INCOME BEFORE INTEREST AND TAXES = ДОХОД ДО ИСЧИСЛЕНИЯ И УПЛАТЫ ПРОЦЕНТОВ И НАЛОГОВ – For company, Income Before Interest and Taxes (known as IBIT or EBIT – for Earnings Before Interest and Taxes) is presented as a separate item before the final net income figure is calculated. This allows the reader to see the firm's profits without financing and tax costs. Another common format calculates a gross margin before deducting selling, general, and administrative costs, which helps in understanding the firm's core profitability from operations before administrative, sales, and overhead costs are considered. Company lists three sources of income:- product sales, research and development, and interest income. Product Sales and Research and Development Revenue account for the revenue realized during the 12 months from each respective activity. Interest income is revenue earned from the company's investment of surplus cash in marketable securities. Since the income statement presents separate expense figures for manufactured products and research and development activities, it is possible to determine a gross profit for each activity. Gross Profit (also known as Gross Margin) is the difference between revenue and the direct costs involved in producing goods or delivering services. Costs of Goods Sold is the name used for the direct expenses incurred by company to make its products, including materials, labor, energy, and other items. The gross margin for company's product sales is calculated by subtracting the costs of goods sold from product sales. Income Before Interest And Taxes (IBIT), this earnings amount is often referred to as Operating Profits since it measures a firm's earnings from all its operations before the impact of financing, taxes, or other nonoperating expenses are considered. Like gross margin, operating profit is more informative when expressed as a percentage of total revenue. / строка баланса (item).

INCOME BOND = ДОХОДНАЯ ОБЛИГАЦИЯ – Generally, Income Bonds promise to repay principal but to pay interest only when earned. In some cases unpaid interest on an income bond may accumulate as a claim against the corporation when the bond becomes due. An income bond may also be issued in lieu of preferred stock. Income Bond is a bond on which interest is paid only if the issuer generates sufficient earnings. The principal of income bonds is guaranteed, and the bond represent a lien on the issuer's income. Income Bond is a type of debt security in which only the face value of the bond is promised to be paid to the investor, with any coupon payments being paid only if the issuing company has enough earnings to pay for the coupon payment. The income bond is a somewhat rare financial instrument which generally serves a corporate purpose similar to that of preferred shares. It may be structured so that unpaid interest payments accumulate and become due upon maturity of the bond issue, but this is usually not the case; as such, it can be a useful tool to help a corporation avoid bankruptcy during times of poor financial health or ongoing reorganization. Investment in a unit trust that produces a good annual income as opposed to capital growth realizable at the end of a certain period of time.

INCOME COVER = ПОКРЫТИЕ ДОХОДА (или ХХ) – Income Cover is a calculation made for loans issued by companies. The income cover is the number of times that the profit of the company (before interest payable and tax) covers the interest on the loan (including the interest on prior ranking loans).

INCOME FUND = ДОХОДНЫЙ ФОНД – Income Fund is a type of mutual fund that emphasizes current income, either on a monthly or quarterly basis, as opposed to capital appreciation. Such funds hold a variety of government, municipal and corporate debt obligations, preferred stock, money market instruments, and dividend-paying stocks. Share prices of income funds are not fixed; they tend to fall when interest rates are rising and to increase when interest rates are falling. Generally, the bonds included in the portfolios of these funds are of investment grade. The other securities are of sufficient credit quality to assure a preservation of capital. There are two popular high-risk funds that also focus mainly on income:- high-yield bond funds and bank loan funds. The former invests primarily in corporate 'junk' bonds and the latter in floating-rate loans issued by banks or other financial institutions. The Income Fund or Bond

Fund, offer good current income but very little potential for growth. Such funds invest in government paper, bonds issued by municipal or local bodies, corporate debts and in stocks of utility companies, offering regular return.

INCOME GEARING (%) = ДОХОДНОЕ ПЛЕЧО (%) – Income Gearing (%) is the interest expressed as a percentage of the operating profit. Thus it shows to what extent a company can pay for its borrowings or what percentage of profits has to be paid for borrowing outside funds. / Доход, Идущий На Погашение Процентов или Использование Заёмного Капитала Для Увеличения Прибыли или Леверидж Доходов.

INCOME STATEMENT = ОТЧЁТ О ДОХОДАХ – Income Statement is company's accounting statement that shows its Income, Expenses, and Profit (or Loss) over a period of time. It is a picture of the financial performance of a company. It is sometimes referred to as a Profit & Loss (P&L) Statement. It allows a company (or others) to compare its performance to that of other similar businesses. It tells shareholders how well their company is doing with respect to generating profits and earnings per share. Income Statement is a summary of the effect of revenues and expenses over a period of time. The Income Statement reports a company's profitability during a specified period of time. The period of time could be one year, one month, three months, 13 weeks, or any other time interval chosen by the company. The main components of the income statement are revenues, expenses, gains, and losses. Revenues include such things as sales, service revenues, and interest revenue. Expenses include the cost of goods sold, operating expenses (such as salaries, rent, utilities, advertising), and nonoperating expenses (such as interest expense). If a corporation's stock is publicly traded, the earnings per share of its common stock are reported on the income statement. A report on a company's financial status over a period of time. It totals profits, subtracts expenses and pinpoints how much money the company can reinvest. The second major financial statement produced by firms is the Income Statement, also referred to as a Profit and Loss Statement or a Statement of Revenue and Expenses. While the balance sheet presents a firm's financial position at one point in time, the income statement shows the financial results from a business's activities over a period of time. It summarizes the two parts of a company's financial flows that determine its profits:- revenues and expenses. By relating a firm's expenses to its revenue over a period of time, the income statement presents the economic results of the firm's activities for that period, i.e. its profits. Summary of the operating and non-operating revenues and expenses of a business or other organization for a given period, usually the fiscal year, and showing net profit or loss for that period. Also known as Profit And Loss Account in the United Kingdom. Income Statement is a key account providing information describing how the company has been trading over a period of time. Therefore it provides information on sales, expenditures, profit and tax. A typical Income Statement consists of:- Sales; Cost of Goods Sold; Distribution Costs; Administration Costs; Other Costs; Operating Profit; Interest Paid; Pretax Profit; Income Taxes; Earnings; Dividend; and Retained Profit. The Income Statement may also be called the Earnings Report, Operating Statement or Profit and Loss Statement. Income Statement is a financial statement that compares sales to expenses to measure profitability. This statement is usually viewed by corporation and store (profit center) for months, quarters and years. Also known as Profit & Loss (P&L) Statement. / Известен также как Отчёт О Прибылях И Убытках (Profit And Loss Account) в Соединённом Королевстве.

INCOME STOCK = ДОХОДНАЯ АКЦИЯ – Income Stock is an equity security that pays regular, often steadily increasing dividends, and offers a high yield that may generate the majority of overall returns. While there is no specific breakpoint for classification, most income stocks have lower levels of volatility than the overall stock market, and offer higher-than-market dividend yields. Income stocks may have limited future growth options, thereby requiring a lower level of ongoing capital investment. The excess cash flow from profits can therefore be directed back toward investors on a regular basis. Income stocks can come from any industry, but are most commonly found as companies operating within real estate (through real estate investment trusts, or REITs), energy sectors, utilities, natural resources and financial institutions. Income stocks are sought by conservative investors who still want some exposure to corporate profit growth. They also have steady streams of revenue that allow for a high level of income payout to investors. The ideal income stock would have a very low volatility (as the Beta would measure), a dividend yield higher than prevailing 10-year treasury bond rates, and a modest level of annual profit growth. Ideal income stocks would also show a history of increasing dividends on a regular basis so as to keep up with inflation, which eats away at future cash payments. Income Stock:- common stocks that pay large dividends that an investor could use as income. / Обыкновенные акции, по которым выплачиваются крупные дивиденды, которые, в свою очередь, могли бы быть использованы инвесторами в качестве доходов. Доходные Акции (Income Stock) – акции, по которым регулярно выплачиваются дивиденды. Существует несколько компаний и институтов, акции которых считаются доходными:- компании электро- и газоснабжения, телефонные компании, ипотечные инвестиционные трасты, банки и страховые компании. Высококачественными доходными акциями считаются акции, по которым дивиденды выплачиваются продолжительное время и имеют тенденцию к постоянному росту. Все дивиденды, выплачиваемые по доходным акциям, облагаются налогом в год их получения, если они не хранятся на счетах с отсроченными налогами, таких, как индивидуальный пенсионный счёт (IRA) или счёт по Плану Кио (Keogh Plan).

INCOME TAXES = НАЛОГИ НА ДОХОДЫ – Income Tax (in the United Kingdom) is a tax payable to the Inland Revenue and which is taken from coupons/interest/dividends. IAS 12 (short for International Accounting Standard No. 12) Income Taxes – The objective of this Standard is to prescribe the accounting treatment for Income Taxes. For the purposes of this Standard, income taxes include all domestic and foreign taxes which are based on taxable profits. Income taxes also include taxes, such as withholding taxes, which are payable by a subsidiary, associate or joint venture on distributions to the reporting entity. The principal issue in accounting for income taxes is how to account for the current and future tax consequences of:- (a) the future recovery (settlement) of the carrying amount of assets (liabilities) that are recognised in an entity's balance sheet; and (b) transactions and other events of the current period that are recognised in an entity's financial statements. Current tax for current and prior periods shall, to the extent unpaid, be recognised as a liability. If the amount already paid in respect of current and prior periods exceeds the amount due for those periods, the excess shall be recognised as an asset. Current tax liabilities (assets) for the current and prior periods shall be measured at the amount expected to be paid to (recovered from) the taxation authorities, using the tax rates (and tax laws) that have been enacted or substantively enacted by the balance sheet date. It is inherent in the recognition of an asset or liability that the reporting entity expects to recover or settle the carrying amount of that asset or liability. If it is probable that recovery or settlement of that carrying amount will make future tax payments larger (smaller) than they would be if such recovery or settlement were to have no tax consequences, this Standard requires an entity to recognise a deferred tax liability (deferred tax asset), with certain limited exceptions. A deferred tax asset shall be recognised for the carryforward of unused tax losses and unused tax credits to the extent that it is probable that future taxable profit will be available against which the unused tax losses and unused tax credits can be utilized. Deferred tax assets and liabilities shall be measured at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted by the balance sheet date. The measurement of deferred tax liabilities and deferred tax assets shall reflect the tax consequences that would follow from the manner in which the entity expects, at the balance sheet date, to recover or settle the carrying amount of its assets and liabilities. Deferred tax assets and liabilities shall not be discounted. The carrying amount of a deferred tax asset shall be reviewed at each balance sheet date. An entity shall reduce the carrying amount of a deferred tax asset to the extent that it is no longer probable that sufficient taxable profit will be available to allow

the benefit of part or all of that deferred tax asset to be utilised. Any such reduction shall be reversed to the extent that it becomes probable that sufficient taxable profit will be available. This Standard requires an entity to account for the tax consequences of transactions and other events in the same way that it accounts for the transactions and other events themselves. Thus, for transactions and other events recognised in profit or loss, any related tax effects are also recognised in profit or loss. For transactions and other events recognised directly in equity, any related tax effects are also recognised directly in equity. Similarly, the recognition of deferred tax assets and liabilities in a business combination affects the amount of goodwill arising in that business combination or the amount of any excess of the acquirer's interest in the net fair value of the acquiree's identifiable assets, liabilities and contingent liabilities over the cost of the combination. Income Taxes is the value of tax that is due based on the operation of the business over the period. It is shown in the Profit & Loss Statement. In the balance sheet, the company applies the asset and liability method for the determination of provisions for income taxes. The income taxes for the reporting period consist of the current taxes (taxes paid and taxes payable) plus the change in the deferred taxes for the respective period. Deferred taxes represent the estimated future tax consequences of temporary differences between the amounts of assets and liabilities recognized for financial reporting purposes and such amounts recognized for tax purposes. Valuation allowances are recorded to reduce the deferred tax assets when it is more likely than not that a tax benefit will not be realized. / МСБУ 12 (сокращение для Международного Стандарта Бухгалтерского Учёта № 12) – . Налог на Доходы – ежегодный налог на доходы, налагаемый федеральным правительством и властями штатов, а также местными властями. Существует два основных вида налога на доходы:- (i) налог на личные доходы физических лиц, налагаемый на доходы семьи или компании, не являющейся корпорацией (акционерным обществом); и (ii) налог на доходы корпорации с юридических лиц, налагаемый на чистую прибыль корпорации. В США налог на доходы был введён в 1913 16-й поправкой к Конституции. Поступления от него обычно составляют около половины суммарного годового дохода федерального правительства. Почти все штаты, а также многие крупные города, облагают налогом на доходы доходы физических и юридических лиц, хотя основным источником муниципальных и штатных доходов являются налоги на имущество и налоги на продажи. Налог на личные доходы и в меньшей степени налог на доходы корпорации являются прогрессивными:- чем выше уровень дохода, тем больший процент от него отчисляется в виде налога на доходы. Ранжирование доходов с точки зрения применения более прогрессивной высокой ставки налогообложения называется 'налоговыми категориями' (tax brackets), которые также определяют объёмы вычетов (deductions), таких, как издержки производства и расходы, штатные и муниципальные подоходные налоги и расходы на благотворительность. В 1986 налог на доходы физических лиц включал 15 предельных налоговых категорий (в том числе необлагаемую налогом сумму (zero bracket amount)), ранжированных до величины 50%. Корпорации платят базовую ставку налога на первые 25 000 Долларов дохода, повышенную ставку на следующие 25 000 Долларов дохода и наивысшую ставку на доходы, превышающие 50 000 Долларов. Долгосрочная прибыль от продажи активов после длительного срока владения ими (long-term capital gains) получила льготный порядок налогообложения как для физических, так и для юридических лиц. Поскольку повышенный уровень доходов от прироста стоимости капитала – это вознаграждение налогоплательщику за принятие на себя повышенного риска, и так как возможности уклонения от уплаты налогов (loopholes) и 'налоговые укрытия' (tax shelters) в целях избежания перехода в более высокую налоговую категорию более доступны для самых богатых налогоплательщиков, то принцип прогрессивности системы налогообложения чаще декларируется, чем применяется реально. Акт о Налоговой Реформе от 1986 (Tax Reform Act of 1986) ввёл модифицированную систему фиксированного налога (flat tax) на доходы и содержал наиболее обширные изменения в налоговом законодательстве с 1913. Он радикально сократил ставки налогообложения как физических, так и юридических лиц, сжал структуру предельных уровней для физических лиц до двух основных категорий налогообложения, прекратил льготный порядок налогообложения прироста стоимости капитала, уменьшил возможности уклонения от уплаты налогов и 'налоговых укрытий' и ввёл точный альтернативный минимальный налог (alternative minimum tax). В 1990 Конгресс США установил повышенную ставку на доходы от прироста стоимости капитала и ограничил её 28%. И хотя ограничение на прирост стоимости капитала остаётся на уровне 28%, Акт об Урегулировании Доходов от 1993 (Revenue Reconcilation Act of 1993) внёс изменения в области высоких ставок налогообложения и упростил наиболее сложные расчёты.

INCOME TAXES PAYABLE = НАЛОГИ НА ДОХОДЫ К ОПЛАТЕ – Income Taxes Payable are company's unpaid portion of its tax liability on its net income from the prior period. Depending on the applicable state and local taxes, a firm may have additional tax liabilities for property, excise, and other taxes.

INCOME TRUSTS = ДОХОДНЫЕ ТРАСТЫ – Income Trusts:- these are a Canadian invention conceived in the mid-80's as a tax-efficient way for companies to distribute revenues to investors in so-called 'Income Trusts'. By setting up a legal trust, companies can expense payments to a trust and the trust can then flow these to the trust's investors. In this manner, income is effectively taxed only once, not twice, as is the case when companies distribute after-tax earnings as dividends to their investors who are taxed on said dividends.

INCOMPATIBLE = НЕСОВМЕСТИМОЕ (или НЕСОГЛАСУЮЩЕЕСЯ) – Incompatible:- a plant that is unable to set seed or units when selfed, crossed, or grafted because of structural, physiological, or ontogenic reasons.

INCOMPATIBLE FLUIDS = НЕСОВМЕСТИМЫЕ ЖИДКОСТИ – Incompatible Fluids are the fluids which when mixed in a system, will have a deleterious effect on that system, its components or its operation.

INCOMPLETE DOMINANCE = НЕПОЛНАЯ ДОМИНАНТНОСТЬ (или НЕПОЛНОЕ ДОМИНИРОВАНИЕ) – Incomplete Dominance:- two different alleles (e.g., dominant and recessive gene) producing an intermediate effect compared with effect of the dominant alleles. / Под Доминантностью или Доминированием понимается форма взаимоотношений парных (аллельных) генов, при которой один из них – доминантный – оказывает более сильное влияние на соответствующий признак особи, чем другой - рацессивный.

INCOMPLETE FERTILIZER = НЕПОЛНОЕ УДОБРЕНИЕ – Incomplete Fertilizer is a classification of fertilizers that contains only 1 or 2 of the major fertilizer elements N, P, and K.

INCOMPLETE REMOVAL OF COLOR IN DISCHARGE PRINTING = НЕПОЛНОЕ УДАЛЕНИЕ ЦВЕТА ПРИ ВЫТРАВНОМ ПЕЧАТАНИИ – Incomplete Removal Of Color In Discharge Printing:- Possible Cause:- loss of strength of reducing agent employed to remove the color or inadequate quantity of reducing agent in the print paste. This is a major defect. The lightly colored areas should have been completely white. Printing defect.

INCOMPLETELY FORMED = НЕ ДО КОНЦА СФОРМИРОВАННЫЕ – Incompletely Formed:- a rare defect and is usually caught during button manufacturing process. Closure defects, and namely – Pearl and Plastic Buttons. / Порок или дефект застёжки.

INCOMPLETE TILLAGE = НЕПОЛНАЯ ОБРАБОТКА ПОЧВЫ – Incomplete Tillage is the result of omitting one or more of the elements of a complete tillage system. / Под Боронованием (Harrowing) понимается рыхление поверхностного слоя почвы

боронами и вращающимися мотыгами. Предохраняет почву от высыхания, выравнивает её поверхность, разрушает почвенную корку, уничтожает сорняки.

INCONSPICUOUS ADMIXTURE = ТРУДНО ОТДЕЛЯЕМЫЕ ПРИМЕСИ – In the Canola industry of the United States, Inconspicuous Admixture is any seed which is difficult to distinguish from Canola. This includes, but is not limited to, common wild Mustard (Brassica Kaber and Brassica Juncea), domestic brown Mustard (Brassica Juncea), yellow Mustard (Brassica Hirta), and seed other than the Mustard group. See also Conspicuous Admixture. / Смотрите также Легко Отеляемые Примеси (Conspicuous Admixture).

INCORPORATE = ЗАДЕЛЫВАТЬ (или ВВОДИТЬ, или ВНОСИТЬ) – Incorporate:- to mix foreign materials, such as pesticides, fertilizers, or plant residues into the soil. / Заделывать удобрения.

INCORPORATION = ИНКОРПОРАЦИЯ – Incorporation is the process of legally declaring a corporate entity as separate from its owners. Incorporation has many advantages for a business and its owners, including:- (i) protects the owner's assets against the company's liabilities; (ii) allows for easy transfer of ownership to another party; (iii) achieves a lower tax rate than on personal income; (iv) receives more lenient tax restrictions on loss carry forwards; and (v) can raise capital through the sale of stock. Incorporation involves drafting an 'Articles of Incorporation', which lists the primary purpose of the business and its location, along with the number of shares and class of stock being issued, if any. Incorporation will also involve state-specific registration information and fees. Incorporation creates a protective bubble around a company's owners, shareholders and directors. Incorporated businesses can take the risks that make growth possible without exposing the shareholders, owners and directors to personal financial liability outside of their original investments in the company. In the United States, incorporated businesses have legal endings such as Inc., Ltd. or Corp. The same general process is used around the world, although legal endings vary by nation. In the United States, an Incorporation is the act of creating or organizing a corporation under the laws of a specific jurisdiction. Incorporation is the process of creating a legal, tax-paying entity. Businesses or companies can be incorporated or unincorporated. If unincorporated, the owner(s) of the business personally take on the assets and liabilities of the business and are personally responsible for all taxes. When incorporating, which is simply a legal registration process, a new, tax-payer is, in essence, created. Incorporating a business is a straightforward process. Lawyers and other agencies usually provide this service. There is even a company which allows you to incorporate in any State in the USA for a reasonable cost (check out www.incorporate.com). By incorporating a business, the owners of the business are personally shielded from most liabilities which that business may incur – this does not apply, however, to the directors of the company who may still be liable for certain actions. In Canada, companies do not need to use any specific identification such as 'Inc.' or 'Limited' or 'Corp.' to identify themselves as legally incorporated businesses, although these descriptions are commonly used. / пузырь (bubble). Корп. (Corp.). В Соединённых Штатах Америки под Инкорпорацией, от позднелатинского слова Incorporatio, означающее Включение В Свой Состав, от Латинских слов In, означающее В, и Corpus, означающее Единое Целое или Тело, понимается акт создания или организации корпорации по законам конкретной юрисдикции. Инкорпорация – процедура, с помощью которой компания регистрирует устав и получает лицензию (или сертификат об инкорпорации), позволяющую ей действовать в качестве корпорации. Факт регистрации в качестве корпорации должен быть отражён в юридическом названии компании, в котором должно присутствовать слово incorporated, сокращенно inc. Смотрите также Articles of Incorporation.

INCORPORATOR = ИНКОРПОРАТОР – In the United States, an Incorporator is the person(s) who perform the act of incorporation and who sign the articles of incorporation and deliver them for filing.

INCORRECT MATERIAL SHADING = НЕПРАВИЛЬНАЯ ОТТЕНОЧНОСТЬ МАТЕРИАЛА – Incorrect Material Shading:- where components do not match exactly as to shade. Sewing Room Defects. / Порок или дефект швейного производства.

INCORRECT NEEDLE = НЕПРАВИЛЬНАЯ ИГЛА – Incorrect Needle:- results in cuts, burns, picking and poor sewability. Machinery defects, and namely – Sewing Machines and Attachments. / Порок или дефект от машинного оборудования.

INCORRECT WEIGHT = НЕПРАВИЛЬНЫЙ ВЕС – Incorrect Weight:- a lighter or heavier weight interlining has been used than what is properly standard for the garment. Interlining defects. / Порок или дефект.

INCOTERMS® = ИНКОТЁРМЗ – Incoterms® 2000 is the latest version of ICC's standard trade definitions, commonly known as the INCO terms. The terms consist of 13 rules which are fundamental to international trade, defining the most important responsibilities of buyers and sellers in international sales contracts. Incoterms are a basic reference for sales contracts, recognized as the international standard by customs authorities and courts everywhere. Since they were first published in 1936, Incoterms – a trademarked ICC product – have been updated six times. Trade terms in coded form as established by the International Chamber of Commerce™ in 1953, whereafter they have been regularly updated. INCOTERMS® 2000:- ICC's standard commercial terms, Incoterms, are in constant daily use in international sales contracts throughout the world. They have been fully revised for the new millennium in line with developments in commercial practice. Published on 1999-September-13, INCOTERMS® 2000 may be used to define the responsibilities of buyer and seller in contracts effective from 2000-January-01. INCOTERMS® 2000 describe the responsibilities of seller and buyer in international trade. The full and authoritative definition of each trade term is published in INCOTERMS® 2000, Publication 560, obtainable from the distributors and ICC national committees throughout the world. INCOTERMS® is a set of ICC™ (short for the International Chamber of Commerce™) terms offered for optional use in trading contracts and intended to reduce misunderstandings in the meaning of international trading terms. Maintained by the International Chamber of Commerce™ (ICC™), this codification of terms is used in foreign trade contracts to define which parties incur the costs and at what specific point the costs are incurred. INCOTERMS® 2000 will make international trading easier:- Paris, France, 13 September 1999 – the International Chamber of Commerce (ICC) today published the millennium edition of its standard trade definitions, INCOTERMS® 2000. Incoterms are a basic reference for sales contracts, in constant daily use throughout the world. The new version will make it easier for traders to do business in the new century, despite the growing volume and complexity of international transactions. Since Incoterms were first published in 1936, they have been updated six times. They precisely define the responsibilities of buyer and seller and are recognized as the international standard by customs authorities and courts in all the main trading nations. Among the best known Incoterms are EXW (Ex Works), FOB (Free on Board), CIF (Cost, Insurance and Freight), DDU (Delivered Duty Unpaid), and CPT (Carriage Paid To). This trade-marked ICC product has become the cornerstone of international trade. Provided that the Incoterms themselves are correctly used, the risk of costly misunderstandings and legal disputes is greatly reduced. They should now be incorporated under the reference 'Incoterms 2000' into contracts that are effective from January 2000 or any date thereafter. Incoterms 1990 remain valid until the end of 1999. The latest edition takes account of the increased use of intermodal transport by providing for the delivery of goods from seller to buyer at any point in the transport chain instead of concentrating as in the past on the moment the cross the ship's rail. The term FCA (Free Carrier) gives a clear definition of the seller's delivery obligation in the country of export, irrespective of the mode of transport. Mr Emmanuel Jolivet, ICC's policy manager for international commercial practice, said the terms offer an array of choices for buyers and sellers to express the main provisions of a sales contract. For example, EXW covers the seller's minimum obligations – putting the goods at the buyer's disposal while they are still on the seller's premises. At the other end of spectrum, Delivered Duty Paid (DDP) expressed the maximum obligations for the seller – delivery is completed when goods are cleared for import and placed at the buyer's

disposal at the named place of destination. Under DDP, the buyer is responsible for unloading the goods from the 'arriving means of transport'. A big advantage of the new edition of Incoterms is that they clearly allocate the loading and unloading obligations of both buyer and seller. Mr Jolivet noted:- 'One of the most frequent queries we received about the old version was on the allocation of terminal handling charges under FCA. Previous ambiguities have now been removed'. Mr Jolivet said much anguish and expense can be avoided if specific reference to INCOTERMS® 2000 is made whenever the terms are used. Another basic requirement is that relevant locations are named whenever an Incoterm is inserted into a contract. For example, the term Delivered at Frontier (DAF) should always be accompanied by a reference to the exact place and on which frontier delivery is to be made. 'If the contract neglects this fundamental detail, the buyer could be put to enormous inconvenience because the seller would then be entitled to choose any place of delivery at the frontier', Mr Jolivet said. Here are some examples of the correct use of Incoterms:- (i) FOB Liverpool Incoterms 2000; (ii) DDU Frankfurt Schmidt GmbH Warehouse 4 Incoterms 2000; and (iii) CPT Smith Carriers, Inc. Main Warehouse New York Incoterms 2000. INCOTERMS® 2000 are the culmination of two years of work by ICC's Working Party on Trade Terms, consisting of more than 40 trade experts from companies and business associations around the world. The group carried out extensive consultations among users before agreeing on the final draft. INCOTERMS® 2000 are available in a bilingual English-French edition from ICC Publishing SA in Paris, France and ICC national committees worldwide. They may also be ordered through the distributors. INCOTERMS® – the recognized abbreviation for the International Commercial Terms. These terms were last amended, effective on 2000-July-01 (INCOTERMS® 2000). So-called INCOTERMS® 2000 (the ICC Publication No. 560), the official International Chamber of Commerce™ rules for the interpretation of trade terms, facilitate the conduct of international trade. Reference to INCOTERMS® 2000 in a sales contract defines clearly the parties' respective obligations and reduces the risk of legal complications. Frequently, parties to a contract are unaware of the different trading practices in their respective countries. This can give rise to misunderstandings, disputes and litigation, with all the waste of time and money that this entails. In order to remedy these problems, the International Chamber of Commerce™ first published in 1936 a set of international rules for the interpretation of trade terms. These rules were known as INCOTERMS® 1936. Since the creation of INCOTERMS® by ICC™ in 1936, this undisputed world-wide contractual standard has been regularly updated to keep pace with the development of international trade. Amendments and additions were later made in 1953, 1967, 1976, 1980, 1990 and in 2000 in order to bring the rules in line with current international trade practices. INCOTERMS® 2000 take account of the recent spread of customs-free zones, the increased use of electronic communications in business transactions, and changes in transport practices. INCOTERMS® 2000 offer a simpler and clearer presentation of the 13 definitions (CFR or COST AND FREIGHT (… named port of destination); CIF or COST, INSURANCE AND FREIGHT (… named port of destination); CIP or CARRIAGE AND INSURANCE PAID TO (… named place of destination); CPT or CARRIAGE PAID TO (… named place of destination); DAF or DELIVERED AT FRONTIER (… named place); DDP or DELIVERED DUTY PAID (… named place of destination); DDU or DELIVERED DUTY UNPAID (… named place of destination); DEQ or DELIVERED EX QUAY (… named port of destination); DES or DELIVERED EX SHIP (… named port of destination); EXW or EX WORKS (… named place); FAS or FREE ALONGSIDE SHIP (… named port of shipment); FCA or FREE CARRIER (… named place); and FOB or FREE ON BOARD (… named port of shipment)), all of which have been revised. It should be stressed that the scope of INCOTERMS® is limited to matters relating to the rights and obligations of the parties to the contract of sale with respect to the delivery of goods sold (in the sense of 'tangibles', not including 'intangibles' such as computer software). INCOTERMS® 2010 (the ICC™ Publication No. 715):- INCOTERMS® or International Commercial Terms are a series of sales terms. They are published by the International Chamber of Commerce™ (ICC™) and are widely used in international commercial transactions. The purpose of Incoterms is to provide a set of international rules for the interpretation of commonly used trade terms in international transactions. They closely correspond to the UN Convention on Contracts for the International Sale of Goods. The first Incoterms were issued in 1936. The most recent Incoterms were updated in 2010 and became effective 2011-January-01. Who needs to understand Incoterms? Government trade officials as well as many private sector parties should understand INCOTERMS®. Such private sector parties include:- exporters, importers, trade finance professionals, export compliance specialists, customs brokers, freight forwarders, insurers, international credit professionals, and sales and purchasing managers. What are Incoterms used for? INCOTERMS® assist trade practitioners in interpreting the most commonly used international trade terms. Using correct Incoterms in an international transaction reduces considerably uncertainties arising from the different interpretation of such terms in different countries. They apportion international trade transaction costs and responsibilities between buyers (importers) and sellers (exporters) and reflect modern-day transportation practices. INCOTERMS® assist in significantly reducing misunderstandings among traders and thereby minimizing trade disputes and litigation. However, their scope is limited to matters related to the international rights and obligations of the parties involved in the contract of sale with respect to the delivery of the goods sold. Thus, they apply to the contract of carriage, not the contract of sale. Why were the INCOTERMS® 2000 revised? INCOTERMS® 2010 are the updated version of INCOTERMS® 2000. INCOTERMS® 2010 have been developed as a result of an extensive review of current shipping practices and trends in an effort to keep up with the rapid expansion of world trade. The key drivers for this update include:- a need for improved cargo security, changes to the Uniform Commercial Code in 2004 that resulted in a deletion of US shipment and delivery terms, and new trends in global transportation. How do INCOTERMS® 2010 differ from INCOTERMS® 2000? In addition to providing a set of rules for the interpretation of commonly used trade terms, INCOTERMS® 2010 significantly revise Group D listed in INCOTERMS® 2000. The five INCOTERMS® 2000 listed in Group D included the following:- (i) DAF – Delivered At Frontier; (ii) DES – Delivered Ex Ship; (iii) DEQ – Delivered Ex Quay; (iv) DDU – Delivered Duty Unpaid; and (v) DDP – Delivered Duty Paid. INCOTERMS® 2010 contain the following categories:- (i) DAT – Delivered At Terminal; (ii) DAP – Delivered At Place; and (iii) DDP – Delivered Duty Paid. Moreover, INCOTERMS® 2010 reduce the number of Incoterm groupings from four to two, allowing trade experts to choose the most suitable rule related to the mode of transport. The 13 INCOTERMS® 2000 contained four essential categories of Incoterms. They were:- (i) Group E – Departure; (ii) Group F – Main carriage unpaid; (iii) Group C – Main carriage paid; and (iv) Group D – Arrival. The two main categories of INCOTERMS® 2010 are now organized by modes of transport. Used in international as well as in domestic contracts for the first time, the new groups aim to simplify the drafting of contracts and help avoid misunderstandings by clearly stipulating certain obligations of buyers and sellers. Group 1:- Incoterms that apply to any mode of transport are:- (i) EXW – Ex Works; (ii) FCA – Free Carrier; (iii) CPT – Carriage Paid To; (iv) CIP – Carriage And Insurance Paid To; (v) DAT – Delivered At Terminal; (vi) DAP – Delivered At Place; (vii) DDP – Delivered Duty Paid. Group 2:- Incoterms that apply to sea and inland waterway transport only:- (i) FAS – Free Alongside Ship; (ii) FOB – Free On Board; (iii) CFR – Cost And Freight; (iv) CIF – Cost, Insurance, and Freight. Further, the two new groupings listed above note a reduction of the number of Incoterms from 13 to 11. Finally, INCOTERMS® 2010 provide additional helpful guidance and clarify obligations. For instance, the revised terms also spell out rules regarding the use of electronic procedures; detail information on security-related clearances for shipments; and offer advice with respect to domestic trade. Can I still use the INCOTERMS® 2000? According to the International Chamber of Commerce™, all contracts made under INCOTERMS® 2000 remain valid even after 2011. In addition, although the ICC™ recommends using INCOTERMS® 2010 after 2011, parties to a contract for the sale with respect of the delivery of goods can agree to use any version of Incoterms after 2011. It is important, however, to clearly specify the chosen version INCOTERMS® 2010, INCOTERMS® 2000, or any earlier version. Where can I obtain a copy of the new INCOTERMS® 2010? You can purchase a copy of the new INCOTERMS® 2010 from the ICC™ website:- http://www.iccwbo.org. The new INCOTERMS® 2010 became effective 2011-

January-01. INCOTERMS® – which is an abbreviation for International Commercial Terms – are a series of sales terms. They are published by the International Chamber of Commerce™ (ICC™) and are widely used in commercial transactions. In addition to providing a set of rules for the interpretation of commonly used trade terms, INCOTERMS® 2010 accomplish the following:- (a) significantly revises Group D listed in INCOTERMS® 2000; (b) reduce Incoterms from four groups to two groups, allowing trade experts to choose the most suitable rule related to the mode of transport; and (c) reduce the absolute number of Incoterms from 13 to 11. Moreover, INCOTERMS® 2010 offer additional guidance which assists users in selecting the most appropriate Incoterm for each transaction. The revised terms also spell out rules regarding the use of electronic procedures; detail information on security-related clearances for shipments; and offer advice with respect to domestic trade. Incoterms® 2010 were launched in mid-September 2010 and came into effect on 2011-January-01. The Incoterms® rules are an internationally recognized standard and are used worldwide in international and domestic contracts for the sale of goods. First published in 1936, Incoterms® rules provide internationally accepted definitions and rules of interpretation for most common commercial terms. The rules have been developed and maintained by experts and practitioners brought together by ICC™ and have become the standard in international business rules setting. They help traders avoid costly misunderstandings by clarifying the tasks, costs and risks involved in the delivery of goods from sellers to buyers. Incoterms® rules are recognized by UNCITRAL (short for the the United Nations Commission on International Trade Law) as the global standard for the interpretation of the most common terms in foreign trade. Please note that all contracts made under INCOTERMS® 2000 remain valid even after 2011. Moreover, although we recommend using Incoterms® 2010 after 2011, parties to a contract for the sale of goods can agree to choose any version of the Incoterms rules after 2011. It is important however to clearly specify the chosen version INCOTERMS® 2010, INCOTERMS® 2000 or any earlier version. Incoterms® are the International Commercial Terms, also known as Terms Of Delivery, are standard trade definitions most commonly used in international trade contracts. They define basic contract responsibilities and liabilities between buyer and seller, particularly as concerns the transport of goods and the distribution of costs and risks between the parties. Two widely-known terms are CIF (= Cost, Insurance, Freight) and FOB (= Free on Board). The Incoterms® (International Commercial Terms) are a series of international sales terms, published by the International Chamber of Commerce (ICC) and widely used in international commercial transactions. These sales terms that govern delivery duties, transportation duties, duties regarding customs clearance and regarding transfer of risk have been revised. They will be published officially at the end of September 2010 and will become valid on 2011-January-01. Here is what is new:- (i) Four sales terms have been removed – DAF (delivered at frontier), DES (delivered ex ship), DEQ (delivered ex quay) and DDU (delivered duty unpaid) will be replaced by two new terms, DAP (delivered at place) and DAT (delivered at terminal). Therefore, there will be eleven sales terms altogether, compared to thirteen sales terms with the Incoterms® 2000. (ii) There will be more clear distinctions between the so called 'Blue Terms' for shipping by ship and the terms for multimodal shipping. The explanations for the sales terms will provide indications which sales terms to use for which mode of transportation (multimodal terms:- EXW, FCA, CPT, CIP, DAP, DAT, DDP; blue terms:- FAS, FOB, CFR, CIF). (iii) The sales terms FOB, CFR and CIF have been adjusted or additional explanation have been provided. The point is for example that regarding FOB the transfer of risk has been happened formerly on if the goods had passed the vertical of the ship's rail – it was similar with CFR and CIF. Now it is made clear that the transfer of risk does only happen if the goods have been set down on the ship. Another small part of the risk has been transfered to the supplier. (iv) Additionally, the new sales terms now contain suggestions that in modern container traffic the sales terms CFR and CIF are barely helpful, because the circumstances in modern container ports no longer do justice for the determination of the transfer of risk by means of the loading of the ship (now:- set down of the goods on the ship). It is recommended to use in container traffic the sales terms CPT or CIP (in these cases the transfer of risk happens in case of surrendering the goods to the carrier). (v) The new set of sales terms will also take more strongly into account 'supply chain security' and electronic documents. / коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Аманюэль Жоливе (Emmanuel Jolivet). (ii) Ди.Ди.Ю. Франкфурт Шмит Ге.эм.бе.Ха Склад 4 Инкотермы 2000 (DDU Frankfurt Schmidt GmbH Warehouse 4 Incoterms 2000); и (iii) Си.Пи.Ти. Смис Кариёрз, Инк. Главный Склад Нью Йорк Инкотермы 2000 (CPT Smith Carriers, Inc. Main Warehouse New York Incoterms 2000). ИНКОТЕРМЫ® 2000 стали кульминацией двухлетней работы Рабочей Группы МТП по Терминам Торговли (ICC's Working Party on Trade Terms), состоявшей из более 40 экспертов торговли из компаний и деловых ассоциаций со всего мира. ИНКОТЕРМЫ® 2000 доступны в двуязычной Англо-Французской редакции у Ай.Си.Си. Паблишинь Эс.А. (ICC Publishing SA) в Париже, Франция. В Русскоязычном исполнении данный Англоязычный термин мог бы выглядеть как ИНКОТЕРМЫ (от Интернациональные Коммерческие Термины) или МЕКОТЕРМЫ (от Международные Коммерческие Термины) в зависимости от того, как переводить. Так называемые ИНКОТЁРМЗ® 2000 (Публикация № 560 МТП[ТЗ]), официальные правила Международной Торговой Палаты[ТЗ] для толкования торговых терминов, и содействия осуществлению международной торговли. Ссылка в контрактах продажи на ИНКОТЁРМЗ® 2000 чётко определяет соответствующие обязательства сторон и снижает риск юридических осложнений. Довольно часто, стороны по контракту не подозревают о всевозможных торговых обычаях в их соответствующих странах. Это может привести в возникновению разногласий, споров и тяжбе в судах,). обозначение . Комиссия Организации Объединённых Наций по Праву Международной Торговли (КООНПМТ или АНСИТРАЛ или, как это уже устоялось в Русском языке, ЮНСИТРАЛ; United Nations Commission on International Trade Law (UNCITRAL)). ИНКОТЁРМЗ® 2010 (Публикация № 715 МТП[ТЗ]) были опубликованы 27 Сентября 2010, и вступили в силу с 01 Января 2011. В новых правилах уже не 13, а 11 торговых терминов, которые разбиты всего на две группы:- термины для перевозки всеми видами транспорта и термины для перевозки морем (включая океаны) и внутренними водами. Инкотёрмз® (от Английских International Commercial Terms) представляют собой международные правила по толкованию наиболее широко используемых торговых терминов в области внешней торговли. Международные торговые термины – это стандартные условия договора международной купли-продажи. Эти условия определяют обязанности сторон, участвующих в международной торговле, а также регламентируют момент передачи права собственности на товар, и соответственно, ответственность за испортившийся в пути товар, неправильное оформление документов на груз и так далее. Первая версия Инкотёрмз® была представлена в 1936. С тех пор специалисты по международной торговле совместно с юристами вносили изменения в первоначальный вариант 6 раз. Новая редакция – Инкотёрмз® 2010 – вступила в силу 01 Января 2011. Краткая информация об Инкотёрмз® 2010:- Что делать с уже заключенными контрактами? ИНКОТЁРМЗ® 2010 будет действовать для уже заключённых контрактов, даже если исполнение обязательств по нему предусмотрено в 2011. После 01 Января 2011 любая ссылка и упоминание ИНКОТЁРМЗ® в новых контрактах будет подразумевать ссылку на ИНКОТЁРМЗ® 2010. Стоит ли Вам беспокоиться по поводу ИНКОТЁРМЗ® 2010? Это зависит от условий, которые обычно используются в Вашем контракте. GAFTA/FOSFA/Сахар (SAL/RSA) не используют ИНКОТЁРМЗ® вообще. Таким образом, Вы можете не принимать во внимание вступающие в силу изменения. Стандартные контракты о нефтепродуктах, как и большинство контрактов о поставках угля, этанола, металлов ссылаются на ИНКОТЁРМЗ®. В этом случае Вам необходимо:- проверить типовой контракт; внести изменения с учётом ИНКОТЁРМЗ® 2010; и сделать необходимые изменения (например, изменить DES на DAP) в типовом контракте, который будет использоваться для будущих сделок. О каких основных изменениях в ИНКОТЁРМЗ 2010 Вам необходимо знать? Исключены 4 (DAF, DES, DEQ и DDU) и введены 2 новых условия поставки (DAP – Доставленно до места (Delivered at Place) и DAT – Доставленно на терминал (Delivered at Terminal)). Создание 2 классов ИНКОТЁРМЗ® – (1) правил для любого вида

транспорта и (2) правил для морских и речных перевозок (ИНКОТЁРМ3® 2000 имел 4 класса). Правила, которые теперь работают как для международных, так и для внутренних поставок. Введение ссылок на –использование электронных записей – в случае согласия сторон, или когда это общепринято. Пересмотренное страховое покрытие с учётом правок внесённых в Institute Cargo Clauses (Институт Лондонских Страховщиков). Чёткое указание ответственности за уплату хранение на Терминале. Детали:- (1) ICC вводит два новых условия доставки:- (i) DAP (Delivered At Place) – Доставлено в месте, который будет использоваться вместо DAF, DES и DDU; и (ii) DAT (Delivered At Terminal) – Доставленно на терминал, который будет использоваться вместо DEQ. Эти условия могут быть использованы независимо от соглашения о виде транспорта. Причина принятия решения о снижении количества условий было обусловлено тем, что торговцы зачастую выбирали неверные или запутанные условия, ведущие к противоречивым или неясным контрактам. (2) Две Категории, Вместо Четырёх:- 11 условий стали систематизированы в двух категориях:- (i) Доставка любым видом транспорта (морским, наземным, воздушным, ж/д) – EXW, FCA, CPT, CIP, DAP, DAT и DDP. Они могут быть использованы, когда отсутствует морской транспорт; и (ii) Доставка морским/речным путём – FAS, FOB, CFR и CIF. (3) Адаптированные Правила:- новый ИНКОТЁРМ3® особенно направлен для использования как в случаях международной, так и в случаях внутренней торговли. К слову, это указанно на титульной странице официального издания ИНКОТЁРМ3®. Для торговых организаций и блоков (к примеру ЕС), где границы формально отсутствуют – новые правила и условия стали проще для использования. (4) Электронные Документы (Записи):- обязательства покупателя и продавца предоставлять контрактную документацию теперь могут быть в виде электронных документов. Введением этого пункта, ICC отражает своё понимание возрастающего объёма использования электронной документации. (5) Institute Cargo Clauses (Институт Лондонских Страховщиков):- там где условия требуют получения страховки, страховые требования изменены с учётом поправок в Институте Лондонских Страховщиков. (6) Безопасность:- проблема безопасности товаров, судов и так далее, сейчас является одной из основных в умах людей, когда осуществляется международная торговля. Учитывая, что большинство стран сейчас предъявляют требования высочайших проверок безопасности, новые правила вводят обязательство обоих сторон предоставлять всю необходимую информацию по запросу в случаях проведения таможенной привозо-вывозной (или импортно-экспортной) очистки. Предыдущая версия ИНКОТЁРМ3® не предъявляла такой вид сотрудничества. (7) Издержки По Хранению На Терминале:- когда продавец должен организовать и оплатить за доставку товаров до согласованного места (CIP, CPT, CFR, CIF, DAT, DAP и CCP) может случиться, что уплата издержек за хранение на терминале переходят к покупателю как часть контрактной цены за товары. Тем не менее, исторически, в некоторых случаях, продавец также должен был платить терминалу за хранение (двойная уплата). ИНКОТЁРМ3® 2010 направлен для исправления ситуации и внесения ясности кто ответственен за уплату издержек по хранению на терминале. Однако ещё предстоит выявить, положит ли это конец двойным оплатам, для тех, кто с ними сталкивался в прошлом.

INCREASED VALUE = УВЕЛИЧЕННАЯ СТОИМОСТЬ (или ВОЗРОСШАЯ СТОИМОСТЬ) – Increased Value:- an insurance effected on a hull interest, e.g., 'disbursements', to provide additional indemnity to that provided by the assured's hull and machinery (H&M) marine policy in event of a total loss of the insured ship. The H&M policy incorporates a warranty which restricts the amount that can be insured in an increased value policy. / ручательство (warranty).

INCREASED VALUE CLAUSE = ОГОВОРКА ОБ УВЕЛИЧЕННОЙ СТОИМОСТИ (или ОГОВОРКА О ВОЗРОСШЕЙ СТОИМОСТИ) – Increased Value Clause is a clause in a cargo policy which provides that, where both an underlying policy and an increased value policy cover the same goods for the same transit, the insured values expressed in both policies shall be aggregated; so that the sum insured by each policy shall be deemed to be part of the whole. The intention is that, where both policies settle a claim, any recoveries in respect of that claim are shared between the underwriters subscribing both policies.

INCREMENTAL EFFECTS = ПРИРОСТАЮЩИЕ ЭФФЕКТЫ – Incremental Effects are the annual effects in energy use (measured in MegaWatthours) and peak load (measured in kiloWatts) caused by new participants in existing Demand-Side Management (DSM) programs and all participants in new DSM programs during a given year. Reported Incremental Effects should be annualized to indicate the program effects that would have occurred had these participants been initiated into the program on January 01 of the given year. Incremental effects are not simply the Annual Effects of a given year minus the Annual Effects of the prior year, since these net effects would fail to account for program attrition, degradation, demolition, and participant dropouts.

INCREMENT OFFERS = ХХ ОФЕРТЫ (или ХХ) – Increment Offers are the financial offers in the Day-Ahead Energy Market to supply specified amounts of MW (MegaWatt) at, or above, a given price.

IN–CROP = В СТАДИИ ПЛОДОНОШЕНИЯ – (1) In-Crop:- a period of time from crop emergence to crop defoliation.

(2) In-Crop:- within a crop area.

INCUBATE = ИНКУБИРОВАТЬ (или ВЫВОДИТЬ) – Incubate:- to provide (for seeds, embryos of animals, or bacteria) prescribed and usually controlled conditions (as temperature and moisture) favorable for development or hatching.

INCUBATION PERIOD = ИНКУБАЦИОННЫЙ ПЕРИОД (или ПЕРИОД ИНКУБАЦИИ) – Incubation Period is a time after inoculation required for the symptoms of a disease to appear. / Под Инкубационным Периодом, от Латинского слова Incubo, означающее в данном случае Покоюсь, понимается скрытый период от момента внедрения в организм возбудителя до появления первых признаков инфекционного заболевания. При ряде заболеваний больные заразны уже в конце инкубационного периода.

INCUMBENT = НАЛЕГАЮЩЕЕ (или ЛЕЖАЩЕЕ) – Incumbent:- resting or leaning upon. Also applied to a pair of cotyledons curving back down the hypocotyl so that the back of one is turned towards the hypocotyl and the back of the other is turned away from it. / паре котиледонов (семядолей) гипокотиль (подсемядольное колено).

INCURRED BUT NOT REPORTED = ПОНЕСЁННЫЕ, НО НЕЗАЯВЛЕННЫЕ – Incurred But Not Reported:- estimated losses which an insurer or reinsurer, based on its knowledge or experience of underwriting similar contracts, believes have arisen or will arise under one or more contracts of insurance or reinsurance, but which have not been notified to an insurer or reinsurer at the time of their estimation. Provision for claims Incurred But Not Reported (IBNR) by the balance sheet date. In other words, it is anticipated that an event will affect a number of policies, although no claims have been made so far, and is therefore likely to result in liability for the insurer.

INCURRED LOSSES = ПОНЕСЁННЫЕ УБЫТКИ – Incurred Losses:- the aggregate of the paid and outstanding claims of an insurer or reinsurer for a year of account or some other given period of time. These losses represent known losses to an insurer or reinsurer and, subject to issues of proof of liability and the determination of the final amount payable in the case of outstanding claims, are relatively certain.

INCURRED LOSS RATIO = СООТНОШЕНИЕ С ПОНЕСЁННЫМ УБЫТКОМ – In insurance, Incurred Loss Ratio is the percentage of losses incurred to premiums earned. See also Experience. Incurred Loss Ratio is the ratio of losses paid and reserved (i.e. incurred)

to premiums earned. Incurred Loss Ratio is a proportion of losses incurred to premiums earned. This ratio indicates the amount of a premium dollar that is being consumed by losses.

INCURSION = НАШЕСТВИЕ (или ВТОРЖЕНИЕ) – Incursion is an isolated population of a pest recently detected in an area, not known to be established, but expected to survive for the immediate future.

INCURVISPINUS = С ВОГНУТЫМИ (или ИСКРИВЛЁННЫМИ ВНУТРЬ) ШИПАМИ – Incurvispinus:- with inwardly curved spines.

INDEHISCENT = НЕРАСТРЕСКИВАЮЩЕЕСЯ (или НЕВСКРЫВАЮЩЕЕСЯ, или НЕРАСКРЫВАЮЩЕЕСЯ) – Indehiscent:- (1) does not split open when ripe. (2) Does not open at maturity to discharge seeds. Indehiscent:- failing to split open at maturity. / Невскрывающееся или Нераскрывающееся.

INDEMNIFICATION = ВОЗМЕЩЕНИЕ – Indemnification is an agreement to compensate for damage or loss. Custodians may indemnify customers that lend securities. Compensation for a loss and/or the expenses incurred. Indemnification is a financial protection provided by a corporation to its directors, officers, and employees against expenses and liabilities incurred by them in lawsuits alleging that they breached some duty in their service to or on behalf of the corporation. Compensation for expenses incurred as a result of suffered losses or damages.

INDEMNIFY = ВОЗМЕЩАТЬ (или КОМПЕНСИРОВАТЬ) – Indemnify:- to restore the victim of a loss, in whole or in part, by payment, repair or replacement.

INDEMNIFYING BANK = ВОЗМЕЩАЮЩИЙ БАНК – In the United States, the term Indemnifying Bank means a bank that is providing an indemnity under Section 6 (Indemnity; the Act of Public Law 108-100 – October 28, 2003) with respect to a substitute check. See also Indemnity. / В Соединённых Штатах Америки под Возмещающим Банком понимается банк, который в соответствии с Параграфом 6 (Возмещение; Акт Публичного Законодательства 108-100 – 28 Октября 2003) обеспечивает возмещение в отношении чека субститута. Смотрите также Возмещение (Indemnity).

INDEMNITY = ВОЗМЕЩЕНИЕ (или КОМПЕНСАЦИЯ) – (1) Indemnity:- the principle according to which a person who has suffered a loss is restored (so far as possible) to the same financial position that he was in immediately prior to the loss, subject in the case of insurance to any contractual limitation as to the amount payable (the loss may be greater than the policy limit). The application of this principle is called Indemnification. Most contracts of insurance are contracts of indemnity. Life insurances and personal accident insurances are not contracts of indemnity as the payments due under those contracts for loss of life or bodily injury are not based on the principle of indemnity. Liability of an insurer for loss under a policy. Undertaking that gives protection against loss or damage. Indemnity may be in the form of replacement or repair of property lost or damaged, or provision of cash to the value of the property. One party's agreement to insure or otherwise defend another party against any claims by third parties resulting from performance under the agreement. Indemnity is insurance principle by which a policyholder is placed in the same financial position after a loss, as they were immediately before it. / Возмещение является принципом страхования, посредством которого держатель страхового полиса останется в том же самом финансовом состоянии после получения убытка (или наступления страхового случая), которое было у него непосредственно перед ним.

(2) In the Act of Public Law 108-100 – October 28, 2003:- (a) Indemnity:- A reconverting bank and each bank that subsequently transfers, presents, or returns a substitute check in any electronic or paper form, and receives consideration for such transfer, presentment, or return shall indemnify the transferee, any subsequent collecting or returning bank, the depositary bank, the drawee, the drawer, the payee, the depositor, and any endorser, up to the amount described in subsections (b) and (c), as applicable, to the extent of any loss incurred by any recipient of a substitute check if that loss occurred due to the receipt of a substitute check instead of the original check. (b) Indemnity Amount:- (1) Amount in event of breach of warranty:- The amount of the indemnity under subsection (a) shall be the amount of any loss (including costs and reasonable attorney's fees and other expenses of representation) proximately caused by a breach of a warranty provided under Section 5 (Substitute Check Warranties). (2) Amount in absence of breach of warranty:- In the absence of a breach of a warranty provided under Section 5, the amount of the indemnity under subsection (a) shall be the sum of:- (A) the amount of any loss, up to the amount of the substitute check; and (B) interest and expenses (including costs and reasonable attorney's fees and other expenses of representation). (c) Comparative Negligence:- (1) In General:- If a loss described in Subsection (a) results in whole or in part from the negligence or failure to act in good faith on the part of an indemnified party, then that party's indemnification under this section shall be reduced in proportion to the amount of negligence or bad faith attributable to that party. (2) Rule Of Construction:- Nothing in this subsection reduces the rights of a consumer or any other person under the Uniform Commercial Code or other applicable provision of Federal or State law. (d) Effect Of Producing Original Check Or Copy:- (1) In General:- If the indemnifying bank produces the original check or a copy of the original check (including an image or a substitute check) that accurately represents all of the information on the front and back of the original check (as of the time the original check was truncated) or is otherwise sufficient to determine whether or not a claim is valid, the indemnifying bank shall:- (A) be liable under this section only for losses covered by the indemnity that are incurred up to the time that the original check or copy is provided to the indemnified party; and (B) have a right to the return of any funds it has paid under the indemnity in excess of those losses. (2) Coordination Of Indemnity With Implied Warranty:- The production of the original check, a substitute check, or a copy under paragraph (1) by an indemnifying bank shall not absolve the bank from any liability on a warranty established under this Act or any other provision of law. (e) Subrogation Of Rights:- (1) In General:- Each indemnifying bank shall be subrogated to the rights of any indemnified party to the extent of the indemnity. (2) Recovery Under Warranty:- A bank that indemnifies a party under this section may attempt to recover from another party based on a warranty or other claim. (3) Duty Of Indemnified Party:- Each indemnified party shall have a duty to comply with all reasonable requests for assistance from an indemnifying bank in connection with any claim the indemnifying bank brings against a warrantor or other party related to a check that forms the basis for the indemnification.

INDEMNITY BOND = ОБЯЗАТЕЛЬСТВО ВОЗМЕЩЕНИЯ (или ОБЯЗАТЕЛЬСТВО КОМПЕНСАЦИИ) – (1) Indemnity Bond is an agreement to hold a carrier harmless with regard to a liability.

(2) Indemnity Bond is a bond which indemnifies the obligee against loss which arises as a result of failure on the part of a principal to perform.

INDEMNITY COVERAGE = ПОКРЫТИЕ ВОЗМЕЩЕНИЯ – Indemnity Coverage:- an application for a Carnet de Passages en Douane can be obtained in person or by mail by contacting your local Canadian Automobile Association (CAA) office or by printing the online application form. Once your application has been reviewed, you will also need to supply a Financial Guarantee. This guarantee can be funded using one of these options:- (i) indemnity coverage; (ii) Cash Guarantee or (iii) Irrevocable Letter of Credit. Effective 2008-September-01, CAA offers indemnity coverage as an alternative to providing a cash guarantee or a bank letter of credit. This eliminates the need to tie up significant assets until the Carnet is discharged following your return. The indemnity cost depends upon where you are travelling and the value of your vehicle. Using the insurers indemnity table take the highest percentage for the countries

you plan to visit. Multiply 10% of the current market value of your vehicle by this percentage and add 8% tax as indicated on the table, and you will have an idea of the cost of the indemnity coverage. Please note that upon the discharge of your Carnet following your return, 50% of your premium (plus 8% of taxes less a 7.5% CAA administration fee) will be refunded. Please note that the duration of the policy is for one year coinciding with the one year validity of your Carnet. Therefore, if your travels extend beyond that one year period, an additional policy must be purchased.

INDENTURE = ИНДЕНТУРА (или ДОГОВОР (или СОГЛАШЕНИЕ) ЗА ПЕЧАТЬЮ СО ВСЕМИ УСЛОВИЯМИ) – An Indenture is a legal contract reflecting a debt or purchase obligation, specifically referring to two types of practices:- in historical usage, an indentured servant status, and in modern usage, an instrument used for commercial debt or real estate transaction. The formal agreement between the issuer of a bond/debenture and the bondholder. The indenture lists all of the rights and obligations of the bondholder, trustee and issuer. Deed or instrument to which there is more than one party. It is so called because such deeds were formerly cut or torn (intended) into portions, one for each party, to prevent forgery and provide proof of each person's involvement in the transaction. Indentures were formerly widely used to bind an apprentice to his master for the period of his apprentice ship. A written agreement under which bonds and debentures are issued, setting forth maturity date, interest rate, and other terms. An Indenture is a contract stating that an individual would work for another individual for a specific number of years. Many early immigrants to the United States came over as indentured servants – someone else paid for their trip over, and in return they had to work for the individual for several years. / хозяину (или капитану) на период . Письменное соглашение, в соответствии с которым выпускаются облигации и долговые обязательства, устанавливающее дату погашения, процентную ставку и иные условия. Индентура – контракт, заключаемый между акционерным обществом и попечителем держателей облигаций, в чью обязанность входит их защита; определяет права держателей облигаций или долговых обязательств по отношению к акционерному обществу.

INDEPENDENT = НЕЗАВИСИМАЯ – (1) Independent:- describing a person or organization that is free to act unilaterally and is not dependent on any other person or organization. / В отношении описания лица или организации, это относится к его или её возможности беспрепятственно действовать самостоятельно и отсутствии его или её зависимости от любого другого лица или организации.

(2) In oil industry, Independent is a term generally applies to a non-integrated oil or natural gas company, usually active in only one or two sectors of the industry. An independent marketer buys petroleum products from major or independent refiners and resells them under his own brand name or buys natural gas from producers and resells it. There are also independents which are active exclusively either in oil or gas production or refining. / В нефтегазовой индустрии этот термин главным образом относится к неинтегрированной нефтяной или газовой компании, действующей обычно только лишь в одном или двух секторах данной индустрии. Независимый сбытовик покупает нефтепродукты у крупных или независимых нефтеперегонщиков и перепродаёт их под своим собственным фирменным названием или просто покупает природный газ у производителей и перепродаёт его. Существуют также независимые компании, действующие исключительно лишь в нефте- или газодобыче или очистке.

INDEPENDENT ACTION = НЕЗАВИСИМОЕ (или САМОСТОЯТЕЛЬНОЕ) ДЕЙСТВИЕ – Independent Action (I/A) is a separate action taken by an individual member of a conference agreement to change rates or terms of carriage as laid out in the conference agreements. Setting rate within a conference tariff that is different from the rate(s) for the same items established by other conference members. Independent Action (I/A) is a carrier can take an independent action in a conference resulting in a unique rate for that carrier within a conference (to and from the United States); ability to file a rate independently of other carrier's action. The right of a conference member to publish a rate of tariff rule that departs from the agreement's common rate or rule.

INDEPENDENT ADJUSTER = НЕЗАВИСИМЫЙ ДИСПАШЕР (или НЕЗАВИСИМЫЙ АДЖАСТЕР) – Independent Adjuster is an adjuster who works as an independent contractor, hiring himself out to insurance companies or other organizations for the investigation and settlement of claims. / Диспашер или аджастер, который работает в качестве независимого подрядчика, самостоятельно предлагающего страховым компаниям быть нанятым для расследования и урегулирования претензий. Диспашеры составляют диспашу с расчётом убытков по авариям.

INDEPENDENT ASSORTMENT = НЕЗАВИСИМЫЙ АССОРТИМЕНТ – Independent Assortment is the random assortment in which segregation for one type has no effect on any other alleles. Meiotic behavior of genes located on nonhomologous chromosomes. / Сегрегация или Выделение или Зейгерование или Разделение По Крупности (Segregation).

INDEPENDENT BROKER = НЕЗАВИСИМЫЙ БРОКЕР – Independent Broker is a member on the floor of the New York Stock Exchange who executes orders for other brokers having more business at that time than they can handle themselves, or for firms who do not have their exchange member on the floor. Formerly known as Two-Dollar Brokers from the time when these independent brokers received USD2.00 per hundred shares of executing such orders. Their fees are paid by the Commission Brokers. See also Commission Broker. / НЙФБ® или Эн.Уай.Эс.И.® (NYSE®). Независимый Брокер – член Нью Йоркской Фондовой Биржи (New York Stock Exchange (NYSE®)), исполняющий приказы для иных брокеров торгового зала биржи, если объём данных ими приказов превышает количество, которое они могут осуществить, или для фирм, члены биржи которых не присутствуют в торговом зале. Независимые брокеры, ранее называвшиеся 'двухдолларовыми' брокерами по сумме взимаемых ими комиссионных за сделки с полными лотами ценных бумаг, получают от брокеров, работающих за комиссионные, компенсацию, которая одно время была фиксированной, но теперь составляет договорную сумму.

INDEPENDENT CARRIER = НЕЗАВИСИМЫЙ ПЕРЕВОЗЧИК – Independent Carrier is a carrier that is not a member of a shipping conference. / Под Независимым Перевозчиком понимается перевозчик, который не является участником конференции по перевозкам.

INDEPENDENT CLAIM = НЕЗАВИСИМАЯ ПРЕТЕНЗИЯ (или НЕЗАВИСИМОЕ ТРЕБОВАНИЕ) – Independent Claim is a claim that does not refer back to or depend on another claim.

INDEPENDENT EUROPEAN PROGRAM GROUP = НЕЗАВИСИМАЯ ГРУППА ПО ЕВРОПЕЙСКОЙ ПРОГРАММЕ – The Independent European Program Group (IEPG) is an intergovernmental organization that is not formally part of NATO but whose membership includes all the EC members of the alliance, plus Norway and Turkey. Established in 1976, IEPG's objectives are to promote European cooperation in research, development, and production of defense equipment; improve transatlantic armaments cooperation; and maintain a healthy European defense industrial base. In 1976, the Defence Ministers of the European NATO nations (except Iceland) established a forum for armaments cooperation, the Independent European Programme Group (IEPG). The Declaration agreed by the Western European Union (WEU) Ministers in Maastricht on 10 December 1991 called for further examination of the possibilities for enhanced cooperation in the field of armaments, with the aim of creating a European Armaments Agency. At their meeting in Bonn in December 1992, the Defence Ministers of the 13 countries of the IEPG decided upon the transfer of the functions of the IEPG to the WEU. Furthermore they agreed six basic principles for the transfer, principal among which were:- (i) all 13 nations should be entitled to participate fully and with the same rights and responsibilities, in any European armaments cooperation forum; (ii)

there should be a single European armaments cooperation forum; (iii) armaments cooperation in Europe should be managed by the National Armaments Directors of all the 13 nations, who will be accountable to the Ministers of Defence of those governments; and (iv) the existing links with NATO and EDIG should be maintained. At the meeting of the WEU Council of Ministers in Rome in May 1993, the Defence Ministers of the IEPG reaffirmed the six key principles on which armaments cooperation should be based, and in particular that all decisions on these matters within the WEU framework should be taken by the 13 nations. They agreed on a number of organizational aspects of the transfer which were subsequently adopted formally by the Council at 13. Since that meeting the WEU armaments cooperation forum has been known as the Western European Armaments Group (WEAG). At their meeting in Marseille in November 2000, WEAG Defence Ministers agreed to the accession to WEAG full membership of six new nations:- Austria, the Czech Republic, Finland, Hungary, Poland and Sweden. WEAG numbers now (in 2005) 19 full members each enjoying the same rights and responsibilities. Objectives:- the objectives of the WEAG are the following:- (i) more efficient use of resources through, inter alia, increased harmonization of requirements; (ii) the opening up of national defence markets to cross-border competition; (iii) to strengthen the European defence technological and industrial base; and (iv) cooperation in research and development. The need for progress towards these objectives has become more pressing in recent years because of reductions in defence budgets and the increasing pace of technological change. Industry is responding by downsizing, restructuring and by rationalization through mergers and joint ventures or exiting from the market. Governments are also responding to ensure that defence requirements can be met in the longer term through access to affordable technology at the necessary level of capability. They are working together to intensify cooperation in the context of the developing European defence identity. Participation:- Full Members:- Austria, Belgium, the Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Italy, Luxembourg, the Netherlands, Norway, Poland, Portugal, Spain, Sweden, Turkey, United Kingdom. European Armaments Partnership:- in November 1997, at their Erfurt meeting, WEAG Ministers noted the continued interest in WEAG armaments cooperation activities expressed by a number of WEU Observers which are not members of WEAG and WEU Associate Partners and, recalling their agreement at Ostend the year before to examine a European Armaments Partnership, they agreed to respond by further opening the WEAG to those nations. They also agreed on the modalities for the participation of those nations in WEAG activities. At their meeting in Luxembourg in November 1999, WEAG Defence Ministers, in the light of the accession of the Czech Republic, Hungary and Poland to NATO and their subsequent Associate Membership in WEU, updated the modalities agreed in Erfurt in November 1997. This enabled those nations to participate in WEAG activities. Furthermore Ministers also approved a procedure for full membership of WEAG. At their meeting in Marseille in November 2000, WEAG Defence Ministers agreed to the accession to WEAG full membership of Austria, the Czech Republic, Finland, Hungary, Poland and Sweden. The modalities agreed at the Erfurt meeting for the participation of interested WEU Associate Partners remain valid. WEAG Panels and their Sub-groups are allowed to examine whether, for each item on the agenda, participation can be opened to Associate Partners. If it is decided that an Associate Partner shall participate in a specific armaments project, the nation concerned shall take part in that project on the same basis as full members, including the contribution of an appropriate financial share. WEAG closes on 23 May 2005. / , от Латинского слова Affirmo, означающее Утверждаю, . в Марселе (Marseille), Франция.

INDEPENDENT INTRODUCING BROKER = НЕЗАВИСИМЫЙ ПРЕДСТАВЛЯЮЩИЙ БРОКЕР – Independent Introducing Broker is a firm or individual that solicits and accepts commodity futures orders from customers but does not accept money, securities or property from the customer. Unlike a Guaranteed Introducing Broker, an Independent Introducing Broker is subject to minimum capital requirements and can introduce accounts to any registered Futures Commission Merchant.

INDEPENDENT LUBRICANT MANUFACTURERS ASSOCIATION = АССОЦИАЦИЯ НЕЗАВИСИМЫХ ИЗГОТОВИТЕЛЕЙ СМАЗОК – The Independent Lubricant Manufacturers Association (ILMA) is a trade association of businesses engaged in compounding, blending, formulating, packaging, marketing, and distributing lubricants. Headquartered in Alexandria, State of Virginia (VA), the United States of America. See also Lubricant. Since 1948, the Independent Lubricant Manufacturers Association (ILMA) has been the voice of member companies that produce more than a quarter of the nation's automotive lubricants and three-quarters of its metalworking fluids for customers who use their products to improve performance and increase efficiency. A Thriving Lubricants Industry Means A Thriving American Economy! Our members make specialized lubricants for everything from backhoes to bone screws. Their products keep planes in the air; cars on the road; and the machines in businesses, households and hospitals running efficiently. Without lubricants and metalworking fluids, American businesses and manufacturing would grind to a halt. Through our enforceable Code of Ethics, ILMA promotes integrity and quality in lubricant manufacturing and marketing. Our top priority is providing the safest, highest-quality products to customers for industrial, transportation and household use. We support policies based on sound science, rigorous analysis and common sense that keep our customers, employees and communities safe, while protecting our business model – providing individual solutions for our customers' needs. ILMA also serves as a technical and educational resource to members, their customers and lawmakers. For decades, our members' scientists have deepened the pool of research and enriched the technical and educational resources that inform our members, our industry and lawmakers. Who Are Our Members? ILMA members are bedrock companies, most are still privately owned, and many have been family-owned for generations; they help customers find custom solutions to their challenges. ILMA members don't drill or refine, but they often work with major refiners and distributors. Manufacturing Members are independent lubricant companies that produce over 30 percent of all lubricants and 75 percent of the metalworking fluids and other specialty industrial lubricants sold in America. International Members are independent companies manufacturing lubricants outside North America. ILMA's membership also includes Supplier Member companies that are key suppliers of the independent lubricant manufacturing industry and Marketing Member companies which market and manufacture lubricants, own and operate a lubricant storage facility and maintain a finished product inventory or utilize a toll blender to do so, but which do not meet Manufacturing Member criteria. ILMA is the principal voice for the industry before Congress, federal regulatory agencies and other industry groups. We unite around issues such as a level financial playing field, smarter regulation, advancement of American manufacturing and the protection of our members' ability to compete with larger companies. Our approach to public policy is persuasive but collaborative. We'd rather work with someone than against them. Our recommendations improve laws on behalf of our members and make environmental and safety enhancements for our customers, employees and neighbors balanced with profit and competition.

INDEPENDENT POWER PRODUCER = НЕЗАВИСИМЫЙ ПРОИЗВОДИТЕЛЬ ЭНЕРГИИ – Independent Power Producer is a nonutility power generating company that is not a qualifying facility. See also Qualifying Facility. / Автономная элетрогенерирующая компания, которая не причисляется к квалифицированной установке. Смотрите также Квалифицированная Установка (Qualifying Facility).

INDEPENDENT TARIFF = НЕЗАВИСИМЫЙ ТАРИФ – Independent Tariff:- any body of rate tariffs that are not part of an agreement or conference system.

INDEPENDENT VARIABLE = НЕЗАВИСИМАЯ ПЕРЕМЕННАЯ – Independent Variable is the variable that is not affected or influenced by other variables or factors.

INDETERMINATE = ИНДЕТЕРМИНАНТНОЕ (или НЕОПРЕДЕЛЁННОЕ) – Indeterminate:- (i) capable of continuing to grow at an apex or tip; and (ii) of sequential flowering from lateral or basal buds to the central or apical bud. See also Determinate. Indeterminate:- when no flower bud growth ends the axis of the flower cluster on the inflorescence. / Под Индетерминантным, от Латинских слов In, означающее отрицание, и Determinans, означающее Определяющий, понимается – не реагирующий на длину дня.

INDETERMINATE GROWTH = ИНДЕТЕРМИНАНТНЫЙ РОСТ – Cotton has an Indeterminate Growth habit and can grow very tall under conditions of unrestrained growth. Growth regulators, such as mepiquat chloride, are generally applied to Cotton to slow internode elongation, especially for well-fertilized irrigated Cotton. Otherwise, vigorous Cotton varieties with plenty of water and nutrients can develop very tall, heavy vegetative growth. This type of rank growth promotes boll rot and fruit abscission, and makes a Cotton crop difficult to harvest. Having a growth pattern in which stems continue growing indefinitely; with flower clusters, the opening of the lower (lateral) flowers first, and the terminal one opening later. See also Determinate. / Хлопчатник обладает индетерминантным характером роста и может вырасти очень толстым при условии несдерживаемого роста. Регуляторы роста, такие как хлорид мепикуат (mepiquat chloride), используются, главным образом, для замедления междоузлового растяжения Хлопчатника, особенно для как следует удобренного и орошаемого Хлопчатника. Иными словами, сильные селекционные сорта Хлопчатника в условиях изобилия воды и питательных веществ могут развиться в очень долстые, с мощным вегетативным ростом. Этот тип обильного роста приводит к появлению коробочной гнили и опадению плодов, что, в свою очередь, приводит к сложности в уборке урожая Хлопчатника. Наличие модели роста, при которой стебли продолжают расти неограниченно; со скоплением цветков, открытием нижних (в горизонтальном плане) цветков первыми, а верхушечных цветков – последующими. Смотрите также Детерминантный (Determinate).

INDEX = ИНДЕКС (или УКАЗАТЕЛЬ) – (1) An Index means a number, calculated by reference to a theoretical collection of assets, market indicators, securities, or derivatives, whose absolute level or periodic difference relate to the performance of the theoretical collection over that period. Third parties may be involved in the administration, maintenance, or calculation of an index. To the extent that an index provider (IP) relies on a third party for the administration, maintenance, and/or calculation of an index, the IP should establish clear roles and responsibilities for that party and receive adequate assurances that the party's index-relevant activities facilitate delivering the index according to its methodology. Index is a measure of a change in value of underlying securities. For example the All Ordinaries Index. Number measuring the change in a value (or set of values) in time or in an area. When measuring the change in a simple value, which is expressed by a single number, the index is the ratio of this value to another value for a prior period, called the base period, or for another geographic area that serves as a reference. Indexes are generally used to represent the change in a set of values, rather than in a single value. For example, indexes are used to measure changes in prices for a basket of commodities or services (consumer price index), or changes in domestic industrial production. The index is a weighted average of base indexes, which measure changes in individual values making up the composite index. A statistical yardstick expressed in terms of percentages of a base year or years. For instance, the New York Stock Exchange® Composite Index of all NYSE® common stocks is based on year-end 1965 as 50. An index is not an average. See also Averages and NYSE® Composite Index. An Index, e.g., a stock index like the Dow, is a collection of stocks that represent a certain grouping, e.g., a tech group, blue chips, a broad market (many stocks like S&P 500), narrow market (high caps), or an entire exchange (e.g., VSE index). A Stock Index, like the Dow, TSE300, or our very own T-Net20 measure the performance of a 'basket' of shares usually representing a 'market', e.g., the Dow represents the best of corporate America, the TSE300 represents the broader Toronto market, whereas the T-Net20 represents the Top BC (the Province of British Columbia) tech companies. Indexes give you a 'sense' of how any given market is performing. The T-Net, which was pegged at 1000 in Jan'98 is now (Sep'99) in the 2900+ range. Some indexes are price weighted and some are value weighted. The T-Net, a market cap weighted index, gives a true representation of what would happen to an investment in that market. In other words, CAD1 000 invested in Jan'98 would return CAD2 900 today. You can also think of a Stock Index like a Mutual Fund (in fact mutual funds are often compared to an index). Statistical indicator share index, stock index futures (index futures). / Сводный Индекс От Нью Йоркской Фондовой Биржи по всем обыкновенным акциям НЙФБ® или Эн.Уай.Эс.И.® (NYSE®). Дау (Dow).

(2) Index is a statistical indicator providing representation of the value of the items that constitute it. Indexes often serve as barometers for a given market or industry. Indexes often serve as benchmarks against which financial or economic performance is measured. The economic indicator used to calculate interest-rate adjustments for adjustable-rate mortgages. No one can be sure when an index rate will go up or down. Index:- plural:- indices. Statistical instrument used to track the development of prices and volumes of commodities and securities (stock index) over time. This is usually done by comparing the performance of the components in the index, either in percentage or relative terms, to a basic parameter which is assumed to be 100%. The economic indicator used to calculate interest-rate adjustments for adjustable-rate mortgages or other adjustable-rate loans. The index rate can increase or decrease at any time. / индикатор, используемый для переоценок процентной ставки для закладных с переоцениваемой ставкой (ЗПС; adjustable-rate mortgage (ARM)). Термин Индекс, от Латинского слова Index, означающее Перечень или Список или Указатель, в зависимости от контекста может относиться к:- (i) указателю, реестру имён, названий и тому подобного; (ii) условному обозначению (буквенному, цифровому или комбинированному) в системе какой-либо классификации, например, почтовый индекс; и (iii) числовому или буквенному указателю, которым снабжаются математические выражения для того, чтобы отличать их друг от друга, например, a_1, a_i, x_8, x_n (здесь 1, i, 8 и n – индексы) и тому подобное. В статистике индекс относится к относительной величине, характеризующей (обычно в %) динамику совокупности, состоящей из непосредственно несоизмеримых единиц, или части такой совокупности, а также изменение уровня какого-либо экономического явления по отношению к уровню того же явления, принятому за базу сравнения, например, общий индекс оптовых цен всех товаров и групповые индексы цен продовольственных и непродовольственных товаров или промышленных и сельскохозяйственных товаров и так далее. Элементы любого индекса:- индексируемая величина, тип (форма), веса, сроки исчисления. Указатель – перечень упорядоченных по алфавитному, систематическому, хронологическому, нумерационному или какому-либо другому признаку описаний произведений печати и письменности, названий предметов, собственных имён, обозначений (формул, символов и тому подобного) или других объектов, обеспечивающий быстрый поиск необходимых сведений в соответствующем информационном массиве (книжном, журнальном, аудиовизуальном и так далее). По содержанию и назначению традиционно различают два больших класса указателей – Библиографические Указатели и Вспомогательные Указатели. Библиографический Указатель, или Указатель Литературы, является разновидностью библиографических пособий; библиографические записи организованы, как правило, в систематическом порядке. Имеет самостоятельное справочное значение. Состоит обычно из двух частей:- основного указателя, являющегося справочным массивом, и вспомогательного указателя, помогающего осуществить поиск сведений, не выявленных группировкой материала в основном указателе. В зарубежной практике встречаются указатели, в которых основной (предметный) и вспомогательный (именной) указатели объединены в один с единым алфавитным расположением (так называемым словарным). Вспомогательный указатель служит путеводителем по тексту; он состоит из перечня упорядоченных рубрик, называющих (или обозначающих) информационные объекты основного текста; ссылок 'см.' и 'см. также', связывающих семантически близкие, но лексически разные понятия, и ссылок к тексту (на порядковые номера страниц, глав, параграфов, библиографических записей и других). Как существенный

элемент справочного аппарата вспомогательный указатель является эффективным средством поиска информации и выборочного чтения. Кроме того, вспомогательный указатель позволяет наглядно представить семантическую структуру произведения. Вспомогательные указатели придаются научным изданиям, библиографическим пособиям, библиотечным каталогам, архивным фондам, собраниям аудиовизуальных материалов и другим. Вспомогательные указатели подразделяются по разным признакам, в том числе:- (1) по содержанию, то есть наличию рубрик, отражающих имена собственные (личные, географические названия, названия организаций и так далее); названия конкретных предметов, названия произведений или первые строки стихотворений, цитаты, аббревиатуры, символы, формулы и так далее; соответственно различают указатели именные, предметные, географических названий, указатели цитат и так далее; (2) по группировке материала различают указатели алфавитные, систематические (тематические), хронологические и так далее; (3) по структуре рубрик, которые могут быть простыми, состоящими из одного слова или словосочетания, или же сложными, то есть включать в себя несколько звеньев – заголовок и подзаголовки; указатели, состоящие только из простых рубрик, называемых 'глухими', из сложных (и простых) – развёрнутыми, или аналитическими, а при наличии дополнительных сведений в виде аннотаций, прямых цитат из текста, дефиниций и тому подобного – аннотированными. По форме издания указатель может быть частью издания, к которому он составляется; издан отдельно в виде самостоятельной публикации; издан на карточках (перфорированных, неперфорированных). Выбор конкретного указателя или системы указателей зависит от вида издания, его тематики и читательского назначения. Высокоразвитая система указателей представлена в научно-справочном аппарате Полного собрания сочинений Владимира Ильича Ленина (5-е Издание). С середины XX века с развитием электронно-вычислительной техники в научно-информационной деятельности стали применяться также новые виды указателей, обычно подготавливаемые при помощи ЭЦВМ и основанные на принципе координатного индексирования. К ним относятся:- указатели цитированной литературы, пермутационные и координатные указатели. Указатель цитированной литературы (библиографических ссылок) представляет собой перечень фамилий авторов (в алфавитном порядке) и названий их работ, на которые ссылается автор данного текста. В ссылках даются также краткие указания на издания, в которых упомянуты ('цитируются') работы авторов. Полное описание этих изданий и публикаций даётся в отдельном указателе источников. Указатель цитированной литературы способствуют, в частности, решению задач науковедческого анализа и прогнозирования (смотрите Научно-Технический Прогноз). Пермутационный указатель – разновидность вспомогательного алфавитно-предметного указателя, в котором функцию предметных заголовков выполняют значимые слова в заглавиях индексируемых документов или в их рефератах. Каждое такое слово последовательно вводится в поисковую колонку, отделённую пробелом от остальных слов заглавия или реферата, составляющих контекст данной предметной рубрики (отсюда его другое название – Указатель Ключевых Слов, Приводимых В Контексте). Каждой строке пермутационного указателя ставится в соответствие код (шифр документа, полное описание которого содержится в библиографической части указателя). Разновидности указателя – двойной пермутационный указатель (ключевые слова используются как традиционные предметные рубрики), указатель ключевых слов, приводимых вне контекста, квазипермутационный указатель (вместо заглавий используются цепочки дескрипторов из поисковых образов документов). Координатный (табличный, коррелятивный, неманипулятивный) указатель позволяет производить координацию двух или более терминов, которые необязательно расположены в алфавитном порядке (как в предметном указателе) или в порядке смысловой иерархии (как в систематическом указателе). Индекс или Указатель – статистический составной показатель, отражающий изменения в экономике или на финансовых рынках, часто отражает процентные изменения по сравнению с базисным годом или предыдущим месяцем. Например, при расчёте индекса по потребительским ценам (consumer price index) в качестве базисного сейчас используется период 1982–84. Этот индекс включает показатели по основным потребительским товарам и услугам, он сдвигается вверх или вниз в зависимости от изменения уровня инфляции. К середине 1990-х индекс вырос со 100 в 1982–84 до более чем 150, и это означает, что стоимость потребительской корзины, на которой основан индекс, выросла с этого времени более чем на 50%. Индексы также являются мерой роста и падения котировок на рынках акций, облигаций и товарно-сырьевой продукции, так как отражают рыночные цены и количество находящихся в собственности акционеров акций компаний, включённых в индекс. Среди нескольких широко известных индексов – Индекс от Нью Йоркской Фондовой Биржи (New York Stock Exchange Index), Индекс от Американской Фондовой Биржи (American Stock Exchange® Index), Индекс от Стэндод Энд Поз (Standard & Poor's), а также Индекс от Валъю Лайн (Value Line). Также рассчитываются подиндексы для отдельных отраслей промышленности, таких, как производство напитков или компьютеров, железные дороги. Индексы рынков акций составляют основу торговых операций с опционами на индекс (index options).

INDEX ARBITRAGE = ИНДЕКСНОЕ АРБИТРАЖИРОВАНИЕ (или АРБИТРАЖИРОВАНИЕ НА ИНДЕКСАХ) – Index Arbitrage is a strategy where a trader tries to profit from pricing discrepancies between an index futures contract and the underlying index. The trader either buys or sells the stocks making up the index, and simultaneously takes the opposite position in the futures market. The simultaneous purchase (sale) of stock index futures and the sale (purchase) of some or all of the component stocks that make up the particular stock index to profit from sufficiently large intermarket spreads between the futures contract and the index itself. See also Arbitrage, and Program Trading.

INDEX CONTRACT = ИНДЕКСНЫЙ КОНТРАКТ (или КОНТРАКТ НА ИНДЕКС) – Index Contract:- any futures and option contracts and any other commodity contracts which are based on any index (for example, Reuters CRB Futures Price Index) and traded at the exchange. / Ройтас (Reuters).

INDEXED BOND = ИНДЕКСИРУЕМАЯ ОБЛИГАЦИЯ – Indexed Bond:- with this financial instrument, investors are guaranteed a fixed rate of return in real terms, since the nominal interest rate is regularly adjusted to match changes in the price index. See also Index-Linked Bond. Indexed Bond is a bond whose payments are linked to an index, e.g., the consumer price index. / Индексируемая Облигация – облигация с переменным доходом, для которой номинал облигации постоянно пересчитывается с учётом изменения определённого индекса, и доход начисляется с учётом изменения номинала.

INDEX GROWTH LINKED UNIT = ПАЙ, УВЯЗАННЫЙ С РОСТОМ ИНДЕКСА – Index Growth Linked Unit (IGLU) is a structured product consisting of a bond and a call option on the market index. Index Growth Linked Units (IGLUs) offer a synthetic diversified share portfolio which is also hedged against losses (minimum capital redemption is guaranteed). Index Growth-Linked Units (IGLUs) is a combination of a note and a collar or equity risk reversal position. As the name implies, the underlying is usually an index, but it may also be a small basket of stocks.

INDEX FUND = ИНДЕКСНЫЙ ФОНД – An Index Fund or index tracker is a collective investment scheme (usually a mutual fund or exchange-traded fund) that aims to replicate the movements of an index of a specific financial market, or a set of rules of ownership that are held constant, regardless of market conditions. As of 2007, index funds made up over 11% of equity mutual fund assets in the United States. Algorithmic trading ahead of index fund rebalancing transfers profits from investors. Tracking can be achieved by trying to hold all of the securities in the index, in the same proportions as the index. Other methods include statistically sampling the market and holding 'representative' securities. Many index funds rely on a computer model with little or no human input in the decision as to

which securities are purchased or sold and are thus subject to a form of passive management. The lack of active management generally gives the advantage of lower fees (which otherwise reduce the investor's return) and, in taxable accounts, lower taxes. In addition it is usually impossible to precisely mirror the index as the models for sampling and mirroring, by their nature, cannot be 100% accurate. The difference between the index performance and the fund performance is called the 'Tracking Error', or, colloquially, 'Jitter'. Index funds are available from many investment managers. Some common indices include the S&P 500, the Nikkei 225, and the FTSE 100. Less common indexes come from academics like Eugene Fama and Kenneth French, who created 'research indexes' in order to develop asset pricing models, such as their Three Factor Model. The Fama-French three-factor model is used by Dimensional Fund Advisors to design their index funds. Robert Arnott and Professor Jeremy Siegel have also created new competing fundamentally based indexes based on such criteria as dividends, earnings, book value, and sales. Investment fund whose portfolio is selected to match the structure of a recognized stock market index. Index Fund is a type of mutual fund with a portfolio constructed to match or track the components of a market index, such as the Standard & Poor's 500 Index (S&P 500). An index mutual fund is said to provide broad market exposure, low operating expenses and low portfolio turnover. 'Indexing' is a passive form of fund management that has been successful in outperforming most actively managed mutual funds. While the most popular index funds track the S&P 500, a number of other indexes, including the Russell 2000 (small companies), the DJ Wilshire 5000 (total stock market), the MSCI EAFE (foreign stocks in Europe, Australasia, Far East) and the Lehman Aggregate Bond Index (total bond market) are widely used for index funds. Investing in an index fund is a form of passive investing. The primary advantage to such a strategy is the lower management expense ratio on an index fund. Also, a majority of mutual funds fail to beat broad indexes, such as the S&P 500. Although a S&P 500 or Dow Jones Industrial Average index fund should each replicate its respective index, the fund's performance is not guaranteed to be the same as others like it or as the index it mimics. The Cover:- an index fund is a passive investment. As such, the fund manager selects a combination of assets for a portfolio that is intended to mimic an index, such as the S&P 500. Because the fund's underlying assets are held and not actively traded, operating expenses are usually lower. A Closer Look:- to some investors, it is reasonable to assume that all index funds perform the same; however, a deeper look will uncover all sorts of discrepancies between funds. The most important difference that will eat into your return is a fund's operating expenses, which are expressed as a ratio – the percentage of expenses compared to the amount of annual average assets under management:- (Example – Expense Ratios) investors who choose to place their money in index funds generally expect lower operating expenses. After all, the fund management doesn't have to select or manage any securities whatsoever! In general, expenses are very important to consider when investing, and index funds are no exception to the rule because expenses reduce an investor's return. Consider the following comparison of 10 S&P 500 funds and their expense ratios as of April 2003. The different bars in the chart above represent different funds. Notice that expense ratios range from 0.15% to almost 1.60%. Bear in mind that the yearly return of the S&P 500 as of the end of April 2003 was approximately 5%. If we assume that the fund tracks the index closely, a 1.60% expense ratio will reduce an investor's return by about 30%! Fee Factor:- it is outlandish that index funds with almost identical portfolio mixes and investing strategies can get away with charging higher fees. The sad truth is that some index funds actually charge front-end loads, back-end loads and 12b-1 fees – all of which will eat into your return. For example, one fund in the above chart (which will remain unnamed), does not have the highest expense ratio but charges a back-end load of 3% and a 12b-1 fee of 1%! Larger and more established funds, such as the Vanguard 500 Index fund, tend to charge lower fees. This may be because management has more experience in tracking indexes or because of the ability to use the economies of scale that a large asset base produces. Furthermore, more established funds do not need additional advertising to attract investors. Whatever the reason, there is simply no justification for higher fees or, for that matter, operating expenses for the exact same product. The Tracking Error:- another way to compare index funds is by looking at their tracking errors, which measures how much the fund deviates from the index it is mimicking. The tracking error is usually expressed as a standard deviation, and a large deviation indicates that there are large inconsistencies between the return of an index fund and its benchmark. This large divergence could be an indication of poor fund construction and/or large fund fees and high operating expenses. High costs can cause the return on an index fund to be significantly lower than the index's return, resulting in a large tracking error. Deviation creates smaller gains and larger losses for the fund. Consider Figure 2, below, which compares the S&P 500's return (red), the Vanguard 500 (green), the Dreyfus S&P 500 (blue) and the Advantus Index 500 B (purple). Notice that the index fund's divergence from the benchmark increases as expenses increase. What's in a Name? When screening for an index fund that fits your investing needs, do not be misled to believe that all index funds labeled as S&P 500 or Wilshire 5000 only follow those indexes. Some funds actually have divergent management behavior. Within the S&P 500 fund group, there is a socially responsible index fund and an enhanced fund. Both of these funds can be found within the S&P 500 Index Tracker funds category – but are they really index funds? When a portfolio manager for an index fund performs additional management services, the fund is no longer passive. Consequently, funds with these added selling features have fees that are well above average. Take, for example, the Devcap Shared Return fund, which is a socially responsible S&P 500 index fund. As of June 04, 2003, it had an expense ratio of 1.75% and charged a 12b-1 fee of 0.25%. Another fund, the ASAF Bernstein Managed Index 500 B, was categorized as an S&P 500 index fund, but it actually sought to outperform the S&P 500! It's not a problem to want to buy a fund that tries to beat the S&P or is socially responsible. The point here is not to get confused between true index funds and funds that just have index-like names. Final Considerations:- within the index fund category, not all funds listed are as diversified as those tracking an index such as the S&P 500. Many index funds actually have the same properties as focused, value and/or sector funds. Remember that focused funds tend to hold fewer than 30 stocks or assets within the same sector. The lack of diversification in sector funds – like the American Gas Index fund – and value index funds that invest in fewer than 30 stocks – like the Strong Dow 30 Value fund – expose investors to higher risk than a fund tracking the S&P 500, which is comprised of 500 companies within various sectors of the economy. Due to the increased risk, it becomes even more important to consider fees, because they reduce the amount of return received for the risks taken. Consider the following comparison of Dow 30 index funds. In this example, the Orbitex Focus 30 A has an expense ratio of almost 3%! A closer look shows a front-end load of 5.78% and 12b-1 fees of 0.40%. Because the Dow lost around 12% over the year ending at the end of April 2003, investors in this fund would have lost around 15%! Take-Home Notes:- if you are an investor who would like to invest in an index fund, be sure to look beyond just the cover:- (i) costs and tracking errors – try to choose investments that have minimal operating expenses and, preferably, no fees or tracking errors. An excellent resource that we've found useful for screening index funds, especially those tracking the S&P 500 index, is Indexfunds.com. This website's screening feature allows you to sort funds according to their expense ratios, returns and other elements. (ii) Compare your chosen index fund with other similar funds – this will allow you to determine the reasonable range of expenses and tracking errors for that particular fund group. The Bottom Line:- not all index funds perform the same. Expense ratios, fees and tracking errors can drastically affect an index fund's performance. Investors should carefully investigate an index fund before buying in to make sure that its fees are low and that they have a firm understanding of what the fund invests in, as well as the strategies and goals that management uses to meet its objectives. Index funds can be very dependable investments, but investors are more likely to find one they can count on if they weed out any element of surprise. A portfolio of investments that closely reflects the composition of an index in order to mirror its performance. Index Fund or Exchange Traded Index Fund (ETIF):- these are like mutual funds that mirror the composition of an Index, e.g., a very popular one is called the Nasdaq 100 (ticker symbol QQQ) ETIF in which you can effectively buy and sell the underlying Index on a stock exchange (look it up!). Index Fund is an investment fund that is linked directly to a share index,

in that it has investments in shares on that index. / Эс.ЭндПи. 500 (S&P 500), Никкэй 225 (Nikkei 225), и ФУТСИ 100 (FTSE 100). От таких академиков как Юдьжин Фама (Eugene Fama) и Кенес Фрэнч (Kenneth French), которые создали . Робёт Анэт (Robert Arnott) и Профессор Дьжерэми Сигэл (Jeremy Siegel). Бёнстайн (ASAF Bernstein Managed Index 500 B). 225 от Никкэй (Nikkei 225). НЭЗДЭК® (NASDAQ®) . Индексный Фонд – взаимный фонд, портфель которого привязан к портфелю с широкой базой. Он может включать Индекс по 500 от Standard & Poor's, индексы по акциям со средним и низким уровнем капитализацией, индекс по зарубежным акциям, просто индексы по акциям. Многие институциональные и индивидуальные инвесторы, особенно сторонники теории эффективного рынка (efficient market), размешают средства в индексные фонды, считая, что, поскольку превысить средние рыночные показатели при долгосрочных вложениях практически невозможно, вложения в такие фонды позволят по меньшей мере получить доходы, соответствующие индексу по рынку. С тех пор как управленческие расходы в индексных фондах значительно снизились по сравнению с расходами на управление портфелем, подобные фонды получили преимущество по стоимости. Индексные Фонды включают в свои портфели все акции, входящие в расчётную базу определённого индекса, и, таким образом, отслеживают результаты целого сегмента рынка или даже рынка в целом, отражаемые данным индексом. Наиболее популярным индексом, отслеживаемым индексными фондами, является Standard & Poor's 500. Однако в настоящее время на рынке представлены фонды, отслеживающие несколько десятков различных индексов, причём число отслеживаемых фондами индексов постоянно увеличивается. Инвестирование в индексные фонды часто называют 'пассивным' инвестированием из-за отсутствия у данных фондов необходимости осуществлять активное управление портфелем. Результаты индексного фонда не могут превзойти результаты соответствующего индекса. Тем не менее, средняя доходность индексных фондов нередко превышает доходность большинства 'активно управляемых' фондов, а их коэффициенты расходов обычно значительно ниже.

INDEX FUTURES = ФЬЮЧЕРС НА ИНДЕКС – Index Futures is a futures contract on a stock or financial index. For each index there may be a different multiple for determining the price of the futures contract. For example, the S&P 500 Index is one of the most widely traded index futures contracts in the United States. Stock portfolio managers who want to hedge risk over a certain period of time often use S&P 500 futures to do so. By shorting these contracts, stock portfolio managers can protect themselves from the downside price risk of the broader market. However, by using this hedging strategy, if perfectly done, the manager's portfolio will not participate in any gains on the index; instead, the portfolio will lock in gains equivalent to the risk-free rate of interest. Alternatively, stock portfolio managers can use index futures to increase their exposure to movements in a particular index, essentially leveraging their portfolios. Index Futures is a futures contract which has as its underlying asset an index, for example, an index based on the price of selected shares. Contracts for future delivery based on the development of a share or price index within a specified period. See also Financial Futures, and Share Index.

INDEX HEDGING = ХЭДЬЖИРОВАНИЕ ИНДЕКСОМ – Index Hedging is a strategy of hedging a share portfolio with put options on a share index, e.g., Swiss Market Index (SMI) hedging. / Стратегия хэдьжирования портфеля акций с помощью опционов на продажу по фондовому индексу, например, хэдьжирование Индексом по Швейцарскому Рынку (ИШР; Swiss Market Index (SMI)).

INDEX INDUSTRY ASSOCIATION = АССОЦИАЦИЯ ИНДЕКСНОЙ ОТРАСЛИ (или АССОЦИАЦИЯ ИНДУСТРИИ ИНДЕКСОВ) – Founded in 2012, the Index Industry Association (IIA) is an independent, not-for-profit organization representing the global index industry. The purpose of IIA is to represent the global index industry by working with market participants, regulators, and other representative bodies to promote sound practices in the index industry that strengthen markets and serve the needs of investors. Several of the leading index providers in the world are members of IIA, including Barclays, FTSE Group, Markit, MSCI Inc., NASDAQ OMX, Russell Investments, and S&P/Dow Jones Indices, LLC. Our members have calculated indices since 1896 and, in the aggregate, the members of IIA calculate over one million indices for their clients, covering a number of different asset classes, including equities, fixed income, and commodities. Headquartered in New York, the United States. / Барклис (Barclays), ФУТСИ Груп (FTSE Group), Маркит (Markit), Эм.Эс.Си.Ай. Инк. (MSCI Inc.), НЭЗДЭК® (NASDAQ®), Расэл Инвэстмэнтс (Russell Investments), и Эс.ЭндПи./Дау Дьжонз (S&P/Dow Jones).

INDEXING = ИНДЕКСИРОВАНИЕ – Indexing is a method of tying the value of an investment or return on investment to changes in a base reference or index, such as price, production or productivity. Also known as Index-Linking. An investment strategy that aims to replicate the performance of a market or market segment by owning the specific securities in an index. / Индексирование – привязка к индексу. (1) Формирование инвестиционного портфеля таким образом, чтобы он был привязан к фондовому индексу, подобному Индексу от Стэндод Энд Поз (Standard & Poor's), для того чтобы результаты вложений соответствовали показателям этого индекса, или были куплены акции индексного фонда (index fund). (2) Привязка заработной платы, налогов или иных платежей к некоторому индексу. Например, в трудовом контракте может быть оговорена индексация заработной платы в соответствии с индексом по потребительским ценам для защиты от потери покупательной способности в периоды растущей инфляции.

INDEX LEPOS = ИНДЕКСНЫЕ ОНЦИ – Index LEPOs:- what is the difference between a future and an index LEPO? LEPO stands for Low Exercise Price Option. LEPOs give the option taker the right to 'buy' the underlying index at a strike price price of 1 point. Economically, LEPOs exhibit similar price behaviour to futures contracts over the same index. There are some differences between the two instruments:- (i) the taker of a LEPO must remember to exercise the LEPO at expiry if the position has not been closed out, whereas the futures contract is automatically cash settled at maturity; (ii) the risk margin of a LEPO is calculated as a percentage of the value of the underlying index, whereas the initial margin of a futures contract is a fixed dollar amount; (iii) LEPOs are traded on the ASX's options market. Low Exercise Price Options (LEPOs) may be over either shares or an index. An Index LEPO is a European call option over a share price index with a 1 point strike price.

INDEX–LINKED BOND = ОБЛИГАЦИЯ С УВЯЗКОЙ К ИНДЕКСУ (или ОБЛИГАЦИЯ, ПРИВЯЗАННАЯ К ИНДЕКСУ) – Index-Linked Bond is a bond in which payment of income on the principal is related to a specific price index – often the Consumer Price Index. This feature provides protection to investors by shielding them from changes in the underlying index. The bond's cash flows are adjusted to ensure that the holder of the bond receives a known real rate of return. In Canada, they also referred to as Real Return Bonds. This type of bond is valuable to investors because the real value of the bond is known from purchase and the risk involved with uncertainty is eliminated. These bonds are also less volatile than nominal bonds and they help investors to maintain their purchasing power. For example, assume that you purchase a regular bond with a nominal return of 4%. If inflation is 3%, you will actually only receive 1% in real terms. On the other hand, if you buy an index-linked bond your cash flow will be adjusted to changes in inflation and

you will still receive the full 4% in returns. Index-Linked Bond:- international bonds for which the interest (or coupon) rate and/or redemption value is linked to a specified index, such as the price of gold, other currencies, commodities, etc. Also known as Indexed Bond.

INDEX–LINKED BOND ISSUE = ЭМИССИЯ ОБЛИГАЦИИ С УВЯЗКОЙ К ИНДЕКСУ (или ВЫПУСК ОБЛИГАЦИИ, ПРИВЯЗАННОЙ К ИНДЕКСУ) – Index-Linked Bond Issue is the bond issue which links the amount to be repaid for principal and interest to the changes in a specific index. A price index clause can protect bondholders to a large extent against the consequences of monetary erosion (inflation).

INDEX–LINKED GILTS = УВЯЗАННЫЕ С ИНДЕКСОМ ГИЛТЫ (или ГИЛТЫ, ПРИВЯЗАННЫЕ К ИНДЕКСУ) – In the United Kingdom, Index-Linked Gilts are the gilts whose coupon and redemption value are linked to movements in the retail prices index. Index-Linked Gilt is a bond issued by the British Government for which the interest payments (coupons) and the final redemption proceeds are linked to movements in the official government Retail Price Index (RPI).

INDEX MANAGED = УПРАВЛЯЕМЫЙ ИНДЕКС – Index Managed:- where a fund manager holds the components of the index in order to replicate its performance. This may be over one or more indices. The manager adopts a 'buy and hold' approach rather than actively managing the fund.

INDEX OF INDUSTRIAL PRODUCTION = ИНДЕКС ПО ПРОМЫШЛЕННОМУ ПРОИЗВОДСТВУ – Index of Industrial Production (IIP) in simplest terms is an index which details out the growth of various sectors in an economy, e.g., Indian IIP will focus on sectors like mining, electricity and manufacturing. Also base year needs to be decided on the basis of which all the index figures would be arrived at. In case of India the base year was first fixed at 1993–94 hence the same would be equivalent to 100 Points but now the base year is changed to 2004–05. Index of Industrial Production (IIP) is an abstract number, the magnitude of which represents the status of production in the industrial sector for a given period of time as compared to a reference period of time. The all India IIP is a composite indicator that measures the short-term changes in the volume of production of a basket of industrial products during a given period with respect to that in a chosen base period. It is compiled and published monthly by the Central Statistics Office (CSO) with the time lag of six weeks from the reference month. In India, the first official attempt to compute the IIP was made much earlier than even the recommendations on the subject at the international level. The Office of the Economic Advisor, Ministry of Commerce and Industry made the first attempt of compilation and release of IIP with base year 1937, covering 15 important industries, accounting for more than 90% of the total production of the selected industries. The all-India IIP is being released as a monthly series since 1950. With the inception of the Central Statistical Organization in 1951, the responsibility for compilation and publication of IIP was vested with this office. Index Of Industrial Production is a measure of the physical output of the nation's factories, mines and utilities. Industrial Production Index (IPI) is an economic indicator that is released monthly by the Federal Reserve Board. The indicator measures the amount of output from the manufacturing, mining, electric and gas industries. The reference year for the index is 2002 and a level of 100. Production data is often received directly from the Bureau of Labor Statistics and trade associations, both on physical output and inputs used in the production process. Each individual index is calculated using the Fischer index formula. Investors can use the IPI of various industries to examine the growth in the respective industry. If the IPI is growing month-over-month for a particular industry, this is a sign that the companies in the industry are performing well. / выработка (output).

INDEX OF REFRACTION = ПОКАЗАТЕЛЬ РЕФРАКЦИИ (или ИНДЕКС РЕФРАКЦИИ, или ПОКАЗАТЕЛЬ ПРЕЛОМЛЕНИЯ) – Index Of Refraction is a ratio of the velocity of light in one medium to its velocity in a second medium as the light passes from medium to medium. If a medium is crystalline, the velocity may depend on the direction of the light with respect to the crystalline axes and the substance may have several indexes of refraction, i.e. it may be birefringent. See also Birefringence. Index Of Refraction is the numerical expression of the ratio of the velocity of light in a vacuum to the velocity of light in a substance (gas, liquid, solid), at a specified wavelength. / Смотрите также Двупреломление или Двойное Лучепреломление (Birefringence). Показатель Преломления – отношение скорости распространения света в воздухе к скорости распространения света в испытуемом веществе. В фармакогнозии показатель преломления определяют для жирных и эфирных масел.

INDEX OPTIONS = ОПЦИОНЫ НА ИНДЕКС (или ИНДЕКСНЫЕ ОПЦИОНЫ) – Index Option is a financial derivative that gives the holder the right, but not the obligation, to buy or sell a basket of stocks, such as the S&P 500, at an agreed-upon price and before a certain date. An index option is similar to other options contracts, the difference being the underlying instruments are indexes. Options contracts, including index options, allow investors to profit from an expected market move or to reduce the risk of holding the underlying instrument. Index options provide diversification as investors are exposed to a large number of securities in one trading instrument. The degree of exposure varies with the particular index option. Popular index options include S&P 500 Index Options (SPX), Dow Jones Industrial Average Index Options (DJX) and Nasdaq-100 Index Options (NDX). Index options are typically cash settled. Index Options:- you can balance your portfolio by investing in options on a stock index, which tracks an entire market or sector. Index options are puts and calls on a stock index, rather than on an individual stock. For many investors, the appeal of index options is the exposure they provide to the performance of a group of stocks. Holding the equivalent stock positions of one index option – say the 500 stocks in the S&P 500 – would require much more capital and numerous transactions. Another attraction is that index options can be flexible, fitting into the financial plans of both conservative and more aggressive investors. If you've concentrated your portfolio on large US companies, you might sell options on an index that correlates to your portfolio to hedge your investments. Or, if you feel that the biotech industry is headed for record gains, you could purchase a call on the Biotech Industry Index. Most index options are European style, which means they can only be exercised at expiration, not before. Hedging Your Portfolio:- conservative investors may use index options to hedge their portfolios. If your portfolio drops in value, an index that corresponds to the movement of your portfolio will drop as well. By purchasing a put on that index, you're entitled, at expiration, to an amount of cash proportionate to the drop of the index below the strike price. For example, say you have USD100 000 invested in a portfolio that contains some of the larger stocks in the broad-based XYZ Index, which is currently trading at about 950. You'd like to protect yourself against a loss of more than 5%, or USD5 000. You purchase a 900 put on the XYZ Index. In the next few months, your portfolio drops in value by about 10%, to USD90 000. Since XYZ has a similar makeup, it has also dropped by a little more than 10%, to 850. Your put is now in-the-money by 50 points, and at expiration you receive USD5 000 minus the premium you paid for the put and any sales charges. Your overall loss is reduced to about USD5 000, or 5%, which was your predetermined acceptable level. Keep in mind, though, that what you pay for the put affects your return. If the index doesn't drop before expiration, your option will remain out-of-the-money or at-the-money. You can decide whether to extend your hedge by buying another option with a later expiration, or rolling out. Using Leverage:- index options also appeal to investors because of the leverage they provide. Investors can participate in moves for a fraction of the cost of purchasing the equivalent assortment of stocks. And even a small change can result in large percentage gains. The downside of leverage, of course, is that if the market moves against expectations, the percentage loss can be high, and might be all of your investment. The leverage of index options also means that if you're confident a certain sector is going to make gains, but you don't know which individual stock will rise, you can purchase an index call to benefit from the broader market shift. What's The Risk? The risk of buying index options is the

same as the risk of buying stock options:- It's limited to the amount of premium you pay. If you're considering buying a put, it's important to weigh the cost of hedging your portfolio against the benefits of the hedge. Index options writers, however, face substantial potential risk. Since the value of the index might drop suddenly, a put writer might owe a lot of cash. The same risk applies to a call writer, if the index increases sharply. And index call writers usually can't cover themselves by holding the underlying instrument, as they can with individual stock options. Margin Considerations:- the margin requirements are different for writing index options than for writing options on individual equities. In general, you initially need to deposit the entire premium, and at least 15% of the contract's aggregate value, or the level of the index multiplied by USD100, in your margin account. Since the aggregate value of an index option changes daily, the amount of the margin maintenance requirement fluctuates, which means you'll need to pay close attention to your account to avoid a margin call. How Much Insurance? If you're using index puts to hedge your portfolio, you'll have to calculate the number of contracts to purchase in order to match the size of your portfolio. (1) Determine the current aggregate value of the index option:- Aggregate Value = XXX Current Index Value x USD100. (2) Divide the value of your portfolio by the aggregate value:- Number Of Contracts = XXX Your Portfolio's Value / Aggregate Value (from above); the result is the number of contracts that will protect your entire portfolio. Once you've determined the number of contracts that will cover your portfolio, you should calculate how much downside protection you want. The strike price you choose should match that amount, so that the insurance will kick in if the index drops that far. For example, if you want to protect against a decline greater than 10% in your portfolio, your strike price should be 90% of the current value of the index, which would be the value of the index if it drops 10% from current value. If your goal is to hedge your portfolio with index puts, the key is to find an index that mirrors the movement of your portfolio. Otherwise, what happens to the index won't accurately reflect what happens to your portfolio, and you may not offset any of its declining value. The first step is to find indexes that cover the same market or sector as your portfolio. Once you've narrowed your choices, you might use the past performance of an index or judge its volatility to find one that closely mirrors your portfolio's movement. But unless your portfolio exactly matches the makeup of an index – which is very unlikely – you'll always face the risk that it won't move the same way your portfolio does. Index Options are the options over a share price index. Index options are cash settled on exercise. Index options quotations, updated once a day at 08:00 pm Eastern time (the United States), are grouped by the exchange on which they trade, and are listed alphabetically. Introduced in 1981, stock Index Options are options whose underlying is not a single stock but an index comprising many stocks. Investors and speculators trade index options to gain exposure to the entire market or specific segments of the market with a single trading decision and often thru one transaction. Obtaining the same level of diversification using individual stocks or individual stock options require numerous transactions and consequently slower decision making and higher costs. Leverage & Predetermined Risk for the Buyer:- like equity options, trading index options gives the investor leverage and predetermined risk. The index option buyer gains leverage as the premium paid relative to the contract value is small. Consequently, for a small percentage moves of the underlying index, the index option holder can see large percentage gains for his position. Furthermore, risk is predetermined as the most the index option trader can lose is the premium paid to hold the options. Contract Multiplier:- stock index options typically have a contract multiplier of USD100. The contract multiplier is used to compute the cash value of each index option contract. Premium:- similar to equity options, index options premiums are quoted in Dollars and cents. The price of a single equity index option contract can be determined by multiplying the quoted premium amount by the contract multiplier. This is the amount that an index option buyer will need to pay to purchase the option and the amount that the index option writer will receive when selling the option. Rights Conferred:- as index options are cash-settled options, the holder of an index option does not possess the right to purchase or sell the underlying stocks of the index but rather, he or she is entitled to demand the equivalent cash value from the option writer upon exercising his option. / Опционы на Индекс по 500 от Эс.ЭндПи. (S&P 500 Index Options (SPX)), Опционы на Промышленный Усреднённый Индекс от Дау Дьжонз (Dow Jones Industrial Average Index Options (DJX)) и Опционы на Индекс по 100 от Нэздэк (Nasdaq-100 Index Options (NDX)). Опционы на индекс по ценам акций. Опционы на индекс при их исполнении предполагают финансовый взаиморасчёт между лицами, вовлечёнными в сделку с данными опционами. Опционы на Индекс или Индексные Опционы – опционы на покупку и продажу на индексы по акциям. Торговля этими опционами ведётся, среди прочих, на Нью Йоркской и Американской фондовых биржах, Чикагской Бирже Опционов (Chicago Board Options Exchange). В индексы с широкой базой включаются акции многих компаний и отраслей промышленности, в то время как в индексы с узкой базой включаются акции одной отрасли промышленности или одного сектора экономики. Индексные опционы позволяют инвесторам вести торговые операции на определённых рынках или с акциями определённых промышленных групп без покупки всех акций по одной. Например, лицо, предполагающее, что ожидается падение котировок акций нефтяных компаний, может приобрести опцион на продажу на индекс по акциям нефтяных компаний вместо того, чтобы осуществлять продажу в короткую половины своих акций нефтяных компаний.

INDEX TRACKING FUND = ФОНД, ОТСЛЕЖИВАЮЩИЙ ИНДЕКС – Index Tracking Fund (or an Index Fund) is an investment fund with the specific objective of tracking a particular index. The fund manager can either hold all the stocks in the index in the appropriate proportions (known as Full Replication) or use some mathematical model to choose a smaller sample of stocks which will perform as closely as possible to the index.

INDEX WARRANTS = ИНДЕКСНЫЕ ВАРРАНТЫ – Index Warrant is an option issued by a corporation to buy or sell a stock index that is exercisable throughout the life of the option for a cash settlement. Index warrants are typically used in hedge strategies to protect portfolios against adverse market movements. Index Warrant is a stock index option issued by either a corporate or a sovereign entity as part of a security offering, and guaranteed by an option clearing corporation. Index Warrant is an option on a stock index or other security index. Those who buy and sell index warrants are often hedging against the overall movement of the index that the option tracks. For example, one may take a long position on an index fund, where the investor benefits if the index rises, and simultaneously purchase put index warrants locking in a certain price to sell the index fund if the long position does not rise. Index Warrants are linked to the performance of a share price index such as the S&P, ASX 200 index or a foreign index.

INDIA = ИНДИА – India (pronunciation:- IN-dee-ah) or I is international nautical signal flag meaning:- (i) International:- I am directing my course to port. (ii) Navy:- Coming alongside. (iii) Sailing Regatta:- Round the Ends Starting Rule. Meaning:- I am altering my course to port. Inport (flown by both vessels on engaged side):- I am coming alongside. At the dip:- preparing. Closed up:- ready. Hauled down:- first line over. International Meaning:- I am altering course to port.

INDIAN MUSLIN = ИНДИЙСКИЙ МУСЛИН – Indian Muslin is a muslin is the name for a very large group of plain-weave fabrics originally made of cotton. Most muslin used for purposes other than sheets is unbleached, which means that bits of trash, usually appearing as brown flecks, add color to the fabric. Occasionally, unbleached muslin becomes popular in fashion, even for wedding gowns. Indian muslin is a very fine muslin from India, often printed with gold and silver and is an expensive luxury fabric. See also Flecks, Muslin, and Trash.

INDIAN REDI = ИНДИЙСКОЕ РЭДИ – Indian Redi is a strong or moderate reddish brown.

INDICA RICE = РИС ИНДИКА – Indica Rice is one of the two major ecogeographical races of Oryza Sativa (see also Japonica). The major type of Rice grown in the tropics and subtropics. It has broad to narrow, light green leaves and tall to intermediate plant stature (except for the semidwarf). Indica plants tiller profusely. Grains are long to short, slender, somewhat flat, and awnless. Indica grains shatter easily and have 23–31% amylose content. They grow mostly in the Philippines, India, Pakistan, Java, Sri Lanka, Indonesia, central and southern China, African countries, and other tropical regions.

INDICATED PRICE = УКАЗАННАЯ ЦЕНА – An Indicated Price is for information purposes and would need to be 'firmed up' in order to transact any deal. / Указанная Цена служит лишь для информационных целей и .

INDICATION = ИНДИКАЦИЯ (или УКАЗАНИЕ, или ИЗЪЯВЛЕНИЕ ЖЕЛАНИЯ) – In insurance, Indication is a non-binding statement by an underwriter of the likely level of premium that he would charge to underwrite a risk, subject to the provision of additional information.

INDICATOR = ИНДИКАТОР – (1) Indicator is a device which provides external evidence of sensed phenomena. / Под Индикатором, от позднелатинского слова Indicator, означающее Указатель, от Латинского слова Indico, означающее Определяю или Указываю, понимается прибор, устройство, элемент, отображающие ход процесса или состояние объекта наблюдения, его качественные либо количественные характеристики в форме, удобной для восприятия человеком. В соответствии с рецепторами, на которые воздействует сигнал, различают визуальные, акустические, тактильные и другие индикаторы. 90% всей информации человек воспринимает зрительно, поэтому наиболее широко применяют визуальные индикаторы, достаточно часто – акустические и реже – действующие на осязание (тактильные), обоняние и тому подобное. Акустические индикаторы используют при плохой видимости, когда зрительное восприятие наблюдателя перегружено информацией или его внимание отвлечено от визуального индикатора. Тактильные индикаторы применяют обычно в сочетании с визуальными, если необходима исключительно быстрая реакция на поступающие сигналы. В химии, Индикаторы – название вещества, показывающие наличие химической реакции или изменения, произошедшие в исследуемой среде (смотрите Химические Индикаторы). Наиболее часто устанавливают сигнальные индикаторы в виде простых устройств, например, сигнальных ламп, звонков, рычагов и другого. Для отображения 2–3 чётко различимых состояний используют цвета:- зелёный (ход процесса нормальный – разрешение), жёлтый (требуется усиленное внимание оператора, наблюдателя – предупреждение), красный (ход процесса нарушен – опасность); разницу в яркости (мигающий указатель поворота на автомобиле; подсвеченные кнопки на пульте и другие) или положении, например, рукоятки переключателя. Посредством сигнальных ламп с нанесёнными цифрами или надписями подают команды или сообщают количественную информацию. Если необходимо надёжное восприятие визуального сигнала, его дублируют звуковым (звонок, ревун). Для указания точных числовых значений измеряемых или контролируемых величин, таких, как время, расстояние, направление, скорость, расход, температура, применяют стрелочные индикаторы со шкалой, проградуированной в минутах, метрах, килограммах, градусах и так далее. Кроме абсолютных значений, стрелочные индикаторы могут отражать и качественную информацию, выражаемую относительной скоростью движения указателя или положением его на шкале. Цифровые индикаторы, обеспечивающие быстрое считывание показаний, если оператору нужна точная количественная информация, выполняются в виде барабанных счётчиков, проекционных или с боковой подсветкой приборов, матричных панелей и так далее. Для увеличения пределов или повышения точности измерения стрелочные и цифровые индикаторы совмещают. Совмещение отображения нескольких видов информации в одном приборе даёт оператору общую картину, сокращая время, необходимое на раздельное восприятие разрозненных её частей. Изобразительные (наглядные) индикаторы отображают положение объекта в пространстве, изменение характеристик в виде графика или кривой на экране электроннолучевой трубки. Проекционные индикаторы, состоящие из проекционного устройства и экрана, отображают сложную и многообразную информацию (смотрите Устройство Отображения Информации). Существуют также комбинированные индикаторы для наглядного воспроизведения непосредственно на щите (графической панели) или пульте оператора состояния и главные характеристик процесса (смотрите Мнемоническая Схема). Восприятие информации улучшается с применением визуальных индикаторов, создающих эффект присутствия. Например, в приборе слепой посадки показания восьми отдельных индикаторов положения самолёта при заходе на посадку заменяются одним наглядным, хотя и условным, отображением перемещения объекта на экране. Направление движения показывается в виде устремлённой к горизонту ленты, разделённой поперечными тёмными полосами, которые при движении объекта смещаются, как бы набегают на оператора. Оператор стремится удержать движущийся объект на лежащей перед ним 'дороге'. Главное достоинство подобных индикаторов заключается в непосредственным восприятии оператором сложной информации без промежуточных преобразований. Индикаторы широко применяют при научных исследованиях, в технике и быту. Они сигнализируют об аварийных ситуациях и о поступлении особо срочной информации, облегчают принятие решения и служат одним из основных средств информационной связи между машиной и человеком (смотрите Инженерная Психология, Система 'Человек И Машина').

(2) Indicator:- any of various statistical values that collectively provide an indication of the stability of an economic system. Data which provides information about or predicts the overall health of the economy or financial markets, e.g., inflation and interest rates. / Под Индикатором, от позднелатинского слова Indicator, означающее Указатель, понимается . Индикатор – показатель, используемый аналитиками фондового рынка для прогнозирования динамики рыночных показателей, таких, как направление инвестиций, объём торговли акциями, динамика процентных ставок, а также покупки и продажи ценных бумаг членами корпораций.

(3) Indicator:- in the technical analysis, a value, usually derived from a stock's price or volume, that an investor can use to try to anticipate future price movements. Indicators are derived into two groups:- trend following or lagging and momentum or leading. Lagging indicators tell you what prices are doing now, or in the recent past, so they are useful when stocks are trending. A moving average is an example of a lagging indicator. Leading indicators are designed to anticipate future price action and many come in the form of oscillators. RSI is an example of a momentum indicator. A way to summarize data in a different way. Used to make the analysis of the data more easy, more reliable or quicker. / индикатор момента .

INDICATOR PLANTS = РАСТЕНИЯ ИНДИКАТОРЫ – Indicator Plants are the plants showing particular characteristics in response to specific soil or site conditions. / Под Индикатором, от Латинского слова Indicator, означающее Указатель, .

INDIGENOUS = АВТОХТОННОЕ (или МЕСТНОЕ, или АБОРИГЕННОЕ, или ТУЗЕМНОЕ) – Indigenous:- occurring naturally in an area. Not introduced. Indigenous:- native to a particular area. / Под Автохтонами, от Греческого слова Autóchtōn, означающее Коренной или Местный, или Аборигеном понимаются виды (роды, семейства) организмов, которые во времени своего становления обитают в данной местности. Например, утконос – автохтон Австралии, дикий Картофель – автохтон Южной Америки. Сравните с Аллохтонами.

INDIGO = ИНДИГО – Indigo is a natural or synthetic vat dye; designated Color Index Vat Blue 1. Indigo is probably one of the oldest colorants used for textiles. Originally it was extracted from plants, but now it is usually synthetic. It is of low substantivity, so multiple

'dips' are required to produce strong shades. Unlike other vat dyes, it exhibits quite poor washfastness. Natural and synthetic indigo are chemically the same. Indigo is a blue dye from a variety of plants in the Indigofera family. Commonly used as a vat dye on both cellulose and protein fibers. Indigo:- originally, a natural blue vat dye extracted from plants, especially the Indigofera tinctoria plant. Most indigo dyes today are synthetic. They are frequently used on dungarees and denims. Indigo is a type of dyestuff, originally obtained from the indigo plant, now produced synthetically. Blues are brilliant. It Is colorfast to washing and light. Indigo:- a variable color averaging a dark grayish blue. A natural dye material of a deep blue color. Natural Indigo is perhaps the oldest dye known to man. The oldest historic texts speak of it, as in the colors chosen for the Tabernacle of the Arc of the Covenant. The oldest fragments of cloth are dyed with it. It was the original dye of the 'Levi's' blue jeans, a trademark color for durability. Natural Indigo is one of the fastest dyes known to man and is the only natural blue dye of permanence. / Субстантивность (Substantivity). Под Индиго ($C_{16}H_{10}N_2O_2$), от Испанского слова Indigo, через Латинское слово Indicum, от Греческого слова Indikós, означающее Индийский, понимаются тёмно-синие кристаллы с медным отливом; $t_{пл}$ 390–392 °C (с разложением). Ранее добывали из некоторых Растений, с конца XIX века получают химическим синтезом. Кубовый краситель для текстильных материалов (окраски светостойки, но мало устойчивы к действию хлора и трению), используются также для изготовления чернил и красок. Под Индиго понимается кубовый краситель синего цвета. известен с глубокой древности, добывался из индигоносных Растений (Индигофера и других). Промышленный синтез индиго освоен в конце XIX века. Широко применяется для крашения джинсовой ткани.

INDIGO DYE RANGE STOP = XX (или ОСТАНОВ ДИАПАЗОНА ИНДИГО КРАСИТЕЛЯ) – Defect Name:- Indigo Dye Range Stop. Defect Type:- warp lines, vertical lines. Fabric Type:- Denim Bottomweights – Indigo Dyed. Description:- Indigo Dye Range Stop:- This is the result of a machine stop on an indigo range. In this case, one end on the indigo range contains approximately one-eight of the total ends in the loom warp. This condition exists in a filling wise band of approximately fifteen inches. Severity:- Major.

INDIRECT BUCKETING = КОСВЕННОЕ (или СКРЫТОЕ, или НЕПРЯМОЕ) МОШЕННИЧЕСТВО – A term Indirect Bucketing refers to when a floor broker trades against his customer in a non-competitive transaction. The opposite customer, often called the Accommodator, assists the floor trader by making it appear that the customer traded with him rather than the floor broker.

INDIRECT COSTS = КОСВЕННЫЕ ЗАТРАТЫ – Indirect Costs are the costs of items or activities, such as maintenance of buildings and machinery, that are not used in the production of goods, nor immediately necessary for their production. Indirect Costs are the costs that are not directly traceable to a specific product or enterprise. See also Indirect Labor Costs, and Materials Overhead.

INDIRECT DAMAGE = КОСВЕННОЕ ПОВРЕЖДЕНИЕ (или НЕПРЯМОЕ ПОВРЕЖДЕНИЕ) – Indirect Damage is a damage caused by an insured peril but not proximately caused thereby. / Повреждение – одно из понятий теории надёжности; событие, заключающееся в нарушении исправности изделия. Повреждение может быть существенным и являться причиной нарушения работоспособности (отказа) и несущественным, при котором работоспособность изделия сохраняется.

INDIRECT EXPENSES = КОСВЕННЫЕ РАСХОДЫ – Indirect Expenses are the expenses incurred in production, but not directly attributable to any one factor of production. Various costs related to several different operating cost categories of a business entity, which must be allocated among these categories.

INDIRECT EXPORTING = КОСВЕННЫЙ ВЫВОЗ (или КОСВЕННОЕ ЭКСПОРТИРОВАНИЕ) – Indirect Exporting is a sale by the exporter to the buyer through a domestically located intermediary. / Продажа экспортёром покупателю через посредника, расположенного в стране покупателя.

INDIRECT LABOR COSTS = КОСВЕННЫЕ ЗАТРАТЫ НА ТРУД (или КОСВЕННЫЕ РАСХОДЫ НА ТРУД, или КОСВЕННЫЕ ИЗДЕРЖКИ НА ТРУД) – Indirect Labor Costs:- salaries of production workers whose efforts usually are not directly traceable to the finished good, including personnel, quality-control workers, and inspectors.

INDIRECT MORTGAGE LOAN = КОСВЕННЫЙ ИПОТЕЧНЫЙ ЗАЁМ – Indirect Mortgage Loan is a mortgage credit in which a debt instrument secured by real estate (such as a mortgage note) is pledged as collateral. If the debtor becomes insolvent, the bank can dispose of or realize the property only after it has obtained title to it, e.g., by debt collection for realization of the pledge. / , например, .

INDIRECT ROUTE = ОБХОДНОЙ МАРШРУТ (или НЕПРЯМОЙ МАРШРУТ) – Indirect Route is any route other than the direct route (aircargo). / В перевозках авиационных грузов, любой маршрут, отличающийся от прямого маршрута.

INDIRECT QUOTATION = НЕПРЯМАЯ РАСЦЕНКА (или ОБРАТНАЯ КОТИРОВКА) – Indirect Quotation:- one unit or 100 units of a local currency expressed in units of a foreign currency. See also Direct Listing.

INDIRECT SHIPMENT = ОТГРУЗКА НЕПРЯМОГО НАЗНАЧЕНИЯ – An Indirect Shipment from a terminal elevator is one that will be reloaded at a transfer elevator for delivery to the buyer.

INDIRECT UTILITY COST = НЕПРЯМАЯ ЗАТРАТА ПРЕДПРИЯТИЯ – Indirect Utility Cost is the utility cost that may not be meaningfully identified with any particular Demand-Side Management (DSM) program category. Indirect costs could be attributable to one of several accounting cost categories, i.e. Administrative, Marketing, Monitoring & Evaluation, Utility-Earned Incentives, Other. Accounting costs that are known DSM program costs should not be reported under Indirect Utility Cost, rather those costs should be reported as Direct Utility Costs under the appropriate DSM program category.

INDIVIDUAL DEVELOPMENT ACCOUNT = СЧЁТ ИНДИВИДУАЛЬНОГО РАЗВИТИЯ – Individual Development Account (IDA) is a type of savings account, offered in some communities, for people whose income is below a certain level.

INDIVIDUAL INVESTOR EXPRESS DELIVERY SERVICE = СЛУЖБА ЭКСПРЕСС ДОСТАВКИ ДЛЯ ИНДИВИДУАЛЬНЫХ ВКЛАДЧИКОВ КАПИТАЛА (или СЛУЖБА ЭКСПРЕСС ДОСТАВКИ ДЛЯ ИНДИВИДУАЛЬНЫХ ИНВЕСТОРОВ) – Individual Investor Express Delivery Service is a service for individual investors which put their orders to the head of any Tandem System Queue (CMS, Super Dot and PSS).

INDIVIDUAL INVESTORS ADVISORY COMMITTEE = СОВЕЩАТЕЛЬНЫЙ КОМИТЕТ ДЛЯ ИНДИВИДУАЛЬНЫХ ВКЛАДЧИКОВ КАПИТАЛА (или СОВЕЩАТЕЛЬНЫЙ КОМИТЕТ ДЛЯ ИНДИВИДУАЛЬНЫХ ИНВЕСТОРОВ) – Individual Investors Advisory Committee provides counsel on the needs and concerns of individual investors. The committee advises the board on policies and programs to advance the interests of individuals who invest in equities, options, futures, and fixed income securities. In addition, the committee serves as a liaison and enhances communications between individual shareholders and the New York Stock Exchange board. / коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INDIVIDUALLY QUICK FROZEN RICE = ОСОБО БЫСТРО ЗАМОРОЖЕННЫЙ РИС – Individually Quick Frozen (IQF) Rice is Rice that has been fully cooked (to about 64% moisture) and then quick frozen. The Rice can be thawed and heated in a microwave (in two to four minutes) and is ready to eat. Unlike instant Rice, there has been no damage (cracking or fissuring of the kernel), and so the

quality of this product is as good or better than Rice cooked at home in a Rice cooker. The process for making this Rice is very similar to the cooking process used at home. Once the Rice is cooked and ready to eat, it is then quick-frozen. Sage V Foods is the leader in this new and developing industry. Most IQF Rice is sold today in 1 400 lb bulk totes to large industrial users who use the Rice to put into frozen entrees containing Rice. The IQF Rice is easy to handle and can flow through conveying and portion scaling systems. Sage V Foods can flavor, mix with vegetables, and package IQF Rice in small microwaveable pouches.

INDIVIDUAL PROVISION = ИНДИВИДУАЛЬНОЕ ОБЕСПЕЧЕНИЕ – Individual Provision:- allowance for accumulated impairment of loans and advances where the impairment can be identified as belonging to individual assets.

INDIVIDUAL RETIREMENT ACCOUNT = ИНДИВИДУАЛЬНЫЙ ПЕНСИОННЫЙ СЧЁТ – The term Individual Retirement Account means a trust created or organized in the United States for the exclusive benefit of an individual or his beneficiaries, but only if the written governing instrument creating the trust meets the following requirements:- (1) Except in the case of a rollover contribution described in subsection (d)(3) in [1] section 402 (c), 403 (a)(4), 403 (b)(8), or 457 (e)(16), no contribution will be accepted unless it is in cash, and contributions will not be accepted for the taxable year on behalf of any individual in excess of the amount in effect for such taxable year under section 219 (b)(1)(A). (2) The trustee is a bank (as defined in subsection (n)) or such other person who demonstrates to the satisfaction of the Secretary that the manner in which such other person will administer the trust will be consistent with the requirements of this section. (3) No part of the trust funds will be invested in life insurance contracts. (4) The interest of an individual in the balance in his account is nonforfeitable. (5) The assets of the trust will not be commingled with other property except in a common trust fund or common investment fund. (6) Under regulations prescribed by the Secretary, rules similar to the rules of section 401 (a)(9) and the incidental death benefit requirements of section 401 (a) shall apply to the distribution of the entire interest of an individual for whose benefit the trust is maintained. A retirement plan which a person can establish for his/herself. A pension plan with tax advantages, Individual Retirement Account (IRA) permits investment through intermediaries like mutual funds, insurance companies and banks or directly in stocks and bonds through stockbrokers. See also Keogh Plan. The US Tax Reform Act of 1976 authorized a qualified retirement plan for individuals. Individual Retirement Account (IRA) is an investing tool used by individuals to earn and earmark funds for retirement savings. There are several types of IRAs:- Traditional IRAs, Roth IRAs, SIMPLE IRAs and SEP IRAs. Traditional and Roth IRAs are established by individual taxpayers, who are allowed to contribute 100% of compensation (self-employment income for sole proprietors and partners) up to a set maximum Dollar amount. Contributions to the Traditional IRA may be tax deductible depending on the taxpayer's income, tax filing status and coverage by an employer-sponsored retirement plan. Roth IRA (is an individual retirement account that offers a valuable future tax break:- Tax-free income in retiremen. Retirement Online LLC, Birmingham, AL, the United States) contributions are not tax-deductible. SEPs and SIMPLEs are retirement plans established by employers. Individual participant contributions are made to SEP IRAs and SIMPLE IRAs. Also referred to as 'Individual Retirement Arrangements'. With the exception of Roth IRAs, where eligible distributions are tax-free, eventual withdrawal from an IRA is taxed as income; including the capital gains. Because income is likely to be lower after retirement, the tax rate may be lower. Combined with potential tax savings at the time of contribution, IRAs can prove to be very valuable tax management tools for individuals. Also, depending on income, an individual may be able to fit into a lower tax bracket with tax-deductible contributions during his or her working years while still enjoying a low tax bracket during retirement. In the United States, Individual Retirement Account (IRA) is a retirement plan, offered by banks, brokerage firms and insurance companies, to which individuals can contribute each year on a tax-deferred basis. / Смотрите также План Кио (Keogh Plan). Индивидуальный Пенсионный Счёт (ИПС) – счёт с отсроченным налогообложением (tax-deferred), который может получить каждый работающий человек, с ежегодным вкладом не более 2 000 Долларов в год (4 000 Долларов для супружеской пары, когда оба супруга работают, или 2 250 Долларов для пары, в которой один из супругов работает, а доход другого супруга составляет 250 Долларов или менее). Актом о Налоговой Реформе от 1986 (Tax Reform Act of 1986) были установлены дополнительные правила ведения индивидуальных пенсионных счетов. Так, начиная с 1986 ежегодные взносы не облагаются налогом, если ни налогоплательщик, ни его супруг (супруга) не участвуют в другом специальном пенсионном плане или трасте (qualified plan or trust). Однако даже когда налогоплательщик участвует в другой пенсионной программе, он может вычесть из облагаемых налогом сумм взносы на индивидуальные пенсионные счета, если его скорректированный совокупный доход (adjusted gross income) составляет менее 40 000 Долларов при совместной налоговой декларации или менее 25 000 Долларов при индивидуальной налоговой декларации. Кроме того, супружеские пары с доходом от 40 000 до 50 000 Долларов, а также не состоящие в браке налогоплательщики с доходом от 25 000 до 35 000 Долларов могут производить частичные вычеты из налогообложения, суммы которых сокращаются пропорционально в рамках 10 000 Долларов, причём минимально вычитаемая сумма составляет 200 Долларов. Семейным налогоплательщикам с совместным доходом выше 50 000 Долларов, одиноким с доходом выше 35 000 Долларов не разрешается делать вычеты из базы налогообложения, но они могут вносить такие же взносы (рассматриваемые после снятия средств со счёта как не облагаемый налогом доход на капитал (return of capital)) и, таким образом, получать преимущества в связи с отсрочкой налогообложения. Налогоплательщики, участвующие в специальном пенсионном плане, могут вносить не вычитаемые из базы налогообложения взносы. При снятии средств с индивидуальных пенсионных счетов до достижения 59.5 лет взимается штраф в размере 10% основной суммы.

INDIVIDUAL RETIREMENT PLAN BONDS = ОБЛИГАЦИИ ИНДИВИДУАЛЬНОГО ПЕНСИОННОГО ПЛАНА – In the United States, Individual Retirement Plan Bonds are nontransferable accrual-type US savings securities sold to individuals eligible to participate in an Individual Retirement Arrangement (IRA). These bonds were first issued in January 1975 after enactment of the Employee Retirement Income Security Act of 1974 (ERISA). The sale of these bonds was terminated 1982-April-30. Regulations governing these securities are in Title 31 Code of Federal Regulations Part 346, also published as Department of the Treasury Circular, Public Debt Series No. 1-75.

INDIVIDUAL TRANSACTION = ИНДИВИДУАЛЬНАЯ ТРАНЗАКЦИЯ (или НЕДЕЛИМАЯ ОПЕРАЦИЯ) – Individual Transaction:- for the International Swap and Derivatives Association, Inc. (ISDA®) Master Agreement, in jurisdictions where close-out netting is enforceable, all transactions under the ISDA® Master Agreement constitute a single agreement between the two counterparties instead of being separate contracts. The confirmation of a transaction serves as evidence of that transaction, and each transaction is incorporated into the ISDA® Master Agreement. See also Close-Out Netting. / взаиморасчёт или сведение (netting) . Международная Ассоциация по Свопам и Деривативам, Инк. (МАСД®; The International Swaps And Derivatives Association, Inc. (ISDA®)) . Головное Соглашение.

INDIVIDUAL VALIDATED LICENSE = РАЗОВАЯ ЛИЦЕНЗИЯ – In the United States, an Individual Validated License (IVL) is written approval by which the US Department of Commerce grants permission, which is valid for 2 years, for the export of a specified quantity of products or technical data to a single recipient. IVLs also are required, under certain circumstances, as authorization for the reexport of US-origin commodities to new destinations abroad. / обратный вывоз (или реэкспорт; reexport).

INDO SUB–BITUMINOUS COAL = ИНДО–СУББИТУМИНОЗНЫЙ УГОЛЬ – Indo Sub-Bituminous Coal is seaborne thermal coal delivered FOB into ocean going vessels from a range of East and South Kalimantan load-outs (Borneo). It represents the types of coals currently supplied by companies like Adaro Resources, Kideco Jaya Agung, Bumi Resources (Melawan), Berau Coal, ABK (Loajanan) and Straits Resources (Jembayan) to name a few. FOB Indo Sub-bituminous Coal is traded at the ICE Futures Europe® under ticker symbol SUB. Contract size is 1 000 tons quoted in US Dollars per ton. Contract is cash-settled at an amount equal to the arithmetic average, for the corresponding month, of the IHS McCloskey Indonesian Sub-Bituminous FOB marker. The Indonesian sub-bituminous FOB marker is an assessment of the price of this quality of coal delivered into ocean going ships from a range of East and South Kalimantan ports. / Ай.Си.И. Фьючез Юрэп® (ICE Futures Europe®).

INDUCED RESISTANCE = ИНДУЦИРОВАННАЯ РЕЗИСТЕНТНОСТЬ (или ВЫЗВАННАЯ РЕЗИСТЕНТНОСТЬ) – Induced Resistance is a type of pseudoresistance in which a plant temporarily acquires increased resistance from some conditions of plant or environment, such as change in soil fertility.

INDUCEMENT = СТИМУЛ (или ПРИМАНКА, или ПОБУЖДЕНИЕ) – Inducement:- placing a port on a vessel's itinerary because the volume of cargo offered at that port justifies the cost of routing the vessel. / Размещение порта на пути судна вследствие того, что объём груза, предлагаемого в данному порту, оправдывает расход на маршрутизацию судна.

INDUCTANCE = ИНДУКТИВНОСТЬ – Inductance:- the characteristic of an electric circuit by which a voltage is induced in it by a variation of current. This can be a variation of the current in the circuit itself (self-inductance) or in a nearby circuit (mutual inductance). The magnitude of the characteristic is measured in the units of Henries. / Под Индуктивностью, от Латинского слова Inductio, означающее Наведение или Побуждение, понимается количественная характеристика связи между магнитным потоком самоиндукции Φ_c электрической цепи и силой тока I в ней. Обозначение:- L. Различают индукцию статическую $L_{ст} = \Phi_c / I$ и динамическую Lдин = $\lim\Delta\Phi_c / \Delta I = d\Phi_c / dI$. Индуктивность зависит от размеров и конфигурации электрической цепи и магнитной проницаемости μ проводников, образующих цепь, и окружающей среды. Для неферромагнитных сред и проводников μ не зависит от напряжённости магнитного поля и Φ_c прямо пропорционально силе тока I, так что $L_{ст} = L_{дин} = L$ = const. Единица индуктивности в СИ – Генри (Гн). Индуктивность – физическая величина, характеризующая магнитные свойства электрических цепей и равная отношению потока Ф магнитной индукции, пересекающего поверхность, ограниченную проводящим контуром, к силе тока в этом контуре, создающем Ф.

INDUCTOR = ИНДУКТОР – An Inductor is electric device consisting of one or more turns of wire and typically having two terminals. An inductor is usually connected into a circuit in order to raise the inductance to a desired value. / Индукторная Электрическая Машина – синхронная электрическая машина, у которой обмотки якоря и возбуждения расположены на статоре; ротор имеет ряд равномерно расположенных по окружности выступов без обмотки. Под Индуктором, от Латинского слова Inductor от Induco, означающее Ввожу или Навожу или Побуждаю, понимаются:- (i) электромагнитное устройство для индукционного нагрева тел, преимущественно проводников, вихревыми токами, возбуждаемыми переменным магнитным полем; или (ii) магнитоэлектрическая машина, обычно с ручным приводом, вырабатывающая высокое напряжение и применяемая в телефонных аппаратах станций ручного обслуживания и другом. (a) Нагревательный индуктор – электромагнитное устройство, предназначенное для индукционного нагрева. Состоит из двух основных частей – индуктирующего провода, создающего переменное электромагнитное поле, и токопроводов для подключения его к источнику электрической энергии. (b) Телефонный индуктор – магнитоэлектрическая машина с ручным приводом, применяемая в телефонных аппаратах для посылки сигналов вызова и отбоя на станции ручного обслуживания. (c) Индуктор электрической машины – часть магнитной цепи электрической машины, содержащая обмотку возбуждения.

INDUSTRIAL BOND = ИНДУСТРИАЛЬНАЯ ОБЛИГАЦИЯ (или ПРОМЫШЛЕННАЯ ОБЛИГАЦИЯ, или ОБЛИГАЦИЯ ПРОМЫШЛЕННОГО СЕКТОРА) – Industrial Bond is a long-term bond issued by a private company intending to construct or make improvements to a factory, plant, or something else industrial. Industrial Bond is a financial instrument issued by businesses primarily to fund expansion or acquisitions. Industrial Bond is a financing instrument used by local authorities to raise revenue for building projects that will benefit the community. The bond issuer retains ownership of the purchased assets and leases them back to the user which is the way the bond debt is ultimately retired. If the project is for a public purpose, the bond interest may be tax exempt at the state level. Industrial Bond is a long-term debt security issued by a corporation engaged in industrial activities such as manufacturing or refining.

INDUSTRIAL DESIGN = ПРОМЫШЛЕННЫЙ ДИЗАЙН (или ИНДУСТРИАЛЬНЫЙ ДИЗАЙН, или ПРОМЫШЛЕННЫЙ ОБРАЗЕЦ) – An Industrial Design is the ornamental or aesthetic aspect of an article. The design may consist of three-dimensional features, such as the shape or surface of an article, or of two-dimensional features, such as patterns, lines or color. Industrial designs are applied to a wide variety of products of industry and handicraft: from technical and medical instruments to watches, jewelry, and other luxury items; from housewares and electrical appliances to vehicles and architectural structures; from textile designs to leisure goods. To be protected under most national laws, an industrial design must be new and/or original. Novelty or originality is determined with respect to the existing design corpus. An industrial design is primarily of an aesthetic nature, and does not protect any technical features of the article to which it is applied. Industrial designs are what makes a product attractive and appealing; hence, they add to the commercial value of a product and increase its marketability. When an industrial design is protected, this helps to ensure a fair return on investment. An effective system of protection also benefits consumers and the public at large, by promoting fair competition and honest trade practices. Protecting industrial designs helps economic development, by encouraging creativity in the industrial and manufacturing sectors and contributes to the expansion of commercial activities and the export of national products. How can industrial designs be protected? In most countries, an industrial design must be registered in order to be protected under industrial design law. As a general rule, to be registrable, the design must be 'new' or 'original'. Different countries have varying definitions of such terms, as well as variations in the registration process itself. Generally, 'new' means that no identical or very similar design is known to have existed before. Once a design is registered, the term of protection is generally five years, with the possibility of further periods of renewal up to, in most cases, 15 years. Depending on the particular national law and the kind of design, an industrial design may also be protected as a work of art under copyright law. In some countries, industrial design and copyright protection can exist concurrently. In other countries, they are mutually exclusive:- once the owner chooses one kind of protection, he can no longer invoke the other. Under certain circumstances an industrial design may also be protectable under unfair competition law, although the conditions of protection and the rights and remedies ensured can be significantly different. What cannot be protected by industrial design rights? Designs that are generally barred from registration in many territories include:- (i) designs that do not meet the requirements of novelty, originality and/or individual character; (ii) designs that are considered to be dictated exclusively by the technical function of a product; such technical or functional design features may be protected, depending on the facts of each case, by other IP rights (e.g., patents, utility models or trade secrets); (iii) designs incorporating protected official symbols or emblems (such as the national flag); and (iv) designs which are considered to be contrary to public order or morality. Some countries exclude handicrafts from design protection, as

industrial design law in these countries requires that the product to which an industrial design is applied is ‘an article of manufacture’ or that it can be replicated by ‘industrial means’. What rights are conferred by industrial design protection? When an industrial design is registered, the holder receives the right to prevent unauthorized copying or imitation by third parties. This includes the right to prevent all unauthorized parties from making, selling or importing any product in which the design is incorporated or to which it is applied. Because industrial design rights are territorial in nature, this right is limited to the territory for which the design is registered. How extensive is industrial design protection? Generally, industrial design protection is limited to the country in which protection is granted. Under the Hague Agreement Concerning the International Registration of Industrial Designs, a WIPO-administered treaty, a procedure for an international registration is offered. An applicant can file a single international application with WIPO (short for the World Intellectual Property Organization). The applicant can designate as many Contracting Parties as he wishes. Industrial Design is any original shape, pattern or ornamentation applied to an article of manufacture, such as the shape of a table, the pattern of a fabric, or the decoration on the handle of a spoon. Industrial designs are distinct from patents, copyrights and trademarks. Also known as Design Patent in the United States. An Industrial Design, in general terms, is the ornamental or aesthetic aspect of a useful article. This aspect may depend on the shape, pattern or color of the article. The design must have visual appeal and perform its intended function efficiently. Moreover, it must be able to be reproduced by industrial means; this is the essential purpose of the design, and is why the design is called Industrial. In a legal sense, industrial design refers to the right granted in many countries, pursuant to a registration system, to protect the original, ornamental and nonfunctional features of a product that result from design activity. Visual appeal is one of the main factors which influence consumers in their preference for one product over another. When the technical performance of a product offered by different manufacturers is relatively equal, consumers will make their choice based on price and aesthetic appeal. So in registering their industrial designs, manufacturers protect one of the distinctive elements that determine market success. By rewarding creators for their effort in producing new industrial designs, this legal protection also serves as an incentive to invest resources in design activities. One of the basic aims of industrial design protection is to stimulate the design element of production. This is why industrial design laws usually only protect designs that can be used in industry or that can be produced on a large scale. This condition of utility is a notable difference between industrial design protection and copyright, since the latter is only concerned with aesthetic creations. Industrial designs can generally be protected if they are new or original. Designs may not be considered new or original if they do not significantly differ from known designs or their combinations. In most industrial design laws, designs that are dictated solely by the article’s function are excluded from protection. If the design for an article produced by many manufacturers, such as a screw, is dictated purely by the function that the screw is intended to perform, then protection for that design would have the effect of excluding all other manufacturers from producing items intended to perform the same function. Such exclusion is not warranted, unless the design is sufficiently novel and inventive to qualify for patent protection. In other words, the legal protection offered by industrial designs concerns only the design that is applied to, or embodied in, articles or products. This protection does not prevent other manufacturers from producing or dealing in similar articles or products, as long as these do not embody or reproduce the protected design. Industrial design registration protects against unauthorized exploitation of the design in industrial articles. It grants the owner of the design the exclusive right to make, import, sell, hire or offer for sale articles to which the design is applied or in which the design is embodied. The term for an industrial design right varies from country to country. The usual maximum term is from 10 to 25 years, often divided into terms requiring the proprietor to renew the registration in order to obtain an extension of the term. The relatively short period of protection may be related to the association of designs with more general styles of fashions, which tend to enjoy somewhat transient acceptance or success, particularly in highly fashion-conscious areas, such as clothing or footwear. / Термин Дизайн, предполагающий Замысел, Проект, Рисунок или Чертёж, обозначает различные виды проектировочной деятельности, имеющей целью формирование эстетических и функциональных качеств предметной среды. В узком смысле слова Дизайн – художественное конструирование. Промышленный Образец, новое художественно-конструкторское решение изделия, определяющее его внешний вид, соответствующее требованиям технической эстетики, пригодное к осуществлению промышленным способом и дающее положительный эффект. Объект промышленной собственности. Под Промышленными Образцами, или просто образцами, понимается художественное оформление или эстетический компонент продуктов. Промышленные образцы представляют собой вид промышленной собственности, охраняемый правами интеллектуальной собственности. ВОИС взаимодействует с государствами-членами в рамках Постоянного Комитета по Законодательству в Области Товарных Знаков, Промышленных Образцов и Географических Указаний (ПКТЗ) в целях разработки международных правовых норм и стандартов, касающихся образцов. Гаагская система международной регистрации промышленных образцов, административные функции которой выполняет ВОИС, предоставляет доступ к охране промышленных образцов во множестве стран путём подачи одной заявки. По вопросам проведения поиска в международных регистрациях образцов обращайтесь к базе данных Hague Express. Почему охраняются промышленные образцы? За счёт использования промышленных образцов изделие приобретает внешнюю и потребительскую привлекательность; в результате возрастает коммерческая стоимость изделия и вероятность его реализации на рынке сбыта. Если промышленный образец охраняется, владелец – физическое или юридическое лицо, зарегистрировавшее образец, обеспечивает себе исключительное право на защиту от несанкционированного копирования или имитации образца третьими лицами. Это способствует получению справедливой прибыли на вложенный капитал. Эффективная система охраны также приносит пользу потребителю и обществу в целом, обеспечивая добросовестную конкуренцию и соблюдение правил добросовестной торговли, а также способствуя развитию художественного творчества и привлекая внимание потребителя к наиболее совершенным в эстетическом отношении изделиям. Охрана промышленных образцов способствует экономическому развитию, активизируя художественное творчество в промышленности и производстве, а также в традиционных сферах искусства и художественных промыслах. А это способствует оживлению коммерческой деятельности и вывозу (или экспорту) национальной продукции. Создать промышленные образцы и обеспечить их охрану относительно недорого и просто. Создание образцов под силу небольшим и средним предприятиям, а также отдельным художникам и ремесленникам как в промышленно развитых, так и в развивающихся странах. Как охраняются промышленные образцы? В большинстве стран для предоставления охраны в соответствии с законодательством о промышленных образцах промышленный образец необходимо зарегистрировать. Обычно в соответствии с требованиями при регистрации образец должен обладать новизной или оригинальностью. В разных странах этим терминам даются различные определения, и каждая страна может установить свой порядок регистрации. В общем случае ‘новый’ означает, что насколько известно, аналогичный либо подобный образец до этого не существовал. При регистрации промышленного образца выдаётся свидетельство о регистрации. Срок охраны обычно составляет пять лет и может продлеваться на последующие сроки, в большинстве случаев до 15 лет. В зависимости от конкретного национального законодательства и от самого образца, промышленный образец может стать объектом охраны как произведение искусства в соответствии с законодательством по авторскому праву. В некоторых странах охрана одного и того же объекта может осуществляться параллельно:- как промышленного образца и как произведения искусства. В других странах авторское право и охрана промышленных образцов взаимно исключают друг друга:- если владелец выбирает один вариант охраны, он не может одновременно воспользоваться другим. В определённых обстоятельствах можно обеспечить охрану промышленного образца в соответствии с законодательством о недобросовестной конкуренции, хотя при этом условия охраны, гарантированные права

и средства правовой защиты могут быть совершенно иными. На какой территории действует охрана промышленных образцов? Обычно охрана промышленного образца ограничивается территорией страны, в которой предоставлена охрана. В рамках Гаагского Соглашения о международном депонировании промышленных образцов, административные функции которого выполняет ВОИС, предлагается новый порядок международной регистрации. Заявитель может подать заявку на одну международную регистрацию либо в ВОИС, либо в национальном ведомстве страны – участницы Соглашения. Затем образцу предоставляется охрана в тех странах – участницах Соглашения, в которых владелец желает её получить.

INDUSTRIAL FABRIC = ТКАНЬ ДЛЯ ПРОМЫШЛЕННОГО ПОТРЕБЛЕНИЯ (или ИНДУСТРИАЛЬНАЯ ТКАНЬ, или ПРОМЫШЛЕННАЯ ТКАНЬ, или ТЕХНИЧЕСКАЯ ТКАНЬ) – Industrial Fabric is a broad term for fabrics used for nonapparel and nondecorative uses. They fall into several classes:- (i) a broad group including fabrics employed in industrial processes, e.g., filtering, polishing, and absorption; (ii) fabrics combined with other materials to produce a different type of product, e.g., rubberized fabric for hose, belting, and tires; fabric combined with synthetic resins to be used for timing gears and electrical machinery parts; coated or enameled fabrics for automobile tops and book bindings; and fabrics impregnated with adhesive and dielectric compounds for application in the electrical industry; and (iii) fabrics directly incorporated in a finished product, e.g., sails, tarpaulins, tents, awnings, and specialty belts for agricultural machinery, airplanes, and conveyors. Fabrics developed for industrial uses cover a wide variety of widths, weights, and constructions and are attained, in many cases, only after painstaking research and experiment. Cotton and manufactured fibers are important fibers in this group, but virtually all textile fibers have industrial uses. The names mechanical fabrics or technical fabrics sometimes have been applied to certain industrial fabrics. These uses fall into several classes:- (i) a broad group of fabrics employed in industrial processes such as filtering, polishing, and absorption; (ii) fabrics combined with other materials to produce a different type of product such as electrical machinery parts, hose, and tires; and (iii) fabrics incorporated directly in a finished products such as awnings, tarpaulins, and tents. Industrial Fabric is a broad term for fabrics used for nonapparel and nondecorative uses. These uses fall into the following classes:- (i) a broad group of fabrics employed in industrial processes, e.g., filtration, polishing, and absorption; (ii) fabrics combined with other materials to produce a different tye of product, e.g., rubberized fabric for hose, belting, tires, timing gears, bearings, and electrical parts; (iii) fabrics impregnated with an adhesive and dielectric compounds; and (iv) fabrics incorporated directly in a finished product, e.g., sales, tarps, tents, awnings, and specialty belts for agricultural machinery, airplanes, and conveyers. Fabrics developed for industrial use cover a wide variety of widths, weights, and construction. In many cases, they have been painstakingly developed to meet a specific application. / Техническая Ткань – текстильная ткань, используемая в качестве основного или вспомогательного материала для изготовления деталей машин, установок и технических изделий в химической, резиновой, обувной, автомобильной и других отраслях промышленности. Изготавливается в основном из химических волокон (капрона, лавсана, стеклянных, углеродных и других нитей). Вырабатывается обычно полотняным переплетением, одно- и многослойной. Технические ткани служат фильтровальными материалами, основой для нанесения различных покрытий, применяются для пошива защитной одежды. Они используются также при изготовлении автомобильных шин, конвейерных лент, пожарных рукавов, парашютов и так далее.

INDUSTRIAL FIBER = ВОЛОКНО ПРОМЫШЛЕННОГО ПОТРЕБЛЕНИЯ (или ИНДУСТРИАЛЬНОЕ ВОЛОКНО, или ПРОМЫШЛЕННОЕ ВОЛОКНО, или ТЕХНИЧЕСКОЕ ВОЛОКНО) – Industrial Fiber:- fibers intended for use in products other than non-protective clothing, household, furnishing and floor coverings selected principally but not exclusively for their performance and properties as opposed to their aesthetic or decorative characteristics.

INDUSTRIAL LIST = ПРОМЫШЛЕННЫЙ СПИСОК – The CoCom Industrial List contains dual-use items whose export are controlled for strategic reasons. In June 1990, CoCom agreed to review and replace the Industrial List with a greatly shortened ‘Core List’ in order to facilitate certain exports to the Soviet Union and Eastern Europe. The US Commodity Control List is currently (in 1991) undergoing a similar review. CoCom was dissolved in March 1994. / Промышленный Список КоКам (CoCom) состоял из изделий двойного назначения, вывоз (или экспорт) которых контролировался, исходя из стратегических соображений.

INDUSTRIAL LUBRICANT = ПРОМЫШЛЕННАЯ СМАЗКА (или ИНДУСТРИАЛЬНАЯ СМАЗКА) – Industrial Lubricant is any petroleum or synthetic-base fluid or grease commonly used in lubricating industrial equipment, such as gears, turbines, and compressors. See also Lubricant. / Промышленная Смазка или Индустриальная Смазка – любой нефтепродукт или жидкость на синтетической основе или пластичная смазка, используемые главным образом в смазывающемся промышленном оборудовании, таком как (зубчатые) передачи, турбины и компрессоры. Смотрите также Смазка (Lubricant).

INDUSTRIAL METALS COMMODITIES INDEX = СЫРЬЕВОЙ ИНДЕКС ПО ПРОМЫШЛЕННЫМ МЕТАЛЛАМ – The Industrial Metals Commodities Index charted by StockCharts.com is published by Goldman Sachs. The industrial metals listed include aluminum, copper, and zinc. / Сырьевой Индекс по Промышленным Металлам, графики которого предлагаются компанией StockCharts.com на их одноимённом сайте StockCharts.com, публикуется компанией Голдмэн Сэкс (Goldman Sachs). К числу промышленных металлов, учитываемых в расчёте индекса, относятся алюминий, медь и цинк.

INDUSTRIAL OILSEEDS = ПРОМЫШЛЕННЫЕ МАСЛИЧНЫЕ СЕМЕНА – Industrial Oilseeds:- a category of oilseed production in the European Union for industrial use (i.e. biofuels).

INDUSTRIAL PROPERTY = ПРОМЫШЛЕННАЯ СОБСТВЕННОСТЬ – Industrial Property shall be understood in the broadest sense and shall apply not only to industry and commerce proper, but likewise to agricultural and extractive industries and to all manufactured or natural products, for example, wines, grain, tobacco leaf, fruit, cattle, minerals, mineral waters, beer, flowers, and flour. Patents shall include the various kinds of industrial patents recognized by the laws of the countries of the Union (the countries to which the Paris Convention applies constitute a Union for the protection of industrial property), such as patents of importation, patents of improvement, patents and certificates of addition, etc. The protection of industrial property has as its object patents, utility models, industrial designs, trademarks, service marks, trade names, indications of source or appellations of origin, and the repression of unfair competition. See also The Paris Convention. Industrial Property:- the broad application of the term ‘industrial’ is clearly set out in the Paris Convention for the Protection of Industrial Property (Article 1 (3)):- ‘Industrial property shall be understood in the broadest sense and shall apply not only to industry and commerce proper, but likewise to agricultural and extractive industries and to all manufactured or natural products, for example, wines, grain, tobacco leaf, fruit, cattle, minerals, mineral waters, beer, flowers, and flour’. Industrial property takes a range of forms, the main types of which will be outlined in this booklet. These include patents to protect inventions; and industrial designs, which are aesthetic creations determining the appearance of industrial products. Industrial property also covers trademarks, service marks, layout-designs of integrated circuits, commercial names and designations, as well as geographical indications, and protection against unfair competition. In some of these, the aspect of intellectual creation, although existent, is less clearly defined. What counts here is that the object of industrial property typically consists of signs transmitting information, in particular to consumers, as regards products and services offered on the market. Protection is directed against unauthorized use of such signs likely to mislead consumers, and against misleading practices in general. / привоз (importation).

INDUSTRIAL SECTOR = ПРОМЫШЛЕННЫЙ СЕКТОР (или ИНДУСТРИАЛЬНЫЙ СЕКТОР) – In some US energy reports, Industrial Sector is an energy-consuming sector that consists of all facilities and equipment used for producing, processing, or assembling goods. The industrial sector encompasses the following types of activity:- agriculture, construction (NAICS code 23, fishing, forestry, hunting (NAICS code 11), manufacturing (NAICS codes 31–33), and mining (including oil and gas extraction, NAICS code 21). Overall energy use in this sector is largely for process heat and cooling and powering machinery, with lesser amounts used for air conditioning, facility heating, and lighting. Fossil fuels are also used as raw material inputs to manufactured products. This sector includes generators that produce electricity and/or useful thermal output primarily to support the above-mentioned industrial activities. The Industrial Sector is generally defined as manufacturing, construction, mining, agriculture, fishing, and forestry establishments (Standard Industrial Classification (SIC) codes 01-39). The utility may classify industrial service using the SIC codes, or based on demand or annual usage exceeding some specified limit. The limit may be set by the utility based on the rate schedule of the utility. / и/или тепловую выработку .

INDUSTRIAL SPIRIT = РАСТВОРИТЕЛЬ (или ТЕХНИЧЕСКИЙ СПИРТ, или ИНДУСТРИАЛЬНЫЙ СПИРТ, или ПРОМЫШЛЕННЫЙ СПИРТ) – Industrial Spirit or SBP (Special Boiling Points) Spirit is refined distillate intermediates with a distillation in the naphtha/kerosene range. Light oils distilling between 30 °C and 200 °C. There are seven or eight grades of industrial spirit, depending on the position of the cut in the distillation range. The grades are defined according to the temperature difference between the 5% volume and 90% volume distillation points (which is not more than 60 °C). / Под Растворителями понимаются индивидуальные химические соединения или их смеси, способные переводить различные вещества в раствор. Подразделяются на неорганические (важнейший из них – вода) и органические. Среди последних свойствами растворителей обладают ароматические углеводороды, спирты, эфиры, хлорированные алифатические углеводороды и многие другие. Наиболее распространённые смеси органических веществ, используемые как растворитель, – бензин скипидар, сольвент, уайт-спирит. Растворители применяют практически во всех отраслях промышленности, а также в сельском хозяйстве и в быту. Большинство органических растворителей – летучие, горючие, иногда токсичные жидкости, образующие с воздухом взрывоопасные смеси. При работе с такими растворителями необходимо соблюдать правила техники безопасности и противопожарной охраны. Под Растворителем понимается неорганическое (главным образом вода) или органическое (ацетон, бензол, спирты, хлороформ и другие) соединение, а также смесь (например, бензин), способное растворять различные вещества. Основные требования:- минимальная пожароопасность и токсичность, химическая инертность по отношению к растворяемому веществу, доступность и дешевизна.

INDUSTRIAL WASTEWATER = ПРОМЫШЛЕННАЯ СТОЧНАЯ ВОДА (или ПРОМЫШЛЕННЫЕ СТОКИ) – Industrial Wastewater is a wastewater produced by industrial processes.

INDUSTRY = ПРОМЫШЛЕННОСТЬ (или ИНДУСТРИЯ) – Industry is a grouping of companies in the same line of business. Industry groupings are more specific to the business than sector groupings. For example, the transportation sector includes airfreight, airline, railroad, shipping, and trucking industry groups. / Группирование компаний по одному и тому же направлению бизнеса. Промышленные группирования являются более специфичными в отношении любого направления деятельности, нежели секторные группирования. Например, сектор транспортировки включает промышленные группы авиаперевозки, авиалиний, железных дорог, водного и автомобильного транспорта. Промышленность или Индустрия – важнейшая отрасль народного хозяйства, оказывающая решающее воздействие на уровень развития производительных сил общества; представляет собой совокупность предприятий (заводов, рудников, фабрик, шахт, электростанций), занятых производством орудий труда для самой промышленности, так и для других отраслей народного хозяйства, а также добычей сырья, материалов, топлива, производством энергии, заготовкой леса и дальнейшей обработкой продуктов, полученных в промышленности или произведённых в сельском хозяйстве. Промышленность состоит из двух больших групп отраслей – добывающей и обрабатывающей. В бывшем Союзе Советских Социалистических Республик (СССР) к добывающей промышленности относились предприятия по добыче горнохимического сырья, руд чёрных и цветных металлов и нерудного сырья для металлургии, неметаллических руд, нефти, газа, угля, сланцев, соли, нерудных строительных материалов, лёгких природных заполнителей и известняка, а также ГЭС, предприятия лесоэксплуатации, по лову рыбы и добыче морепродуктов, водопроводы. К обрабатывающей промышленности относились предприятия по производству чёрных и цветных металлов, проката, химических и нефтехимических продуктов, машин и оборудования, продуктов деревообработки и целлюлозно-бумажной промышленности, цемента и других строительных материалов, продуктов лёгкой и пищевой промышленности, а также предприятия по ремонту промышленных изделий и ТЭС. Промышленность подразделялась также на производство средств производства (Группа А) и производство предметов потребления (Группа Б). Термин Индустрия, от Латинского слова Industria, означающее Усердие, это одно и тоже, что и Промышленность. Промышленность, важнейшая отрасль народного хозяйства, оказывающая решающее воздействие на уровень развития производительных сил общества. Состоит из двух больших групп отраслей – добывающей и обрабатывающей промышленностей и подразделяется на производство средств производства (Группа А) и производство предметов потребления (Группа Б).

INDUSTRY ADVISORY GROUP = ИНДУСТРИАЛЬНАЯ (или ПРОМЫШЛЕННАЯ, или ОТРАСЛЕВАЯ) СОВЕЩАТЕЛЬНАЯ ГРУППА – The Industry Advisory Group (IAG) helps to coordinate industry participation in the North American Plant Protection Organization (NAPPO). Each country selects an IAG chairperson; the primary role of the three chairpersons is to interface with the Executive Committee and facilitate two-way communication with their industry. The IAG Chairpersons have the responsibility to communicate with their various industry sectors and to bring the interests and concerns of these sectors to the NAPPO executive and to the NAPPO annual meeting. In addition they are expected to support the mission and strategic plan of NAPPO and to actively promote NAPPO within their countries. Specific Responsibilities:- (i) attend and actively participate in the NAPPO Annual Meeting and meetings of the Executive Committee; (ii) chair their country industry meetings at the NAPPO Annual Meeting; (iii) gather and convey industry input to NAPPO Executive Committee and Working Group on an ongoing or as-needed basis; (iv) identify key industry sectors affected by the work of NAPPO, any significant gaps in industry involvement, and encourage active industry participation in the Annual Meeting, and relevant Panel meetings; (v) work with industry sectors to identify a primary (and optionally, an alternate) point of contact for each NAPPO Panel for which industry participation is relevant and important. Assist in maintaining accurate information for key industry contacts; and (vi) encourage industry groups to join and support the work of NAPPO as Sustaining Associate Members. / коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INDUSTRY COMMUNICATIONS PLATFORM = ПЛАТФОРМА ДЛЯ СВЯЗИ В ПРОМЫШЛЕННОСТИ (или ОТРАСЛЕВАЯ ПЛАТФОРМА ДЛЯ СВЯЗИ) – Industry Communications Platform (ICP):- technology, people and processes that employ the internet and other next generation applications to streamline communication and business activities in a targeted industry, e.g., ApparelSearch.com and edaflow.

INDUSTRY SERVICES AUTOMATION = ПРОМЫШЛЕННАЯ АВТОМАТИЗАЦИЯ УСЛУГ – Industry Services Automation (ISA) is a networked computerized system that is incorporated into the visual grading system used by the Canadian Grain Commission's (CGC's) Inspection Services for the analysis of dockage and grading factors, test weight, and moisture content. The workstation consists of a computer terminal, keyboard, and Mettler electronic scale. The output from the ISA represents the original and official Inspection Report.

INDUSTRY STANDARDIZATION FOR INSTITUTIONAL TRADE COMMUNICATIONS = ПРОМЫШЛЕННАЯ СТАНДАРТИЗАЦИЯ СРЕДСТВ СВЯЗИ ИНСТИТУЦИОНАЛЬНОЙ ТОРГОВЛИ – Industry Standardization for Institutional Trade Communications (ISITC) is a working committee of securities operations professionals that defines message standards governing communications between custodians, investment managers, custodians, and broker/dealers and vendors. The ISITC's mission is to foster alliances and advocate standards that promote straight-through processing (STP) of securities transactions. / коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INDUSTRY STOCKS = ПРОМЫШЛЕННЫЕ ЗАПАСЫ – Industry Stocks are the primary stocks owned by oil companies, traders and other organizations except those holding government-controlled stocks. They include stocks held by industry to meet International Energy Agency (IEA), European Union and national emergency reserve commitments. / Первичные запасы, принадлежащие нефтяным компаниям, торговцам и иным организациям, за исключением тех запасов, которые удерживаются под контролем правительства или государства. Они включают запасы, удерживаемые отраслью с целью удовлетворения обязательств перед Международным Агентством по Энергетике (МАЭ), Европейским Союзом и национальными резервами на случаи чрезвычайной обстановки.

INEDIBLE = НЕСЪЕДОБНОЕ (или НЕПИЩЕВОЕ) – Inedible:- unpleasant, bad tasting, not possible to eat.

INEFFECTIVE TILLERS = НЕЭФФЕКТИВНЫЕ (или БЕЗРЕЗУЛЬТАТНЫЕ, или НЕСПОСОБНЫЕ) ПОБЕГИ (или РОСТКИ, или ОТРОСТКИ) – Ineffective Tillers are the tillers that do not bear panicles.

INEP = INSTITUTO NACIONAL DE ESTUDOS E PESQUISAS EDUCACIONAIS ANISIO TEIXEIRA

INEPA = INSTITUTE OF ENTOMOLOGY AND PARASITOLOGY OF AFRICA

INERA = INSTITUT NATIONAL POUR L'ETUDE ET LA RECHERCHE AGRONOMIQUE

INERMIS = БЕЗЗАЩИТНОЕ – Inermis (Latin:- Unarmed):- of a plant or plant part without spines of thorns.

INERT GAS SYSTEM = СИСТЕМА ИНЕРТНОГО ГАЗА – Inert Gas System is a system of preventing any explosion in the cargo tanks of a tanker by replacing the cargo, as it is pumped out, by an inert gas, often the exhaust of the ship's engine. Gas-freeing must be carried out subsequently if worker have to enter the empty tanks.

INERT INGREDIENT = ИНЕРТНЫЙ ИНГРЕДИЕНТ – Inert Ingredient is any ingredient in a formulation which has no pesticidal activity. / Под Инертным Ингредиентом, от Латинских слов Iners, родительный падеж Inertis, означающее Бездеятельный, и Ingrediens, родительный падеж Ingredientis, означающее Входящий, понимается бездействующая или с отсутствием активности составная часть какого-либо сложного соединения или смеси.

INFECT = ИНФИЦИРОВАТЬ (или ЗАРАЖАТЬ) – Infect:- to introduce or contaminate the plant with a pathogen or disease-producing substance. To invade and establish a parasitic relationship with the host plant.

INFECTION = ИНФЕКЦИЯ (или ЗАРАЖЕНИЕ) – Infection is a stage in a disease cycle when the pathogen penetrates and establishes a parasitic relationship with the host. Infection:- (Latin:- inficere – to poison) Invasion of the body by pathogenic microorganisms causing inflammation. / Под Инфекцией, от позднелатинского слова Infectio, означающее Заражение, понимается внедрение и размножение в организме человека или животного болезнетворных микроорганизмов, сопровождающееся комплексом реактивных процессов; завершается инфекционным заболеванием, бактерионосительством или гибелью микробов. Источник возбудителя инфекции заражает здоровых при соприкосновении, через рот (с водой и пищей), воздух (с капельками слюны и слизи), членистоногих переносчиков.

INFECTIVE INSECT = ИНФЕКЦИОННОЕ НАСЕКОМОЕ (или ЗАРАЗНОЕ НАСЕКОМОЕ) – Infective Insect is an Insect that actually transmits a viral disease.

INFERIOR = НИЖНЕЕ – Inferior:- below another organ or part.

INFERIOR OVARY = НИЖНЯЯ ЗАВЯЗЬ – Inferior Ovary is an ovary positioned below the receptacle of a flower, as in members of the Iris Family. Inferior Ovary is:- (i) one to which the sepals or floral tube are apparently attached; and/or (ii) one to which the floral tube is fused.

INFEST = ПОРАЖАТЬ (или НАВОДНЯТЬ (ПАРАЗИТАМИ), или КИШЕТЬ (ПАРАЗИТАМИ)) – Infest:- to attack externally, e.g., by insect pests; attack on a part of a plant such as grain of rice. Also to contain the parasite.

INFESTATION = НАШЕСТВИЕ (или ЗАРАЖЕНИЕ, или ИНВАЗИЯ) – Infestation (of a commodity) is a presence in a commodity of a living pest of the plant or plant product concerned. Infestation includes infection. Infestation is the presence of Insects on a Plant or on Grain. / Заражение включает инфекцию. Заражение – присутствие в товаре живого организма, вредного для Растения или растительного продукта. Заражение включает также инфицирование.

INFESTED AREA = ИНВАЗИРОВАННЫЙ АРЕАЛ (или ЗАРАЖЁННЫЙ АРЕАЛ) – Infested Area is an area which has been determined to have an established pest population.

INFESTED ROUGH RICE = ИНВАЗИРОВАННЫЙ РИС–СЫРЕЦ (или ЗАРАЖЁННЫЙ РИС–СЫРЕЦ) – In the Rice industry of the United States, tolerances for live insects for Infested Rough Rice are defined according to sampling designations as follows:- (i) Representative sample. The representative sample consists of the work portion, and the file sample if needed and when available. The rough Rice (except when examined according to paragraph (a)(3) of this section will be considered infested if the representative sample contains two or more live Weevils, or one live Weevil and one or more other live insects injurious to stored Rice or five or more other live insects injurious to stored Rice. (ii) Lot as a whole (stationary). The lot as a whole is considered infested when two or more live Weevils, or one live Weevil and one or more other live insects injurious to stored Rice, or five or more other live insects injurious to stored Rice, or 15 or more live Angoumois moths or other live moths injurious to stored Rice are found in, on, or about the lot. (iii) Sample as a whole during continuous loading/unloading. The minimum sample size for Rice being sampled during continuous loading/unloading is 500 grams per each 100 000 pounds of Rice. The sample as a whole is considered infested when a component

(as defined in the US Federal Grain Inspection Service (FGIS) instructions) contains two or more live Weevils, or one live Weevil and one or more other live insects injurious to stored Rice, or five or more other live insects injurious to stored Rice. / Долгоносик (Weevil).

INFILTRATION = ИНФИЛЬТРАЦИЯ (или ПРОСАЧИВАНИЕ) – Infiltration is the downward entry of water into the soil. / Под Инфильтрацией, от Латинских слов In, означающее В, и Filtratio, означающее Процеживание, понимается проникновение атмосферных и поверхностных вод в почву, горную породу по капиллярным и субкапиллярным порам и другим пустотам.

INFLAMMABLE LIQUIDS = ЛЕГКО ВОСПЛАМЕНЯЮЩИЕСЯ ЖИДКОСТИ – Inflammable Liquids are liquids liable to spontaneous combustion which give off inflammable vapors at or below 80 degrees F. For example, ether, ethyl, benzine, gasoline, paints, enamels, carbon disulfide, etc. / Легко Воспламеняющиеся Жидкости:- жидкости, способные к спонтанному воспламенению, от которых исходят воспламеняемые пары при температуре 80 градусов по Фаренгейту (Ф) или ещё ниже. Примерами таких жидкостей служат:- бензин, газолин, дисульфид углерода, краски, эмали (enamels), этил, эфир и тому подобные.

INFLATABLE STRUCTURES = РАЗДУВАЕМЫЕ СТРУКТУРЫ (или НАДУВАЕМЫЕ СТРУКТУРЫ) – Inflatable Structures are the structures opened or enlarged by input of air and, once enlarged, able to retain the air to maintain the distended position.

INFLATION = ИНФЛЯЦИЯ – In macroeconomic terms, Inflation is a lasting rise in the general level of prices. Inflation can be caused by non-monetary (rise in demand) or monetary factors (expansive monetary policy). To combat inflation, central banks can tighten the money supply, or economic policies can be pursued to reduce state spending and dampen demand. Disciplined collective bargaining and reasonable wage settlements can also help keep inflation with bounds. The opposite of inflation is Deflation, which typically leads to falling prices, recession or even economic crises. See also Deflation, Hyperinflation, and Price Stability. Inflation is a sustained increase in the general price level or a decline in the value or purchasing power of money. Inflation:- in contemporary usage, a sustained rise over time in the general level of prices, normally measured by a weighted index of prices of a large and representative sample of goods and services (both consumers' goods and producers' goods) regularly traded in the economy under consideration. (In XIX century usage, the term referred more specifically to any sustained expansion in the stock of money available within the economy under consideration – the eventual consequence of which would normally be a generalized increase in prices.) When the quantity of money available in the economy begins to exceed the amount that firms and households (in the aggregate) feel they wish to keep on hand to finance their expected volume of trading in the foreseeable future, people tend to increase their rate of spending all at once, shifting the demand curves for nearly all goods and services to the right at the same time and thus driving up the general price level – which is just another way of saying that each unit of money begins to be worth less than before in its purchasing power. Such an acceleration of spending may happen for any of a number of reasons:- (i) the money stock itself is rapidly expanding; (ii) the available stocks of many goods have suddenly shrunk dramatically due to natural disaster, wartime destruction, or political interruption of established international trading relationships through embargoes or blockades; (iii) the average amounts of money people want to keep on hand is shrinking due to rising guesstimates of what future inflation rates might be; (iv) increasing availability of new close money-substitutes like credit cards; or (v) because households' willingness or ability to save is for some reason sharply decreasing. History strongly suggests, however, that sustained inflation at rates of more than four or five percent per year in 'normal' times is nearly always due primarily to government or central bank policies of rapid monetary expansion rather than to anything else that may be going on in the private sector to influence the public's demand for cash balances. If the money stock continues to increase a great deal faster than the public's total demand for cash holdings, the inflationary process begins to feed upon itself. Initial experience with accelerating inflation quickly convinces the public that the future purchasing power of their money holdings is going to be very much less than it is in the present – leading people to reduce still further their desired amounts of money to hold and further accelerating the general rise in prices because of their desperate efforts to spend away their money as quickly as possible, before its value melts away. When such an inflationary panic once takes hold, the result is apt to be hyperinflation, in which prices may begin increasing by several hundred percent (or even several thousand percent) per month until the monetary system collapses altogether and people resort to primitive barter (or the use of more stable foreign currencies, if available) rather than accept the government's worthless money as payment for their goods or services. Inflation is a persistent increase in the general price level, leading to a persistent fall in the purchasing power of money. It is usually expressed as an annual percentage change in a consumer price index such as the Harmonised Index of Consumer Prices (HICP). Increase in the general price level due to increased total spending relative to the supply of goods on the market, resulting in diminished purchasing power and loss in the value of money. There are two types of inflation:- demand-pull inflation and cost-push inflation. In demand-pull inflation, high demand for credit causes price to rise, stimulating growth in the gross national product, which pulls prices up even further. Bottlenecks are one cause of demand-pull inflation. In cost-push inflation, wage increases cause producers to raise prices to cover the cost of higher wages, resulting in a cyclical pattern of higher wages and prices (the wage-price spiral). The main causes of inflation are disequilibrium between supply and demand; price increases; excess money supply; disequilibrium between consumption and investment; deficit spending by the government; economic and social factors and psychological factors or expectations. The opposite of Deflation. See also Stagflation. The overall general upward price movement of goods and services in an economy. Inflation is a sustained increase in the general level of prices, which is equivalent to a decline in the value or purchasing power of money. If the supply of money and credit increases too rapidly over many months, the result will be inflation. With inflation, a Dollar buys less and less over time. Here are some examples of how inflation can hurt businesses or individuals:- (i) Inflation might make people worse off if their incomes don't rise as rapidly as prices. (ii) Lenders might lose because they will be repaid with Dollars that aren't worth as much. (iii) Savers might lose because the Dollar they save today will not buy as much when they are ready to spend it. (iv) Businesses will find it harder to plan and therefore may decrease investment in future projects. (v) Owners of financial assets suffer. (vi) Interest rate-sensitive industries, like mortgage companies, may suffer as inflation drives up long-term interest rates and Federal Reserve tightening raises short-term rates. Increase in the general level of prices and wages and a decrease in the purchasing power of money, resulting from growth in the money supply in relation to the supply of goods. Inflation And Deflation:- inflation and deflation are important economic phenomenona that have negative consequences for the economy. Basically, inflation is defined as a general, or broadly-based, increase in the prices of goods and services over an extended period which consequently leads to a decline in the value of money and thus its purchasing power. Deflation is often defined as the opposite of inflation, namely as a situation in which the overall price level falls over an extended period. When there is no inflation or deflation, we can say that there is price stability if, on average, prices neither increase nor decrease but stay stable over time. If, for instance, EUR100 can buy the same basket of goods as it could, say, one and two years ago, then this can be called a situation of absolute price stability. Movements In Individual Prices And In The General Price Level:- it is important to make a distinction between movements in prices of any individual good or service and movements in the general price level. Frequent changes in individual prices are quite normal in market-based economies, even if there is price stability overall. The changes in supply and/or demand conditions of individual goods or services inevitably lead to changes in their price. For example, in recent years we have seen substantial declines in the prices of computers and mobile phones, mainly resulting from rapid technological progress. However, from the beginning of 1999 to mid-2006, oil and other energy prices increased, partly as a result of concerns regarding the future supply of energy and partly as a result of increased demand for energy, in particular from fast-growing economies. On the whole, inflation in most industrialised

countries remained low and stable – stability in the general price level can go hand-in-hand with substantial changes in individual prices as long as falling and rising prices offset each other so that the overall price level remains unchanged. Measurement Issues:- How can inflation be measured? There are millions of individual prices in an economy.These prices are subject to continuous moves which basically reflect changes in the supply of and the demand for individual goods and services and thus give an indication of the 'relative scarcity' of the respective goods and services. It is obvious that it is neither feasible nor desirable to take all of these prices into account, but neither is it appropriate to look at just a few of them, since they may not be representative of the general price level. Consumer Price Index:- most countries have a simple common-sense approach to measuring inflation, using the socalled 'Consumer Price Index' (CPI). (In fact, the Consumer Price Index, which measures the price changes in consumer goods and services, is not the only price index in an economy. Another index which is of similar economic importance is the Producer Price Index.This index measures the changes made by domestic producers of goods and services to sales prices over time.) For this purpose, the purchasing patterns of consumers are analysed to determine the goods and services which consumers typically buy and which can therefore be considered as some how representative of the average consumer in an economy. As such they do not only include those items which consumers buy on a day-to-day basis (e.g., bread and fruit), but also purchases of durable goods (e.g., cars, PCs, washing machines, etc) and frequent transactions (e.g., rents). Putting together this 'shopping list' of items and weighting them according to their importance in consumer budgets leads to the creation of what is referred to as a 'Market Basket'. (More precisely, these goods are weighted according to final monetary expenditure shares of private households. In practice, the weights in the basket are periodically revised in order to reflect changes in consumer behaviour.) Each month, a host of 'price surveyors' checks on the prices of these items in various outlets. Subsequently, the costs of this basket are then compared over time, determining a series for the price index. The annual rate of inflation can then be calculated by expressing the change in the costs of the market basket today as a percentage of the costs of the identical basket the previous year. However, the developments of the price level as identified by such a basket only reflect the situation of an 'average' or representative consumer. If a person's buying habits differ substantially from the average consumption pattern and thus from the market basket on which the index is based, that person may experience a change in the cost of living that is different to the one shown in the index. There will therefore always be some people who experience a higher 'inflation rate' for their 'individual basket' and some who face a lower 'individual rate of inflation'. In other words, the inflation measured by the index is only an approximate measure of the average situation in the economy; it is not identical to the overall price changes faced by each individual consumer. In principle, Inflation is defined as a general increase in the prices of goods and services over a protracted period, resulting in a decline in the value of money and thus its purchasing power. Deflation is when the overall price level falls over a protracted period. Inflation is the amount (in %) by which a basket of goods increases in price in one year. One statistical measure of this is the consumer price index (CPI). Too high a rate of inflation (>2%) can lead to economic instability and generally results in a government raising interest rates in an attempt to keep inflation down. Inflation is an increase in the general price level, e.g., in the consumer price index, over an extended period. A simple way to define Inflation is 'an increase in the price you pay for goods' but that only tells part of the story .... It could also be seen as a 'decline in the purchasing power of your money'. But there is more to inflation than that. There are two sides to inflation 'Price Inflation' and 'Monetary Inflation'. Price Inflation vs Monetary Inflation:- Technically, Price Inflation is when prices get higher or it takes more money to buy the same item and this is what people commonly think of when they hear the word Inflation. Monetary Inflation is an increase in the money supply which generally results in price inflation. This acts as a 'hidden tax' on the consumers in that country and is the primary cause of price inflation. Monetary inflation is commonly referred to as the government 'printing money' although the actual process is a bit more complex than just cranking up the printing presses but the effects are essentially the same. As the money supply increases the currency loses it's purchasing power and the price of goods and services increases. In a large economy like that of the US this process usually takes 18 months to 2 years so the government is able to spend the newly minted Dollars at the old value before consumers realize that they have been cheated into accepting something that will purchase less than they originally thought it would. Inflation is measured by the Bureau of Labor Statistics in the United States using the Consumer Price Index. What Causes Inflation? There are a variety of different causes for inflation. The primary cause of macroeconomic inflation is an increase in the money supply. As 'more money chases fewer goods' the price of the available goods is bid up. So simply increasing the money supply will increase prices. A secondary cause that is generally more limited in scope and duration is a temporary shortage of goods either due to a natural disaster like Hurricane Katrina and Hurricane Sandy. In this type of situation the disaster has created a shortage of goods, but the supply of money has remained the same. And the demand for the goods is the same or even increased as rebuilding is necessary. So once again prices are bid up because there is more money than goods. But this situation is usually short lived as producers ramp up production to handle the increased demand or in the case of a localized disaster, producers may ship goods in from unaffected areas. Weather can also cause localized crop failures which can drive up prices but this has become less of a problem as food production and distribution has become more globalized. A third cause of inflation could be the effects of an organized cartel that is purposely restricting supply and artificially raising prices. This only works as long as the cartel maintains a monopoly. Economic theory tells us that if prices are raised it will encourage competitors to enter the business and eventually drive prices back toward the cost of production. But if the producers collude together they can raise prices by restricting supply. This happened in the 1970's as OPEC agreed to limit oil production in an effort to raise Oil Prices. The effectiveness of this type of price manipulation depends on the unity of the cartel because as prices rise there is more incentive to 'cheat' on production quotas. Thus other members of the cartel bear the cost of restricting supply while the individual gets the benefit of increased sales at a higher price. Thus most cartels are generally only successful in the short run. The one notable exception is the DeBeers Diamond Cartel. Currency exchange rates can have some effects on the price of imported goods but generally they are a function of the money supply in the country (if they are allowed to fluctuate on the open market). In other words, if a country like Zimbabwe or Venezuela prints lots of money their currency will devalue in relation to other currencies. Making their products cheaper on the world market. At first this doesn't make sense but think of it this way:- A Venezuelan produces a vase that he is willing to sell for 100 Bolívar. When the exchange rate is 1 to 1 that vase will cost an American USD100. But if the exchange rate drops to 100 to 1 it will only cost the American USD1. The problem is that prices will probably rise in Venezuela and the next vase will have to be sold for 10 000 Bolívar. Another problem arises when the government tries to set the exchange rate or institutes price controls which results in economic distortions, shortages and a rise of the 'Black Market', i.e. the free market. So from a macroeconomic point of view the only cause of long term inflation is an increase in the money supply, since the other causes are self-limiting and of limited duration. Inflation Risk:- The primary risk in inflation is that your purchasing power will be eroded during the time that you hold the money. In other words, you will be able to buy less. If you work one hour and expect to be able to buy one toaster with the money you receive from your labors but you don't need a toaster at the moment you expect your money to retain its value so you can buy that toaster at a later date. The primary risk of inflation is that the longer you hold those dollars the less they will buy. So after a year that money that used to buy a toaster will now only buy 90% of a toaster or 50% of a toaster. The higher the inflation rate, the faster the purchasing power decreases. And consequently the quicker people want to unload this depreciating asset. Better to buy the toaster now, even though you don't need it at the moment, rather than wait and have to spend more money later. This causes people to spend money faster and faster the higher the inflation rate goes. The speed at which people unload their money is called the Velocity of Money. Definition of Inflation in Economics:- However, it appears that the meaning of the word inflation has changed over time. Let's look at how to define inflation and

how the definition has changed and what that actually means to you the consumer. Webster's 1983 Definition of Inflation:- According to Webster's New Universal Unabridged Dictionary published in 1983 the second definition of 'inflation' after 'the act of inflating or the condition of being inflated' is:- 'An increase in the amount of currency in circulation, resulting in a relatively sharp and sudden fall in its value and rise in prices: it may be caused by an increase in the volume of paper money issued or of gold mined, or a relative increase in expenditures as when the supply of goods fails to meet the demand.' This definition includes some of the basic economics of inflation and would seem to indicate that inflation is not defined as the increase in prices but as the increase in the supply of money that causes the increase in prices, i.e. inflation is a cause rather than an effect. But ....' Webster's 2000 Definition of Inflation:- 'The American Heritage® Dictionary of the English Language, Fourth Edition, Copyright © 2000 Published by Houghton Mifflin Company says:- 'Inflation:- A persistent increase in the level of consumer prices or a persistent decline in the purchasing power of money, caused by an increase in available currency and credit beyond the proportion of available goods and services.' In this definition, inflation (rising prices) would appear to be the consequence or result, rather than the cause.' Shifty Words:- 'So between 1983 and 2000 the definition appears to have shifted from the cause to the result. Also note that the cause could be either an increase in money supply or a decrease in available goods and services.' From this page we can see that even Dictionaries don't agree on the definition of inflation and economists continue to argue over its primary cause. Although it is generally agreed that economic inflation may be caused by either an increase in the money supply or a decrease in the quantity of goods. Therefore it should be equally obvious that falling prices will result from a decrease in the money supply or a rapid increase in the quantity of available goods. Recent years have seen a virtual explosion of inexpensive goods produced in China and other former Communist Countries. So it is no wonder that we in the United States see falling prices rather than the effects of inflating the money supply in our economy. The opposite of inflation is Deflation. Inflation Rate:- The inflation rate is generally measured on a percentage basis in annual terms. In other words, the percentage increase of prices over the previous year. So if something cost USD1.00 a year ago and costs USD1.10 now there has been 10% inflation. Inflation Hedge:- An inflation hedge is a method of protecting yourself against the effects of inflation. So if you would like to buy something a year from now but want to protect your purchasing power in the mean time you might purchase an 'inflation hedge' commonly inflation hedges are commodities under the assumption that if paper money is depreciating then physical commodities will be appreciating. Typically precious metals like gold and silver are considered the best inflation hedges because they are easily transportable, divisible, and readily accepted. Occasionally, other commodities can be used as an inflation hedge. If you are hedging large investments Oil might serve as an inflation hedge. During times of HyperInflation such as that of Weimar Germany people would buy any commodity they could get their hands on such as soap, matches, teacups, whatever ... assuming that anything was better than holding on to money that would be worthless shortly. Once they had a commodity they could exchange it with someone else for what they actually needed. / Под Инфляцией, от Латинского слова Inflatio, означающее Вздутие, понимается присущее экономике переполнение сферы обращения бумажными деньгами вследствие чрезмерного (по сравнению с потребностями в действительных деньгах – золоте) выпуска их. Инфляция может быть и результатом сокращения товарной массы в обращении при неизменном количестве выпущенных бумажных денег. Она выражается в обесценении последних по отношению к золоту, сопровождается ростом цен и падением реальной заработной платы. В период общего кризиса с отменой золотого стандарта инфляция приняла всеобщий, затяжной и хронический характер. В современных условиях проявляется в повышении рыночной цены золота, стоимости жизни, введении 'плавающих' курсов валют и росте цен. Инфляция – рост цен. Рост уровня цен на товары и услуги, происходящий в случае роста расходов по отношению к предложению товаров и услуг на рынке; иными словами, слишком большое количество денег направлено на приобретение слишком малого количества товаров. Умеренная инфляция является обычным результатом экономического роста. Гиперинфляция, когда цены поднимаются на 100% и более, приводит к потере доверия к данной валюте и массовому переводу активов в другую валюту, недвижимость или золото, что обычно позволяет сохранить их ценность в периоды инфляции.

INFLATIONARY = РАЗДУВАНИЕ – Inflationary:- of, relating to, tending to cause inflation. Substantial and continuing rise in the general price level of commodities. / Под Инфляцией, от Латинского слова Inflatio, означающее Вздутие, понимается .

INFLATIONARY GAP = ИНФЛЯЦИОННЫЙ РАЗРЫВ – An Inflationary Gap, in economics, is the amount by which the real Gross domestic product, or real GDP, exceeds potential GDP. The real GDP is also known as GDP 'Adjusted For Inflation', 'constant prices' GDP or 'constant Dollar' GDP, because it measures the aggregate output in a country's income accounts in a given year, expressed in base-year prices. On the other hand, the potential GDP is the quantity of real GDP when a country's economy is at full-employment. It is one type of output gap, the other being a recessionary gap. The concept of the inflationary gap was first given by John Maynard Keynes in his work How to Pay for War? (1940) this method was basically employed to study and solve problems regarding war finance. Keynes starts the analysis of the inflationary gap from the level of full employment equilibrium whereas his other analyses are based on under-employment equilibrium. Let the full employment output be YF and the actual output that the economy is currently producing be Y. If the difference YF – Y is negative, the actual national income exceeds the potential national income, which is known as the Inflationary Gap. If this gap is positive, it is known as Recessionary Gap. The inflationary gap is always an ex-ante phenomenon, it is always expected to occur in the future. It arises when expected expenditure will not equal expected consumption at a future date. Keynes defines it as the excess demand in the market for consumption of goods and services. He defined an inflationary gap as an excess of planned expenditure over the available output at pre-inflation or base prices.Given a constant average propensity to save, rising:- money incomes at full employment level would lead to an excess of demand over supply and to a consequent inflationary gap. Thus Keynes used the concept of the inflationary gap to show the main determinants that cause an inflationary rise of prices. When an initial increase in aggregate demand produces inflation (so called Demand-Pull Inflation) and real GDP increase, the price level and real GDP are determined at the point where the new aggregate demand and the short-run aggregate supply meet. This point is known as Above Full-Employment Equilibrium, since the short-run aggregate supply is above the long-term aggregate supply, i.e. above the aggregate supply at full employment. The gap created between real GDP and potential GDP is the consequence of inflation, this is one of the reasons this type of gap is called an Inflationary Gap. Obviously, this situation cannot last forever, because there is a shortage of labor. The shortage of labor produces the rise of wage rates, which makes the short-run aggregate supply decrease, until it reaches the full-employment level. The short-run aggregate supply decrease makes an upward pressure on the price level, consequently causing inflation. The once created gap between real GDP and potential GDP was the sign of forthcoming inflation, this is another reason this type gap is called an Inflationary Gap. The main cause of the gap is considered to be expansionary monetary policies carried out by the government. An inflationary gap is a signal that the economy is in the boom part of the trade cycle, resources are being used over their capacity, factories are operating with increasing average costs; wage rates increase because labor is used beyond normal hours at overtime pay rates. A case of the gap can arise when consumer or investor spending is very buoyant, when foreign demand is increasing or when government expenditure increases. According to some economists, such a situation arose in the United States in 1999–2000 and 2006–07, when the unemployment rate was below 5%. Wages increase as a result of the increase in aggregate demand which in turn raises business costs. This leads to an increase in prices (inflation) and these higher prices reduce consumer purchasing power, causing aggregate demand to fall and the output gap to close. When the gap is finally eliminated, equilibrium is

achieved, with actual GDP equal to potential GDP but at a higher price level. Economists warn that this is not an auto mechanism. Government action in the form of fiscal and monetary policies is a must to close the gap. Monetary policy can be used to contract the money supply in the economy by raising interest rates, which would reduce purchasing power, resulting in falling demand. Keynes, however, was not in favour of monetary methods. He suggested a method of progressive taxation, where the collections from the taxes would be saved and used once equilibrium is achieved in the economy, which he called 'forced savings'. Another method is to cut transfer payments and subsidies, thus cutting down consumption. Friedman criticized the Keynesian inflationary gap on the grounds that gap analysis can be used only under special circumstances like wartime. He stated that the analysis did not improve our knowledge of business cycles to a great extent. Bert Hansen criticized Keynes for limiting his analysis of the gap only to the goods market, leaving out the factor market. According to him, the gap is caused due to excess demand in both the goods and factor market. Another drawback of this model is its static nature, which was criticized by Milton Friedman, Eric Lundberg and other economists. Keynes himself recognised this drawback and introduced time lags concerning receipts and expenditure of income. Tjalling Charles Koopmans (1910–1985; Dutch American mathematician and economist) introduced the idea of the speed of inflation, stating that the inflationary gap reduces as the speed of inflation falls. Another weakness of the theory is that it is concerned only with flow concepts like current income, expenditure, consumption, and saving. However the increase of prices affects not only current goods but also the stock of goods already out in the market. This point is ignored in the theory. Despite these criticisms, the concept of inflationary gap has proved to be of much importance in explaining rising prices at full employment level and policy measures in controlling inflation. Inflationary Gap:- amount by which government and private spending exceeds the amount needed to maintain a stable price level and full employment. / Дьжон Мэйнад Кейнз (John Maynard Keynes; 1883 – 1946; Английский экономист). Чалин Шарл Коопманс (Tjalling Charles Koopmans; 1910–1985; Нидерландско-Американский математик и экономист).

INFLATION FACTOR = ИНФЛЯЦИОННЫЙ ФАКТОР (или ФАКТОР ИНФЛЯЦИИ) – Inflation Factor is a loading to provide for increased medical costs and loss payments in the future due to inflation.

INFLATION–INDEXED DEBT INSTRUMENT = ДОЛГОВОЙ ИНСТРУМЕНТ, ИНДЕКСИРУЕМЫЙ С УЧЁТОМ ИНФЛЯЦИИ – Inflation-Indexed Debt Instrument is generally a debt instrument (such as a bond or note) on which the payments are adjusted for inflation and deflation. In a typical inflation-indexed instrument, the principal amount is adjusted monthly based on an inflation index such as the Consumer Price Index.

INFLATION–INDEXED SECURITIES = ЦЕННЫЕ БУМАГИ, ИНДЕКСИРУЕМЫЕ С УЧЁТОМ ИНФЛЯЦИИ – Inflation-Indexed Securities offer a valuable option – an investment specifically designed to provide a substantial and predictable real rate of return over inflation. For example, if inflation is 3%, a 5% interest rate provides a 2% real return over inflation. Also known as Inflation Linked Securities and Linkers in the United Kingdom.

INFLATION–LINKED SECURITIES = ЦЕННЫЕ БУМАГИ С УВЯЗКОЙ К ИНФЛЯЦИИ (или ЦЕННЫЕ БУМАГИ, ПРИВЯЗАННЫЕ К СТАВКЕ ИНФЛЯЦИИ) – Inflation-Linked Securities:- in the fall of 1972 President Nixon announced that the rate at which inflation was increasing was decreasing. This was the first time that a sitting US President used a third derivative to advance his case for re-election. The modelling of inflation has a number of rather subtle features associated with it. The essential idea here is that one treats the CPI as if it were the price of a foreign currency. The associated 'foreign' interest rate system then has the interpretation of being the system of 'real' interest rates. Inflation is a monetary phenomenon. To model a monetary economy with inflation we need three more ingredients. These are:- (i) the rate of real consumption – k_t, (ii) the money supply – M_t, and (iii) the liquidity benefit rate – β_t associated with the money supply. The process β_t describes the effective rate of benefit, in Dollars per unit of time, associated with a given level of the money supply, on an aggregate basis. If the money supply at time t is M_t, the associated benefit rate is (β_t x M_t) Dollars per year. Thus one thinks of the benefit as a kind of 'consumable' commodity. Of course what really 'counts' is the real rate of benefit derivable from the presence of the money supply. This is given by:- $l_t = (\beta_t \times M_t) / C_t$. The consumer price index (CPI) is thus used as a kind of 'exchange rate' to convert the nominal benefit into a real benefit. Our assumption is that in equilibrium the price level – C_t and the rate of real consumption – k_t will be adjusted to each other in such a way as to maximize the total expected utility. Many types of investments can help you keep pace with, or stay ahead of, inflation. But generally, the higher the desired return, the more risk you must take. Over long periods of time, stocks have often beaten inflation, but not always – as the mid-1970's, early 1980s, and even the early part of this decade, made dramatically clear. Also keep in mind that stocks represent the riskiest class when compared to guaranteed, fixed income and real estate asset classes, and, of course, you should remember that past performance does not guarantee future returns. Real estate investments can also effectively hedge against inflation, since the cost of commercial real estate and rents is more directly related to an overall business expansion and price trends, than to one isolated economic factor. However, you need to be aware that real estate is illiquid, and that it may be slow to react to more rapid changes in inflation. Money market accounts are short-term enough to be highly responsive to inflation, but generally do not stay very far ahead of it. And while longer-term bonds tend to provide higher returns than money market investments, they are vulnerable to current interest rate changes – the kind often created by inflation – that can reduce the value of existing portfolios. Inflation-indexed securities offer a valuable option – an investment specifically designed to provide a substantial and predictable real rate of return over inflation. For example, if inflation is 3%, a 5% interest rate provides a 2% real return over inflation. 'Linkers' – as these inflation-linked investments are sometimes called – have been available in Britain since 1981. Similar securities were then introduced in a number of other countries that were fighting inflation, including Australia, Mexico, Argentina, Brazil, Sweden, Israel, Canada, and, in 1997, the United States. All work on the same principle:- They pay an interest rate based on an official inflation measure, plus a present real rate of return over inflation. The real rate stays constant no matter how much inflation swings up and down. The US government's inflation-fighting securities are called Treasury Inflation-Protected Securities, or TIPS. Since their introduction in 1997, the US Treasury inflation bond market has grown to more than USD400 billion. TIPS base their inflation component on the monthly Consumer Price Index for Urban Consumers (CPI-U), which measures the changing prices of goods and services. For new issues, the real rate over the CPI is set at periodic auctions held by the government. In an inflationary environment, demand will almost certainly drive up TIPS prices, which then usually causes interest rates paid by new issues to drop. Both of these factors will tend to boost the value of current portfolios and make it more expensive for investors to jump in. The debt financing securities that offer their holders protection against fluctuations in the rate of inflation as measured by the consumer price index (CPI). The yields of these securities adjust monthly with respect to the current rate of inflation. Although they are not as common as conventional debt instruments, inflation-protected debt can provide an investor with a balanced risk exposure:- these securities pose all of the normal risks associated with regular debt securities – such as default risk – but they remove the possibility of inflationary changes eroding their real returns. There are corporate and municipal inflation-linked securities. Inflation-Linked Securities are investments that have been available in Britain since 1981. Similar securities were then introduced in a number of other countries that were fighting inflation, including Australia, Mexico, Argentina, Brazil, Sweden, Israel, Canada, and, in 1997, the United States. All work on the same principle:- they pay an interest rate based on an official inflation measure, plus a present real rate of return over inflation. The real rate stays constant no matter how much inflation swings up and down. Also known as Inflation-Indexed Securities in the United States, and Linkers in the United Kingdom. Debt financing securities that offer their holders

protection against fluctuations in the rate of inflation as measured by the Consumer Price Index (CPI). The yields of these securities adjust monthly with respect to the current rate of inflation. Inflation-Linked Securities:- although they are not as common as conventional debt instruments, inflation-protected corporate debt can provide an investor with a balanced risk exposure:- these securities pose all of the normal risks associated with regular corporate debt securities – such as default risk – but they remove the possibility of inflationary changes eroding their real returns. / флуктуации (колебания).

INFLATION PROTECTION BONDS = ОБЛИГАЦИИ С ЗАЩИТОЙ ОТ ИНФЛЯЦИИ – In the United States, Inflation Protection Bonds are issued with a constant par value and usually in increments of USD1 000.00, these bonds are designed to protect an investor's capital against inflation, thereby, maintaining purchasing power. The principal value fluctuates daily along with changes in the CPI-U (Consumer Price Index – Urban). The bonds also pay interest semi-annually, by applying a fixed interest rate to the principal balance of the bond, not the par value. The bonds will make a final payment based on the CPI-U for the maturity date. Investors, however, are guaranteed a minimum of par value at the time of maturity. Inflation indexed bonds may be stripped into principal and interest components. These are not inter-changeable like other US Treasury STRIPS. An interest strip may mature for less than the par value (during periods of deflation), while the corpus strip guarantees that you will receive at least par value at maturity. There have been no inflation-indexed bonds that have been stripped and sold to investors to our knowledge. Inflation indexed bonds have a number of common features:- (i) Par Value remains constant; (ii) Principal Balance varies daily; (iii) Interest rate is fixed; (iv) Coupon Payments vary with the principal balance; (v) Bonds may be stripped; and (vi) CPI-U index is applied with a 3 month lag.

INFLATION RATE = СТАВКА ИНФЛЯЦИИ (или УРОВЕНЬ ИНФЛЯЦИИ) – Inflation Rate is an important economic indicator. The rate at which prices are rising. The inflation rate is based upon the Consumer Price Index (CPI). / Уровень инфляции является важным экономическим индикатором, отражающим уровень роста цен. Ставка Инфляции – скорость изменения цен. Два основных показателя уровня инфляции в США – индекс по потребительским ценам (consumer price index) и индекс по ценам от производителей (producer price index) – отражают изменения цен для потребителей и производителей. Ставка инфляции может быть рассчитан на погодовой, помесячной или иной основе.

INFLATION RISK PREMIUM = ПРЕМИЯ ЗА РИСК ИНФЛЯЦИИ – Inflation Risk Premium is the difference between the yield on a fixed income bond and the sum of the guaranteed real yield and the expected inflation rate on a similar index-linked bond. It is required as compensation for the uncertainty in the real return on the bond by investors with index-linked liabilities. Under the inflation risk premium theory the yield curve will tend to slope upwards because investors need a higher yield to compensate them for holding longer dated stocks which are more vulnerable to inflation risk than shorter dated stocks.

INFLATION TAX = ИНФЛЯЦИОННЫЙ НАЛОГ – Inflation Tax is a term which refers to the financial loss of value suffered by holders of cash and fixed-rate bonds, as well those on fixed income (not indexed to inflation), due to the effects of inflation; or capital gains tax resulting from inflation. This financial loss of value is often expressed as a loss of purchasing power. It may be better characterized as a wealth transfer than a tax - since many people including debtors, holders of hard assets and some equities may simultaneously gain. Many economists hold that inflation affects the lower and middle classes more than the rich, as they hold a larger fraction of their income in cash, they are much less likely to receive the newly created monies before the market has adjusted with inflated prices, more often have fixed incomes, wages or pensions, and lack the means to avoid domestic inflation by reallocating assets overseas. Some argue that inflation is a regressive non-linear consumption tax. Nevertheless, inflation improves the economic position of people with outstanding fixed interest debt like student loans and mortgages. It can improve the nation's balance of trade – stimulating exports with a less expensive currency – and decreasing imports. A large portion of the 'tax' also falls on foreign holders of fixed income debt in the inflated currency. It is important to note that this 'tax' on creditors is coupled with a simultaneous transfer to debtors – reducing their debt burden. By transferring wealth to people who are more likely to spend it, an inflation 'tax' can further increase real (inflation adjusted) economic growth (beyond its beneficial impact on trade). It may also hasten new purchases since inflation makes it costly to keep cash. Inflation can increase liquidity in depressed real estate markets since it would increase nominal asset values back above the loan values. This improved LTV (Loan To Value is a ratio of the outstanding debt on a property to the market value of that property) allows for people to sell their homes, and move to pursue better economic opportunities and as such can improve efficiency of the labor markets. In this way, an 'inflation tax' can improve real (inflation adjusted) economic growth and improve employment. Therefore a very tight monetary policy which seeks to reduce inflation – even at the cost of real (inflation adjusted) economic growth and jobs can be viewed as a 'stagnation tax'. Inflation Tax:- the transfer of resources to the government from businesses and consumers that occurs when government spending is financed by printing government-issued money rather than being financed by government taxes or borrowing from the public. When the government obtains goods and services by printing new money and inflation occurs, consumers and businesses holding money pay an inflation tax because inflation erodes the purchasing power of their money holdings. / Величина Инфляционного Налога (ИН) равна произведению уровня инфляции (И) показывающему, насколько обесцениваются деньги, на сумму денег, имеющихся в наличии у населения (Д):- ИН = И х Д.

IN–FLIGHT SURVEY = ОТЧЁТ ПО ДАННОМУ РЕЙСУ – The In-Flight Survey (IFS) is administered to US and foreign travelers departing the US as a means of providing data on visitor characteristics, travel patterns and spending habits, and for supplying data on the US international travel Dollar accounts as well as to meet balance of payments estimation needs. The IFS covers about 70 percent of US carriers and 35 percent of foreign carriers, who voluntarily choose to participate. Sample results are expanded to universe estimates to account for nonresponse of passengers on each sampled flight, for coverage of all flights on each major airline route, and for all international routes. The basis for the expansion is the number of passengers departing the United States, obtained from the Immigration and Naturalization Service.

INFLORESCENCE = СОЦВЕТИЕ – Inflorescence (from New Latin Inflōrēscentia, from Late Latin Inflōrescere = To Blossom, from Flōrescere = To Bloom) is a flower cluster, including bracts, on a stalk. See also Catkin, Corymb, Cyathium, Cyme, Dichasium, Fascicle, Head (or Capitulum), Panicle, Raceme, Spadix, Spike, Thyrse Umbel. Inflorescence is the arrangement of flowers on the axis. Inflorescence:- in a flowering plant, a cluster of flowers on a branch or a system of branches. An inflorescence is categorized on the basis of the arrangement of flowers on a main axis (peduncle) and by the timing of its flowering (determinate and indeterminate). There are determinate and indeterminate inflorescences. Determinate inflorescence:- in determinate (cymose) inflorescences, the youngest flowers are at the bottom of an elongated axis or on the outside of a truncated axis. At the time of flowering, the apical meristem (the terminal point of cell division) produces a flower bud, thus arresting the growth of the peduncle:- (i) A Cyme is a flat-topped inflorescence in which the central flowers open first, followed by the peripheral flowers, as in the onion (genus Allium). (ii) A Dichasium is one unit of a cyme and is characterized by a stunted central flower and two lateral flowers on elongated pedicels, as in the wood stichwort (species Stellaria nemorum). Indeterminate inflorescence:- in indeterminate inflorescences, the youngest flowers are at the top of an elongated axis or on the centre of a truncated axis. An indeterminate inflorescence may be a catkin, corymb, head, panicle, raceme, spadix, spike, and umbel:- (i) A Catkin (or Ament) is a spike in which the flowers are either male (staminate) or female (carpellate). It is usually pendulous, and the perianth may be reduced or absent, as in Oaks (Quercus). (ii) A Corymb is a raceme in

which the pedicels of the lower flowers are longer than those of the upper flowers so that the inflorescence has a flat-topped appearance overall, as in Hawthorn (Crataegus). (iii) A Head (Capitulum) is a short dense spike in which the flowers are borne directly on a broad, flat peduncle, giving the inflorescence the appearance of a single flower, as in the Dandelion (Taraxacum). (iv) A Panicle is a branched raceme in which each branch has more than one flower, as in the Astilbe (Astilbe). (v) In a Raceme a flower develops at the upper angle (axil) between the stem and branch of each leaf along a long, unbranched axis. Each flower is borne on a short stalk, called a Pedicel. An example of a raceme is found in the Snapdragon (Antirrhinum majus). (vi) A Spadix is a spike borne on a fleshy stem and is common in the family Araceae (e.g., Philodendron). The subtending bract is called a Spathe. (vii) A Spike is a raceme, but the flowers develop directly from the stem and are not borne on pedicels, as in Barley (Hordeum). (viii) In an Umbel, each of the pedicels initiates from about the same point at the tip of the peduncle, giving the appearance of an umbrella-like shape, as in the Wax Flowers (Hoya). Inflorescence is a group of flowers growing from a common stem, often in a characteristic arrangement. Also called Flower Cluster. Inflorescence is the part of a floral shoot where the flowers are segregated as more or less distinct units. Inflorescence is the flowering part of a plant including the bracts, flower stalks, and flowers. / (i) как у Лука (Род Аллиум или Лук (Genus Allium)). (ii) Дихазий (Виды Звездчатки или Стеллярии Нэморум (Stellaria Nemorum)). (i) Серёжка (Catkin или Ament) как у Дубов (Куэркус; Oaks (Quercus)). (ii) (Corymb) как у Боярышника (Кратэгус; Hawthorn (Crataegus)). (iii) Головка (Head или Capitulum) как у Одуванчика (Тараксакум; Dandelion (Taraxacum)). (iv) Метёлка (Panicle) как у Астильбы (Astilbe). (v) Кисть (Raceme) у Львиного Зева (Антирринум Майус; Snapdragon (Antirrhinum Majus)). (vi) Початок (Spadix) Обёртка или Покрывало (Spathe). (vii) Колос (Spike) у Ячменя (Barley (Hordeum)). (viii) (Umbel) как у Восковых Цветков (; Hoya). рацемозное (ботрическое) соцветие или гроздь (cluster), состоящее из . Смотрите также Серёжка (Catkin), Коримб или Щиток (Corymb), Циатий (Cyathium), Полузонтик или Ложный Зонтик (Cyme), Дихазий (Dichasium), Пучок или Гроздь (Fascicle), Головка (Head или Капитулум (Capitulum)), Метёлка (Panicle), Кисть (Raceme), Початок (Spadix), Колос (Spike), и Тирсоидный или Пирамидально-Метёльчатый Зонтик (Thyrse Umbel). Под Соцветием понимается часть годичного побега растения, несущая цветки и видоизменённые прицветные листья; более или менее чётко ограничена от вегетативной части растения. Различают соцветия ботрические (с моноподиальным ветвлением, цветки распускаются от основания к верхушке или от периферии к центру) и цимозные (с симподиальным ветвлением, цветки распускаются от вершины к основанию), простые (головка, зонтик, кисть, колос и так далее) и сложные (сложный колос, метёлка и так далее). Основные типы соцветия:- (i) головка (Клевер); (ii) зонтик (Первоцвет); (iii) кисть (Иванчай); (iv) колос (Подорожник); (v) сложный колос (Рожь); и (vi) метёлка (Овёс).

INFLOW QUENCH = ВХОД (или ВПУСК, или ВТЕКАНИЕ, или ПРИТОК, или ЗАСАСЫВАНИЕ, или ПРИЛИВ, или ВТЕКАТЬ) ТУШИТЬ (или ТУШЕНИЕ, или ГАШЕНИЕ, или ЗАКАЛКА, или ГАСИТЬ, или ОСЛАБЕВАТЬ, или РЕЗКОЕ ОХЛАЖДЕНИЕ, или ПОДАВЛЕНИЕ) – Inflow Quench:- cooling air for extruded polymer filaments that is directed radially inward across the path of the filaments. The threadline is completely enclosed in a quench cabinet in inflow quenching. See also Outflow Quench.

INFLUENCE = ВЛИЯНИЕ (или ВОЗДЕЙСТВИЕ) – Influence:- to modify the growth and development of a plant in any way by natural selection or research.

INFLUENT = ВТЕКАЮЩЕЕ – Influent is the fluid entering a component.

INFORMAL APPLICATION = НЕФОРМАЛЬНАЯ ЗАЯВКА – Informal Application is an application that has been filed without one or more of the elements required to receive a filing date. The United States Patent and Trademark Office (USPTO) will return informal applications to applicants. Please see the entry for ‘application’ above for a list of the required elements.

INFORMATION DISCLOSURE STATEMENT = ЗАЯВЛЕНИЕ О РАСКРЫТИИ ИНФОРМАЦИИ – Information Disclosure Statement (IDS) is a list of all patents, publications, US applications, or other information submitted for consideration by the office (the United States Patent and Trademark Office (USPTO)) in a non-provisional patent application filed under 35 USC § 111(a) to comply with applicant’s duty to submit to the office information which is material to patentability of the invention claimed in the non-provisional application. For patent applications filed under 35 USC § 111(a), applicants and other individuals who are substantively involved in preparing or prosecuting a patent application must submit to the office information which is material to patentability (could render a claim unpatentable) as defined in 37 CFR § 1.56 (CFR:- short for the US Code of Federal Regulations). The provisions of 37 CFR § 1.97 and 37 CFR § 1.98 provide a mechanism for compliance with the duty of disclosure provided in 37 CFR § 1.56. The IDS must include a list of all patents, publications, US applications, or other information submitted for consideration by the office. The United States Patent and Trademark Office (USPTO) provides forms for use in the submission of an IDS, the PTO/SB/08a and PTO/SB/08b. / Заявление О Раскрытии Информации – документ, прилагающийся к заявке и содержащий дополнительную информацию.

INFORMATION GENERATION SYSTEM = СИСТЕМА СБОРА, ОБРАБОТКИ И РАСПРОСТРАНЕНИЯ ИНФОРМАЦИИ – Information Generation System reads information lines, calculates best bid offer, index calculation, best price quotes (pricing for odd lots), and forms and sends information to trading floor overhead screen (FID).

INFORMATION SYSTEM AGREEMENT = СОГЛАШЕНИЕ ОБ ИНФОРМАЦИОННОЙ СИСТЕМЕ – The Information System Agreement (ISA) is a leading organization of ocean carriers that develops, promotes and implements electronic commerce solutions for the maritime industry.

INFORMATION TECHNOLOGY = ИНФОРМАЦИОННАЯ ТЕХНОЛОГИЯ – Information Technology (IT) is a generic term for people or systems working toward business improvement. / Информационная технология это обобщённый термин для людей или систем, работающих на усовершенствование бизнеса.

INFORMING CUSTOMER = ИНФОРМИРУЮЩИЙ ЗАКАЗЧИК – In the cotton futures trading, the stopping clearing member informs his customer as to the number of bales, the grade, staple, and pertinent classing data of the cotton stopped. The clearing member will also inform his customer regarding the point of delivery of the cotton, and will, if requested by mutual consent, arrange for local delivery.

INFRARED ANALYSIS = ИНФРАКРАСНЫЙ АНАЛИЗ – Infrared Analysis is a form of absorption spectroscopy that identifies organic functional groups present in a used oil sample by measuring their light absorption at specific infrared wavelengths; absorbance is proportional to concentration. The test can indicate additive depletion, the presence of water, hydrocarbon contamination of a synthetic lubricant, oxidation, nitration, and glycol contamination from coolant. Fourier Transform Infrared (FTIR) permits the generation of complex curves from digitally represented data. / Анализ с помощью инфракрасной спектроскопии.

INFRARED SPECTRA = ИНФРАКРАСНЫЕ СПЕКТРЫ – Infrared Spectra is a graph of infrared energy absorbed at various frequencies in the additive region of the infrared spectrum. The current sample, the reference oil and the previous samples are usually compared. / Инфракрасные Спектры или ИК-Спектры .

INFRARED SPECTROSCOPY = ИНФРАКРАСНАЯ СПЕКТРОСКОПИЯ – Infrared Spectroscopy is an analytical method using infrared absorption for assessing the properties of used oil and certain contaminants suspended therein. See also Fourier Transform

Infrared Spectroscopy (FTIR). / Инфракрасная Спектроскопия или ИК-Спектроскопия – раздел спектроскопии, включающий получение, исследование и применение спектров испускания, поглощения и отражения в инфракрасной области спектра (смотрите Инфракрасное Излучение). Инфракрасная спектроскопия занимается главным образом изучением молекулярных спектров, так как в ИК-области расположено большинство колебательных и вращательных спектров молекул. В инфракрасной спектроскопии наиболее широкое распространение получило исследование ИК-спектров поглощения, которые возникают в результате поглощения ИК-излучения при прохождении его через вещество. Это поглощение носит селективный характер и происходит на тех частотах, которые совпадают с некоторыми собственными частотами колебаний атомов в молекулах вещества и с частотами вращения молекул как целого, а в случае кристаллического вещества – с частотами колебаний кристаллической решётки. В результате интенсивность ИК-излучения на этих частотах резко падает – образуются полосы поглощения. Количественная связь между интенсивностью I прошедшего через вещество излучения, интенсивностью падающего излучения I_0 и величинами, характеризующими поглощающее вещество, даётся Законом Бугера-Ламберта-Бера. На практике обычно ИК-спектр поглощения представляют графически в виде зависимости от частоты n (или длины волны l) ряда величин, характеризующих поглощающее вещество:- коэффициента пропускания T (n) = $I(n)/I_0(n)$; коэффициента поглощения A(n) = $[I_0(n) – I(n)]/I_0(n) = 1 – T(n)$; оптической плотности D(n) = $\ln[1/T(n)] = c(n)cl$, где c(n) – показатель поглощения, c – концентрация поглощающего вещества, l – толщина поглощающего слоя вещества. Поскольку D(n) пропорциональна c(n) и c, она обычно применяется для количественного анализа по спектрам поглощения. Основные характеристики спектра ИК-поглощения:- число полос поглощения в спектре, их положение, определяемое частотой n (или длиной волны l), ширина и форма полос, величина поглощения – определяются природой (структурой и химическим составом) поглощающего вещества, а также зависят от агрегатного состояния вещества, температуры, давления и другого. Изучение колебательно-вращательных и чисто вращательных спектров методами инфракрасной спектроскопии позволяет определять структуру молекул, их химический состав, моменты инерции молекул, величины сил, действующих между атомами в молекуле, и другое. Вследствие однозначности связи между строением молекулы и её молекулярным спектром инфракрасная спектроскопия широко используется для качественного и количественного анализа смесей различных веществ (например, моторного топлива). Изменения параметров ИК-спектров (смещение полос поглощения, изменение их ширины, формы, величины поглощения), происходящие при переходе из одного агрегатного состояния в другое, растворении, изменении температуры и давления, позволяют судить о величине и характере межмолекулярных взаимодействий. Инфракрасная спектроскопия находит применение в исследовании строения полупроводниковых материалов, полимеров, биологических объектов и непосредственно живых клеток. Быстродействующие спектрометры позволяют получать спектры поглощения за доли секунды и используются при изучении быстропротекающих химических реакций. С помощью специальных зеркальных микроприставок можно получать спектры поглощения очень малых объектов, что представляет интерес для биологии и минералогии. Инфракрасная спектроскопия играет большую роль в создании и изучении молекулярных оптических квантовых генераторов, излучение которых лежит в инфракрасной области спектра. Методами инфракрасной спектроскопии наиболее широко исследуются ближняя и средняя области ИК-спектра, для чего изготовляется большое число разнообразных (главным образом двухлучевых) спектрометров. Далёкая ИК-область освоена несколько меньше, но исследование ИК-спектров в этой области также представляет большой интерес, так как в ней, кроме чисто вращательных спектров молекул, расположены спектры частот колебаний кристаллических решёток полупроводников, межмолекулярных колебаний и другое.

INFRASTRUCTURE = ИНФРАСТРУКТУРА – Infrastructure:- public utilities of a country. System of airfields and airports, housing, ports, railways, roads, telecommunication systems and networks, water and sewerage systems, and other public amenities in a certain area. Also known as Overhead Capital. / системы и сети дальней связи, . коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Под Инфраструктурой, от двух Латинских слов Infra, означающее Ниже или Под, и Structura, означающее Расположение или Строение, понимается комплекс отраслей хозяйства, обслуживающих производство – производственная инфраструктура и обеспечивающих условия жизнедеятельности общества – социальная инфраструктура. Производственная Инфраструктура подразумевает под собой аэродромы, водоснабжение, водохранилища, гидромелиорацию, дороги, каналы, мосты, порты, связь, склады, транспорт и другое. Социальная или Непроизводственная Инфраструктура подразумевает под собой здравоохранение, науку, образование и другое. Уровень развития инфраструктуры отражает степень освоенности (обустройства) данной территории. Инфраструктура – базисная экономическая система страны, включающая транспорт, коммуникации и иные сферы материального производства. Строительство и обслуживание дорог, мостов, канализационных линий и электросистем обеспечивает функционирование миллионов рабочих мест по всей стране. Для развивающихся стран построение инфраструктуры является первым шагом в экономическом развитии.

INFRASTRUCTURE FUND = ИНФРАСТРУКТУРНЫЙ ФОНД – Infrastructure Fund:- a managed investment that invests in public infrastructure assets which companies and individuals utilise during ordinary day-to-day activity. This may include transport, telecommunications, materials handling and utilities facilities. / транспорт, дальнюю связь, . коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INFRINGEMENT = НАРУШЕНИЕ (или ПОСЯГАТЕЛЬСТВО) – Infringement is an unauthorized use of material protected by copyright, patent or trademark law. / Законодательство по авторскому праву, патентам или товарным знакам защищает от неавторизованного использования материала.

INFUSION TECHNOLOGY = ТЕХНОЛОГИЯ ВЛИВАНИЯ – Infusion Technology is an infused polymer construction process that reinforces the fabric of outerwear garments in the places where they take the most abuse:- zipper and pocket flaps, and other high-abrasion areas. The technology blends polymers, penetrates deep into the inner fibers, and surrounds them to form a permanent bond. this tough, resilient matrix ensures a highly wear-resistant surface while allowing the fabric to remain lightweight and flexible. The infused polymer process eliminates the need for heavier-weight abrasion overlays, tapes and bindings, and adds increased strength to the most crucial points on the garment, which dramatically extends the life of the garment. / и прочие зоны повышенного истирания.

INGARD® COTTON = ХЛОПЧАТНИК ИНГАД® – INGARD® Cotton is the Australian name for Monsanto's BT transgenic technology. This technology is owned by Monsanto and is protected by a labyrinth of international patents. To be able to plant transgenic seed in a given area a farmer must first receive a license for that area from Monsanto. / Хлопчатник ИНГАД® – это зарегистрированное в Австралии название для БТ трансгенетической технологии компании Монсэнто (Monsanto). Эта технология принадлежит компании Монсэнто и защищена серией международных патентов. Чтобы использовать трансгенетические семена для посева на какой-то территории фермер, в первую очередь, должен получить от Монсэнто лицензию для конкретной территории.

IN GATE = У ВОРОТ (или В ПРОХОДЕ) – In Gate:- the transaction or interchange that occurs at the time a container is received by a rail terminal or water port from another carrier. / Операция или взаимообмен, который возникает в момент, когда контейнер получен железнодорожным терминалом или водным портом от иного перевозчика.

INGER = INTERNATIONAL NETWORK FOR GENETIC EVALUATION OF RICE

INGESTED CONTAMINANTS = ПРОГЛАТЫВАЕМЫЕ ЗАГРЯЗНИТЕЛИ (или ПРОГЛАТЫВАЕМЫЕ ЗАГРЯЗНЯЮЩИЕ ВЕЩЕСТВА) – Ingested Contaminants:- environmental contaminant that ingresses due to the action of the system or machine.

INGOT = ЧУШКА (или ШТЫК, или СЛИТОК) – Ingot is a mass of metal cast into a size and shape such as a bar, plate, or sheet convenient to store, transport, and work into a semifinished or finished product; it also refers to a mold in which metal is so cast. Gold, silver, and steel, particularly, are cast into ingots for further processing. Steel ingots range in size from small rectangular blocks weighing a few pounds to huge, tapered, octagonal masses weighing more than 500 tons. Tin ingots are the starting material for many products, whether the tin is to be alloyed with other metals, converted to other physical forms, applied to other metal surfaces, or converted to chemical compounds. Ingots are blocks of metal which are cast into a particular shape. They can vary greatly from metal to metal and from production site to production site. Aluminum, lead, zinc and tin are very often transported in this form. Ingot is the mass of metal that results from casting molten steel into a mould. An ingot is usually rectangular in shape and is subsequently rolled into blooms and billets for rods, bars and sections and slabs for plates, sheet and strip. With the increasing use of the continuous casting process the ingot route is less used as the molten steel is now directly cast into a bloom or billet. A bar of metal, usually precious or semi-precious. A block of metal that is cast in a particular shape for convenient handling. See also Bar. Ingot is a mass of metal, such as a bar or block, that is cast in a standard shape for convenient storage or shipment. Ingots are large rough castings designed for storage and transportation. The shape usually resembles a rectangle or square with generous fillets. They are tapered, usually with the big-end-down. Ingot is a form of metal bar, often a preferred form for delivery. Derived from casting into a simple shape for hot working or remelting. / такие как пруток (bar). литьё или отливка (casting). непрерывное литьё или непрерывная разливка или непрерывный слиток (continuous casting). обычно окантован в форме . Чушка меди или свинца. Под Чушкой понимается небольшой слиток металла – чугуна, цветных металлов, ферросплавов – в виде бруска, отливаемого в горизонтальном положении в открытую сверху форму (мульду). Под Слитком понимается литая металлическая заготовка для дальнейшей переработки путём пластической деформации, переплава или електролиза. Под Слитком понимается металл, затвердевший при кристаллизации в изложнице; чаще всего имеющий форму усечённой пирамиды, призмы (квадратной, прямоугольной или многогранной), цилиндра или конуса. Слиток служит полуфабрикатом для дальнейшей переработки, главным образом прокаткой или ковкой. При массовом производстве стали в цехах с высокопроизводительными агрегатами большой вместимости отливают крупные слитки (массой в несколько десятков тонн) для последующего обжатия на блюмингах или слябингах. Под Слитком понимается литая металлическая заготовка, предназначенная для дальнейшей переработки путём пластической деформации (прокатка, ковка, прессование), переплава (получение фасонных отливок, приготовление сплавов) или электролиза (аноды из черновой меди, никеля и другого). Слитки получают путём разливки жидкого металла в формы сравнительно простых очертаний – изложницы, а также методом непрерывного литья и наплавления в водоохлаждаемом кристаллизаторе (электрошлаковый переплав, переплав в дуговых вакуумных печах). Слитки, отлитые в изложницы и предназначенные для дальнейшей обработки давлением, имеют чаще всего форму усечённой пирамиды или усечённого конуса. Если металл кристаллизуется с усадкой, как, например, спокойная сталь, то в слитке имеется прибыльная часть (прибыль), где концентрируется усадочная раковина; при дальнейшем переделе эту часть отрезают и направляют на переплавку. Кипящая сталь затвердевает без образования сосредоточенной усадочной раковины, поэтому в слитках такой стали нет прибыльной части. Слитки, отлитые методом непрерывного литья, имеют форму призм (квадратного, прямоугольного, многоугольного сечения) или цилиндров. Иногда отливают слитки более сложной формы, например, полые. В верхней части непрерывнолитых слитков также располагается усадочная раковина (сравнительно небольшого размера); эту часть отделяют при резке заготовки на мерные длины. В слитках электрошлакового и вакуумно-дугового переплава усадочная раковина значительно меньше, что обусловлено снижением скорости наплавления на заключительном этапе формирования слитков. Масса слитков, предназначенных для обработки давлением, от нескольких килограмм (кг) до 250 тонн (т) и более. Наиболее употребительны стальные слитки массой от 0.5 до 20 т. Слитки чугуна и некоторых цветных металлов, предназначенные для переплава, имеют обычно форму небольших усечённых пирамид с большой конусностью. Такие слитки называются Чушками. Их масса не превышает, как правило, 30–40 кг. Из других форм слитков можно отметить так называемые Штыки (медные), различные болванки и так далее. В связи с тем что условия кристаллизации металла существенно изменяются в ходе затвердевания, строение и химический состав металла в слитках весьма неоднородны (смотри Ликвация). Чем крупнее слиток, тем сильнее выражена в нём химическая и структурная неоднородность. Слитки, получаемые методом непрерывного литья или путём наплавления в кристаллизаторе, значительно более однородны, чем слитки, отлитые в изложницы. Слиток:- золотой резерв Федеральной Резервной Системы (Federal Reserve System (FRS)) США хранится в виде металлических слитков. Частные инвесторы могут хранить слитки ценного металла, такого, как золото или серебро, или приобрести сертификат, дающий им право на долевое участие во владении слитком.

INGRAIN = ЛЕДЯНОЕ (или ПОЛУФАБРИКАТ, ОКРАШЕННЫЙ ДО ПЕРЕРАБОТКИ, или ИЗ КРАШЕНОЙ ПРЯЖИ) – Ingrain is a term used to describe yarn or stock that is dyed in two or more shades prior to knitting or weaving to create blended color effects in fabrics. Made of predyed fibers; thoroughly dyed:- ingrain yarn. Ingrain Dyes:- the term ‘Ingrain’ is very old and has been used to denote insoluble dyes formed by chemical reaction, on the fiber, of reagents applied either from a mixed bath or from a succession of baths. The modern technical description places them more specifically into two groups: insoluble azo-dyes and oxidation colors. Insoluble azo dyes are also known as Azoic Dyes and as ice colors (from the ice employed in preparing the diazonium compound). Conventionally, two components of the dye are applied separately to the fiber. The first is an aromatic hydroxy compound, known as Naphthol, and often a Phenol, which is applied uniformly in alkaline solution. On subsequently passing the prepared material through a solution of a diazotised amine (a diazo-compound), coupling occurs and results in the precipitation of a colored, insoluble azo-compound inside the fibers. In a refinement of this technique, particularly useful for textile printing, the diazo-compound is converted into a stable, non-coupling form which may safely be mixed with a naphthol without the dye being formed. The two are then applied together. On treating the material with mild acid the diazo-compound is regenerated and coupling again takes place. Since the final dye is insoluble, the fastness to washing, etc, is good. Many members are also resistant to attack during normal processing. Insoluble azo-dyes are used mainly for coloring cellulosic fibers and also, by modified techniques, the newer synthetic fibers. Oxidation colors are black or brown dyes produced by the oxidation of suitable aromatic amines on the fire to be dyed. By far the most important is aniline black, obtained from aniline. Aniline, together with either hydrochloric or sulphuric acid and an oxidizing agent, is first applied to the cloth, which is then heated in a moist atmosphere, and subsequently treated with a dichromate and acid. The aniline is oxidized in a number of stages, resulting finally in the formation of a dense black precipitate within the fiber. Aniline black is applied mainly to cotton, especially by printing, and also gives dense blacks on nylon. Other amines, when oxidised in a similar way, give brown shades and are used for the dyeing of fur and of hair. Ingrain:- made of fiber or yarn dyed before weaving. Used especially of rugs. Ingrain is a knitted or woven fabric made of yarns dyed before knitting or weaving. Ingrain:- yarn or fiber dyed before manufacture. See also Dyeing. / осадок (precipitate). Найлан^{ТЗ} (Nylon^{TM}).

INGRESSION LEVEL = УРОВЕНЬ ИНГРЕССИИ (или ИНГРЕССИОННЫЙ УРОВЕНЬ) – Ingression Level:- particles added per unit of circulating fluid volume. / Под Ингрессией, от Латинского слова Ingressio, означающее Вхождение, понимается проникновение

морских вод в понижения рельефа прибрежной суши при повышении уровня моря или погружении берега. В результате ингрессии формируются ингрессионные берега, характеризующиеся изрезанной береговой линией. В зависимости от происхождения понижений рельефа различают берега гляциального, флювиального, эолового и структурно-денудационного расчленения.

INHERENT ADVANTAGE = ХАРАКТЕРНОЕ (или СВОЙСТВЕННОЕ, или ПРИСУЩЕЕ) ДОСТОИНСТВО (или ПРЕИМУЩЕСТВО) – Inherent Advance:- the cost and service benefits of one mode compared with other modes.

INHERENT FLAME RESISTANCE = ХАРАКТЕРНАЯ СОПРОТИВЛЯЕМОСТЬ ВОСПЛАМЕНЕНИЮ – Inherent Flame Resistance:- as applied to textiles, flame resistance that derives from an essential characteristic of the fiber from which the textile is made.

INHERENT NATURE = ХАРАКТЕРНАЯ ЧЕРТА (или ХАРАКТЕРНОЕ СВОЙСТВО) – Inherent Nature:- the natural tendency of certain cargoes to suffer from inevitable loss; usually engendered by delay in transit. An example would be fruit which deteriorates naturally during delay. Unless the policy provides otherwise, inherent nature of the subject matter insured is excluded by the Marine Insurance Act (MIA) 1906.

INHERENT VICE = ХАРАКТЕРНЫЙ НЕДОСТАТОК – (1) Inherent Vice is a quality in a cargo which, in event of certain circumstances, will cause loss to the cargo. An example would be the inherent vice in soft coal which can give rise to spontaneous combustion when the coal is carried in a wet condition in a hot humid hold. Unless the policy provides otherwise, inherent vice of the subject matter insured is excluded by the Marine Insurance Act (MIA) 1906. A quality in goods that produces damage to them by its own action without the assistance of an outside agency. Inherent Vice is an insurance term referring to any defect or other characteristic of a product that could result in damage to the product without external cause, for example, instability in a chemical that could cause it to explode spontaneously. Insurance policies may exclude inherent vice losses.

(2) Inherent Vice is a defect or cause of loss arising out of the nature of the goods in question. / Дефект или причина убытка, вытекающего исходя из природы самих товаров в принципе.

INHERENT VISCOSITY = ХАРАКТЕРНАЯ ВЯЗКОСТЬ (или ХАРАКТЕРИСТИЧЕСКАЯ ВЯЗКОСТЬ) – In dilute solution viscosity measurements, Inherent Viscosity is the ratio of the natural logarithm of the relative viscosity to the concentration of the polymer in grams per 100 ml of solvent. The unit of inherent viscosity is dL/g. See also Intrinsic Viscosity.

INHERIT = НАСЛЕДОВАТЬ (или УНАСЛЕДОВАТЬ) – Inherit:- to receive a specific set of genes from the parents with particular traits; to transfer characteristics from parent to offspring.

INHERITANCE = НАСЛЕДСТВЕННОСТЬ (или НАСЛЕДОВАНИЕ) – Inheritance is the process of genetic transmission of characters or characteristics. / свойства (characters) . Под Наследственностью понимается свойство организмов повторять в ряду поколений сходные типы обмена веществ и индивидуального развития в целом. Обеспечивается самовоспроизведением материальных единиц наследственности – генов, локализованных в специфических структурах ядра клетки (хромосомах) и цитоплазмы. Вместе с изменчивостью наследственность обеспечивает постоянство и многообразие форм жизни и лежит в основе эволюции живой природы.

INHIBITOR = ИНГИБИТОР (или ЗАМЕДЛИТЕЛЬ) – Inhibitor is any substance that slows or prevents such chemical reactions as corrosion or oxidation. Inhibitor is a substance that retards or prevents a chemical or physical change. In textiles, a chemical agent that is added to prevent fading, degradation, or other undesirable effects. / Ингибитор или Замедлитель – тормозящее вещество, химический стабилизатор. Под Ингибиторами (химическими), от Латинского слова Inhibeo, означающее Останавливаю или Сдерживаю, понимаются вещества, тормозящие разнообразные химические реакции; находят широкое применение для предотвращения или замедления нежелательных процессов, например, коррозионного разрушения металлов, окисления топлив, смазочных масел и пищевых продуктов, полимеризации, старения полимеров (смотрите Стабилизаторы Полимерных Материалов) и другого. Характерной особенностью химических ингибиторов является эффективность их в малых концентрациях – от тысячных долей % до нескольких %. Эффективность ингибирования зависит от природы химических ингибиторов и характера ингибируемой реакции, а также от количества ингибитора, времени его введения в реакционную среду, температуры, содержания других веществ, влияющих на эффективность ингибитора. Ингибиторы коррозии вводят в коррозионно-активную среду для защиты металлов от коррозии. Ингибиторы коррозии относятся к наиболее эффективным средствам борьбы с коррозией и находят широкое применение при травлении металлов с целью удаления окалины, для защиты энергетического оборудования, при добыче и переработке нефти и газа, в промышленном и бытовом водоснабжении, в охладительных системах промышленного оборудования и транспортных средств (двигатели внутреннего сгорания), для защиты от атмосферной коррозии изделий машиностроения, при гидроиспытаниях и так далее. Широко используют ингибиторы для защиты деталей машин и приборов во время межоперационного хранения, консервации и транспортировки. Защитное действие ингибиторов коррозии определяется их способностью изменять кинетику электрохимических реакций, обусловливающих коррозионный процесс. В зависимости от того, какую из электрохимических реакций сильнее тормозят ингибиторы коррозии, они делятся на анодные, катодные и смешанные. К анодным ингибиторам коррозии относятся, например, такие окислители, как хроматы и нитриты, широко применяемые в промышленности (авиационной, химической, нефтеперерабатывающей и так далее). При действии этих ингибиторов металл переходит в устойчивое, пассивное состояние. В качестве катодных ингибиторов коррозии применяют соли мышьяка и висмута, а также различные органические соединения, повышающие перенапряжение водорода на металле. Катодными ингибиторами коррозии могут служить также вещества, поглощающие катодные деполяризаторы; в частности, для защиты котельной аппаратуры применяют гидразин или сульфит натрия, связывающие растворённый в воде кислород. В зависимости от природы коррозионной среды различают ингибиторы коррозии для кислых, нейтральных и щелочных сред, а также ингибиторы атмосферной коррозии. Для защиты от атмосферной коррозии, например, широкое распространение получили так называемые Летучие Ингибиторы, пары которых адсорбируются на поверхности металла. Широко распространённый и эффективный метод применения ингибиторов атмосферной коррозии – введение их в упаковочные материалы. Для защиты чёрных металлов применяют нитрит дициклогексиламмония (НДА), карбонат циклогексиламмония (КЦА), смеси мочевины или гексаметилентетрамина (уротропина) с нитритом натрия (УНИ); для защиты чёрных металлов в сочетании с цветными – соли нитро- и динитробензойной кислот с аминами. С целью предотвращения коррозии металлов химические ингибиторы вводят также в топлива, масла, смазки и полимерные покрытия. В масла и смазки добавляют окисленные нефтепродукты, нитрованные масла, сульфонаты, амины, нитриты и другие; в полимерные покрытия – хроматы, нитрованные масла и другие. Ингибиторы окислительных реакций тормозят окисление молекулярным кислородом; они добавляются к топливам, маслам и смазкам для замедления их окисления при хранении и в процессе применения (смотрите Антиокислители). Содержание в топливах и маслах некоторых металлов оказывает каталитическое действие на окисление и снижает эффективность ингибитора. Для устранения этого влияния в топлива вводят так называемые Дезактиваторы Металлов, например, салицилидены, образующие

с металлами нереакционноспособные комплексы. В качестве ингибиторов окислительных реакций используют главным образом фенолы, ароматические амины и некоторые сернистые соединения. Например, в бензины добавляют фенил-n-аминофенол, 2,4-диметил-6-трет-бутилфенол, 2,6-ди-трет-бутил-4-метилфенол (техническое название Тонанол-О) и другие. Ингибиторы, вводимые с той же целью в смазочные масла (смотрите Присадки), обладают обычно сложной химической природой и, помимо повышения стойкости к окислению, улучшают также и ряд других эксплуатационных характеристик масел. Ингибиторы окисления пищевых продуктов – природные или синтетические вещества, задерживающие окисление жиров и жиросодержащих продуктов. Примерами таких ингибиторов являются известные с глубокой древности пряности – тимьян, шалфей, тмин и тому подобные, которые придают продуктам приятный запах и ингибируют их окисление (прогоркание). Природные ингибиторы, из которых наиболее известны токоферолы, содержатся во многих натуральных жирах и маслах, однако теряются при их рафинировании; поэтому в рафинированные жиры и масла обычно вводят химические ингибиторы. Для этих целей используют, например, природные продукты – сырое хлопковое или соевое масла (в концентрациях до 5%), или же синтетические продукты, например, нетоксичные сложные эфиры галловой кислоты – этил- и пропилгаллаты, ионол (3,5-ди-трет-бутил-4-окситолуол), а также многие фенолы и амины (например, для предохранения от окисления льняного масла). Действие химических ингибиторов в этих случаях может усиливаться другими веществами, например, лимонной и аскорбиновой кислотами. Ингибиторы полимеризации задерживают или замедляют полимеризацию мономеров (а также олигомеров) при их хранении или перегонке. Ингибиторы полимеризации должны предохранять не только от спонтанной полимеризации, но и от окисления кислородом воздуха. Ингибиторами полимеризации являются сера, фенолы, таннин, канифоль, соли меди и другие. Об ингибиторах, угнетающих активность ферментов, смотрите Ингибиторы (в биологии). Ингибиторы Коррозии – вещества, снижающие скорость коррозии; применяются для антикоррозионной защиты материалов, главным образом металлов. Подробнее смотрите Ингибиторы (химические). Ингибиторы (в биологии) – природные и синтетические вещества, угнетающие активность ферментов (как в живом организме, так и в бесклеточных системах); различаются по характеру действия, специфичности и другим свойствам. В организме в роли естественных ингибиторов ферментов могут выступать продукты обмена веществ. По аналогии с техникой, такое ингибирование называется Торможением По Принципу Обратной Связи, так как конечный продукт какого-либо биосинтетического процесса специфически ингибирует одну из первых его стадий. Ингибирование осуществляется либо на генетическом уровне (Ингибитор, называемый в этом случае Репрессором, тормозит биосинтез одного из ферментов, действующих в начале биосинтетической цепи), либо на кинетическом уровне (Ингибитор, называемый Ретроингибитором, снижает активность этого фермента). Ретроингибирование – частный случай так называемой Аллостерической Регуляции Активности Фермента. Ингибиторы широко используются для изучения механизма каталитического действия ферментов, установления природы функциональных групп белков, для выяснения роли различных ферментативных процессов в обмене веществ. Ингибиторы имеют большое практическое значение. Так, применение ядохимикатов для борьбы с вредными насекомыми и сорняками связано с их способностью ингибировать процессы, жизненно важные для этих организмов (смотрите Ферментные Яды). Действие некоторых фармакологических средств и лекарств также основано на ингибировании ферментативных реакций. В более широком смысле термин Ингибитор применяют для обозначения веществ, тормозящих какие-либо сложные биологические процессы (например, Ингибиторы Роста Растений). Смотрите также Ферментативный Катализ. Ингибиторы Роста Растений – вещества, тормозящие рост Растений (подавляющие распускание почек, прорастание семян и рост стебля). Природные ингибиторы роста растений накапливаются в больших количествах в тканях почек и семян осенью в период приостановки процессов роста при переходе Растения в состояние покоя. Весной, перед распусканием почек и прорастанием семян, содержание ингибиторов роста Растений резко снижается. К числу природных ингибиторов роста Растений относят соединения фенольной (кумарин и его производные, салициловая кислота, наринген и другие) и терпеноидной (абсцизовая кислота и её аналоги) природы. Ингибиторы роста Растений способны подавлять стимулирующее действие на ростовые процессы всех известных фитогормонов. Для обработки Растений с целью задержки их роста используют синтетические ингибиторы роста Растений:- антагонисты транспорта ауксинов (трииодбензойная кислота, дихлоранизол, нафтилметилпропионовая кислота и другие), ретарданты, подавляющие рост стебля (CCC, AMO-1618, B-9), морфактины, нарушающие морфогенез (флуоренол, хлорфлуоренол), парализаторы (ГМК, Na^- ГМК и другие).

INHIBITORY GENE = ГЕН ИНГИБИТОР (или ПОДАВЛЯЮЩИЙ ГЕН) – Inhibitory Gene is a gene that inhibits the expression of other genes either in dominant or recessive form. / Под Ингибиторами, от Латинского слова Inhibeo, означающее Удерживаю, понимаются химические вещества, подавляющие активность ферментов. Например, иодуксусная кислота тормозит ферментативные реакции углеводного обмена. Используют для изучения механизма действия ферментов, для лечения нарушений обмена веществ, а также в качестве пестицидов.

IN–HOUSE DAMAGE = ВНУТРИСКЛАДСКОЕ ПОВРЕЖДЕНИЕ – In-House Damage is a damage to product that occurred while in the warehouse, i.e. water leak, dropped product, etc.

INIA = INSTITUTO NACIONAL DE INVESTIGACIÓN AGRARIA

INIA = INSTITUTO NACIONAL DE INVESTIGACIÓN Y TECNOLOGIA AGRARIA Y ALIMENTARIA

INIAP = INSTITUTO NACIONAL DE INVESTIGACIONES AGROPECUARIAS

INIBAP = INTERNATIONAL NETWORK FOR THE IMPROVEMENT OF BANANA AND PLANTAIN

INIFAP = INSTITUTO NACIONAL DE INVESTIGACIONES FORESTALES, AGRICOLAS Y PECUARIAS

INITIAL CARRIER = ПЕРВОНАЧАЛЬНЫЙ ПЕРЕВОЗЧИК – Initial Carrier is the transportation line to which a shipment is delivered by the shipper. / Перевозочная линия, для которой груз был поставлен отправителем.

INITIAL COIN OFFERING = ПЕРВОНАЧАЛЬНОЕ ПРЕДЛОЖЕНИЕ МОНЕТ – Initial Coin Offering (ICO):- an unregulated means by which funds are raised for a new cryptocurrency venture. An Initial Coin Offering (ICO) is used by startups to bypass the rigorous and regulated capital-raising process required by venture capitalists or banks. In an ICO campaign, a percentage of the cryptocurrency is sold to early backers of the project in exchange for legal tender or other cryptocurrencies, but usually for Bitcoin. Also called an Initial Public Coin Offering (IPCO). When a cryptocurrency startup firm wants to raise money through an Initial Coin Offering (ICO), it usually creates a plan on a whitepaper which states what the project is about, what need(s) the project will fulfill upon completion, how much money is needed to undertake the venture, how much of the virtual tokens the pioneers of the project will keep for themselves, what type of money is accepted, and how long the ICO campaign will run for. During the ICO campaign, enthusiasts and supporters of the firm's initiative buy some of the distributed cryptocoins with fiat or virtual currency. These coins are referred to as tokens and are similar to shares of a company sold to investors in an Initial Public Offering (IPO) transaction. If the money raised does not meet the minimum funds required by the firm, the money is returned to the backers and the ICO is deemed to be unsuccessful. If the funds requirements are met within the specified timeframe, the money raised is used to either initiate the new scheme or to complete it. Early investors in

the operation are usually motivated to buy the cryptocoins in the hope that the plan becomes successful after it launches which could translate to a higher cryptocoin value than what they purchased it for before the project was initiated. An example of a successful ICO project that was profitable to early investors is the smart contracts platform called Ethereum which has Ethers as its coin tokens. In 2014, the Ethereum project was announced and its ICO raised USD18 million in Bitcoins or USD0.40 per Ether. The project went live in 2015 and in 2016 had an ether value that went up as high as USD14 with a market capitalization of over USD1 billion. ICOs are similar to IPOs and crowdfunding. Like IPOs, a stake of the startup or company is sold to raise money for the entity's operations during an ICO operation. However, while IPOs deal with investors, ICOs deal with supporters that are keen to invest in a new project much like a crowdfunding event. But ICOs differ from crowdfunding in that the backers of the former are motivated by a prospective return in their investments, while the funds raised in the latter campaign are basically donations. For these reasons, ICOs are referred to as crowdsales. Although there are successful ICO transactions on record and ICOs are poised to be disruptive innovative tools in the digital era, investors are cautioned to be wary as some ICO or crowdsale campaigns are actually fraudulent. Because these fund-raising operatives are not regulated by financial authorities such as the US Securities Exchange Commission (SEC), funds that are lost due to fraudulent initiatives may never be recovered. In early September, 2017, the People's Bank of China officially banned ICOs, citing it as disruptive to economic and financial stability. The central bank said tokens cannot be used as currency on the market and banks cannot offer services relating to ICOs. As a result, both bitcoin and ethereum tumbled, and it was viewed as a sign that regulations of cryptocurrencies are coming. The ban also penalizes offerings already completed. Xxxxx. An ICO is a fundraising tool that trades future cryptocoins in exchange for cryptocurrencies of immediate, liquid value. You give the ICO bitcoin or ethereum, and you get some of Billy's New Super Great Coin or the infamous CrunchCoin. The Financial Times calls ICOs 'unregulated issuances of cryptocoins where investors can raise money in bitcoin or other cryptocurrencies', which is accurate, especially if you underline the word 'unregulated'. We'll get to that in a moment. Sticking close to the older financial publications, The Economist also took a look at the financing mechanism, describing what you buy in an ICO in the following fashion:- ICO 'coins' are essentially digital coupons, tokens issued on an indelible distributed ledger, or blockchain, of the kind that underpins bitcoin, a crypto-currency. That means they can easily be traded, although unlike shares they do not confer ownership rights. ... Investors hope that successful projects will cause tokens' value to rise. The referenced value increase is critical to understanding the appeal of ICOs. These are not transactions of love. They are investments made in hopes of quick, strong returns. Latest Crunch Report:- Watch More Episodes:- notably, not all ICOs are for cryptos that will maintain their own blockchain. According to the crypto-focused Smith + Crown research group, some ICOs are actually 'launching 'meta-tokens' built on Ethereum, Bitcoin, NXT or others'. After all, why not. So ICOs can be coins on top of coins funded by the transfer of other cryptos to accounts in the hunt for what's next. That might sound crazy, but it's hot times in the crypto world. And that heat is keeping ICOs bubbling. The same Economist piece, published in April of 2017, notes:- 'nearly USD250m has already been invested in ICOs, of which USD107m alone has flowed in this year', a metric that it attributes to the aforementioned Smith + Crown. That is a lot of money, making ICOs large in terms of their sheer Dollar-scale. It's therefore not hard to understand why more traditional business publications are paying attention. Following the money is their jam. In short:- ICOs are the new funding slingshot by which nascent cryptos are flung into the world. Thieves, Lies And Laws:- as with any boom, there are bad actors to be found in the land of ICOs. Given bitcoin and the larger cryptocurrency world's deep tradition of enduring bad behavior, it is not a surprise that ICOs are attracting humans of base intent. ICO fraud and skullduggery is common enough that a quick search yields heart-melting headlines like 'Ver Backed Qtum Founder Ran Previous ICO Scam', 'To everyone that bought into the Matchpool ICO, it looks like it was maybe a scam…', and 'A Digital Currency Scam is Misusing the Rothschild Family Name'. All of the articles are from this year to date. In the world of ICOs, fraud is never hard to find. Add in regular sums of incompetence that any new venture could fall prey to, and ICOs feel a bit Old West. Laws:- but what about regulation, you reasonably protest. Surely that must exist to protect consumers? Returning to Smith + Crown, skirting usual rules concerning fundraising is nearly normal in the realm of ICOs – at least partially explaining why guard rails in crypto offerings may remain a homegrown affair:- most ICOs today are marketed as 'software presale tokens' akin to giving early access to an online game to early supporters. In order to try to avoid legal requirements that come with any form of a security sale, many ICOs today use language such as 'crowdsale' or 'donation' instead of ICOs. So regulation is out of the mix for now. There is an argument to be made that a dearth of regulatory oversight is actually good, as it allows the ICO market to iterate and innovate quickly. It is a reasonable(ish) argument and likely technically correct, but that doesn't mitigate the potential for unsophisticated investors to be preyed upon. Caveat emptor and moral hazard are fine arguments in favor of no rules regarding ICOs and cryptos, but if the market wants to keep growing, it will need to do more to attract consistently larger pools of capital. Bubble Me This:- is there a chance that ICOs will slow? Of course, but the forces behind them run a bit deeper than we might have first guessed. CryptoHustle makes the related point in a recent article that 'ICO mania is likely due to early Ethereum adopters making serious returns after the last bull run'. Etherum's run has certainly been staggering. If it is fueling the ICO craze, we could be in for a long cycle. Regardless, the point doesn't mean that cryptomarkets are as they should be. That ICOs would eventually get ahead of themselves and bubble like so many young technology niches was predicted at least since last October (in 2016). How long the good times will last isn't obvious. But the correction will come, as always, and when it does, we'll see which cryptos have a real shot. Take This Away:- the cryptocurrency market is hot once again. And while it continues to set new records, a host of altcoins will demand its slice of the market. Should you buy into an ICO? Only if you have a massive appetite for risk, zero fear of losing your capital and are willing to take a flying chance on an idea that could flop. Then again, crowdfunding has similar risks and seems perfectly healthy. Your call. Xxxxx. Initial Coin Offering (ICO) is an unregulated and controversial means of crowdfunding via use of cryptocurrency, which can be a source of capital for startup companies. In an ICO, a percentage of the newly issued cryptocurrency is sold to investors in exchange for legal tender or other cryptocurrencies such as Bitcoin or Ethereum. Early token sales were held by Mastercoin in July 2013 and Ethereum and Karmacoin in 2014, but 'mainstream' ICOs began with messaging app developer Kik in September 2017. By November 2017 there were around 50 offerings a month, despite bans in countries such as China and South Korea. History:- the first token sale (also known as an ICO) was held by Mastercoin in July 2013. Ethereum raised money with a token sale in 2014, raising 3 700 BTC in its first 12 hours, equal to approximately USD2.3 million dollars at the time. An ICO was held by Karmacoin in April 2014 for its Karmashares project. One of the first 'mainstream' ICOs was executed by the messaging app developer Kik in September 2017. Kik had previously issued USD50 million in tokens called 'Kin' to institutional investors, and sought to raise an additional USD125 million from the public. In connection with this ICO, an unidentified third party executed a phishing scam by circulating a fake URL for the offering through social media. ICOs and token sales are now extremely popular. As of November 2017 there were currently around 50 offerings a month, and a new web browser Brave's ICO generated about USD35 million in under 30 seconds. There are at least 18 websites that track ICOs. At the start of October 2017, ICO coin sales worth USD2.3 billion had been conducted during the year, more than ten times as much as in all of 2016. Detail:- the term may be analogous with 'token sale' or crowdsale, which refers to a method of selling participation in an economy, giving investors access to the features of a particular project starting at a later date. ICOs may sell a right of ownership or royalties to a project, in contrast to an initial public offering which sells a share in the ownership of the company itself. According to Amy Wan, a partner at Trowbridge Sidoti LLP practicing crowdfunding and syndication law, 'The coin in an ICO is a symbol of ownership interest in an enterprise – a digital stock certificate, if you will'. In contrast to initial public offerings (IPOs), where investors gain shares in the ownership of the company, in ICOs, the investors buy coins of the company, which can appreciate in value

if the business is successful. These coins are sometimes 'pre-mined', eliminating the need for proof of work. Often contributions are capped at a certain value and depending on how long the ICO lasts, on a per-day basis. Conversely, those same coins can depreciate if the company does not perform. At least 400 ICOs have been conducted as of August 2017. Ethereum is (as of August 2017) the leading blockchain platform for ICOs with more than 50% market share. These tokens are called ERC20. The Ethereum network ICOs have resulted in considerable phishing, Ponzi schemes, and other scams, accounting for about 10% of ICOs. Older coins focused on being a currency, while newer coins based on the Ethereum blockchain have developed some controversy through the selling of what is tantamount to 'securities' in the form of ICO tokens. These developments have created an evolution in the ICO release marketplace towards the new 'utility' token replacing the typical token. Some commentators believe that 'utility tokens', which can be exchanged for a unit of service such as storage, could avoid such questions. As A Mechanism For Scams:- ICOs can be used for a wide range of activities, ranging from corporate finance, to charitable fundraising, to outright fraud. The US Securities and Exchange Commission (SEC) has warned investors to beware of scammers using ICOs to execute 'pump and dump' schemes, in which the scammer talks up the value of an ICO in order to generate interest and drive up the value of the coins, and then quickly 'dumps' the coins for a profit. The developers themselves can be guilty of such tactics. However, the SEC has also acknowledged that ICOs 'may provide fair and lawful investment opportunities'. The UK Financial Conduct Authority has also warned that ICOs are very high risk and speculative investments, are scams in some cases, and often offer no protections for investors. Even in cases of legitimate ICOs, funded projects are typically in an early and therefore high-risk stage of development. Increased regulation of ICOs will reportedly encourage institutional investors to invest in them. / Биткойн (Bitcoin). смышлёная контрактная платформа, называемая Эсэреэм (Ethereum), которая имеет Эсёрз (Ethers) в качестве её монетных жетонов (coin tokens). INITIAL DATA CAPTURE = СБОР (или УСТАНОВЛЕНИЕ) ПЕРВОНАЧАЛЬНЫХ ДАННЫХ – In the US patent law, Initial Data Capture (IDC) is the first phase of the publication process for a patent where the patent file is electronically captured. It takes approximately 6 weeks from the date that the allowed file is received for the completion of the Initial Data Capture of the application. The application is then sent to the File Maintenance Facility (FMF) for matching of the issue fee and any other correspondence. The application may stay in the FMF for approximately 1–2 weeks. However, if all requirements are not yet fulfilled the application will remain at the FMF until the requirements are met. Once all files are matched, the application will move to the Final Data Capture (FDC).

INITIAL DEPOSIT = ПЕРВОНАЧАЛЬНЫЙ ДЕПОЗИТ (или ПЕРВОНАЧАЛЬНЫЙ ВКЛАД) – Initial Deposit:- customers' funds put up as security for a guarantee of contract fulfillment at the time a futures market position is established. Also known as Initial Margin. / Первоначальный Депозит:- фонды заказчиков, размещённые в качестве обеспечения по гарантии исполнения контракта на срок удерживания открытой позиции на рынке фьючерсов . Известен также как Первоначальная Маржа (Initial Margin).

INITIAL DEPOSIT/MARGIN = ПЕРВОНАЧАЛЬНЫЙ ДЕПОЗИТ/МАРЖА – Initial Deposit/Margin is the funds put up as security for the guarantee of the contract fulfillment at the beginning of a futures or options contract.

INITIAL EVALUATION PERIOD = ПЕРВОНАЧАЛЬНЫЙ ПЕРИОД ВЫЧИСЛЕНИЯ – Initial Evaluation Period is the first trial conducted in a program of testing to identify varieties or lines that could be retained for future trials.

INITIALISATION = ИНИЦИАЛИЗАЦИЯ – Initialisation is a provisioning the Personal Trusted Device (PTD) with one or more public-private key pairs and root certificates.

INITIAL LENGTH = ПЕРВОНАЧАЛЬНАЯ ДЛИНА (или НАЧАЛЬНАЯ ДЛИНА) – Initial Length is the length of a test specimen under specified pretension at the beginning of a test. Note:- for a tensile test the initial length is measured between the two effective clamping points.

INITIAL MARGIN = ПЕРВОНАЧАЛЬНАЯ МАРЖА – Initial Margin is the percentage of the purchase price of securities (that can be purchased on margin) that the investor must pay for with his or her own cash or marginable securities. Also called the 'Initital Margin Requirement'. According to Regulation T of the Federal Reserve Board, the initial margin is currently 50%. This level is only a minimum and some brokerages require you to deposit more than 50%. For futures contracts, initial margin requirements are set by the exchange. Initial Margin is the amount of margin required by the broker when a futures position is opened. Initial Margin is the minimum value on deposit in trader's margin account to establish a new futures or options position, or to add to an existing position. Initial margin amount levels differ by contract. Brokerage firms set the level of Initial Margin required, and it may change at any time at their discretion. Increases or decreases in Initial Margin levels reflect anticipated or actual changes in market volatility. Also known as Original Margin, or Initial Performance Bond. Customers' funds put up as security for a guarantee of contract fulfillment at the time a futures or options market position is established. Initial Margin is a security deposit to be made when placing a futures trade. Also known as First Margin. It serves primarily to secure the counterparty's financial claims, thereby reducing the risks involved. Initial Margin is the minimum amount required to open a futures position. Initial margin requirements are determined by the board of directors of an exchange and are based on the volatility and price of the futures contract. Initial Margin is the initial deposit you make to your broker when you open a new futures position whether long or short. Initial margin, also known as Futures Requirement, Original Margin or Initial Margin Level (IML), is the first of three futures margins that all futures traders must be familiar with before actually trading futures. Yes, futures margin is definitely the most confusing aspect of futures trading that all beginner futures traders struggle with. Initial margin is the first of these margins and is actually nothing more than a deposit you give to your broker when you open any futures positions. This initial margin is to be paid no matter if you are the long or the short in this new position. That's right, you need to pay eventhough you are 'Selling' or 'Writing' a new futures contract. What is Initial Margin in Futures Trading? Initial margin is one of three margin terms that all futures traders must understand. The other two being Maintenance Margin and Variation Margin. Initial margin is the initial deposit you need to make in order to open a new futures position. Indeed, the term 'Margin' in futures trading is just a fanciful industry term for 'Deposit'. This initial margin varies according to the underlying asset that is covered. Some assets require a high amount of initial margin while some assets require only a very low amount of initial margin. Initial margin is always calculated based on a certain percentage of the total value of the assets covered and is normally quoted directly as a Dollar amount by your futures broker. Initial Margin serves as the starting point for new futures positions from which profits will be added on to and losses deducted from. In fact, the initial margin is a kind of guarantee that you have the money to pay for your losses should losses occur right the very first day the futures position is put on. It works exactly like the chips you buy in a casino upon entering without which there is no guarantee of payment for your losses. For instance, if you bought 1 contract of the AAPL (code for share of Apple Inc.) June 2010 Single Stock Futures (SSF) in the picture above, you would be prompted for a 'Futures Requirement' of USD4 965 (contract size 100). This 'Futures Requirement' is the initial margin. All you need is to have at least USD4 965 in your futures trading account before you

place the order and you would have fulfilled initial margin requirement. Assuming AAPL drops by USD0.50 on the very day you bought those Single Stock Futures, the loss amount of USD50 will be deducted from your initial margin of USD4 965 through daily settlement. This deduction of loss is the very purpose of Initial Margin in futures trading. The whole futures margin system is a mechanism to make sure parties involved have sufficient cash to cover losses in order to lower the clearinghouse's risk of guaranteeing performance. Initial margin is calculated as a percentage of the full contract value. The main purpose of Initial Margin is to make sure that you have enough cash to cover losses incurred due to a large single day move. As such, initial margin requirement is generally determined based on the volatility of the asset being covered. The more volatile the underlying asset is, the higher the margin requirement would be. In the US market, the Financial Industry Regulatory Authority (FINRA) requires all initial margin to be at least 25% of the value of the asset covered. If an asset is deemed to be volatile, your broker may require as much as 50% as initial margin. All Single Stock Futures traded in the US market requires 25% initial margin. Initial margin requirement can change as the volatility of the underlying asset changes but such changes do not happen often. However, it is common for initial margin requirement for futures contracts of different expiration months to be different, as such, you need to be sure to check the initial margin requirement of the different futures contracts you are trading even if they are of the same underlying asset but different expiration months. Initial margin requirement is typically lower when you put on a futures spread rather than an outright futures position due to the lower risk and volatility of a spread position. More and more clearinghouses and futures exchanges around the world are adopting what is known as SPAN Margin. SPAN is short for Standardized Portfolio Analysis of Risk. This is a complex computer system that attempts to determine the worst possible single day move of a futures position and determine the initial margin requirement based on that calculation instead of applying a standard rate across the board in all market conditions. The objective of SPAN margin is really to lower initial margin requirement to more realistic levels so that futures trading becomes more accessible. This system also rewards sophisticated futures traders who apply hedges to their positions in order to lower risk and therefore initial margin requirement. Initial Margin is an amount of cash or eligible securities required to be deposited by the buyer or seller at the clearing office via a broker or bank before engaging in margin transactions. What is the difference between Maintenance Margin and Initial Margin? Initial margin is the margin that market participants must pay when they initiate their position with their clearing firm whereas maintenance margin is the minimum level at which market participants must keep in their account, or 'maintain' in their account over time. Initial Margin is the margin deposit required by the exchange when a new futures trade is entered. See also Margin Deposit. Initial Margin is the amount of money that must be deposited at the time a futures position is entered into. Also called Original Margin. See also Maintenance Margin; Margin; and Margin Call. / Средства клиента, депонированные в качестве гарантии исполнения контракта на время покупки фьючерсов или опционов.

INITIAL MODULUS = НАЧАЛЬНЫЙ МОДУЛЬ (или ПЕРВОНАЧАЛЬНЫЙ МОДУЛЬ) – Initial Modulus:- the slope of the initial straight portion of the stressstrain curve. The modulus is the ratio of the change in stress, expressed in newtons per tex, grams-force per tex, or grams-force per denier, to the change in strain expressed as a fraction of the original length.

INITIAL NEGOTIATING RIGHT = ИЗНАЧАЛЬНО СОГЛАСОВАННОЕ (или ОГОВОРЁННОЕ) ПРАВО – An Initial Negotiating Right (INR) is a right held by one GATT (short for the General Agreement on Tariffs and Trade) country to seek compensation for an impairment of a given bound tariff rate by another GATT country. INRs stem from past negotiating concessions and allow the INR holder to seek compensation for an impairment of tariff concessions regardless of its status as a supplier of the product in question. / Генерального Соглашения о Тарифах и Торговле (ГСТТ или ГЯТ (GATT)).

INITIAL PUBLIC OFFERING = ПЕРВОНАЧАЛЬНОЕ ПУБЛИЧНОЕ ПРЕДЛОЖЕНИЕ (или ПЕРВОНАЧАЛЬНОЕ ПУБЛИЧНОЕ РАЗМЕЩЕНИЕ) – A term 'Initial Public Offering' (IPO) is used to refer to companies tapping the stock market for the first time as part of a capital increase or reallocation. In other words, shares in a company are offered publicly for sale to interested investors for the first time. In most cases, an IPO involves the company's listing and the quotation of its shares on the stock exchange. From the company's point of view, an IPO is a way of using its stock as a financing instrument to acquire third-party risk capital. Synonym:- Going Public. The first issue of a company's shares to the public. The first sale of stock by a private company to the public. IPOs are often issued by smaller, younger companies seeking capital to expand, but can also be done by large privately-owned companies looking to become publicly traded. In an IPO, the issuer obtains the assistance of an underwriting firm, which helps it determine what type of security to issue (common or preferred), best offering price and time to bring it to market. Also known as Public Offering. IPOs can be a risky investment. For the individual investor it is tough to predict what the stock will do on its initial day of trading and in the near future since there is often little historical data to analyze the company with. Also, most IPOs are of companies going through a transitory growth period and are therefore subject to additional uncertainty regarding their future value. A privately held company converts to being a public company by holding an initial public offering, generally offered by one or more underwriters, depending on the size of the offering. There are significant regulatory and disclosure documents that a company must file prior to going public. In securities industry, this term used when a private company first offers its shares, PCs (an acronym for Professional Corporation, a business legal entity), etc to the public. A step towards becoming a public company and towards widening the capital base. A corporation's first offering of common stock to the public. Initial Public Offering (IPO) is a company's offering of newly issued shares from treasury to the general public. It is generally the first time that a company does so – making the transition from being a closed-door privately operated company (CCPC – Canadian Controlled Private Corp.) to being a publicly traded, highly visible, entity. When doing an IPO, an underwriter, i.e. a stockbroker firm, handles the distribution of shares to the public. Effectively, the brokerage firm subscribes (underwrites) for the shares and then sells them to its clients (investors). After the IPO, the shares will then trade on a stock exchange. It is sometime referred to as 'Going Public'. Entrepreneurs and VCs (Venture, or 'vulture' Capitalists) sometimes call it 'cashing in'. Up until a company is public (i.e. anyone can buy or sell its shares), it is private and operates away from the limelight. Companies often go public to raise huge amounts of money or to give investors liquidity. / Корп. (Corp.). Первоначальная эмиссия акций компании на рынке. Смотрите также Нахождение В Обращении или Флотация (Flotation).

INITIAL PUBLIC OFFERING COSTS = РАСХОДЫ НА ПЕРВОНАЧАЛЬНОЕ ПУБЛИЧНОЕ РАЗМЕЩЕНИЕ – In Canada, Initial Public Offering (IPO) Costs:- these vary depending on the size of an IPO offering and the exchange on which it takes place. IPO costs entail legal, accounting, and agency fees. IPO costs also include the selling agents' commissions – but these are generally reported separately because they account for most of the costs of an underwriting – but are in fact contingent on success (they are 'just a sales commission'). The 'fixed' costs run anywhere from as low as CAD75 000 on a junior exchange to several CAD100K's on senior exchanges. If an IPO is very broad (several exchanges or international), costs can run in the millions of Dollars, excluding commissions!

INITIAL STORAGE = НАЧАЛЬНОЕ ХРАНЕНИЕ – Initial Storage is a warehouse storage charge for the month when product is received; it is typically billed when product is received.

INITIAL THRESHOLD = XX – Initial Threshold (in electricity):- in the context of the PJM (PJM Interconnection LLC (Pennsylvania New Jersey Maryland Interconnection LLC) economic planning process, when the cumulative gross congestion cost of a constraint exceeds the applicable initial threshold, PJM begins determining the extent to which the load affected by that constraint is unhedgeable. Initial

threshold values are specific to the transmission level voltage of the affected facility. / Пи.Дьжей.Эм. Интёконэкшэн Эл.Эл.Си. (PJM Interconnection LLC или Пэнсэлвэйниэ Ню Дьжози Мэрилэнд Интёконэкшэн Эл.Эл.Си. (Pennsylvania New Jersey Maryland Interconnection LLC)).

INITIATION OF FUNDS TRANSFER INSTRUCTION = ИНИЦИАЦИЯ (или ИНИЦИИРОВАНИЕ) ИНСТРУКЦИИ НА ПЕРЕВОД ДЕНЕЖНЫХ СРЕДСТВ – Initiation Of Funds Transfer Instruction:- the creation of a funds transfer instruction by the ordering customer based on the electronic Payment Initiator (ePI) data, e.g., importation of ePI data elements at the ordering customer's site into an electronic payment order, such as a cross-border payment template in an electronic banking application. / Создание инструкции на перевод денежных средств , шаблон (template). , например, привоз (importation) .

INITIATOR = ИНИЦИАТОР (или ВОЗБУДИТЕЛЬ) – Initiator is a chemical added to start a reaction such as polymerization. Unlike catalysts, initiators may be consumed during the reaction.

INJECTIONS = ИНЖЕКЦИИ (или НАГНЕТАНИЯ, или ПОПОЛНЕНИЯ, или РЕПРЕССИИ) – Injections:- natural gas injected into storage reservoirs. / Природный газ, закачиваемый в резервуары для хранения.

INJURY = УЩЕРБ (или ВРЕД) – Injury:- in the United States law, a finding by the International Trade Commission that imports are causing, or are likely to cause, harm to a US industry. An injury determination is the basis for a Section 201 case. It is also a requirement in all antidumping and most countervailing duty cases, in conjunction with Commerce Department determinations on dumping and subsidization.

IN–KIND CONTRIBUTIONS = КОНТРИБУЦИИ В НАТУРАЛЬНОМ ВИДЕ (или ХХ) – In-Kind Contributions represent the value of noncash contributions provided by the recipient and non-Federal third parties. Only when authorized by Federal legislation may property purchased with Federal funds be considered as the recipient's in-kind contributions. In-kind contributions may be in the form of charges for real property and nonexpendable personal property, and value of goods and services directly benefiting and specifically identifiable to the project or program.

INK–JET PRINTING = ПЕЧАТАНИЕ НАПЫЛЕНИЕМ ЧЕРНИЛ – Ink-Jet Printing is a non-contact printing that uses electrostatic acceleration and deflection of ink particles released by small nozzles to form the pattern.

INKLE = ТЕСЬМА (или ЛЕНТА) – Inkle is a colored linen tape or braid woven on a very narrow loom and used for trimming.

INLAND BILL OF LADING = СУХОПУТНЫЙ КОНОСАМЕНТ – An Inland Bill of Lading (a waybill on rail or the 'pro forma' bill of lading in trucking) is used to document the transportation of the point of origin or destination. It should contain information such as marks, numbers, steamship line, and similar information to match with a dock receipt. A bill of lading used in transporting goods overland to the exporter's international carrier. Although a through bill of lading can sometimes be used, it is usually necessary to prepare both an inland bill of lading and an ocean bill of lading for export shipments. See also Bill of Lading.

INLAND CARRIER = СУХОПУТНЫЙ ПЕРЕВОЗЧИК – Inland Carrier is the transportation line or company which hauls import or export traffic between ports and inland points. / Транспортная линия или компания, которая доставляет привозные (или импортные) и вывозные (или экспортные) грузы на участке между портами и сухопутными пунктами.

INLAND CLEARANCE DEPOT = СУХОПУТНЫЙ ПУНКТ ОЧИСТКИ (или ТАМОЖЕННОГО ОФОРМЛЕНИЯ) – Inland Clearance Depot is the inland location where cargo, particularly containerized, may be cleared by customs.

INLAND HAULAGE CHARGE = СБОР ЗА СУХОПУТНЫЙ ПОДВОЗ (или ДОСТАВКУ) – Inland Haulage Charge:- cost to move a container to an inland destination. / Стоимость транспортировки контейнера к наземному пункту назначения.

INLAND MARINE INSURANCE = СТРАХОВАНИЕ ПЕРЕВОЗКИ ПО ВНУТРЕННИМ ВОДАМ – Inland Marine Insurance:- although there are no standard forms in inland marine insurance, most contracts follow a typical pattern. They are usually written on a named-peril basis covering such perils of transportation as collision, derailment, rising water, tornado, fire, lightning, and windstorm. The policies generally exclude losses resulting from pilferage, strike, riot, civil commotion, war, delay of shipments, loss of markets, illegal trade, or leakage and breakage. The scope of inland marine is greatly extended by means of 'floater' policies. These are used to insure certain types of movable property whether or not the property is actually in transit. Business floater policies are purchased by jewelers, launderers, dry cleaners, tailors, upholsterers, and other persons who hold the property of others while performing services. Personal property floaters are used to cover, on a comprehensive basis, any item of personal property owned by a private individual. They may also cover the property of visitors, or the property of servants while on the premises of the insured. They exclude certain types of property for which other contracts have been designed, such as automobiles, aircraft, motorcycles, animals, or business and professional equipment. Inland Marine Insurance is a branch of the insurance business which developed from the insuring of shipments which did not involve ocean voyages. Exposures eligible for this form of protection are described in the nationwide definition of Marine Insurance. Such diverse properties as bridges, tunnels, jewelry, and furs can now be written under Inland Marine forms.

INLAND POINT = СУХОПУТНЫЙ ПУНКТ – Inland Point is a city with no port; landlocked city. / Город без порта; окружённый сушей город.

INLAND POINT INTERMODAL = К СУХОПУТНОМУ ПУНКТУ СМЕШАННЫМ ТРАНСПОРТОМ – Inland Point Intermodal (IPI):- cargo moving via land from/to an inland point. See also Micro Bridge. Inland carriage by another mode of transportation after port discharge, cargo moving to/from an inland point. Inland carriage by another mode of transportation after port discharge; cargo moving to/from an inland point (synonym for Micro-Bridge). Reverse Inland Point Intermodal (IPI) – same as above except cargo moves overland to another port not in the natural flow necessitating longer water transit. / порта разгрузки, .

INLAND TRANSPORT = СУХОПУТНАЯ ПЕРЕВОЗКА (или НАЗЕМНАЯ ПЕРЕВОЗКА) – Inland Transport means carriage during combined transport other than between the port of loading and the port of discharge.

INLAND VALLEY SWAMPS = НАЗЕМНЫЕ ДОЛИННЫЕ ЛЕСНЫЕ БОЛОТА – Inland Valley Swamps:- small to moderate sized valley bottoms in rainforest not associated with streams, which flood perennially or intermittently with stagnant water.

INLAND WATERS = ВНУТРЕННИЕ ВОДЫ – Inland Waters is a term referring to lakes, streams, rivers, canals, waterways, inlets, bays and the like. / В международном праве под Внутренними Водами понимаются все воды, находящиеся в пределах территории данного государства (кроме его территориальных вод):- водохранилища, каналы, озёра, проливы, реки и так далее. Внутренними водами считаются также внутренние моря, ограниченные со всех сторон сушей, составляющей территорию только одного государства. К внутренним водам относятся морские воды (воды бухт, заливов, портов) от исходной линии территории вод государства в сторону берега. В бывшем Союзе Советских Социалистических Республик (СССР) согласно Закону о Государственной Границе СССР 1982 последние ограничивались шириной входа не более 24 миль.

IN–LINE FILTER = ХХ ФИЛЬТР (или СОВМЕЩЁННЫЙ ФИЛЬТР, или ВСТРОЕННЫЙ ФИЛЬТР, или ПРОХОДНОЙ ФИЛЬТР, или НАХОДЯЩИЙСЯ НА ОДНОЙ ЛИНИИ ФИЛЬТР) – In-Line Filter is a filter assembly in which the inlet, outlet and filter element axes are in a straight line. See also Filter.

INMARSAT = INTERNATIONAL MARITIME SATELLITE ORGANIZATION

INNER DECKBOARD = ВНУТРЕННЯЯ ДОСКА НАСТИЛА – In pallet, Inner Deckboard is any deckboard located between the end deckboards.

INNER PACKAGING = ВНУТРЕННЯЯ УПАКОВКА (или ПЕРВИЧНАЯ УПАКОВКА) – Inner Packaging:- also known as Dunnage, includes materials such as foam, paper, or wood used to minimize movement within the container.

INNOTECH = REGIONAL CENTRE FOR EDUCATIONAL INNOVATION AND TECHNOLOGY

INNOVATION = ИННОВАЦИЯ (или НОВОВВЕДЕНИЕ) – Innovation is the practical application of a new technology to the production process, or of a new method to the management of a business unit, resulting in an improvement. / Практическое применение новой технологии в производственном процессе, или нового метода управления хозяйствующего субъекта, приводящее к усовершенствованию.

INOCULATE = ИНОКУЛИРОВАТЬ (или ПРИВИВАТЬ) – Inoculate:- to introduce microorganisms into another organism or medium.

INOCULATION = ИНОКУЛЯЦИЯ (или ПРИВИВКА, или ЗАСЕВ) – Inoculation is the introduction of an explant (any plant part) into a suitable medium for callus formation and ultimately plant production. / Под Инокуляцией, от Латинского слова Inoculatio, означающее Прививка, понимается введение живых микроорганизмов, инфицированного материала, сыворотки или других веществ в ткани растений, животных или человека, а также в питательные среды. Под Инокуляцией понимается введение живых микроорганизмов, инфицированного материала, сыворотки или других веществ в ткани Растений, Животных или Человека (а также в питательные среды). Инокуляция живого возбудителя инфекционного заболевания (например, вируса вакцины) применяют, чтобы спровоцировать у здорового человека развитие болезни в ослабленной форме и тем самым способствовать развитию у него иммунитета. Инокуляция может быть лечебной – введение специфической сыворотки с лечебными целями и профилактической – введение иммуносыворотки или вакцины как защитного средства против определённого заболевания.

INOCULUM = ИНОКУЛЯТ (или ПОСЕВНОЙ МАТЕРИАЛ) – Inoculum is a material (as spores, bacteria, or contaminated fluids) used in or suitable for use in inoculating or inoculation, e.g., portion of a pathogen (spores, mycelium, hypha in the case of Fungi) or Insect (eggs, young larvae) capable of being disseminated and causing infection/infestation. Infective material or spores. That part of a pathogen that is produced on or in infected host tissue and is able to infect a new host or healthy host tissue. Inoculum is usually in the form of spores or sclerotia but may also be in the form of bacteria or fungal fragments growing and surviving in plant residues or seed. / (как споры, Бактерия или). Под Инокуляцией, от Латинского слова Inoculatio, означающее Прививка, понимается введение живых микроорганизмов, инфицированного материала, сыворотки или других веществ в ткани Растений, Животных или Человека, а также в питательные среды.

INORGANIC = НЕОРГАНИЧЕСКОЕ – Inorganic:- of molecules or chemistry based mainly on elements other than carbon. See also Organic. Inorganic:- of mineral origin. / Под Неорганическим понимается связанное с неорганической химией.

INORGANIC FERTILIZER = НЕОРГАНИЧЕСКОЕ УДОБРЕНИЕ (или МИНЕРАЛЬНОЕ УДОБРЕНИЕ) – Inorganic Fertilizer:- fertilizer materials derived from minerals, atmospheric gases, water, and inert materials. Can be natural or synthetic products of chemical reactions. / Под Минеральными Удобрениями понимаются минеральные соединения, главным образом соли, содержащие элементы питания растений и используемые для повышения плодородия почвы. Промышленность бывшего Союза Советских Социалистических Республик (СССР) выпускала минеральные удобрения азотные, фосфорные, калийные, микроудобрения; твёрдые (порошковидные и гранулированные) и жидкие. Обогащают почву питательными элементами, изменяют реакцию почвенного раствора, влияют на микробиологические процессы. Мировое производство минеральных удобрений (миллионов тонн в пересчёте на 100%-ное содержание N, P_2O_5 и K_2O):- 47 в 1965 и 133 в 1984; в бывшем СССР соответственно 7.4 и 30.8.

INORGANIC FIBER = НЕОРГАНИЧЕСКОЕ ВОЛОКНО – Inorganic Fibers either begin as synthetic fibers that undergo further processing such as carbonization (performed to rayon and acrylic to from carbon fiber) or are mineral based such as glass fiber, i.e. fiberglass. Inorganic fibers are typically found in composite structures. Inorganic Fibers are:- carbon, ceramic, glass, and metal fibers. Inorganic Fibers are essentially composed by inorganic chemical compounds, based on natural elements like carbon and other minerals such as silicon and boron, which, in general, after receiving treatment at high temperatures, are turned into fibers. The outstanding features of these fibers are their resistance to high temperatures and high mechanical strength. Because of these important properties they are also featured in the so-called 'High-Performance Fibers'. This group includes carbon, glass, boron, metal, aluminum silicate, silicon carbide and rock wool fibers. Carbon and glass fibers outweigh steel (considered to be the most resistant material) to some extent, on their mechanical properties, and with the advantage of not presenting steel's corrosion problems. Among the most common applications of inorganic fibers are those that require high-performance materials, such as parts of airplanes and spaceships, race cars, equipment and clothing for extreme sports, building materials, concrete reinforcement, equipment and clothing for extreme conditions (fire, corrosive environments, bacterial attacks, rain, and extreme cold), protective clothing (bullet proof vests, cut-resistant gloves, etc). Inorganic Fibers are the fibers of inorganic products manufactured from metals and glass. A carbon fiber is also included in these fibers.

IN–PACKAGE DESICCATION = ВНУТРИУПАКОВОЧНАЯ ДЕСИКАЦИЯ (или ВНУТРИУПАКОВОЧНОЕ ВЫСЫХАНИЕ, или ВНУТРИУПАКОВОЧНОЕ ВЫСУШИВАНИЕ) – In-Package Desiccation is a drying out that occurs within the package.

IN PERSONAM = ИН ПЭРСОНАМ (или ПЕРСОНАЛЬНО) – In Personam is a Latin phrase meaning 'directed toward a particular person'. In a lawsuit in which the case is against a specific individual, that person must be served with a summons and complaint to give the court jurisdiction to try the case, and the judgment applies to that person and is called an 'In Personam Judgment'. In personam is distinguished from in rem, which applies to property or 'all the world' instead of a specific person. This technical distinction is important to determine where to file a lawsuit and how to serve a defendant. In personam means that a judgment can be enforceable against the person wherever he/she is. On the other hand, if the lawsuit is to determine title to property (in rem) then the action must be filed where the property exists and is only enforceable there. Legal action against a person. / Юридическое действие против лица.

IN POSITION = В ГОТОВНОСТИ (или В НАЛИЧИИ) – A term In Position refers to a commodity located where it can readily be moved to another point or delivered on a futures contract. Commodities not so situated are Out of Position. Soybeans in Mississippi are out of position for delivery in Chicago, but in position for export shipment from the Gulf of Mexico. The opposite of Out Of Position.

INPUT = ВЛОЖЕНИЕ (или ЗАТРАТА, или ВХОДЯЩИЕ ДАННЫЕ, или ПРИХОД) – Input:- money or other cost of production. Products added to the soil to improve plant production. Data into a computer. Personal contribution.

INPUT–OUTPUT = ПРИХОД–РАСХОД – Input-Output:- in the United Kingdom, a detailed analytical framework based on Supply and Use tables. These are matrices showing the composition of output of individual industries by types of product and how the domestic and imported supply of goods and services is allocated between various intermediate and final uses, including exports.

INR = INDIAN RUPEE

INR = INITIAL NEGOTIATING RIGHT

IN REM = ИН РЭМ (или ВЕЩЬ В СЕБЕ) – In Rem is Latin for 'in a thing'. In a lawsuit, an action in rem is directed towards some specific piece of property, rather than being a claim for, say, monetary compensation against a person (which is an in personam or personal action). It focuses on proprietary title to property. Land is an example of a case where, when the title (e.g., who owns a house) is in dispute, an in rem action is used to deliver the land itself back to the rightful owner. The distinction between an in rem action and an in personam action is relevant to which jurisdiction a court case may need to be filed in, for the purposes of conflict of laws and civil procedure. In an in rem action the right jurisdiction would be where the property actually is. Late Latin:- In = Against + Rem, accusative of Rēs = Matter or Thing. In late Latin:- In The Thing Itself. Against a thing, such as property, status, or a right, rather than against a person. Used of an action or a judgment. A lawsuit against an item of property, not against a person (In Personam). An action In Rem is a proceeding that takes no notice of the owner of the property but determines rights in the property that are conclusive against all the world. For example, an action to determine whether certain property illegally imported into the United States ought to be forfeited can be captioned United States v. Thirty-nine Thousand One Hundred and Fifty Cigars. The object of the lawsuit is to determine the disposition of the property, regardless of who the owner is or who else might have an interest in it. Interested parties might appear and make out a case one way or another, but the action is In Rem, against the things. A legal term referring to an action against a corporation is an In Personam action. In Rem lawsuits can be brought against the property of debtors in order to collect what is owed, and they are begun for the partition of real property, foreclosure of mortgages, and the enforcement of liens. They may be directed against real or personal property. In Rem actions are permitted only when the court has control of the property or where its authority extends to cover it. For example, the courts in Kansas may determine rights to a farm in Kansas, but not the ownership of a cannery in Texas. The In Rem jurisdiction of a court may be exercised only after parties who are known to have an interest in the property are notified of the proceedings and have been given a chance to present their claim to the court. See also Lien In Rem. / Вещь В Себе. Против Вещи. Смотрите также Удержание У Себя (Lien In Rem). 'Вещь В Себе' это философское понятие, означающее вещи, как они существуют сами по себе ('в себе'), независимо от нас и нашего познания, в отличие от того, как они являются 'для нас' в познании или, иными словами, как они раскрываются человеком в процессе познания. Эти термины в XVIII веке приобрели особое значение в связи с отрицанием возможности познания 'вещей в себе'. Высказанное ещё Английским философом-материалистом Дьжоном Локком (1632–1704), это положение было подробно обосновано и являлось одним из центральных понятий 'Критики Чистого Разума' Немецкого философа, родоначальника Немецкой классической философии Профессора Иммануила Канта (1724–1804). Кант утверждал, что мы имеем дело только с явлением, полностью оторванным от 'вещи в себе'. У Канта 'Вещь В Себе' означает также сверхприродные, непознаваемые, недоступные опыту сущности:- Бог, свобода воли и так далее. Диалектический материализм, сходя из принципиальной познаваемости мира, рассматривает познание как процесс превращения 'вещи в себе' в 'вещь для нас' на основе практики.

INSA = INDIAN NATIONAL SCIENCE ACADEMY

INSAET = INSTITUTE OF AGRICULTURAL ENGINEERING AND TECHNOLOGY

INSCRIPTION = НАДПИСЬ – In the United States, Inscription:- the social security account number or, if assigned by the IRS, the employer identification number, names, connective ('OR', 'POD', 'Payable on death to'), and addresses appearing on the face of a bond. See also Registration. Letters inscribed (especially words engraved or carved) on something.

INSEAM = ВНУТРЕННЯЯ ДЛИНА НОГИ (или ВНУТРЕННИЙ ШОВ) – Inseam or Inside Leg:- select a pair of your best-fitting pants of a similar material. Measure from the crotch to the bottom. The number of incges, to the nearest half-inch, is the inseam length. Inside Leg (for men):- measure from the crutch to the top of the heel of the shoe. Outside Leg (for men):- measure from the top of the trouser waistband to the top of the shoe at the ankle. Inseam:- the distance from the bottom of a trouser leg to the crotch. The measurement is taken along the inside leg seam that joins the front and the back leg panels. / Длина Ноги По Внутренней Поверхности:- расстояние в сантиметрах по внутренней поверхности ноги от промежности до основания ступни, измеренное по прямой линии. Человек стоит прямо, нрги слегка раздвинуты, масса тела равномерно распределена на обе ноги. Длина Внутреннего Шва Брючин – измеряется по внутреннему шву брючин от промежности до низа.

INSECT = НАСЕКОМОЕ – Insect, (Class Insecta or Hexapoda), any member of the largest Class of the Phylum Arthropoda, which is itself the largest of the Animal Phyla. Insects have segmented bodies, jointed legs, and external skeletons (exoskeletons). Insects are distinguished from other Arthropods by their body, which is divided into three major regions:- (1) the head, which bears the mouthparts, eyes, and a pair of antennae, (2) the three-segmented thorax, which usually has three pairs of legs (hence 'Hexapoda') in adults and usually one or two pairs of wings, and (3) the many-segmented abdomen, which contains the digestive, excretory, and reproductive organs. ... Insect:- members of the Phylum Arthropoda ('jointed legs'); they have six legs, three distinct body regions (head, thorax, and abdomen), one pair of antennae, and usually wings. The world's most abundant creatures are the Insects, whose known Species outnumber all the other Animals and the Plants combined. Insects have been so successful in their fight for life that they are sometimes described as the human race's closest rivals for domination of the Earth. Entomologists, the scientists who study Insects, have named almost 1 000 000 Species – perhaps less than one third of the total number. Insects thrive in almost any habitat where life is possible. Some are found only in the Arctic regions, and some live only in deserts. Others thrive only in fresh water or only in brackish water. Many Species of Insects are able to tolerate both freezing and tropical temperatures. Such hardy Species are often found to range widely over the Earth. Few Insects, however, inhabit marine environments. Small size, relatively minor food requirements, and rapid reproduction have all aided in perpetuating the many Species of Insects. Certain parasitic Insects spend much of their lives on or within the body of an Animal host, where all the comforts of life – food, moisture, warmth, protection from enemies – are optimal. Other kinds of Insects spend all or some part of their lives securely enclosed in a food Plant. Some Species have become remarkably versatile in order to meet the changing demands of the environment. Various Water Bugs and Water Beetles are able to fly and swim, as well as crawl. Many Types of Insects, such as the Bees, Ants, and Wasps depend on a complex social structure and defensive behavior. Nonpredatory Species frequently have special defenses, such as an unpleasant taste or odor, venomous spines, or camouflage. Although they are adaptable and versatile as a group, Insects are often unable to adjust to unusual weather conditions. Excessive rain, an unusually early frost, an extended drought – these and other weather extremes can quickly wipe out or drastically reduce Insect populations in a region. Because Insects are an important item in the diet of many other Animals – Birds, Reptiles, Amphibians, and

Fish, as well as other Insects – the number is constantly held in check. The total of all factors unfavorable to Insect survival is overwhelming; thus, in some Species, out of hundreds of eggs laid by a single female, seldom do more than a few individuals reach adulthood. The survival of some Species is enhanced by the large numbers of eggs laid. Insect Structure And Function:- Despite their diversity, all adult Insects share some basic external and internal anatomical features. Insects are distinguished from other members of the Animal Kingdom by having six legs; one pair of antennae; a ringed, or segmented, body; and three well-defined body regions. It is from the joined body rings, or segments, that Insects derived their name, for the Latin word Insecta means 'Segmented'. Many creatures closely resemble Insects and are often mistaken for them – for instance, Spiders and Scorpions, which have eight legs; centipedes, which have dozens of legs; and mites and ticks, which have saclike bodies unbroken by segments. The name Bug refers to certain Insects with piercing and sucking mouthparts but is also commonly applied to Insects in general. External Anatomy:- The three main sections of an Insect body are the head; the middle section, or thorax; and the hind section, or abdomen. The body is covered with a horny substance containing chitin. The protective armor plate also serves as an external skeleton, or exoskeleton, for the support of the internal organs. The head bears the antennae, the mouthparts, and the eyes. The thorax has three segments; on each is a pair of legs. In Winged Insects the thorax also bears one or two pairs of wings. The abdomen typically has 11 segments, though no more than 10 are visible; it contains a large part of the digestive system. In females the ovipositor, or egg-laying organ, is located at the tip of the abdomen. Internal Organs:- The nervous system of the Insect includes a brain and a pair of parallel nerve cords, which extend along the length of the underside of the body. Along the nerve cords are a series of nerve masses, called Ganglia. Each ganglion controls certain activities and is more or less independent of the others. Insect blood is usually green, yellow, or colorless. Few Insects have red blood. The fluid is not enclosed in a system of arteries, veins, and capillaries but fills the body cavity. It is circulated by a tube that extends down the length of the body along the center of the back. The tube has valved intake openings along its sides and is open at the anterior, or front, end. By means of muscles, it draws the blood through the side openings and pumps it forward into the head cavity and out again into the body. The pulsations of the tube can be easily seen in light-colored caterpillars. Air enters the body through breathing pores, called spiracles. A pair of spiracles is usually found on each of two thoracic segments and on several abdominal segments. From the spiracles, large air tubes called Tracheae and smaller ones known as Tracheoles carry air to all parts of the body. Some Water Insects breathe by means of gills. Other Aquatic Insects have a snorkellike tube that leads to the water's surface. Certain internal parasites and very primitive Insects breathe directly through the body wall. Mouthparts:- Mouthparts vary with feeding habits. For example, the mouth of a Chewing Insect, such as the Grasshopper, has several parts. There is an upper lip, the labrum, and a lower lip, the labium. Between these are two pairs of jaws, which work sideways. The upper jaws, or mandibles, are for crushing; the lower pair, the maxillae, manipulate the food. On the maxillae and on the labium are two pairs of sensory structures called Palpi. On the floor of the mouth is the tonguelike hypopharynx, which secretes digestive juices. The sucking type of mouth is a modification of the chewing type. The butterfly's coiled proboscis, or sucking tube, is a modification of the maxillae. Sense Organs:- The sense organs of Insects are as varied as they are intricate. In some of these creatures the visual organs are capable of nothing more than distinguishing night from day. Others have eyes as efficient and sensitive as those of the vertebrates. Insect eyes are of two general types – simple and compound. Simple eyes, also called Ocelli, are usually located in small clusters on the sides of the head or on the frons, or forehead. Although small, they may easily be seen by means of a magnifying glass. Ocelli are found in both immature and mature Insects, but they appear to be more important in the mature forms. Individually these organs can do no more than detect light; however, the sensations received by several ocelli can together produce in the Insect's brain an image of the surrounding area as the creature turns its head from side to side. Compound eyes, like the sight organs of higher animals, are present in pairs, with one eye on each side of the head. They are most common in adult Insects. Some – certain Mayflies, for example – have two pairs of compound eyes. The eyes are called compound because each one is composed of many lenslike facets. Each of these facets – of which there are, for example, some 25 000 in a single Dragonfly eye – receives a separate image. The total effect of these images is a composite picture in the Insect's brain. The eyes of many Insects – Bees, for example – are sensitive to ultraviolet light, but Insect eyes are generally less sensitive to colors at the red end of the spectrum. The antennae are vital structures, because organs of taste, touch, smell, and hearing may be located in them. The loss of the pair of antennae usually leaves the Insect in a shocked and helpless state. Their appearance and structure may vary greatly, even between Insects of the same Order. The hearing organs of Insects are well developed in many Species and are found on various parts of the body. The ears of katydids and crickets are located on the tibiae of the forelegs. The typical Grasshopper's ear is clearly visible as an oval plate on the first abdominal segment. The 'Voices' Of Insects:- Insect sounds are produced by specialized structures to attract the opposite sex, to communicate with other members of a group, or to frighten enemies. Wings or mouthparts may be rubbed together. Legs may be scraped against wings or bodies. The grubs of certain wood-boring Beetles produce sound by rubbing their legs together. The male Cicada vibrates miniature 'drumheads' on the lower surface of its abdomen. The song of the female Mosquito comes from the vibration of special bands stretched across its breathing organs. Growth And Development:- The development from egg to adult is most interesting, especially in those Insects that go through the complex changes called Complete Metamorphosis. The growth of Insects is quite different from that of vertebrates because the Insect skeleton is an external covering rather than an internal framework. Except for the pliable fold between the plates of chitinous cuticle making up the exoskeleton, there is no place where expansion can occur; thus the growing Insect must periodically shed, or molt, its covering. The new skin, already formed, then expands and begins to harden. The offspring of all Insects undergo a varying number of such growth intervals before maturity. Adult Insects do not grow at all. With the exception of the subimago (subadult) stage of the Mayfly, only adults have functional wings. Primitive Species such as Silverfish mature with little change in appearance except their size. These kinds of Insects are known as Ametabolous Insects. The immature Insects of such Species are called simply the 'Young'. Immature Grasshoppers, Cicadas, the True Bugs, and a number of other Types resemble the adults in many respects but lack functional wings. Such young, called Nymphs, are hemimetabolous or are said to exhibit incomplete metamorphosis. A variation of such development occurs in Dragonflies, Mayflies, and Caddis Flies. The nymphs of these forms are aquatic and have a way of life quite unlike that of the adults. Bees, Beetles, Butterflies, and Moths are some of the Insects that go through all the changes of complete metamorphosis. They are said to be holometabolous. The young are called Larvae (singular, Larva). In the inactive stage immediately preceding adulthood they are called Pupae (singular, Pupa). The larva hatches from an egg. Often larvae are mistaken for Worms. They may be smooth-bodied, like the maggots of the fly, or hairy, like some caterpillars (literally, 'hairy cat'), or they may be vicious-looking, like the grub of the Tiger Beetle. Larvae are classified into five forms, based on their shape:- eruciform (caterpillarlike), scarabaeiform (grublike), campodeiform (elongated, flattened, and active), elateriform (wirewormlike), and vermiform (maggotlike). Larvae differ from adults in many respects. The mouthparts may be completely different. The mouth is always well developed, for this stage is the hungriest period of the Insect's life. Eyes, if present, are usually simple rather than compound. Certain structures found in the larva may be absent in the adult. Caterpillars, for example, have several additional legs, called Prolegs, along the abdomen. Near the end of its larval stage, the Insect must find a place in which to pupate, or turn into a pupa. Beetle larvae, as well as certain caterpillars, may hollow out cells in the soil. Some caterpillars may spin silken cocoons about their bodies; some may spin bands to hold themselves against twigs or leaves. Some caterpillars hang upside down from silken pads. Hairy caterpillars pluck out their hairs to line the walls of their cocoons. The pupal stage is a time of tissue transformation. During this period different kinds of mouthparts, legs, eyes, and, perhaps, breathing organs must replace those of the larva. When the changes are completed, the creature bursts out

of its old skin to become a fully developed Insect. In this final, sexually mature state, it is also known as an Imago. Habits And Bahavior:- Each Species of Insect, in its struggle for survival, has developed complex behavior mechanisms and habits. These involve every activity of daily life – including egg laying, nest building, self-defense, and the search for food. Egg Laying And Care Of The Young:- Most Species of Insects are of two sexes, but in some – the White-Fringed Beetle, for example – males are unknown. In certain Insects the sex of the offspring depends upon whether or not the egg has been fertilized. The unmated females of some parasitic Wasps produce males only, while mated ones produce the two sexes in about equal numbers. The queen honeybee can lay either fertilized or unfertilized eggs, according to the needs of the hive. Unfertilized eggs produce drones, while fertilized eggs produce females. The adult female instinctively places her eggs in a place suitable for their hatching and for proper development of the young. Parasitic Wasps and Flies place their eggs directly on the host. The horse botfly glues her eggs to the hairs of the horse where they can be licked off and thus be transferred to the Horse's stomach; the larvae live on the lining of the stomach and intestines. If a caterpillar feeds on only one Species of Plant, then the egg from which it will hatch is unerringly placed upon that Plant. Often Insects' eggs are hidden in special protective materials. They may be encased in frothy secretions which dry to form a hard covering, or clusters of eggs may be coated with hairs or scales from the adult Insect's body. The eggs of many Species are inserted directly into Plant tissues by means of sawlike or spearlike ovipositors. The young of some Insects are born alive. Such Insects are called Viviparous (from Latin Vivus, 'Alive', and Parere, 'Bring Forth'), to distinguish them from Egg-Laying Insects, which are called Oviparous (from Latin Ovum, 'Egg'). Aphids sometimes lay eggs and sometimes produce live young; female Aphids also bear young for many generations without mating. This is called Parthenogenesis (from the Greek words meaning 'Virgin Birth'). A few Insects reproduce in the larval or pupal stages. This is known as Paedogenesis (from the Greek words meaning 'Birth From Young'). Nests:- Nest building as an adult activity is peculiar to Ants, Wasps, and Bees. Carpenter Ants live in galleries, which they chew out of tree trunks, logs, and fence posts. Mound-building ants construct cities in the soil, with thousands of chambers and passageways. The great paper apartment houses of the paper Wasps and the honeycombs of the Bees are considered to be marvels of engineering. Nesting Species must feed their larvae. Ants forage for food for their young. Some Species raise Fungus gardens and cultivate Aphid 'Cows', whose liquid excrement, or honeydew, they eat. The mud dauber Wasp lays its eggs in tubes of mud. It then stocks the tubes with paralyzed Spiders and seals the tubes. After the larvae hatch, a sufficient food supply is at hand until they pupate. How Insects Spend The Winter:- Each Species of Insect usually passes the winter in one particular phase of development. Some Butterflies winter as pupae, caterpillars, or eggs. The monarch Butterfly migrates long distances Southward in the fall; some survive for a return flight in the spring. In the winter some Insects may come out of hibernation during brief periods of mild weather. Snow Scorpion Flies and Springtails are often found on snow or ice. Honeybees in well-protected hives use their body heat to maintain a hive temperature that permits them to remain somewhat active and to feed on stored sweets. They leave the hive when the temperature rises to about 55 °F (13 °C). Extreme heat or drought brings about a period of inactivity called Estivation. The eggs of Mosquitoes do not hatch and the nymphs and adults of many Aquatic Insects become dormant when the breeding ponds and marshes dry up. Protection From Enemies:- Insects have developed many methods of self-defense to avoid being devoured by their enemies. Flight, concealment, motion, armor and weapons, and even grotesqueness are some of these methods. Certain Insects are specially adapted for hiding. Vast numbers hide beneath stones or the bark of trees. The flattened bodies of Cockroaches and Bedbugs enable them to disappear into narrow cracks. The most interesting means of concealment are mimicry and protective coloration. The Walkingstick looks like a Twig. Certain moths blend so well into the bark of the tree on which they rest that they cannot be distinguished from the Tree. Some harmless Insects resemble stinging Species in shape or color and so are avoided by predators. Certain moths and flies mimic Bees. Armor and weapons are well developed in many Insects. The tough, horny covering of the Beetles amounts to a solid shell of armor. Sharp jaws and beaks, poisoned stingers, and spines serve as effective weapons. The extreme hairiness of some caterpillars makes Birds and other predators avoid them, and in some caterpillars the hairs have venomous spines. Stink glands in some Insects repel attackers in the same way as those in a skunk. When disturbed, the Bombardier Beetle ejects an irritating gas from its tail. The gas may be fired repeatedly and audibly. Grasshoppers exude a fluid popularly known as 'Tobacco Juice'. The flavor of some Insects is so bitter or sour that would-be predators avoid eating them. Response To Environment:- Insects are not able to reason. They are guided by instinct and by physiological reactions to their environment. Such reactions are called Tropisms, from the Greek word Tropos, meaning 'Turn'. All tropisms involve turning toward or away from a stimulus. Through chemotropism, chemical stimuli help Insects find places to lay their eggs. The Carrion Beetle, for example, deposits eggs on decayed meat – drawn to it by odor. Butterflies and Bees are attracted to flowers by odor as well as color. The scent glands of various Insects help them attract a mate. Insects also avoid certain substances by chemotropic reactions. Clothes chests made of cedar or camphor wood have long been used for storing woolens and furs because these woods contain substances repellent to clothes moths. Many Insects seem to be attracted to or repelled by light (phototropism). Moths are attracted to artificial light and moonlight but avoid sunlight. Butterflies react in the opposite way. Cockroaches in a dark room hide when a light is turned on. Response to gravity (geotropism) may govern the way various boring Insects react. Thermotropism, or attraction to heat, may draw parasites to their warm-blooded hosts. Thigmotropism is reaction to touch. Some Insects avoid all contact with others; some thrive in close contact. The swarming of Bees may be due to an attraction to one another's bodies. Attraction to water (hydrotropism), adjustment to currents of streams (rheotropism), and adjustment to air currents (anemotropism) may explain the behavior of a wide variety of Insects. However, no single stimulus governs all of their complex activities. Classification:- Insects belong to the Phylum Arthropoda, one of the chief divisions of the Animal Kingdom. The name comes from two Greek words, Arthron ('Joint') and Podos ('Foot'), and refers to the jointed feet. Arthropods also include Spiders, Lobsters, Centipedes, and other Animals. In this Phylum, Insects belong to the Class Insecta. Each Insect has two parts to its scientific name. For example, the Housefly is Musca Domestica. The first half of the name is that of the Genus (a group of closely related Species) to which the species Domestica belongs. The many thousands of Insect Genera (plural of Genus) are grouped under more than 900 Families. These Families, in turn, are grouped under as many as 30 Orders. To summarize, the housefly is classified as follows:- Kingdom, Animalia; Phylum, Arthropoda; Class, Insecta (Hexapoda); Order, Diptera; Family, Muscidae; Genus, Musca; Species, Domestica. Each of these groups is often divided even further into subgroups (Subphylum, Subclass, Suborder, and so on). Ancestors Of The Modern Insect:- Insects appeared on Earth long before the advent of Humans or the earliest Mammals. The first Insects probably evolved from primitive Ringed Worms. These Insect ancestors were wingless and developed without metamorphosis, as do today's Silverfish. The oldest fossils of ancestral Insect forms are believed to be some 350 million years old. There are also fossil records, from later eras, of highly developed forms very similar to the Mayflies, Cockroaches, and Dragonflies now in existence. Some ancient Insects were truly huge; Dragonflies, for example, had a wingspread of 2 feet (0.61 meter) or more. The Imprtance Of Insects To Humans:- Insects that attack Humans or anything of value to Humans are termed Pests; many of these are mutually competitive with Humans for the world's food supply. Other Insects are benefactors of Humans, as they devour the carcasses of dead Animals, pollinate orchards, manufacture honey, or simply serve as another link in the food chain of the Animal Kingdom, for Humans eat the Animals – including Fish and Birds – which, in turn, live upon the Insects. (1) Harmful Insects:- About 10 000 Species of Insects have been classified as Pests. Some are disease carriers, afflicting and often killing Humans. Many Insects prey upon domestic Animals; others eat human food, clothing, and other possessions. Still others, in their quest for food or lodging, destroy trees, wood, and paper. Carriers Of Disease:- As vectors, or transmitting agents, of disease organisms, Insects have caused more deaths and have inflicted

greater misery and hardship on humankind than all the wars of history. In their efforts to find food, Insects wage their own war against the Human Race. Some feed upon humans directly. Notable among these are the True Flies, including Mosquitoes, Horseflies, Black Flies, Tsetse Flies, and other two-winged Pests. Perhaps humankind's worst enemy among the Insects is the Mosquito. More lives have been lost as a result of malaria, yellow fever, encephalitis, and other Mosquito-borne diseases than from all the other Insect-borne diseases combined. The Tsetse Fly has been a serious deterrent to the development of much of tropical Africa, for the Insect acts as a vector of trypanosomiasis (African sleeping sickness) among Humans and of nagana, a serious disease of Livestock. Horseflies and Stable Flies also transmit disease through their bites. The common housefly is not a biter, but it can carry myriad disease organisms on the hairs and the sticky secretions of its body. The Assassin, or Kissing, Bug transmits the highly fatal Chagas' disease. Bedbugs, Fleas, and lice live on the blood of Birds and Mammals, including Humans. The Human louse lives on the blood of Humans alone and transmits typhus, relapsing fever, and trench fever. The Flea is potentially one of humankind's deadliest enemies; Rat Fleas, for example, carry the germs of murine typhus and plague, which wiped out about one-third of the population of Europe in four years in the mid-1300s. Household Pests:- Insect Pests in the home are most commonly chewers. One of the most troublesome of these – the Clothes Moth – attacks furs, woolens, and materials made of hair. The Silverfish and the Firebrat eat sized or stiffened material, such as the paper and bindings of books and starched clothing and curtains. In some parts of the United States, Termites do considerable damage to furniture and paper products, as well as to the timber frameworks of buildings. Plant-Eating Pests:- Most Insects are Herbivorous – that is, they feed on Plants. Virtually every part of a Plant, from the flower to the root, is vulnerable to their attack. They do their damage in a variety of ways. Insects with chewing mouthparts are the most destructive Plant eaters. A horde of Grasshoppers, for example, can strip every blade of vegetation from a field in a few hours. The destruction caused by other Chewing Insects, such as Beetles, can also be enormous. Insects with sucking mouthparts, though usually smaller and less conspicuous than the chewers, also do a great deal of damage to farm crops and to forest and garden Plants. These Insects pierce Plant tissues and draw out the vital juices. These Insects include the Aphids, Chinch Bugs, Cicadas, and Scale Insects. Damage is also done to the host Plant from within by many other Plant Pests – usually as larvae. Some eat their way between the top and bottom layers of a leaf, giving it a blotched appearance. The leaf roller, the larval form of certain moths, rolls a leaf into a tube and spins silk to hold it together. The caterpillar then feeds on the leaf. Other Insect Pests tie several leaves together into a large nest. Gallflies cause swellings on buds, flowers, leaves, stems, bark, or roots of Plants. Usually the female pierces the Plant and lays an egg; the Plant then grows a gall, or swelling, around the egg (see Oak). Insect Immigrants Upset Nature's Balance:- As long as a region is left in its natural state, no Species of Insect is likely to increase disproportionately in numbers. The balance of nature prevents this from happening. Every Insect has natural enemies, such as the Spider, the praying mantis, and many kinds of disease organisms, that help keep the number of Insects down. The balance of nature in the New World was upset when settlers from Europe brought their domestic Plants with them. Many Insects that were harbored by these Plants escaped the natural controls that were present in their old environments and became Pests. The widespread use of such insecticides as DDT, now largely discontinued, also disrupted the balance of nature in some areas. Pests arrive in many ways and from many lands. The Gypsy Moth, for example, was brought to the United States for experiments in the 1860s. It escaped from the laboratory and before the end of the XIX century had cost millions of Dollars annually in damage to shade Trees. The Argentine Ant, an enemy of field crops and stored foods, was a stowaway in a cargo that reached New Orleans, State of Louisiana (La. or LA), United States, in 1891. The Brown-Tail Moth, another shade-tree Pest, reached New England from Europe in about 1897. The Alfalfa Weevil came to Utah in 1902 in soil adhering to imported Plants. The Corn Borer was carried from Southern Europe in 1909 in a shipment of broomcorn. Two serious Pests came from Japan – the Oriental Fruit Moth, on Cherry Trees presented by the city of Tokyo to Washington, DC, in 1913; and the Japanese Beetle, on Trees reaching New Jersey in 1916. Also in 1916, carloads of cottonseed from Mexico brought in the Pink Bollworm. Four arrived in 1920:- the Satin Moth, an enemy of shade Trees; the Asiatic Beetle, which destroys lawns; the Mexican Bean Beetle, which feeds on a variety of Beans; and the Mediterranean Fruit Fly, which is highly destructive of fruits, nuts, and vegetables. Methods Of Insect Control:- Until the middle of the XIX century Americans were helpless against the growing Insect menace. Finally, in the 1860s, arsenic compounds were found to be effective in combating the Colorado Potato Beetle. This was the first successful control of Insect Pests by scientific means. In the Morrill Act, in 1862, Congress provided for the study of Insect Pests and other agricultural problems. Six principal methods are used in the control of Insect Pests. These methods are chemical, mechanical, radiological, cultural, biological, and legal. Chemical:- The chemical substances used to destroy Insects are called Insecticides. These may be broadly classified as stomach poisons, contact poisons, fumigants, and sorptive dusts. The stomach poisons are more effective against the Chewing Insects; the contact poisons, against Sucking Insects. Fumigants are gaseous poisons that enter the Insect's breathing system. Sorptive dusts are dry chemical compounds that kill Insects by absorbing fatty substances from the exoskeleton, thus causing vital body fluids to evaporate. Mechanical:- Mechanical methods of Insect control – often primitive and time-consuming – are generally less effective than chemical methods. They can seldom be applied practically to large populations of Insects or over wide areas. These methods include swatting, the use of traps and barriers, water control, and temperature control. Water control involves adjustment of the water level or the rate of flow in breeding places. Temperature control is sometimes effective against Insects that infest enclosed storage facilities. Reducing the temperature to 40 or 50 °F (4 or 10 °C) will cause most Insects to become dormant; raising the temperature to 130 °F (54 °C) for three hours is sufficient to kill almost any Insect. Radiological:- Perhaps the most dramatic, wholesale destruction of Insects can be accomplished by making them infertile. Sexual sterility in male Insects is induced by treating them with the rays of radioactive cobalt. If a large number of a particular Species undergo this process in the laboratory, the treated males – though sterile – will still mate with fertile females; but the eggs laid by these females will be sterile. Following continual releases of sterile males in a single area, the number of young can be gradually reduced over a period of several generations until the population of the Insect is totally wiped out within that area. Through this technique the Screwfly, a serious Pest of Cattle, was first eradicated from the Island of Curaçao in the West Indies in 1954. Radiological warfare was then used to bring the Screwfly under control in the South-Eastern United States. Cultural:- The cultural control of Insect Pests is of special interest to the farmer. Methods include the destruction of Plant residues and Weeds, crop tillage, crop rotation, and the growing of Insect-resistant strains of crops. When the farmer destroys the crop residues and Weeds, he also destroys hibernating Insects that would otherwise reproduce the following season. By plowing or cultivating at the right time of year, he can often eliminate large numbers of Harmful Insects living in the soil. Crop rotation is an important means of combating Insect Pests of field crops, for many such Pests will feed on only a single Species or a single Family of Plant. Thus, if a farmer grows a grain one season and a legume the next, populations of many Grain Pests (as well as legume Pests) can be kept down or eliminated. Insect-resistant strains of many crops have been developed. Many of these strains have been developed by means of genetic engineering techniques. Resistance to the European Corn Borer, the Wireworm, and the Chinch Bug, for example, has been obtained in a single Corn hybrid through selective breeding. Biological:- The control of Insects by biological means involves the application of the Pest's natural enemies. These enemies may be Microbes, Mites, or other Insects. Scientists have succeeded in controlling Harmful Insects by first determining the major predators or parasites of that Insect in its country of origin. Then the scientists introduced these natural enemies as control agents in the new country that the Pest had infested. A classic example is the Cottony Cushion Scale, which threatened the survival of the California Citrus industry in 1886. The predatory Ladybird Beetle, or Vedalia Beetle, was introduced from Australia, and within two years the Scale Insect had virtually disappeared from California. In Eastern Canada in the early 1940s the

vicious European Spruce Sawfly was completely controlled by the spontaneous appearance of a viral Plant disease, perhaps unknowingly introduced from Europe. This event led to increased interest in Plant diseases as potential means of Pest control. Legal:- The legal control of Insects concerns government regulations to prevent the spread of Insect Pests from one country or region to another. The US Federal Plant Quarantine Act of 1912 began the fight against imported Pests by providing for inspectors at ports of entry. These officials examine all Plant products as well as passengers' baggage. Infested material is destroyed or thoroughly fumigated. Aircraft are examined and may be fumigated as soon as they arrive in the United States from countries where Insect Pests are a potential threat. By the time an immigrant Pest is discovered in domestic Plants, it is usually too late for eradication of the injurious Insect. In some instances, however, control has been achieved. In 1929 the Mediterranean Fruit Fly was detected in Florida Orchards; the Insects threatened ruin to the fruit crop. State and federal entomologists united for battle, and all Florida was quarantined. Abandoned and rundown Orchards were destroyed. Chemists developed new poison sprays. By the end of the summer not a 'Medfly' could be found in Florida. In 1956 a second such outbreak occurred; this too was put down after several months of intensive warfare. In 1981 a serious spread of the Medfly threatened California's agricultural regions with economic disaster. The Pest had been imported accidentally in 1980. An attempt to control the Insects by importing sterilized males from Peru failed. The US Department of Agriculture threatened to quarantine the state's produce unless the infected areas were fumigated. Governor Jerry Brown finally authorized helicopter spraying of the pesticide called Malathion in July 1981. The spraying halted the threat to the California crops. (See also Pest Control.) (2) Beneficial Insects:- Numerous Species of Plants depend upon Insects to pollinate them. In visiting flowers for nectar, Insects carry pollen from one flower to the pistil of another. In this way they fertilize the Plant and enable it to make seeds. Without Insects there would be no Orchard fruits or berries. Tomatoes, Peas, Onions, Cabbages, and many other Vegetables would not exist. There would be no clover or Alfalfa. The Animals that need these forage crops would be of poor quality, and humankind's meat supply would suffer. There would be no linen or cotton; no tea, coffee, or chocolate. The Honeybee produces honey and wax. Silk is made by the Silkworm larva. Shellac is secreted by an Oriental Scale Insect. Such Insects as the Dobsonfly are used in sport fishing as bait. In many underdeveloped areas of the world Grasshoppers, caterpillars, and other Insects are necessary to Humans as food. Insects are also important to Humans as food for other Animals. Freshwater fishes depend upon Insects for food. Hundreds of Species of Birds would perish if there were no Insects to eat. Insects have also played a significant role in the biological laboratory. The Drosophila Fly, in particular, has been valuable in the study of inherited characteristics (see Genetics). The European Blister Beetle, or Spanish Fly, is helpful in the fight against Human disease, for it secretes cantharidin, a substance used medically as a blistering agent. Many Insects are invaluable as predators on Insects that are Pests to Humans. In the same way, Plant-Eating Insects are often valuable for their destruction of Weeds. Insects that burrow in the earth improve the physical and chemical condition of the soil. As scavengers, Insects perform the important function of eating dead Plants and Animals. The housefly, scorned as a disease carrier, is beneficial in its larval form – the maggot. It feeds on decaying refuse and in this way makes the world somewhat cleaner and more habitable for others. / Под Насекомыми понимается Класс Беспозвоночных типа Членистоногих. Тело разделено на голову, грудь и брюшко. 3 пары ног, у большинства – крылья. Дышат трахеями. Развитие, как правило, с метаморфозом – яйцо, личинка, нимфа (или куколка), взрослое Насекомое. Самая многочисленная и разнообразная группа животных на Земле:- известно около одного миллиона Видов, истинное их число, вероятно, 1.5–2 миллиона Видов; в бывшем Союзе Советских Социалистических Республик (СССР) насчитывалось 80 000–100 000 Видов. Число Отрядов по разным системам от 30 до 40. Некоторые Насекомые повреждают сельскохозяйственные, лесные и декоративные Растения, зерно и другие пищевые продукты в хранилищах, переносят возбудителей болезней Человека и Животных; есть и полезные – опыляют Растения, дают пищевые продукты и сырьё (воск, мёд, шёлк), истребляют Насекомых-Вредителей (например, Наездники). Численность многих Видов, особенно Бабочек, сокращается. 202 Вида Насекомых числились в Красной Книге бывшего СССР. Наука о Насекомых – Энтомология. Обобщённое Внешнее Строение Насекомого:- головная капсула, усики, сложные глаза, простые глаза, верхняя губа, жвалы, нижние челюсти, нижняя губа, переднегрудь, среднегрудь, заднегрудь, нижние полукольца (стерниты) грудных сегментов, их верхние полукольца (тергиты), их бочки (плейриты), тазик, вертлуг, бедро, голень, лапка, крылья с системой жилок, костальная жилка, Ск – субкостальная, Р – радиальные, М – медиальные (срединные), Ку – кубительные, А – Анальные жилки, брюшко, тергиты и стерниты брюшных сегментов, церки, яйцеклад и стигмы. Насекомые (Insecta), Класс Беспозвоночных Животных типа Членистоногих. Тело членистое, покрыто плотной кутикулой, образующей наружный скелет; подразделено на 3 отдела – голову, грудь и брюшко. Голова несёт ротовые органы, глаза и пару усиков; образована плотной головной капсулой; имеются парные сложные глаза и простые глазки; усики, или антенны (нитевидные, щетинковидные, булавовидные, перистые, пластинчатые и другие), служат органами осязания и обоняния. Ротовые органы (верхняя и нижняя пара челюстей, и нижняя губа) сверху прикрыты верхней губой. Дифференциация ротовых органов связана с приспособлением к различным способам питания. Из исходных грызущих ротовых органов Прямокрылых, Жуков, Перепончатокрылых и других возникли сосущие органы (рабочий орган – хоботок) Бабочек, Мух, приспособленные для использования жидкой пищи, и колюще-сосущие – Клопов, Равнокрылых, Трипсов, кровососущих Комаров, Слепней и других, питающихся клеточным соком растений и кровью животных. Грудь трёхчлениковая, несёт обычно 3 пары членистых ног, а у большинства и крылья; снабжена сильной мускулатурой, имеет прочный скелет и подразделяется на передне-, средне- и заднегрудь. На каждом сегменте груди – по 1 паре ног. Ноги членистые, подразделяются на тазик, вертлуг, бедро, голень и заканчиваются членистой лапкой с парой концевых коготков. Помимо передвижения (ходильные, бегательные, прыгательные и плавательные ноги), у некоторых Насекомых ноги приспособлены для поимки добычи (хватательные), рытья (роющие) или для сбора цветочной пыльцы (собирательная задняя пара ног у Пчелиных). У крылатых Насекомых средне- и заднегрудь несут по паре перепончатых крыльев, укреплённых сетью жилок. Расположение жилок характерно для разных групп Насекомых и имеет значение для систематики. Брюшко – многочленистое, содержит до 11 сегментов, у взрослых Насекомых лишено развитых ног; у многих Насекомых имеет концевые придатки:- парные членистые или нечленистые церки, иногда непарный парацерк, у самки – яйцеклад или жало, у самца – пару нечленистых грифельков. Анатомическое строение Насекомых сложно. Пищеварительная система представлена кишечным каналом, состоящим из переднего, среднего и заднего отделов и слюнных желёз. Строение органов пищеварения различно в зависимости от типа пищи. Кровеносная система незамкнутая; передвижение крови (гемолимфы), заполняющей полость тела, обеспечивается спинным сосудом с пульсирующим отделом – сердцем. Дыхательные органы – сложная система ветвящихся воздухоносных трубок – трахей, заканчивающихся тончайшими капиллярами – трахеолами; воздух поступает в трахейную систему через дыхальца по бокам тела и непосредственно достигает тканей и клеток тела. Выделительные органы представлены мальпигиевыми сосудами, удаляющими из организма ненужные и вредные продукты жизнедеятельности. Развитие Насекомых и многие процессы их жизнедеятельности регулируются гормонами, выделяемыми эндокринными железами, связанными с нервной системой. У многих Насекомых развиты пахучие, ядовитые, воскоотделительные и шёлкоотделительные железы. Половая система состоит из желёз (семенники у самца, яичники у самки и придаточные железы) и выводящих протоков; у самцов Высших Насекомых имеется сложный копулятивный аппарат. Нервная система представлена так называемым Головным Мозгом и Брюшной Нервной Цепочкой, состоящей из нескольких узлов – Ганглиев. Помимо зрения, Насекомые обладают осязанием, обонянием, вкусом, слухом и гигротермическим чувством. Поведенческие

реакции Насекомых отличаются большим разнообразием и сложностью (смотрите Общение Животных). Развитие Насекомых сопровождается сменой стадий (фаз) и превращением – метаморфозом; при неполном превращении выражены лишь 3 стадии – яйцо, личинка (нимфа) и взрослое Насекомые, или имаго; при полном – между личинкой и имаго есть ещё стадия куколки. Жизненный цикл разнообразен, определяется числом поколений в году, особенностями сезонного развития и характером диапаузы. Систематика Насекомых:- известно около 1 миллиона Видов Насекомых, то есть больше, чем всех остальных Животных и Растений вместе взятых. Ежегодно описывают тысячи новых Видов; истинное число Видов Насекомых на земном шаре, вероятно достигает 2 миллионов. В бывшем Союзе Советских Социалистических Республик (СССР) – 80 000–100 000 Видов, но изучены далеко не все. Из-за большого разнообразия их классификация очень сложна; существует несколько разных систем. По одной из них Насекомых делят на 2 Подкласса:- Низшие, Первичнобескрылые, или Аптериготы, с 4 Отрядами (Бессяжковые, Ногохвостки, Двухвостки и Щетинохвостки) и Высшие, Крылатые, или Птериготы. Высших, Крылатых Насекомых разделяют на Насекомых с неполным превращением и с полным превращением. К Насекомым с неполным превращением относятся (из ныне живущих) отряды Подёнок и Стрекоз (иногда объединяемые в группу Древнекрылых, противопоставляемую всем остальным крылатым Насекомым, называемым Новокрылыми), а также Таракановые, Богомоловые, или Богомолы, Термиты, Эмбии, Гриллоблаттиды, Палочники, Прямокрылые, Кожистокрылые, Гемимериды, Зораптеры, Веснянки, Равнокрылые, Клопы, Пузыреногие, Пухоеды, Вши и Сеноеды. Насекомые с полным превращением включают следующие отряды:- Жуки, Веерокрылые, Вислокрылки, Верблюдки, Сетчатокрылые, Скорпионовы Мухи, Ручейники, Бабочки, Блохи, Двукрылые, Перепончатокрылые. По другой системе, Насекомых разделяют на 2 подкласса:- Энтогнатные, или Скрытночелюстные (Entognatha), с 3 отрядами (Бессяжковые Насекомые, Ногохвостки и Двухвостки) и Эктогнатные, Наружночелюстные (Ectognatha) – Щетинохвостки и все Высшие Насекомые. Всё разнообразие Насекомых, их анатомию, эмбриологию, физиологию, экологию, их распространение, методы борьбы с вредителями изучает Энтомология. Роль Насекомых в природе необычайно разнообразна. Они участвуют в круговороте веществ, так как используют самые разнообразные источники пищи (от живого растения и тела других животных до разлагающихся остатков растительного и животного происхождения), выполняют санитарную функцию, активно участвуют в почвообразовательном процессе. Велика их роль в опылении Цветковых Растений. Насекомые дают ценную пищевую и техническую продукцию (Медоносные Пчёлы, Шёлкопряды, Лаковые Червецы и другие). Некоторые Насекомые полезны истреблением вредителей и сорняков, многие виды служат пищей для ряда промысловых животных – Млекопитающих, Птиц и Рыб. Среди Насекомых много опасных вредителей растений и животных. Большой вред Насекомые наносят как переносчики возбудителей ряда заболеваний, кровососы и другие. Численность многих Насекомых в популяциях непостоянна, у некоторых видов может повышаться во много раз (смотрите Динамика Численности Животных). Ископаемые Насекомые:- единичные остатки Ногохвосток обнаружены в среднем девоне. С середины карбона Насекомые становятся многочисленными и представлены преимущественно вымершими отрядами – Палеодиктиоптерами, гигантскими Стрекозами, Таракановыми и другими. В перми появляются первые Жуки, Скорпионницы и другие, а в триасе – первые Перепончатокрылые. Юрские Насекомые известны только из Евразии; характерно обилие Жуков, Двукрылых и других. С раннего мела появляются многие новые Семейства, формирующие кайнозойскую фауну Насекомых, которая уже с палеогена мало отличалась от современной. Остатки ископаемых Насекомых помогают определить геологический возраст отложений, климат и биогеоценозы прошлого. Ископаемые Насекомые изучаются в ряде стран, особенно широко с 1930-х в бывшем СССР, где открыто около 500 местонахождений и собраны обширные коллекции.

INSECT GROWTH REGULATOR = РЕГУЛЯТОР РОСТА НАСЕКОМЫХ – Insect Growth Regulator is a compound, either natural or synthetic, that influences Insect growth and development, e.g., Dimilin affects Boll Weevil grub integument formation during shed, resulting in deformed pupae and adults or premature death. Often referred to by its acronym, IGR. / Димилын (Dimilin). Регуляторы Роста Насекомых относятся к группе нетоксичных инсектицидов. Это синтетические гормональные инсектициды, которые являются химическими соединениями, нарушающими биологические процессы на конкретных этапах развития Насекомых. Они созданы как аналоги существующих в природе гормонов. При контактном воздействии регулятора роста на Насекомое происходит блокирование развития и метаморфоз Насекомых во всех фазах развития – от яйца до взрослого Насекомого. Это происходит под контролем двух конкретных видов гормонов:- (i) ювенильного гормона, который контролирует и непосредственно влияет на процесс инкубации яйца, появления личинок, куколок и взрослых насекомых; и (ii) ‘раздевающего’ гормона, блокирующего процесс смены эпидермиса Насекомого, создающего условия для формирования ‘раздетого’ Насекомого при переходе из одной фазы его развития в другую. При гормональном дисбалансе Насекомые погибают или становятся стерильными.

INSECTICIDE = ИНСЕКТИЦИД – Insecticide is any substance or mixture of substances intended to prevent, destroy, repel, or control any Insect or other arthropod. Insecticide is a material that kills Insects. Insecticide is any toxic substance that is used to kill Insects. Such substances are used primarily to control Pests that infest cultivated Plants or to eliminate disease-carrying Insects in specific areas. Insecticides can be classified in any of several ways, on the basis of their chemistry, their toxicological action, or their mode of penetration. In the latter scheme, they are classified according to whether they take effect upon ingestion (stomach poisons), inhalation (fumigants), or upon penetration of the body covering (contact poisons). Most synthetic organic insecticides penetrate by all three of these pathways, however, and hence are better distinguished from each other by their basic chemistry. Besides the synthetic organics, some organic compounds occurring naturally in plants are useful insecticides, as are some inorganic compounds. Most insecticides are sprayed or dusted onto plants and other surfaces traversed or fed upon by insects. Stomach poisons are toxic only if ingested through the mouth and are most useful against those insects that have biting or chewing mouth parts, such as caterpillars, beetles, and grasshoppers. The chief stomach poisons are the arsenicals, e.g., Paris green (copper acetoarsenite), lead arsenate, and calcium arsenate; and the fluorine compounds, among them sodium fluoride and cryolite. They are applied as sprays or dusts onto the leaves and stems of plants eaten by the target Insects. Stomach poisons have gradually been replaced by synthetic organic insecticides, which are less dangerous to humans and other mammals. Contact poisons penetrate the skin of the pest and are used against those arthropods, such as aphids, that pierce the surface of a plant and suck out the juices. The contact insecticides can be divided into two main groups: naturally occurring compounds and synthetic organic ones. The naturally occurring contact insecticides include nicotine, developed from Tobacco; pyrethrum, obtained from flowers of Chrysanthemum Cinerariaefolium; rotenone, from the roots of Derris Species and related Plants; and oils, from petroleum. Though these compounds were originally derived mainly from plant extracts, the toxic agents of some of them (e.g., pyrethrins) have been synthesized. Natural insecticides are usually short-lived on Plants and cannot provide protection against prolonged invasions. Except for pyrethrum, they have largely been replaced by newer synthetic organic insecticides. The synthetic contact insecticides are now the primary agents of insect control. In general they penetrate insects readily and are toxic to a wide range of species. The main synthetic groups are the chlorinated hydrocarbons, organic phosphates (organophosphates), and carbamates. The chlorinated hydrocarbons were developed beginning in the 1940s after the discovery (1939) of the insecticidal properties of DDT. Other examples of this series are BHC, lindane, Chlorobenzilate, methoxychlor, and the cyclodienes (which include aldrin, dieldrin, chlordane, heptachlor, and endrin). Some of these compounds are quite stable and have a

long residual action; they are, therefore, particularly valuable where protection is required for long periods. Their toxic action is not fully understood, but they are known to disrupt the nervous system. The organophosphates are now the largest and most versatile class of insecticides. Two widely used compounds in this class are parathion and malathion; others are Diazinon, naled, methyl parathion, and dichlorvos. They are especially effective against sucking insects such as aphids and mites, which feed on plant juices. The chemicals' absorption into the plant is achieved either by spraying the leaves or by applying solutions impregnated with the chemicals to the soil, so that intake occurs through the roots. The organophosphates usually have little residual action and are important, therefore, where residual tolerances limit the choice of insecticides. They are generally much more toxic than the chlorinated hydrocarbons. Organophosphates kill Insects by inhibiting the enzyme cholinesterase, which is essential in the functioning of the nervous system. The carbamates are a relatively new group of insecticides that includes such compounds as carbamyl, methomyl, and carbofuran. They are rapidly detoxified and eliminated from animal tissues. Their toxicity is thought to arise from a mechanism somewhat similar to that for the organophosphates. Fumigants are toxic compounds that enter the respiratory system of the insect through its spiracles, or breathing openings. They include such chemicals as hydrogen cyanide, naphthalene, nicotine, and methyl bromide and are used mainly for killing Insect Pests of stored products or for fumigating nursery stock. The advent of synthetic organic insecticides in the mid-XX century made the control of insects and other arthropod pests much more effective, and such chemicals remain essential in modern agriculture despite their environmental drawbacks. By preventing crop losses, raising the quality of produce, and lowering the cost of farming, modern insecticides increased crop yields by as much as 50 percent in some regions of the world in the period 1945–65. They have also been important in improving the health of both humans and domestic animals; malaria, yellow fever, and typhus, among other infectious diseases, have been greatly reduced in many areas of the world through their use. But the use of insecticides has also resulted in several serious problems, chief among them environmental contamination and the development of resistance in pest species. Because insecticides are poisonous compounds, they may adversely affect other organisms besides harmful insects. The accumulation of some insecticides in the environment can in fact pose a serious threat to both wildlife and humans. Many insecticides are short-lived or are metabolized by the animals that ingest them, but some are persistent, and when applied in large amounts they pervade the environment. When an insecticide is applied, much of it reaches the soil, and groundwater can also become contaminated from direct application or runoff from treated areas. The main soil contaminants are the chlorinated hydrocarbons such as DDT, aldrin, dieldrin, heptachlor, and BHC. Owing to repeated sprayings, these chemicals can accumulate in soils in surprisingly large amounts (10–100 pounds per acre), and their effect on wildlife is greatly increased as they become associated with food chains. The stability of DDT and its relatives leads to their accumulation in the bodily tissues of insects that constitute the diet of other animals higher up the food chain, with toxic effects on the latter. Birds of prey such as eagles, hawks, and falcons are usually most severely affected, and serious declines in their populations have been traced to the effects of DDT and its relatives. Consequently, the use of such chemicals began to be restricted in the 1960s and banned outright in the 1970s in many countries. Cases of insecticide poisoning of humans also occur occasionally, and the use of one common organophosphate, parathion, was drastically curtailed in the United States in 1991 owing to its toxic effects on farm laborers who were directly exposed to it. Another problem with insecticides is the tendency of some target insect populations to develop resistance as their susceptible members are killed off and those resistant strains that survive multiply, eventually perhaps to form a majority of the population. Resistance denotes a formerly susceptible insect population that can no longer be controlled by a pesticide at normally recommended rates. Hundreds of species of harmful insects have acquired resistance to different synthetic organic pesticides, and strains that become resistant to one insecticide may also be resistant to a second that has a similar mode of action to the first. Once resistance has developed, it tends to persist in the absence of the pesticide for varying amounts of time, depending on the type of resistance and the species of pest. Insecticides may also encourage the growth of harmful insect populations by eliminating the natural enemies that previously held them in check. The nonspecific nature of broad-spectrum chemicals makes them more likely to have such unintended effects on the abundance of both harmful and beneficial insects. Because of the problems associated with the heavy use of some chemical insecticides, current insect-control practice combines their use with biological methods in an approach called Integrated Control. In this approach, a minimal use of insecticide may be combined with the use of pest-resistant crop varieties; the use of crop-raising methods that inhibit pest proliferation; the release of organisms that are predators or parasites of the pest species; and the disruption of the pest's reproduction by the release of sterilized pests. Insecticide is a pesticide designed specifically to combat insects. Insecticide is a chemical used for killing Insects. / Виды (Species). Под Инсектицидом, от Латинских слов Insectum, означающее Насекомое, и Caedo, означающее Убиваю, понимается химический препарат из группы пестицидов для борьбы с Насекомыми – вредителями сельскохозяйственных Растений. Инсектициды, уничтожающие яйца Насекомых Вредителей – овициды, уничтожающие личинки Насекомых Вредителей – ларвициды. Инсектициды включают антифиданты, аттрактанты и хемостерилизаторы. Инсектициды вносят в почву, используют для опыливания и опрыскивания Растений, обработки Животных против паразитов. Их используют и для защиты продовольственных запасов, древесины, тканей, для борьбы с переносчиками болезней и бытовыми насекомыми.

INSECT INFESTATION = НАШЕСТВИЕ НАСЕКОМЫХ (или ЗАРАЖЕНИЕ НАСЕКОМЫМИ) – Insect Infestation:- the Canada Grain Regulations establish procedures for handling infested grain at primary elevators. Grain found infested at terminal or transfer elevators is handled and treated under the direction of an officer of the Canadian Grain Commission (CGC). According to the Canada Grain Act, infested grain is grain that contains any injurious, noxious or troublesome Insect or Animal Pest.

INSECTIVOROUS = НАСЕКОМОЯДНОЕ – Insectivorous:- trapping and obtaining nutrients from insects. See also Entomophagous. / Смотрите также Энтомофаги (Entomophagous). Под Насекомоядными понимается отряд Млекопитающих. Длина тела от 3 до 45 сантиметров. 7 Семейств; около 300 Видов. Распространены широко. В бывшем Союзе Советских Социалистических Республик (СССР) насчитывалось 35 Видов из 3 Семейств:- Ежи, Землеройки и Кроты. Некоторые насекомоядные – объект пушного промысла. Насекомоядные (Insectivora), Отряд Млекопитающих. Длина тела от 3 (Бурозубка-Крошка, Малая Белозубка) до 39 сантиметров (см) (Тенрек). Голова удлинённая, обычно оканчивается подвижным хоботком. Глаза небольшие, у некоторых скрыты под кожей. Тело покрыто короткой густой шерстью (Кроты, Выхухоли, Землеройки), у некоторых – щетиной (Тенреки) или иглами (Ежи). Окраска однотонная – серая, бурая или чёрная, изредка пятнистая. Конечности короткие, пятипалые, стопо- или полустопоходящие, у Прыгунчиков – пальцеходящие. Хвост у одних (например, Ежи) очень короткий, у других (например, Выхухоль) по длине почти равен телу. Кожные железы хорошо выражены, у некоторых видов выделяют пахучий секрет. Сильно развит обонятельный отдел головного мозга; большие полушария невелики, часто не покрывают мозжечка. Из органов чувств наиболее развиты обоняние и осязание. 9 Семейств:- Щелезубы, Тенреки, Выдровые Землеройки (представитель – Выдровая Землеройка), Златокроты, Ежи, Прыгунчики, Землеройки, Кроты, Выхухоли (единственный Вид – Выхухоль); включают около 63 Родов (свыше 300 Видов). Иногда к Насекомоядным относят Тупай. Распространены Насекомоядные по всему земному шару, исключая Гренландию, Антарктиду, Австралию и большую часть Южной Америки. В бывшем Союзе Советских Социалистических Республик (СССР) – 4 Семейства:- Ежи, Землеройки, Кроты, Выхухоли (10 Родов, представленных 38 Видами). Встречаются повсеместно, на Севере до побережья Ледовитого Океана и прибрежных островов, в горах – до линии снегов. Насекомоядные ведут наземный (Ежи, Тенреки, Землеройки), подземный (Златокроты, Кроты) или полуводный и водный (Выдровые Землеройки, Куторы, Выхухоли) образ жизни.

Преимущественно ночные Животные. Всеядны, но предпочитают животную пищу:- беспозвоночных и мелких позвоночных Животных. Убежищем для многих служат норы, иногда очень сложные; мелкие лесные наземные Виды живут в лесной подстилке. Активны круглый год, лишь некоторые представители Семейства Ежей впадают на зиму в спячку. Размножаются до 3 раз в год, в помёте от 1 до 25 детёнышей. Ряд Насекомоядных служит объектом пушного промысла (Выхухоль, Кроты). Насекомоядные истребляют Вредных Насекомых; являются промежуточными хозяевами Клещей – переносчиков опасных болезней. Численность некоторых Видов (Щелезубы, Выхухоль) крайне низка, и они находятся под охраной. Насекомоядные известны с нижнего мела. Это самая древняя и примитивная группа Плацентарных Млекопитающих, давшая начало многим Отрядам Млекопитающих (Рукокрылым, Приматам, Грызунам, Хищным и другим). Иногда Отряд Насекомоядных делят на 3 отряда. Под Насекомоядными Растениями понимаются Многолетние Травянистые (наземные и водные) Растения, использующие мелких Насекомых как дополнительный источник питания. Около 500 Видов, во всех частях света; в бывшем СССР насчитывалось 18 Видов из Семейства Росянковых и Пузырчатковых. Ловчие органы – листья с липкими железистыми волосками, закрывающиеся при попадании насекомых, или в форме специальных ловушек. Переваривают добычу с помощью протеолитических ферментов и органических кислот. Наиболее известны Жирянка, Венерина Мухоловка, Непентес, Росянка. Насекомоядные Растения, Многолетние Травянистые Растения, улавливающие Насекомых (изредка других мелких Животных) и использующие их как дополнительный источник питания (главным образом азотистого). Насекомоядные Растения встречаются во всех частях света. Около 500 Видов из 6 Семейств, в том числе Росянковых, Пузырчатковых, Непентесовых, Саррациниевых и Цефалотовых. В бывшем Союзе Советских Социалистических Республик (СССР) около 18 Видов из 4 Родов, относящихся к 2 Семействам:- Росянковых (Росянка, Альдрованда) и Пузырчатковых (Пузырчатка, Жирянка). Насекомоядные растения обитают в воде пресных водоёмов, на заболоченных лугах и болотах, то есть на субстратах, бедных соединениями азота. Неизбежное в таких условиях азотистое голодание, а также недостаток фосфора, калия и других веществ Насекомоядные Растения восполняют за счёт Насекомых, улавливаемых ими при помощи ловчих органов – метаморфизованных листьев. На поверхности таких листьев имеются желёзки, выделяющие пищеварительные ферменты типа пепсина и органические кислоты (муравьиную, бензойную и другие). Ферменты расщепляют белки тела животного до более простых, усваиваемых Насекомоядными Растениями соединений. У наземных Насекомоядных Растений корневая система развита слабо, у водных она редуцирована, тем не менее, все они могут существовать за счёт веществ, получаемых из почвы или воды. Однако дополнительное питание животной пищей ускоряет развитие Насекомоядных Растений, переход к цветению и плодоношению. У одних Насекомоядных Растений (Росянка, Жирянка, Росолист и других) листья покрыты многочисленными головчатыми желёзками, выделяющими липкую прозрачную жидкость, привлекающую Насекомых и приклеивающую их к листу. При попадании насекомого на ловушку у растения усиливается секреция желёзок; при этом железистые волоски изгибаются по направлению к телу Насекомого (Росянка) или заворачиваются края ловчего листа, на котором оно находится (Жирянка). У других Растений ловчий аппарат представлен или пассивно улавливающими Насекомых урнами (Непентес, Саррацения, Дарлингтония и другие) или активно действующими ловушками (Дионея, Альдрованда, Пузырчатка и другие).

INSECT PARTS = ЧАСТИЦЫ НАСЕКОМЫХ (или ОРГАНЫ НАСЕКОМЫХ) – A term Insect Parts refers to pieces of Insects such as Grasshoppers and Lady Bugs that remain in the sample after cleaning or processing. Samples are analyzed for the percentage of Insect fragments and graded according to established tolerances. If pulse crops come into contact with Insects during the harvesting process, it may result in seed staining and earth adhering to the seed and may result in samples having an objectionable odor. Samples containing staining of this nature will be considered to be earth tagged and graded according to color definitions. Samples having a distinct objectionable odor not associated with the quality of the grain will be graded Type of Grain Sample Account Odor. / таких как, Саранча (Кузнечики) и Божьи Коровки, которые .

INSECT SAFE BOLLS = КОРОБОЧКИ, УСТОЙЧИВЫЕ К НАСЕКОМЫМ (или БЕЗОПАСНЫЕ В ОТНОШЕНИИ НАСЕКОМЫХ КОРОБОЧКИ) – Insect Safe Bolls (bolls tolerant to Insects):- The point in development when a boll becomes safe from Insects has been determined in caged boll tests only and is being further validated under field conditions. The endocarpal layer of the boll was rarely penetrated by Boll Weevil (Anthomonus Grandis Boheman) or third-instar Bollworm (Helicoverpa Zea Boddie) larvae after a boll had accumulated 350 DD60's. Thus, the last effective boll population is projected to be resistant to Insects as soon as 350 DD60's have accumulated from physiological cutout (nodes above white flower (NAWF) = 5).

INSECT SPOTS = ПЯТНА ОТ НАСЕКОМЫХ – Insect Spots:- Insects spots on fabric. Finishing defect. / Пятна От Насекомых на ткани. Порок или дефект заключительной отделки.

INSECT VECTORS OF RICE YELLOW MOTTLE VIRUS = НАСЕКОМЫЕ–ПЕРЕНОСЧИКИ ВИРУСА МОЗАИЧНОЙ БОЛЕЗНИ РИСА – Insect Vectors of Rice Yellow Mottle Virus (RYMV):- General Information:- (i) the Rice yellow mottle virus (RYMV) is one of the most economically damaging diseases of Rice in Africa and Madagascar. First identified in irrigated Rice fields at Otonglo, Kisumu, Kenya in 1966. (ii) RYMV is a spherical positive sense single stranded RNA (ssRNA) virus belonging to the sobemovirus group. It occurs at relatively high concentration in systemically infected plants. (iii) The virus is mechanically transmitted – gains entry into Rice plants through injuries. The possible roots of entry are:- (a) root damage during transplanting and roots intertwining in the soil, (b) weeding operations with hoes, (c) harvesting with sickle, and (d) insects; and (iv) Owing to the seriousness of the disease in limiting Rice yields in Africa, the need to understand the dynamics of virus spread and the vector's role in it became vital so that control options which would be both sustainable and accessible to the low-income farming community are well targeted. Symptoms:- (i) RYMV is characterized by pale yellow mottle leaves, stunting, reduced tillering, non-synchronous flowering, and yellowish streaking of rice leaves; (ii) malformation and incomplete emergence of panicles and sterility are observed on infected Rice Plants; (iii) some Varieties developed conspicuous bronze or orange coloration followed by rolling of leaf margins and subsequent leaf desiccation; and (iv) the symptoms could be mistaken for iron or nitrogen deficiency as well as iron toxicity damageadults (workers) that consume the roots and fill the stem. Causes of RYMV outbreaks:- (i) newly introduced Varieties from Asia which are inherently vulnerable than the traditional land races they have replaced coupled with monoculture over large acreage; (ii) the availability of irrigation water that allows Rice planting throughout the year facilitates the survival and penetration of pests and pathogens. It also leads to enhanced growth and continuity of weed hosts and seedling volunteers; (iii) outbreaks of the Insect vectors which acquire the virus from the infected Rice and weeds; (iv) increased use of fertilizer influenced the natural ecology of crops in favor of pest population build up and increase in the incidence of the virus; (v) wide range and non-synchronous planting dates increases the risks of RYMV outbreaks; and (vi) rapidly increasingly international transfer of germplasm without adequate adaptive testing may also contribute to the spread of the virus. Control:- (i) the control of the Insect vectors using biopesticides; (ii) early transplanting before the outbreak of Trichispa Sericea, with reduction in spacing of Plants; (iii) destruction of Rice residues after harvest and ratoons that harbour the virus and insect vectors; (iv) synchronous planting; (v) diversification of Varieties on a single plot; (vi) change of site for nurseries; (vii) early transplanting before the outbreak of Trichispa Sericea, with reduction in spacing of plants; (viii) rouging of infected plants and immediate replanting; (ix) reduction of fertilizer application (e.g., urea) on attacked plots; (x) early and double weeding to reduce the weed reservoir of the virus

and Insect vectors; and (xi) withholding irrigation water between plantings to provide a Rice-free period and so restrict the build-up of the virus infection and insect population. / Под Мозаичными Болезнями растений понимаются болезни, вызываемые вирусами. Вредоносны мозаики Капусты, Огурца, Свёклы, Табака, Томата и других. На листьях и плодах зелёные пятна различной интенсивности, формы и величины.

INSECURE BACKSTITCHING = НЕНАДЁЖНАЯ СПЛОШНАЯ СТРОЧКА – Insecure Backstitching:- original stitch row not covered with second seam. Sewing Room Defects. / втачивание (stitching). Порок или дефект швейного производства.

INSFFER = INTERNATIONAL NETWORK ON SOIL FERTILITY AND FERTILIZER EVALUATION FOR RICE

INSIDE DAY = ДЕНЬ ВНУТРИ (или ДЕНЬ СТАБИЛИЗАЦИИ) – Inside Day:- the day's trading range is contained inside that of the previous day, i.e. a higher low and a lower high. Inside Day is a day in which price stays inside the range of the price of the previous day. / В техническом анализе биржевых рынков, ситуация, при которой диапазон торговли данного дня находится внутри диапазона предыдущего дня, то есть высший уровень цены ниже и низший уровень цены выше. День, когда диапазон изменения цены остаётся внутри диапазона изменения цены в предыдущий день.

INSIDE INFORMATION = ИНФОРМАЦИЯ ДЛЯ СЛУЖЕБНОГО ПОЛЬЗОВАНИЯ (или ИНСАЙДЕРСКАЯ ИНФОРМАЦИЯ) – For example in Germany, according to §13 of the Securities Trading Act (Wertpapierhandelsgesetz (WpHG)), Inside Information is concrete knowledge pertaining to (1) circumstances which have not been made public, relating to (2) one or more issuers of insider securities, or to insider securities themselves, which (3) if it were made public, would be likely to have a significant impact on the price of the insider security. Examples of such events are major incoming orders, company mergers, an unexpected fall in profits, a research breakthrough and the like, provided these developments have not been made public. / Информация для Служебного Пользования – состояние дел компании, не получившее ещё открытой огласки. Например, ответственные работники компании знают о том, что состоится поглощение их компании, или о том, что последний отчёт о доходах будет значительно отличаться от ранее сообщавшейся информации. В соответствии с правилами Комиссии по Ценным Бумагам и Биржам (Securities and Exchange Commission (SEC)) лицо, имеющее доступ к закрытой информации – инсайдер (insider), не имеет права осуществлять торговые операции на её основе.

INSIDE–MOUNTED SEAL = УСТАНОВЛЕННОЕ ИЗНУТРИ УПЛОТНЕНИЕ – Inside-Mounted Seal is a mechanical seal located inside the seal chamber with the pumped product's pressure at its outside diameter (OD). See also Seal.

INSIDER = ПОСВЯЩЁННЫЙ (или ПОСВЯЩЁННОЕ ЛИЦО, или ИНСАЙДЕР) – In general usage an Insider is anyone who has access to information not yet available to others. An insider is also someone who is aware – ahead of the great majority of current or potential shareholders – of company developments which could have a considerable impact on the price of the securities involved. Attempts to gain unfair advantages by trading on the basis of inside information are subject to prosecution. In Germany, pursuant to § 14 of the Securities Trading Act, insiders are prohibited from (i) taking advantage of their knowledge of inside information to acquire or dispose of insider securities for their own account, or for the account or on behalf of a third party; (ii) disclosing or making available inside information to a third party without authority to do so; (iii) recommending or persuading a third party to acquire or dispose of insider securities. Criminal proceedings may be instituted against insiders who act in violation of these regulations. The Federal Financial Supervisory Authority (BaFin) is responsible for tracing and prosecuting insider trades prohibited by § 14 of the Securities Trading Act. Insiders are those people who are directors or senior officers or individuals who hold more than a 10% voting interest in the company. If these people buy or sell shares (publicly or privately) in their company, they are doing what is referred to as Insider Trading. Insider is a person party to confidential information on the strength of his or her professional position. Normally used in connection with information which when made public is likely to have a significant influence on the price of securities. See also Insider Transactions. / БаФин (BaFin). Инсайдер – лицо, имеющее доступ к закрытой информации. Лицо, имеющее доступ к ключевой информации до того, как она будет сообщена публично. Обычно этим словом обозначают директоров и ответственных работников компании, но с юридической точки зрения это определение было расширено за счёт включения родственников и иных лиц, которые могут получить прибыль от использования внутренней (конфиденциальной) информации о компании (inside information). Лица, имеющие доступ к такой информации, не имеют права осуществлять торговые операции для того, чтобы получать прибыль на её основе.

INSIDE RANGE BAR = ШТРИХ ВНУТРИ ДИАПАЗОНА – Inside Range Bar is a price bar on a chart where the high is less than the previous bar's high, and the low is greater than the previous bar's low. Normally considered both a consolidation and continuation pattern. Observe any world-class sprinter in training. He will speed down a track in obsessive pursuit of a faster time but occasionally will break and rest before resuming his charge. Often, its during these pauses that the athlete recovers his physical stamina for a perfectly timed surge designed to deliver a superior finish. In trading, price behaves similarly, moving from periods of expansion and trends to periods of contraction and stability. During these pauses, opportunity can be found. It's here that traders can identify low-risk entries using a particular price pattern that marks both reversal points and continuation moves. Inside bar patterns refer to times when the high of a price bar is lower than the previous bar's high and the low of a price bar is higher than the previous bar's low. Inside bars reflect reduced volatility in the commodity or stock and identify periods of contraction. Such periods are common when a price has experienced a sustained trend, followed by a shorter-term reversal, but they can occur at any time. Inside bars can be found on any time frame, and often the pattern precedes a significant price move. Inside bars reveal price points where the ascent or descent of price action is in question. Traders participating in the stock's trend are at an impasse, and that indecision results in a lack of movement until the bulls or bears assert themselves and take control of the trend (see 'Inside Apple', right). Multiple inside price bars are a phenomenon that occurs when neither side of the market takes control for subsequent trading sessions. Price meanders with no conviction, typically after a strong run up or decline. Similar to a widely accepted tenet of channel trading, the longer the sideways action, the stronger the expected break in price once that break occurs. Although the application of inside price bars seems simple, there are some key distinctions that traders must keep in mind to use this method effectively. Picking Your Shots:- depending on the context of the market, inside bars can be used to confirm price trends or to fade support and resistance. For example, a common challenge of breakout trading is that the moves are so explosive they can catch traders unaware, and by the time the trend is clear, a reasonable entry point is history. Inside bars, however, can clue you into the potential move at a more opportune moment. Once price begins to pull back, any inside bar formed during the brief lull will provide a compelling entry point. A buy entry over the high of the inside bar in a bullish market or a sell entry below the low of the inside bar for a bearish market are reliable entries in the presence of strong price trends (see 'Buying the dips', right). Trading bounces off support and resistance levels is one of the most reliable and well-known technical trading methods. The reason this approach works is that price zones are defined clearly, and they offer high-probability trades. Inside bars are an excellent supplemental indicator, adding evidence to the likelihood that support or resistance will hold, allowing a low-risk entry. Once an inside bar occurs at a support or resistance level, place an entry order above or below the formation with the expectation that the price level will bounce accordingly. When the pattern forms in either price zone, it is further confirmation that a short-term reversal is imminent. An entry at the upper level of an inside bar off support is one of the most reliable

and simple bullish technical trades you can make – and the opposite is true for bearish trades off resistance. Sushi Roll:- inside price bars can be used alone as a reliable method of anticipating trends or confirming support and resistance in the market, but they also can be used in combinations to identify key trading opportunities. One important characteristic of inside bars is that they reflect lower volatility, typically following strong price movement. This could have a number of causes. New information may have been introduced to the market that impacts current prospects or future price expectations. This sentiment could spread, and the former zeal behind the earlier move could wane. However, often that zeal rests just below the surface, and it doesn't take much to kickstart a new surge in price and volatility. This can happen all at once or over the course of several days. In either case, inside bar patterns can clue you in to pending opportunity. One of these patterns is known as the Sushi Roll. This is a multiple-period formation consisting of 10 bars where the first five are inside bars, falling within a narrow range of highs and lows, and the next five are outside bars that contain the first five. The name of the pattern was coined by Mark Fisher, trader and author of the book 'The Logical Trader'. The major benefit of this pattern is that it signals a potential price reversal much sooner than chart patterns such as a double bottom or head-and-shoulders formation. Plus, it's applicable to any time frame, so it can be customized depending on your own trading preference. To that end, it is important to note that the 10-price-bar rule is not set in stone. What is important is the underlying principle that any price range that trades in a small range followed by expanding price action makes a strong case for a price reversal. This knowledge alone can help you avoid unnecessary losses by tightening up your stops, taking profits or exiting the trade altogether. The strategy can be adopted for larger time frames by conservative traders simply by increasing the number of days to watch for market reversals. Increasing the day range to as many as 20, for example, can help you avoid false moves compared to using the 10-day pattern. While you sacrifice getting into a market reversal earlier and lose some of the early profit potential, the trade-off is that you can catch trends that have the potential of lasting for years. Inside Game:- just as the pause between musical notes makes structured music possible and pleasing, market forces are a symphony of buying and selling, with pauses and accelerations giving trends their character and providing the potential for profit. Inside price action offers a skilled trader the opportunity to recognize when the tide is shifting, providing a relatively lowrisk entry or exit. Look for patterns of this type of price action during strong trends or periods of contraction for effective trade setups. This method is effective especially when trades follow the tone of the general market – buying when major indexes are rising and selling when major indexes are falling. / Эпэл (Apple). Марк Фишё (Mark Fisher). Сущи Рол (Sushi Roll). В техническом анализе биржевых рынков, ценовой штрих на графике, у которого максимум ниже максимума предудыщего штриха, а минимум – выше минимума предыдущего штриха. Обычно это рассматривается и как модель консолидации и как модель продолжения.

INSIDER DEALING = СОВЕРШЕНИЕ СДЕЛОК С ИСПОЛЬЗОВАНИЕМ СЛУЖЕБНОЙ ИНФОРМАЦИИ – In the United Kingdom, Insider Dealing is the purchase or sale of securities by someone who possesses 'inside' information affecting securities which has not yet been made available to the market and which, if made available, would significantly affect the share price. In the United Kingdom such deals are a criminal offence. / Информацией Ограниченного Доступа является информация представляющая ценность для её владельца, доступ к которой ограничивается на законном основании. В свою очередь информация ограниченного доступа подразделяется на информацию составляющию государственную тайну и информацию, соблюдение конфиденциальности которой установлено законом (конфиденциальная информация).

INSIDER TRADING = ТОРГОВЛЯ С ИСПОЛЬЗОВАНИЕМ СЛУЖЕБНОЙ ИНФОРМАЦИИ (или ТОРГОВЛЯ С ИСПОЛЬЗОВАНИЕМ СЛУЖЕБНОЙ ИНФОРМАЦИИ, или ИНСАЙДЕРСКАЯ ТОРГОВЛЯ) – Insider Trading is the trading (buying or selling) of shares in a company by an insider, i.e. a senior manager, director, or person who owns more than 10% of the shares of a company. Insider trading is not illegal. But, if insiders trade on material privileged information – before it becomes known to the general public – that is a problem! This is perfectly legal except when trading takes place using privileged information which has not yet been released to the public. We often hear of insiders selling stock if they know that a weak earnings report is about to be issued. All insiders must report their trading regularly to the appropriate securities commission. This information is available on-line to the public. If you are about to invest in a company, you might want to find out if insiders are buying or selling. It may give you an indication of their own confidence level in the company.

INSIDER TRANSACTIONS = ТРАНЗАКЦИИ С ИСПОЛЬЗОВАНИЕМ СЛУЖЕБНОЙ ИНФОРМАЦИИ (или ОПЕРАЦИИ С ИСПОЛЬЗОВАНИЕМ СЛУЖЕБНОЙ ИНФОРМАЦИИ) – In Switzerland, Insider Transactions are the transactions designed to secure a pecuniary advantage by improperly exploiting an information lead. According to Penal Code Article 161 introduced in 1988, insider transactions are punishable offences under Swiss law. Any insider obtaining a pecuniary advantage for himself or a third party by exploiting confidential information relevant to the price of a stock shall be liable to punishment. It is also a punishable offence for persons (even if they are non-insiders) to receive and make use of insider information.

IN SIGHT = В ПОЛЕ ЗРЕНИЯ – In Sight:- the amount of a particular commodity that arrives at terminal or central locations in or near producing areas. When a commodity is 'in sight', it is inferred that reasonably prompt delivery can be made; the quantity and quality also become known factors rather than estimates. / Объём конкретного сырья, который прибывает на терминал или центральное местоположение или близ производственных областей. Когда о сырье говорят, что оно находится 'в поле зрения', то это значит, что оно резонно может быть поставлено покупателю или заказчику без какого-либо промедления; кроме того, это значит, что количество и качество также становятся известными, а не предполагаемыми параметрами.

IN SITU = ИН СИТУ (или НА МЕСТЕ) – In Situ:- Latin:- meaning, in the natural or original location, position or place. In Situ is a Latin phrase which translated literally as 'In position'. It is used in many different contexts. In biology, In Situ means to examine the phenomenon exactly in place where it occurs, i.e. without moving it to some special medium.

IN SITU HYBRIDIZATION = ГИБРИДИЗАЦИЯ ИН СИТУ (или ГИБРИДИЗАЦИЯ НА МЕСТЕ) – In Situ Hybridization is a technique used for hybridization of cytological (chromosome) preparations with the labeled DNA probes. The method couples molecular biology, biochemistry, and cytology. Usually the expression of a gene (as RNA) or the location of target DNA (for example, in a chromosome) is detected by a molecular probe. The probe can be labeled by a variety of biochemical methods. / Под Гибридизацией, от Латинского слова Hibrida, означающее Помесь, понимается скрещивание разнородных в наследственном отношении организмов. Один из важнейших факторов эволюции биологических форм в природе. Применяют для получения хозяйственных ценных форм Животных и Растений. Скрещивание особей одного и того же Вида (различных Подвидов, Сортов, пород или линий) называется внутривидовой гибридизацией, а различных Видов или Родов – отдалённой гибридизацией.

INSOLUBLES = НЕРАСТВОРИМЫЕ ВЕЩЕСТВА – Insolubles are the particles of carbon or agglomerates of carbon and other material. Indicates deposition or dispersant drop-out in an engine. Not serious in a compressor or gearbox unless there has been a rapid increase in these particles. / в компрессоре или коробке передач .

INSOLVENCY = НЕПЛАТЁЖЕСПОСОБНОСТЬ – Insolvency is a state in which total liabilities (excluding equity capital) exceed total assets; therefore, it is the inability to pay debts when called upon to do so. If insolvency is chronic, bankruptcy or liquidation generally follow. The inability to pay debts as and when they become due and payable. Inability of an individual or entity to pay its debts as they come due. According to the US Bankruptcy Act, a person is insolvent if the total fair market value of his or her property is insufficient to

pay his or her debts. The opposite of Solvency. See also Bankruptcy. Insolvency is the sustained inability of a debtor to repay his debt when due. In microeconomic terms, insolvency almost always results in the collapse of the debtor's business enterprise. / Под Неплатёжеспособностью понимается финансовое положение хозяйствующего субъекта, при котором он систематически допускает неплатежи поставщикам, банкам. Неплатёжеспособность – неспособность в установленный срок оплатить свои задолженности.

INSOLVENT = НЕПЛАТЁЖЕСПОСОБНЫЙ – Insolvent:- when an entity's liabilities exceed its assets. Insolvent:- when a business cannot meet its financial obligations (i.e. pay its bills and debts), it is said to be insolvent. The state of insolvency. Unable to pay one's debts as they become due. The opposite of Solvent.

INSOTEC = INSTITUTO DE INVESTIGACIONES SOCIO–ECONÓMICAS Y TECNOLÓGICAS

INSPECTION = ИНСПЕКЦИЯ (или ОСМОТР) – (1) In the US Cotton industry, an Inspection is the process of weighing, sampling, and inspecting physical Cotton being submitted for classing. Inspection is done under the supervision of the New York exchange or its designated agency. / Под Инспекцией, от Латинского слова Inspectio, означающее Осмотр, понимается . Действия, такие как измерение, обследование, испытание и калибровка одного или нескольких показателей продукции или услуги и сравнение с установленными требованиями для определения соответствия.

(2) Inspection is the process of examining textiles for defects at any stage of manufacturing and finishing. Inspection is the process of identifying and mending the fabric defects. It is visual examination of fabric. Reasons why inspection is carried out:- (i) to remove defects; (ii) to minimize the future reoccurrences of the defect; (iii) to determine quality and hence the price of the fabric; and (iv) to supply information to proper levels of management as to the qualities being produced. Different Grading systems:- (i) point systems; (ii) Graniteville system; and (iii) Dallas system. See also Defect. / Смотрите также Порок или Дефект (Defect).

(3) Inspection is an official visual examination of plants, plant products or other regulated articles to determine if pests are present and/or to determine compliance with phytosanitary regulations.

INSPECTION CERTIFICATE = СВИДЕТЕЛЬСТВО ОБ ОСМОТРЕ (или СЕРТИФИКАТ ИНСПЕКЦИИ) – (1) Inspection Certificate is a certificate issued by an independent agent or firm attesting to the quality and/or quantity of the merchandise being shipped. Such a certificate is usually required in a letter of credit for commodity shipments.

(2) Inspection Certificates:- cooperating agencies such as Federal Grain Inspection Service (FGIS) perform export inspections for specified commodities and issue certificates that may be accepted by USDA-APHIS-PPQ (United States Department of Agriculture – Animal and Plant Health Inspection Service – Plant Protection and Quarantine) in place of inspection. These certificates are based on officially drawn samples and export inspections conducted by designed Federal Grain Inspection Service (FGIS) personnel. While not all certificates are accepted by PPQ in place of inspection, a list of acceptable inspection certificates issued by FGIS and other agencies.

INSPECTION CERTIFICATION = СВИДЕТЕЛЬСТВОВАНИЕ ОСМОТРА (или СВИДЕТЕЛЬСТВО О ПРОВЕДЕНИИ ОСМОТРА) – Inspection Certification:- some purchasers and countries may require a certificate of inspection attesting to the specifications of the goods shipped, usually performed by a third party. Inspection certificates are often obtained from independent testing organizations.

INSPECTOR = ОСМОТРЩИК (или ИНСПЕКТОР) – Inspector is a person authorized by a National Plant Protection Organization to discharge its functions.

INSPECTOR GENERAL = ГЕНЕРАЛЬНЫЙ ОСМОТРЩИК (или ГЕНЕРАЛЬНЫЙ ИНСПЕКТОР) – In the US patent law, Inspector General (IG):- 57 statutory Offices of Inspector General (OIGs) were created by an act of Congress in 1978 to independently detect fraud or instances of waste, abuse or misuse of federal funds and identify operational deficiencies within each of the Departments.

INSTALLED CAPACITY = XX (или УСТАНОВЛЕННАЯ ЁМКОСТЬ) – Installed Capacity:- system total installed capacity measures the sum of the installed capacity (in installed, not unforced, terms) from all internal and qualified external resources designated as PJM (PJM Interconnection LLC (Pennsylvania New Jersey Maryland Interconnection LLC) capacity resources. See also Unforced Capacity. / Пи.Дьжей.Эм. Интёконэкшэн Эл.Эл.Си. (PJM Interconnection LLC или Пэнсэлвэйниэ Ню Дьжози Мэрилэнд Интёконэкшэн Эл.Эл.Си. (Pennsylvania New Jersey Maryland Interconnection LLC)).

INSTALLED CAPACITY/UNFORCED CAPACITY = XX – Installed Capacity/Unforced Capacity (ICAP/UCAP):- Installed Capacity (ICAP) refers to the maximum amount of electricity a generator is designed to produce, or what is sometimes referred to as the boilerplate (or nameplate) rating, and is usually expressed in MegaWatts (MW). However, despite this rating, power plants are usually not able to produce this maximum output 100% of the time. Unforced Capacity (UCAP) refers to the average amount of electricity that is actually available at any given time after discounting the time that the facility is unavailable due to outages or deratings. For example, if a generating facility has an ICAP rating of 100 MWs, but ambient conditions only allow the generator to produce 90 MW, the UCAP rating would be 90 MW. Likewise, if the same generator with an ICAP rating of 100 MW can actually produce 100 MW of electrical output, but is shut down 10% of the time due to repairs, its UCAP rating would also be 90 MWs. Power plants that generate an amount of electricity close to their ICAP rating are said to have a high capacity factor. Regional regulatory authorities determine how much total capacity is needed for system reliability purposes. The total amount of capacity required is allotted among customers based on their individual peak demands, which gives each individual customer a specific capacity requirement. Why does this matter? The cost of capacity is ultimately born by the customer, and becomes a component of their electric rate. A customer's capacity requirement is based on their PLC (Peak Load Contribution), so by managing their energy use during periods of peak demand, a customer can, to some degree, control their capacity cost, and, in turn, their overall rate.

INSTALLMENT CREDIT = КРЕДИТ В РАССРОЧКУ – Installment Credit is a loan, extended by financial institution or retail firms, to be repaid along with interest charge in fixed periodic payments or, if variable rate of interest is charged, to be repaid in amounts that vary with the interest charged. Purchasing consumer goods and paying for them in partial payments, or installments, spread out over a period of time. Installment credit enables buyers to use the goods before they are paid for and sellers to charge more for them, since they collect interest on the unpaid balance. Installment credit is often financed by a credit institution that pays the seller for the purchase and collects the installments from the buyer, charging the seller a fee for this service and charging the buyer interest on unpaid balances.

INSTALLMENT LETTER OF CREDIT = АККРЕДИТИВ В РАССРОЧКУ (или АККРЕДИТИВ ЧАСТЯМИ) – Installment Letter Of Credit (LC) is the LC calling for multiple shipments within specified date ranges. / Аккредитив, предполагающий многочисленные отгрузки в рамках определённого графика.

INSTALLMENT LOAN = ССУДА В РАССРОЧКУ – Installment Loan is a loan paid back in several (monthly) instalments over a specified period of time. Also known as Hire Purchase Loan in the United Kingdom. / В Соединённом Королевстве известен как Ссуда На Аренду С Выкупом (Hire Purchase Loan).

INSTALLMENT PLAN = ПЛАН РАССРОЧКИ – Installment Plan is a plan requiring a borrower to make payments at specified intervals over the life of a loan. / План Рассрочки – это план, требующий от заёмщика производить платежи по прошествии очередного временного интервала в течение всего периода заимствования.

INSTALLMENT SHIPMENTS = ОТГРУЗКИ ЧАСТЯМИ – Installment Shipments:- successive shipments are permitted under letters of credit. Usually they must take place within a given period of time.

INSTALMENT WARRANTS = ВАРРАНТЫ В РАССРОЧКУ – Instalment Warrants give holders the right to buy the underlying shares or instrument by payment of several instalments (usually two) during the life of the warrant. The Final payment is usually between 40% and 60% of the price of the underlying instarument at the time of issue. Instalment warrants are often covered warrants with the underlying asset being held in trust/custody for the benefit of the holder. A common feature of instalment warrants is that the holder is entitled to any dividends or distributions and possibly franking credits paid by the underlying asset during the life of the warrant. An interest component is usually part of the payments due. There are different types of instalments. See also High Yield Instalments, or Hot Instalments, and Rolling Instalments.

INSTANT RICE = МГНОВЕННЫЙ РИС – Instant Rice or Quick Cooking Rice is Rice that has been precooked and then dried so that the consumers can recook the Rice in a short period of time. Kraft General Food's 'Minute Rice' is instant rice. Regular white rice takes about 15 minutes to cook. Parboil Rice takes about 18 minutes to cook. Instant Rice can be ready in a little as 3 minutes. Cooking Rice involves getting moisture to the center of the kernel then getting that moisture to a temperature of over about 160 °F to gelatinize the starch. Raw starch in uncooked Rice is tightly compacted and so it takes about 15 minutes for boiling hot water to migrate to the center of the kernel. There are several processes to make instant Rice, but the one most commonly used starts much like the home cooking process. Rice is blanched in hot water, steamed, and then rinsed. Then the Rice is then dried in a hot oven drier. The degree of cooking and degree of puffing in the drier determine the final cook time for the instant Rice. When the Rice is cooked again by the consumer, the water migrates faster through the kernel because the starch has been gelatinized and there are many small cracks and fissures in the kernel. Quality of the final cooked Rice is affected by the instantizing process. The faster the Rice cooks, the lower the quality. Instant Rice that cooks in 10 minutes is very close to the real thing. Instant Rice that cooks in 5 minutes has a much poorer texture that Rice cooked in a home Rice cooker. Rice that is ready in hot water (like cup of noodles) is very mushy. All companies involved are trying to improve the process, but it is impossible to make a dry instant Rice that cooks in under five minutes that is equal in quality to Rice cooked in the home in a Rice cooker. Most companies that manufacture instant Rice sell the Rice to the consumer though grocery stores.

INSTAR = (ПРОМЕЖУТОЧНАЯ) ВОЗРАСТНАЯ СТАДИЯ – Instar is the stage of an insect between successive molts, the first instar being the stage between hatching and the first molt. Instar is a stage of nymph (e.g., stink bug) or larva (e.g., bollworm) between molts. An Instar is a developmental stage of arthropods, such as insects, between each moult (ecdysis), until sexual maturity is reached. Arthropods must shed the exoskeleton in order to grow or assume a new form. Differences between instars can often be seen in altered body proportions or changes in the number of body segments. Some arthropods can continue to molt after sexual maturity, but these subsequent molts are generally not called instars. For most insect species the term Instar is used to denote the developmental stage of the larval or nymphal forms of holometabolous (complete metamorphism) or hemimetabolous (incomplete metamorphism) insects, but the term can be used to describe any developmental stage including pupa or imago (the adult, which does not molt in insects). The number of instars an insect completes depends on the species and the environmental conditions. Cooler temperatures and lower humidity often slow the rate of development. Nonetheless, there seem to be some limits, and it is rare for an insect to pass through any fewer than 4 total larval instars before reaching maturity. The stage of an insect between successive moults. / Промежуточная стадия развития Насекомого между последовательными линьками. , например, . Виды (Species).

INSTEX = INSTRUMENT IN SUPPORT OF TRADE EXCHANGES

INSTINET = INSTITUTIONAL NETWORKS CORPORATION

INSTITUTE CARGO CLAUSES = ИНСТИТУТСКИЕ ОГОВОРКИ О ГРУЗЕ (или ОГОВОРКИ ИНСТИТУТА О ГРУЗЕ) – Institute Cargo Clauses is a set of terms for cargo insurance policies voluntarily adopted as standard terms by many international marine insurance organizations, including the Institute Of London Underwriters and the American Institute Of Marine Underwriters. Widest insurance cover is provided under 'Institute Cargo Clause A', a more restrictive cover under 'Institute Cargo Clause B', and the most restrictive cover under 'Institute Cargo Clause C'. These clauses have replaced the older 'All Risks', 'With Average', and 'Free Of Particular Average' clauses. Also called American Institute Cargo Clauses. Institute Cargo Clauses:- standard insurance conditions, published by the Institute of London Underwriters, for policies covering goods in transit overseas. Treaty wordings developed by the International Chamber of Commerce. There are three basic sets of these clauses (A, B and C). The A clauses cover All Risks, subject to specified exclusions. The B and C clauses cover specified risks, subject to specified exclusions. / Стандартные условия страхования, публикуемые Институтом Лондонских Расписчиков (Андеррайтеров), для полисов, покрывающих товары в транзите за границей.

INSTITUTE CLAUSE = ИНСТИТУТСКАЯ ОГОВОРКА (или ОГОВОРКА ИНСТИТУТА) – Institute Clause is a standard clause published by the Institute of London Underwriters. / Стандартная оговорка, публикуемая Институтом Лондонских Расписчиков (Андеррайтеров).

INSTITUTE OF ELECTRICAL AND ELECTRONICS ENGINEERS = ИНСТИТУТ ИНЖЕНЕРОВ В СФЕРЕ ЭЛЕКТРИЧЕСТВА И ЭЛЕКТРОНИКИ (или ИНСТИТУТ ИНЖЕНЕРОВ ЭЛЕКТРИКОВ И ЭЛЕКТРОНЩИКОВ) – The Institute of Electrical and Electronics Engineers (IEEE) is the world's largest professional association dedicated to advancing technological innovation and excellence for the benefit of humanity. IEEE and its members inspire a global community through IEEE's highly cited publications, conferences, technology standards, and professional and educational activities. IEEE, pronounced 'Eye-triple-E', stands for the Institute of Electrical and Electronics Engineers. The association is chartered under this name and it is the full legal name. IEEE's core purpose is to foster technological innovation and excellence for the benefit of humanity. IEEE will be essential to the global technical community and to technical professionals everywhere, and be universally recognized for the contributions of technology and of technical professionals in improving global conditions. The IEEE is engaged in an enterprise-wide strategic planning process. IEEE creates an environment where members collaborate on world-changing technologies – from computing and sustainable energy systems, to aerospace, communications, robotics, healthcare, and more. The strategic plan of IEEE is driven by an envisioned future that realizes the full potential of the role IEEE plays in advancing technology for humanity. The IEEE Brand Identity Toolkit explains the basic usage rules for all corporate identity elements and how to utilize them to create a powerful and consistent communications pieces. IEEE is led by a

diverse body of elected and appointed volunteer members. The governance structure includes boards for operational areas as well as bodies representing members in the 45 Societies and technical Councils and ten worldwide geographic regions. For over a century, the IEEE has sponsored various programs to honor achievements in education, industry, research, and service. These awards and recognitions each have a unique mission and criteria, and offer the opportunity to praise distinguished colleagues, dedicated teachers, and corporate leaders who have made a lasting impact on humanity, technology, and the profession. The Institute of Electrical and Electronics Engineers (IEEE) is an independent organization which develops electrical standards and furthers the profession of electrical and electronics engineers. It is a non-profit organization, IEEE is the world's largest professional association for the advancement of technology. Headquartered in Piscataway Township, State of New Jersey, the United States of America. IEEE, an association dedicated to advancing innovation and technological excellence for the benefit of humanity, is the world's largest technical professional society. It is designed to serve professionals involved in all aspects of the electrical, electronic and computing fields and related areas of science and technology that underlie modern civilization. IEEE's roots, however, go back to 1884 when electricity was just beginning to become a major force in society. There was one major established electrical industry, the telegraph, which – beginning in the 1840s – had come to connect the world with a communications system faster than the speed of transportation. A second major area had only barely gotten underway – electric power and light, originating in Thomas Edison's inventions and his pioneering Pearl Street Station in New York. IEEE, pronounced 'Eye-triple-E', stands for the Institute of Electrical and Electronics Engineers. The association is chartered under this name and it is the full legal name. However, as the world's largest technical professional association, IEEE's membership has long been composed of engineers, scientists, and allied professionals. These include computer scientists, software developers, information technology professionals, physicists, medical doctors, and many others in addition to our electrical and electronics engineering core. For this reason the organization no longer goes by the full name, except on legal business documents, and is referred to simply as IEEE. Foundation of the AIEE:- in the spring of 1884, a small group of individuals in the electrical professions met in New York. They formed a new organization to support professionals in their nascent field and to aid them in their efforts to apply innovation for the betterment of humanity – the American Institute of Electrical Engineers, or AIEE for short. That October the AIEE held its first technical meeting in Philadelphia, PA. Many early leaders, such as founding President Norvin Green of Western Union, came from telegraphy. Others, such as Thomas Edison, came from power, while Alexander Graham Bell represented the newer telephone industry. As electric power spread rapidly across the land – enhanced by innovations such as Nikola Tesla's AC Induction Motor, long distance AC transmission and large-scale power plants, and commercialized by industries such as Westinghouse and General Electric – the AIEE became increasingly focused on electrical power and its ability to change people's lives through the unprecedented products and services it could deliver. There was a secondary focus on wired communication, both the telegraph and the telephone. Through technical meetings, publications, and promotion of standards, the AIEE led the growth of the electrical engineering profession, while through local sections and student branches, it brought its benefits to engineers in widespread places. Foundation of the IRE:- a new industry arose beginning with Guglielmo Marconi's wireless telegraphy experiments at the turn of the century. What was originally called 'Wireless' became radio with the electrical amplification possibilities inherent in the vacuum tubes which evolved from John Fleming's diode and Lee de Forest's triode. With the new industry came a new society in 1912, the Institute of Radio Engineers. The IRE was modeled on the AIEE, but was devoted to radio, and then increasingly to electronics. It, too, furthered its profession by linking its members through publications, standards and conferences, and encouraging them to advance their industries by promoting innovation and excellence in the emerging new products and services. The Societies converge and merge:- through the help of leadership from the two societies, and with the applications of its members' innovations to industry, electricity wove its way – decade by decade – more deeply into every corner of life – television, radar, transistors, computers. Increasingly, the interests of the societies overlapped. Membership in both societies grew, but beginning in the 1940s, the IRE grew faster and in 1957 became the larger group. On 01 January 1963, The AIEE and the IRE merged to form the Institute of Electrical and Electronics Engineers, or IEEE. At its formation, the IEEE had 150 000 members, 140 000 of whom were in the United States. Growth and globalization:- over the decades that followed, with IEEE's continued leadership, the societal roles of the technologies under its aegis continued to spread across the world, and reach into more and more areas of people's lives. The professional groups and technical boards of the predecessor institutions evolved into IEEE Societies. By the early XXI century, IEEE served its members and their interests with 38 societies; 130 journals, transactions and magazines; more 300 conferences annually; and 900 active standards. Since that time, computers evolved from massive mainframes to desktop appliances to portable devices, all part of a global network connected by satellites and then by fiber optics. IEEE's fields of interest expanded well beyond electrical/electronic engineering and computing into areas such as micro- and nanotechnology, ultrasonics, bioengineering, robotics, electronic materials, and many others. Electronics became ubiquitous – from jet cockpits to industrial robots to medical imaging. As technologies and the industries that developed them increasingly transcended national boundaries, IEEE kept pace, becoming a truly global institution which used the innovations of the practitioners it represented in order to enhance its own excellence in delivering products and services to members, industries, and the public at large. Publications and educational programs were delivered online, as were member services such as renewal and elections. By 2010, IEEE had over 395 000 members in 160 countries. Through its worldwide network of geographical units, publications, web services, and conferences, IEEE remains the world's largest technical professional association. The Institute of Electrical and Electronics Engineers (IEEE) is the world's largest technical professional society. Founded in 1884 by a handful of practitioners of the new electrical engineering discipline, today's Institute is comprised of more than 395 000 members who conduct and participate in its activities in 160 countries. The men and women of the IEEE are the technical and scientific professionals making the revolutionary engineering advances which are reshaping our world today. / коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Президент Норвин Грин (Norvin Green) из Вэстён Юниэн (Western Union), пришёл из телеграфии. INSTITUTE OF LONDON UNDERWRITERS = ИНСТИТУТ ЛОНДОНСКИХ РАСПИСЧИКОВ (или ИНСТИТУТ ЛОНДОНСКИХ АНДЕРРАЙТЕРОВ) – Institute Of London Underwriters (ILU) is an organization representing the interests of member insurance companies. Although the majority of members are British companies, membership is available, at the discretion of the Institute of London Underwriters (ILU), to foreign companies. The Institute maintains a close liaison with Lloyd's marine market, and provides facilities for a number of joint committees to operate. In the XIX century, Lloyd's and the Institute of London Underwriters (a grouping of London company insurers) developed between them standardized clauses for the use of marine insurance, and these have been maintained since. These are known as the Institute Clauses because the Institute covered the cost of their publication. Within the overall guidance of the Marine Insurance Act and the Institute Clauses parties retain a considerable freedom to contract between themselves. Institute of London Underwriters is a group of insurance companies in the United Kingdom that pool risk for marine and air insurance. It draws up standardized contracts for members and settles claims. While the Institute is not part of Lloyd's, the two organizations work together for common goals. It was established in the late XIX century. Institute of London Underwriters is an organization of British insurance companies that work with each other to provide marine and aviation insurance. The Institute of London

Underwriters also works closely with Lloyds of London. Institute Of London Underwriters (ILU) is an association of UK insurance companies that cooperate with each other in providing a market for marine insurance and aviation insurance. Although Lloyd's underwriters are not members of the institute, the two organizations work closely with each other. The ILU appoints agents to settle claims, provides certificates of insurance for cargo shippers insured by members, and is responsible for drawing up its own insurance contracts for the use of members; it also draws up the Institute cargo clauses widely used in many marine and aviation policies. Institute of London Underwriters is a trade association of insurance companies that writes transportation, aviation, and marine insurance. The association began operation in the 1880s and it suggests standard clauses to be incorporated in policies written by the underwriters in London. The Institute of London Underwriters (ILU) was established in 1884 as the trade association for insurance companies transacting marine, aviation, and transport business in the London market. Although comparable in some respects to other representative market bodies, it differed from many of these in that it was concerned with the day-to-day business of the market as well as matters of policy. The governing body of the Institute was the Committee of fifteen, elected from among the nominated representatives of its member companies. The Committee in turn elected a Chairman and Deputy Chairman, both normally serving for two years. The Institute was at first simply an association of underwriters working in the London market. It stemmed from informal meetings of London underwriters to discuss mutual problems. The underwriters recognised that more formal association would be helpful in many ways, such as providing an official channel for talks with governments, shipowners or even other insurers. From the earliest days, the Institute took a dominant role in trying to improve a variety of clauses in general use. Until the Second World War, the Institute remained a small secretariat concerned with promoting its members' interests in general rather than providing services to help process their business. However, the shortage of civilian labor during the Second World War led to the formation of a central Policy Department in October 1942, and the Institute's role began to grow substantially. During 1946, the Institute's Articles of Association were extended to comprise vessels, aircraft, cargoes, freight or other objects of marine, aviation and transit insurance. Lloyd's underwriters were included in membership in the early years, but Lloyd's Underwriters' Association was founded as a separate body in 1909. Nevertheless, the Institute continued to provide a secretariat to deal with questions of interest to the market as a whole. This led to a system of joint ILU/Lloyd's committees to monitor topics of interest in particular fields. The Joint Hull Committee was formed in 1910 to discuss all matters connected with hull insurance. The Technical and Clauses Committee (formed 1925) drew its members from company and Lloyd's underwriters and claim adjusters, to act on mandates from the main committees to revise existing clauses or introduce new ones. The War Risks Rating Committee (formed 1935) monitored situations which might affect the insurance of war risks for cargoes. The Joint Cargo Committee (formed 1942) dealt with insurance of cargo by air as well as by sea. The Institute was situated at 4 Royal Exchange Buildings (1884–87); 1 St. Michael's House, Cornhill (1887–1930); 37/39 Lime Street (1930–56); 40 Lime Street (1956–86); and 49 Leadenhall Street (1986–98). In 1965 a subsidiary office was opened in Folkestone, to house the Policy Department and accounting centre. In December 1998 the ILU merged with the London International Insurance and Reinsurance Market Association (LIIRMA) to form the International Underwriting Association of London. See also International Underwriting Association. / Лойд (Lloyd). Институт Лондонских Расписчиков (ИЛР) – ассоциация страховщиков, образованная в 1884, занимавшаяся морским и авиационным страхованием, основной задачей которой являлось рассмотрение вопросов, представляющих интерес для субъектов страхового рынка, выработка рекомендаций по страхованию различных рисков, разработка и внедрение в практику стандартных условий и оговорок по страхованию воздушных и морских судов, грузов. В 1998 в результате слияния с Ассоциацией Лондонского Рынка Страхования и Перестрахования (London Insurance And Reinsurance Market Association) преобразован в Международную Ассоциацию Андеррайтинга (International Underwriting Association).

INSTITUTE TIME CLAUSES = ОГОВОРКИ ИНСТИТУТА О СРОКЕ (или ИНСТИТУТСКИЕ ОГОВОРКИ О СРОКЕ) – Institute Time Clauses:- standard insurance conditions, published by the Institute of London Underwriters, for policies covering ships for a period of time. / Стандартные условия страхования, публикуемые Институтом Лондонских Расписчиков (Андеррайтеров), для полисов, покрывающих суда на период времени.

INSTITUTE WARRANTIES = РУЧАТЕЛЬСТВА ИНСТИТУТА – Institute Warranties:- a set of express warranties, published by the Institute of London Underwriters, for use in hull and machinery policies. The set comprises five locality warranties and one trade warranty; the latter relating to the carriage of Indian coal as cargo. In event of breach of any of the warranties, the assured is held covered by the breach of warranty clause in the Institute hull clauses. See also Breach of Warranty Clause. / , публикуемых Институтом Лондонских Расписчиков (Андеррайтеров). ручательство (warranty).

INSTITUT INTERNATIONAL POUR L'UNIFICATION DU DROIT PRIVE = МЕЖДУНАРОДНЫЙ ИНСТИТУТ ПО УНИФИКАЦИИ ЧАСТНОГО ПРАВА (или ИНСТИТЬЮТ ЭНТЭРНАСЬЁНАЛЬ ПУР Л'ЮНИФИАКСЬЁН ДЮ ДРУА ПРИВЕ) – Institut International Pour L'Unification Du Droit Prive (UNIDROIT) or International Institute for the Unification of Private Law is an international governmental organization headquartered in Rome, Italy, whose tasks are to study needs and methods for modernising, harmonising and coordinating private and in particular commercial law as between States and groups of States and to formulate uniform law instruments, principles and rules to achieve those objectives. Membership of UNIDROIT is restricted to States acceding to the UNIDROIT Statute. UNIDROIT's 63 member States (in 2017) are drawn from the five continents and represent a variety of different legal, economic and political systems as well as different cultural backgrounds. See also International Institute For The Unification Of Private Law. Institut International Pour L'Unification Du Droit Prive (UNIDROIT) or International Institute for the Unification of Private Law:- Purpose:- The International Institute for the Unification of Private Law (UNIDROIT) is an independent intergovernmental Organisation with its seat in the Villa Aldobrandini in Rome. Its purpose is to study needs and methods for modernising, harmonising and co-ordinating private and in particular commercial law as between States and groups of States and to formulate uniform law instruments, principles and rules to achieve those objectives. Origins:- Set up in 1926 as an auxiliary organ of the League of Nations, the Institute was, following the demise of the League, re-established in 1940 on the basis of a multilateral agreement, the UNIDROIT Statute. Membership:- Membership of UNIDROIT is restricted to States acceding to the UNIDROIT Statute. UNIDROIT's 63 member States are drawn from the five continents and represent a variety of different legal, economic and political systems as well as different cultural backgrounds. Funding:- The Institute is financed by annual contributions from its member States which are fixed by the General Assembly. Extra-budgetary contributions may be made to fund specific projects or activities. Structure:- UNIDROIT has an essentially three-tiered structure, made up of a Secretariat, a Governing Council and a General Assembly. The Secretariat is the executive organ of UNIDROIT responsible carrying out its Work Programme from day to day. It is headed by a Secretary-General appointed by the Governing Council on the nomination of the President of the Institute. The Secretary-General is assisted by a team of international civil servants and supporting staff. Annual Reports on the activity of UNIDROIT. The Governing Council supervises all policy aspects of the means by which the Institute's statutory objectives are to be attained and in particular the way in which the Secretariat carries out the Work Programme drawn up by the Council. It is made up of one ex officio member, the President of the Institute, and 25 elected members, mostly eminent judges, practitioners, academics and civil servants. The Governing Council is chaired by the President of the Institute who is a member of the Council ex officio. The General Assembly is the ultimate decision-making organ of UNIDROIT:- it votes the Institute's budget each year; it approves the Work Programme every three years; it elects the Governing Council every five years. It

is made up of one representative from each member Government. The Presidency of the General Assembly is held, on a rotating basis and for one year, by the Ambassador of one of the Organisation's member States. Reports on the annual sessions of the General Assembly of Member States. Languages:- The official languages of UNIDROIT are English, French, German, Italian and Spanish; its working languages are English and French. Legislative Policy:- UNIDROIT has over the years prepared over seventy studies and drafts. Many of these have resulted in international instruments, including international Conventions, Model Laws, Principles and Legal and Contractual Guides. In the case of Conventions, they were adopted by diplomatic Conferences convened by member States of UNIDROIT:- UNIDROIT's work has also served as the basis for a number of international instruments adopted under the auspices of other international Organisations, several of which are already in force. (1) Nature Of Instruments Drawn Up By UNIDROIT:- UNIDROIT's basic statutory objective is to prepare modern and where appropriate harmonised uniform rules of private law understood in a broad sense. However, experience has demonstrated a need for occasional incursion into public law, especially in areas where hard and fast lines of demarcation are difficult to draw or where transactional law and regulatory law are intertwined. Uniform rules prepared by UNIDROIT are concerned with the unification of substantive law rules; they will only include uniform conflict of laws rules incidentally. (2) Technical Approach To Harmonisation Or Unification Favoured By UNIDROIT:- UNIDROIT's independent status amongst intergovernmental Organisations has enabled it to pursue working methods which have made it a particularly suitable forum for tackling more technical and correspondingly less political issues. (3) Factors Determining Eligibility Of Subjects For Uniform Law Treatment:- New technologies and international commercial practices call for new, harmonised and widely acceptable solutions. Generally speaking, the eligibility of a subject for harmonisation or even unification will to a large extent be conditional on the willingness of States to accept changes to domestic law rules in favour of a new international solution on the relevant subject. Legal and other arguments in favour of harmonisation have accordingly to be weighed carefully against such perception. Similar considerations will also tend to determine the most appropriate sphere of application to be given to uniform rules, that is to say, whether they should be restricted to truly cross-border transactions or extended to cover internal situations as well. While commercial law topics tend to make for most of the international harmonisation initiatives, the broad mandate given to UNIDROIT allows the organisation to deal with non-commercial matters as well. (4) Factors Determining Choice Of Instrument To Be Prepared:- The uniform rules drawn up by UNIDROIT have, in keeping with its intergovernmental structure, generally taken the form of international Conventions, designed to apply automatically in preference to a State's municipal law once all the formal requirements of that State's domestic law for their entry into force have been completed. However, alternative forms of unification have become increasingly popular in areas where a binding instrument is not felt to be essential. Such alternatives may include model laws which States may take into consideration when drafting domestic legislation or general principles which the judges, arbitrators and contracting parties they address are free to decide whether to use or not. Where a subject is not judged ripe for uniform rules, another alternative consists in the legal guides, typically on new business techniques or types of transaction or on the framework for the organisation of markets both at the domestic and the international level. Generally speaking, 'hard law' solutions (i.e. Conventions) are needed where the scope of the proposed rules transcends the purely contractual relationships and where third parties' or public interests are at stake as is the case in property law. The choice of topics for the UNIDROIT work programme, their priority levels and working methods, as well as the overall line of activities follow the criteria and strategic objetives of the Institute, as set out in its Strategic Plan. Working Methods:- (1) Preliminary Stage:- Once a subject has been entered on UNIDROIT's Work Programme, the Secretariat, where necessary assisted by experts in the field, will draw up a feasibility study and/or a preliminary comparative law report designed to ascertain the desirability and feasibility of law reform. Where appropriate and funding permitting, an economic impact assessment study is also carried out. The report, which may include a first rough draft of the relevant principles or uniform rules, will then be laid before the Governing Council which, if satisfied that a case has been made out for taking action, will typically ask the Secretariat to convene a study group, traditionally chaired by a member of the Council, to prepare a preliminary draft Convention or one of the alternatives mentioned above. The membership of such study groups, made up of experts sitting in their personal capacity, is a matter for the Secretariat to decide. In doing so, the Secretariat will seek to ensure as balanced a representation as possible of the world's different legal and economic systems and geographic regions. (2) Intergovernmental Negotiation Stage:- A preliminary draft instrument prepared by the study group will be laid before the Governing Council for approval and advice as to the most appropriate further steps to be taken. In the case of a preliminary draft Convention, the Council will usually ask the Secretariat to convene a committee of governmental experts whose task it will be to finalise a draft Convention capable of submission for adoption to a diplomatic Conference. In the case of one of the alternatives to a preliminary draft Convention not suitable by virtue of its nature for transmission to a committee of governmental experts, the Council will be called upon to authorise its publication and dissemination by UNIDROIT in the circles for which it was prepared. Full participation in UNIDROIT committees of governmental experts is open to representatives of all UNIDROIT member States. The Secretariat may also invite such other States as it deems appropriate, notably in light of the subject-matter concerned, as well as the relevant international Organisations and professional associations to participate as observers. A draft Convention finalised by a committee of governmental experts will be submitted to the Governing Council for approval and advice as to the most appropriate further steps to be taken. Typically, where it judges that the draft Convention reflects a consensus as between the States represented in the committee of governmental experts and that it accordingly stands a good chance of adoption at a diplomatic Conference, the Council will authorise the draft Convention to be transmitted to a diplomatic Conference for adoption as an international Convention. Such a Conference will be convened by one of UNIDROIT's member States. (3) Co-operation With Other International Organisations:- UNIDROIT maintains close ties of co-operation with other international Organisations, both intergovernmental and non-governmental, which in many cases take the form of co-operation agreements concluded at inter-Secretariat level. The Hague Conference on Private International Law, UNIDROIT and the United Nations Commission on International Trade Law (UNCITRAL), the three private-law formulating agencies, are quite appropriately referred to as 'The Three Sisters'. By reason of its expertise in the international unification of law, UNIDROIT is moreover at times commissioned by such other Organisations to prepare comparative law studies and/or draft Conventions designed to serve as the basis for the preparation and/or finalisation of international instruments in those Organisations. (4) Network Of Correspondents:- UNIDROIT's ability to obtain up-to-date information on the state of the law in all the various countries is essential to the pursuit of its statutory objectives. Such information can be difficult to obtain and UNIDROIT therefore maintains a network of correspondents in both member and non-member States, who are appointed by the Governing Council from amongst academic and practising lawyers. Depositary Functions:- UNIDROIT has been designated as the Depositary to its most recent instruments: the 2001 Cape Town Convention (pursuant its Article 62(1)), the 2001 Aircraft Protocol (pursuant to its Article XXXVII(1)), which both entered into force on 01 March 2006, the 2007 Luxembourg Rail Protocol (pursuant to its Article XXXIV(1)), the 2012 Space Protocol (pursuant to its Article XLVIII(1)) which have not yet entered into force, as well as the 2009 UNIDROIT Convention on Substantive Rules for Intermediated Securities (pursuant to its Article 48 (1) (also not yet in force). UNIDROIT's responsibilities as Depositary under those instruments are specified in each instrument, and include the operation of a system for the receipt and notification of all instruments of ratification, declarations and other documents lodged with the Depositary. UNIDROIT provides information for the assistance of States that are contemplating becoming Contracting States to them. Legislative Activities:- (i) Principles of International Commercial Contracts; (ii) Protocol to the Cape Town Convention on Matters specific to Space Assets; (iii) Netting of Financial Instruments; (iv) Principles and rules capable of enhancing trading in securities in

emerging markets; (v) Third Party Liability for Global Navigation Satellite System (GNSS) Services; (vi) Preparation of a new Protocol to the Cape Town Convention on matters specific to agricultural, mining and construction equipment; (vii) Private law and social and economic development; and (viii) Model legislative provisions on State ownership of undiscovered cultural objects. Non-Legislative Activities And Outreach Resources:- Essential support for UNIDROIT's core activity - that is the drawing up of uniform rules - is provided by its maintenance of a world-renowned library, its preparation of a number of specialised publications in the field of the unification of law, its legal co-operation programme , its project for a uniform law data base, and its periodic organisation of congresses, meetings and seminars. Library:- The UNIDROIT Library is one of the leading documentation centres in its field and is consulted by researchers from all over the world. Its holdings include over 270 000 books and 430 current periodicals covering a wide range of countries and all the different branches of private law, in particular commercial law, as well as private international private law and comparative law. The library catalogue is available on-line. Publications:- From its earliest days UNIDROIT has put out a number of publications. Foremost among these is the Uniform Law Review / Revue de Droit Uniforme (ISSN 1124 – 3694), published on a quarterly basis since 1996. In addition, the Institute collects all its working materials in the UNIDROIT Proceedings and Papers series which is updated annually and is available on the UNIDROIT website. Congresses, Meetings And Seminars:- UNIDROIT periodically organizes international congresses, meetings and seminars to discuss topical aspects of the harmonised modernisation and unification of law, such as methodology and its practical applications to specific projects or in general. These events bring together judges, arbitrators, academics and practising lawyers as well as national and international civil servants. Legal Co-operation:- UNIDROIT makes its expertise in the field of legal harmonisation available to developing countries or regions and countries in economic transition, in particular, also with a view to promoting uniform law in those parts of the world. It also offers technical assistance with the drafting of national and regional legislation, a prime example being its co-operation with the Organisation for the Harmonisation of Business Law in Africa (OHADA). At the request of that Organisation, UNIDROIT prepared a preliminary draft OHADA Uniform Act on contract law, largely inspired by the UNIDROIT Principles. Moreover, UNIDROIT provides assistance in implementing and publicising UNIDROIT instruments and activities, including training and research in respect of uniform law. A research scholarships programme, funded largely by outside donors, enables the UNIDROIT Library to host a certain number of researchers each year.

INSTITUTIONAL DELIVERY SYSTEM = СИСТЕМА ИНСТИТУЦИОНАЛЬНОЙ ПОСТАВКИ – Institutional Delivery (ID) System is a trade confirmation and affirmation system provided by the Depository Trust Corporation (DTC). Sometimes referred to as DTC-ID. / , от Латинского слова Affirmo, означающее Утверждаю, .

INSTITUTIONAL INVESTOR = ИНСТИТУЦИОНАЛЬНЫЙ ИНВЕСТОР – Institutional Inestors:- entities with large amounts to invest, such as investment companies, pension funds and endowment funds. Investment companies and pension funds, usually with large amounts to invest. Organizations with substantial (mostly continuous) investment needs which trade large volumes of securities, e.g., insurance companies, investment funds, pension funds, etc. Organizations which invest funds on behalf of client, generally intending to reap profits only in the long term. Institutional Inestor is an organization whose primary purpose is to invest its own assets or those held in trust by it for others. Includes pension funds, investment companies, insurance companies, insurances and banks. An entity such as an insurance company, investment company, mutual fund, pension fund or trust department of a bank, that invests large sums in the securities markets. Institutional Inestors:- organizations that buy securities on behalf of institutions, such as pension funds, mutual funds, or insurance companies. Institutional investors often manage considerable capital. / , например, . Институциональный Инвестор – организация, ведущая операции с ценными бумагами в крупном объёме. Некоторыми примерами являются взаимные фонды, банки, страховые компании, пенсионные фонды, профсоюзные фонды, планы участия в прибылях, корпорации, а также фонды, в которые вносятся средства на обучение в колледжах. Как правило, более 50%, а иногда до 70% ежедневных торгов на Нью Йоркской Фондовой Бирже приходится на институциональных инвесторов.

INSTITUTIONAL TRADERS ADVISORY COMMITTEE = СОВЕЩАТЕЛЬНЫЙ КОМИТЕТ ИНСТИТУЦИОНАЛЬНЫХ ТОРГОВЦЕВ – Institutional Traders Advisory Committee advises on policies and procedures for strengthening the efficiency of New York Stock Exchange (NYSE®) markets. Its members, who represent leading financial institutions, also assist the NYSE® staff in developing ways to improve communication with investing institutions. They provide views on the prospective impact of proposed trading rules on institutional investors' needs and interests. / (НЙФБ® или Эн.Уай.Эс.И.® (NYSE®)). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INSTITUTIONAL UNIT = ИНСТИТУЦИОНАЛЬНОЕ ПРЕДПРИЯТИЕ (или ИНСТИТУЦИОНАЛЬНАЯ ЕДИНИЦА) – In the United Kingdom, Institutional Units are the individual bodies whose data is amalgamated to form the sectors of the economy. A body is regarded as an institutional unit if it has decision-making autonomy in respect of its principal function and either keeps a complete set of accounts or is in a position to compile, if required, a complete set of accounts which would be meaningful from both an economic and a legal viewpoint.

INSTRON® TENSILE TESTER = ИНСТРЭНОВСКИЙ® ДИНАМОМЕТР (или ИНСТРЭНСКИЙ® ТЕСТЕР ДЛЯ ОПРЕДЕЛЕНИЯ РАСТЯЖЕНИЯ (или РАЗРЫВА)) – Instron® Tensile Tester is a high precision electronic test instrument designed for testing a variety of material under a broad range of test conditions. It is used to measure and chart the load-elongation properties of fibers, yarns, fabrics, webbings, plastics, films, rubber, leather, paper, etc. May also be used to measure such properties as tear resistance and resistance to compression. Instron® is a registered trademark of Illinois Tool Works, Inc. (ITW), Norwood, State of Massachusetts (MA), the United States. / Инстрэн® (Instron®) является зарегистрированным товарным знаком компании Илыной Тул Вокс, Инк. (Ай.Ти.ДаблЮ.; Illinois Tool Works, Inc. (ITW)).

INSTRUMENT = ИНСТРУМЕНТ – Instrument is a tradable asset such as a commodity, security, or derivative, or an index or value that underlies a derivative or could underlie a derivative. / Под Инструментом, от Латинского слова Instrumentum, означающее Орудие, понимается торгуемый актив, такой как сырьё, ценная бумага, или дериватив (производное), или индекс, или ценность, которая лежит или может лежать в основе деривативa. Инструмент – актив; обязательство; финансовый или кредитно-денежный документ. Юридический документ, в котором формально отражены определённые контрактные взаимоотношения или в соответствии с которым предоставляются определённые права, например векселя, контракты, соглашения.

INSTRUMENT IN SUPPORT OF TRADE EXCHANGES = ИНСТРУМЕНТ В ПОДДЕРЖКУ ТОРГОВЫХ ОБМЕНОВ – Instrument In Support Of Trade Exchange (in Iran and the European Union) or Instrument For Supporting Trade Exchanges (in the United States) (INSTEX) (2019-June-28):- Nuclear talks progress 'not enough' for Iran to change course. INSTEX payment system now operational, but Iran says needs to be used for oil purchases to be useful. Diplomats meeting in Vienna in a bid to save a 2015 nuclear deal between Iran and world powers made progress but it was 'not enough' to stop Tehran scaling back compliance with the accord, according to the Iranian deputy foreign minister. Officials from the deal's remaining signatories – China, Russia, the United Kingdom, France, Germany and Iran – as well as the European Union, held talks in the Austrian capital on Friday after Tehran warned that it would soon breach a limit on the amount of enriched uranium set out in the agreement. 'It was a step forward, but it is still not enough and not meeting Iran's expectations', Iran's Deputy Foreign Minister Abbas Araqchi (Iran's top nuclear negotiator) told reporters. 'I don't

think the progress made today will be enough to stop our process but the decision will be made in Tehran'. The meeting took place amid growing concern that the deal could collapse, a year after the United States unilaterally withdrew from the accord, which limits Iran's nuclear activity in exchange for relief from sanctions. After pulling out, the US reimposed sanctions on Iran and called for Iranian oil exports to be reduced to zero as part of a 'maximum pressure' campaign against Tehran, which has dramatically reduced Iran's oil exports. The remaining signatories to the deal want Iran to remain within its limits but Tehran says they have not offered sufficient incentives. In addition to the stockpile limit, Iran has said that in early July it will start to enrich uranium above the 3.67 percent cap agreed in the deal. Al Jazeera's Dorsa Jabbari, reporting from Tehran, said the progress at the talks was unlikely to be enough for the Iranians to remain within the limits set out in the deal. 'What happens next is up to the leadership here to decide. We know that they are going to go ahead with scaling back their commitment', she said. 'In the next few days, we'll see how far the Iranians go'. INSTEX Operational:- In a statement on Friday, the EU said Germany, France and the UK have set up a special trade channel with Iran that aims to circumvent US sanctions on the Islamic Republic. 'France, Germany and the United Kingdom informed participants that INSTEX had been made operational and available to all EU Member States and that the first transactions are being processed', the EU said, referring to the trade channel's formal name. The countries that set up INSTEX have said that it would be 'initially focusing on the sectors most essential to the Iranian population – such as pharmaceutical, medical devices and agrifood goods'. This would avoid a clash with the US, as its sanctions permit trade in humanitarian goods. Araqchi said on Friday that INSTEX would need to expand to cover a wider range of goods in order to satisfy Iran. 'For INSTEX to be useful for Iran, Europeans need to buy oil or consider credit lines for this mechanism otherwise INSTEX is not like they or us expect', he said. Oil exports are a key source of revenue for Iran. The payment system, which would act as a middleman in trade between Iran and European companies and reduce the need for direct transactions, had been widened to include more countries beyond the UK, France and Germany, he added. Reporting from Vienna, Al Jazeera's Dominic Kane said the meeting appeared to be broadly positive but cautioned that the world powers did not send high-level delegations to the talks. 'This meeting had been presented by the Iranian side as perhaps the last chance to reach a conclusion', he said. 'Iran sent its deputy foreign minister here but the other parties did not send senior foreign ministers to attend, so the ball is in the other parties' court'. Foreign ministers from Iran and the five remaining signatories would meet 'very soon', Araqchi said. China Rejects US Sanctions:- Meanwhile, China's delegate at the talks, Fu Cong, said Beijing would continue to import Iranian oil despite Washington's sanctions on Tehran. 'We reject the unilateral imposition of sanctions', he said. 'For us, energy security is important and the importation of Iranian oil is important to Chinese energy security and also the livelihood of the people'. He added that the meeting was 'conducive to easing tensions in the region', referring to sabre-rattling between Washington and Tehran in the Gulf. Concern about a possible confrontation in the region escalated sharply last week when Iran shot down a US unmanned drone, which Tehran said was in its airspace. The US said it was downed in international airspace. US President Donald Trump ordered retaliatory attacks on Iran but later cancelled them, saying they would not have been proportional. It was the latest in a series of escalatory events in the Gulf region in recent weeks, including alleged attacks on tankers which the US has blamed on Iran, despite Tehran's denials. Xxxxx. Iran on April 29, 2019 announced the establishment of a company designed to match a mechanism European countries have set up to facilitate trade despite US sanctions. Earlier on March 20, the Governor of Central Bank of Iran (CBI) Abdolnaser Hemmati had announced that a mechanism similar to Europe's Instrument for Trade and Exchanges (INSTEX) has been registered. The mechanism, called the Special Trade and Finance Institute (STFI) was introduced after technical and expert negotiations between Iranian delegations and representatives from three European countries (Britain, France and Germany). STFI has been devised to work in tandem INSTEX, designed to alleviate facilitate limited trade with Iran. The newly established Iranian company has started its activity with one billion Rials (about USD24 000) capital. France, Germany and the UK set up INSTEX on January 31, 2019, following the US withdrawal from the deal with Iran in 2018, to help Tehran with limited trade despite US sanctions. However, the Islamic Republic's Supreme Leader, Ayatollah Ali Khamenei has repeatedly called INSTEX a 'meaningless' measure and 'a bitter joke', adding that 'Europeans should have stood up to the US after it left the Joint Comprehensive Plan of Action (JCPOA) and should have lifted all sanctions against Iran'. The US Representative to the EU, Gordon Sondland, also reiterated on April 11, that the era of the US-Europe dispute over the Joint Comprehensive Plan of Action (JCPOA) or Tehran's nuclear deal with world powers is over. 'The SPVs (INSTEX) are Europe's attempt to appease Iran by showing that they are still trying their very best to facilitate proper transfers of payments to Iran. We believe that those special purpose vehicles (SPVs) are really nothing more than, and I've said it before, a paper tiger', said Gordon D. Sondland (the United States Ambassador to the European Union). The formal announcement of Special Trade and Finance Institute's (STFI's) establishment has been followed by another round of attacks by Iranian officials on the EU and on what they describe as the 'EU3 procrastination'. Parliament Speaker Ali Larijani insisted on Monday, April 29, that Iran no longer cares about Europe's demands as European governments have let it down in countering 'hostile US policies'. 'We are trying to find out why European leaders and the European Union only support us in rhetoric or only express regret at America's actions', Larijani said during a meeting with Wolfgang Gerstl, the head of Austria-Iran parliamentary friendship group in Tehran on Monday. 'Sure, you might say there are problems because of US pressure and it might sound logical, but we look at this from our own point of view and the most important thing for us is that this behavior has raised questions about EU's credibility and it means that the EU lacks the weight to solve problems', local news outlets cited Larijani as saying. Larijani expressed his dissatisfaction with the EU3 to the extent that he stressed, 'We do not need Europe's help in getting back at Washington. We will get even with America'. Xxxxx. Joint statement on the creation of INSTEX, the special purpose vehicle aimed at facilitating legitimate trade with Iran in the framework of the efforts to preserve the Joint Comprehensive Plan of Action (JCPOA) (31 January 2019):- Joint statement by the E3 Foreign Ministers Jean-Yves Le Drian (France), Heiko Maas (Germany), Jeremy Hunt (United Kingdom):- France, Germany and the United Kingdom, in accordance with their resolute commitment and continued efforts to preserve the Joint Comprehensive Plan of Action (JCPOA) endorsed by United Nations Security Council resolution 2231, announce the creation of INSTEX SAS (Instrument for Supporting Trade Exchanges), a Special Purpose Vehicle aimed at facilitating legitimate trade between European economic operators and Iran. The E3 reaffirm that their efforts to preserve the economic provisions of the JCPOA are conditioned upon Iran's full implementation of its nuclear-related commitments, including full and timely cooperation with the International Atomic Energy Agency (IAEA). INSTEX will support legitimate European trade with Iran, focusing initially on the sectors most essential to the Iranian population – such as pharmaceutical, medical devices and agri-food goods. INSTEX aims in the long term to be open to economic operators from third countries who wish to trade with Iran and the E3 continue to explore how to achieve this objective. The creation of INSTEX is a major first step taken by E3 countries today. The operationalisation of INSTEX will follow a step-by-step approach:- (i) The E3 together with INSTEX will continue to work on concrete and operational details to define the way the company will operate; and (ii) The E3 will also work with Iran to create an effective and transparent corresponding entity that is required to be able to operationalise INSTEX. INSTEX will function under the highest international standards with regards to anti-money laundering, combating the financing of terrorism (AML/CFT) and European Union and United Nations sanctions compliance. In this respect, the E3 expect Iran to swiftly implement all elements of its Financial Action Task Force (FATF) action plan. The E3 underline their commitment to pursue the further development of INSTEX with interested European countries to make this instrument in support of trade exchanges with Iran operational by following the steps set out above. Xxxxx. INSTEX:- More About Politics Than Economics? (2019-June-07; Atlantic Council, Washington, DC, USA):- Ever since the US withdrawal from the Iran nuclear deal in May 2018, the European Union (EU) has emphasized its sovereignty regarding both

commercial and political relations with Iran, insisting that it could continue trade under the framework of the 2015 Joint Comprehensive Plan of Action (JCPOA). Despite that, trade has cratered and a mechanism – the Instrument for Supporting Trade Exchanges (INSTEX) – expressly created to keep up commercial ties has not yet been implemented. When INSTEX was announced on January 31, Per Fischer, the former Head of Financial Institutions at Commerzbank, was appointed as its President. The INSTEX Supervisory Board includes Simon McDonald, the UK Permanent Under-Secretary of State for Foreign Affairs; Miguel Berger, Head of the Economic Department at the German Foreign Office; and Maurice Gourdault-Montagne, Secretary-General of the French Ministry of Europe and Foreign Affairs. These are seasoned senior diplomats. There is, however, a noticeable absence of senior officials from the UK Treasury, Germany's Federal Ministry of Finance, France's Ministry of the Economy and Finance or central bank officials from Britain, France and Germany – the so-called E3. While diplomats can contribute to the work, the more obvious choice of INSTEX directors should have been senior officials and experts from E3 finance ministries or central banks, i.e. experts in international financial markets and trade as INSTEX is expected to define and implement a financial solution for EU-Iran trade and not primarily drive a political solution. By not appointing senior officials from E3 finance ministries or central banks to lead INSTEX, these countries are intentionally or unintentionally conveying a message to the Iranian government, as well as to EU and Iranian companies and banks:- the E3 consider establishing INSTEX as a political move rather than an effort to create a viable trade mechanism. If interpreted that way, Iran will consider this as a maneuver by the E3 to shy away from its commitments under the JCPOA due to US pressure. On April 29, 2019, Iran announced the establishment of a Special Trade and Finance Institute (STFI), which will mirror INSTEX in order to facilitate EU-Iran trade under US sanctions. Unlike those named to INSTEX, the appointed members of STFI all come from the Iranian banking sector although none come from Iran's Ministry of Economic Affairs and Finance or at the Central Bank of Iran (CBI), which has been sanctioned by the United States. STFI's President is Ali Asqar Nouri, a former advisor at Iran Zamin Bank. STFI's board consists of Hamid Ghanbari, a former director at the CBI, as chairman; Farshid Farrokh representing Refah Bank; Sharhzad Moshiri from Bank Keshavarzi; Mohammad Reza Javadian representing Bank Pasargad; and Hamid Ghanbari representing Faradis Gostar Kish, a company that provides mobile payment solutions. None of the appointed STFI directors are diplomats or high-ranking government officials. While skilled in their fields, these directors are not at the same political and operational level as their INSTEX counterparts. This could indicate that Iran is equally not considering INSTEX as a serious E3 approach aimed at solving the EU-Iran trade dilemma. Neither body, so far, has shared detailed information about the mechanism with any chamber of commerce, trade organization or press in any affected country. The president of STFI said in an interview on May 29, 2019, 'All these processes have been defined, but doing them all is very complex'. Looking at the structures of INSTEX and STFI, it appears that neither the E3 nor Iran anticipate that the proposed mechanism will work. From the start, the idea of this mechanism has raised questions about its practicality given the imbalance between European exports to and imports from Iran as well as the expansive nature of US sanctions. In order for the INSTEX 'barter' process to work, the revenue generated by selling Iranian oil needs to be 'transferred' to it. However, with continued US restrictions that prevent selling Iranian oil, the influx of Iranian funds into INSTEX will become a challenge that ultimately leads to a deficit for Iran. Further, considering that the major buyers of Iranian oil are not European – e.g., China, India, Korea and Japan – it is not certain that those buyers would accept transferring payments to INSTEX. That would require complicated negotiations between the parties, where US interference and influence cannot be ignored. Furthermore, even if the Iranian oil revenues pour into INSTEX, Iran will still be restricted from spending the funds on any trade other than medicine and food. Last, but not least, Iran may speculate that its funds being held by INSTEX might become blocked in Europe due to collapse of the JCPOA or other disputes with the US and EU in the future. That would undoubtedly trigger political turmoil both inside Iran and between Tehran and the E3. The EU's commitment to Iran was to lift sanctions under the JCPOA's framework assuming that Tehran also fulfilled its commitments, which it has done to date. Considering the sophisticated and significant nature of EU-Iran trade, establishing a limited trade and financial mechanism like INSTEX does not fulfill the EU's obligations under the JCPOA. Therefore, if INSTEX does not rapidly accommodate a full spectrum of EU-Iran trade, and if Tehran is prevented from selling its oil to generate required funds, INSTEX will be doomed to fail. Establishing a sustainable and functioning EU-Iran trade mechanism cannot be done without cooperation with the US. The Trump administration will not hesitate to politically and financially pressure the EU if US sanctions against Iran are circumvented by an EU-based financial mechanism. The US will impose penalties against any trade mechanism that enabled business with Iran without US consent. In her letter to the President of INSTEX on May 07, 2019, the US Treasury Department undersecretary clearly stated:- 'Engaging in activities that run afoul of US sanctions can result in severe consequences, including a loss of access to the US financial system'. Even if INSTEX works in practice, it is still unclear if European or even non-European companies and banks, which have much more lucrative business activities with US companies and banks, will be willing to use INSTEX to trade with Iran as the risk of penalties or blacklisting by the US is so high. / Помощник Министра Иностранных Дел Ирана Аппос Аракчи (Iran's Deputy Foreign Minister Abbas Araqchi). Дорса Джаббари из Эль Джазиры (Al Jazeera's Dorsa Jabbari). Доминик Кейн из Эль Джазиры (Al Jazeera's Dominic Kane). Данэлд Тчрамп, Президент США (US President Donald Trump). Абдолнасер Хеммати, Управляющий Центрального Банка Ирана (Governor of Central Bank of Iran (CBI) Abdolnaser Hemmati). Аятолла Али Хамэнэи (Ayatollah Ali Khamenei). Годэн Ди. Сандлэнд, Посол Соединённых Штатов Америки в Европейском Союзе (Gordon D. Sondland). Али Лариджани, Спикер Парламента Ирана (Parliament Speaker Ali Larijani). Вольфган Гярстэль, Глава Австрийско-Иранской Группы Дружбы Парламентариев (Wolfgang Gerstl, the Head of Austria-Iran parliamentary friendship group). Министры Иностранных Дел Жо-Ив Лё Дэрьё (Jean-Yves Le Drian; Франция), Хэйко Мас (Heiko Maas; Германия), Дьжерэми Хант (Jeremy Hunt; Соединённое Королевство). Пеа Фиша (Per Fischer), бывший Глава Финансовых Учреждений Комерцбанка (Head of Financial Institutions at Commerzbank), был назначен в качестве его Президента. Саймэн МэкДанэлд (Simon McDonald, the UK Permanent Under-Secretary of State for Foreign Affairs); Мигэль Бэрга, Глава Экономического Департамента при Министерстве Иностранных Дел Германии (Miguel Berger, Head of the Economic Department at the German Foreign Office); и Морис Гурдо-Мутаньа, Генеральный Секретарь Министерства Европейских и Иностранных Дел Франции (Maurice Gourdault-Montagne, Secretary-General of the French Ministry of Europe and Foreign Affairs). Президентом Специального Института Торговли и Финансов (СИТФ) (Special Trade and Finance Institute (STFI)) является Али Аскар Нури (Ali Asqar Nouri), бывший советник Иранского банка Иран Замин Банк (Iran Zamin Bank). В Совет СИТФ входят также Хамид Ганбари (Hamid Ghanbari), бывший Директор и Председатель Центрального Банка Ирана; Фаршид Фаррок (Farshid Farrokh), представлявший Иранский банк Рефах Банк (Refah Bank); Шарзад Мошири (Sharhzad Moshiri) из Иранского банка Банк Кешаварзи (Bank Keshavarzi); Мохаммад Реза Джавадян (Mohammad Reza Javadian), представлявший Иранский банк Банк Пасаргад (Bank Pasargad); и Хамид Ганбари (Hamid Ghanbari), представлявший Иранскую компанию Фарадис Гостар Киш (Faradis Gostar Kish), обеспечивавшую решения по мобильным платежам.

INSUFFICIENT CARTON STRENGTH = НЕДОСТАТОЧНАЯ КРЕПОСТЬ КАРТОННОГО КОРОБА – Insufficient Carton Strength:- self explanatory. Thread defects, and namely – Packing. / Порок или дефект ниток.

INSUFFICIENT TENSILE = НЕДОСТАТОЧНОЕ НАТЯЖЕНИЕ – Insufficient Tensile:- when thread tensile is not normal for thread of its size and finish. Thread defects, and namely – Spinning. / Порок или дефект ниток.

INSULATED CONTAINER = ТЕРМОИЗОЛИРОВАННЫЙ КОНТЕЙНЕР (или ИЗОЛИРОВАННЫЙ КОНТЕЙНЕР) – Insulated Container is a container used to protect cargo from freezing or extremely warm temperatures with no refrigeration unit. A container insulated on the walls, roof, floor, and doors, to reduce the effect of external temperatures on the cargo. / Изолированный по торцевой и боковым стенкам, крыше, днищу и дверям контейнер для уменьшения степени воздействия внешних температур на перевозимый в таком контейнере груз.

INSULATED CONTAINER TANK = ТЕРМОИЗОЛИРОВАННЫЙ КОНТЕЙНЕР–ЦИСТЕРНА (или ИЗОЛИРОВАННЫЙ КОНТЕЙНЕР–ЦИСТЕРНА) – Insulated Container Tank is the frame of a container constructed to hold one or more thermally insulated tanks for liquids. / Сконструированная рама контейнера для удерживания в ней одной или более термоизолированных цистерн для перевозки жидкостей.

INSULATION = ИЗОЛЯЦИЯ – Insulation:- with respect to a fabric, a material that protects from the loss of warmth or the penetration of cold. / В текстильной отрасли под Изоляцией, от Французского слова Isolation, означающее Отделение или Разобщение, понимается .

INSURABLE INTEREST = СТРАХУЕМЫЙ ИНТЕРЕС (или СТРАХОВОЙ ИНТЕРЕС) – Insurable Interest is the interest one has in relation to property exposed to peril whereby one may lose financially by the loss of, or damage to, such property or may incur a liability in respect thereof. A person who effects a marine insurance contract without an insurable interest or a reasonable expectation of acquiring such interest is guilty of an offence under English law. In order to claim under a policy, one must have an insurable interest in the subject matter insured at the time the loss occurs. A direct monetary interest in the insured property sufficient to result in monetary loss should the property be damaged or destroyed. If an insured wishes to enforce a contract of insurance before the Courts he must have an insurable interest in the subject matter of the insurance, which is to say that he stands to benefit from its preservation and will suffer from its loss. In non-marine insurances, the insured must have insurable interest when the policy is taken out and also at the date of loss giving rise to a claim under the policy. In life insurance the insured must have insurable interest must when the policy is taken out and in marine insurance the insured must generally have insurable interest at the date of loss giving rise to a claim under the policy. Insurable Interest is the principle that the insured must have an interest, usually financial, in the risk for which the policy is to be issued. Insurance requires for its validity that the insured shall be so related to the subject-matter of the insurance that he will benefit from its survival or will suffer from loss or damage to it or may incur liability in respect of it. In the absence of such an interest, known as an Insurable Interest, the insurance will be invalid.

INSURABLE RISK = СТРАХУЕМЫЙ РИСК (или СТРАХОВОЙ РИСК) – Insurable Risk is a risk which meets most of the following requisites:- (i) the loss insured against must be defined; (ii) it must be accidental; (iii) it must be large enough to cause hardship to the insured; (iv) it must belong to a homogenous group of risks large enough to make losses predictable; (v) it must not be subject to the same loss at the same time as a large number of other risks; (vi) the insurance company must be able to determine a reasonable cost for the insurance; (vii) the insurance company must be able to calculate the chance of loss.

INSURABLE VALUE = СТРАХУЕМАЯ СТОИМОСТЬ (или СТРАХОВАЯ СТОИМОСТЬ) – Insurable Value is the value of property as expressed in a policy of insurance. / Стоимость имущества, указанного в страховом полисе.

INSURANCE = СТРАХОВАНИЕ – Insurance is a a system under which the insurer, for a consideration usually agreed upon in advance, promises to reimburse the insured or to render services to the insured in the event that certain accidental occurrences result in losses during a given period. It thus is a method of coping with risk. Its primary function is to substitute certainty for uncertainty as regards the economic cost of loss-producing events. Insurance relies heavily on the 'law of large numbers'. In large homogeneous populations it is possible to estimate the normal frequency of common events such as deaths and accidents. Losses can be predicted with reasonable accuracy, and this accuracy increases as the size of the group expands. From a theoretical standpoint, it is possible to eliminate all pure risk if an infinitely large group is selected. From the standpoint of the insurer, an insurable risk must meet the following requirements:- (1) the objects to be insured must be numerous enough and homogeneous enough to allow a reasonably close calculation of the probable frequency and severity of losses. (2) The insured objects must not be subject to simultaneous destruction. For example, if all the buildings insured by one insurer are in an area subject to flood, and a flood occurs, the loss to the insurance underwriter may be catastrophic. (3) The possible loss must be accidental in nature, and beyond the control of the insured. If the insured could cause the loss, the element of randomness and predictability would be destroyed. (4) There must be some way to determine whether a loss has occurred and how great that loss is. This is why insurance contracts specify very definitely what events must take place, what constitutes loss, and how it is to be measured. From the viewpoint of the insured person, an insurable risk is one for which the probability of loss is not so high as to require excessive premiums. What is 'excessive' depends on individual circumstances, including the insured's attitude toward risk. At the same time, the potential loss must be severe enough to cause financial hardship if it is not insured against. Insurable risks include losses to property resulting from fire, explosion, windstorm, etc; losses of life or health; and the legal liability arising out of use of automobiles, occupancy of buildings, employment, or manufacture. Uninsurable risks include losses resulting from price changes and competitive conditions in the market. Political risks such as war or currency debasement are usually not insurable by private parties but may be insurable by governmental institutions. Very often contracts can be drawn in such a way that an 'uninsurable risk' can be turned into an 'insurable' one through restrictions on losses, redefinitions of perils, or other methods. A system of protection against loss under which a number of parties agree to pay certain sums (premiums) for a guarantee that they will be compensated under certain conditions for specified loss and damage. The US Insurance Market is the largest in the world. There were 7 948 licensed insurance companies at the end of 2008. Total premium volume in 2008 of USD1.24 trillion accounted for 29 percent of the global market. On insurance density measures (premiums per capita), the United States ranked ninth at USD4 078 in 2008 and thirteenth on insurance penetration (premiums as a percentage of GDP) at 8.7 percent. There are three main Sectors:- life, property and casualty, and health insurance. Key specialist insurance lines (i.e. those which must be written in separate companies) are:- financial guaranty (bond insurance – the 'monoline insurers'); mortgage insurance; and title insurance. Most US insurers write primary insurance on US risks:- the US market is characterized by low market concentration in most sectors, indicating a high degree of competition; limited private sector capacity in certain 'hard to insure' risks, such as natural catastrophes, which has led to the creation of programs provided by government; limited international insurance business and a relatively small reinsurance capacity – 58 percent of all premium ceded to reinsurers by US insurers is to markets in Europe and Bermuda; and relatively few groups offering insurance as well as other financial services:- for example, only 17 groups are headed by a bank holding company and regulated by the Federal Reserve. Distribution of insurance products is mainly through agents and brokers:- intermediaries distributing insurance in the United States are generally referred to as 'Producers'. They may act as agents of one or more insurance companies (captive agents or independent agents) or as brokers, i.e. acting on behalf of the customer. Overall, the insurance sector, and property and casualty business in particular, has been resilient through the financial crisis:- capital and surplus, the key measure of the buffer available in case reserves prove inadequate to ensure that policyholder claims can be paid, fell by 6.7 percent in life and 8.5 percent in property and casualty between end-2007 and mid-2009. Companies whose capital adequacy,

measured by the regulators' risk-based capital (RBC) requirements, fell to regulatory intervention levels accounted for only 3 percent of the total in 2008. The property and casualty sector suffered from investment falls, but losses from natural catastrophes in 2009 were not as high as in some recent years. However, there have also been significant stresses in the insurance sector in the last two years (on 2010-July):- writers of financial guaranty business (the monoline insurers) lost their high ratings after serious losses related to impair structured finance products. The American International Group (AIG) was supported by the federal authorities after major losses at its capital markets affiliate. Two other insurance groups with federally regulated banking or thrift subsidiaries were granted federal government capital support under the Troubled Asset Relief Program (TARP) (others had applied for funds). Life insurance was particularly affected by the crisis, many strains being related to growth in non-traditional savings products such as variable annuities, many of which have generous guarantees. While pressures have eased, there remain challenges:- while the recovery in many markets since March 2009 has brought relief, life companies in particular remain exposed to possible further problems if economic recovery continues to be modest. However, as life companies have shifted to savings products, their insurance risks (mortality and longevity) have become less significant. Health insurers are subject to significant uncertainty arising from the federal government reforms to health insurance. Property and casualty risks are more dispersed. While the United States is exposed to major natural catastrophes, their impact is regional; national companies are diversified and the largest risks are carried by foreign reinsurers. Insurance is a predominantly state-regulated activity in the United States:- the 1945 McCarran-Ferguson Act reinstated the regulatory authority of the states 'on matters of the business of insurance' and exempted the 'business of insurance' as regulated by the states from federal anti-trust laws. The federal government has enacted various measures affecting insurance, including the Gramm-Leach-Bliley Act of 1999 and the 2002 USA PATRIOT Act, which gave examination powers in relation to anti-money laundering and specified insurance business to federal authorities. States carry out insurance regulatory functions within the state administration:- the insurance departments or similar units within state administrations carry out licensing and oversight work for insurance companies and intermediaries under powers set out in state legislation and in accordance with state budgets. A commissioner heads the department and exercises all formal powers. Some commissioners are elected, but most are appointed by the state governor. While arrangements vary among states, funding is usually raised from the insurance markets via fees and levies. Insurance departments also collect premium taxes for the states, a significant part of state governments' total revenues. State insurance departments carry out both financial and market conduct regulation:- states set reserving and capital requirements. They carry out financial analysis and onsite examinations. Most states have some review or approval authority over policy forms and, in the case of property and casualty insurers, they also often regulate premium rates. Departments also respond directly to consumers' complaints and requests for information. They license and oversee insurance intermediaries. The US National Association of Insurance Commissioners (NAIC) plays an important coordinating role for state regulators:- the NAIC is a not-for-profit organization established by the state insurance commissioners to centralize some functions to achieve economies and greater uniformity. The NAIC itself employs some 430 staff, which compares with nearly 12 000 employed by the states. Key functions of the NAIC include the development of model laws and regulations, which now total over 200; the Financial Regulation Standards and Accreditation Program (referred to in this report as 'the accreditation program'), aimed at ensuring that states meet certain minimum standards in respect to financial regulation; and the centralized process of financial analysis operated through the NAIC's Financial Analysis Working Group (FAWG). Insurance policyholders are protected against the insolvency of insurance companies by guaranty associations in each state:- all US insurance companies are required to be members of associations covering life and health insurance and, through separate organizations, property and casualty. Payments are triggered by the insolvency of an insurer. Laws differ on the extent of coverage and maximum payable per policyholder. A contract whereby an insurer promises to pay the insured a sum of money or some other benefit upon the happening of one or more uncertain events in exchange for the payment of a premium. There must be uncertainty as to whether the relevant event(s) may happen at all or, if they will occur (e.g., death) as to their timing. Insurance is the main way that businesses and individuals reduce the financial impact of a risk occurring. While an insurance policy does not remove a risk, it does provide the policyholder with some security should the worst happen. A business that provides insurance – known as the 'Insurer' – agrees to take on the risk on behalf of the business or individual concerned – known as the 'Insured'. It does this by providing the insured with an insurance contract, sometimes called a 'Policy'. In this contract the insurer will state what risks it has agreed to insure against and how much it will pay if the risk happens so that the insured is put back into the same position as if the risk had not happened. The policy may also include a list of things that are not insured against, known as 'Exclusions'. So, for example, if someone buys insurance in case their car is stolen, the insurance may have an exclusion if the insured was careless and left the keys in the car, making it easy for the car to be stolen. In return, the insurer receives a fee from the insured, and this is called the Insurance 'Premium'. The insurer will collect premiums on a number of policies and pool these funds, which it then invests to make the pot of money grow. Should any insured person make a claim on a policy, the insurer will pay out on that claim from the pool of funds. The insurer is in business to make a profit and will be hoping that the total premiums it receives in any one year, together with any money it can make by investing the money, will exceed the total claims it has to pay out. Insurers in the United Kingdom and in most countries are very closely supervised to make sure that they do keep enough money to pay all their claims. To be included in an insurance policy, a risk must be capable of being measured in monetary terms. It must also be something that is not certain to happen. So to take a very simple example, you cannot insure against the risk that the sun is going to set. That is a certainly going to happen and it is not something for which you can buy insurance. Also the insured person must have a direct interest in any loss – you cannot take out life insurance on the life of a complete stranger, for example. The insurer will look at all the circumstances surrounding a risk before deciding whether or not to provide insurance cover against it, and this whole process is called 'Underwriting'. Underwriters are the specialists employed by the insurer to carry out this task and they will want to understand a number of things about the risk such as how likely is it to happen, what steps are already being taken to reduce the risk and what are the financial consequences of it happening? The underwriters at Lloyd's are among the best in the world. The risks that they cover are usually brought into the Lloyd's market by brokers, and the underwriters and brokers together will use their considerable knowledge and expertise to agree the right insurance cover at the right price and on the right terms. Economic function whose end result is to provide compensation for damage to property and persons, by assuming responsibility for certain risks and paying compensation. By extension, industry consisting of business entities that play this role. The right to insurance compensation, formalized by a contract between the insurer and the insured, is given in exchange for payment of an insurance premium, which may be paid by the insured or on the insured's behalf by a third party. / 1945 Акт МэКэрэна-Фёгасэна (McCarran-Ferguson Act). , включая Акт Грэма-Лыча-Блайли от 1999 (Gramm-Leach-Bliley Act of 1999) и Ю.Эс.Эй. Пэйтчриэт Акт от 2002 (2002 USA PATRIOT Act), . Под Страхованием понимается система мероприятий по созданию денежного (страхового) фонда за счёт взносов его участников, из средств которого возмещается ущерб, причинённый стихийными бедствиями, несчастными случаями, а также выплачиваются иные денежные суммы в связи с наступлением определённых событий. Страхование, система мероприятий по созданию денежного (страхового) фонда, из средств которого производится возмещение ущерба и выплата иных денежных сумм в результате стихийных бедствий, несчастных случаев, наступления других событий. Страхование, как указывал Карл Маркс, составляет экономическую необходимость, так как общественное производство нуждается в средствах, предназначенных для покрытия чрезвычайных убытков, вызываемых случайностями и силами природы (смотрите Карл Маркс и Фридрих Энгельс, Соч., 2 Изд., Т. 24, С. 199). Институт страхования

возник в средние века, первоначально в торговом мореплавании в связи с присущими ему опасностями. Впоследствии страхование охватило другие области. В зависимости от объекта страхование подразделяется на имущественное (например, страхование строений, посевов, сельскохозяйственных животных, домашнего имущества, средств транспорта) и личное (страхование жизни, здоровья, трудоспособности). В бывшем Союзе Советских Социалистических Республик (СССР) государственное страхование – новый общественно-исторический тип страхования, его основы были заложены национализацией страхового дела, необходимость которой обосновал Владимир Ильич Ленин. Впервые страхование стало монополией государства. Общее руководство страховым делом было возложено на Министерство Финансов СССР, при котором на началах хозрасчёта действовало Главное Управление Государственного Страхования – Госстрах СССР. Для выполнения страховых операций на внешнеторговом рынке был образован на акционерных началах Ингосстрах. Порядок и условия страхования, виды, объекты страхования определялись законодательством Союза ССР. Отдельные виды страхования детально регулировали правила и инструкции, утверждаемые Министерством Финансов СССР. Законодательством союзных республик разрешались только вопросы страхования, отнесённые к их ведению законодательством СССР. Сторонами страхового правоотношения являлись страховая организация (Госстрах) и страхователь (колхозы, другие кооперативные и общественные организации, граждане). Страхование осуществлялось в форме обязательного (когда страховые отношения возникали исключительно в силу закона в обязательном порядке) и добровольного (на основании договора между страховой организацией и страхователем). Страхователь обязуется уплачивать Госстраху установленные платежи, а Госстрах – при наступлении страхового случая уплатить страхователю или иному лицу при имущественном страховании страховое возмещение, при личном – страховую сумму. Перечень имущества, подлежащего обязательному страхованию и могущего быть предметом дополнительного добровольного страхования, устанавливается нормативными актами, которые регулируют порядок и условия данного вида страхования. Государственное имущество, по общему правилу, не страхуется – возмещение ущерба, причинённого стихийными бедствиями и иными обстоятельствами имуществу, находящемуся в оперативном управлении государственных организаций, осуществляется за счёт государственного бюджета СССР. Государственное имущество, находящееся в пользовании кооперативных и общественных организаций, а также отдельных граждан, подлежит обязательному страхованию в соответствии с условиями (правилами) пользования им; оно может быть также застраховано и дополнительно по усмотрению организаций или граждан, несущих ответственность за сохранность и целостность этого имущества. Государственные организации могут страховать имущество колхозов, иных кооперативных и общественных организаций и граждан, принятое ими на хранение, комиссию, в ремонт, для переработки и тому подобное. Обязательному страхованию подлежат определённые виды имущества колхозов и межколхозных организаций (например, урожай сельскохозяйственных культур, сельскохозяйственные животные, домашняя птица, здания, сооружения, транспортные средства), а также граждан (например, строения, крупный рогатый скот). В законе содержится подробный перечень опасностей, от наступления которых страхуется имущество. Размер страхового возмещения заранее определён законом и не может быть изменён соглашением сторон. Прочее имущество кооперативных и общественных организаций и граждан страхуется в добровольном порядке. Договор страхования совершается только в письменной форме, оформляется выдаваемым Госстрахом Страховым Свидетельством, Страховой Квитанцией или Страховым Полисом. Страхователь обязан:- уплачивать Госстраху страховые платежи; содержать застрахованное имущество в надлежащем состоянии; принимать все возможные меры к предупреждению гибели или повреждения застрахованного имущества; во время и после стихийного бедствия или аварии принимать меры к спасению застрахованного имущества и к предотвращению дальнейшего его повреждения и так далее. При наступлении страхового случая Госстрах обязан составить Акт о Гибели или Повреждении Имущества, определить размер страхового возмещения и выплатить его в установленные сроки. В порядке обязательного личного страхования производится страхование пассажиров от несчастных случаев на железнодорожном и водном транспорте (кроме пригородного сообщения), на воздушном транспорте, автомобильном транспорте общего пользования (кроме путей внутриобластного сообщения, а в республиках, где нет областного деления, – внутриреспубликанского сообщения). Застрахованными считаются все пассажиры с момента объявления посадки. Соответствующий страховой сбор взимается при продаже билетов, проездных и иных документов. При добровольном личном страховании предметом страхования также являются жизнь и здоровье застрахованного. При заключении договора личного страхования учитываются возраст гражданина, состояние его здоровья и так далее. Существуют различные виды договора личного страхования:- смешанного страхования жизни (в том числе с условием выплаты двойной страховой суммы), страхования от несчастных случаев, пожизненного страхования на случай смерти и утраты трудоспособности, страхования пенсий, страхования детей, страхования работников за счёт государственных, кооперативных и общественных организаций. Договор личного страхования может быть заключён в пользу какого-либо третьего лица. Договор вступает в силу после взноса первого платежа. Страховая сумма выплачивается Госстрахом независимо от причитающихся страхователю или иному лицу, в пользу которого заключён договор, выплат по государственному социальному страхованию, социальному обеспечению, сумм, причитающихся ему в возмещение причинённого вреда. Страхование в капиталистических странах осуществляется по договорам имущественного и личного страхования крупными капиталистическими страховыми предприятиями (смотрите Страховые Монополии) и является важным инструментом финансирования банковского капитала. Большую роль в развитии страхования и концентрации страхового дела в руках монополий играет перестрахование – соглашение между страховыми обществами, по которому одно страховое предприятие обязуется возместить другому страховому предприятию сумму (или её часть), выплаченную последним клиенту по договору страхования. Будучи вызвано к жизни концентрацией капитала, перестрахование ускоряет процесс этой концентрации. Участие буржуазного государства в регулировании страхового дела ограничивается контролем специальных государственных органов за образованием, деятельностью и ликвидацией страховых предприятий, установлением условий страхования и так далее. В большинстве буржуазных стран изданы специальные законы о надзоре за страховыми предприятиями. Страхование – система, в рамках которой частные лица и компании, беспокоящиеся относительно потенциальных опасных ситуаций, вносят средства в страховые компании, которые затем возмещают им понесённый ущерб в случае наступления страхового события. Страховые компании получают прибыль от инвестирования вносимых ими страховых взносов. Некоторые наиболее распространённые виды страхования покрывают коммерческие риски, автомобили, дома, лодки, заработную плату работников и здоровье. Страхование жизни гарантирует выплату средств бенефициарам в случае смерти застрахованного лица. В широком экономическом значении страхование переносит риск с индивидов на более широкую группу лиц, которая более надёжно способна компенсировать убытки.

INSURANCE ASSET = СТРАХОВОЙ АКТИВ – Insurance Asset is an insurer's net contractual rights under an insurance contract.

INSURANCE BROKER = СТРАХОВОЙ БРОКЕР – Insurance Broker is an individual or firm that acts as agent for an individual, body or firm in arranging insurance cover and in presenting claims under such cover. At present only Lloyd's brokers may arrange cover directly with or on behalf of underwriters in the underwriting room. Insurance Broker is an insurance intermediary who advises their clients and arranges their insurances. Although they act as an agent for their client, they will normally be remunerated by a commission (brokerage) from the insurer. An insurance broker is a full-time specialist in handling insurance business who belongs to a professional

body and complies with their code of practice. Also known as Insurance Agent. / Лойд. Страховой Брокер – независимый брокер, который находит для клиента страховую компанию с лучшими условиями покрытия риска и с меньшими для клиента затратами. Страховые брокеры работают не на страховые компании, а на покупателей страховых полисов. Они постоянно следят за страховыми компаниями, чтобы иметь возможность предложить своим клиентам наиболее выгодные условия.

INSURANCE CERTIFICATE = СТРАХОВОЕ СВИДЕТЕЛЬСТВО (или СТРАХОВОЙ СЕРТИФИКАТ) – Insurance Documents:- Apart from the insurance policy, which is the agreement between insurer and insured party and which sets in details the risks covered, the conditions and the rates, the following other documents are currently used in the insurance market:- (i) Insurance Certificates:- a furtherance of the policy to cover consignments in transit, to describe them, the journeys, the amounts covered, agents to contact at destination and other details relevant to the insurance cases. Insurance certificates are signed by the underwriters and the original certificate is normally required in the set of documents to be presented to a bank for a transaction covered by a letter of credit. When not required for banking purposes and to cut down on administrative work, certificates can be replaced by much simpler notices of insurance where only the agent to contact at destination need to be added. This can be arranged by an agreement between the holder of a long-term-agreement and the insurance company. (ii) Survey Report:- the document established by the insurance company's agents at destination, when consignments are received in bad order. Since survey reports are costly, they should be requested only when it is expected that the loss or damage will exceed the figure considered reasonable by the underwriters or when a survey report is registered by the insurer. The survey report will be the basis of settlement of an insurance claim and it can be accompanied by an estimate of repairs approved by the surveyor when applicable. The fees levied by the surveyor for establishing his report is payable by the person/party who requested his attendance, but are reimbursable by the insurance company. This certificate is used to assure the consignee that insurance is provided to cover loss of or damage to the cargo while in transit. Insurance Certificate is a document which assures the consignee that insurance is provided to cover loss or damage to the cargo while in transit. A certificate issued by an insurer to a shipper (or other party) as evidence that a shipment of merchandise is covered under a marine policy. / Страховой Сертификат – документ, содержащий условия договора страхования, заменяет страховой полис.

INSURANCE COMPANY = СТРАХОВАЯ КОМПАНИЯ – Insurance Companies may be classified into two groups:- (i) Life Insurance Companies, which sell life insurance, annuities and pensions products; and (ii) Non-Life, General, or Property/Casualty Insurance companies, which sell other types of insurance. General insurance companies can be further divided into these sub categories:- (a) Standard Lines; and (b) Excess Lines. In most countries, life and non-life insurers are subject to different regulatory regimes and different tax and accounting rules. The main reason for the distinction between the two types of company is that life, annuity, and pension business is very long-term in nature – coverage for life assurance or a pension can cover risks over many decades. By contrast, non-life insurance cover usually covers a shorter period, such as one year. In the United States, standard line insurance companies are insurers that have received a license or authorization from a state for the purpose of writing specific kinds of insurance in that state, such as automobile insurance or homeowners' insurance. They are typically referred to as 'Admitted' Insurers. Generally, such an insurance company must submit its rates and policy forms to the state's insurance regulator to receive his or her prior approval, although whether an insurance company must receive prior approval depends upon the kind of insurance being written. Standard line insurance companies usually charge lower premiums than excess line insurers and may sell directly to individual insureds. They are regulated by state laws, which include restrictions on rates and forms, and which aim to protect consumers and the public from unfair or abusive practices. These insurers also are required to contribute to state guarantee funds, which are used to pay for losses if an insurer becomes insolvent. Excess line insurance companies (also known as Excess and Surplus) typically insure risks not covered by the standard lines insurance market, due to a variety of reasons (e.g., new entity or an entity that does not have an adequate loss history, an entity with unique risk characteristics, or an entity that has a loss history that does not fit the underwriting requirements of the standard lines insurance market). They are typically referred to as Non-Admitted or Unlicensed Insurers. Non-admitted insurers are generally not licensed or authorized in the states in which they write business, although they must be licensed or authorized in the state in which they are domiciled. These companies have more flexibility and can react faster than standard line insurance companies because they are not required to file rates and forms. However, they still have substantial regulatory requirements placed upon them. Most states require that excess line insurers submit financial information, articles of incorporation, a list of officers, and other general information. They also may not write insurance that is typically available in the admitted market, do not participate in state guarantee funds (and therefore policyholders do not have any recourse through these funds if an insurer becomes insolvent and cannot pay claims), may pay higher taxes, only may write coverage for a risk if it has been rejected by three different admitted insurers, and only when the insurance producer placing the business has a surplus lines license. Generally, when an excess line insurer writes a policy, it must, pursuant to state laws, provide disclosure to the policyholder that the policyholder's policy is being written by an excess line insurer. On July 21, 2010, President Barack Obama signed into law the Nonadmitted and Reinsurance Reform Act of 2010 ('NRRA'), which took effect on July 21, 2011 and was part of the Dodd-Frank Wall Street Reform and Consumer Protection Act. The NRRA changed the regulatory paradigm for excess line insurance. Generally, under the NRRA, only the insured's home state may regulate and tax the excess line transaction. Insurance companies are generally classified as either mutual or proprietary companies. Mutual companies are owned by the policyholders, while shareholders (who may or may not own policies) own proprietary insurance companies. Demutualization of mutual insurers to form stock companies, as well as the formation of a hybrid known as a Mutual Holding Company, became common in some countries, such as the United States, in the late XX century. However, not all states permit mutual holding companies. Other possible forms for an insurance company include reciprocals, in which policyholders reciprocate in sharing risks, and Lloyd's organizations. Insurance companies are rated by various agencies such as A.M. Best (A.M. Best Company, Inc., headquartered in Oldwick, State of New Jersey (NJ), the United States). The ratings include the company's financial strength, which measures its ability to pay claims. It also rates financial instruments issued by the insurance company, such as bonds, notes, and securitization products. Reinsurance companies are insurance companies that sell policies to other insurance companies, allowing them to reduce their risks and protect themselves from very large losses. The reinsurance market is dominated by a few very large companies, with huge reserves. A reinsurer may also be a direct writer of insurance risks as well. Captive insurance companies may be defined as limited-purpose insurance companies established with the specific objective of financing risks emanating from their parent group or groups. This definition can sometimes be extended to include some of the risks of the parent company's customers. In short, it is an in-house self-insurance vehicle. Captives may take the form of a 'pure' entity (which is a 100% subsidiary of the self-insured parent company); of a 'mutual' captive (which insures the collective risks of members of an industry); and of an 'association' captive (which self-insures individual risks of the members of a professional, commercial or industrial association). Captives represent commercial, economic and tax advantages to their sponsors because of the reductions in costs they help create and for the ease of insurance risk management and the flexibility for cash flows they generate. Additionally, they may provide coverage of risks which is neither available nor offered in the traditional insurance market at reasonable prices. The types of risk that a captive can underwrite for their parents include property damage, public and product liability, professional indemnity, employee benefits, employers' liability, motor and medical aid expenses. The captive's exposure to such risks may be limited by the use of reinsurance. Captives are becoming an increasingly important component of the risk management and risk financing strategy of

their parent. This can be understood against the following background:- (i) heavy and increasing premium costs in almost every line of coverage; (ii) difficulties in insuring certain types of fortuitous risk; (iii) differential coverage standards in various parts of the world; (iv) rating structures which reflect market trends rather than individual loss experience; and (v) insufficient credit for deductibles and/or loss control efforts. There are also companies known as Insurance Consultants. Like a mortgage broker, these companies are paid a fee by the customer to shop around for the best insurance policy amongst many companies. Similar to an insurance consultant, an 'Insurance Broker' also shops around for the best insurance policy amongst many companies. However, with insurance brokers, the fee is usually paid in the form of commission from the insurer that is selected rather than directly from the client. Neither insurance consultants nor insurance brokers are insurance companies and no risks are transferred to them in insurance transactions. Third party administrators are companies that perform underwriting and sometimes claims handling services for insurance companies. These companies often have special expertise that the insurance companies do not have. The financial stability and strength of an insurance company should be a major consideration when buying an insurance contract. An insurance premium paid currently provides coverage for losses that might arise many years in the future. For that reason, the viability of the insurance carrier is very important. In recent years, a number of insurance companies have become insolvent, leaving their policyholders with no coverage (or coverage only from a government-backed insurance pool or other arrangement with less attractive payouts for losses). A number of independent rating agencies provide information and rate the financial viability of insurance companies. Insurance Company is the party covering the risks of the issued goods and/or services that are insured. / 21 Июля 2010 Президент США Барак Обама (Barack Obama) и был частью Акта Дада-Фрэнька (Dodd-Frank Wall Street Reform and Consumer Protection Act). Мьютчуол Холдинь Кампэни (Mutual Holding Company). Эй.Эм. Бэст (Эй.Эм. Бэст Кампэни, Инк.) (A.M. Best (A.M. Best Company, Inc.)). Сторона, покрывающая риски за отпущенные товары и/или услуги, являющиеся застрахованными.

INSURANCE COMPONENT = СТРАХОВОЙ КОМПОНЕНТ (или КОМПОНЕНТ СТРАХОВАНИЯ) – Insurance Component is a contractual component that would be a separate instrument. / Контрактный компонент, который мог бы быть отдельным инструментом.

INSURANCE CONTRACT = ДОГОВОР СТРАХОВАНИЯ (или СТРАХОВОЙ ДОГОВОР, или КОНТРАКТ СТРАХОВАНИЯ) – Insurance Contract is a contract under which one party (the insurer) accepts significant risk from another party (the policyholder) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder. Determines what insurance coverage is in place and determines the legal framework under which the content of an insurance policy is enforced. / Под Страховым Полисом, от Французского слова Police, от Итальянского слова Polizza, означающее Квитанция или Расписка, понимается документ (как правило, именной), удостоверяющий заключение договоров личного или имущественного страхования, а также отношения по государственному обязательному страхованию. В бывшем Союзе Советских Социалистических Республик (СССР) при добровольном страховании страховой полис вручался страхователю (гражданину или организации, в интересах которых осуществлялось страхование) вслед за уплатой им первого страхового взноса. При обязательном страховании страховой полис выдавался после определения органами Госстраха состава имущества, подлежащего страхованию, его оценки, исчисления размера страховых платежей. В страховом полисе фиксировались основные условия страхования:- вид, объект, начало и конец действия страхования, размер страховой суммы, сведения о страхователе, страховщике и другое.

INSURANCE CONTRACTS = ДОГОВОРЫ СТРАХОВАНИЯ (или СТРАХОВЫЕ ДОГОВОРЫ, или КОНТРАКТЫ СТРАХОВАНИЯ) – IFRS 4 (short the International Financial Reporting Standards No. 4) Insurance Contracts – the objective of this IFRS is to specify the financial reporting for insurance contracts by any entity that issues such contracts (described in this IFRS as an insurer) until the International Accounting Standards Board (IASB) completes the second phase of its project on insurance contracts. In particular, this IFRS requires:- (a) limited improvements to accounting by insurers for insurance contracts; and (b) disclosure that identifies and explains the amounts in an insurer's financial statements arising from insurance contracts and helps users of those financial statements understand the amount, timing and uncertainty of future cash flows from insurance contracts. An insurance contract is a contract under which one party (the insurer) accepts significant insurance risk from another party (the policyholder) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder. The IFRS applies to all insurance contracts (including reinsurance contracts) that an entity issues and to reinsurance contracts that it holds, except for specified contracts covered by other IFRSs. It does not apply to other assets and liabilities of an insurer, such as financial assets and financial liabilities within the scope of IAS 39 Financial Instruments:- Recognition and Measurement. Furthermore, it does not address accounting by policyholders. The IFRS exempts an insurer temporarily from some requirements of other IFRSs, including the requirement to consider the Framework in selecting accounting policies for insurance contracts. However, the IFRS:- (a) prohibits provisions for possible claims under contracts that are not in existence at the reporting date (such as catastrophe and equalisation provisions); (b) requires a test for the adequacy of recognised insurance liabilities and an impairment test for reinsurance assets; and (c) requires an insurer to keep insurance liabilities in its balance sheet until they are discharged or cancelled, or expire, and to present insurance liabilities without offsetting them against related reinsurance assets. The IFRS permits an insurer to change its accounting policies for insurance contracts only if, as a result, its financial statements present information that is more relevant and no less reliable, or more reliable and no less relevant. In particular, an insurer cannot introduce any of the following practices, although it may continue using accounting policies that involve them:- (a) measuring insurance liabilities on an undiscounted basis; (b) measuring contractual rights to future investment management fees at an amount that exceeds their fair value as implied by a comparison with current fees charged by other market participants for similar services; and (c) using non-uniform accounting policies for the insurance liabilities of subsidiaries. The IFRS permits the introduction of an accounting policy that involves remeasuring designated insurance liabilities consistently in each period to reflect current market interest rates (and, if the insurer so elects, other current estimates and assumptions). Without this permission, an insurer would have been required to apply the change in accounting policies consistently to all similar liabilities. The IFRS requires disclosure to help users understand:- (a) the amounts in the insurer's financial statements that arise from insurance contracts; and (b) the amount, timing and uncertainty of future cash flows from insurance contracts. Xxxxx. The IASB and FASB continued their discussions on insurance contracts by considering the unit of account and separation of investment components from the insurance contract. Unit of account:- the IASB tentatively decided that:- (a) a portfolio of insurance contracts should be defined as contracts that are:- (i) subject to similar risks and priced similarly relative to the risk taken on; and (ii) managed together as a single pool; (b) the unit of account used to determine the residual margin and perform the onerous test should be the portfolio; (c) the unit of account used to release the residual margin should not be prescribed. However, the release of the residual margin should be performed in a manner consistent with the objective of releasing the residual margin over the coverage period to the period(s) in which the service is provided. Nine IASB members supported these decisions and five opposed them. The FASB tentatively decided that:- (a) a portfolio of insurance contracts should be defined as contracts that are:- (i) subject to similar risks and priced similarly relative to the risk taken on; and (ii) have similar duration and similar expected patterns of release of the single margin; (b) the unit of account used to determine and release the single margin, and perform the onerous contract test should be the portfolio. All FASB members agreed with these decisions. Separation of investment components from the insurance contract:- The IASB and

FASB tentatively decided that:- (a) an investment component in an insurance contract is an amount that the insurer is obligated to pay the policyholder or a beneficiary regardless of whether an insured event occurs. Nine IASB members and all FASB members supported this decision and five IASB members opposed it. (b) In the statement of financial position, insurers should not be required to present investment components separately from the insurance contract. However insurers should disclose both:- (i) the portion of the insurance contract liability that represents the aggregated portions of premiums received (and claims / benefits paid) that were excluded from the statement of comprehensive income; and (ii) the amounts payable on demand. Eleven IASB members and four FASB members agreed with these decisions and three IASB members and three FASB members opposed it. In addition, the IASB tentatively decided that insurers should exclude from the aggregate premium presented in the statement of comprehensive income the present value of the amounts that the insurer is obligated to pay to policyholders or their beneficiaries regardless of whether an insured event occurs, determined consistently with measurement of the overall insurance contract liability. Twelve IASB members supported this decision and two opposed it. The FASB did not vote on this issue. Both boards directed the staff to consider whether any investment components (as defined) are sufficiently distinct from the insurance component that they should be recognised separately and measured applying the financial instrument standard, rather than the insurance contracts standard. Next steps:- both boards will continue their discussion on insurance contracts in the week commencing 16 April 2012. / МСБУ 39 (сокращение для Международного Стандарта Бухгалтерского Учёта № 39) – .

INSURANCE INTERMEDIARY = ПОСРЕДНИК ПО СТРАХОВАНИЮ – Insurance Intermediary is a person through whom an insurance contract is effected. It normally refers to an insurance broker and/or an agent of an insurer such as a coverholder.

INSURANCE LIABILITY = СТРАХОВАЯ ОТВЕТСТВЕННОСТЬ – Insurance Liability:- an insurer's net contractual obligations under an insurance contract. / Чистые контрактные обязательства страховщика по контракту страхования. Страховая Ответственность – несение риска страховщиком.

INSURANCE–LINKED SECURITIES = ЦЕННЫЕ БУМАГИ КОМПАНИЙ СТРАХОВОГО СЕКТОРА – Insurance-Linked Securities:- in risk securitisation, bonds issued by an insurance or reinsurance company or corporation and purchased by institutional investors. The underlying risk of the bond is a peak risk, and the payment of interest and/or principal depends on the occurrence or severity of an insurance event.

INSURANCE OMBUDSMAN = УПОЛНОМОЧЕНЫЙ ПО ПРАВАМ ЧЕЛОВЕКА В ОБЛАСТИ СТРАХОВАНИЯ – In the United Kingdom, Insurance Ombudsman is an official body, financed by participating insurers, to whom unresolved complaints can be referred.

INSURANCE PREMIUM = СТРАХОВАЯ ПРЕМИЯ (или СТРАХОВОЙ ВЗНОС) – Insurance Premium is a payment made to secure insurance. The premium is compensation owed by the insured to the insurer in exchange for the risk assumed by the insurer. The premium covers the insurance company's estimated risk, administrative and other operating expenses, and profits. / Страховой Премией называется плата, которую страховщик взимает за страхование (принятие на себя ответственности за возможное повреждение или гибель судна); сумма страховой премии образуется от умножения ставки премии на страховую сумму (сумма, которая обозначается в договоре страхования и которая не может быть выше действительной стоимости судна на момент страхования). Тарифная или договорная ставка премии есть плата за страхование, выраженная в сотых или тысячных долях страховой суммы (в процентах или промилле от страховой суммы). Размер страховой премии зависит прежде всего от степени риска по страховой сделке и фиксируется в страховом полисе (insurance policy), который выдаётся страховщиком страхователю и подтверждает заключение сделки страхования. Страховая Премия:- выплаты, производимые владельцем страхового полиса. Размер премии устанавливается, исходя из вероятности риска потерь и конкуренции со стороны других страховщиков. Актуарий страховой компании определяет уровень риска для отдельных категорий страхователей, а затем при рассмотрении заявления конкретного страхователя сравнивает его риск с рисками категории таких страхователей в целом. Если держатель полиса не уплачивает страховой премии, то страхование или полис могут потерять законную силу. В случае приобретения полиса с объявленной денежной стоимостью клиент может выбрать полис с низкой номинальной стоимостью, по которому вносит все причитающиеся взносы, или продлить срочный полис.

INSURANCE PREMIUM TAX = НАЛОГ НА СТРАХОВУЮ ПРЕМИЮ – Insurance Premium Tax is the Finance Act 1994 introduced this new tax on most general insurance risks located in the United Kingdom. All amounts stated on documentation should make clear the amount of tax payable. Insurance premium tax is currently 5%.

INSURANCE RISK = СТРАХОВОЙ РИСК – Insurance Risk is a risk, other than financial risk, transferred from the holder of a contract to the issuer.

INSURANCE WITH AVERAGE CLAUSE = СТРАХОВАНИЕ С ОГОВОРКОЙ ОБ АВАРИИ – Insurance With Average Clause:- this type of clause covers merchandise if the damage amounts to three percent or more of the insured value of the package or cargo. If the vessel burns, sinks, collides, or sinks, all losses are fully covered. In marine insurance, the word average describes partial damage or partial loss.

INSURED = СТРАХОВАТЕЛЬ (или ЗАСТРАХОВАННОЕ ЛИЦО, или ЗАСТРАХОВАННЫЙ) – Insured is the person, firm or company insured under the policy. A person who is insured under a contract of insurance. Where there is one insured this person may also be referred to as the Policyholder. Insured is the person whose risk is transferred and shared; the party to an insurance agreement whom the insurer agrees to indemnify for losses, provide benefits for, or render services to. Also known as Assured. / Застрахованное Лицо или Застрахованный или Страхователь – владелец страхового полиса. Частное лицо, группа людей или собственность, которые имеют право или к которым может быть применено право на страховое покрытие по страховому полису (insurance policy). В полисе чётко указывается, возмещение каких убытков гарантируется страховщиком. Страхователем может выступать частное лицо, купившее полис страхования жизни, группа лиц в групповом полисе страхования жизни, приобретённом компанией от лица своих работников. Полис страхования домовладельцев (homeowner's insurance policy) предусматривает страхование собственности домовладельцев, такой, как дом или имущество.

INSURED DEPOSITORY INSTITUTION = ЗАСТРАХОВАННОЕ ДЕПОЗИТАРНОЕ УЧРЕЖДЕНИЕ – In the United States, Insured Depository Institution is a depository institution benefitting from federal deposit insurance. Under existing law, all federally-chartered and most state-chartered depository institutions must have federal deposit insurance. Federal deposit insurance funds currently guarantee all deposits at federally insured institutions up to USD250 000.00 per depositor.

INSURED EVENT = ЗАСТРАХОВАННЫЙ СЛУЧАЙ (или ЗАСТРАХОВАННОЕ СОБЫТИЕ, или СТРАХОВОЙ СЛУЧАЙ) – Insured Event is an uncertain future event that is covered by an insurance contract and creates insurance risk. / Неопределённое событие в будущем, которое покрывается контрактом страхования (договором страхования) и создаёт страховой риск.

INSURED PERIL = ЗАСТРАХОВАННАЯ УГРОЗА (или ЗАСТРАХОВАННАЯ ОПАСНОСТЬ) – Insured Peril is a harmful event which is covered under a contract of insurance. / Событие, приводящее к ущербу, которое покрывается контрактом страхования (договором страхования).

INSURED VALUE = ЗАСТРАХОВАННАЯ СТОИМОСТЬ (или СТРАХОВАЯ СТОИМОСТЬ) – Insured Value:- usually computed by adding the invoice cost, guaranteed freight, other costs, and insurance premium plus a percentage, commonly 10%. This usually represents landed value. / Застрахованная Стоимость или Страховая Стоимость рассчитывается сложением стоимости, указанной в счёте-фактуре, гарантированного фрахта, иных расходов и страховой премии плюс процент от этой суммы, как правило порядка 10%. Обычно отражает стоимость по выгрузке. Добавляемые к документально подтверждённой сумме 10% предполагают под собой сумму упущенной выгоды и расходов на всевозможные разбирательства с партнёрами на случай проявления страхового риска и нанесения материального ущерба застрахованному имуществу или грузу.

INSURER = СТРАХОВЩИК – Insurer is an insurance company or Lloyd's underwriter who, in return for a premium, agrees to provide indemnity in the event of a specified loss suffered by the person paying the premium as a result of some accident or occurrence. The party that has an obligation under an insurance contract to compensate a policyholder if an insured event occurs. Insurer is a provider of insurance. If the insurance is underwritten at Lloyd's the insurer(s) will be the members of one or more syndicates. If the insurance is not underwritten at Lloyd's the insurer(s) will be one or more insurance companies. Some insurances may be underwritten by syndicates and insurance companies. Insurer is the company or group offering protection through the sale of an insurance policy to an insured. The party to an insurance agreement who undertakes to indemnify for losses, provide pecuniary benefits, or render services. / Лойд. Компания или группа, предлагающая защиту посредством продажи страхователю страхового полиса. Сторона в договоре о страховании, которая принимает на себя обязательство застраховать от возможных убытков, обеспечить денежными выплатами, или оказать услуги.

INSURF = INTERNATIONAL NETWORK ON SOIL FERTILITY AND SUSTAINABLE RICE FARMING

INTA = INSTITUTO NACIONAL TECNOLOGIA AGROPECUARIA

INTA® = INTERNATIONAL TRADEMARK ASSOCIATION

INTAGLIO = ИНТАЛИЯ – Intaglio is:- (1) a printing style in which the design is cut into the surface of the cylinder and is thus below the surface. (2) A lustrous, brocade pattern knitted in a tricot fabric. / Под Инталией, от Итальянского слова Intaglio, означающее Резьба, понимается резной камень (гемма) с углублённым изображением. Инталии служили главным образом печатями. Появились в 4-м тысячелетии до Нашей Эры (в странах Древнего Востока), широко распространились в период античности.

INTAKE AIR TEMPERATURE = ТЕМПЕРАТУРА ЗАБОРНОГО ВОЗДУХА – Intake Air Temperature is a temperature of the air as it leaves the cooling mechanism and is blown into the refrigerated hold/container. The intake air temperature is regulated during chilled operation.

INTANGIBLE ASSET = НЕМАТЕРИАЛЬНЫЙ АКТИВ – Intangible Asset is an identifiable non-monetary asset without physical substance. Most such assets consist of deferred acquisition costs and contractual rights acquired in a business combination or a portfolio transfer. Intangible fixed assets include mineral exploration, computer software and entertainment, literary or artistic originals. Expenditure on them is part of gross fixed capital formation. They exclude non-produced intangible assets such as patented entities, leases, transferable contracts and purchased goodwill, expenditure on which would be intermediate consumption. Non-physical assets giving an entity future economic benefits arising from some exclusive, preferred, or protected position, e.g., franchises, goodwill, patents, or trademarks. Intangible Asset is an asset lacking physical substance, such as goodwill, or representing a right granted by the government, such as a patent or trademark, or by another company, such as a franchise, with a life of more than one year. The opposite of Tangible Asset. / , например, . Нематериальный Актив – права или нематериальные ресурсы, которые, как считается, дают фирме преимущество на рынке. Подобные активы включают авторские права, патенты, торговые марки (trademarks), репутацию (goodwill), компьютерные программы, капитализированные расходы на рекламу, организационные расходы, лицензии, договоры аренды (leases), франшизы (franchises), разрешения на поиск ископаемых, а также на привоз (или импорт) и вывоз (или экспорт).

INTANGIBLE ASSETS = НЕМАТЕРИАЛЬНЫЕ АКТИВЫ – IAS 38 (short for International Accounting Standard No. 38) Intangible Assets – The objective of this Standard is to prescribe the accounting treatment for intangible assets that are not dealt with specifically in another Standard. This Standard requires an entity to recognise an intangible asset if, and only if, specified criteria are met. The Standard also specifies how to measure the carrying amount of intangible assets and requires specified disclosures about intangible assets. An intangible asset is an identifiable non-monetary asset without physical substance. Recognition and measurement:- The recognition of an item as an intangible asset requires an entity to demonstrate that the item meets:- (a) the definition of an intangible asset; and (b) the recognition criteria. This requirement applies to costs incurred initially to acquire or internally generate an intangible asset and those incurred subsequently to add to, replace part of, or service it. An asset meets the identifiability criterion in the definition of an intangible asset when it:- (a) is separable, ie is capable of being separated or divided from the entity and sold, transferred, licensed, rented or exchanged, either individually or together with a related contract, asset or liability; or (b) arises from contractual or other legal rights, regardless of whether those rights are transferable or separable from the entity or from other rights and obligations. An intangible asset shall be recognised if, and only if:- (a) it is probable that the expected future economic benefits that are attributable to the asset will flow to the entity; and (b) the cost of the asset can be measured reliably. The probability recognition criterion is always considered to be satisfied for intangible assets that are acquired separately or in a business combination. An intangible asset shall be measured initially at cost. The cost of a separately acquired intangible asset comprises:- (a) its purchase price, including import duties and non-refundable purchase taxes, after deducting trade discounts and rebates; and (b) any directly attributable cost of preparing the asset for its intended use. In accordance with IFRS 3 Business Combinations, if an intangible asset is acquired in a business combination, the cost of that intangible asset is its fair value at the acquisition date. The only circumstances in which it might not be possible to measure reliably the fair value of an intangible asset acquired in a business combination are when the intangible asset arises from legal or other contractual rights and either:- (a) is not separable; or (b) is separable, but there is no history or evidence of exchange transactions for the same or similar assets, and otherwise estimating fair value would be dependent on immeasurable variables. Internally generated intangible assets:- Internally generated goodwill shall not be recognised as an asset. No intangible asset arising from research (or from the research phase of an internal project) shall be recognised. Expenditure on research (or on the research phase of an internal project) shall be recognised as an expense when it is incurred. An intangible asset arising from development (or from the development phase of an internal project) shall be recognised if, and only if, an entity can demonstrate all of the following:- (a) the technical feasibility of completing the intangible asset so that it will be available for use or sale; (b) its intention to complete the intangible asset and use or sell it; (c) its ability to use or sell the intangible asset; (d) how the intangible asset will generate probable future economic benefits. Among other things, the entity can demonstrate the existence of a market for the output of

the intangible asset or the intangible asset itself or, if it is to be used internally, the usefulness of the intangible asset. (e) the availability of adequate technical, financial and other resources to complete the development and to use or sell the intangible asset; and (f) its ability to measure reliably the expenditure attributable to the intangible asset during its development. Internally generated brands, mastheads, publishing titles, customer lists and items similar in substance shall not be recognised as intangible assets. The cost of an internally generated intangible asset for the purpose of paragraph 24 is the sum of expenditure incurred from the date when the intangible asset first meets the recognition criteria in paragraphs 21, 22 and 57. Paragraph 71 prohibits reinstatement of expenditure previously recognised as an expense. Expenditure on an intangible item shall be recognised as an expense when it is incurred unless:- (a) it forms part of the cost of an intangible asset that meets the recognition criteria; or (b) the item is acquired in a business combination and cannot be recognised as an intangible asset. If this is the case, this expenditure (included in the cost of the business combination) shall form part of the amount attributed to goodwill at the acquisition date (see IFRS 3 Business Combinations). Measurement after recognition:- An entity shall choose either the cost model or the revaluation model as its accounting policy. If an intangible asset is accounted for using the revaluation model, all the other assets in its class shall also be accounted for using the same model, unless there is no active market for those assets. Cost model:- After initial recognition, an intangible asset shall be carried at its cost less any accumulated amortisation and any accumulated impairment losses. Revaluation Model:- after initial recognition, an intangible asset shall be carried at a revalued amount, being its fair value at the date of the revaluation less any subsequent accumulated amortisation and any subsequent accumulated impairment losses. For the purpose of revaluations under this Standard, fair value shall be determined by reference to an active market. Revaluations shall be made with such regularity that at the balance sheet date the carrying amount of the asset does not differ materially from its fair value. An ‘active market’ is a market in which all the following conditions exist:- (a) the items traded in the market are homogeneous; (b) willing buyers and sellers can normally be found at any time; and (c) prices are available to the public. If an intangible asset’s carrying amount is increased as a result of a revaluation, the increase shall be credited directly to equity under the heading of revaluation surplus. However, the increase shall be recognised in profit or loss to the extent that it reverses a revaluation decrease of the same asset previously recognised in profit or loss. If an intangible asset’s carrying amount is decreased as a result of a revaluation, the decrease shall be recognised in profit or loss. However, the decrease shall be debited directly to equity under the heading of revaluation surplus to the extent of any credit balance in the revaluation surplus in respect of that asset. Useful life:- An entity shall assess whether the useful life of an intangible asset is finite or indefinite and, if finite, the length of, or number of production or similar units constituting, that useful life. An intangible asset shall be regarded by the entity as having an indefinite useful life when, based on an analysis of all of the relevant factors, there is no foreseeable limit to the period over which the asset is expected to generate net cash inflows for the entity. ‘Useful life’ is:- (a) the period over which an asset is expected to be available for use by an entity; or (b) the number of production or similar units expected to be obtained from the asset by an entity. The useful life of an intangible asset that arises from contractual or other legal rights shall not exceed the period of the contractual or other legal rights, but may be shorter depending on the period over which the entity expects to use the asset. If the contractual or other legal rights are conveyed for a limited term that can be renewed, the useful life of the intangible asset shall include the renewal period(s) only if there is evidence to support renewal by the entity without significant cost. To determine whether an intangible asset is impaired, an entity applies IAS 36 Impairment of Assets. Intangible assets with finite useful lives:- The depreciable amount of an intangible asset with a finite useful life shall be allocated on a systematic basis over its useful life. ‘Depreciable amount’ is the cost of an asset, or other amount substituted for cost, less its residual value. Amortisation shall begin when the asset is available for use, ie when it is in the location and condition necessary for it to be capable of operating in the manner intended by management. Amortisation shall cease at the earlier of the date that the asset is classified as held for sale (or included in a disposal group that is classified as held for sale) in accordance with IFRS 5 Non-current Assets Held for Sale and Discontinued Operations and the date that the asset is derecognised. The amortisation method used shall reflect the pattern in which the asset’s future economic benefits are expected to be consumed by the entity. If that pattern cannot be determined reliably, the straight-line method shall be used. The amortisation charge for each period shall be recognised in profit or loss unless this or another Standard permits or requires it to be included in the carrying amount of another asset. The ‘residual value’ of an intangible asset is the estimated amount that an entity would currently obtain from disposal of the asset, after deducting the estimated costs of disposal, if the asset were already of the age and in the condition expected at the end of its useful life. The residual value of an intangible asset with a finite useful life shall be assumed to be zero unless:- (a) there is a commitment by a third party to purchase the asset at the end of its useful life; or (b) there is an active market for the asset and:- (i) residual value can be determined by reference to that market; and (ii) it is probable that such a market will exist at the end of the asset’s useful life. The amortisation period and the amortisation method for an intangible asset with a finite useful life shall be reviewed at least at each financial year-end. If the expected useful life of the asset is different from previous estimates, the amortisation period shall be changed accordingly. If there has been a change in the expected pattern of consumption of the future economic benefits embodied in the asset, the amortisation method shall be changed to reflect the changed pattern. Such changes shall be accounted for as changes in accounting estimates in accordance with IAS 8. Intangible assets with indefinite useful lives:- An intangible asset with an indefinite useful life shall not be amortised. In accordance with IAS 36 Impairment of Assets, an entity is required to test an intangible asset with an indefinite useful life for impairment by comparing its recoverable amount with its carrying amount (a) annually, and (b) whenever there is an indication that the intangible asset may be impaired. The useful life of an intangible asset that is not being amortised shall be reviewed each period to determine whether events and circumstances continue to support an indefinite useful life assessment for that asset. If they do not, the change in the useful life assessment from indefinite to finite shall be accounted for as a change in an accounting estimate in accordance with IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors. / МСБУ 38 (сокращение для Международного Стандарта Бухгалтерского Учёта № 38) – . выработка (output). в соотвествии с МСБУ 8 Политики Ведения Бухгалтерского Учёта, Изменения в Оценках Бухгалтерского Учёта и Ошибки.

INTARSIA = ИНТАРСИЯ (или ИНКРУСТАЦИЯ) – Intarsia is a pattern knitted into a fabric. The term usually refers to a design on only one part of the fabric. / Под Интарсией, от Итальянского слова Intarsio, означающее Инкрустация, понимается вид инкрустации на деревянных предметах (мебели и так далее):- фигурные изображения или узоры из пластинок дерева, разных по текстуре и цвету, врезанных в поверхность деревянного предмета. Наивысшего расцвета интарсия достигла в Италии в XV веке.

INTEGRAL REFRIGERATED CONTAINER = ИНТЕГРАЛЬНЫЙ РЕФРИЖЕРАТОРНЫЙ КОНТЕЙНЕР – Integral Refrigerated Container is the insulated refrigerated container with an integrated refrigeration unit. Requires a three-phase power supply for operation.

INTEGRATED = ИНТЕГРИРОВАННАЯ – Integrated:- a company engaged in more than one aspect of the oil industry. For example, an integrated refiner-marketer is involved in both the refining and marketing of petroleum products. / В нефтяной отрасли экономики Интегрированной компанией считается компания, вовлечённая более чем в один аспект деятельности. Например, нефтеперегонное-сбытовое предприятие вовлечено как в процесс перегонки нефти, так и в сбыт нефтепродуктов.

INTEGRATED CARRIER = ИНТЕГРИРОВАННЫЙ ПЕРЕВОЗЧИК – Integrated Carrier:- carriers that have both air and ground fleets; or other combinations, such as sea, rail, and truck. Since they usually handle thousands of small parcels an hour, they are less expensive and offer more diverse services than regular carriers.

INTEGRATED CIRCUIT = ИНТЕГРИРОВАННАЯ СЕТЬ – Integrated Circuit (IC):- semiconductor chip in which many active or passive elements are fabricated and connected together on a continuous substrate, as opposed to discrete devices, such as transistors, resistors, capacitors and diodes that exist individually. Integrated Circuit is an electronic component designed to perform processing and/or memory functions. Intellectual Property with Regard to Integrated Circuits:- the question of the type of protection to be granted to the layout design or topography of integrated circuits is relatively new. Although prefabricated components of electrical circuitry have been used for a long time in the manufacture of electrical equipment (such as radios), large-scale integration of a multitude of electrical functions in a very small component became possible as a result of advances in semiconductor technology. Integrated circuits are manufactured in accordance with very detailed plans or layout designs. The layout designs of integrated circuits are creations of the human mind. They are usually the result of vast investment, of both expertise and financial resources. There is a continuing need for the creation of new layout designs that reduce the dimensions of existing integrated circuits and simultaneously increase their functions. The smaller an integrated circuit, the less material is needed for its manufacture, and the smaller the space needed to accommodate it. Integrated circuits are used in a wide range of products, including articles of everyday use, such as watches, television sets, washing machines and cars, as well as sophisticated computers and servers. Whereas creating a new layout design for an integrated circuit involves a major investment, it is possible to copy such a layout design for a fraction of that cost. Copying may be done by photographing each layer of an integrated circuit and preparing masks for the production of the integrated circuit on the basis of the photographs obtained. The high cost of the creation of such layout designs and the relative ease of copying are the main reasons why layout designs need protection. Layout designs of integrated circuits are not considered to be industrial designs in the sense of the laws providing for the registration of industrial designs. This is because they do not determine the external appearance of integrated circuits, but rather the physical location, within the integrated circuit, of each element with an electronic function. Moreover, layout designs of integrated circuits are not normally patentable inventions, because their creation usually does not involve an inventive step, although it requires a great deal of work by an expert. Further, copyright protection may not apply if national law determines that layout designs cannot be copyrighted. In response to the uncertainty surrounding the protection of layout designs, the Treaty on Intellectual Property in Respect of Integrated Circuits was adopted under WIPO's auspices on 1989-May-26. The Treaty has not entered into force but its substantive provisions have, to a large extent, been incorporated by reference in the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS), which was concluded in 1994. / Электронный компонент, разработанный для выполнения функций обработки и/или запоминания.

INTEGRATED CIRCUIT CARD = КАРТА ИНТЕГРИРОВАННОЙ СЕТИ – Integrated Circuit Card is an ID–1 card type (as specified in ISO 7810, ISO 7811 parts 1–5, ISO 7812, and ISO 7813) into which has been inserted one or more integrated circuits.

INTEGRATED COMPUTER ASSISTED SURVEILLANCE SYSTEM = ИНТЕГРИРОВАННАЯ СИСТЕМА КОМПЬЮТЕРНОЙ ПОДДЕРЖКИ НАДЗОРА – Integrated Computer Assisted Surveillance System accesses data from many sources to provide on-line stock watch and follow-up case studies.

INTEGRATED HANG TAG = ИНТЕГРИРОВАННЫЙ ПРИКРЕПЛЁННЫЙ ЯРЛЫК – Integrated Hang Tag:- this is an integration of price ticket information (UPC Price (short for the US Universal Product Code Price), etc) onto a hang tag. This process eliminates the need for having a hang tag plus a price ticket. The integrated hang tag allows you to merge the creative aspect of hang tags with the boring but necessary information from a traditional price ticket. Essentially, this allows for an updated version of an old fashion price ticket.

INTEGRATED LLOYD'S VEHICLE = ИНТЕГРИРОВАННОЕ В ЛОЙДЗ ПРЕДПРИЯТИЕ – Integrated Lloyd's Vehicle (ILV) is an arrangement in which a syndicate's capital is wholly provided by corporate members that are under the same ownership and control as the syndicate's managing agent. At the Corporation of Lloyd's, a company which owns a corporate member of a syndicate and the managing agent of that syndicate. / Корпорэйшэн оф Лойдз (Corporation of Lloyd's).

INTEGRATED PEST MANAGEMENT = КОМПЛЕКСНАЯ ОРГАНИЗАЦИЯ БОРЬБЫ С ВРЕДИТЕЛЯМИ (или ИНТЕГРИРОВАННОЕ УПРАВЛЕНИЕ ВРЕДИТЕЛЯМИ, или ИНТЕГРИРОВАННЫЙ КОНТРОЛЬ ЗА ВРЕДИТЕЛЯМИ) – Integrated Pest Management (IPM) is a strategy that combines different pest control measures and applies these at varying frequencies and degrees depending on the stage of an actual or potential infestation. As conditions change, control measures can be applied to meet the increased or decreased insect hazard, while always maintaining an appropriate level of base protection. Is an approach to pest control which recognises that maximum control of pests is likely to require several methods used in concert, including using cultural, biological, mechanical and chemical control methods. Integrated Pest Management (IPM) is an approach to weed, insect and disease management that uses all available control strategies to manage pest populations, keeping them below economic thresholds. This results in a cropping system that is more resilient to failures since it does not exclusively rely on the use of pesticides to control pests. For example, integrated weed management strategies include field scouting, tillage and nutrient management practices, crop rotations and cover crops. Ongoing monitoring of fields and crops, throughout the growing season and beyond, allows a farmer to observe issues and apply remediation in a timely manner to minimize any negative economic impact, while improving field operation efciencies. Some problems cannot be addressed when observed, but the information can still be recorded for future use. While traditionally feld scouting has been solely associated with pest monitoring and management, it has many other benefts, including:- (i) pre-planting field walks that identify drainage issues; (ii) post-planting field walks to look at equipment performance (planters delivering desired population, depth, placement across the entire unit); (iii) nutrient management (specific areas with nutrient deficiency symptoms); (iv) crop variety selection (evaluation of in-field comparisons of variety performance); and (v) scouting as part of soil sampling, which allows observation of field conditions (erosion, drainage) outside the cropping window. Integrated Pest Management (IPM) is a strategy that utilizes various tactics or control methods (cultural, biological, and chemical) in a harmonious way in which control actions are based on frequent monitoring of the pest. IPM depends on multidisciplinary ecological strategies to weigh the effect of each tactic, as part of the agroecosystem, in producing the least disturbance and yield loss in the long run.

INTEGRATED PRODUCER = ИНТЕГРИРОВАННЫЙ ПРОИЗВОДИТЕЛЬ – Integrated Producer is a producer who also owns the smelting and semi-fabricating facilities. Integrated Producer is a company that both makes and sells a product. Integrated producers extract, refine, and sell the oil themselves. Integrated Producer is a producer of metal who owns mines, smelters, and refineries, and sometimes also fabricating plants. Integrated Producer is a person whose job is to market a company's brand using different methods, such as the internet, television, and newspapers. / Плавка или Выплавка или Плавление (Smelting).

INTEGRATED TUG BARGE = БАРЖА, СОЧЛЕНЁННАЯ С БУКСИРОМ ТОЛКАЧЁМ – Integrated Tug Barge is a large barge of about 600 feet (182.88 meters) and 22 000 tons cargo capacity, integrated from the rear on to the bow of a tug purposely constructed

to push the barge. / Крупная баржа в 182.88 метра (600 футов) и грузоподъёмностью в 22 000 тонн, сочленённая сзади с носовой частью буксира толкача, специально сконструированной для буксировки барж методом толкания.

INTEGRATED UNIT = ИНТЕГРИРОВАННАЯ ЕДИНИЦА – Integrated Unit is a refrigerated container with integrated refrigeration unit.

INTEGRATED WEED MANAGEMENT = ИНТЕГРИРОВАННОЕ УПРАВЛЕНИЕ СОРНЯКАМИ (или ИНТЕГРИРОВАННЫЙ КОНТРОЛЬ ЗА СОРНЯКАМИ) – Integrated Weed Management is a set of management tools or options that, when used in conjunction with each other, result in a sustainable system of wholefarm management of Weeds.

INTEGRATE TECHNOLOGY PLAN NETWORK = XX – Integrate Technology Plan Network:- high-speed secure environment to integrate services and functions supporting the trading floor. / Высокоскоростная безопасная среда для интеграции услуг и функций, поддерживающих торговый пол.

INTEGRATING SPHERE = ИНТЕГРИРУЮЩАЯ СФЕРА – Integrating Sphere is an optical device used either to collect light reflected or transmitted from a specimen into a hemisphere or to provide isotropic irradiation of a specimen from a complete hemisphere, consisting of an approximately spherical cavity with apertures (ports) for admitting and detecting light, and usually having additional apertures over which sample and reference specimens are placed and for including or excluding the specularly reflected components (surface reflected light).

INTEGRATION = ИНТЕГРАЦИЯ – (1) Integration is a business concentration. There are two basic forms of business integration:- (i) in horizontal integration, a business expands through merger with or acquisitions of firms active in the same production stage for a given good; and (ii) in vertical integration, a business expands by acquisition of firms engaged in production stages or activities that are different from, but complement its own. / Термин Интеграция, от Латинского слова Integratio, означающее Восполнение или Восстановление, относится к процессу сближения, происходящий наряду с процессами их дифференциации. В экономике интеграция относится к форме интернационализации хозяйственной жизни, возникшей после Второй Мировой Войны. Она превратилась в объективный процесс переплетения национальных хозяйств и проведения согласованной межгосударственной экономической политики. Под интеграцией может также пониматься создание межгосударственных объединений (например, Европейское Экономическое Сообщество или Европейская Ассоциация Свободной Торговли) – замкнутых экономических блоков как новых форм борьбы за экономический раздел и передел мира. При этом, она может характеризоваться острыми противоречиями между региональными экономическими группировками и внутри их.

(2) Integration is a term that describes the degree in, and to, which one given company participates in all phases of the petroleum industry. / Интеграция – термин, который описывает уровень участия отдельно взятой компании во всех фазах нефтяной отрасли.

INTEGRATOR = ИНТЕГРАТОР (или ИНТЕГРИРУЮЩЕЕ УСТРОЙСТВО) – Integrator (in air transport) is a cargo company that offers its customers complete services:- pickup, airport-to-airport transport, delivery, and all the supporting ancillary services. Usually synonymous with a carrier that provides express services. / Интегратор, то же, что Интегрирующее Устройство. Интегрирующее Устройство или Интегратор, вычислительное устройство для определения интеграла, например, вида $Z = \int_{x0}^{x1} ydx$, где x и y – входные переменные. Входными переменными величинами могут быть механическое перемещение, давление, электрический ток (напряжение), число импульсов, температура и тому подобное. Интегрирующее устройство используется как самостоятельное вычислительное устройство при решении математических задач методами интегрирования; может служить элементом системы автоматического регулирования (интегрирующее звено); входить в состав вычислительной машины; использоваться для моделирования физического процесса и так далее. Так, например, гидравлическое интегрирующее устройство применяют для изучения неустановившихся процессов теплопередачи, фильтрации, диффузии. Исследуемые переменные отображаются уровнями жидкости в сосудах, сообщающихся через так называемые трубки сопротивлений. Если в трубках открыть краны, то начальные уровни жидкости перераспределятся в соответствии с заданными условиями. Отыскание значений выходной величины сводится в этом случае к измерению уровней жидкости в сосудах. Основным элементом электронных интегрирующих устройств непрерывного действия (аналоговых) является электрический конденсатор, напряжение на котором пропорционально интегралу от силы тока, протекающего через конденсатор в цепи обратной связи операционного усилителя. Такие интегрирующие устройства обычно входят в состав аналоговых вычислительных машин. Цифровые интегрирующие устройства входят в состав цифровых дифференциальных анализаторов, а также некоторых специализированных вычислительных устройств, например, интерполяторов. Интегрирование функции в цифровых интегрирующих устройствах заменяется операцией суммирования конечного числа последовательных значений этой функции (её приращений), заданных в дискретных точках. При этом входная и выходная числовая информация представляется в виде электрических импульсов, а интегрирование осуществляется суммированием этих импульсов. Выбирая цену импульсов достаточно малой, можно обеспечить практически необходимую точность при замене интеграла суммой; точность аналогового интегрирующего устройства ограничена.

INTEGRITY = ЦЕЛОСТНОСТЬ – (1) The property of ensuring that information is not altered in any way, either by accident or with fraudulent intent. Integrity is the characteristic of data whereby they have not been deleted, changed, added to or otherwise tampered with. / Под Целостностью понимается внутреннее единство объекта, его относительная автономность, независимость от окружающей среды.

(2) Integrity (of a consignment) is a composition of a consignment as described by its Phytosanitary Certificate or other officially acceptable document, maintained without loss, addition or substitution. / Целостность (груза):- состав груза в соответствии с описанием, данным в фитосанитарном сертификате или другом официально признаваемом документе, поддерживаемый без потерь, добавлений или замен.

INTEGUMENT = ИНТЕГУМЕНТ (или НАРУЖНЫЙ ПОКРОВ) – Integument is the something that covers or encloses, e.g., skin, husk, rind, outer layer of an insect. Integument:- the covering of an ovule or other structure. / Под Интегументом, от Латинского слова Integumentum, означающее Покрывало, понимается покров семяпочки, вырастающий из её центральной части – нуцеллуса. На верхушке семяпочки интегумент образует отверстие – пыльцевход или микропиле. При образовании семени интегумент превращается в семенную кожуру.

INTELLECTUAL PROPERTY = ИНТЕЛЛЕКТУАЛЬНАЯ СОБСТВЕННОСТЬ – Countries with innovative local industries almost invariably have laws to foster innovation by regulating the copying of inventions, identifying symbols and creative expressions. These laws encompass four separate and distinct types of intangible property, namely, patents, trademarks, copyrights and trade secrets, which are collectively referred to as Intellectual Property. Intellectual property shares many of the same characteristics associated with real and personal property. For example, intellectual property is an asset and as such it can bought, sold, licensed, exchanged or gratuitously given away like any other form of property. Further, the intellectual property owner has the right to prevent the

unauthorized use or sale of the property. The most noticeable difference between intellectual property and other forms of property, however, is that intellectual property is intangible, i.e. it cannot be defined or identified by its own physical parameters. It must be expressed in some discernible way to be protectable. Creations of the mind – creative works or ideas embodied in a form that can be shared or can enable others to recreate, emulate, or manufacture them. There are four ways to protect intellectual property:- (i) patents; (ii) trademarks; (iii) copyrights; or (iv) trade secrets. See also Copyright, Mask Work, Patent, Trademark, and Unfair Competition. Intellectual Property (IP) refers to creations of the mind:- inventions, literary and artistic works, and symbols, names, images, and designs used in commerce. IP is divided into two categories:- Industrial property, which includes inventions (patents), trademarks, industrial designs, and geographic indications of source; and Copyright, which includes literary and artistic works such as novels, poems and plays, films, musical works, artistic works such as drawings, paintings, photographs and sculptures, and architectural designs. Rights related to copyright include those of performing artists in their performances, producers of phonograms in their recordings, and those of broadcasters in their radio and television programs. For an introduction to IP for non-specialists, refer to:- (i) Understanding Copyright and Related Rights; (ii) Understanding Industrial Property; and (iii) World Intellectual Property Organization (WIPO) Intellectual Property Handbook (a comprehensive introduction to the policy, law and use of IP). The innovations and creative expressions of indigenous and local communities are also IP, yet because they are 'traditional' they may not be fully protected by existing IP systems. Access to, and equitable benefit-sharing in, genetic resources also raise IP questions. Normative and capacity-building programs are underway at WIPO to develop balanced and appropriate legal and practical responses to these issues. Term that describes inventions or other discoveries that have been registered with government authorities for the sale or use by their owner. Intellectual property rights is the ownership of the right to possess or otherwise use or dispose of products created by human ingenuity. The term Intellectual Property refers broadly to the creations of the human mind. Intellectual property rights protect the interests of creators by giving them property rights over their creations. The Convention Establishing the World Intellectual Property Organization (1967) does not seek to define intellectual property, but gives the following list of the subject matter protected by intellectual property rights:- (i) literary, artistic and scientific works; (ii) performances of performing artists, phonograms, and broadcasts; (iii) inventions in all fields of human endeavor; (iv) scientific discoveries; (v) industrial designs; (vi) trademarks, service marks, and commercial names and designations; (vii) protection against unfair competition; and (viii) 'all other rights resulting from intellectual activity in the industrial, scientific, literary or artistic fields'. Intellectual property relates to items of information or knowledge, which can be incorporated in tangible objects at the same time in an unlimited number of copies at different locations anywhere in the world. The property is not in those copies but in the information or knowledge reflected in them. Intellectual property rights are also characterized by certain limitations, such as limited duration in the case of copyright and patents. The importance of protecting intellectual property was first recognized in the Paris Convention for the Protection of Industrial Property in 1883 and the Berne Convention for the Protection of Literary and Artistic Works in 1886. Both treaties are administered by the World Intellectual Property Organization (WIPO). Countries generally have laws to protect intellectual property for two main reasons. One is to give statutory expression to the moral and economic rights of creators in their creations and to the rights of the public in accessing those creations. The second is to promote creativity and the dissemination and application of its results, and to encourage fair trade, which would contribute to economic and social development. The Two Branches of Intellectual Property:- Intellectual property is usually divided into two branches, namely Copyright and Industrial Property. Expression of the theory that ideas as well as tangible inventions and innovations are unique to one person or group and should be patentable. At the moment, intellectual property has no clear standing in the UK law, other than in Copyright. A term Intellectual Property refers to all assets of a company that have an intellectual nature to them. They are often referred to as 'Soft' Assets such as trademarks, logos, patents, software, trade secrets, brands, industrial designs, music, colors, designs, etc. They usually have intangible value unlike hard assets such as land, buildings, and equipment. / инновации . чертёж (drawing). Под Интеллектуальной Собственностью, от Латинского слова Intellectualis, означающее Умственный, понимаются творения человеческого разума:- изобретения, литературные и художественные произведения, символику, названия, изображения и образцы, используемые в торговле. Интеллектуальная собственность подразделяется на две категории:- промышленная собственность, которая включает изобретения (патенты), товарные знаки, промышленные образцы и географические указания источника происхождения; и авторское право, которое включает литературные и художественные произведения, такие как романы, стихи и пьесы, фильмы, музыкальные произведения; и произведения изобразительного искусства, такие как рисунки, картины, фотографии и скульптуры, а также архитектурные сооружения. Смежные права включают права артистов-исполнителей на их исполнения, права производителей фонограмм на их записи и права вещательных организаций на их радио и телевизионные программы. Приводимые ниже ссылки обеспечивают более подробную информацию по различным областям интеллектуальной собственности. Промышленная собственность:- (i) Изобретения (патенты); (ii) Товарные знаки; (iii) Промышленные образцы; (iv) Географические указания. Авторское право и смежные права:- (i) Авторское право; (ii) Смежные права; и (iii) Коллективное управление авторским правом. Интеллектуальная Собственность является юридическим понятием, охватывающим авторское право, изобретательское право и иные права, относящиеся к интеллектуальной деятельности. Интеллектуальная Собственность относится к разряду неосязаемой собственности, состоящей из четырёх отдельных и самостоятельных компонентов, а именно:- патентов, торговых или сервисных марок, авторских прав и торговых секретов. Как и обычная собственность, интеллектуальная собственность также обладает большинством аналогичных характеристик, то есть может продаваться, лицензироваться, обмениваться и тому подобному. Но она отличается от обычных видов собственности тем, что является неосязаемой, иными словами, интеллектуальная собственность не может быть определена или идентифицирована посредством своих собственных физических параметров. , то есть . В праве под Промышленной Собственностью понимается исключительное право на нематериальные ценности:- изобретение, промышленный образец, товарный знак и тому подобное. Регламентируется национальным законодательством и международными договорами, например, Парижская Конвенция 1883 об Охране Промышленной Собственности.

INTELLECTUAL PROPERTY RIGHTS = ПРАВА НА ИНТЕЛЛЕКТУАЛЬНУЮ СОБСТВЕННОСТЬ – Intellectual Property Rights are the rights relating to:- (i) literary, artistic and scientific works, (ii) performances of performing artists, phonograms and broadcasts, (iii) inventions in all fields of human endeavour, (iv) scientific discoveries, (v) industrial designs, (vi) trademarks, service marks and commercial names and designations, (vii) protection against unfair competition, and all other rights resulting from intellectual activity in the industrial, scientific, literary or artistic fields. This term is defined by the World Intellectual Property Organization. This is an overall definition, and Customs administrations should refer to the Agreement on the Trade-Related Aspects of Intellectual Property Rights, including trade in counterfeit goods (TRIPS), in their application of legislation relating to intellectual property rights.

INTELSAT = INTERNATIONAL TELECOMMUNICATIONS SATELLITE ORGANIZATION

INTENDED USE = ИСПОЛЬЗОВАНИЕ ПО ПРЕДНАЗНАЧЕНИЮ (или РАСШИРЕННОЕ ИСПОЛЬЗОВАНИЕ) – Intended Use is a declared purpose for which plants, plant products, or other regulated articles are imported, produced, or used.

INTENDED USER = ПРОДВИНУТЫЙ ПОЛЬЗОВАТЕЛЬ – Intended User is the actuary's principal or other individual or entity that the actuary anticipates and intends to use the work product at the time the actuary provides professional services to the principal.

INTENSIFIER = ИНТЕНСИФИКАТОР (или МУЛЬТИПЛИКАТОР, или УСИЛИТЕЛЬ) – Intensifier is a device which converts low pressure fluid power into higher pressure fluid power. / Мультипликатор давления. Под Интенсификатором, от Латинских слов Intensio, означающее Напряжение или Усилие, и Facio, означающее Делаю, понимается . Под Мультипликатором, от Латинского слова Multiplico, означающее Увеличиваю или Умножаю, понимается:- (1) устройство для увеличения частоты вращения вала машины, выполненное в виде обособленного механизма, обычно с повышающими зубчатыми передачами. Применяется редко, преимущественно в испытательных и лабораторных установках, когда частота вращения вала двигателя, приводящего в действие вал машины, недостаточна для выполнения требуемой операции. (2) Устройство для повышения давления жидкости, состоящее из двух соединённых между собой цилиндров. В цилиндре низкого давления находится поршень большого диаметра D, который соединён с плунжером малого диаметра d, входящим в цилиндр высокого давления. Получаемое давление p_B будет в D^2/d^2 раз больше подводимого p_H (в 40–60 раз). Мультипликаторы, главным образом гидравлические, имеют ограниченное применение в современных гидравлических прессах (для увеличения усилия прессования), в пневмогидравлических усилителях (в многоточечных зажимных устройствах металлорежущих станков). Усилитель в технике, устройство, в котором осуществляется увеличение энергетических параметров входного (управляющего) сигнала (воздействия) за счёт использования энергии вспомогательного (управляемого) источника. В усилителе, в отличие от преобразователя, связь между выходными и входными сигналами непрерывная и однозначная. По виду энергии управляющего сигнала и управляемого источника различают усилители электрические, магнитные, гидравлические, пневматические, механические. Усилитель – один из основных элементов устройств автоматики, телемеханики, вычислительной и измерительной техники, радиоэлектроники и связи, а также приводов рабочих машин (в электроэнергетике, машиностроении, на транспорте). Смотрите также Гидравлический Усилитель, Диэлектрический Усилитель, Квантовый Усилитель, Усилитель Постоянного Тока, Усилитель Электрических Колебаний, Фотоэлектрический Усилитель, и Электромашинный Усилитель.

INTENSITY = ИНТЕНСИВНОСТЬ (или ГЛУБИНА, или СИЛА) – Intensity is:- (1) the amount of energy per unit (space, charge, time). (2) The brilliance of a color. (3) The brightness of light.

INTENT TO USE = НАМЕРЕНИЕ ИСПОЛЬЗОВАТЬ – In the US patent and trademark law, a term Intent To Use (ITU) refers to the intent-to-use filing basis provided for in Trademark Act Section 1(b), 15 USC 1051(b). Applicants who have not yet used (in commerce that can be regulated by Congress) the mark they wish to register may file a trademark application under this filing basis. An 'intent to use' application must include a sworn statement (usually in the form of a declaration) that applicants have a bona fide intention to use the mark in commerce. A properly worded declaration is included in the trademark application form for registration. The applicant or a person authorized to sign on behalf of the applicant must sign the declaration. Applicants who file based on 'intent to use' must begin actual use of the mark in commerce and file an Allegation of Use before the United States Patent and Trademark Office (USPTO) will register the mark. See also definitions of 'Amendment to Allege Use' and 'Statement of Use'. There is an additional filing fee for the Allegation of Use.

INTERACTION = ВЗАИМОДЕЙСТВИЕ (или ВЗАИМООТНОШЕНИЕ) – Interaction is the differential response of two or more factors which is more than can be attributed to chance.

INTERAGENCY GROUP ON COUNTERTRADE = МЕЖАГЕНТСТКАЯ ГРУППА ПО ВСТРЕЧНОЙ ТОРГОВЛЕ (или МЕЖВЕДОМСТВЕННАЯ ГРУППА ПО ВСТРЕЧНОЙ ТОРГОВЛЕ) – Interagency Group On Countertrade (IGC):- (1) Establishment:- The President shall establish an interagency group on countertrade, to be composed of representatives of such departments and agencies of the United States as the President considers appropriate. The Secretary of Commerce shall be the chairman of the interagency group. (2) Functions:- it shall be the function of the interagency group to:- (A) review and evaluate:- (i) United States policy on countertrade and offsets, in light of current trends in international countertrade and offsets and the impact of those trends on the United States economy; (ii) the use of countertrade and offsets in United States exports and bilateral United States foreign economic assistance programs; and (iii) the need for and the feasibility of negotiating with other countries, through the Organization for Economic Cooperation and Development and other appropriate international organizations, to reach agreements on the use of countertrade and offsets; and (B) make recommendations to the President and the Congress on the basis of the review and evaluation referred to in subparagraph (A). (3) Sharing of information:- other departments and agencies of the United States shall provide to the interagency group such information available to such departments and agencies as the interagency group may request, except that the requirements, including penalties for violation thereof, for preserving the confidentiality of such information which are applicable to the officials, employees, experts, or consultants of such departments and agencies shall apply in the same manner to each member of the interagency group and to any other person performing any function under this subsection. In the United States, the Interagency Group on Countertrade (IGC), established in 1988 under Executive Order 12661, reviews policy and negotiates agreements with other countries on countertrade and offsets. The IGC operates at the Assistant Secretary level, with the Department of Commerce as chair. Membership includes 11 other agencies:- Agriculture, Defense, Energy, Justice, Labor, State, Treasury, the Agency for International Development, the Federal Emergency Management Agency, the US Trade Representative, and the Office of Management and Budget. / Межведомственная Группа По Встречной Торговле (МГВТ) была создана в 1988 с целью пересмотра и переоценки политики США в области встречной торговли и бартера в свете текущих тенденций в международной коммерции; возглавляется Департаментом Торговли США.

INTER ALIA = ИНТЭР АЛИА – Inter Alia:- Among Other Things. Latin:- Inter = Among + Alia, neuter accusative pl. of Alius = Other. Latin, Among other things. A phrase used in pleading to designate that a particular statute set out therein is only a part of the statute that is relevant to the facts of the lawsuit and not the entire statute. Inter alia is also used when reporting court decisions to indicate that there were other rulings made by the court but only a particular holding of the case is cited. / Интэр Алиа в переводе с Латинского языка – Ко Всему Прочему или Между Прочим или Среди Прочего.

INTERALLELIC = МЕЖАЛЛЕЛЬНОЕ – Interallelic:- between two different alleles of a gene, e.g., interallellic action is one which is influenced by two different alleles.

INTER–AMERICAN DEVELOPMENT BANK = МЕЖАМЕРИКАНСКИЙ БАНК РАЗВИТИЯ – The Inter-American Development Bank (IDB) is the main source of multilateral financing and expertise for sustainable economic, social and institutional development in Latin America and the Caribbean. The IDB Group is composed of the Inter-American Development Bank, the Inter-American Investment Corporation (IIC) and the Multilateral Investment Fund (MIF). The IIC focuses on support for small and medium-sized businesses, while the MIF promotes private sector growth through grants and investments, with an emphasis on microenterprise. Partnering with clients, the IDB seeks to eliminate poverty and inequality, and promotes sustainable economic growth. The Bank supports clients in the design of projects, and provides financing, technical assistance and knowledge services to support development interventions. The IDB focuses on empirical evidence for making decisions and measuring the impact of this projects to increase its development effectiveness. The IDB lends to national, provincial, state and municipal governments as well as autonomous public institutions. Civil

society organizations and private sector companies are also elegible for IDB financing. What we finance and what we seek to achieve:- (i) our priorities and areas of action; (ii) mandates; (iii) Sector Initiatives; and (iv) Regional initiatives. What types of products we offer:- (i) IDB Financing (Financial Instruments:- Rates, Loans, Grants, Guarantees, Investments, Technical Cooperation, Financial Products, Financial Resources); (ii) Knowledge Generation; and (iii) Project Preparation Facilities. Operations:- (i) Operational Summary; (ii) New Lending Framework, 2005–08 (in force until 2012); (iii) Evaluation and Auditing; (iv) Integrity and Transparency; and (v) Debt Relief. To help raise awareness of tackle social issues, the IDB supports campaigns that promote changes in key areas such as human trafficking and youth participation in development. The idea of a development institution for Latin America was first floated during the earliest efforts to create an inter-American system, at the First Pan-American Conference in 1890. It would take nearly seven decades for the IDB to become a reality, under an initiative proposed by President Juscelino Kubitschek of Brazil. The Bank was formally created in 1959, when the Organization of American States drafted the Articles of Agreement establishing the Inter-American Development Bank. Throughout the years, the IDB has added new member countries and it increased its capital nine times. These actions have allowed the IDB to boost support for poverty alleviation and other development programs that have helped transform Latin America and the Caribbean. Although much remains to be done, the region's social indicators have improved significantly in such areas as literacy, nutrition and life expectancy. The Inter-American Development Bank (IADB) is a regional financial institution established in 1959 to advance the economic and social development on 27 Latin American member countries. IADB headquarters are in Washington, DC, the United States, with country offices in 26 borrowing countries, plus a regional office in Asia and office in Europe. Clients:- central governments, provinces, municipalities, private firms and non-governmental organizations. We support efforts by Latin America and the Caribbean countries to reduce poverty and inequality. We aim to bring about development in a sustainable, climate-friendly way. Established in 1959, we are the largest source of development financing for Latin America and the Caribbean, with a strong commitment to achieve measurable results, increased integrity, transparency and accountability. We have an evolving reform agenda that seeks to increase our development impact in the region. While we are a regular bank in many ways, we are also unique in some key respects. Besides loans, we also provide grants, technical assistance and do research. Our shareholders are 48 member countries, including 26 Latin American and Caribbean borrowing members, who have a majority ownership of the IDB. Our Fund for Special Operations (FSO) provides concessional financing to our most vulnerable member countries. Given our shareholder base and prudent management, we have a strong financial position. As a result, the IDB is able to borrow in international markets at competitive rates and transfer that benefit to our clients. The Agreement Establishing the Inter-American Development Bank became effective December 30, 1959, and has been amended on several occasions. The latest amendments were those which took effect on July 31, 1995 relating to the Eighth General Increase in the Resources of the Bank. / выдвинутая Президентом Бразилии Жусэлино Кубишэк (Juscelino Kubitschek). Межамериканский Банк Развития (МАБР) является региональным финансовым учреждением, основанным в 1959, для авансирования экономического и социального развития 27 Латино-Американских стран участниц. Штабквартира МАБР расположена в Вашингтоне, Округ Колумбия, Соединённые Штаты Америки. Межамериканский Банк Развития (МБР), межправительственная кредитная организация, основанная в 1959 для финансирования программ развития в странах Латинской Америки. Штабквартира банка расположена в Вашингтоне, США. Членами банка являются 25 Латино-Американских стран, Канада, США и 16 стран из других регионов (Австрия, Бельгия, Великобритания, Германия, Дания, Израиль, Испания, Италия, Нидерланды, Португалия, Финляндия, Франция, Швейцария, Швеция, Югославия, Япония). На Декабрь 1983 ресурсы банка, мобилизованные в форме подписки на капитал, оценивались в 21.4 миллиарда Долларов США. Наибольшие объёмы средств привлекаются с частного рынка. В период между 1961 и 1983 банк выдал кредиты на сумму 14.9 миллиардов Долларов. Решающие позиции занимают США, что даёт им возможность использовать МБР в своих политических целях.

INTERBANK BUSINESS = МЕЖБАНКОВСКИЙ БИЗНЕС – Interbank Business:- lending and deposit operations conducted directly between banks. Reported in the balance sheet under due from and due to banks. / Операции по предоставлению ссуд или размещению вкладов, осуществляемые непосредственно между банками. В балансовом отчёте банка выделяются отдельными строками:- в активах как 'Средства В Кредитных Организациях', и в пассивах как 'Средства Кредитных Организаций'.

INTERBANK FUNDS = МЕЖБАНКОВСКИЕ ФОНДЫ – Interbank Funds are the borrowed funds raised within the banking system in contrast to funds placed with the bank by the public.

INTERBANK MONEY MARKET = МЕЖБАНКОВСКИЙ ДЕНЕЖНЫЙ РЫНОК – Interbank Money Market is the market for short-term loans between banks. The term usually describes the trading of funds with a maturity of between one day (overnight or even less than one day) and one year. / (однодневный расчёт) .

INTERBANK PAYMENTS = МЕЖБАНКОВСКИЕ ПЛАТЕЖИ – Interbank Payments are the transfers of funds where all parties involved are credit institutions. Settlement of foreign exchange, money market, securities trading and other bank-to-bank transactions.

INTERBANK RATE = МЕЖБАНКОВСКАЯ СТАВКА – Interbank Rate is the interest rate applied to credit operations between banking institutions. On the Euromoney market the London Interbank Offered Rate (LIBOR) is calculated daily and serves as a guide for the interest rates used for many international loans in Eurocurrencies. Another example of an interbank rate is the federal funds rate (funds banks lend one another for short periods). / Под Межбанковской Ставкой понимается процентная ставка, применённая к кредитным операциям между банковскими учреждениями. На рынке Евроденег (Euromoney market) Лондонская Межбанковская Ставка Предложения (London Interbank Offered Rate), более известная в Англоязычном звучании как ЛАЙБО или ЛИБО (LIBOR), рассчитывается ежедневно и служит в качестве пособия для процентных ставок, применяемых для многих международных займов в Евровалютах. Другим примером межбанковской ставки является ставка по федеральным средствам (federal funds rate), то есть фондам, которые банки ссуживают друг другу на короткие периоды времени.

INTERBANK SETTLEMENT AMOUNT = СУММА МЕЖБАНКОВСКОГО РАСЧЁТА – Interbank Settlement Amount is an amount paid by the receiving bank to the sending bank.

INTERBANK SETTLEMENT DATE = ДАТА МЕЖБАНКОВСКОГО РАСЧЁТА – Interbank Settlement Date is the date on which reimbursement funds are available to the sender (direct debits).

INTERBANK SETTLEMENT VALUE DATE = ДАТА ЗАЧИСЛЕНИЯ ПРИ МЕЖБАНКОВСКИХ РАСЧЁТАХ – Interbank Settlement Value Date is the date on which reimbursement funds are available to the receiver.

INTERBREEDING = ИНТЕРБРИДИНГ – Interbreeding is the use of plants capable of gene exchange by hybridization. / Под Интербридингом понимается использование растений, способных к генетическому обмену посредством гибридизации. Интербридинг – скрещивание между разновидностями внутри вида. Под Разведением сельскохозяйственных животных понимается наука о размножении сельскохозяйственных животных и улучшении их наследственных качеств, совершенствовании существующих и выведении новых пород; раздел зоотехнии; производственная деятельность по

осуществлению этих задач. Разрабатывает теорию и практические приёмы племенной работы применительно ко всем видам сельскохозяйственных животных. Важнейшие методы разведения сельскохозяйственных животных – чистопородное разведение, скрещивание и гибридизация при тщательном отборе и подборе животных. Тесно связано с генетикой.

INTERCEPTION = ПРЕГРАЖДЕНИЕ – (1) Interception (of a consignment) is the refusal or controlled entry of an imported consignment due to failure to comply with phytosanitary regulations.

(2) Interception (of a pest) is the detection of a pest during inspection or testing of an imported consignment.

INTERCHANGE = ВЗАИМООБМЕН (или ПЕРЕДАЧА) – interchange:- transfer of a container from one party to another. Interchange or also Receipt is the dispatch or receipt notification issued by a terminal and a record of the condition of a container. In addition Interchange is also used to describe the location at a terminal where lorry drivers 'Check In and Out'.

INTERCHANGEABLE ITEMS = ВЗАИМОЗАМЕНЯЕМЫЕ ИЗДЕЛИЯ – Interchangeable Items:- interchangeability is the ability to exchange parts or assemblies between like equipments, without having to alter or physically change the item. This is an extremely important life cycle cost design requirement. Total interchangeability exists when two or more items are physically and functionally interchangeable in all possible applications, i.e. when the items are capable of full, mutual substitution in all directions. Functional interchangeability is attained when an item, regardless of its physical specifications, can perform the specific functions of another item. Physical interchangeability exists when two or more parts or units made to the same specification can be mounted, connected, and used effectively in the same position in an assembly or system. The two broad classes of interchangeability are:- (i) Universally Interchangeable:- items that are required to be interchangeable in the field even though manufactured by different facilities; and (ii) Locally Interchangeable:- items that are interchangeable with other components made by the same facility but not necessarily interchangeable with those made by other facilities. This may result from different sets of measurement units employed in their design and manufacture. Also known as Fungible Items. That can be interchanged:- interchangeable items of clothing; interchangeable automotive parts. / Известны также как Взаимозаменяемые Изделия (Fungible Items).

INTERCHANGE AGREEMENT = СОГЛАШЕНИЕ О ВЗАИМООБМЕНЕ – Interchange Agreement is a document authorizing exchange of containers/equipment in intermodal transit, e.g., ocean carrier releasing a container to a railroad. Contract between carrier and trucker that legally permits interchange of equipment. Contract between two steamship companies or between a steamship company and a trucker which legally permits interchange of equipment. / , например, .

INTERCHANGE POINT = ПУНКТ ВЗАИМООБМЕНА (или ПЕРЕДАЧИ) – Interchange Point is a location where one carrier delivers freight to another carrier.

INTERCOASTAL = ПРИБРЕЖНОЕ (или КАБОТАЖНОЕ) – Intercoastal:- between one coast and another, as between the Atlantic and the Pacific coasts. Domestic shipping routes serving more than one coast. Water service between two coasts; in the United States, this usually refers to water service between the Atlantic and Pacific or Gulf Coasts. As opposed to coastal water operations, Intercoastal refers to water transport carried out between coasts, e.g., between US Pacific and Atlantic coasts. / Под Каботажной Перевозкой понимается перевозка грузов между разными побережьями одной страны, например, между Атлантическим и Тихоокеанским побережьями США.

INTER–COMMODITY SPREAD = МЕЖСЫРЬЕВАЯ КУРСОВАЯ РАЗНИЦА (или МЕЖСЫРЬЕВОЙ СПРЭД) – An Inter-Commodity Spread involves the simultaneous purchase of a given delivery month of one futures market and the sale of the same delivery month of a different, but related, futures market. For example, an inter-commodity spreader might buy July Wheat futures and sell July Corn futures to take advantage of expected price relationship changes between the two commodities. The purchase of a given delivery month of one futures market and the simultaneous sale of the same delivery month of a different, but related, futures market. An Inter-Commodity Spread is a spread between two different but related commodities. The two commodities can either be used interchangeably or have common supply and demand characteristics. Although it is not necessary to spread the same months in both commodities, it is a common practice. One popular inter-commodity spread, the Wheat/Corn spread, involves buying (or selling) one or more Wheat futures contracts and selling (or buying) one or more Corn futures contracts of the same delivery month. The Wheat/Corn spread is quoted as Wheat over Corn – that is, Wheat minus Corn. Since Wheat prices are generally higher than Corn prices, the spread is usually positive. Changes in the Wheat/Corn spread are often seasonal. The Wheat/Corn spread usually tends to become less positive some time in May/June/July, following the winter Wheat harvest, when Wheat prices are low and Corn prices are high. On the other hand, a trader might expect the spread to become more positive in September/October/November, during the Corn harvest, when Corn prices are low and Wheat prices are high. Given the existence of a 'normal' spread relationship between Wheat and Corn, traders can take advantage of abnormal relationships in the spread as those relationships return to normal. Conversely, traders can also seize opportunities when they anticipate abnormal spread relationships developing from normal ones. Suppose a trader anticipates a normal spread, with Wheat falling faster relative to Corn until summer, then Wheat gaining on Corn in the fall. On June 29, the trader buys one Wheat futures contract at USD3.75 per bushel and sells one Corn futures contract at USD3.02½ per bushel in anticipation of spread becoming more positive. The spread difference is 72½ cents a bushel (USD3.75 – USD3.02½). On November 02, the trader offsets the position by selling one Wheat futures contract at USD4.01 per bushel and buying one Corn futures contract at USD2.49 per bushel, for a difference of USD1.52 per bushel (USD4.01 – USD2.49). The spread moved from 72½ cents to USD1.52, and the trader profited accordingly, actually gaining on both legs of the spread. His total gain on the position was 79½ cents per bushel (USD1.52 – USD0.72½), or USD3 975.00 per spread (USD0.79½ x 5 000 bushels). A special type of inter-commodity spread is the spread between a commodity and its products. The most common example, the spread between soybeans and its two products – soybean meal and soybean oil – is known as the Crush Spread. By buying soybean futures and selling soybean oil and meal futures, soybean processing firms often 'put on the crush' to hedge the purchase price of soybeans and the selling price of Soybean oil and meal. Specifically, these processing firms use the crush spread to minimize the financial risks of sudden increases in Soybean cost or declining values of finished Soybean oil and meal. To make a profit from Soybean processing, processors must buy beans at a lower cost than the combined sales income from the finished oil and meal. The difference, or profit margin, is called the Gross Processing Margin (GPM). Application of the GPM to the Soybean, Soybean oil, and Soybean meal futures markets makes it possible for processors to buy Soybean futures to hedge later purchases of cash soybeans and, at the same time, sell Soybean oil and meal futures to hedge later sales of meal and oil. Given a favorable price relationship between Soybean futures and Soybean oil and meal futures, processors buy Soybean futures and simultaneously sell oil and meal futures. They hold the long Soybean portion of the hedge until they actually buy the required cash soybeans. Suppose, as a processor feared, the price of Soybeans rises in the cash market. The processor remains relatively unaffected because the futures price of Soybeans also increases in response to the same economic factors. The processor buy Soybeans in the cash market and offsets the long Soybean futures position – at a higher price – by selling an equal number of Soybean futures contracts. The gain on the futures position approximately offsets the increased cost of the raw material. The processor holds the short side of the crush hedge – the sale of oil and meal futures – until ready to sell the finished oil and meal. If the cash market prices of oil and meal decline, the futures prices probably will decline as well. Thus, even if the processor

receives less income from a cash market sale of the oil and meal, the gain the processor can realize in the futures market roughly offsets this cash market loss. This crush spread hedge works in the same way and for the same reasons as do all well placed hedges – because of the tendency of cash and futures prices, which are influenced by the same economic factors, to move in the same direction. But the crush spread is a uniquely effective hedge because it affords Soybean processors protection in three related markets. The crush spread's opposite, e reverse crush, works well too. This spreading pooprtunity results from distortions in normal price patterns, that is, when the cost of Soybeans exceeds the combined sales value of Soybean oil and meal. The resulting unfavorable gross processing margin makes it unprofitable for soybean processors to manufacture meal and oil. When the GPM drops below a profitable level, Soybean processors may slow down or even stop manufacturing operations and at the same time possibly initiate reverse crush spreads – selling Soybean futures and buying oil and meal futures. Other market participants would likely move to seize the same spreading opportunity, and the concerted market pressure of reduced soybean meal and oil manufacturing and reverse crush spreads in the futures market will gradually return price relationship to a more normal level. Intercommodity Spread:- the simultaneous purchase of futures in one commodity and sale of futures in another commodity. Inter-Commodity Spread is a spread in which the long and short legs are in two different but generally related commodity markets. Also known as Intermarket Spread. See also Spread.

INTERCOMPANY TRANSFER PRICE = ВНУТРИСТРУКТУРНАЯ (или ВНУТРИХОЗЯЙСТВЕННАЯ) ТРАНСФЕРТНАЯ ЦЕНА – Intercompany Transfer Price is a price at which goods and services are bought and sold among divisions of one company or among affiliates of a consolidated group of companies. Profits from intercompany transactions are eliminated from net income in the consolidated financial statements.

INTERCONTAINER = АНТЭРКОНТЭНЭР – Intercontainer is a co-operative formed by 19 European Railways, for the management of international rail container traffic in Europe. Intercontainer is a joint subsidiary of 24 European railway undertakings responsible for organizing and selling international container carriage services. Its legal form is that of a Belgian cooperative society, and it was set up in 1967 with its headquarters in Brussels, Belgium. It participates in the market as an operator by purchasing rail traction from the railway undertakings. Until 1990 Intercontainer operated exclusively in the market segment involving sea-borne containers and swap bodies in international traffic. Since 1991 it has been able to act in all segments of the market:- containers, swap bodies, trailers and semi-trailers, in both national and international traffic.

INTERCONTINENTALEXCHANGE, INC. = МЕЖКОНТИНЕНТАЛЬНАЯБИРЖА, ИНК. – In May 2000, IntercontinentalExchange, Inc. (ICE®) was established, with its founding shareholders representing some of the world's largest energy companies and global banks. ICE's mission was to transform OTC energy markets by providing an open, accessible, around-the-clock electronic energy marketplace to a previously fragmented and opaque market. ICE® offered the energy community price transparency, more efficiency, greater liquidity and lower costs than manual trading, such as voice or floor markets. Working together with participants in the energy markets, ICE® developed the leading electronic marketplace for energy commodities, along with the leading electronic trade confirmation platform. ICE Data was launched in 2002 to meet the demand for increased market data in the OTC energy markets, and is today one of the leading providers globally. ICE® has developed and maintained its state-of-the-art technology infrastructure for trading, trade processing, clearing, market data and risk management, investing over USD120 million in technology since inception. In June 2001, ICE® expanded its business into the futures markets by acquiring the International Petroleum Exchange (IPE), now ICE Futures Europe®, Europe's leading regulated energy futures exchange. ICE Futures Europe's markets today account for approximately 50% of the world's crude oil and refined futures traded each day. In April 2005, ICE Futures Europe® became the first fully electronic energy exchange. Since 2003, ICE® has partnered with the Chicago Climate Exchange (CCX) to host its OTC emissions markets, and today offers the leading European emissions futures in conjunction with the European Climate Exchange (ECX). the ICE/ECX carbon futures contracts are the most widely relied upon carbon contracts globally. In November 2005, ICE completed its IPO on the New York Stock Exchange (NYSE®) under the ticker ICE®. Today, ICE is a member of the Russell 1000® and the S&P 500 indexes. In 2006, The Wall Street Journal recognized ICE® as the best performing stock of all publicly traded US stocks. In January 2007, ICE® acquired the New York Board of Trade (NYBOT®) now known as ICE Futures US®. Today, its futures contracts for soft commodities, including sugar and coffee are listed on the ICE platform. In June 2007, ICE® and Russell Investments entered into an exclusive licensing agreement with respect to the US Russell Index futures complex, and today Russell Index futures trade exclusively on ICE®. Also in 2007, ICE acquired the exclusive right to key natural gas indexes, including NGI and NGX, and transitioned them to electronic markets on ICE's OTC platform. In July 2007, ICE® acquired and integrated ChemConnect's natural gas liquids (NGLs) and chemicals markets into its OTC markets. In September 2007, ICE® acquired the Winnipeg Commodity Exchange (WCE), the world's leading canola market, now known as ICE Futures Canada®. In October 2007, ICE® acquired Chatham Energy, a leading OTC energy options broker. In January 2008, ICE® acquired YellowJacket (YJ), a leading peer-to-peer negotiation platform for the OTC energy options markets. In August 2008, ICE® completed its acquistion of Creditex, a leading interdealer market for the execution and processing of credit derivatives with operations in New York, London and Singapore. In March 2009, ICE® acquired The Clearing Corporation (TCC), which provides the clearing technology for ICE's credit default swap clearing house, known as 'ICE Trust'. Approved by the Board of Governors of the Federal Reserve in March 2009, ICE Trust, is a member of the Federal Reserve and is a New York bank holding company and is the leading CDS clearing house globally. Today, ICE® employs over 750 professionals across the United States, Europe and Asia. IntercontinentalExchange, Inc. (ICE®) is a leading operator of regulated futures exchanges and over-the-counter markets. ICE® is also a leading operator of central clearing services for the futures and over-the-counter markets, with five regulated clearing houses across North America and Europe. ICE® serves customers in more than 70 countries. Operates the leading electronic global futures and over-the-counter (OTC) marketplace for trading a broad array of energy commodity contracts on its Internet-based trading platform. These contracts include oil, natural gas, and power. ICE® conducts its futures markets trading through its subsidiary, the International Petroleum Exchange (IPE), Europe's leading energy futures and options exchange. The IPE provides regulated marketplaces in which participants use futures and options to manage their price risk exposure. ICE® also offers services to support the broader trading and risk management infrastructure, including cleared OTC contracts, electronic trade confirmations, and energy market data. ICE® is based in Atlanta, Georgia, with offices in Calgary, Chicago, Houston, London, New York, and Singapore. In June of 2001, ICE expanded its business into futures trading by acquiring the International Petroleum Exchange (IPE), now ICE Futures Europe®, which operated Europe's leading open-outcry energy futures exchange. Since 2003, ICE® has partnered with the Chicago Climate Exchange (CCX) to host its electronic marketplace. In April of 2005, the entire ICE® portfolio of energy futures became fully electronic. ICE® became a publicly traded company on 2005-November-16, and was added to the Russell 1000® Index on 2006-June-30. The company announced its intent to acquire the New York Board of Trade® (NYBOT®) on 2006-September-14. In the late 1990s, Mr Jeffrey Sprecher, ICE's founder, Chairman and Chief Executive Officer, acquired Continental Power Exchange, Inc with the objective of developing a platform to provide a more transparent and efficient market structure for over-the-counter (OTC) energy commodity trading. Mr Sprecher realized that the electronic revolution in the international financial markets provided a great opportunity to bring the benefits of an electronic marketplace to energy trading. In May 2000, The Intercontinental Exchange (ICE®) was established, with its founding shareholders representing some of the world's largest energy traders. The company's mission was to transform OTC trading by providing an open, accessible, multi-dealer, around-the-clock electronic energy exchange. The exchange was built and

offered the trading community better price transparency, more efficiency, greater liquidity and lower costs than manual trading. In June of 2001, ICE® expanded its business into futures trading by acquiring the International Petroleum Exchange (IPE) located in London, UK, now ICE Futures Europe®, which operated Europe's leading open-outcry energy futures exchange. Since 2003, ICE® has partnered with the Chicago Climate Exchange (CCX) to host its electronic marketplace. In April of 2005, the entire ICE portfolio of energy futures became fully electronic. Along with Headquarters in Atlanta, State of Georgia, USA, ICE® has offices in Chicago, Houston, New York; in Calgary, Canada, London, UK, and Singapore to support operations worldwide. In the late 1990s, Jeffrey Sprecher, ICE's founder, chairman, and Chief Executive Officer, acquired Continental Power Exchange, Inc. with the objective of developing a platform to provide a more transparent and efficient market structure for OTC energy commodity trading. Mr. Sprecher realized that the electronic revolution in the international financial markets provided a great opportunity to bring the benefits of an electronic marketplace to energy trading. In May 2000, IntercontinentalExchange, Inc was established, with its founding shareholders representing some of the world's largest energy traders. The company's mission was to transform OTC trading by providing an open, accessible, multi-dealer, around-the-clock electronic energy exchange. The exchange was built and offered the trading community better price transparency, more efficiency, greater liquidity and lower costs than manual trading. In June of 2001, ICE® expanded its business into futures trading by acquiring the International Petroleum Exchange (IPE), now ICE Futures Europe®, which operated Europe's leading open-outcry energy futures exchange. Since 2003, ICE® has partnered with the Chicago Climate Exchange (CCX) to host its electronic marketplace. In April of 2005, the entire ICE® portfolio of energy futures became fully electronic. ICE® continues to develop new products and services designed to meet the needs of energy market participants. However, the company's commitment to its markets and participants does not change:- ICE® is dedicated to providing a marketplace that levels the playing field, creates greater opportunities, and offers access to energy commodities markets from anywhere, at anytime. ICE's products include derivative contracts based on key energy commodities:- crude oil and refined oil products such as heating oil and jet fuel, and other products like natural gas and electric power. Recently, ICE Futures introduced what has become Europe's leading emissions futures contract in conjunction with the European Climate Exchange. The majority of trades in ICE's markets are cash-settled, based on the value of the underlying commodity, rather than settled through physical delivery of the commodity. ICE® is the only marketplace offering integrated electronic markets for side-by-side trading of energy products in both futures and over-the-counter (OTC) markets, bringing together the world's buyers and sellers of derivative and physical energy commodity contracts. ICE's ability to offer centralized access to futures and OTC contracts on either a cleared or bilateral basis, and through multiple interfaces, allows participants to optimize trading opportunities, operations and strategies. ICE's Internet-based platform increases the accessibility and transparency of the energy commodity markets and enhances the speed and quality of trade execution. ICE conducts its OTC business directly, and operates its futures business through its wholly-owned subsidiary, ICE Futures, the largest electronic energy futures exchange (formerly known as the International Petroleum Exchange, or IPE) which is a regulated market in the United Kingdom. All futures and cleared OTC contracts are processed through a central clearinghouse – LCH.Clearnet Ltd (headquartered in London, UK). IntercontinentalExchange® (ICE®) became the center of global trading in 'soft' commodities with its acquisition of the New York Board of Trade (NYBOT®) in 2007. Now known as ICE Futures US, Inc., the exchange offers futures and options on futures on soft commodities include coffee, cocoa, frozen concentrated orange juice, sugar and cotton. IntercontinentalExchange® (ICE®) became the center of global trading in 'soft' commodities with its acquisition of the New York Board of Trade (NYBOT®) in 2007. Now known as ICE Futures US®, the exchange offers futures and options on futures on soft commodities include Coffee, Cocoa, frozen concentrated orange juice, sugar and Cotton. Cotton futures have traded in New York since 1870, first on the New York Cotton Exchange, then on the New York Board of Trade and now on ICE Futures US®. Options on Cotton futures were introduced on the NYBOT® in 1984. Futures and options on futures have been used by the domestic and global Cotton industries to price and hedge transactions. Because Cotton is at the center of the global textiles industry, it is a preferred contract among commodity trading advisors and hedge funds. ICE Futures US® is the exclusive global market for Cotton No. 2^{SM} futures and options. In addition to agricultural commodities, ICE® operates existing futures and options markets for crude oil, refined products, natural gas, power, emissions, and foreign currency and equity index futures and options. ICE® conducts its energy futures markets through ICE Futures Europe®, its UK regulated London-based subsidiary, which offers the world's leading oil benchmarks and trades nearly half of the world's global crude oil futures. ICE® conducts its soft commodity, foreign exchange and index markets through its US regulated subsidiary, ICE Futures US®, which provides global futures and options markets, as well as clearing services through ICE Clear US®, its wholly owned clearinghouse. ICE's state-of-the-art electronic trading platform brings market access and transparency to participants in more than 50 countries. ICE was added to the Russell 1000® Index in June 2006. Headquartered in Atlanta, ICE® also has offices in Calgary, Chicago, Houston, London, New York and Singapore. ICE® also conducts futures and options trading in Canola oil, feed Wheat and western Barley through ICE Futures Canada®, a regulated market in Manitoba, Canada. See also Zhengzhou Commodity Exchange. IntercontinentalExchange® (ICE®) began offering risk management and trading for the grain markets through its acquisition of the Winnipeg Commodity Exchange (WCE) in September 2007. Today, WCE is known as ICE Futures Canada, Inc.. Established in 1887, the exchange has a rich history in serving the needs of hedgers in the grain markets. Today, ICE Futures Canada® is Canada's leading agricultural exchange. Based in Winnipeg, ICE Futures Canada® offers electronically traded futures and options markets for canola and western barley contracts. 2014-November-07 (Bloomberg):- ICE Benchmark Administration (IBA) will run the replacement for the 95-year-old London gold fixing, as benchmarks for other precious metals were overhauled this year. Intercontinental Exchange Inc.'s IBA will provide a price platform, methodology and administer the procedure that now takes place by phone each day at 10:30 am and 03 pm, the London Bullion Market Association and ICE said today in statements. Societe Generale SA, Bank of Nova Scotia, HSBC Holdings Plc and Barclays Plc currently conduct the fixings used by miners to central banks to trade and value metal. Silver became the first precious metal to ditch the daily fixing procedure in August after Deutsche Bank AG said it would stop taking part as it scales back its commodities business. A new mechanism will replace platinum and palladium fixes on December 01. Scrutiny on how benchmarks are set increased after regulators uncovered price-rigging in everything from interbank-loan rates to currencies. IBA said it expects to start running the LBMA Gold Price in the first quarter of next year. 'I'm delighted to announce an administrator in time to allow the market to move forward from consultation into timely implementation', Ruth Crowell, chief executive of the LBMA, said in a statement. 'While we know that it is subject to internal compliance approvals, we are pleased to have 11 entities intending to be phase one participants'. Consultation Period:- The LBMA ran two market surveys, a seminar and met with participants during a consultation period in which a consensus was reached that IBA should be the administrator, the association said. IBA is responsible for the London interbank offered rate. The London Gold Market Fixing Ltd. said in July that the LBMA would help in seeking to appoint a new administrator. The association said October 17 that ICE, the London Metal Exchange, CME Group Inc. and Thomson Reuters Corp., Autilla Ltd. (Sapient) and EBS were shortlisted. The firms presented proposals to the market at an October 24 seminar in London. About USD18 trillion of gold circulated globally last year, according to CPM Group, a New York-based research company. Gold was fixed at USD1 145 an ounce in London this morning. Bullion for immediate delivery reached a four-year low of USD1 132.16 earlier today and is down 4.8 percent this year. Prices slumped 28 percent in 2013, the biggest annual decline in three decades. Gold Fixing:- Deutsche Bank's withdrawal from the gold fixing in May left just four other banks to conduct the ritual that dates back to 1919. Meetings had been held in a wood-paneled room at Rothschild's offices in St. Swithin's Lane until the process was switched to a telephone conference call in 2004. During fixings, members declare how much

metal they want to buy or sell for clients as well as their own accounts. Traders relay shifts in supply and demand to clients and take fresh orders as the spot price changes, before the fix is made. Participants can trade the metal and its derivatives on the over-the-counter market and exchanges during the calls. The LBMA Gold Price will be a physically settled, electronic and tradable auction, IBA said. Aggregated gold bids and offers will be published real-time and the price updated every 30 seconds until a balance is found. Guidelines for financial benchmarks designed to improve integrity and reliability in the wake of the Libor scandal were published by the International Organization of Securities Commissions (IOSCO) last year. The principles cover issues of governance and methodology, with one of the key recommendations the use of 'observable transactions' as the basis of a benchmark. New Procedures:- 'We look forward to working closely with the LBMA and the precious metals industry as we deliver an IOSCO-compliant benchmark that fulfills the requirements of market participants in an efficient and transparent manner', Finbarr Hutcheson, President of IBA, said in a statement. CME Group and Thomson Reuters began running the new electronic, auction-based silver system on August 15, three months after the three banks conducting the procedure said they would stop participating. The London Metal Exchange will run the platinum and palladium replacement on December 01. Bloomberg LP, the parent company of Bloomberg News, competes with Thomson Reuters in selling financial and legal information, and trading systems. See also Gold Fixing. IntercontinentalExchange (ICE) refer to IntercontinentalExchange, Inc. and its consolidated subsidiaries. ICE Futures Europe refers to our wholly-owned subsidiary, which, prior to September 03, 2007, operated as ICE Futures and which, prior to October 25, 2005, operated as the International Petroleum Exchange of London, Ltd. (IPE). ICE Futures U.S. refers to our wholly-owned subsidiary that we acquired on January 12, 2007, which, prior to our acquisition, operated as the Board of Trade of the City of New York, Inc. (NYBOT), a member-owned not-for-profit corporation, and, after our acquisition, operated as the Board of Trade of the City of New York, Inc., a wholly-owned subsidiary of IntercontinentalExchange. On September 03, 2007, we renamed NYBOT 'ICE Futures U.S.' 'ICE Clear U.S.' refers to ICE Futures U.S.'s wholly-owned clearing subsidiary, which previously operated as the New York Clearing Corporation (NYCC). ICE Futures Canada refers to our wholly-owned subsidiary that we acquired on August 27, 2007 and which previously operated as the Winnipeg Commodity Exchange, Inc. (WCE). ICE Clear Canada refers to ICE Futures Canada's wholly-owned clearing subsidiary, which previously operated as WCE Clearing Corporation (WCECC). We are a leading regulated global futures exchange and over-the-counter, or OTC, market operator. We operate the leading electronic futures and OTC marketplace for trading a broad array of energy, soft agricultural and agricultural commodities, credit default swaps, or CDS, and financial products. Currently, we are the only marketplace to offer an integrated electronic platform for side-by-side trading of products in both futures and OTC markets, together with clearing services. Through our widely-distributed electronic marketplace, we bring together buyers and sellers of derivative and physical commodities and financial contracts and offer a range of services to support our participants' risk management needs. We conduct our regulated energy futures markets through our wholly-owned subsidiary, ICE Futures Europe, which is based in the United Kingdom, or U.K. ICE Futures Europe is the largest energy futures exchange outside of the United States, or U.S., as measured by 2008 traded contract volume, and one of the top 10 commodity exchanges in the world, according to the Futures Industry Association. We conduct our regulated U.S. futures markets through our wholly-owned subsidiary, ICE Futures U.S. We conduct our regulated Canadian futures markets through our wholly-owned subsidiary, ICE Futures Canada. ICE Futures Europe clears its business through ICE Clear Europe, ICE Futures U.S. clears its business through ICE Clear U.S. and ICE Futures Canada clears its business through ICE Clear Canada. We completed our acquisition of ICE Futures U.S. in January 2007 and our acquisition of ICE Futures Canada in August 2007. The launch of ICE Clear Europe occurred in November 2008, completing our strategic plan to offer clearing services through wholly-owned clearing businesses in the United States, the United Kingdom and Canada. Clearing services for our UK energy futures and cleared global OTC energy businesses were previously outsourced to a third party UK clearing house. We conduct our OTC business directly through IntercontinentalExchange as an Exempt Commercial Market under the Commodity Exchange Act and through Creditex Group Inc., or Creditex, an interdealer broker. We completed our acquisition of Creditex in August 2008. Creditex is a market leader and innovator in the execution and processing of index and single-name CDS with markets spanning the United States, Europe and Asia. In October 2008 we announced our planned acquisition of The Clearing Corporation as part of our strategy to offer clearing in the CDS market. Our Business:- We operate diverse global markets that promote price transparency and offer participants the opportunity to trade a variety of energy, soft agricultural and agricultural commodities, CDS and financial products. Our core products include contracts based on crude and refined oil products, natural gas, power, coal, emissions, sugar, cotton, coffee, cocoa, canola, orange juice, CDS, foreign exchange and equity index products. Our derivative and physical products provide participants with a means for managing risks associated with changes in the prices of these commodities, asset allocation, ensuring physical delivery of select commodity products and trading. The majority of our trading volume is financially or cash settled, meaning that settlement is made through cash payments based on the difference between the purchase price of the contract and the value of the underlying commodity at contract expiration, rather than through physical delivery of the commodity itself. All futures and options contracts and many of our OTC swap contracts are cleared through a central counterparty clearing house. We also offer OTC swap contracts that can be traded on a bilateral basis. Our customer base includes professional traders, financial institutions, institutional and individual investors, corporations, manufacturers, commodity producers and refiners, and governmental bodies. We do not take proprietary trading positions in any contracts in our markets. We operate our US, UK and Canadian exchanges, as well as our OTC markets, primarily on our electronic platform, except for the Creditex business, in which trading is conducted both electronically on Creditex's proprietary platform, and through voice brokered transactions. ICE Futures U.S. continues to offer options on futures markets through its open-outcry trading floor based in New York City, complementing our electronic futures and options offerings. In addition to trade execution, our electronic platform offers a comprehensive suite of trading-related services, including pre- and post-trade risk management tools, electronic trade confirmation and clearing services. Through our platform, we facilitate straight-through processing of trades, with the goal of providing seamless integration of front-, back- and mid-office trading and risk management activities. We operate and manage our business on the basis of three segments:- our futures business segment, our OTC business segment and our market data business segment. For a discussion of these segments and related financial disclosure, refer to note 18 to our consolidated financial statements and related notes included elsewhere in this Annual Report on Form 10-K. History:- In May 2000, IntercontinentalExchange was established, with our founding shareholders representing some of the world's largest energy companies and global banks. Our mission was to transform OTC energy markets by providing an open, accessible, around-the-clock electronic energy marketplace to a previously fragmented and opaque market. We offered the energy community greater price transparency, efficiency, liquidity and lower costs than manual trading, such as voice or floor markets. Working together with participants in the energy markets, we developed the leading electronic marketplace for energy commodities, along with the leading electronic trade confirmation platform. In June 2001, we expanded our business into the futures markets by acquiring the IPE, now ICE Futures Europe. Europe's leading regulated energy futures exchange, ICE Futures Europe's markets today account for approximately 50% of the world's crude oil and refined futures traded each day. In April 2005, ICE Futures Europe became the first fully electronic energy exchange. ICE Data was launched in 2002 to meet the demand for increased market data in the OTC energy markets, and is today one of the leading providers of futures and OTC data globally. Since 2003, we have partnered with the Chicago Climate Exchange, or CCX, to host its OTC emissions markets, and today we offer the leading European emissions futures contracts in conjunction with the European Climate Exchange, or ECX. In November 2005, we completed our initial public offering on the New York Stock Exchange

under the ticker symbol ‘ICE’ and have since become a member of the Russell 1000 and the S&P 500 indexes. In January 2007, we acquired NYBOT, now known as ICE Futures U.S. Today, ICE Futures U.S.’s futures contracts for soft agricultural commodities such as sugar and coffee are listed in our electronic markets. In June 2007, we entered into an exclusive licensing agreement with the Frank Russell Company to list the US Russell Index futures complex. Also in 2007, we acquired the exclusive right to key natural gas indexes, including the NGI and NGX indexes. In July 2007, we acquired and integrated ChemConnect’s OTC natural gas liquids and chemicals markets. In August 2007, we acquired the Winnipeg Commodity Exchange, the leading canola market in the world, now known as ICE Futures Canada. In October 2007, we acquired Chatham Energy, or Chatham, a leading OTC energy options broker, and in February 2008, we acquired YellowJacket Software, Inc., or YellowJacket, a leading peer-to-peer negotiation platform for the OTC options markets. In August 2008, we completed our acquisition of Creditex, a leading interdealer market for the execution and processing of credit derivatives. In October 2008, we announced plans to acquire The Clearing Corporation, or TCC, and the transaction is expected to close in the first quarter of 2009. TCC will be the clearing service provider for our CDS clearing house, known as ICE US Trust, or ICE Trust. ICE Trust is a limited purpose New York trust regulated by the New York State Banking Department. ICE Trust plans to commence clearing in the first quarter of 2009. Today, we employ over 790 professionals across the United States, Europe and Asia. Futures Marketplaces:- In our futures business, we operate three regulated futures exchanges in the United States, the United Kingdom and Canada. ICE Futures Europe operates as a Recognized Investment Exchange in the United Kingdom, where it is regulated by the UK Financial Services Authority, or FSA. ICE Futures Europe was founded in 1980 as a traditional open-outcry auction market, and today operates exclusively as an electronic exchange. Trades in our energy futures markets may only be executed in the name of exchange members for the members’ own account or their customers’ account. Our members and their customers include many of the world’s largest energy companies and leading financial institutions. ICE Futures U.S. is a leading global futures and options exchange for trading in a broad array of soft agricultural commodities, including sugar, coffee, cotton, cocoa and frozen concentrated orange juice, or FCOJ. ICE Futures U.S. also provides trading in futures and options contracts for a variety of financial products, including its futures and options contracts based on the Russell indexes and the US Dollar Index, or USDX. ICE Futures U.S. operates as a Designated Contract Market and is regulated by the Commodity Futures Trading Commission, or CFTC. Until February 02, 2007, ICE Futures U.S. operated exclusively as an open-outcry exchange and provided only floor-based markets. On that date, ICE Futures U.S. listed its core soft agricultural commodity markets on our electronic platform, and has subsequently introduced the Russell indexes, currency pairs and USDX futures and options contracts electronically. Options markets continue to be available for trading on the floor of the exchange. ICE Futures Canada is Canada’s leading commodity futures and options exchange and North America’s first fully electronic commodity futures exchange. Based in Winnipeg, Manitoba, ICE Futures Canada offers futures and options contracts on Canola and Western Barley. For over a century ICE Futures Canada, and its predecessor companies, have operated futures markets that bring together agricultural industry participants, traders, and investors to engage in price discovery, price risk transfer and price dissemination for the markets. ICE Futures Canada is a recognized commodity futures exchange under the provisions of The Commodity Futures Act (Manitoba), or the CFA, and is regulated by the Manitoba Securities Commission, or MSC. ICE Clear Europe clears and settles contracts for ICE Futures Europe and is regulated by the FSA as a Recognized Clearing House. ICE Futures U.S. owns its clearing house, ICE Clear U.S., which clears and settles contracts traded on, or subject to the rules of, ICE Futures U.S. ICE Clear U.S. is a Derivatives Clearing Organization and is regulated by the CFTC. ICE Futures Canada owns it clearing house, ICE Clear Canada, which clears and settles contracts traded on, or subject to the rules of, ICE Futures Canada. ICE Clear Canada is a recognized clearing house under the provisions of the CFA and is regulated by the MSC. OTC Marketplace:- In our OTC business, we operate global over-the-counter markets primarily through our electronic platform. We offer trading in thousands of contracts, covering a broad range of energy-related products and contract types. These contracts include derivative contracts as well as contracts that provide for physical delivery of the underlying commodity, principally relating to natural gas, power, natural gas liquids, chemicals and crude and refined oil products. We offer a wide range of derivative contracts in our OTC markets due to the availability of various combinations of commodities, product types, delivery ‘hub’ locations and terms or settlement dates for a given contract. In 2008 and 2007, we acquired Creditex, YellowJacket, ChemConnect and Chatham, and as a result, have expanded our markets to include CDS, natural gas liquids, chemicals and natural gas options contracts. Our OTC market participants include many of the world’s largest energy companies, leading financial institutions and proprietary trading firms, as well as natural gas distribution companies and utilities. Participants in our OTC energy markets must qualify as eligible commercial participants or eligible commercial entities under the Commodity Exchange Act. Market Data:- We offer a variety of market data services for both futures and OTC markets through our market data subsidiary, ICE Data. ICE Data compiles and repackages market data derived from trading activity on our platform into information products that are sold to a broad customer base extending beyond our core trading community. Since its inception, ICE Data has expanded to provide data services covering our energy futures and OTC markets, as well as soft agricultural and agricultural commodities, equity indexes and currency pairs. Market data services for these segments include publication of daily indices, access to historical price and other data, view only access to our trading platform, end of day settlements and pricing data sets, as well as a service that provides independent validation of participants’ own valuations for OTC products. Clearing House Function:- We operate a clearing house for ICE Futures U.S. through ICE Clear U.S., for ICE Futures Canada through ICE Clear Canada and for ICE Futures Europe and our OTC cleared businesses through ICE Clear Europe. These clearing houses clear, settle and guarantee to their clearing members the financial performance of all futures contracts and options on futures contracts matched through our execution facilities and accepted by the clearing house from clearing members in our US, UK and Canadian regulated futures markets as well as our cleared OTC markets. Through our clearing houses, we maintain a system for performance of financial obligations owed to the clearing members through which buyers and sellers conduct transactions. This system is supported by several mechanisms, including rigorous clearing membership requirements, the posting of original margin deposits, daily mark-to-market of positions and payment of variation margin, maintenance of a guaranty fund in which clearing members maintain deposits with our clearing houses and broad assessment powers to recoup financial losses if they arise due to a clearing member financial default. The amount of margin deposits on hand will fluctuate over time as a result of, among other things, the extent of open positions held at any point in time by market participants and the volatility of the market as reflected in the margin rates then in effect for such contracts. In addition to our existing three clearing houses, we are developing a clearing house to act as a central counterparty in the registration and clearing of credit default swap transactions. We are forming a limited purpose bank, ICE Trust, to serve as the facility to clear credit default swaps transactions. In November 2008, we launched ICE Clear Europe, a clearing house based in London, as part of our strategic plan to offer clearing services through wholly-owned clearing businesses in the United States, the United Kingdom and Canada. Clearing services for our UK energy futures and cleared global OTC energy businesses were previously outsourced to a third party UK clearing house. Gaining greater control over this core clearing process will allow us to introduce more products and services to the futures and OTC markets for broker-dealers and for our customers, as well as to ensure technology and operational service levels meet the efficiency standards that we have set within our execution business. We also believe that this flexibility will allow us to increase our speed-to-market for new cleared products and to expand our products further into physically-delivered commodity products on a competitive basis with other derivatives exchanges that manage their own clearing and risk management services. Control of our own clearing houses enables us to capture the revenue associated with both the trading and clearing of our futures and

options contracts. It is our objective to provide a clearing model that benefits customers and clearing firms alike, through technological innovation, offering a competitive alternative for clearing for new products and new exchanges, competitive pricing, and greater profit participation by member firms and new value-added services. Longer term, we anticipate that collectively, our US, UK and Canadian clearing houses may partner to serve our global customer base across the commodities and financial products marketplaces in an innovative and capital efficient manner. Our clearing strategy is designed to complement our diverse markets while meeting the risk management, capital and regulatory requirements of an expanding global marketplace. We believe our clearing houses are a significant attraction to our market participants, and an important part of the functioning of our exchanges. Because the role of the clearing house is to serve as a central counterparty for each matched trade, clearing members do not need to evaluate the credit of each potential counterparty or limit themselves to a selected set of counterparties. This flexibility increases the potential liquidity available for each trade. The interposition of our clearing house as the counterparty for each matched trade allows our customers to establish a position with one party and then to offset the position with another party. This contract offsetting process provides our customers with flexibility in establishing and adjusting positions. In order to ensure performance, our clearing houses establish and monitor financial requirements for our clearing members and set minimum margin requirements for our traded products. Our clearing houses use proprietary software, based on an industry standard margining convention, to determine the appropriate margin requirements for each clearing member by simulating the gains and losses of complex portfolios. We typically hold margin collateral to cover at least 99% of price changes for a given product within a given historical period. At each settlement cycle, our clearing houses value, at the market price prevailing at that time, or mark-to-market, all open futures positions and require payments from clearing members whose positions have lost value and make payments to clearing members whose positions have gained value. Our clearing houses mark-to-market all open futures positions at least once a day, and in some cases more often if market volatility warrants. Marking-to-market provides both participants in a transaction with an accounting of their financial obligations under the contract. Having a mark-to-market cycle of a minimum of two times a day for ICE Clear U.S. and once daily for ICE Clear Europe and ICE Clear Canada helps protect the financial integrity of our clearing houses, our clearing members and market participants. This allows our clearing houses to identify quickly any clearing members that may not be able to satisfy the financial obligations resulting from changes in the prices of their open contracts before those financial obligations become exceptionally large and jeopardize the ability of our clearing houses to ensure financial performance of their open positions. All our clearing houses may call multiple intraday original margin in circumstances where market conditions require they take additional protection. As a self-regulatory organization, ICE Clear U.S. has instituted detailed risk-management policies and procedures to guard against default risk with respect to cleared contracts. In order to manage the risk of financial non-performance, we (i) have established that clearing members maintain at least USD5 million in minimum working capital, (ii) limit the risk exposure of open positions based upon the clearing member's capital, (iii) require clearing members to post original margin collateral for all open positions, and to collect original margin from their customers, (iv) pay and collect variation margin on a marked-to-market basis at least twice daily, (v) require clearing members to collect funds from under-margined customers, (vi) require deposits to the guaranty fund from clearing members which would be available to cover financial non-performance, and (vii) have broad assessment authority to recoup financial losses. ICE Clear Europe has instituted a similar multi-layered risk management system of rules, policies and procedures to protect itself in the event of a clearing member default which include requiring its members to (i) hold a sufficient minimum level of capital, (ii) make sufficient margin payments as required under the ICE Clear Europe rules, (iii) have made a guaranty fund contribution as required by ICE Clear Europe, (iv) have acceded to the ICE Clear Europe regulations and thereby accept ICE Clear Europe's powers of assessment to require the provision of additional funds by clearing members in certain situations consequent on an event of default, and (v) hold accounts as required under the ICE Clear Europe regulations at ICE Clear Europe approved financial institutions in relation to which ICE Clear Europe has established direct debit mandates in its favor. ICE Clear Canada has instituted a similar multi-layered risk management system of rules, policies and procedures to protect against default which include (i) operational and financial standards for clearing participants applicable to category of registration, (ii) requirements for clearing participants to post original margin for house and client positions and requirements to collect additional margin from clients, (iii) assessing and collecting intra-day margin payments on a pre-determined basis, (iv) requiring all clearing participants to pay into a guaranty fund, and (v) rules requiring all clearing participants to provide additional monies for the clearing fund in the event of a default. We also maintain extensive surveillance and compliance operations and procedures to monitor and enforce compliance with rules pertaining to the trading, position sizes, delivery obligations and financial condition of clearing members. In the unlikely event of a payment default by a clearing member, the clearing house would first apply assets of the clearing member to cover its payment obligation. These assets include original margin, variation margin and the guaranty fund deposits and any other available assets. In addition, we would make a demand for payment pursuant to any applicable guarantee provided to the clearing houses by the parent of a clearing member. Thereafter, if the payment default remains unsatisfied, the clearing house would use the guaranty fund of other clearing members and funds collected through an assessment against all other solvent clearing members to satisfy the deficit. We have agreed to reserve USD50.0 million of the USD250.0 million available under our revolving credit facility for use by ICE Clear U.S. to provide temporary liquidity in the event of default by a clearing member. In June 2008, the Company entered into a separate senior unsecured credit agreement which provides for a 364-day revolving credit facility in the aggregate principal amount of USD150.0 million which is available for operational use solely by ICE Clear Europe. ICE Clear Canada has arranged a total of USD3.0 million in revolving standby credit facilities with the Royal Bank of Canada to provide liquidity in the event of default by a clearing member. ICE Clear Europe has committed USD100.0 million in cash as part of its guaranty fund, of which USD50.0 million will be available only in the event a clearing member defaults and such member has used all its available funds to settle the position. The USD50.0 million will be used before other funds in the guaranty fund are used. If additional cash is required to settle positions, then the remaining USD50.0 million will be called pro-rata along with other non-defaulting ICE Clear Europe clearing members' deposits in the guaranty fund. ICE Clear Europe is also insured up to USD100.0 million in the event of a clearing member default, which would be called upon after the guaranty funds are depleted and prior to any clearing member assessment. As part of the powers and procedures designed to backstop financial obligations in the event of a default, each of the clearing houses may levy assessments on all of our clearing members if there are insufficient funds available to cover a deficit. There is no limit on this assessment of each clearing member unless the clearing member has notified the clearing house that it is withdrawing as a clearing member. However, before the clearing member can withdraw from the clearing house, the clearing house can assess the clearing member an amount up to two times the initial amount of the clearing member's guaranty fund balance to cover any remaining default. Despite this authority to levy assessments, there can be no assurance that the relevant clearing members will have the financial resources available to pay, or will not choose to be expelled from membership rather than pay, any such assessments. Despite the risk mitigation techniques adopted by, and the other powers and procedures implemented by our clearing houses, which are designed to, among other things, minimize the potential risks associated with the occurrence of monetary defaults, there can be no assurance that these powers and procedures will prevent such defaults or will otherwise function to preserve the liquidity of the clearing houses. Our clearing houses have an excellent risk management track record. ICE Clear Europe, ICE Clear U.S. and ICE Clear Canada, and their predecessor companies, have never experienced an incident of a clearing member default which has required the use of the guaranty funds or assets of the clearing house. / Ротшильд. INTERCOOLER = ПРОМЕЖУТОЧНЫЙ ОХЛАДИТЕЛЬ – Intercooler is a device which cools a gas between the compressive steps of a multiple stage compressor. / устройство, которое охлаждает газ между .

INTERCORPORATE HAULING = ВНУТРИКОРПОРАТИВНАЯ ПЕРЕВОЗКА (или ПЕРЕВОЗКА ВНУТРЕННИМ ПРОМЫШЛЕННЫМ ТРАНСПОРТОМ) – Intercorporate Hauling is a private carrier hauling a subsidiary's goods and charging the subsidiary a fee; this is legal if the subsidiary is wholly owned or if the private carrier has common carrier authority.

INTERCROPPING = ВОЗДЕЛЫВАНИЕ ПРОМЕЖУТОЧНЫХ КУЛЬТУР (или УПЛОТНИТЕЛЬНЫЙ ПОСЕВ, или УПЛОТНЁННЫЙ ПОСЕВ, или ПОСЕВ В МЕЖДУРЯДЬЯХ, или МЕЖРЯДНАЯ КУЛЬТИВАЦИЯ) – Intercropping is a growing two or more crops simultaneously in alternating rows or sets of rows in the same plot. See also Mixed Intercropping. / возделывание двух или более культур одновременно в .

INTER–CROP SPREADS = МЕЖУРОЖАЙНЫЕ КУРСОВЫЕ РАЗНИЦЫ (или МЕЖУРОЖАЙНЫЕ СПРЭДЫ) – Inter-Crop Spreads are the differences in price between futures contracts with delivery in different marketing years.

INTERDELIVERY SPREAD = МЕЖПОСТАВОЧНАЯ КУРСОВАЯ РАЗНИЦА (или КУРСОВАЯ РАЗНИЦА ПО РАЗЛИЧНЫМ СРОКАМ ПОСТАВКИ, или СПРЭД ПО РАЗЛИЧНЫМ СРОКАМ ПОСТАВКИ) – Interdelivery Spread:- simultaneously entering a long and short on the same futures contract but with different delivery months in the hopes that the price difference between the two months widens or narrows, depending on the underlying investment. Spread traders are only concerned that their long positions rise in value relative to their short positions. For example, if a trader is long June Corn and short August Corn, then the trader is hoping that the price of June Corn rises and the price of August Corn falls. Interdelivery Spread is a spread involving two different months of the same commodity. See also Spread. An Interdelivery Spread, one of the most commonly used spreads, lets spread traders take advantage of abnormal price differences between two delivery months of a single futures market. Traders describe interdelivery spreads as either bull or bear spreads. In an agricultural (ag) bull spread, a trader buys the nearby month and sells the deferred, expecting the nearby to gain on the deferred. An ag bear spread is just the opposite:- a trader sells the nearby month and buys the deferred, expecting the deferred to gain on the nearby. The nearby futures month refers to the contract month closest to expiration, while a deferred futures month is any contract month further from expiration. Note that in a metals bull spread, traders sell the nearby month and buy the deferred – just the opposite of an ag bull spread. That's because in the ag markets, an increase in the cash price typically raises the nearby month more than the deferred month. In the metals market, an increase in price typically raises the deferred month price by more. Among storable commodities, such as grains and metals, carrying charges have the greatest effect on the underlying futures prices of different delivery months. Carrying charges represent the cost of storage, insurance, and interest. The combination of storage cost and insurance for Corn, Oats, Soybeans, or Wheat in Chicago Board of Trade-approved elevators averaged 3.9 to 4.5 cents per bushel per month in 1993. A set amount of cents per month for interest is more difficult to state since interest rates have typically been a variable component of carrying charges. Theoretically, in a normal futures market – reflecting adequate supplies of the underlying cash commodity and sufficient storage capacity – the price of the nearby futures month and the price of the deferred futures month have a definite relationship. That is, the deferred futures price is usually more than the nearby futures price by approximately the amount of the cost of carrying the commodity from the nearby to the deferred month. Each futures delivery month price is typically priced higher than the previous month by the amount of the cost to store, insure, and finance the commodity from month to month. For example, in the case of Corn priced at USD2.50 per bushel, with a base cost for storage and insurance of 4.5 cents per bushel per month and an interest rate of 10 percent, the carrying charge is 6.58 cents per bushel (bu) per month (mo):- ((USD2.50 x 10%) / 12) + USD0.045 = USD0.065 8 / bu / mo. Thus, the theoretical spreads of futures prices at full carry are:- December – USD2.50; March – USD2.69¾; May – USD2.83; and July – USD2.96¼. These prices reflect the Corn crop year that begins September 01 and ends August 31. Consequently, December is considered the first new-crop futures delivery month and July the last. Futures prices tend to be at their seasonal low right after harvest – October and November for Corn. In a normal market, then, December futures should be priced lower than the deferred contract months since carrying charges accumulate as the marketing year progresses. Remember that these full-carry markets are theoretical. In practice, interdelivery futures price spreads only rarely reflect the full cost of carry due to changing market conditions. Take actual Corn spreads at the Chicago Board of Trade from mid-November 1982. With the nearby December Corn futures selling at USD2.34½ per bushel and a prime rate of 11½ percent, the monthly carrying cost was about 7 cents. December 1982 – USD2.34½; March 1983 – USD2.45; May – USD2.51½; July – USD2.56¼; and September – USD2.60. These spreads are far from full carry. Many different market variables could have affected the spread between the delivery months, including expectations about the amount of Corn planted by farmers during the next crop year; corn demand for animal feed, food, seed, and industrial uses; carryover expectations (remaining supplies of corn carried from one crop year to the next); the expected rate of inflation; interest rate fluctuations; and the availability of storage. In fact, some markets may not reflect carrying charges at all. During periods when a commodity is in short supply, the nearby futures contract can trade at a premium to the deferred futures. Such a market is called an Inverted Market. The inversion represents, in effect, a negative return for holding inventories. One of the most common interdelivery spreads is the intercrop, or old-crop/new-crop, spread. It involves buying futures in one crop year and selling futures in another crop year. Since prices are usually lowest at harvest, new-crop futures tend to be priced lower than futures from the previous crop year. Traders must consider a number of factors, however, when establishing an old-crop/new-crop spread. First, traders should look at the price relationship – not absolute price levels – between the two contracts and determine how they think the spread will change. Then traders must ask:- (i) How large are remaining supplies (carryover) from the last harvest? (ii) What is the outlook for the size of next harvest? (iii) How does the rate of usage compare to previous forecasts? (iv) How strong is future demand expected to be? Answering these questions helps determine how a spread will change pver time. If traders expect old-crop prices to rise relative to new-crop prices, they can buy the old-crop month and simultaneously sell the new-crop month. If, on the other hand, they expect new-crop prices to gain relative to old-crop prices, they can buy the new-crop month and simultaneously sell the old-crop month. In each case, both sides of the spread are usually executed in one step, not two. The July/December Corn spread is a common intercrop spread. July represents the old-crop month; December represents the new-crop month. Traders calculate the spread by

subtracting the December futures price from the July futures price (July minus December). The purchase of one delivery month of a given futures contract and simultaneous sale of another delivery month of the same commodity on the same exchange. Also known as Calendar Spread, Intra-commodity Spread, and Intramarket Spread. An Interdelivery Spread, sometimes called an Intramarket Spread, involves the simultaneous purchase of one delivery month of a given futures contract and the sale of another delivery month of the same commodity on the same exchange. For example, an interdelivery spreader might buy July Wheat and sell December Wheat at the Chicago Board of Trade.

INTERDEPARTMENTAL SERVICE = МЕЖДЕПАРТАМЕНТНАЯ УСЛУГА – Interdepartmental Service (electric) is the interdepartmental service includes amounts charged by the electric department at tariff or other specified rates for electricity supplied by it to other utility departments.

INTERDUNAL SWALE WETLAND = XX СИЛЬНО УВЛАЖНЁННАЯ ЗЕМЛЯ – Interdunal Swale Wetland is a wetland dominated by grasslike vegetation that occurs in the low areas between sand dunes or beach ridges along the Great Lakes shoreline.

INTEREST = ПРОЦЕНТ (или ИНТЕРЕС) – (1) Interest:- the price paid for credit is a function of two main factors:- time and risk. The cost of lending as a function of time compensates the lender for giving up the use of the borrowed funds. The risk that the borrower will become insolvent increases over time and justifies charging a certain premium over and above the cost of lending, and varies with the borrower's creditworthiness and the guarantees associated with the credit. Gross interest paid. This includes financial charges, but does not include interest capitalized. Interest paid is not netted off against interest received. Interest:- cost of service rendered by a lender to a borrower, and paid by the borrower for the use of a sum of money for a given period of time. Interest is an expense for the party who pays it, and a revenue for the recipient. It is a price, in the economic sense. Interest may be defined in terms of an interest rate, that is, the relationship of the amount of interest due for one year and the amount of principal loaned, with each amount expressed in units of money. This is simple interest, as opposed to compound interest, which applies the principal plus the amount of interest already accrued thereon. Payments borrowers pay lenders for the use of their money. A corporation pays interest on its bonds to its bondholders. Interest is a compensation at a specified rate, which is paid for the use of money. The price paid by a borrower for the use of the lender's money. A term Interest refers to any physical commodity, currency or other tangible goods, intangibles (such as an equity security, bond, futures contract, swap or option, interest rates, another index, including indexes that track the performance of a rule-based trading strategy or the volatility of a financial instrument or another index), any financial instrument on an Interest, which is intended to be measured by a Benchmark. Depending on the context, it is assumed that the word 'Interest' also includes the market for such Interest. / Под Процентом, от Латинского словосочетания Pro Centum, означающее За Сто, понимается сотая доля числа, обозначаемая знаком %. Проценты – сотые доли целого (принимаемого за единицу). Процентом называют одну сотую долю и обозначают знаком %; так, 19% от 3 метров (м) составляют 0.57 м, или 57 сантиметров (см). Тысячная доля целого, то есть десятая часть процента, имеет специальное название – Промилле – и особое обозначение 0/00. В хозяйственных и статистических расчётах, а также во многих отраслях науки части величин принято выражать в процентах; для их нахождения служит формула простых процентов:- если с величины a нарастает p % за год (или за какой-либо другой промежуток времени), то через t лет она превратится в xxx. При этом предполагается, что по истечении каждого года доход за этот год изымается, так что за новый год доход исчисляется с первоначальной величины (в этом именно смысле говорят о простых процентах). Если же доход причисляют к первоначальной величине и, следовательно, доход за новый год исчисляется с наращенной суммы, то говорят о сложных процентах; в этом случае величина, в которую превратится a через t лет, вычисляется по формуле сложных процентов:- xxx сут, а каждый месяц – 30 сут. Сложные проценты применяются во многих областях хозяйственной деятельности и бухгалтерского учёта (в банках, сберегательных кассах и так далее), а также в различных статистических расчётах (в первую очередь при определении среднегодовых темпов относительного прироста или снижения за длительные периоды времени – пятилетки, десятилетия и так далее).

(2) Interest is the price paid for the provision of money and capital. The price paid for borrowing money, usually given in percentages and as an annual rate. Interest is a fee for the use of money over time. It is an expense to the borrower and revenue to the lender. Also money earned on a savings account. Interest is the price paid for making money available. In this respect the customer can either obtain interest from the bank for cash deposits (credit interest) or interest can be paid by the customer, e.g., for taking down a loan (debit interest). The charge or cost for the use of money. Interest is a payment for the use or forbearance of money. / Сбор или стоимость использования денег. Под Ссудным Процентом, от Латинского слова Procentum, означающее За Сто), понимается плата, получаемая кредитором от заёмщика за пользование отданными в ссуду деньгами. В докапиталистических формациях, когда кредит выступал в форме ростовщического, источником процента был прибавочный и частично необходимый труд мелких производителей или рабов. При капитализме процент составляет лишь часть произведённой прибавочной стоимости, или прибыли. Прибыль на капитал делится на процент, присваиваемый ссудным капиталистом, и предпринимательский доход, присваиваемый функционирующим капиталистом. На поверхности явлений процент выступает как плод самого капитала, что маскирует капиталистическую эксплуатацию. Он принимает форму цены капитала, как товара, при потреблении которого стоимость и потребительная стоимость не только сохраняются, но и увеличиваются, в то время как потребительная стоимость других товаров в конце концов потребляется. При социализме процент – часть прибыли социалистического предприятия или часть дохода юридического или физического лица, уплачиваемая за пользование денежными средствами в форме ссуды, вклада и тому подобного. Устанавливая его, социалистическое государство исходит из необходимости обеспечить наиболее полное и эффективное использование денежных ресурсов, укрепление режима экономии и хозяйственного расчёта. Процент выплачивается по банковским ссудам социалистическими предприятиями и организациями, начисляется по вкладам предприятий, организаций, населения в банках и сберегательных кассах.

(3) Interest is a share of profits or assets of an entity, e.g., minority interest, interest in a partnership. / Доля в прибылях или активах юридического лица, например, миноритарный процент, процент в товариществе. Под Интересом, от Латинского слова Interest, означающее Иметь Значение, понимается .

INTEREST ACCRUAL = НАЧИСЛЕНИЕ ПРОЦЕНТА – In the United States, Interest Accrual is the interest earned by an appreciation-type or accrual-type savings security, such as a Series EE bond, and added to what the bond was worth either at the time it was purchased or at some point thereafter according to applicable regulations.

INTEREST ACCRUAL DATE = ДАТА НАЧИСЛЕНИЯ ПРОЦЕНТА – Interest Accrual Date is a date from which interest is computed on a new bond or other debt instrument. See also Dividend Date.

INTEREST ARBITRAGE = ПРОЦЕНТНОЕ АРБИТРАЖИРОВАНИЕ – Interest Arbitrage:- the operation wherein foreign debt instruments are purchased to profit from the higher interest rate in the foreign country over the home country. The operation is profitable only when the forward rate on the foreign currency is selling at a discount less than the premium on the interest rate. See also Arbitrage, and Interest Rate Parity.

INTEREST–BEARING CLAIM = ТРЕБОВАНИЕ НА ПОЛУЧЕНИЕ ПРОЦЕНТОВ – Interest-Bearing Claim is a financial asset which entitles its owner to receive interest payments from the debtor who issued it.

INTEREST COUPON = ПРОЦЕНТНЫЙ КУПОН – Interest Coupon:- the receipt form accompanying fixed-income securities which is presented on the interest payment date against payment of the due interest amount. A renewal coupon is attached to the interest coupon sheet on which several interest coupons are combined. Also known as Coupon. The coupon attached to bonds and medium-term notes. Presented to collect interest on the due dates. / Купон, прилагаемый к облигациям и среднесрочным нотам. Представляется для получения процентов в надлежащие (причитающиеся) даты.

INTEREST COVERAGE RATIO = СООТНОШЕНИЕ ПРОЦЕНТ ПОКРЫТИЕ (или СООТНОШЕНИЕ ПОКРЫТИЯ ПРОЦЕНТОВ, или КОЭФФИЦИЕНТ ОБЕСПЕЧЕННОСТИ ПРОЦЕНТОВ) – Interest Coverage Ratio:- fiscal year earnings from continuing operations (before interest and taxes) divided by the interest expense. This data is taken from the 10K Report. This ratio measures a company's ability to pay interest. The higher the ratio, the more capable a company is of paying its interest. Interest Coverage Ratio:- income before income tax expense, plus interest and debt expense and amortization of capitalized interest, less net income attributable to noncontrolling interests, divided by before-tax interest costs.

INTEREST COVER RATIO = СООТНОШЕНИЕ ПРОЦЕНТ ПОКРЫТИЕ – Interest Cover Ratio is a ratio that shows the number of times interest payments are covered by earnings before interest and tax (EBIT). The higher the interest cover, the greater the company's ability to meet interest payments. Interest Cover = Earnings Before Interest and Tax (EBIT) / Net Interest Payments = number of times covered. Ratio Interest Cover = EBITDA / Interest Expense.

INTEREST DAYS = ПРОЦЕНТНЫЕ ДНИ – Interest Days:- the number of days per month and year taken for interest calculations. German practice (also followed in Switzerland):- 1 month = 30 days, 1 year = 360 days. UK practice (followed on the Euromarket):- the exact number of days in a calendar month is taken, 1 year = 365 days.

INTEREST DEDUCTION = ВЫЧЕТ ПРОЦЕНТОВ (или УДЕРЖАНИЕ ПРОЦЕНТОВ) – Interest Deduction is a deduction for taxpayers who pay certain types of interest. Interest deductions reduce the amount of income subject to tax. The two main types of interest deductions are for home mortgage and home equity loan interest, and margin account interest. These deductions are allowed primarily to encourage home ownership and investment activity. Other interest deductions can come from the interest paid on student loans. Interest deductions face some limitations. Taxpayers must be able to itemize in order to claim either of the deductions listed above, and margin account interest and other investment-related expenses are only deductible for amounts in excess of 2% of adjusted gross income. Additionally, margin loan interest is only tax-deductible if the loan is used to purchase taxable investments, and the deduction is limited to net investment income. However, once these conditions are met, it is possible to reduce or even eliminate one's taxable income if a sufficient amount of interest has been paid. In savings business, an interest reduction imposed following a failure to comply with the agreed period of notice.

INTEREST DISCOUNT PAPER = БУМАГА С ПРОЦЕНТНЫМ ДИСКОНТОМ – Interest Discount Paper is a security for which the purchase price is calculated on the date of purchase by discounting the interest on the nominal amount to be repaid at a later date. The interest (plus compound interest) is only paid out upon redemption at the end of the term. Typical interest discount papers are zero bonds, financing bills, etc. The opposite of interest discount paper is Accrued Interest Paper.

INTEREST DIVISOR = ПРОЦЕНТНЫЙ ДЕЛИТЕЛЬ – Interest Divisor is a calculated constant for simplifying the computation of interest. The number of the days in the year divided by the rate of interest.

INTEREST EARNED = ЗАРАБОТАННЫЕ ПРОЦЕНТЫ – Interest Earned is an amount earned by a company on its interest bearing bank accounts or other investments. The amount should be reported as Interest Revenues, Interest Income, or Investment Revenues in the accounting period in which the interest is earned. Also known as Interest Received. / Известны также как Полученные Проценты (Interest Received).

INTEREST EXPENSE = РАСХОДЫ ПО ПРОЦЕНТАМ (или ПРОЦЕНТНЫЕ РАСХОДЫ) – In the United States, Interest Expense is an expense for interest on a loan made to an individual, corporation or other entity. Also known as Interest Payable in the United Kingdom. Interest Expense is the cost of borrowing during the period. This cost would appear on the income statement, whether it has been paid in cash or not. Computed using compound interest calculations based on principal balances owed, interest rates, and amount of time during the period. / К Процентным Расходам относят:- расходы по уплате процентов по вкладам юридических и физических лиц; уплаченные проценты по долговым обязательствам банка (облигациям, сберегательным и депозитным сертификатам, векселям); уплаченные проценты по ресурсам, привлечённым от других банков, в том числе от центрального банка, и овердрафт по кредитным ресурсам, перераспределённым между головным банком и его филиалами; расходы по уплате процентов по кредитам, приобретённым банком на аукционной, ломбардной основе, по отсроченным межбанковским кредитам, в том числе по разрешениям правительства; уплаченные проценты по счетам банков-корреспондентов и другие.

INTEREST FORMULA = ФОРМУЛА ПРОЦЕНТОВ (или ФОРМУЛА РАСЧЁТА ПРОЦЕНТОВ) – Interest = interest numbers divided by interest divisor. The interest number is produced by multiplying the interest days by one hundredth of the capital. When someone lends money to someone else, the borrower usually pays a fee to the lender. This fee is called 'Interest'. 'Simple' Interest, or 'Flat Rate' Interest. The amount of simple interest paid each year is a fixed percentage of the amount borrowed or lent at the start. The simple interest formula is as follows:- Interest = Principal x Rate x Time; where:- 'Interest' is the total amount of interest paid, 'Principal' is the amount lent or borrowed, 'Rate' is the percentage of the principal charged as interest each year. The rate is expressed as a decimal fraction, so percentages must be divided by 100. For example, if the rate is 15%, then use 15/100 or 0.15 in the formula. 'Time' is the time in years of the loan. The simple interest formula is often abbreviated in this form:- $I = P \cdot R \cdot T$.

INTEREST GROUP = ГРУППА ПО ИНТЕРЕСАМ – Interest Group is a group of people who share common traits, attitudes, beliefs, and/or objectives who have formed a formal organization to serve specific common interests of the membership. Examples of interest groups would include such disparate organizations as the Auburn Chamber of Commerce, the Society for the Prevention of Cruelty to Animals, the elementary school PTA (short for the Parent-Teacher Association), the Teamsters Union, the Southern Baptist Convention, the American Numismatics Association, the National Association for the Advancement of Colored People, the Brangus Breeders Association, the American Civil Liberties Union, the Cosa Nostra, and the Benevolent Order of Elks. Interest groups typically have formal admission to membership, dues, elected officers, by-laws and regular meetings, and they often provide information and regular opportunities for communication through newsletters or magazines, sponsor recreational or educational activities, organize volunteer public service projects, make deals for group discounts or group insurance and so on. Larger interest group organizations may have full-time paid officers or professional staff to manage and to supplement the efforts of member-volunteers in furthering the work of the organization. Many interest groups at least occasionally engage in some form of lobbying or other political activities with respect to issues that touch directly on the common interests that are the organization's reason for being – for example, the PTA may

organize support for a bond issue election to pay for erecting a new school building. Some interest groups have political activity as their principal or only reason for being in the first place. Interest groups that exist primarily for exerting political influence as a means of affecting government policies or legislation are often referred to by the narrower term pressure groups. Since more and more activities have become politicized with the expansion of the scope of activities of the government in the XX century, more and more interest groups find themselves drawn into politics to protect or promote the interests of their membership, and the distinction in usage between the terms interest group and pressure group has accordingly become less significant in ordinary language. / коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INTEREST INCOME = ДОХОД ПО ПРОЦЕНТАМ (или ПРОЦЕНТНЫЙ ДОХОД) – In the United States, Interest Income is the type of income generated by bank deposits, bonds, guaranteed investment certificate (GIC's), treasury bills, fixed income investments, strip bonds and strip coupons. Also known as Interest Receivable in the United Kingdom. Earnings on investments such as savings accounts, certificates of deposit and seller-financed mortgages.

INTEREST INCOME STATEMENT = ОТЧЁТ ПО ДОХОДУ ПО ПРОЦЕНТАМ (или ОТЧЁТ О ПРОЦЕНТНОМ ДОХОДЕ) – In the United States, Interest Income Statement (IRS Form 1099-INT) is a paper information return showing the amount of reportable interest paid to a taxpayer. Typically, the return shows the total amount of such interest paid to that taxpayer in a year. This return has to be mailed to the taxpayer no later than the end of January following the tax year in which the payment of interest to the taxpayer occurred. The statement may include interest on accrual (EE/I/E) or current income (HH/H) savings bonds. Box 1 – Interest Income:- shows taxable interest paid to you during the calendar year by the payer. This does not include interest shown in box 3 (Interest on US Savings Bonds and Treasury obligations). May also show the total amount of the credits from clean renewable energy bonds, Gulf tax credit bonds, qualified forestry conservation bonds, new clean renewable energy bonds, qualified energy conservation bonds, qualified zone academy bonds, Midwestern tax credit bonds, qualified school construction bonds, and build America bonds that must be included in your interest income. These amounts were treated as paid to you during 2011 on the credit allowance dates (March 15, June 15, September 15, and December 15). Box 3 – Interest on US Savings Bonds and Treasury obligations:- Shows interest on US Savings Bonds, Treasury bills, Treasury bonds, and Treasury notes. This may or may not all be taxable. This interest is exempt from state and local income taxes. This interest is not included in box 1 (Interest Income). Due dates:- Furnish Copy B of this form to the recipient by 2012-January-31. File Copy A of this form with the IRS by 2012-February-28. If you file electronically, the due date is 2012-April-02. To file electronically, you must have software that generates a file according to the specifications in Pub. 1220, Specifications for Filing Forms 1097, 1098, 1099, 3921, 3922, 5498, 8935, and W-2G Electronically. IRS does not provide a fill-in form option. Forms 1099-INT and 1098:- If you received mortgage interest in the course of your trade or business, you may have to report it to the payer of such mortgage interest and to the IRS on Form 1098, Mortgage Interest Statement. Do not report mortgage interest to the payer on Form 1099-INT. Foreign recipient:- If the recipient is a nonresident alien, you may have to withhold federal income tax and file Form 1042-S, Foreign Person's US Source Income Subject to Withholding. Interest excluded from reporting:- You are not required to file Form 1099-INT for interest on an obligation issued by an individual, interest on amounts from sources outside the United States paid outside the United States by a non-US payer or non-US middleman, certain portfolio interest, interest on an obligation issued by an international organization and paid by that organization, and payments made to a foreign beneficial owner or foreign payee. Other exception:- Do not report tax-deferred interest, such as interest that is earned but not distributed from an Individual Retirement Account (IRA). / Надлежащие (причитающиеся) даты:- . сохранение (conservation).

INTEREST IN SUSPENSE = ПРОЦЕНТ В НЕОПРЕДЕЛЁННОСТИ – Interest In Suspense:- contractual interest suspended on non-performing loans.

INTEREST MARGIN = МАРЖА ПО ПРОЦЕНТАМ (или ПРОЦЕНТНАЯ МАРЖА) – (1) Interest Margin is the difference between the interest earned by a bank and the interest paid by it. / Разница между процентами, заработанными банком, и процентами, уплаченными этим банком.

(2) Interest Margin is the difference between the interest rates in a particular sector of the banking business, e.g., between the interest rate for first mortgages and the interest rate on the deposits and borrowings used to refinance the mortgages. / Разница между процентными ставками в конкретном секторе банковского дела, например, между процентной ставкой по первым закладным и процентной ставкой по депозитам и заимствованиям, используемым для рефинансирования данных закладных.

INTEREST MARGIN ON AVERAGE ADVANCES = ПРОЦЕНТНАЯ МАРЖА ПО УСРЕДНЁННОЙ СУММЕ АВАНСОВ – Interest Margin On Average Advances:- net interest income (before deducting the impairment on doubtful advances) divided by gross average advances.

INTEREST MARGIN ON AVERAGE TOTAL ASSETS = ПРОЦЕНТНАЯ МАРЖА ПО УСРЕДНЁННЫМ СУММАРНЫМ АКТИВАМ – Interest Margin On Average Total Assets:- net interest income (before deducting the impairment on doubtful advances) divided by average total assets.

INTEREST–ONLY PAYMENT ADJUSTABLE–RATE MORTGAGE = ЗАКЛАДНАЯ С РЕГУЛИРУЕМОЙ СТАВКОЙ С ОПЛАТОЙ ТОЛЬКО ПРОЦЕНТОВ – In the United States, an Interest-Only Payment Adjustable-Rate Mortgage (I-O payment ARM) plan allows you to pay only the interest for a specified number of years. After that, you must repay both the principal and the interest over the remaining term of the loan.

INTEREST OPERATIONS = ОПЕРАЦИИ ПО ПРОЦЕНТАМ – Interest Operations are the bank operations connected with the payment or receipt of interest (claims, liabilities). In general, bill of exchange and money market paper business also falls under interest operations.

INTEREST PAID = ВЫПЛАЧЕННЫЕ ПРОЦЕНТЫ – Interest Paid:- balance sheet item showing the interest paid by the bank on funds it has received on deposit. Usually called Credit Interest in current account transactions. The opposite of Interest Received. Interest Paid shows the total amount of interest paid on loans (long & short-term) and overdrafts less any interest earned on Bank Deposits. / Строка (item) балансового отчёта . Выплаченные Проценты – статья баланса банка по пассиву, показывающая процентные выплаты по привлечённым депозитам.

INTEREST PAYABLE = ПРОЦЕНТЫ К ОПЛАТЕ – In the United Kingdom, Interest Payable is an accounting term which refers to the amount a company pays in the form of interest on cash borrowings. The figure for interest payable can be found in the balance sheet. Its flip side is 'interest receivable' – the amount a company receives as interest on its cash deposits. Also known as Interest Expense in the United States.

INTEREST PAYMENT DATE = ДАТА ПРОЦЕНТНЫХ ПЛАТЕЖЕЙ (или ДАТА ПЛАТЕЖЕЙ ПРОЦЕНТОВ) – Interest Payment Date is a date specified in the bond terms for the payment of interest. In Germany, interest is generally paid annually, in other countries mostly semi-annually or quarterly (e.g., in the USA) on a retroactive basis.

INTEREST PAYMENTS = ПРОЦЕНТНЫЕ ПЛАТЕЖИ (или ВЫПЛАТЫ ПРОЦЕНТОВ) – Interest Payments:- the return expressed in percentage earned on an investment each year. These payments are issued every six months based on an annual rate.

INTEREST RATE = ПРОЦЕНТНАЯ СТАВКА – Interest Rates are set by the capital markets. The market assesses the risk of the company. Many bonds are explicitly rated, or graded, based on the amount of default risk they carry. Most US debentures (bonds backed by the general faith and credit of the borrowing company) have fixed coupons. Most bank loans, obtained by both US and non-US corporations have floating rates; in other words, the interest rate charged periodically changes to reflect changes in market interest rates. Syndicated bank loans, those funded by a large number of commercial banks, typically fluctuate with LIBOR, the London interbank offered rate. The percentage rate used to determine the cost of borrowing money, stated usually as a percentage of the principal loan amount and as an annual rate. Interest Rate is the rate charged to borrow funds, usually from banks or other lending institutions. The Interest Rate is the relationship between the annual amount of interest payable and the principal amount, and is the unit charge for the service rendered. Another important economic indicator. The price, calculated as a percentage of the money loaned, that banks are charging borrowers for the use of the bank's money. The rate of interest expressed as a percentage and calculated for a year. See also Accrued Interest, and Variable Interest Rate. Interest Rate(s) is(are) the price(s) of obtaining the temporary use of money that one borrows from someone else who actually owns it, normally expressed as a percentage of the amount borrowed per year. Since loans and loan repayment extend over considerable periods of time and entail more complex security arrangements than a simple cash-on-the-barrelhead exchange, interest rates to be paid are normally spelled out as part of a relatively complex written contract between borrower and lender. Like most other prices in an advanced market economy, the going levels of interest rates are determined in rather well-developed, highly competitive markets (in this case, they are referred to as 'Credit Markets' or 'Financial Markets') by the interaction and mutual adjustment of supply and demand. The demand for loanable funds mainly comes from firms who need them for investment purposes, from households who want them mainly for the purchase of big-ticket consumer durable goods like houses or autos, and from national, state and local governments who want them in order to make up the difference between the amount of money available in the treasury from tax collections and the (larger) amount of money the government has nevertheless decided to spend in financing its various projects and programs. The supply of loanable funds comes mainly from individual household and business firm savings placed with financial intermediary firms such as banks, thrift institutions, and insurance companies or else mobilized directly from individual lenders through the issuance of bonds, notes and other credit instruments tradeable on financial markets. In economies such as our own that allow fractional reserve banking, a considerable portion of the supply of loanable funds comes through credit creation by the central bank and the banking system. It is a serious oversimplification to refer to 'the' rate of interest because at any given time there will normally be a whole range of different rates of interest that vary according to (among other things) the particular form of lending (bank savings deposits, personal i.o.u.'s, secured mortgages, collateralized bank loans, corporate bonds, US Treasury notes, etc), the contractual terms upon which the money is loaned (duration of the loan, repayment schedule, fixed rate or floating rate, national currency in which the loan is to be repaid, etc), and the perceived degree of risk that the particular category of borrower will default on his repayments. For theoretical or analytical purposes, economists often like to postulate the existence of a 'pure' (completely risk free) rate of interest (closely approximated by the rate of return on very short-term US government Treasury bills) and then analyze other real world interest rates in terms of various factors peculiar to particular types of loans that each cause some sort of 'premium' to be added on to the pure rate of interest in proportion to the various kinds and degrees of risk entailed (risk of default, risk of inflation or currency devaluation reducing the real value of the repayment over time, risk that the debt would be hard to resell if the lender unexpectedly needs to get his money out before the term of the loan expires, etc). The level of interest rates plays an extremely important role on either the supply side or the demand side of very many other important markets in the economy, and for that reason interest rates are often perceived by government policy makers as a potentially powerful tool for manipulating the economy in the interests of promoting growth, controlling inflation, stimulating exports and so on. Large-scale investment projects by business firms such as building new factories (or starting up new businesses) are often financed largely by borrowing, and the level of interest rates plays an important role in determining whether a particular investment project under consideration seems likely to be profitable or not. Thus, a period of very high interest rates (especially very high long-term interest rates) is likely to reduce greatly the amount of new investment undertaken – with obvious short-term consequences for the level of employment in the construction and machine-tools industries and with longer-term consequences for the country's overall economic growth in the future. Similarly, the level of interest rates plays a large role in the willingness and ability of consumers to purchase new houses, recreational vehicles, automobiles, refrigerators and other big ticket items – with important implications for the profitability and level of employment in these industries. Interest rates available on savings accounts, bonds, and the like play a role in determining household decisions about how much income to save and how much to spend on immediate consumption. Interest rates (and especially their relationship to the levels of interest rates in other countries) also play a crucial role in affecting the volume of savings entering the country from abroad for local investment or leaving the country for foreign investment purposes – thus influencing not only investment activity but also the exchange rates of the domestic currency in relation to foreign currencies, and thus the attractiveness of the country's exports to potential purchasers abroad. For all these reasons (and others), governments in the XX century are nearly always deeply involved in deliberate efforts to influence interest rates by means of monetary policies that encourage the expansion (or, occasionally, contraction) of the money stock through regulatory pressures on the banking system. The Interest Rate indicates the interest rate level in percent. It is the price a borrower must pay for borrowing money, respectively the money a creditor receives for providing capital. A central bank can determine the Short-Term Nominal Interest Rates which banks have to pay when they want to get credit from the central bank. Banks need to go to the central bank for credit as they need banknotes for their clients and need to fulfil minimum reserve requirements in the form of deposits with the central bank. As central banks are the only institutions which can issue banknotes (and bank reserves), i.e. they are the monopolistic suppliers of base money, they can determine the policy rates, e.g., the short-term nominal interest rates on loans given to the banks. The expectations regarding the future development of policy rates in turn influence a wide range of longer-term bank and market interest rates. From the perspective of an individual household, a higher real interest rate makes it more attractive to save, since the return on saving in terms of future consumption is higher.Therefore, higher real interest rates typically lead to a fall in current consumption and an increase in savings. From a firm's standpoint, a higher real interest rate will, provided all other variables remain the same, deter investment, because fewer of the available investment projects will offer a return sufficient to cover the higher cost of capital. To sum up, an interest rate rise will make current consumption less desirable for households and discourage current investment by firms.The effects on individual households and firms show that an increase in real interest rates brought about by monetary policy will lead to a reduction in current expenditure in the economy as a whole (if the other variables remain constant). Economists say that such a policy change causes a drop in aggregate demand and is thus often referred to as a 'Tightening' of monetary policy. It is important to understand that there are time lags in this process. It might easily take months for firms to put a new investment plan in place; investments involving the construction of new plants or the ordering of special equipment can even take years. Housing investment also takes some time to respond to changes in interest rates. Also many consumers will not immediately change their consumption plans in response to changes in interest rates. Indeed, it is generally agreed that the overall transmission process of monetary policy takes time. Monetary policy cannot, therefore, control the overall demand for goods and services in the short run. Expressed in another way, there is a significant time lag between a change in monetary policy and its effect on the economy.

Interest Rate:- the percentage of extra money you get back if you lend your money to someone else (or keep it in the bank) or the percentage of extra money you have to pay back if you borrow money (in addition to the loan received). / (более известная в Англоязычном звучании как ЛАЙБО или ЛИБО (LIBOR)). Под Процентной Ставкой понимается размер процента, устанавливаемый банками по различным видам проводимых ими операций (краткосрочным и долгосрочным ссудам, срочным вкладам, вкладам до востребования и другим). Процетная Ставка, размер процента, устанавливаемый банками по различным видам проводимых ими операций (краткосрочным и долгосрочным ссудам, срочным вкладам, вкладам до востребования и другим). Процентная Ставка – размер процента за ссуду денег. Представляет собой отношение величины дохода от ссуды к сумме ссуды. В докапиталистических формациях основной формой кредита выступал ростовщический кредит и процентная ставка, если в стране не существовало специального законодательного ограничения, практически не имела предела (так называемая ростовщическая процентная ставка). При капитализме процентная ставка колеблется в рамках средней нормы прибыли в зависимости от спроса и предложения на ссудный капитал. В современных условиях на неё также оказывают влияние инфляционные процессы, международные переливы капиталов, государственно-монополистическое регулирование кредита и так далее. При социализме процентная ставка устанавливается государством в плановом порядке и не подвержена стихийным колебаниям. Процентная Ставка – ставка процента, выплачиваемая за использование денежных средств, обычно в годовом исчислении. Ставка вычисляется путём деления суммы процентных платежей на величину основной суммы займа. Например, если банк за кредит в 100 Долларов требует уплаты 10 центов в год, то среднегодовая ставка по его кредиту составляет 10%. Проценты начисляются по векселям, облигациям, кредитным картам и многим видам потребительских и коммерческих кредитов. Процентная Ставка:- плата за кредит в процентном выражении к сумме кредита в расчёте на один год. Устанавливаемый центральным банком какой либо страны, процентная ставка повышает валютный курс относительно валюты этой страны при её увеличении, из-за того что держать средства именно в этой валюте становится более выгодно, следовательно и спрос на эту валюту будет расти.

INTEREST RATE CAP = ВЕРХНИЙ ПРЕДЕЛ ПРОЦЕНТНОЙ СТАВКИ – Interest Rate Cap is a limit on the amount your interest rate can increase. Interest caps come in two versions:- (i) periodic adjustment caps, which limit the interest-rate increase from one adjustment period to the next; and (ii) lifetime caps, which limit the interest-rate increase over the life of the loan. By law, virtually all adjustable-rate mortgages (ARMs) must have an overall cap. See also Cap. / все закладные с переоцениваемой ставкой (ЗПС; adjustable-rate mortgage (ARM)) должны иметь .

INTEREST RATE CAP = ОПЦИОН НА ВЕРХНИЙ ПРЕДЕЛ ПРОЦЕНТНОЙ СТАВКИ – Interest Rate Cap is an over-the-counter (OTC) option that pays the difference between a floating interest rate and the cap rate. See also Cap. / Опцион на верхний предел процентной ставки, внеучётный опцион, предусматривающий выплату разницы между изменяющимся уровнем и верхним пределом процентной ставки.

INTEREST RATE COLLAR = ОПЦИОН НА ДИАПАЗОН ПРОЦЕНТНОЙ СТАВКИ (или ОПЦИОН НА ВЕРХНИЙ И НИЖНИЙ ПРЕДЕЛЫ ПРОЦЕНТНОЙ СТАВКИ) – Interest Rate Collar is a combination of cap and floor. See also Cap, Collar, and Floor. / Комбинация опционов на врехний (cap) и нижний пределы (floor) процентной ставки.

INTEREST RATE FLOOR = ОПЦИОН НА НИЖНИЙ ПРЕДЕЛ ПРОЦЕНТНОЙ СТАВКИ – Interest Rate Floor is an over-the-counter (OTC) option that pays the difference between the floor rate and a floating interest rate. See also Floor. / Опцион на нижний предел процентной ставки, внеучётный опцион, предусматривающий выплату разницы между нижним пределом и изменяющимся уровнем процентной ставки.

INTEREST RATE FUTURES = ФЬЮЧЕРС НА ПРОЦЕНТНУЮ СТАВКУ – Interest Rate Futures are the futures contracts traded on fixed income securities such as US Treasury issues, or based on the levels of specified interest rates such as LIBOR (London Interbank Offered Rate). Currency is excluded from this category, even though interest rates are a factor in currency values. Forward contracts for hedging against interest rate fluctuations. See also Financial Futures. Interest Rate Futures are the futures contracts traded on fixed income securities such as CDs, GNMAs, US Treasury issues. Currency is excluded from this category, even though interest rates are a factor in currency values. / (более известная в Англоязычном звучании как ЛАЙБО или ЛИБО (LIBOR)). от флуктуаций (колебаний) процентной ставки. Фьючерсный Контракт На Процентную Ставку – фьючерсные контракты на основе долговых ценных бумаг или межбанковских депозитов. Теоретически покупатель фьючерсного контракта на облигацию обязуется принять эту облигацию в срок исполнения контракта, а продавец фьючерсного контракта согласен поставить эту облигацию. Однако большинство фьючерсных контрактов завершается до срока исполнения без поставки финансового инструмента. Стоимость контрактов изменяется в направлении, обратном изменению процентных ставок. Например, если доходность Казначейских Облигаций растёт, то цена фьючерсных контрактов на Казначейские Облигации падает. И наоборот, когда доходность Казначейских Облигаций падает, цена фьючерсных контрактов растёт. Существует множество видов фьючерсных контрактов на процентную ставку, среди них контракты на Казначейские Векселя, краткосрочные и долгосрочные облигации; ценные бумаги Государственной Национальной Ассоциации по Закладным (Government National Mortgage Association (GNMA)), обеспеченные ипотекой; муниципальные облигации; межбанковские депозиты, такие, как Евродоллары (Eurodollars). Подобными контрактами торгуют спекулянты (speculators), рассчитывающие на повышение или понижение процентных ставок. Кроме того, компании, имеющие риск потенциальных убытков от изменения процентных ставок, такие, как брокерские фирмы, банки и страховые компании, могут использовать фьючерсные контракты для защиты от риска (hedge) своих позиций по Казначейским Облигациям и другим долговым финансовым инструментам или стоимости будущих займов. Перечень процентных фьючерсных контрактов смотрите (Securities And Commodities Exchanges).

INTEREST RATE OPTION = ОПЦИОН НА ПРОЦЕНТНУЮ СТАВКУ – Interest Rate Option is an over-the-counter (OTC) option, provision to pay or receive a specific interest rate on a predetermined principal for a set period of time. A transaction in which one party grants to the other party (in consideration for a premium payment) the right, but not the obligation, to receive a payment equal to the amount by which an interest rate either exceeds (in the case of a call option) or is less than (in the case of a put option) a specified strike rate. In an Interest Rate Option, the underlying asset is related to the change in an interest rate. In an Interest Rate Cap, for example, the seller agrees to compensate the buyer for the amount by which an underlying short-term rate exceeds a specified rate on a series of dates during the life of the contract. In an Interest Rate Floor, the seller agrees to compensate the buyer for a rate falling below the specified rate during the contract period. A Collar is a combination of a long (short) cap and short (long) floor, struck at different rates. Finally, a Swap Option (Swaption) gives the holder the right – but not the obligation – to enter an interest rate swap at an agreed upon fixed rate until or at some future date. / Опцион на процентную ставку – это внеучётный опцион, . Опционный Контракт На Процентную Ставку (Interest-Rate Option Contract) – опционный контракт на долговую ценную бумагу. Опционы, в отличие от фьючерсов, дают покупателю право, но не обязывают его купить облигации по фиксированной цене до определённого срока в будущем. Продавцы опциона обещают продать облигации по оговорённой цене в любой момент до срока исполнения контракта. Покупатель опциона, который получает право на покупку финансового инструмента, уплачивает

за это премию продавцу опциона. Цена опционов на покупку на базе доходности возрастает вместе с ростом доходности, цена опциона на продажу на базе доходности растёт с падением доходности. Существуют Опционы на Процентную Ставку на Казначейские Векселя, краткосрочные и долгосрочные облигации, ценные бумаги Государственной Национальной Ассоциации по Закладным (Government National Mortgage Association (GNMA)), обеспеченные ипотекой; муниципальные облигации и другие финансовые инструменты, чувствительные к изменению процентных ставок. Полный перечень этих контрактов смотрите (Securities and Commodities Exchanges).

INTEREST RATE PARITY = ПАРИТЕТ ПРОЦЕНТНЫХ СТАВОК – The formal theory of Interest Rate Parity holds that under normal conditions the forward premium or discount on a currency in terms of another is directly related to the interest differential between the two countries. For example, the forward rate discount (or premium) on Swiss francs in terms of Dollars would equal the premium (or discount) of interest rates in Switzerland over (or under) those in the US. This theory holds only when there are unrestricted flows of international short-term capital. In reality, numerous economic and legal obstacles restrict the movement, so that actual parity is rare. See also Interest Arbitrage. / Формальная теория о паритете процентных ставок предполагает, что при обычных условиях .

INTEREST RATE RISK = РИСК (ИЗМЕНЕНИЯ) ПРОЦЕНТНОЙ СТАВКИ (или ПРОЦЕНТНЫЙ РИСК) – Most banks' principal market risk exposure is Interest Rate Risk (IRR). IRR is the exposure of a bank's current or future earnings and capital to interest rate changes. Interest rate fluctuations affect earnings by changing net interest income and other interest-sensitive income and expense levels. Interest rate changes affect capital by altering banks' economic value of equity (EVE). EVE represents the net present value of all asset, liability, and off-balance sheet cash flows. Interest rate movements change the present values of those cash flows. EVE estimates the long-term, expected change to earnings and capital that will result from an interest rate movement. As financial intermediaries, banks can not completely avoid IRR. However, excessive IRR can threaten banks' earnings, capital, liquidity, and solvency. IRR has many components, including repricing risk, basis risk, yield curve risk, option risk, and price risk. The board of directors (board) must ensure that management effectively identifies, measures, monitors, and controls IRR. The policies, procedures, and systems used to achieve those goals comprise the IRR management program. Although many methodologies effectively guide IRR management, all programs should address:- (i) board and senior management oversight; (ii) strategies, risk limits, and controls; (iii) risk identification and measurement; (iv) monitoring and reporting; and (v) independent review. The bank's complexity and risk profile should determine its IRR management program's formality and sophistication. Banks that do not employ complex strategies, maintain basic balance sheet structures, and exhibit low IRR may rely on less intricate programs. However, all procedures should be clearly documented and senior management should actively supervise daily operations. More complex banks will likely need more formal, detailed IRR management programs. In such cases, management should establish specific controls and produce cogent analysis that addresses all major risk exposures. At those banks, internal controls should include an independent review process for IRR analysis and requirements for reasonable separation of duties. IRR measurement systems range from simplistic to extremely complex. Despite that variety, all systems require verifiable account data, rely heavily on assumptions, and lose precision when analyzing complex instruments or volatile markets. Most important, measurement systems are only a forecasting tool and can not flawlessly predict cash flows, earnings, or capital. Although IRR is the principal market risk taken by most banks, other activities can dramatically increase (or reduce) market risk exposure. (i) Foreign Exchange activities expose banks to the price (exchange rate) risk that results from volatile currency markets. Exchange rates depend upon a variety of global and local factors that are difficult to predict, including interest rates, economic performance, and political developments. (ii) Commodity activities involve using contracts (including futures and options) for fungible, bulk goods to speculate or hedge. Commodity prices depend upon many factors, including weather, economic conditions, and political developments that are exceptionally difficult to forecast. Generally, banks should only use foreign exchange or commodity activities to control specific market risks. Management, independent of the broker/dealer, should demonstrate expertise commensurate with the activities undertaken. In addition, management should produce documented analysis that clearly details the effectiveness of all foreign exchange and commodity activities. That analysis should be prepared at least quarterly and presented to the Board for review. (iii) Equity Trading And Investing creates market risk exposure, since changes in equity prices can adversely affect earnings and capital. The board and management have a responsibility to identify, measure, monitor and control trading activity risks. Management should carefully monitor all equity investments, regularly evaluate the resulting market risk exposure, and provide timely reports to the Board. Certain restrictions on this activity are contained in Part 362 of the US the Financial Crisis Inquiry Commission (FDIC) Rules and Regulations, 'Activities and Investments of Insured State Banks' which implements section 24 of the Federal Deposit Insurance Act. Section 24 prohibits an insured state bank from directly, or indirectly, acquiring or retaining any equity investment of a type that is not permissible for a national bank. National banks are generally prohibited from owning equity securities and, by extension, insured state banks are also enjoined from this activity. However, there are three exceptions to the referenced section 24 prohibition. One of these exceptions enables certain insured state banks (grandfathered banks) to retain and continue to invest in common or preferred stock, or shares of investment companies. The FDIC has extended this exception by regulation to enable banks having the grandfathered authority to hold the subject investments through majority-owned subsidiaries provided the bank is wellcapitalized. Foreign exchange, commodity, or equity speculation may be considered an unsafe and unsound practice. However, well-capitalized banks with sophisticated, effective management may safely engage in prudent foreign exchange, commodity, and equity trading. When necessary, contact a designated Capital Markets Specialist for additional guidance. Changes in interest-rate levels on the money and capital markets have a direct impact on the prices of fixed-interest securities. Rising interest rates usually have a negative impact on the market prices of equities and bonds. By contrast, falling interest rates have a positive impact on prices. Interest Rate Risk is the potential impact on the fair value of assets and liabilities from changes in interest rates. The bank is exposed to interest rate risk principally through the interest-bearing assets relating to the management of its equity. These assets are managed using a fixed duration benchmark of bonds. The bank is also exposed to limited interest rate risk through its activities in accepting and reinvesting customer deposits. The bank closely monitors interest rate risk including the sensitivity of fair values to movements in interest rates. Market risk is restricted using economic capital, value-at-risk (VaR) and stress test-based limits. Risk of gain or loss in the value of a portfolio as a result of changes in market interest rates. The risks associated with changes in interest rates, i.e. the risk that changes in interest rates will adversely affect an Issuer's position with respect to borrowing costs, re-investment opportunities, at-market investment termination, etc. / Процентный Риск – риск возникновения финансовых потерь (убытков) вследствие неблагоприятного изменения процентных ставок по активам, пассивам и внебалансовым инструментам кредитной организации. Основными источниками процентного риска могут являться:- (i) несовпадение сроков погашения активов, пассивов и внебалансовых требований и обязательств по инструментам с фиксированной процентной ставкой; (ii) несовпадение сроков погашения активов, пассивов и внебалансовых требований и обязательств по инструментам с изменяющейся процентной ставкой (риск пересмотра процентной ставки); (iii) изменения конфигурации кривой доходности по длинным и коротким позициям по финансовым инструментам одного эмитента, создающие риск потерь в результате превышения потенциальных расходов над доходами при закрытии данных позиций (риск кривой доходности); (iv) для финансовых инструментов с фиксированной процентной ставкой при условии совпадения сроков их погашения – несовпадение степени изменения процентных ставок по привлекаемым и размещаемым кредитной организацией ресурсам;

для финансовых инструментов с плавающей процентной ставкой при условии одинаковой частоты пересмотра плавающей процентной ставки – несовпадение степени изменения процентных ставок (базисный риск); и (v) широкое применение опционных сделок с традиционными процентными инструментами, чувствительными к изменению процентных ставок (облигациями, кредитами, ипотечными займами и ценными бумагами и прочим), порождающих риск возникновения убытков в результате отказа от исполнения обязательств одной из сторон сделки (опционный риск).

INTEREST RATE SUBSIDY = СУБСИДИЯ ПРОЦЕНТНОЙ СТАВКИ – Interest Rate Subsidy is a sum of money or subsidy paid by a government to a financial institution to enable the lender to offer loans at discounted rates to certain borrowers. See also Incentive.

INTEREST RATE SWAP = СВОП НА ПРОЦЕНТНУЮ СТАВКУ – An Interest Rate Swap (IRS) is an agreement to exchange net future cashflows. Interest rate swaps most commonly change the basis on which liabilities are paid on a specified principal. They are also used to transform the interest basis of assets. In its commonest form, the fixed-floating swap, one counterparty pays a fixed rate and the other pays a floating rate based on a reference rate, such as LIBOR. There is no exchange of principal – the interest rate payments are made on a notional amount. In floating-floating swaps the two counterparties pay a floating rate on a different index, such as three-month LIBOR versus six-month LIBOR. Swaps usually extend out as far as 10 years, although 12–40 year maturities are available in some liquid currencies. However, the longer the maturity of the swap, the less liquid it becomes and credit risk increases. Credit enhancements such as mutual put options and collateral are used to ameliorate the credit risk of longer term swaps. Interest rate swaps provide users with a way of hedging the effects of changing interest rates. For example, a company can convert floating-rate interest payments to fixed-rate payments if it thinks interest rates will rise (which would make its liabilities more expensive). Companies can also use interest rate swaps in conjunction with new debt issuance, raising money on, say, a fixed basis and swapping it into floating-rate debt. In an interest rate swap there is a fixed-rate payer (floating-rate receiver) and a fixed-rate receiver (floating-rate payer). If there is a preponderance of fixed-rate payers (for example, when companies want to lock into low rates), the swap spread (the yield spread over equivalent maturity government bonds) increases. If there is a preponderance of fixed-rate receivers, the swap spread declines. Interest rate swaps were initially transacted back-to-back, with a bank acting as an intermediary. In return for putting the differing requirements together and for taking the credit risk on the interest rate payments, the bank took a fee – either fixed or a small proportion of the interest payments. Now banks run swap books and act as principals in transactions. As a result they have to hedge the swaps they put on their books. This can be done with another swap or with securities. Since US Dollar and Sterling interest rate swaps are priced as a spread over Treasuries, this is not too difficult, although movement in the swap spread does create basis risk. Most dealers use short-term interest rate futures such as Eurodollar futures or Euroyen futures to hedge swap positions. Disparities between futures and cash bonds and notes can drive swap spreads up and down. Such hedges can be imperfect when swap payments differ from the contract's maturity. Interest Rate Swap is an agreement to exchange periodic payments related to interest rates on a single currency; can be fixed for floating, or floating for floating based on different indices. This group includes those swaps whose notional principal is amortised according to a fixed schedule independent of interest rates. An Interest Rate Swap (IRS) is an agreement to exchange interest rate cash flows, calculated on a notional principal amount, at specified intervals (payment dates) during the life of the agreement. Each party's payment obligation is computed using a different interest rate. In an Interest Rate Swap, the notional principal is never exchanged. Although there are no standardized swaps, a plain vanilla swap typically refers to a generic interest rate swap in which one party pays a fixed rate and one party pays a floating rate (usually LIBOR). There are risks associated with Interest Rate Swaps. Typically, a party entering a swap gives up (or takes on) exposure to a given interest rate. At the same time, each party take on the risk – known as Counterparty Credit Risk – that the other party will default at some time during the life of the contract. The value of an Interest Rate Swaps to a counterparty is the net difference between the Present Value of the payments the counterparty expects to receive and the Present Value of the payments the counterparty expect to make. At the inception of the swap, the value is generally zero to both parties, and becomes positive to one and negative to the other depending on the movement of interest rates. Present Value is the value of a quantity to be received in the future, adjusted for the time value of money (interest foregone while waiting for the quantity. It is a transaction whereby two counter-parties exchange fixed and floating interest with each other. This transaction can be regarded as two parallel loans, one fixed and one floating. The floating is set against LIBOR, and the difference between the two rates is paid in the appropriate direction on each rollover. In a single currency Interest Rate Swaps, no principal changes hands, only interest. A swap in which the two counterparties agree to exchange interest rate flows. Typically, one party agrees to pay a fixed rate on a specified series of payment dates and the other party pays a floating rate that may be based on LIBOR (London Interbank Offered Rate) on those payment dates. The interest rates are paid on a specified principal amount called the Notional Principal. A transaction in which one party pays periodic amounts of a given currency based on a specified fixed rate and the other party pays periodic amounts of the same currency based on a specified floating rate that is reset periodically, such as the London Inter-Bank Offered Rate; all calculations are based on a notional amount of the given currency. Suppose a client enters into an interest rate swap with derivatives dealer to protect against rates rising by locking in a fixed rate. Doesn't that mean the dealer expects rates to fall? Otherwise, why would the dealer take on the risk of losing money? The dealer's view on interest rates does not matter. When the dealer assumes a client's risk, the dealer typically lays off – that is, hedges – that risk with an offsetting transaction. Suppose, for example, a dealer enters into a swap in which the client pays a fixed rate to the dealer and the dealer pays a floating rate to the client. The dealer could hedge the risk by entering into an offsetting swap with another client or dealer. Or, it could take a Treasury security position with interest rate exposure that offsets the swap. Or, it could take an offsetting futures position. Over the entire portfolio some risks might be uncovered at various times – which is essential to the existence of a liquid market – but such risks are carefully monitored and controlled by dealers. / Своп на Процентную Ставку – соглашение, по которому одна сторона совершает с другой стороной обмен обязательствами с плавающей ставкой на обязательства с фиксированной процентной ставкой. Сделка защищает первого партнёра в случае изменения процентной ставки. Вторая сторона выигрывает, если понижаются базовые процентные ставки. (более известная в Англоязычном звучании как ЛАЙБО или ЛИБО (LIBOR)).

INTEREST RATE SWAPTION = ОПЦИОН НА СВОП НА ПРОЦЕНТНУЮ СТАВКУ – Interest Rate Swaption is an over-the-counter (OTC) option to enter into an interest rate swap contract, purchasing the right to pay or receive a certain fixed rate.

INTEREST RATE WARRANT = ВАРРАНТ НА ПРОЦЕНТНУЮ СТАВКУ – Interest Rate Warrant is an over-the-counter (OTC) option; long-dated (over one year) interest rate option. These products fall into the other OTC options subsection.

INTEREST RECEIVABLE = ПРОЦЕНТЫ К ПОЛУЧЕНИЮ – In the United Kingdom, Interest Receivable is an accounting term which refers to the amount of income a company receives in the form of interest payments on its cash. The figure for interest receivable can be found in the balance sheet. Its flip side is 'interest payable' – the amount a company pays on its borrowings. Also known as Interest Income in the United States. / В Соединённом Королевстве, Проценты К Получению являются бухгалтерским термином, относящимся к сумме дохода, которую компания получает в форме .

INTEREST RECEIVED = ПОЛУЧЕННЫЕ ПРОЦЕНТЫ – Interest Received:- interest paid to a bank for the money it has lent out. The opposite of Interest Paid. Also known as Interest Earned. / Процент, выплачиваемый банку за те деньги, которые он

предоставляет в кредит. В противоположность Процентам К Оплате (Interest Paid). Известны также как Заработанные Проценты (Interest Earned).

INTEREST RETURN = ПРОЦЕНТНАЯ ОТДАЧА (или ОТДАЧА ПО ПРОЦЕНТАМ) – Interest Return is a current yield differs from nominal yield, because securities are purchased at a flexible market price, which can be higher or lower than the face value. Since the interest is always paid on the face value, the following calculation is applied:- (interest rate x 100) / market value = current yield; also return.

INTERESTS IN ASSOCIATES AND JOINT VENTURES = ДОЛИ УЧАСТИЯ В АССОЦИАТАХ И СОВМЕСТНЫХ ВЕНЧУРАХ (или ДОЛИ УЧАСТИЯ В АССОЦИАТАХ И СОВМЕСТНОЙ ДЕЯТЕЛЬНОСТИ, или ДОЛИ УЧАСТИЯ В АССОЦИАТАХ И СОВМЕСТНЫХ ПРЕДПРИЯТИЯХ) – Interests In Associates And Joint Ventures:- Associate is an entity (other than a subsidiary) in which another entity (the investor) has a participating interest and over whose operating and financial policies the investor exercises a significant influence. This definition includes the phrases 'participating interest' and 'exercises a significant influence'. Joint Venture is an entity in which the reporting entity holds an interest on a long-term basis and is jointly controlled by the reporting entity and one or more other venturers under a contractual arrangement. Participating interest is an interest held in the shares of another entity on a long-term basis for the purpose of securing a contribution to the investor's activities by the exercise of control or influence arising from or related to that interest. The investor's interest must, therefore, be a beneficial one and the benefits expected to arise must be linked to the exercise of its significant influence over the investee's operating and financial policies. An interest in the shares of another entity includes an interest convertible into an interest in shares or an option to acquire shares. In the United Kingdom, long-term equity investments accounted for by the equity method. Equity method of accounting is a method of accounting that brings an investment into its investor's financial statements initially at its cost, identifying any goodwill arising. The carrying amount of the investment is adjusted in each period by the investor's share of the results of its investee less any amortization or write-off for goodwill, the investor's share of any relevant gains or losses, and any other changes in the investee's net assets including distributions to its owners, for example by dividend. The investor's share of its investee's results is recognized in its profit and loss account. The investor's cash flow statement includes the cash flows between the investor and its investee, for example relating to dividends and loans. / Ассоциат или Зависимое Лицо (associate) . доля (share) .

INTERESTS IN JOINT VENTURES = ДОЛИ УЧАСТИЯ В СОВМЕСТНЫХ ВЕНЧУРАХ (или ДОЛИ УЧАСТИЯ В СОВМЕСТНОЙ ДЕЯТЕЛЬНОСТИ, или ДОЛИ УЧАСТИЯ В СОВМЕСТНЫХ ПРЕДПРИЯТИЯХ) – IAS 31 (short for International Accounting Standard No. 31) Interests in Joint Ventures – This Standard shall be applied in accounting for interests in joint ventures and the reporting of joint venture assets, liabilities, income and expenses in the financial statements of venturers and investors, regardless of the structures or forms under which the joint venture activities take place. However, it does not apply to venturers' interests in jointly controlled entities held by:- (a) venture capital organisations, or (b) mutual funds, unit trusts and similar entities including investment-linked insurance funds that upon initial recognition are designated as at fair value through profit or loss or are classified as held for trading and accounted for in accordance with IAS 39 Financial Instruments:- Recognition and Measurement. A joint venture is a contractual arrangement whereby two or more parties undertake an economic activity that is subject to joint control. Joint control is the contractually agreed sharing of control over an economic activity, and exists only when the strategic financial and operating decisions relating to the activity require the unanimous consent of the parties sharing control (the venturers). Control is the power to govern the financial and operating policies of an economic activity so as to obtain benefits from it. A venturer is a party to a joint venture and has joint control over that joint venture. Joint ventures take many different forms and structures. This Standard identifies three broad types – jointly controlled operations, jointly controlled assets and jointly controlled entities – that are commonly described as, and meet the definition of, joint ventures. Jointly controlled operations:- The operation of some joint ventures involves the use of the assets and other resources of the venturers rather than the establishment of a corporation, partnership or other entity, or a financial structure that is separate from the venturers themselves. Each venturer uses its own property, plant and equipment and carries its own inventories. It also incurs its own expenses and liabilities and raises its own finance, which represent its own obligations. In respect of its interests in jointly controlled operations, a venturer shall recognise in its financial statements:- (a) the assets that it controls and the liabilities that it incurs; and (b) the expenses that it incurs and its share of the income that it earns from the sale of goods or services by the joint venture. Jointly controlled assets:- Some joint ventures involve the joint control, and often the joint ownership, by the venturers of one or more assets contributed to, or acquired for the purpose of, the joint venture and dedicated to the purposes of the joint venture. The assets are used to obtain benefits for the venturers. Each venturer may take a share of the output from the assets and each bears an agreed share of the expenses incurred. In respect of its interest in jointly controlled assets, a venturer shall recognise in its financial statements:- (a) its share of the jointly controlled assets, classified according to the nature of the assets; (b) any liabilities that it has incurred; (c) its share of any liabilities incurred jointly with the other venturers in relation to the joint venture; (d) any income from the sale or use of its share of the output of the joint venture, together with its share of any expenses incurred by the joint venture; and (e) any expenses that it has incurred in respect of its interest in the joint venture. Jointly controlled entities:- A jointly controlled entity is a joint venture that involves the establishment of a corporation, partnership or other entity in which each venturer has an interest. The entity operates in the same way as other entities, except that a contractual arrangement between the venturers establishes joint control over the economic activity of the entity. A venturer shall recognise its interest in a jointly controlled entity using proportionate consolidation or the equity method. Proportionate consolidation is a method of accounting whereby a venturer's share of each of the assets, liabilities, income and expenses of a jointly controlled entity is combined line by line with similar items in the venturer's financial statements or reported as separate line items in the venturer's financial statements. The equity method is a method of accounting whereby an interest in a jointly controlled entity is initially recorded at cost and adjusted thereafter for the post-acquisition change in the venturer's share of net assets of the jointly controlled entity. The profit or loss of the venturer includes the venturer's share of the profit or loss of the jointly controlled entity. Transactions between a venturer and a joint venture:- When a venturer contributes or sells assets to a joint venture, recognition of any portion of a gain or loss from the transaction shall reflect the substance of the transaction. While the assets are retained by the joint venture, and provided the venturer has transferred the significant risks and rewards of ownership, the venturer shall recognise only that portion of the gain or loss that is attributable to the interests of the other venturers. The venturer shall recognise the full amount of any loss when the contribution or sale provides evidence of a reduction in the net realisable value of current assets or an impairment loss. When a venturer purchases assets from a joint venture, the venturer shall not recognise its share of the profits of the joint venture from the transaction until it resells the assets to an independent party. A venturer shall recognise its share of the losses resulting from these transactions in the same way as profits except that losses shall be recognised immediately when they represent a reduction in the net realisable value of current assets or an impairment loss. Separate financial statements of a venture:- When separate financial statements are prepared, investments in subsidiaries, jointly controlled entities and associates that are not classified as held for sale (or included in a disposal group that is classified as held for sale) in accordance with IFRS 5 shall be accounted for either:- (a) at cost, or (b) in accordance with IAS 39. The same accounting shall be applied for each category of investments. Investments in subsidiaries, jointly controlled entities and associates that are classified as held for sale (or included in a disposal group that is classified as held for sale) in accordance with IFRS 5 shall be accounted for in accordance with that IFRS.

Investments in jointly controlled entities and associates that are accounted for in accordance with IAS 39 in the consolidated financial statements shall be accounted for in the same way in the investor's separate financial statements. / МСБУ 31 (сокращение для Международного Стандарта Бухгалтерского Учёта № 31) – . выработка (output).

INTEREST YIELD = ПРОЦЕНТНАЯ ДОХОДНОСТЬ (или ДОХОДНОСТЬ В ПРОЦЕНТАХ) – In the context of the London Metal Exchange (LME), Interest Yield refers to the profit earned by borrowing metal in a contango market, sometimes giving the user a greater return than is available from the current interest rate on money.

INTERFACIAL POLYMERIZATION = МЕЖФАЗНАЯ ПОЛИМЕРИЗАЦИЯ (или ПОЛИМЕРИЗАЦИЯ НА ГРАНИЦЕ РАЗДЕЛА ФАЗ) – Interfacial Polymerization is a polymerization in which two reactive monomers, each dissolved in different solvents that are mutually immiscible, react at the interface between the two solutions.

INTERFACIAL PROBLEMS = ВНУТРИПОВЕРХНОСТНЫЕ ПРОБЛЕМЫ (или МЕЖФАЗНЫЕ ПРОБЛЕМЫ) – Interfacial Problems:- transfer of heat and water vapor at interfaces.

INTERFACIAL TENSION = МЕЖФАЗНОЕ НАТЯЖЕНИЕ – Interfacial Tension (IFT) is the energy per unit area present at the boundary of two immiscible liquids. It is usually expressed in dynes/cm (ASTM Designation D 971). American Society for Testing and Materials (ASTM). / Американское Общество по Испытаниям и Материалам (АОИМ).

INTERFACING = ПРОКЛАДКА – Interfacing:- fabrics used to support, reinforce and give shape to fashion fabrics in sewn products. Often placed between the lining and the outer fabric, it can be made from yarns or directly from fibers, and may be either woven, nonwoven, or knitted. Some interfacings are designed to be fused (adhered with heat from an iron), while others are meant to be stitched to the fashion fabric. See also Interlining. Interfacing is a stiffening fabric made of horsehair (often goat hair, wool, man-made fibers, or combinations of these fibers). Interfacing is used to give additional body and strength to certain parts of garments. Areas that usually require interfacing in-clude the front opening edges, collars, pocket flaps, and any piece where stretching or a loss of crispness would be a disadvantage.

INTERFERENCE = ВМЕШАТЕЛЬСТВО (или СТОЛКНОВЕНИЕ, или ПРИОРИТЕТНЫЙ СПОР) – Interference:- a proceeding, conducted before the Board of Patent Appeals and Interferences (Board), to determine priority of invention between a pending application and one or more pending applications and/or one or more unexpired patents.

INTERFERENCE FILTER = ИНТЕРФЕРЕНЦИОННЫЙ ФИЛЬТР (или ФИЛЬТР ПОМЕХ) – Interference Filter is a filter constructed of extremely thin alternate layers of high and low refractive-index material and capable of transmitting narrow spectral bands formed by constructive interference within the desired waveband and destructive interference at other wavelengths (used in filter colorimeters and some abridged spectrophotometers).

INTERFLOW = ВНУТРИПОЧВЕННЫЙ СТОК (или ПОДПОВЕРХНОСТНЫЙ СТОК) – Interflow is a shallow and often ephemeral and perched groundwater moving laterally.

INTERFLUVE = МЕЖДУРЕЧЬЕ – Interfluve is an area of higher ground between two rivers flowing into the same drainage system. / Под Междуречьем понимается территория, расположенная между двумя или несколькими реками и включающая водораздельное пространство с прилегающими склонами долин.

INTER–GOVERNMENTAL AUTHORITY ON DROUGHT AND DEVELOPMENT = МЕЖПРАВИТЕЛЬСТВЕННЫЙ ОРГАН ПО ВОПРОСАМ ЗАСУХИ И РАЗВИТИЯ – The Inter-Governmental Authority on Drought and Development (IGADD) consists of Djibouti, Ethiopia, Kenya, Somalia, Sudan and Uganda, with the common goal of promoting cooperation on drought-related matters. / Межправительственный Орган по Вопросам Засухи и Развития (МОВЗР) был создан с общей целью обеспечения сотрудничества по вопросам, связанным с засухами. В МОВЗР входят представители Джибути, Кении, Сомали, Судана, Уганды и Эфиопии.

INTERGRADING = ЭВОЛЮЦИОНИРОВАНИЕ (или ПРИОБРЕТЕНИЕ ПРИЗНАКОВ ДРУГОГО ВИДА) – Intergrading is a merging from one form to another by a continuous series of intermediate forms rather than divided into discrete sets.

INTERIM ACCOUNT = ПРОМЕЖУТОЧНЫЙ СЧЁТ – Interim Account (IA) is an integrated trading and clearing account used for temporary registration of transactions. The account is used for error trades or trades where the correct customer is to be identified. A contract may be registered on an interim account during the term of the contract but no automatic netting will take place. Exercise and other events relating to contracts may take place on an interim account. Also known as Suspense Account. Interim Accounts are the accounts prepared during the financial year to show a company's current progress and financial position. An Interim Account is an account used to temporarily hold a transaction before it is transferred to a permanent account. It is common business practice to use an interim account when a business transaction is split into two steps due to timing of the activity. / Известен также как Счёт Переходящих Сумм (Suspense Account). / Промежуточный Счёт – временный счёт, служащий для накопления средств на проведение коммерческих операций. Промежуточный Счёт – временный счёт в бухгалтерских книгах организации, используемый для записи остатков, исправляющих ошибки, или остатков, которые ещё окончательно не определились (например, из-за того, что какая-либо конкретная сделка не была завершена.

INTERIM DIVIDEND = ПРОМЕЖУТОЧНЫЙ ДИВИДЕНД – Interim Dividend:- when a dividend is paid more than once a year, dividends other than the final one are called Interim Dividends. Typically, dividends are paid twice a year, one interim and one final dividend. The size of the interim dividend is determined prior to the closing of the financial year on the basis of the current income statement. Adjustment to the result for the year is made by means of the final dividend.

INTERIM FINANCIAL REPORTING = ПРОМЕЖУТОЧНАЯ ФИНАНСОВАЯ ОТЧЁТНОСТЬ – IAS 34 (short for International Accounting Standard No. 34) Interim Financial Reporting – The objective of this Standard is to prescribe the minimum content of an interim financial report and to prescribe the principles for recognition and measurement in complete or condensed financial statements for an interim period. Timely and reliable interim financial reporting improves the ability of investors, creditors, and others to understand an entity's capacity to generate earnings and cash flows and its financial condition and liquidity. This Standard applies if an entity is required or elects to publish an interim financial report in accordance with International Financial Reporting Standards. Interim financial report means a financial report containing either a complete set of financial statements (as described in IAS 1 Presentation of Financial Statements) or a set of condensed financial statements (as described in this Standard) for an interim period. Interim period is a financial reporting period shorter than a full financial year. In the interest of timeliness and cost considerations and to avoid repetition of information previously reported, an entity may be required to or may elect to provide less information at interim dates as compared with its annual financial statements. This Standard defines the minimum content of an interim financial report as including condensed financial statements and selected explanatory notes. The interim financial report is intended to provide an update on the latest complete set of annual financial statements. Accordingly, it focuses on new activities, events, and circumstances and does not

duplicate information previously reported. Nothing in this Standard is intended to prohibit or discourage an entity from publishing a complete set of financial statements (as described in IAS 1) in its interim financial report, rather than condensed financial statements and selected explanatory notes. If an entity publishes a complete set of financial statements in its interim financial report, the form and content of those statements shall conform to the requirements of IAS 1 for a complete set of financial statements. An interim financial report shall include, at a minimum, the following components:- (a) condensed balance sheet; (b) condensed income statement; (c) condensed statement showing either (i) all changes in equity or (ii) changes in equity other than those arising from capital transactions with owners and distributions to owners; (d) condensed cash flow statement; and (e) selected explanatory notes. If an entity publishes a set of condensed financial statements in its interim financial report, those condensed statements shall include, at a minimum, each of the headings and subtotals that were included in its most recent annual financial statements and the selected explanatory notes as required by this Standard. Additional line items or notes shall be included if their omission would make the condensed interim financial statements misleading. In deciding how to recognise, measure, classify, or disclose an item for interim financial reporting purposes, materiality shall be assessed in relation to the interim period financial data. In making assessments of materiality, it shall be recognised that interim measurements may rely on estimates to a greater extent than measurements of annual financial data. An entity shall apply the same accounting policies in its interim financial statements as are applied in its annual financial statements, except for accounting policy changes made after the date of the most recent annual financial statements that are to be reflected in the next annual financial statements. To achieve that objective, measurements for interim reporting purposes shall be made on a year-to-date basis. The measurement procedures to be followed in an interim financial report shall be designed to ensure that the resulting information is reliable and that all material financial information that is relevant to an understanding of the financial position or performance of the entity is appropriately disclosed. While measurements in both annual and interim financial reports are often based on reasonable estimates, the preparation of interim financial reports generally will require a greater use of estimation methods than annual financial reports. / МСБУ 34 (сокращение для Международного Стандарта Бухгалтерского Учёта № 34) – .

INTERIM FINANCING = ПРОМЕЖУТОЧНОЕ ФИНАНСИРОВАНИЕ (или ВРЕМЕННОЕ ФИНАНСИРОВАНИЕ) – Interim Financing:- temporary loan secured to finance an economic transaction until permanent financing can be obtained. See also Bridge Loan.

INTERIM RECEIPT = ПРОМЕЖУТОЧНАЯ (или ВРЕМЕННАЯ) РАСПИСКА – Interim Receipt is a receipt given by a carrier pending execution of an Air Waybill (aircargo). / В перевозках авиационных грузов .

INTERIM RECEIVER = ВРЕМЕННЫЙ ПОЛУЧАТЕЛЬ – (1) Interim Receiver is a person appointed by a court to act as receiver, until a receiver proper is appointed.

(2) In cotton futures trading, a Stopper of a Delivery Notice who retenders the contract during the same deliver period in which he stopped the notice. The Interim Receiver takes possession and assumes ownership of the duplicate samples. / В торговле фьючерсами на хлопок, Останавливающий Уведомление о Поставке.

INTERIM STATEMENT = ПРОМЕЖУТОЧНЫЙ ОТЧЁТ – Interim Statement is a short financial statement produced by a company, often unaudited, in the middle of the year, halfway between publication of the annual accounts. Also known as Interim Accounts in the United Kingdom. Balance sheet of a company covering a period ending between the regular annual closing dates.

INTERIOR PANEL = ВНУТРЕННЯЯ ПАНЕЛЬ – Interior Panel is a general term for a panel made from a type of adhesive which is not resistant to moisture and is therefore limited to uses where protection from moisture is provided. See also Exterior Panel. / Смотрите также Наружная Панель (Exterior Panel). Под Панелью, от Немецкого слова Paneel, понимается плоский крупноразмерный элемент (конструкция) заводского изготовления, широко применяемый в современном строительстве зданий и сооружений различного назначения (например, панель покрытия, стеновая панель и другие).

INTERLACED YARN = ПЕРЕПЛЕТЁННАЯ ПРЯЖА (или СПЛЁТШАЯСЯ ПРЯЖА) – Interlaced Yarn (synonym:- Intermingled Yarn) is a multifilament yarn in which cohesion is imparted to the filaments usually by passing the yarn through a turbulent air-, gas- or steam-jet without overfeed causing entwining of the filaments and the formation of randomly distributed interlacing points. / филаментная (комплексная) пряжа (filament yarn).

INTERLACING DISTANCE = ПЕРЕПЛЕТАЮЩАЯСЯ ДИСТАНЦИЯ (или РАССТОЯНИЕ ПЕРЕПЛЕТЕНИЯ) – Interlacing Distance is the distance between adjacent interlacing points. / одиночное перекрытие основы и утка (interlacing point).

INTERLACING FREQUENCY = ПЕРЕПЛЕТАЮЩАЯСЯ ЧАСТОТА (или ЧАСТОТА ПЕРЕПЛЕТЕНИЯ) – Interlacing Frequency is the number of interlacing points per unit length. / одиночное перекрытие основы и утка (interlacing point).

INTERLEAVED 2 OF 5 = ЧЕРЕДУЕМЫЙ 2 ИЗ 5 – Interleaved 2 of 5:- this is strictly a numeric barcode. Each encoded character is made up of five elements, two are wide and three are narrow. The number of characters to be printed must be an even number. If the number of characters to be printed is odd, a zero will be appended to the beginning of the code.

INTERLIBRARY LENDING = МЕЖБИБЛИОТЕЧНАЯ ВЫДАЧА – Interlibrary Lending is a loaning materials owned or licensed by one library to another library or its users.

INTERLINE = ПРОМЕЖУТОЧНАЯ ЛИНИЯ (или МЕЖЛИНЕЙНОЕ) – Interline:- between two or more transportation lines or a carrier with which one interchanges cargo and/or equipment. Two or more motor carriers working together to haul a shipment to a destination. Carriers may interchange equipment but usually they rehandle the shipment without transferring the equipment.

INTERLINE AGREEMENT = МЕЖЛИНЕЙНОЕ СОГЛАШЕНИЕ – Interline Agreement:- the cooperation between two or more airlines for the carriage over particular routes (aircargo). / В перевозках авиационных грузов, сотрудничество между двумя или более авиалиниями для транспортировки грузов по конкретным маршрутам.

INTERLINE CARRIAGE = МЕЖЛИНЕЙНАЯ ПЕРЕВОЗКА – Interline Carriage is the carriage over the routes of two or more parties of an interline agreement (aircargo). / В перевозках авиационных грузов .

INTERLINE CARRIER = МЕЖЛИНЕЙНЫЙ ПЕРЕВОЗЧИК – Interline Carrier is a carrier with whom another carrier has an interline agreement. / Перевозчик, с которым другой перевозчик имеет межлинейное соглашение.

INTERLINE FREIGHT = МЕЖЛИНЕЙНЫЙ ФРАХТ – Interline Freight is a freight moving from origin to destination over the freight lines of two or more transportation carriers. / Фрахт (груз), перемещаемый из пункта отгрузки к пункту назначения грузовыми линиями двух или более транспортных перевозчиков.

INTERLINING = ПРОКЛАДОЧНАЯ (ТКАНЬ) (или ПОДКЛАДОЧНАЯ (ТКАНЬ)) – Interlining is a padding or stiffening fabric used in garment manufacture to provide shape retention. Interlining is sandwiched between layers of fabric. Interlining is:- (1) an insulation,

padding, or stiffening fabric, either sewn to the wrong side of the lining or the inner side of the outer shell fabric. The interlining is used primarily to provide warmth in coats, jackets, and outerwear. (2) Firm stiff linen canvas for men's coats. Interlining is a layer of fabric placed between the outer fabric and the lining of the garment to add warmth. It is most commonly found in coats and jackets. Interlinings are offen made of reprocessed wool, but other materials such as polyester fiberfill may be used. See also Fiberfill, and Reprocessed Wool.

INTERLINKING MECHANISM = ЦЕНТРАЛИЗОВАННЫЙ МЕХАНИЗМ (или ВЗАИМОСВЯЗАННЫЙ МЕХАНИЗМ, или СВЯЗУЮЩИЙ МЕХАНИЗМ) – Interlinking Mechanism is one of the components of the TARGET system. The term is used to designate the infrastructures and procedures which link domestic Real-Time Gross Settlement (RTGS) systems in order to enable the processing of cross-border payments within Trans-European Automated Real-time Gross settlement Express Transfer (TARGET).

INTERLINKING PROCESSING COMPONENT = КОМПОНЕНТ ВЗАИМОСВЯЗАННОЙ (или ЦЕНТРАЛИЗОВАННОЙ) ОБРАБОТКИ – Interlinking Processing Component is the component used to implement validation and other interlinking processes and to communicate with the domestic Real-Time Gross Settlement (RTGS) system processing components. / с внутренней системой валовых расчётов в режиме реального времени (ВРРРВ) .

INTERLINKING SYSTEM = ЦЕНТРАЛИЗОВАННАЯ СИСТЕМА (или ВЗАИМОСВЯЗАННАЯ СИСТЕМА, или СВЯЗУЮЩАЯ СИСТЕМА) – Interlinking System:- the infrastructure and procedures which are used within each Real-Time Gross Settlement (RTGS) system or in addition to the RTGS systems to process cross-border payments within Trans-European Automated Real-time Gross settlement Express Transfer (TARGET) system. / , которые используются в каждой системе Валовых Расчётов в Режиме Реального Времени (ВРРРВ) или . ТАСВРРУП (Трансевропейская Автоматизированная Система Валовых Расчётов в Режиме Реального Времени по Ускоренным Переводам) или ТАСВРРЭП (Трансевропейская Автоматизированная Система Валовых Расчётов в Режиме Реального Времени по Экспресс Переводам).

INTERLOCK = ИНТЕРЛОК (или КРУГЛОВЯЗАЛЬНОЕ) – Interlock:- a fine gauge, compound knit fabric with a smooth surface on both front and back, composed of two separate 1 x 1 rib fabrics interknitted to form one cloth, made on an interlock machine. The fabric was traditionally used for underwear, but today is being used for apparel. Despite the name of the fabric, poorly made interlock develops runs at the edges and all interlock knits should be reinforced or finished in some way at these edges. Interlock is the stitch variation of the rib stitch, which resembles two separate 1 x 1 ribbed fabrics that are interknitted. Plain (double knit) interlock stitch fabrics are thicker, heavier, and more stable than single knit constructions. Interlock is a special type of eight-lock knit cloth. The stitch variation of the rib stitch, which generally resembles a double 1 x 1 ribbed fabric that is interknitted with crossed sinker wales. Plain (double knit) interlock stitch fabrics are thicker, heavier, and more stable than single knit constructions. The fabric has a smooth surface on both sides, and possesses good wearing qualities. Interlock Fabrics are made with four sets of needles and two feeders with two separate yarns Each needle bed uses two types, short and long needles, alternatively. At the same time the shorter needle from one needle bed are placed exactly opposite to the longer needle of the other needle bed. Interlock is a stretchable fabric made on a circular knitting machine and consisting of two ribbed fabrics joined by interlocking. A garment made of interlock fabric, namely one that is stretchable and made on a circular knitting machine and consisting of two ribbed fabrics joined by interlocking. / Интерлок (или Двуластик):- (i) образован из двух ластиков, ввязаных один в другой. Петельные столбики одного из ластиков располагаются против петельных столбиков другого ластика, изнаночной стороной внутрь. (ii) Лицевая и изнаночная стороны интерлока одинаковы и образованы лицевыми столбиками. (iii) Обладает повышенной упругостью, хорошими теплозащитными свойствами, меньшей растяжимостью по сравнению с переплетением 'ластик', но более высокой растяжимостью по сравнению с кулирной гладью, низкой распускаемостью, не скручивается. Полотна интерлок, изготовленные из хлопчатобумажной пряжи без вложения химических волокон, имеют высокую остаточную деформацию и подвержены усадке по длине и притяжке по ширине. Интерлок – это трикотажное полотно со структурой в 'резинку', гладкое с обеих сторон. Этот материал очень устойчив к деформации, после растягивания приобретает прежнюю форму, не распускается. Интерлок очень мягкий на ощупь, тёплый и комфортный. Одежда из интерлока очень приятна к телу. Так как это натуральный материал, он пропускает воздух и позволяет коже дышать. Кроме этого, это материал, из которого получаются не только удобные, но и очень эффектные и нарядные вещи для малышей. Практически не даёт усадку после стирки.

INTERLOCK KNIT = ИНТЕРЛОЧНЫЙ (или ВЗАИМОСВЯЗАННЫЙ) ТРИКОТАЖ (или ВЯЗКА) – Interlock Knit:- to produce an interlock knit, long and short needles are arranged alternately in both the dial and cylinder; the needles in the dial and cylinder are also positioned in direct alignment. When the long and short needles knit in alternate feeds in both needle housings, a fabric with a type of cross 1 x 1 rib effect is produced. Interlock Knit:- sometimes known as T-Shirt Knit, it usually has a stretch across the grain. It is most commonly used for lightweight pants, skirts and tops.

INTERLOCK STITCH KNIT = ТРИКОТАЖ XX – Interlock Stitch Knits are variations of rib stitch knits. The front and back of interlocks are the same. These fabrics are usually heavier and thicker than regular rib knit fabrics. However, fine yarns can be used to produce lightweight interlock knits. The interlocking of stitches prevents runs and produces apparel fabrics that do not ravel or curl at the edges.

INTERMARKET ANALYSIS = МЕЖРЫНОЧНЫЙ АНАЛИЗ – Intermarket Analysis:- an additional aspect of market analysis that takes into consideration the price action of related market sectors. The four sectors are bonds, commodities, currencies, and stocks. International markets are also included. This approach is based on the premise that all markets are interrelated and impact on one another. / Межрыночный Анализ:- дополнительный аспект анализа рынка, принимающий в расчёт поведение цен в связанных с данным рынком секторах. Четырьмя основными секторами являются:- акции, валюты, облигации и сырьё. Сюда включаются и международные рынки данных активов или инструментов. Такой подход основывается на предпосылке того, что все рынки являются взаимоувязываемыми и влияющими друг на друга.

INTERMARKET SPREAD = МЕЖРЫНОЧНАЯ КУРСОВАЯ РАЗНИЦА (или МЕЖРЫНОЧНЫЙ СПРЭД) – Intermarket Spread:- some commodities trade on not just one but several exchanges. Futures trading in Wheat, for instance, occurs at the Chicago Board of Trade, the Kansas City Board of Trade, the MidAmerica Commodity Exchange, and the Minneapolis Grain Exchange. Intermarket spreads, such as taking a long position in Kansas City Wheat futures against a short position in Chicago Borad of Trade Wheat futures, attempt to take advantage of changing price relationships between these various markets. These price differences often reflect specific geographic factors that the intermarket spreader must analyze. Transport costs, for instance, are one important factor. Wheat prices are generally lowest in the primary producing areas and increase by at least the cost of transportation elsewhere. The value of the class and grade of wheat deliverable on each exchange also influences price differentials. While the different exchanges generally allow delivery of several classes of Wheat (premiums and discounts allowed), each market tends to reflect the prices of a particular Wheat class. For example, Chicago Board of Trade Wheat futures prices tend to reflect the price of soft red winter Wheat, while Kansas City Wheat futures prices tend to reflect the price of hard red winter Wheat – each market reflecting the type of Wheat grown nearby. Spread traders must also realize that different Wheat classes tend to vary in price, depending on their use. Market participants interested in spreading Wheat watch the relationship between these two markets. When the price relationship becomes abnormal,

spreaders buy the underpriced contract and sell the overpriced contract. This occurred in October 1986, when Chicago wheat futures traded nearly 40 cents higher than Kansas City wheat futures. The price discrepancy corresponded with a shortage of soft red winter Wheat in the cash market caused by a poor crop coupled with heavy participation by Wheat producers in government programs. In this market situation, spreaders bought Kansas City Wheat futures and sold Chicago Board of Trade Wheat futures. When the price relationship reflected more normal market conditions, they closed their spreads by selling Kansas City Wheat and buying Chicago Wheat. Opportunities also exist for spreading between the US futures markets and foreign futures exchanges. Some common international spread positions include New York versus London Cocoa, sugar, or copper and gold spreads between New York, Chicago, and London. Intermarket Spread:- the sale of a given delivery month of a futures contract on one exchange and the simultaneous purchase of the same delivery month of a futures contract on another exchange. See also Inter-commodity Spread, and Spread. An Intermarket Spread involves the simultaneous sale of a given delivery month of a futures contract on one exchange and purchase of the same delivery month and futures contract on another exchange. For example, an intermarket spreader might sell December Wheat futures at the Chicago Board of Trade and buy December Wheat futures at the Kansas City Borad of Trade to capitalize on expected price relationship changes between the two months and different markets. Intermarket Spread:- the simultaneous purchase of futures in one exchange and sale of futures with the same commodity delivery month in another exchange. / Межрыночная Курсовая Разница или Межрыночный Спрэд формируется путём продажи фьючерсного контракта с конкретным месяцем поставки на одной бирже и одновременной покупки фьючерсного контракта с тем же самым месяцем поставки на другой бирже. Так сложилось, что некоторые виды одного и того же сырья торгуются сразу на нескольких биржах. Например, фьючерсы на Пшеницу (futures on Wheat) до недавнего времени торговались на следующих Американских биржах:- Чикагская Палата Торговли (Chicago Board of Trade), Палата Торговли Города Канзаса (Kansas City Board of Trade), СреднеАмериканская Сырьевая Биржа (MidAmerica Commodity Exchange), и Миннеаполисская Биржа Зерна (Minneapolis Grain Exchange). Суть операций с межрыночной курсовой разницей заключается в том, чтобы использовать в своих интересах предполагаемую взаимосвязь меняющейся цены одинакового рода сырья с одинаковым месяцем поставки между двумя различными рынками, когда, например, в Палате Торговли Города Канзаса открывается позиция покупки Декабрьского фьючерса на Пшеницу, против открытой ранее в Чикагской Палате Торговли позиции продажи Декабрьского фьючерса на Пшеницу. Существующие различия в ценах очень часто объясняются наличием специфических географических факторов, которые должны быть обязательно учтены в данной стратегии торговли. Одним из таких важных факторов являются затраты на перевозку (transport costs). По крайней мере, все отталкиваются от того, что цены на Пшеницу являются самыми низкими главным образом в регионах её возделывания, и по мере отдаления от таких регионов цена становится выше вследствие накладных расходов по её перевозке и доставке к местам назначения. Кроме того, следует учитывать, что стоимость поставляемой Пшеницы может существенно разниться в зависимости от её класса и сорта, а также от их использования. Несмотря на то, что разные биржи предусматривают поставки Пшеницы нескольких классов с учётом имеющихся надбавок и скидок, каждый из рынков делает некий упор в отражении цен на конкретный класс Пшеницы, который возделывается вблизи данного рынка. Например, Палата Торговли Города Канзаса делает основной упор на цену твёрдой озимой краснозёрной Пшеницы (hard red winter Wheat), а Чикагская Палата Торговли – мягкой озимой краснозёрной Пшеницы (soft red winter Wheat). Биржевые дельцы, заинтересованные в сделках с курсовой разницей, смотрят и на тот и на другой рынок, пытаясь уловить определённую взаимосвязь между ними. Как только соотношение цен становится ненормальным, спрэдеры покупают недооцененный контракт (the underpriced contract) и продают переоцененный контракт (the overpriced contract). Ярко выраженный пример такой ситуации произошёл в Октябре 1986, когда фьючерсы на Пшеницу в Чикаго котировались почти на 40 центов выше цен на фьючерсы на Пшеницу в Канзасе. Такое существенное расхождение в ценах было связано с нехваткой мягкой озимой краснозёрной Пшеницы на реальном рынке, вызванной низким урожаем, усугублённым активнейшим участием производителей Пшеницы в правительственных программах. В той сложившейся обстановке спрэдеры покупали фьючерсы на Пшеницу в Канзасе и продавали фьючерсы на Пшеницу в Чикаго. Постепенно ситуация с ценой стала нормализоваться, и спрэдеры стали прикрывать свои ранее открытые позиции посредством продажи фьючерсов на Пшеницу в Канзасе и покупки фьючерсов на Пшеницу в Чикаго. Подобные возможности для сделок с курсовой разницей существуют также на международных рынках фьючерсов, например, разница в ценах на одно и то же сырьё, котируемое на Американских биржах фьючерсов и на зарубежных биржах фьючерсов. К числу наиболее распространённых сделок с курсовой разницей в этом случае относятся сделки с фьючерсами на Какао и сахар на биржах в Нью Йорке и в Лондоне или сделки с фьючерсами на медь и золото на биржах в Нью Йорке, Чикаго и Лондоне. Фактически, операции, основанные на межрыночной курсовой разнице, относятся к так называемым операциям арбитражирования, рассматриваемым далее. Смотрите также Межсырьевая Курсовая Разница или Межсырьевой Спрэд (Inter-commodity Spread), и Курсовая Разница или Спрэд (Spread).

INTERMARKET SURVEILLANCE GROUP = ГРУППА МЕЖРЫНОЧНОГО НАДЗОРА – The Intermarket Surveillance Group (ISG) was established in the early 1980s and is comprised of an international group of exchanges, market centers, and market regulators that perform front-line market surveillance in their respective jurisdictions. ISG has two main purposes:- (1) the coordination and development of programs and procedures to identify possible fraudulent and manipulative activities across markets; and (2) information sharing. The organization is governed by a written Agreement that requires every member to represent that it has the ability to obtain and freely share regulatory information and documents with other ISG members in order to assist them in investigations and/or pursue disciplinary actions. An ISG member's ability to share regulatory information must be generally unencumbered by rules, nationally imposed blocking statutes or bank secrecy laws. Initially the focus of ISG was on US markets. However, over time, given the growth of cross border trading and proliferation of international products, membership in the ISG has grown to over 50 organizations worldwide. In 2008, the ISG structure and Agreement were modernized to reflect the evolving international character of the group. The work of organization is undertaken by a number of standing sub-groups:- Membership, Technology, Derivatives, Surveillance Practices, Forum and Events, US Members and Non-US Members. Membership in the standing sub-groups is voluntary although, since there are considerable areas of common interest, many ISG members contribute to the activities of more than one standing sub-group. While ISG membership is open to all exchanges, strict requirements exist with respect to an applicant's regulatory capabilities related to market surveillance as well as their ability to obtain and freely share information. The US Intermarket Surveillance Group (ISG) allows regulatory staffs of the national securities exchanges and the National Association Of Securities Dealers (NASD) to coordinate industry-wide cooperative efforts for exchanging market data. Their goal is to enhance intermarket surveillance to assure the integrity of trading in options and equities, and to enhance public protection. The purpose of the ISG is to provide a framework for the sharing of information and the coordination of regulatory efforts among exchanges trading securities and related products to address potential intermarket manipulations and trading abuses. The ISG plays a crucial role in information sharing among markets that trade securities, options on securities, security futures products, and futures and options on broad-based security indexes. The ISG also provides a forum for discussing common regulatory concerns, thus enhancing members' ability to efficiently fulfill their regulatory responsibilities. In effect, the ISG is an information-sharing cooperative governed by a written Agreement. The ISG is not subject to regulatory oversight, nor does it file rule changes with the Commodity Futures Trading Commission (CFTC) or the Securities and Exchange Commission (SEC) or seek approval from any outside entity when it considers requests from securities or derivative exchanges to

become a member. History:- the ISG was created in 1981 by the major US securities exchanges in response to the growing need among those marketplaces to share information regarding securities' related products and the need to conduct routine market surveillance. The proliferation of related products and derivative instruments created the need for a system of formalized, consistent procedures for the exchange of information across different jurisdictions. In 1990, an Affiliate category of ISG membership was created to allow futures exchanges and non-US organizations admission into the ISG to facilitate further information sharing. In 2008 the Agreement and structure of the ISG was modernized to eliminate the distinction between Full and Affiliate members and reflect the growing international character of the organization. Today the ISG has grown to include North American, Australian, Asian, Middle Eastern, South Asian and European exchanges, all of which have a common interest in ensuring that the securities and derivative marketplaces are regulated effectively and efficiently. All US national securities exchanges and national securities associations are members of the ISG. In addition, major US futures exchanges as well as non-US exchanges and associations that trade securities and related products are also members. Information Sharing:- membership in the ISG carries with it a commitment to share information required for regulatory purposes with other members. In connection with the routine sharing of information, the ISG has defined certain types of violations which can occur across markets. The ISG Agreement provides that shared information must be kept strictly confidential and used only for regulatory purposes. Such information is shared on an as-needed basis and only upon request. In addition, US securities participants, via the facilities of the Securities Industry Automation Corporation (SIAC) and The Options Clearing Corporation (OCC), routinely share trading information electronically. Meetings:- generally, the ISG meets at least twice each year. Meetings, hosted by member organizations in both domestic and international locations, are open only to representatives of members, prospective members, SIAC representatives, and appropriate governmental authorities such as the CFTC, SEC, the UK Financial Services Authority, and, on occasion, organizations such as the International Organization of Securities Commissions. Senior market surveillance or market regulation personnel represent member organizations. Subgroups:- the ISG has seven Standing subgroups; Membership, Technology, Derivatives, Surveillance Practices, Forum and Events, US Members and Non-US Members. Standing subgroup Chairpersons are elected by the full ISG membership on a rotating basis for two year terms. An Executive Committee is comprised of the Chairpersons of each of the Standing subgroups in addition to the ISG Chair and the ISG Deputy Chair, though the ISG Chair & Deputy Chair are non-voting members of the Executive Committee. From time to time, and at the discretion of the ISG Chairman, Special subgroups may be formed to address specific issues of importance to the Group. Special subgroups may be permanent or have a limited life depending on the subject. Special subgroups are headed by a representative of a member and are appointed by the Chairman. Meetings of subgroups, whether standing or special, may be independent of regular ISG meetings and may take place either at a location directed by the subgroup chairperson or telephonically during the interval between ISG meetings. Ordinarily, Standing subgroups also meet on the day preceding a full ISG meeting. Eligibility:- membership in the ISG is open to all recognized market centers that trade products and have rules and regulations designed to detect and deter possible abuses in their marketplaces. Participants in the ISG must have the ability to share regulatory information and otherwise cooperate with other ISG participants in connection with regulatory matters affecting their markets.

INTERMARKET SURVEILLANCE INFORMATION SYSTEM = ИНФОРМАЦИОННАЯ СИСТЕМА МЕЖРЫНОЧНОГО НАДЗОРА – Houses detailed and summarized equity and option transaction, quotation and clearance data from all the Intermarket Surveillance Group (ISG) participants, as well as the proprietary data of participants. An New York Stock Exchange product, Intermarket Surveillance Information System (ISIS) was used by the American, Boston, and Philadelphia stock exchanges. Providing surveillance personnel with easy on-line access to complete, accurate, and timely data makes surveillance tasks more efficient and effective.

INTERMARKET TRADING SYSTEM = МЕЖРЫНОЧНАЯ ТОРГОВАЯ СИСТЕМА – Intermarket Trading System is an electronic communications network that links participating market centers. The system enables market professionals to interact with their counterparts in other markets whenever the nationwide Consolidated Quote System (CQS) shows a better price in another market, thus ensuring price protection. See also Broker ITS. An electronic network of US exchanges and NASD (short for the National Association Of Securities Dealers) broker/dealers. The Intermarket Trading System (ITS) displays quotes of stocks traded on multiple exchanges. This allows specialists and traders to get the best possible price of a stock for their customers. Links the New York Stock Exchange and other national market centers in a communications and data-processing network. Intermarket Trading Sysytem, cooperatively developed by the system's competing markets, enables brokers and participating market-makers to reach electronically into any of the markets within seconds, whenever the Consolidated Quotation System indicates the possibility of better execution. / коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INTERMEDIARY = ПОСРЕДНИК – (1) Intermediary is a person who acts between and deals with two parties who themselves make no direct contact with each other. / Лицо, которое действует между двумя сторонами и ведёт с ними дела, а сами эти две стороны не предпринимают никаких прямых контактов друг с другом. Посредник – лицо или организация, имеющие право на проведение инвестиций и принятие решений за других людей. Некоторыми примерами являются банки, ссудо-сберегательные ассоциации, страховые компании, брокерские фирмы, взаимные фонды, а также кредитные союзы. Эти специалисты обладают широкими знаниями относительно инвестиционных альтернатив и могут добиться более высокого дохода, чем средний инвестор. Кроме того, они имеют дело с крупными суммами, несут меньшие расходы на осуществление сделок и могут разнообразить свои активы. Также называются Финансовыми Посредниками (Financial Intermediary).

(2) Intermediary is a person who acts on behalf of another person in connection with futures trading, such as an Associated Person, Commodity Pool Operator, Commodity Trading Advisor, Futures Commission Merchant, or Introducing Broker.

(3) In reinsurance, an Intermediary is a third party in the design, negotiation, and administration of a reinsurance agreement. Intermediaries recommend to cedants the type and amount of reinsurance to be purchased and negotiate the placement of coverage with reinsurers.

INTERMEDIARY CLAUSE = ОГОВОРКА О ПОСРЕДНИКЕ – In reinsurance, Intermediary Clause is a provision in reinsurance agreements which identifies the intermediary negotiating the agreement. Most intermediary clauses shift all credit risk to reinsurers by providing that:- (i) the cedant's payments to the intermediary are deemed payments to the reinsurer; and (ii) the reinsurer's payments to the intermediary are not payments to the cedant until actually received by the cedant. This clause is mandatory in some states.

INTERMEDIARY REIMBURSEMENT INSTITUTION = СТОРОННЕЕ (или ПОСРЕДНИЧЕСКОЕ) УЧРЕЖДЕНИЕ ПО РАМБУРСИРОВАНИЮ (или ВОЗМЕЩЕНИЮ) – Intermediary Reimbursement Institution:- in a SWIFT message a financial institution between the sender's correspondent and the receiver's correspondent, through which reimbursement of a transaction will take place. / Сообщество по Всемирной Межбанковской Финансовой Дальней Связи (СВМФДС; The Society for Worldwide Interbank Financial Telecommunication (SWIFT)). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INTERMEDIATE = ПРОМЕЖУТОЧНОЕ – Intermediate:- (1) the characters or traits of the plant between two different levels. (2) A substance which is in a metabolic pathway between two other substances. / свойства (characters) .

INTERMEDIATE BULK CONTAINER = КОНТЕЙНЕР ТЕРМОС ДЛЯ СЫПУЧИХ ГРУЗОВ – Intermediate Bulk Container (IBC) is a special type of bulk container for hazardous materials. / Специальный тип контейнера для перевозки опасных материалов навалом.

INTERMEDIATE CONSIGNEE = ПРОМЕЖУТОЧНЫЙ КОНСИГНАТОР (или ПРОМЕЖУТОЧНЫЙ ПОЛУЧАТЕЛЬ) – An Intermediate Consignee is the bank, forwarding agent, or other intermediary (if any) that acts in a foreign country as an agent for the exporter, the purchaser, or the ultimate consignee, for the purpose of effecting delivery of the export to the ultimate consignee.

INTERMEDIATE CONSUMPTION = ПРОМЕЖУТОЧНОЕ ПОТРЕБЛЕНИЕ (или ПОТРЕБЛЕНИЕ ДЛЯ ПЕРЕРАБОТКИ) – Intermediate Consumption is a consumption of goods and services in the production process. It may be contrasted with final consumption and capital formation. See also Final Consumption Expenditure.

INTERMEDIATE CONTAINER TRANSFER FACILITY = ПРОМЕЖУТОЧНАЯ БАЗА ПЕРЕДАЧИ КОНТЕЙНЕРОВ – Intermediate Container transfer Facility (ICTF) is a site where cargo is transferred from one form of transit to another, such as rail to ship.

INTERMEDIATE LOAD = ПРОМЕЖУТОЧНАЯ НАГРУЗКА – Intermediate Load (electric system):- the range from base load to a point between base load and peak. This point may be the midpoint, a percent of the peakload, or the load over a specified time period.

INTERMEDIATE POINT = ПРОМЕЖУТОЧНЫЙ ПУНКТ – Intermediate Point is a point located en route between two other points. / Пункт, расположенный на маршруте между двумя другими пунктами.

INTERMEDIATE QUARANTINE = ПРОМЕЖУТОЧНЫЙ КАРАНТИН – Intermediate Quarantine is a quarantine in a country other than the country of origin or destination.

INTERMEDIATE TARGETS = ПРОМЕЖУТОЧНЫЕ ЦЕЛИ (или НАМЕЧЕННЫЕ ПРОМЕЖУТОЧНЫЕ ЗНАЧЕНИЯ) – An Intermediate Target is a variable (such as the money supply) that is not directly under the control of the central bank, but that does respond fairly quickly to policy actions, is observable frequently and bears a predictable relationship to the ultimate goals of policy.

INTERMEDIATE TERM = ПРОМЕЖУТОЧНЫЙ СРОК (или СРЕДНЕСРОЧНЫЙ) – Intermediate Term:- a period of time that is less than the long term, and greater than the short term. Must be defined by each trader based on personal preference and trading style. A good rule of thumb is 3–15 days (1–3 weeks). Daily charts are best used as a trading vehicle. / Период времени в биржевой торговле меньший нежели долгосрочный, и больший нежели краткосрочный. Должен определяться каждым торговцем, опираясь на личные предпочтения и стиль торговли. Более менее точным в этом плане мог бы быть период времени от 3 до 15 рабочих дней (1–3 недели). В качестве торгового проводника, при этом, лучше всего использовать посуточные графики.

INTERMINGLED YARN = ПЕРЕПЛЕТЁННАЯ (или ПЕРЕМЕШАННАЯ) ПРЯЖА – Intermingled Yarn is a multifilament yarn in which cohesion is imparted to the filament bundle by entwining the filaments instead of, or in addition to, twisting. The effect is usually achieved by passing the yarn under light tension through the turbulent zone of an air-jet. Intermingled Yarn, also known as Interlaced Yarn, is the replacement for lightly twisted yarns. See also Interlaced Yarn. / филаментная (комплексная) пряжа (filament yarn).

INTERMINGLING = ПЕРЕПЛЕТЕНИЕ (или ПЕРЕМЕШИВАНИЕ) – Intermingling is:- (1) the use of air jets to create turbulence to entangle the filaments of continuous filaments yarns, without forming loops, after extrusion. Provides dimensional stability and cohesion for further processing but is not of itself a texturing process. It is compatible with high-speed spin-drawing and high-speed take-up. When compared with twisting processes, it also permits increased take-up package size. (2) Combining two or more yarns via an intermingling jet. Can be used to get special effect yarns, i.e. mixing dye variants to get heather effects upon subsequent dyeing. Intermingling is the number of points per meter of industrial multifilament yarn, where filaments are interlaced. These filament entanglement points along the yarn are necessary to insure a good unwinding and processability of a non-twisted yarn during any transformation process. / филаментная (комплексная) пряжа (filament yarn). Экструзия или Выдавливание (Extrusion).

INTERMITTENT IRRIGATION = ПЕРИОДИЧЕСКАЯ ИРРИГАЦИЯ (или ПРЕРЫВИСТАЯ ИРРИГАЦИЯ, или ПЕРИОДИЧЕСКОЕ ОРОШЕНИЕ, или ПРЕРЫВИСТОЕ ОРОШЕНИЕ) – Intermittent Irrigation is a method of applying irrigation water by which the field is alternately watered and drained. The soil surface is allowed to dry prior to the next application of water. / Под Ирригацией, от Латинского слова Irrigatio, понимается то же, что Орошение – подвод воды на поля, испытывающие недостаток влаги, и увеличение её запасов в почве; вид мелиорации. Различают орошение регулярное и периодическое – 1 раз в год (лиманное). В 1980 мировая площадь орошаемых земель составляла свыше 230 миллионов га (наибольшие – в Китае, Индии, Соединённых Штатах Америки (США), Италии, Болгарии, Франции); в бывшем Союзе Советских Социалистических Республик (СССР) (в 1984) 19.5 миллионов га (Средняя Азия, Юг Украины, Молдавия, Северный Кавказ).

INTERMITTENT PATTERN = ПРЕРЫВИСТАЯ ВЫКРОЙКА (или ПЕРЕМЕЖАЮЩИЙСЯ УЗОР) – Intermittent Pattern is a pattern occurring in interrupted sequence.

INTERMODAL = СМЕШАННОЕ (или ИНТЕРМОДАЛЬНОЕ) – A term Intermodal means using 2 or more, modes of transportation:- rail, truck or ship. The stock can move over sea by ship, over land by rail and then, at the main rail switch, the container is removed and put on truck chassis. The stock is then carried by truck to distribution centers. Intermodal:- combination of modes of transportation. Intermodal:- coordinated transport of freight, especially in connection with relatively long-haul movements, using any combination of freight forwarders, piggy-back, containerization, air freight, assemblers, rail and road. Used to denote movements of cargo containers interchangeably between transport modes, i.e. motor, water, and air carriers, and where the equipment is compatible within the multiple systems. A term Intermodal refers to the handling of containers between different forms of transport (ship-to-ship, inter-terminal, rail, truck). Also known as Combined. / , то есть . Известна также как Комбинированная (Combined).

INTERMODAL BILL OF LADING = СМЕШАННЫЙ КОНОСАМЕНТ (или ИНТЕРМОДАЛЬНЫЙ КОНОСАМЕНТ) – Intermodal Bill Of Lading is a bill covering cargo moving via multimodal means. Also known as Combined Transport Bill of Lading, or Multimodal Bill of Lading. / Смешанный Коносамент – коносамент, покрывающий перевозку груза в смешанном сообщении, то есть с использованием различных типов перевозки, например, морской и автодорожной или железнодорожной и тому подобных типов в различной комбинации. Известен также как Коносамент Для Комбинированной Перевозки (Combined Transport Bill of Lading), и Мультимодальный Коносамент или Смешанный Коносамент (Multimodal Bill of Lading).

INTERMODAL CONTAINER TRANSFER FACILITY = СМЕШАННАЯ БАЗА ПЕРЕДАЧИ КОНТЕЙНЕРОВ – Intermodal Container Transfer Facility is a facility where cargo is transferred from one mode of transportation to another, usually from ship or truck to rail.

INTERMODAL CO–ORDINATED TRANSPORT = СМЕШАННАЯ СКООРДИНИРОВАННАЯ ПЕРЕВОЗКА (или ИНТЕРМОДАЛЬНАЯ СКООРДИНИРОВАННАЯ ПЕРЕВОЗКА) – Intermodal Co-Ordinated Transport:- this is normally used to describe the capability of interchange of container units among the various carriers. The fact that the containers are of recognized

modular dimensions, and have common handling characteristics, permits them to be transferred from trucker to railroad, to ocean carrier, in an origin-to-destination movement.

INTERMODALISM = ИНТЕРМОДАЛИЗМ – Intermodalism is the concept of transportation as a door-to-door service rather than port-to-port. Thus efficiency is enhanced by having a single carrier coordinating the movement and documentation among different modes of transportation.

INTERMODAL MARKETING COMPANY = КОМПАНИЯ ПО СМЕШАННОМУ ХОЗЯЙСТВОВАНИЮ (или ИНТЕРМОДАЛЬНАЯ МАРКЕТИНГОВАЯ КОМПАНИЯ) – Intermodal Marketing Company consolidates container loads or piggyback trailers from several shippers and contracts with railroads for volume space. An intermediary that sells intermodal services to shippers. / Посредник, который торгует услугами смешанных перевозок для грузоотправителей.

INTERMODAL TRANSPORT = ПЕРЕВОЗКА В СМЕШАННОМ СООБЩЕНИИ (или СМЕШАННАЯ ПЕРЕВОЗКА, или ИНТЕРМОДАЛЬНАЯ ПЕРЕВОЗКА) – The terms Intermodal Transport and Combined Transport are often used interchangeably to describe the carriage of goods by two or more modes of transport. In the European Union, Intermodal Transport is defined as the movement of goods in one and the same loading unit or road vehicle, which uses successively two or more modes of transport without handling the goods themselves in changing modes. Combined Transport has been defined as intermodal transport where the major part of the European journey is by rail, inland and waterways or sea and any initial or final legs carried out by road are as short as possible. See also Combined Transport, and Multimodal Transport. Moving of cargo through more than one mode of transportation, i.e. ocean to rail to road. / , то есть . Под Смешанной Перевозкой понимается перевозка пассажиров и грузов при помощи нескольких видов транспорта (железнодорожного, речного и так далее).

INTERNAL BREAKDOWN = ВНУТРЕННИЙ РАСПАД (или ВНУТРЕННЕЕ РАЗЛОЖЕНИЕ) – Internal Breakdown is a chilling damage in pomaceous fruit. If, for instance, apples are stored at too cold a temperature, they 'freeze' and suffer irreparable metabolic damage. The flesh of the fruit usually becomes soft and brown from the core. Such damage generally cannot be detected externally. / в выжитых плодах.

INTERNAL COMBUSTION PLANT = ЭЛЕКТРОСТАНЦИЯ С ДВИГАТЕЛЕМ ВНУТРЕННЕГО СГОРАНИЯ – Internal Combustion Plant is a plant in which the prime mover is an internal combustion engine. An internal combustion engine has one or more cylinders in which the process of combustion takes place, converting energy released from the rapid burning of a fuel-air mixture into mechanical energy. Diesel or gas-fired engines are the principal types used in electric plants. The plant is usually operated during periods of high demand for electricity.

INTERNAL CONSUMPTION = ВНУТРЕННЕЕ ПОТРЕБЛЕНИЕ – Internal Consumption:- an amount of goods produced by a company or economy for its own use. In economics, this is a function of economic development. Traditional agrarian economies are characterized by a high level of internal consumption. As trade evolves and producers specialize, the amount of internally consumed goods declines.

INTERNAL CONTROL = ВНУТРЕННИЙ КОНТРОЛЬ – Internal Control is a process designed to provide reasonable assurance regarding achievement of various management objectives such as the reliability of financial reports.

INTERNAL DYE VARIABILITY = ВНУТРЕННЕЕ НЕПОСТОЯНСТВО КРАСИТЕЛЯ (или ВНУТРЕННЯЯ ИЗМЕНЧИВОСТЬ КРАСИТЕЛЯ) – Internal Dye Variability is the change from point to point in dye uniformity across the diameter and along the length of the individual filaments. Affects appearance of the dyed product and is a function of fiber, dye, dyeing process, and dyebath characteristics.

INTERNAL FINANCING = ВНУТРЕННЕЕ ФИНАНСИРОВАНИЕ – Internal Financing is a method of financing whereby a business entity pays for its capital expenditures using its own resources. Contrast with external financing through borrowing, loans, capital increases, etc. The business entity does not look to lenders – banks, financial markets, venture capitalists – for the resources needed to finance its own capital investments, but uses cash flow from its own operations. Governments also use internal financing, in the form of surplus revenues from taxes or other sources to pay for operating expenses. Also known as Plow Back, and Self-Financing.

INTERNAL MARKET AND SERVICES DIRECTORATE GENERAL = ГЕНЕРАЛЬНЫЙ ДИРЕКТОРАТ ПО ВНУТРЕННЕМУ РЫНКУ И УСЛУГАМ – DG MARKT:- Internal Market DG of the European Commission:- has responsibility inter alia for EU accounting legislation. The Internal Market and Services Directorate General (DG MARKT) is one of the Directorates General and specialized services which make up the European Commission. Its main role is to coordinate the Commission's policy on the European Single Market and to seek the removal of unjustified obstacles to trade, in particular in the field of services and financial markets. The Internal Market and Services DG is based in Brussels and has a staff of approximately 500, working under the political authority of Commissioner Michel Barnier and managed by Director General Jonathan Faull. The DG's mission is to develop and maintain a dynamic and open European single market that enables citizens to meet the challenges of globalisation. We aim to provide a regulatory environment that enhances competitiveness, stimulates innovation, and promotes financial stability. We also aim to improve the range and quality of products and services available at competitive prices throughout the Single Market in order to deliver higher living standards, better job opportunities, and a prosperous economic future for all citizens. In this context, the Internal Market and Services Directorate-general is directly responsible for proposing and – once laws are adopted by the European Parliament and Council – controlling the implementing of a European legal framework in the following specific areas:- regulated professions, services, company law and corporate governance, public procurement, intellectual and industrial property and postal services' In the area of financial services, it aims at establishing the legal framework for the integration of the Union's capital markets and the creation of a single market for financial services. The first role of the Directorate-general is therefore to bring forward proposals for legislation aiming to remove barriers, thus simplifying life for consumers and for businesses, stimulating competition, reducing prices and widening choice. This involves not only making it easier for goods and services to circulate, but also making it easier for EU citizens to work and to live in other EU countries. The second responsibility of the Directorate-General is to ensure that the opportunities offered by the Single Market are fully exploited. It does so by controlling the full and timely respect of Community law in co-operation with the Member States and by monitoring closely how EU law is being applied in practice. The third task for the Directorate-general is to inform citizens and businesses about the rights they have within the Single Market and of the benefits available to them. / Комиссара Мишэля Барнье (Commissioner Michel Barnier) и управляемый Генеральным Директором Йонатаном Фаулем (Jonathan Faull).

INTERNAL MOVEMENT VEHICLE = ТРАНСПОРТНОЕ СРЕДСТВО ДЛЯ ВНУТРЕННИХ ПЕРЕВОЗОК – Internal Movement Vehicle is a heavy-haul truck used to move containers between facilities within the port. / Автомобиль-тяжеловоз, используемый для перемещения контейнеров между площадками в пределах одного порта.

INTERNAL RATE OF RETURN = ВНУТРЕННЯЯ СТАВКА ОТДАЧИ – Internal Rate of Return (IRR) is the annualized rate of return (in percent) of an investment using compound interest rate calculations. These are built in to many time-value-of-money programs,

including the financial functions in popular spreadsheets such as 1-2-3 and Excel as well as many calculators and on-line web-based calculators. The IRR is calculated at the point when the net present value of cash outflows (the cost of the investment) and cash inflows (returns on the investment) equal zero. This is very useful when one has a number of future cash flows on which an interest rate needs to be calculated.

INTERNAL REVENUE SERVICE = СЛУЖБА ВНУТРЕННИХ ДОХОДОВ – In the United States, a Government agency which handles the income tax returns filed by individuals and corporations. The Internal Revenue Service (IRS) frequently performs auditing functions pertaining to these income tax returns and the accounting records on which they are based. It has also been called upon to administer certain temporary economic controls, such as wage and price controls. Also known as Department Of Inland Revenue in the United Kingdom. Internal Revenue Service (IRS) is a federal agency that administers the internal revenue code. The IRS is part of the United States Treasury Department. The IRS is a bureau of the Department of the Treasury and one of the world's most efficient tax administrators. In fiscal year 2009, the IRS collected more than USD2.3 trillion in revenue and processed more than 236 million tax returns (The IRS spent just 50 cents for each USD100 it collected in FY 2009). The IRS Mission:- provide America's taxpayers top quality service by helping them understand and meet their tax responsibilities and enforce the law with integrity and fairness to all. This mission statement describes our role and the public's expectation about how we should perform that role. (i) In the United States, the Congress passes tax laws and requires taxpayers to comply. (ii) The taxpayer's role is to understand and meet his or her tax obligations. (iii) The IRS role is to help the large majority of compliant taxpayers with the tax law, while ensuring that the minority who are unwilling to comply pay their fair share. The IRS is organized to carry out the responsibilities of the secretary of the Treasury under section 7801 of the Internal Revenue Code. The secretary has full authority to administer and enforce the internal revenue laws and has the power to create an agency to enforce these laws. The IRS was created based on this legislative grant. Section 7803 of the Internal Revenue Code provides for the appointment of a commissioner of Internal Revenue to administer and supervise the execution and application of the internal revenue laws. Headquartered in Washington, DC, the United States. The IRS is the US government agency responsible for tax collection and tax law enforcement. Origin:- the roots of IRS go back to the Civil War when President Abraham Lincoln (1809–1865) and Congress, in 1862, created the position of commissioner of Internal Revenue and enacted an income tax to pay war expenses. The income tax was repealed 10 years later. Congress revived the income tax in 1894, but the Supreme Court ruled it unconstitutional the following year. 16th Amendment:- in 1913, Wyoming ratified the 16th Amendment, providing the three-quarter majority of states necessary to amend the Constitution. The 16th Amendment gave Congress the authority to enact an income tax. That same year, the first Form 1040 appeared after Congress levied a 1 percent tax on net personal incomes above USD3 000.00 with a 6 percent surtax on incomes of more than USD500 000.00. In 1918, during World War I, the top rate of the income tax rose to 77 percent to help finance the war effort. It dropped sharply in the post-war years, down to 24 percent in 1929, and rose again during the Depression. During World War II, Congress introduced payroll withholding and quarterly tax payments. 1913 Form 1040. A New Name:- in the 1950s, the agency was reorganized to replace a patronage system with career, professional employees. The Bureau of Internal Revenue name was changed to the Internal Revenue Service. Only the IRS commissioner and chief counsel are selected by the president and confirmed by the Senate. Today's IRS Organization:- the IRS Restructuring and Reform Act of 1998 prompted the most comprehensive reorganization and modernization of IRS in nearly half a century. The IRS reorganized itself to closely resemble the private sector model of organizing around customers with similar needs. / когда Президент США Эйбрэхэм Лынкэн (Abraham Lincoln; 1809–1865) и Конгресс . Служба Внутренних Доходов (СВД) – налоговое управление, федеральное агентство Соединённых Штатов Америки (США), уполномоченное собирать практически все федеральные налоги, включая личный и корпорационный подоходный налоги, налог на социальное обеспечение, а также акцизные налоги и налоги на дарения. Основные исключения составляют налоги, связанные с алкоголем, табаком, оружием, взрывчатыми веществами, а также таможенные сборы и пошлины. Служба Внутренних Доходов США контролирует исполнение правил и процедур, входящих в сферу компетенции Департамента Финансов США (US Department of Treasury), а также расследует ситуации и налагает наказание (через Налоговый Суд США (US Tax Court)) в случае нарушения налогового законодательства.

INTERNAL SETTLEMENT = ВНУТРЕННИЙ РАСЧЁТ – Internal Settlement is a settlement that is effected through transfers of securities and funds on the books of a single intermediary. An internal settlement requires both counterparties to maintain their securities and funds accounts with the same intermediary. / Под Внутренним Расчётом понимается расчёт, который производится посредством перевода ценных бумаг и денежных средств с помощью проводок по книгам учёта или бухгалтерским книгам единственного посредника. Внутренний расчёт требует от обеих встречных сторон сделки поддерживать свои счета ценных бумаг и денежных средств у одного и того же посредника.

INTERNATIONAL ACCOUNTING STANDARD = МЕЖДУНАРОДНЫЙ СТАНДАРТ БУХГАЛТЕРСКОГО УЧЁТА – Accounting standards issued by the International Accounting Standards Committee (IASC) were designated 'International Accounting Standards' (IAS). In 2001, IASC became the International Accounting Standard Board (IASB) and announced that its accounting standards would be designated 'International Financial Reporting Standards' (IFRS). The International Accounting Standard (IAS) is a standard or its interpretation regarding financial reporting, as approved by the International Accounting Standards Committee, the predecessor organization to the International Accounting Standards Board (IASB), or as updated by the IASB. IASs can refer to all of these standards and interpretations. Similarities and Differences between the International Accounting Standards Committee (IASC) Standards and US GAAP (short for the Generally Accepted Accounting Principles). The IASC–US comparison project set out to identify similarities and differences between IASC standards and US GAAP (primarily FASB (short for the Financial Accounting Standards Board) standards) predisposed to the view that the shortest route to understanding comparability would be to zero in on differences. Therefore, this report, by its very nature, focuses on differences as a basis for comparison. Similarities tend to be identified and described in a general manner, while differences are discussed in more detail. IASC standards are different from FASB standards. That conclusion is not new, nor is it unique to this report. It is neither the objective nor the intent of the IASC to develop standards identical to FASB standards. IASC standards and FASB standards seek to serve different environments (international versus national), respond to different mandates, have different technical support levels, and result from different standard-setting structures and processes. Differences between those two sets of standards, therefore, are inevitable and not necessarily inappropriate. However, if financial statements based on IASC standards are to be considered appropriate for cross-border access to the world's capital markets (including those in the United States), it is essential that IASC standards meet the demands of those capital markets for high-quality financial information. In undertaking the project, the FASB staff sought to obtain greater understanding of the specific nature of IASC standards. At the time that the project began (in 1995), detailed information about the level of comparability of reported financial results between financial statements prepared based on IASC standards and those prepared based on US GAAP was available to relatively few individuals. In large part due to increased awareness resulting from publicity surrounding the IASC's core standards project, research on the issues related to international comparability has increased. However, conclusions about the acceptability of IASC standards for cross-border securities listings and other purposes are mixed and often are supported by fragmentary evidence. Some studies that compare IASC standards with US GAAP have asserted that the two sets of standards are broadly similar or that use of IASC standards can lead to results similar to those that would have been obtained had US GAAP been used. As some of the comparative analyses in

this report show, some of the IASC standards and their US GAAP counterparts do have a similar underlying approach to accounting in certain areas and it may be possible to arrive at similar results under both standards. However, the existence of alternatives, even within standards that are very similar, can create the potential for very different reported results. The comparative analysis of IAS 23, Borrowing Costs, provides an example. The allowed alternative treatment in IAS 23 requires capitalization of borrowing costs incurred in the acquisition, construction, or production of certain assets. That is very similar to the US GAAP requirement. However, IAS 23's benchmark treatment requires that borrowing costs be expensed. That is very different from the allowed alternative treatment (and, consequently, from US GAAP). The existence of both a benchmark and allowed alternative treatment has the potential to result in noncomparability both between IASC-based and US GAAP-based financial statements and among financial statements prepared under IASC standards. Other studies have concluded that IASC standards are too broad and general to ensure that similar accounting methods are applied in similar circumstances or that similar results are consistently achieved. While the guidance provided by IASC standards often is more general than that found in US GAAP, IASC standards may be more rigorous than the national standards of some countries and, in some circumstances, may be equally or more effective than US GAAP. For example, both IAS 2, Inventories, and US GAAP provide broad, general guidance on cost-flow assumptions in estimating inventory cost. However, IAS 2 provides more-extensive guidance than does US GAAP on the topic of accounting for inventories of service providers. On the other hand, an absence of implementation guidance can lead to differences in applying standards that are broadly similar. For example, IAS 33, Earnings per Share, and its US GAAP counterpart, FASB Statement No. 128, Earnings per Share, resulted from a cooperative standard-setting effort between the IASC and the FASB. The two standards are very similar. However, Statement 128 provides more-specific implementation guidance for some of the calculations required for determining earnings per share, for example, for determining the impact of different types of contingencies related to contingently issuable shares. There may be differences in earnings-per-share calculations between enterprises following IAS 33 and those following Statement 128 because, in the absence of implementation guidance, enterprises following IAS 33 are not required to determine the impact of contingently issued shares on the same basis as that described in Statement 128 and would not be prohibited from using alternative bases for making that determination. Finally, not all questions about comparability relate to the comparability of financial statements prepared using different sets of accounting standards. Few studies have focused on comparability among the financial statements of enterprises following IASC standards. For example, there is little (if any) research that provides evidence of whether the IASC-based financial statements provided by an enterprise from France are comparable to the financial statements provided by a similar enterprise from Japan that also is following IASC standards. That type of comparison was beyond the scope of this report. Notwithstanding similarities with or differences from US GAAP, because IASC standards will be applied in different national environments-each with its own set of national accounting standards or conceptual framework-IASC standards must be capable of being consistently interpreted and applied in order to meet the objective of international comparability among those enterprises that use IASC standards. Thus, it would be misleading to make sweeping generalizations or blanket assertions about the relative quality of IASC standards based solely on the similarities and differences between two sets of accounting standards. The mere existence of differences between accounting standards is not a sufficient measure of the quality or merit of any particular accounting standard relative to the other. The true test of an accounting standard is whether it satisfies the demand for information in the environment in which it is intended to be used. What is required, therefore, is a fuller understanding of the nature of similarities and differences in the information provided in the financial statements as a result of applying the two sets of accounting principles. The FASB staff believes that the comparative analyses in this report will provide useful information to help interested parties evaluate the current state of IASC–US GAAP comparability and draw their own conclusions.

INTERNATIONAL ACCOUNTING STANDARDS BOARD® = ПАЛАТА ПО МЕЖДУНАРОДНЫМ СТАНДАРТАМ БУХГАЛТЕРСКОГО УЧЁТА® (или СОВЕТ ПО МЕЖДУНАРОДНЫМ СТАНДАРТАМ БУХГАЛТЕРСКОГО УЧЁТА®) – The IASB (short for the International Accounting Standards Board®):- The IASC Foundation (short for International Accounting Standards Committee Foundation®) is an independent, not-for profit private sector organization working in the public interest. Its principal objectives are:- (i) to develop a single set of high quality, understandable, enforceable and globally accepted international financial reporting standards (IFRSs) through its standard-setting body, the International Accounting Standards Board® (IASB); (ii) to promote the use and rigorous application of those standards; (iii) to take account of the financial reporting needs of emerging economies and small and medium-sized entities (SMEs); and (iv) to bring about convergence of national accounting standards and IFRSs to high quality solutions. The governance and oversight of the activities undertaken by the IASC Foundation and its standard-setting body rests with its Trustees, who are also responsible for safeguarding the independence of the IASB and ensuring the financing of the organization. The Trustees are publicly accountable to a Monitoring Board of public authorities. The IASB is the independent standard-setting body of the IASC Foundation. Its members (currently 15 full-time members) are responsible for the development and publication of IFRSs, including the IFRS for SMEs and for approving Interpretations of IFRSs as developed by the IFRIC. All meetings of the IASB are held in public and webcast. In fulfilling its standard-setting duties the IASB follows a thorough, open and transparent due process of which the publication of consultative documents, such as discussion papers and exposure drafts, for public comment is an important component. The IASB engages closely with stakeholders around the world, including investors, analysts, regulators, business leaders, accounting standard-setters and the accountancy profession. The IFRIC (short for the International Financial Reporting Interpretations Committee):- The IFRIC is the interpretative body of the International Accounting Standards Board® (IASB). The IFRIC comprises 14 voting members appointed by the Trustees and drawn from a variety of countries and professional backgrounds. The mandate of the IFRIC is to review on a timely basis widespread accounting issues that have arisen within the context of current IFRSs and to provide authoritative guidance (IFRICs) on those issues. IFRIC meetings are open to the public and webcast. In developing interpretations, the IFRIC works closely with similar national committees and follows a transparent, thorough and open due process. All other activities undertaken by the IASC Foundation in support of the objectives of the organization are managed by the IASC Foundation's staff. Those activities include:- (i) the creation of an XBRL taxonomy for IFRSs and the IFRS for SMEs to facilitate the electronic use, exchange and comparability of financial data prepared in accordance with IFRSs. This is done by the IFRS XBRL team. (ii) The production of high quality, understandable and up to date material including freely downloadable training material for the IFRS for SMEs, and the organization of conferences and workshops about IFRSs. These activities are grouped within the IASC Foundation Education Initiative. (iii) The protection of the IFRS brand and the support of global convergence through addressing translation and copyright issues and contributing to the financing of the organization through the provision of publication services. These activities are grouped under Content Management. (iv) operations, including the day-to-day management of and support for the organization. Also included are communications, improving and expanding external relationships, and promoting a better understanding of the work of the organization. The International Accounting Standard Board® (IASB) is the accounting standard setter that adopts International Financial Reporting Standards (IFRSs). In April 2001, the International Accounting Standards Board® (IASB), an independent accounting standardsetter based in London, assumed accounting standard-setting responsibilities from its predecessor body, the International Accounting Standards Committee. The IASB is responsible for International Financial Reporting Standards (IFRS). Headquartered in London, the United Kingdom. See also XBRL Taxonomy. IASC Foundation (was incorporated in 2001) is a head of the structure. The IASC Foundation is a not-for-profit, private sector body that raises funds to support the operations of the IASB as an independent accounting standard-setter. Our objective:- To develop a single set of high quality, understandable, enforceable and globally accepted

financial reporting standards based upon clearly articulated accounting principles. How do we do this?:- (i) an independent standard-setting board, overseen by a geographically and professionally diverse body of trustees, publicly accountable to the Monitoring Board of public capital market authorities; (ii) supported by an external standards advisory council (SAC) and the International Financial Reporting Interpretations Committee (IFRIC) to offer guidance where divergence in practice occurs; (iii) a thorough, open, participatory and transparent due process; (iv) engagement with investors, regulators, business leaders and the global accountancy profession at every stage of the process; and (v) collaborative efforts with the worldwide standard-setting community. International Accounting Standards Board (IASB) is an independent private sector body formed in 1973 (as the International Accounting Standards Committee (IASC)). IASB is responsible for setting accounting standards, designated International Financial Reporting Standards. Its headquarters are in London. The IFRS are drawn up and published by the International Accounting Standards Board® (IASB). The IASB is a private and independent accounting standard-setter based in London. It is made up of 14 members from 9 countries. The IASB works together with national standard-setting bodies (DRSC in Germany, FASB in the USA) to promote the harmonization of national rules with international accounting standards. The IASC was the predecessor body to the IASB. / (i) создание таксономии Экс.Би.Ар.Эл. для . коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INTERNATIONAL ACCOUNTING STANDARDS COMMITTEE = КОМИТЕТ ПО МЕЖДУНАРОДНЫМ СТАНДАРТАМ БУХГАЛТЕРСКОГО УЧЁТА – The International Accounting Standards Committee (IASC) is a predecessor to the International Accounting Standards Board® (IASB). Voluntary, private organization of over 100 professional associations from 80 countries. It addressed accounting questions with the aim of formulating, publishing and raising worldwide acceptance of principles and regulations for drawing up annual statements of account. A further declared aim was to promote the international harmonization of standards, accounting principles and methods for the preparation of annual statements of account.

INTERNATIONAL ACTUARIAL ASSOCIATION = МЕЖДУНАРОДНАЯ АКТУАРНАЯ АССОЦИАЦИЯ – The International Actuarial Association (IAA) in renewed form was established in June 1998 (26th International Congress of Actuaries, Birmingham, the United Kingdom:- a proposal to formally restructure the IAA into an association of associations is formally adopted). The primary role of the IAA is to focus the activity of the global profession in support of the public's interest. By offering a global interface, it extends service in support of the public interest beyond the confines of any one country and ensures that the actuarial practice platforms of the future can maintain that role. In an environment of international transactions and personal mobility, the contributions of actuaries to the analysis and quantification of financial risk emerge as important considerations. Users' trust in this analysis is paramount to the success of the professional advice. Global consistency of professional competence and practice, in preparation of that advice, augments the trust and reliance placed upon the actuarial advisor. Step by step, the IAA continues the path set over the past 10 years, building on the understandings gained and the respect developed among the member associations. As the future opens opportunities for increased public service without border constraints and with innovations freely shared, the professional forum offered by the IAA – with its free sharing of innovations – increases in scope and value. Demands on the international realm of each association's activity are beginning to be recognized as important to the success of the local individual professional. The XXI century, a mystery in many respects, is already identified as a focal point for actuarial skills in terms of issues of humanity and risk. These will require a global approach to actuarial research and practice. Xxxxx. Founded in 1895, the International Actuarial Association (IAA) is the worldwide association regrouping local professional actuarial associations and their individual actuaries. The IAA exists to encourage the development of a global profession, acknowledged as technically competent and professionally reliable, which will ensure that the public interest is served. The actuarial profession is recognized worldwide as a major player in the decision-making process within the financial services industry, in the area of social protection and in the management of risk, contributing to the well-being of society as a whole. The mission of the IAA, as the worldwide organization of actuarial associations, is:- (i) to represent the actuarial profession and promote its role, reputation and recognition in the international domain; and (ii) to promote professionalism, develop education standards and encourage research, with the active involvement of its Member Associations and Sections, in order to address changing needs. The IAA adheres to the values of integrity, accountability, transparency, and objectivity when dealing with Member Associations, other stakeholders and the public. History of the IAA:- the year 1998 will go down in history as a major turning point for the actuarial profession and an important step in preparing the profession for the challenges of the next millennium. On the occasion of the 26th International Congress of Actuaries held in Birmingham from 1998-June 07-12, the General Assembly of the International Actuarial Association (IAA) constituted itself as an association in accordance with Swiss Law with a Secretariat in Ottawa, Canada. The IAA is the continuation of the 'Comité Permanent des Congrès d'Actuaires' established in 1895 as an association of individuals, which was renamed the IAA in 1968. Within the scope of the reorganization of the IAA in June 1998, the International Forum of Actuarial Associations (IFAA), which was formed as a section of the IAA on 1995-September-10, was dissolved. The governance and structure of the IFAA were thus incorporated into the reorganized IAA to meet the growing needs of the actuarial profession as it expands in a global economy. The restructure created a single, stronger unified framework to ensure unity of direction and efficient coordination with respect to issues of a world-wide nature. The major responsibilities of the IAA are now in the hands of the actuarial associations, which bring together the actuaries in their respective countries and is the link between the actuaries and the actuarial associations worldwide. The IAA is the unique international organization dedicated to the research, education and development of the profession and of actuarial associations. The IAA has seven sections, ASTIN, AFIR, IACA, IAAHS, PBSS, AWB and LIFE. The ASTIN Section stands for Actuarial STudies In Non-life insurance and was founded in 1957. However, the scope of its investigations has been enlarged recently so as to include health insurance. ASTIN publishes the ASTIN Bulletin, an internationally renowned referenced scientific journal, twice a year and organizes annual colloquia. The AFIR Section stands for Actuarial Approach for Financial Risks and was founded in 1988. It has as its objective the promotion of actuarial research in financial risks and problems and its most important function is the organizing of annual colloquia. The IACA Section stands for International Association of Consulting Actuaries and was founded in 1968, independently of the IAA, to facilitate international exchange of views between consulting actuaries. It was admitted as a section of the IAA in 1999. The International Actuarial Association Health Section (IAAHS) was founded in 2003 to provide an international perspective on health actuarial practice, public and private health insurance, and health policy matters. The Pensions, Benefits, Social Security Section (PBSS) was founded in 2003 to serve actuaries around the world who have personal, professional, educational or research interests in social protection and the commercial, social and public policy issues concerning the provision of pensions and other benefits. The Actuaries Without Frontiers Borders (AWB) was also founded in 2003 to link situations in need of actuarial skills with financial resources and with actuarial volunteers to meet those needs. The LIFE Section has as its objectives to promote and facilitate an international exchange of views, advice, research and practical information among actuaries involved with life insurance issues. The International Actuarial Association (IAA) is an organization whose members are actuarial associations representing over ninety-five percent of actuaries worldwide. Headquartered in Ottawa, Canada. In the late XIX century (in 1895), actuaries in Belgium recognized the value of a textbook prepared by the Institute of Actuaries in London and sought to gain permission to translate it. But first, they wanted to be sure there was a market large enough to warrant a French version. The newly created Association Francaise des Actuaires in France provided the market assurance and the Institute's Dr. King gave permission for the translation. The result was a friendly relationship among the actuaries of the three nations. A few years later, a draft law was submitted to the Belgian Parliament.

In this text, the role of controller was assigned to actuaries. During the discussion, a member of Parliament asked what an actuary actually was, saying he had not found a definition of the word ‘actuary’ in the most recent dictionaries. The word was dropped and the Belgian actuaries were omitted. To demonstrate that actuaries existed in other countries, the Belgian actuaries organized a meeting of actuaries in Brussels and succeeded in convincing some members of the Belgian government to invite other nations throughout the world to send delegates to Brussels. As a result, the 1895 Congress of Actuaries was an initiative of a small actuarial group in Belgium supported diplomatically under the auspices of the Belgian government. The purpose was to prove to the government that actuaries existed and performed a legitimate and needed field of work. This became the first international actuarial congress. The format of the congress was in the academic model of the time; papers were prepared for prior circulation and on-site presentation. Proceedings were documented and printed. The first Congress did not discuss creating an organization; only the wish to meet again was expressed. In 1896, the Belgian organizers invited French and British actuaries to Brussels to discuss the possibility of creating a permanent structure for future Congresses. They met and agreed to do so and wrote the bylaws of the ‘Comite Permanent des Congres Internationaux d’Actuaires’ to be located in Brussels. The name ‘Comite Permanent’ was in use for more than 50 years; it was during the 1960s when the name International Actuarial Association (IAA) was adopted. It was initially agreed to repeat the Congress every three years and invitations from represented associations were solicited to provide hosting duties. The Congresses were structured around individual memberships in a corporation set up in Belgium. The Belgian association volunteered to provide the Secretariat. Actuaries from around the world could apply for a membership that gave them the right to attend Congresses. Eligibility was determined by whether the local definition of an actuary was acceptable to the Comite. Governance of the IAA was by a Council. The terms of reference for the Council were to plan for the next Congress and, eventually, to receive and distribute reports of actuarial happenings from the various countries represented. Over time, the IAA adopted additional purposes – to convene specialty ‘Section’ colloquia and establish Committees, elected by their individual members, to direct the Section’s activities and programs, and to promote their defined specialty interests. The Council was made up of individuals, some appointed by associations, some volunteering after personal solicitation by retiring Council members. The number of individuals on the Council from a country tended to depend on the heritage of the profession in that country. Some members were appointed by and spoke for their home associations, while others acted independently. The practice of the Council was to meet annually, at a Congress or in Brussels. Throughout the XX century, the IAA held Congresses around the world, apart from during times of global conflicts. It also published proceedings and bulletins. The central characteristic of the first 100 years of the IAA was that it was an organization of individual members meeting together for discussion of technical advances of actuarial research and practice. There was no governing link directly to actuarial associations that would have enabled it to address professionalism and the public interest. This was consistent with the times. Actuaries from around the world embraced the IAA with varying degrees of allegiance; for some it was the hallmark of their professional standing, while for others it had little relevance. As such, and without strong association links, the IAA would have had difficulty serving as a platform for XXI century professionalism. In the early 1990s, recognizing the increased freedom of geographic border transparency and the globalization of many aspects of actuarial practice, North American and European actuarial leaders began discussing approaches that could be taken to establish an international framework of professionalism. Two models were available. In Europe, national actuarial associations joined forces in the Groupe Consultatif to interface with the bureaucracy of the European Union. In North America, where separate actuarial associations represented specialty practices and national interests, agreement had been reached to combine efforts for the public good wherever possible. Discussions began at the 1992 Congress in Montreal and continued in various worldwide venues. Recognizing the tradition of the IAA as an individual-based association, it became apparent that the discussion needed to focus on a new, separate international association of associations with an emphasis on the public interest and global professionalism. As discussions moved toward a concluding proposal, leaders of the IAA suggested that the IAA sponsor the proposed association of associations as a Section of the IAA. This idea was embraced and resulted in the establishment of the International Forum of Actuarial Associations Section in 1995 at the Brussels Congress. Within the context of professionalism, the consistent goals of the discussions were two-fold:- to encourage actuarial associations worldwide to talk to each other, and to further the profession and enable jurisdictional borders to be crossed in actuarial practice. These goals were refined and expanded as the discussion committee wrote the statutes for the International Forum of Actuarial Associations (IFAA). The task was delicate, since long traditions existed and a global model of another profession was not available as a template. Some founding principles became implicit in the crafting of the organization structure and the resulting protocols. All of these were reflections of a future that was difficult to define. The result was to create an association of member associations rather than an association of individuals. Delegates would represent and speak on behalf of the constituent IFAA member association. Every member association was given an opportunity to be at the table of the IFAA Committee (the governing body) and most IFAA subcommittees. Each association would appoint its delegates to the Committee and subcommittees, and the IFAA protocols were to allow enough time for those delegates to be instructed by their individual associations with respect to the issues at hand, whether at the Committee or at the subcommittees. Agenda structures needed to allow for association consultation and advice to delegates. The resulting organization was to be accessible and transparent to the member associations in all respects, except for the areas of audit and nominations. It was recognized that there was great potential for disinterest or disassociation, so ample opportunity had to be made available for both awareness and involvement. There needed to be substantial consensus on all positions taken. A statement of position of the IFAA would be a statement of position of the associations combined. For many issues, a majority of votes would govern; for more important issues, a super-majority would be necessary. A target of discussions was to have a structure that would search for attainment of a consensus, so that the voting step would be a confirmation rather than a decisive step in addressing the issues. This was the reason for weighted vote values; while each member association had one delegate in the Committee, the vote of that delegate carried a weight ranging from one to four. As a result, no geographic or linguistic cluster of associations would be able to dominate decision-making. The principle of ‘subsidiarity’, a concept from international diplomacy, was the result of concern about potential overlapping jurisdictions. Its original intent was to recognize that the IFAA should defer to local groups whenever the latter were better equipped to address an issue. Subsidiarity:- Statutes – Article 8 Co-operation: The IAA will restrict its activities to strategies and programmes which require international co-ordination or direction, or can be handled more efficiently across national and regional boundaries. It will not become involved with actions at the level of the Member Associations or regional groups of actuarial associations, except at the express invitation of such an association or group. The IAA will therefore take any measures necessary to avoid duplication or overlap with the activities of Member Associations or regional groups of actuarial associations. The IFAA established membership conditions for associations and its Accreditation Subcommittee began addressing the membership status of applying associations. Within weeks of its formation, the IFAA responded to proposed revisions in international pension accounting standards by recruiting key actuaries from North America and Europe to represent the profession in subsequent discussions. This resulted in newly found respect for the profession. In mid-1997, several practice-oriented subcommittees were established. One that came to be of particular significance was a subcommittee to interface with the general initiative to enhance international accounting standards that had been mandated by regulators of security exchanges. It focused on developments relating to insurance companies and insurance contracts. This was closely followed by the formation of a subcommittee to interface with the recently formed International Association of Insurance Supervisors (IAIS). The IFAA established a Secretariat in Canada and a dues structure for member associations. Protocols for selection of Officers and subcommittee leadership were set within

the Nominations Committee. In 1995, after 100 years of Belgian volunteer service and recognizing that the future scope of work was beyond the level appropriate for a volunteer organization, the IAA Council decided it would be appropriate to receive proposals from interested associations to host the Secretariat in the future. A special committee was delegated to recommend an alternative legal and administrative structure. The special committee was composed of members of several large associations and others; all had been active over the years in the IAA Council. Associations were invited to submit proposals to serve in a Secretariat role. Eventually, Canada was agreed to be the locale for the Secretariat with Switzerland to be the country of incorporation. A part of the discussion of the special committee was to examine the viability of the ongoing IAA structure given the new existence of the IFAA within it as a Section. In 1995, a review of this issue had been requested by several IAA Council members. As it was discussed by the special committee, the conclusion became clear that it was appropriate for the IAA itself to become an association of associations based on a strong platform of professionalism, with opportunities for individuals to relate to one another internationally at Congresses and through the activity of Sections. The acceptability of this idea was in large part due to the respect in which the members of the special committee were held by Council members. The result was a proposal to have the IAA adopt a new set of governing documents that would embrace the features of the IFAA Section as well as other features appropriate for the IAA heritage of being an individual member-based organization. This included the tradition of communicating in both English and French. The proposal also would disband the IFAA and move the IAA forward as an association of associations. The proposal was agreed to at the Birmingham Congress in 1998. The IAA Secretariat moved to Canada and the new structure – a renewed IAA – was established. In the decade following the restructuring, the renewed IAA has focused on its service to the public and to the profession through member associations, as well as to the profession's members through congresses and the IAA Sections. Expectations were set out in the aims adopted in the Statutes of the restructured IAA. Although no ten-year targets were stated in 1998, 2008 finds the IAA operating at a surprisingly multi-dimensional level of activity that interfaces with a broad set of international organizations, while developing a deeper sense of global professionalism among member associations. Not surprisingly, tensions are present related to the need for changes to the IAA's operations to reflect the enhanced international presence of the profession and the many actions under consideration. Intense effort has been expended to aid in the nurturing of the profession in emerging economies, with prodigious results in terms of new associations in countries where there were no actuaries at all until recent years, or in some cases only in the distant past. Committees address long agendas and aggressively seek consensus on items that move the profession forward internationally. Technology is applied to the fullest extent available within IAA operations to reduce communication lag and generate fiscal prudence. Actuarial associations now aspire to IAA membership. Its membership criteria are taken seriously by both the IAA and its member associations. Fundamental to the IAA restructuring is the recognition of the components of a profession:- a unique field of knowledge grounded in ongoing research and education, a certification process for those who possess a mastery of the field of knowledge, a code of conduct that provides assurance of dedication to the public good and of skilled competence, an articulated set of practice standards that help ensure the proper use of appropriate methodology and practice, and an active professional or regulatory discipline process that provides motivation for compliance by individual practitioners, combined with a just route for appeal. The components of professionalism deemed necessary in each applying association provide for realization of the goals of the restructured IAA and the basis for the continuing IAA member association accreditation process. With the structure focused on professional issues, the IAA is poised to interface with both users of actuarial counsel and other international providers of complementary services. Throughout the world the profession shows growth, especially in countries with developing financial and risk-related economies. These statistics are apparent in the growth of IAA member associations as well as within the associations themselves. In 1998, there were 39 Full Member associations and 19 Observer Member associations (now referred to as Associate Members). At the start of 2008, there were 58 Full Member associations and 23 Associate Member associations. Two contractual savings conferences have been sponsored jointly with the World Bank. Links have been developed with the Organization for Economic Cooperation and Development (OECD) in Paris and have resulted in granting reciprocal observer status between the IAA and the OECD. The IAA opened relationships with the World Trade Organization (WTO) that created contacts between the WTO and the IAA Professionalism Committee, which could give the WTO an extensive insight into the role and the organization of the profession. / Комитэ Пермано дэ Конгрэ д'Актюэр (Comité Permanent des Congrès d'Actuaires). Международная Актуарная Ассоциация (МАА; The International Actuarial Association (IAA)) представляет собой организацию, членами которой являются актуарные ассоциации, представляющие свыше девяноста пяти процентов актуариев по всему миру. Штабквартира расположена в Оттаве, Канада. шаблон (template). инновации . коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INTERNATIONAL ACTUARIAL STANDARD OF PRACTICE = МЕЖДУНАРОДНЫЙ АКТУАРНЫЙ СТАНДАРТ ПРАКТИКИ – The International Actuarial Standard Of Practice (IASP) is a standard of practice adopted by the International Actuarial Association (IAA), which is a statement of behavior required of actuaries operating within a specified context, including the methodology adopted, the approach used to set assumptions, the contents of the resulting report or opinion and the report or opinion's presentation. The four types of IASP are Class 1:- Mandatory; Class 2:- Voluntary; Class 3:- Recommended Practice; and Class 4:- Practice Guideline.

INTERNATIONAL AIR AMBULANCE = МЕЖДУНАРОДНАЯ ВОЗДУШНАЯ СКОРАЯ ПОМОЩЬ – International Air Ambulance, like the ones Air Ambulance Network uses; are aircraft that are used to transport patients from one country to another. This generally a fixed wing aircraft (Airplane). Air Ambulance Network has been performing international air ambulance transfers since 1971. Air Ambulance Network has been providing an international air ambulance medically configured to take care of the patient's requirements since 1971. An international air ambulance uses an array of business size aircraft in providing air medical transports, such as twin engine, turbo prop and jet aircraft. For most international air ambulance transfers a jet is used such as the Lear Jet, which is the workhorse of international air ambulances. Air Ambulance Network has been providing international air ambulance services since 1971. Air Ambulance Network is one of the first international air ambulance transport providers and has led the industry ever since it inception. Today, Air Ambulance Network is a leader in the international air ambulance transport industry.

INTERNATIONAL AIR TRANSPORT ASSOCIATION = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ ВОЗДУШНОГО ТРАНСПОРТА – The International Air Transport Association (IATA) is an international organization of airlines, founded in 1945, with the aim of promoting the commercial air traffic. This should be achieved by cooperation between parties concerned and by performance of certain rules, procedures and tariffs, regarding both cargo and passengers, by those parties. The International Air Transport Association (IATA) is a trade association serving airlines, passengers, shippers, travel agents, and governments. IATA head office is in Montreal, Canada and executive office in Geneva, Switzerland. The International Air Transport Association (IATA) was founded in Havana, Cuba, in April 1945. It is the prime vehicle for inter-airline cooperation in promoting safe, reliable, secure and economical air services – for the benefit of the world's consumers. The international scheduled air transport industry is now more than 100 times larger than it was in 1945. Few industries can match the dynamism of that growth, which would have been much less spectacular without the standards, practices and procedures developed within IATA. At its founding, IATA had 57 members from 31 nations, mostly in Europe and North America. Today it has some 240 members from more than 140 nations in every part of the globe. The modern IATA is the successor to the International Air Traffic Association founded in the Hague in 1919 – the year of the world's first international scheduled services. The old IATA was able to start small and grow gradually. It was also limited to a European dimension until 1939 when Pan American joined. The post-

1945 IATA immediately had to handle worldwide responsibilities with a more systematic organization and a larger infrastructure. This was reflected in the 1945 Articles of Association and a much more precise definition of IATA's aims than had existed before 1939. (1) To promote safe, regular and economical air transport for the benefit of the peoples of the world, to foster air commerce, and to study the problems connected therewith. (2) To provide means for collaboration among the air transport enterprises engaged directly or indirectly in international air transport service. (3) To cooperate with the newly created International Civil Aviation Organization (ICAO – the specialized United Nations agency for civil aviation) and other international organizations. The most important tasks of IATA during its earliest days were technical, because safety and reliability are fundamental to airline operations. These require the highest standards in air navigation, airport infrastructure and flight operations. The IATA airlines provided vital input to the work of ICAO, as that organization drafted its Standards and commended Practices. By 1949, the drafting process was largely complete and reflected in 'Annexes' to the Chicago convention, the treaty which still governs the conduct of international civil aviation. In those early days, ICAO coordinated regional air navigation and support for airports and operational aids in countries which could not themselves afford such services. IATA provided airline input to ICAO and to sessions of the International Telecommunications Union on wavelength allocation. The standardization of documentation and procedures for the smooth functioning of the world air transport network also required a sound legal basis. IATA helped to mesh international conventions, developed through ICAO, with US air transport law which had developed in isolation prior to World War Two. The Association made a vital input to the development of Conditions of Carriage the contract between the customer and the transporting airline. One early item on the legal agenda was revision and modernization of the Warsaw Convention, originally signed in 1929, on airline liability for passenger injury or death and cargo damage or loss. This work continues. Once they were operating within a sound technical and legal framework, airlines' next requirements were for answers to questions such as:- who can fly where? What prices are to be charged? How is the money from multi-airline journeys – that is, interlining – to be divided up, and how do airlines settle their accounts? The Chicago Conference of 1944 which gave birth to the Chicago Convention tried to achieve a multilateral answer to the first two questions, but failed to do so. The questions of who flies, and where, were resolved on a bilateral basis. The benchmark Bermuda Agreement of 1946 between the United States and the United Kingdom was the first of almost 4 000 bilateral air transport agreements so far signed and registered with ICAO. In the early days, governments insisted on the right to oversee the prices charged by international airlines but could not, in practical terms, develop those prices for themselves. IATA was delegated to hold Traffic Conferences for this purpose, with all fares and rates subject to final government approval. The aim was twofold:- ensuring that fares and rates would not involve cut-throat competition, while ensuring that they could be set as low as possible, in the interests of consumers. A coherent pattern of fares and rates pattern was established, avoiding inconsistencies between tariffs affecting neighbouring countries – and thereby avoiding traffic diversion. The predictability of fares and rates in this pattern also enabled airlines to accept each others' tickets on multi-sector journeys and thus gave birth to interlining. Today, 50 million international air passengers a year pay for their ticket in one place, in one currency, but complete their journey using at least two, and sometimes five or more, airlines from different countries using different currencies. The first worldwide Traffic Conference was held in Rio de Janeiro in 1947. It reached unanimous agreement on nearly 400 resolutions covering all aspects of air travel. Fare construction rules for multi-sector trips, revenue allocation – pro-rating – rules, baggage allowances, ticket and air waybill design and agency appointment procedures were typical details agreed at this pioneering meeting. Today, that pioneering work is reflected in the currently applicable IATA Resolutions dealing with these and many other subjects. Notable examples are:- (i) The Multilateral Interline Traffic Agreements:- these are the basis for the airlines' interline network. Close to 300 airlines have signed them, accepting each others' tickets and air waybills – and thus their passenger and cargo traffic – on a reciprocal basis. (ii) Passenger and Cargo Services Conference Resolutions:- these prescribe a variety of standard formats and technical specifications for tickets and air paybills. (iii) Passenger and Cargo Agency Agreements & Sales Agency Rules:- these govern the relationships between IATA Member airlines and their accredited agents with regard to passenger and cargo. Debt Settlement between airlines, largely arising from interlining, takes place through the Clearing House, which began operations in January 1947. During its first year, 17 airlines cleared USD26 million. The IATA Clearing House today. International air transport grew at double-digit rates from its earliest post-1945 days until the first oil crisis in 1973. Much of the impetus for this growth came from technical innovation. The introduction of turbo-propeller aircraft in the early 1950s, transatlantic jets in 1958, wide-bodied aircraft and high by-pass engines in 1970 and later, advanced avionics were the main innovations. They brought higher speeds, greater size, better unit cost control and, as a result, lower real fares and rates. Combined with increased real incomes and more leisure time, the effect was an explosion in demand for air travel. Increased demand for air travel led to increased activity for IATA. Unit Load Devices, or ULDs – principally, containers – allow rapid, economical cargo handling. IATA Members developed the technical specifications for containers and created a ULD control center, to keep track of their movements. Until 1955, there was a complete embargo on the air transport of toxic, flammable or corrosive materials. Then IATA developed Dangerous Goods Regulations for their safe carriage. A decade later, Live Animals Regulations provided for suitable standards for the in-flight welfare of animals. Eventually, IATA was re-organized on a two-tier basis in October 1979. The tiers comprised:- (i) Trade Association (technical, legal, financial, traffic services and most agency matters); and (ii) Tariff Coordination (passenger fares, cargo rates, and related conditions and charges). At present, some 100 Members, including the world's largest airlines, continue to participate in Tariff Coordination. The IATA that emerged since 1979 has put an increasing share of its resources into trade association activities. IATA also changed the basis of its funding. Much of the association's funding is now done through the marketing of its products and services to Member airlines, other airlines and others in the travel, transport and tourism industry. As a result airlines can access a broader array of professional services, tapping into IATA's expertise. And IATA has greater flexibility in the way it approaches its tasks, while remaining devoted to its non-for profit operations principles. / инновация . Международный Союз Дальней Связи (). INTERNATIONAL ANTICOUNTERFEITING COALITION = МЕЖДУНАРОДНАЯ КОАЛИЦИЯ ПО ПРОТИВОДЕЙСТВИЮ РАСПРОСТРАНЕНИЯ ФАЛЬШИВЫХ ДЕНЕЖНЫХ ЗНАКОВ – International AntiCounterfeiting Coalition:- the touchstone of the IACC's mission is to combat counterfeiting and piracy by promoting laws, regulations and directives designed to render the theft of intellectual property undesirable and unprofitable. The IACC serves as an umbrella organization, offering anti-counterfeiting programs designed to increase protection for patents, trademarks, copyrights, service marks, trade dress and trade secrets. Critical to the IACC's purpose is its belief that acts of counterfeiting create severe public health and safety hazards, as well as economic harm. The IACC initiates actions and supports government actions that will ultimately result in increased enforcement, lead to the prosecution of intellectual property infringers, and create a strong deterrent to counterfeiters and pirates. In an effort to create conditions under which its members' intellectual property rights are safe from illegal copying, infringement and other forms of theft, the IACC engages in substantive dialogue with governments worldwide. In pursuing its mission, the IACC provides law enforcement officials with information and training to identify counterfeit and pirated products and in the methods of product security to prevent the infringement of its members' intellectual property rights. The International AntiCounterfeiting Coalition Inc (IACC) is a Washington, DC-based non-profit organization devoted solely to combating product counterfeiting and piracy. Formed in 1979, today it is comprised of a cross section of business and industry – from autos, apparel, luxury goods and pharmaceuticals, to food, software and entertainment – the IACC's members' combined annual revenues exceed USD650 billion. The IACC develops and conducts training for domestic and foreign law

enforcement officials, submits comments on intellectual property enforcement laws and regulations in the United States and abroad and participates in regional and international programs aimed at improving intellectual property enforcement standards. The International AntiCounterfeiting Coalition (IACC), founded in 1978, is a nonprofit organization located in Washington, DC, the United States. The IACC seeks to advance intellectual property rights (IPR) protection on a worldwide basis by promoting laws, regulations, and directives designed to render theft of IPR unattractive and unprofitable. The International AntiCounterfeiting Coalition is the world's largest non-profit organization devoted solely to protecting intellectual property and deterring counterfeiting. Our membership spans from automotive, apparel, luxury goods and pharmaceuticals, to food, software and entertainment. From the small privately-owned companies to large multinationals, we share one common goal–to combat counterfeiting and piracy.

INTERNATIONAL APPLICATION = МЕЖДУНАРОДНАЯ ЗАЯВКА – International Application is:- (i) an application filed under the Patent Cooperation Treaty; (ii) allows a trademark owner to seek registration in any of the countries that have joined the Madrid Protocol by filing a single application.

INTERNATIONAL ASSOCIATION FOR THE PROTECTION OF INTELLECTUAL PROPERTY = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ ПО ЗАЩИТЕ ИНТЕЛЛЕКТУАЛЬНОЙ СОБСТВЕННОСТИ – International Association for the Protection of Intellectual Property (IAPIP) or, in French, Association Internationale pour la Protection de la Propriété Intellectuelle (AIPPI). AIPPI dates back to 1897, shortly following the signature of the Paris Convention for the Protection of Industrial Property in the year 1883. Following the initiative of leading legal scientists and practitioners a founders meeting was held in Brussels on 1897-May-08 and in October 1897 the first Congress was convened in Vienna with subsequent festivities in Budapest. Congresses were held annually in the early stages, later alternating with 'Reunions', until the beginning of the First World War dictated an interruption in 1914. The revival of the Association took place in 1925. Under the leadership of the Swiss Patent Attorney, Eugen Blum, the center of gravity of AIPPI moved to Switzerland. As a consequence of the Second World War, the activities of the Association suffered a second interruption from 1938 to 1946. The development of AIPPI to its present form has been a continual one. Starting with an emphasis on Western Europe it has become a truly international Association, including North and South America, Eastern European countries, Asia, Australia and Africa. In 1997 AIPPI celebrated its Centennial in Vienna and Budapest. In its long history, AIPPI has adopted more than 700 Resolutions and Reports. The presentation of these Resolutions and Reports to international Governmental Organizations, in particular the WIPO, has contributed considerably to the development, improvement and harmonization of the international protection of Intellectual Property. Recently AIPPI has revised and improved its Statutes and Regulations (which are available in English, French and German) in order to meet not only the challenges present in the IP field but also the needs of the Membership. What has AIPPI actually achieved for the Benefit of Intellectual Property Owners and Users? Some important examples are as follows:- (i) Promotion of Revisions of the Paris Conventions leading to enormous improvement in the protection of industrial property during the XX century; (ii) The establishment of the Trade Marks Law Treaty (which is the result of an AIPPI initiative); (iii) The passing of Resolutions (such as the test for the Experimental Use exception in patent law) which are cited as authority on what the law should be in some jurisdictions; and (iv) Delegations of AIPPI are established as active participants in all major international and regional discussions on intellectual property law projects – viz Patent Law Treaty, European Community Patent Convention, Directive of the European Union on Biotechnology, the Hague Agreement and the Madrid Protocol, to mention just a few. The Members of AIPPI are people actively interested in intellectual property protection on a national or international level. They include lawyers, patent attorneys and trademark agents as well as judges, scientists and engineers. They also include corporations. AIPPI is organized into 64 National and one Regional Groups and membership is obtained by joining one of these Groups. In countries where no Group exists, membership is obtained as an Independent Member in the international organization. The primary international bodies of AIPPI are:- (i) the General Assembly, in which all Members have a right to participate and which is responsible for adopting and modifying the Statutes; (ii) the Executive Committee, made up of Delegates of all of the Groups – around 300 in number; this is the principal decision-making body of AIPPI; (iii) the Council of Presidents, made up of the Presidents of the Groups plus a representative of the Independent Members; and (iv) the Bureau which directs the activities of AIPPI; it is formed of eight Members including the President of AIPPI who chairs the Bureau and the Vice President; the Secretary General and a Deputy who are responsible for administration and representation; the Reporter General and two Deputies who, with two Assistants, organize the substantive work of the Association; and a Treasurer General who is in charge of financial resources. The General Secretariat and staff have offices in Zurich, Switzerland. Among the more important Standing Committees are the Programme Committee which recommends to the Executive Committee the subjects for study; the Finance Advisory Committee which acts as an internal auditor; and the Nominating Committee which proposes candidates for the various elective offices. Headquarters are in Zürich, Switzerland. The International Association for the Protection of Intellectual Property, generally known under the abbreviated name AIPPI, is the world's leading International Organization dedicated to the development and improvement of intellectual property. It is a politically neutral, non-profit organization, domiciled in Switzerland which currently has over 8 000 Members representing more than 100 countries. The objective of AIPPI is to improve and promote the protection of intellectual property on both an international and national basis. It pursues this objective by working for the development, expansion and improvement of international and regional treaties and agreements and also of national laws relating to intellectual property. It operates by conducting studies of existing national laws and proposes measures to achieve harmonization of these laws on an international basis. In this context AIPPI has become increasingly concerned with issues concerning the enforcement of intellectual property rights. / Международная Ассоциация по Защите Интеллектуальной Собственности или, как это звучит на Французском языке по месту регистрации ассоциации, Асосьясьё Этэрнасьёналь пур ля Протэксьён дё ля Проприете Интэллектюэль (А.И.Пэ.Пэ.И.; Association Internationale pour la Protection de la Propriété Intellectuelle (AIPPI)). Штабквартира расположена в Цюрихе, Швейцария. Ойген Блюм (Eugen Blum).

INTERNATIONAL ASSOCIATION OF CLASSIFICATION SOCIETIES LTD = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ КЛАССИФИКАЦИОННЫХ ОБЩЕСТВ ЭЛ.ТИ.ДИ. – The International Association of Classification Societies (IACS) is a technically-based, maritime organization headquartered in London. It was founded on 1968-September-11 in the city of Hamburg. Its membership is comprised, as of January 2011, of the eleven largest marine classification societies in the world. An estimated 90% of the world's cargo carrying ships' tonnage is covered by the classification standards set by the eleven Member Societies of IACS. More than 50 organizations worldwide define their activities as providing marine classification. Any classification society that meets the qualitative conditions of membership may apply for membership within IACS. To remain a member of IACS, all members are required to demonstrate continued compliance with strict quality standards as determined by periodic audits. Dedicated to promoting maritime safety and clean seas, IACS and its individual members make a unique contribution to the marine and offshore industries by carrying out extensive research and development on marine-related topics, providing technical support and verifying compliance with published standards. Marine classification is a system for promoting the safety of life, property and the environment primarily through the establishment and verification of compliance with technical and engineering standards for the design, construction and life-cycle maintenance of ships, offshore units and other marine-related facilities. These standards are contained in relevant rules established by each Society. IACS provides a forum within which the member societies can discuss, research and adopt technical criteria that enhance maritime safety. The classification process begins with the evaluation by the class society of a submitted design to determine

its compliance with the applicable rules. During construction, classification society surveyors attend the vessel to verify that it is built in conformance with the approved drawings and to the relevant rules. On delivery, the vessel enters a regimen of periodic surveys by the society to verify that it is being maintained to a standard that is in compliance with the applicable classification rules. These periodic surveys generally follow a five-year cycle of annual, intermediate and special surveys with the extent of the survey varying depending upon the age of the vessel or offshore unit and the type of survey being conducted. For a vessel to remain 'in class' it must be determined to have met the applicable class rule requirements at the completion of each survey. Should a vessel sustain in-service damage, the vessel's owner is required to advise the classification society of record so that a damage survey can be arranged as soon as is practical. Should the surveyor determine that the damaged vessel no longer meets the applicable rule requirements, the owner will be required to carry out the necessary repairs to bring the vessel back into compliance if it is to remain in class. Although IACS is a non-governmental organization, it also plays a unique role within the International Maritime Organization (IMO), for which IACS provides technical support and guidance and develops unified interpretations of the international statutory regulations developed by the Member States of the IMO. Once adopted, these unified interpretations are applied by each of the IACS member societies, in a harmonized manner, when certifying compliance with the statutory regulations on behalf of authorizing flag States. IACS has consultative status with the IMO, and remains the only non-governmental organization with observer status which also develops and applies technical rules that are reflective of the aims embodied within IMO conventions. The link between the international maritime regulations, developed by the IMO and the classification rule requirements for a ship's hull structure and essential engineering systems is codified in the International Convention for the Safety of Life at Sea (SOLAS). IACS can trace its origins back to the International Load Line Convention of 1930 and its recommendations. The Convention recommended collaboration between classification societies to secure 'as much uniformity as possible in the application of the standards of strength upon which freeboard is based…'. Following the Convention, RINA hosted the first conference of major societies in 1939 – also attended by ABS, BV, DNV, GL, LR and NK – which agreed on further cooperation between the societies. A second major class society conference, held in 1955, led to the creation of Working Parties on specific topics and, in 1968, to the formation of IACS by seven leading societies. The value of their combined and unique level of technical knowledge and experience was quickly recognized when, in 1969, IACS was given consultative status by the IMO. Its membership has steadily increased since that time to the current eleven members. IACS is governed by a Council, with each Member represented on the Council by a senior management executive. The position of Chairman of the Council is rotated between the members on an annual basis. Reporting to the Council is the General Policy Group (GPG), made up of a senior management representative from each member society. The GPG develops and implements actions giving effect to the policies, directions and long term plans of the Council. The chair of GPG is taken by the Member holding the Council chair. Much of the technical development work of IACS is undertaken by a number of working parties (WP), the members of which are drawn from the technical, engineering, survey or quality management staff of the member societies as appropriate. The members of IACS are:- American Bureau of Shipping (ABS), Bureau Veritas (BV), China Classification Society (CCS), Det Norske Veritas (DNV), Germanischer Lloyd (GL), Korean Register of Shipping (KR), Lloyd's Register (LR), Nippon Kaiji Kyokai (NK; ClassNK), Registro Italiano Navale (RINA), Russian Maritime Register of Shipping (RS), and Indian Register of Shipping (IRS). The International Association of Classification Societies Ltd (IACS) is an organization in which the major classification societies, among others American Bureau of Shipping, Lloyd's Register of Shipping and Germanischer Lloyd, are joined, whose principal aim is the improvement of standards concerning safety at sea. Headquartered in London, the United Kingdom. / Бюро Вэритас (Бе.Ве.; Bureau Veritas (BV)), , Дэ Ношке Вэритас (Дэ.Эн.Вэ.; Det Norske Veritas (DNV)), Германский Лойд (Germanischer Lloyd), , , Ниппон Кайдьжи Киокай (Nippon Kaiji Kyokai (NK; ClassNK)), Рэдьжистро Итальяно Навалэ (Эрры.И.Энни.А.; Registro Italiano Navale (RINA)), . Организация, в которой объединились ведущие классификационные общества, среди прочих в которой Американское Бюро Судоходства (American Bureau of Shipping), Регистр Судоходства Лойда (Lloyd's Register of Shipping) и Германский Лойд (Germanischer Lloyd), чьими главенствующими целями является совершенствование стандартов, касающихся безопасности на море. Штабквартира ассоциации расположена в Лондоне, Соединённое Королевство.

INTERNATIONAL ASSOCIATION OF CONGRESS CENTERS = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ КОНГРЕСС ЦЕНТРОВ – AIPC (Association Internationale des Palais de Congres, in French, or International Association of Congress Centres, in English) is an international association of convention and exhibition centers whose mission is to support, encourage and recognize excellence in convention center operation and management. Its programs are directed towards enhancing the profile and performance of its members, who represent facilities whose primary purpose is to accommodate and service meetings, conventions, congresses and exhibitions and who are already engaged in or are interested in participating in the international meetings market. AIPC is an association of member centers rather than individuals. Typically, a member center is represented by the most senior executive position in the organization. AIPC welcomes new member applications through the following process, which is designed to ensure that the prospective member's goals and operation are aligned with those of the AIPC membership. Founded in 1958, AIPC is a professional, non-profit association of international congress, convention and exhibition centers with the mission of encouraging and recognizing excellence in congress center management. Headquartered in Brussels, Belgium. With a global network of more than 150 of the world's leading centers, its programs help members develop and enhance management expertise in the areas of operations, finance, technology, staff development, marketing, client relations and environment. AIPC addresses its mission with a variety of activities including:- (i) industry research, analysis and technical publications; (ii) training, educational and professional development activities; (iii) global marketing and communications for the industry; (iv) member networking and information exchange forums; (v) performance standards and recognition programs; and (vi) Annual AIPC Apex Award for 'World's Best Congress Centre' and the 'AIPC Innovation Award' for the recognition of management innovations. AIPC focuses specifically on the issues, opportunities and challenges facing convention and exhibition centers and maintains close working relations with related industry organizations and the trade media to ensure that both members and other sectors of the industry are well informed about key issues. / Международная Ассоциация Конгресс Центров (МАКЦ) или, как это звучит на Французском языке по месту регистрации, Асосьясьё Этэрнасьёналь дэ Пале дё Конгрэ (А.И.Пэ.Сэ.; Association Internationale des Palais de Congres (AIPC)). инновация . коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INTERNATIONAL ATOMIC ENERGY AGENCY = МЕЖДУНАРОДНОЕ АГЕНТСТВО ПО АТОМНОЙ ЭНЕРГИИ – The International Atomic Energy Agency (IAEA) is the world's center of cooperation in the nuclear field. It was set up as the world's 'Atoms for Peace' organization in 1957 within the United Nations family. The Agency works with its Member States and multiple partners worldwide to promote safe, secure and peaceful nuclear technologies. Organizational Profile:- the IAEA Secretariat is headquartered at the Vienna International Centre in Vienna, Austria. Operational liaison and regional offices are located in Geneva, Switzerland; New York, USA; Toronto, Canada; and Tokyo, Japan. The IAEA runs or supports research centers and scientific laboratories in Vienna and Seibersdorf, Austria; Monaco; and Trieste, Italy. The IAEA Secretariat is a team of 2 200 multi-disciplinary professional and support staff from more than 90 countries. The Agency is led by Director General Yukiya Amano and six Deputy Directors General who head the major departments. IAEA programmes and budgets are set through decisions of its policymaking bodies – the 35-member Board of Governors and the General Conference of all Member States. Reports on IAEA activities are submitted periodically or as cases warrant

to the UN Security Council and UN General Assembly. IAEA financial resources include the regular budget and voluntary contributions. The Regular Budget for 2008 amounts to €277 million. The target for voluntary contributions to the Technical Co-operation Fund for 2008 is USD80 million (as per the latest IAEA Annual Report). The IAEA's mission is guided by the interests and needs of Member States, strategic plans and the vision embodied in the IAEA Statute. Three main pillars – or areas of work – underpin the IAEA's mission-: Safety and Security; Science and Technology; and Safeguards and Verification. As an independent international organization related to the United Nations system, the IAEA's relationship with the UN is regulated by special agreement. In terms of its Statute, the IAEA reports annually to the UN General Assembly and, when appropriate, to the Security Council regarding non-compliance by States with their safeguards obligations as well as on matters relating to international peace and security. The International Atomic Energy Agency (IAEA) is the primary international organization that enforces a system of safeguards to ensure that non-nuclear weapons states do not divert shipments of sensitive equipment from placeful applications to the production of nuclear weapons. Before a supplier state of nuclear materials or equipment may approve an export to a non-nuclear weapons NPT (Nuclear non-Proliferation Treaty) signatory state, it must receive assurances that the recipient will place the material under IAEA safeguards. Subsequent to shipment, the recipient state must allow IAEA officials to verify the legitimate end use of the exported materials or equipment. IAEA, established in 1957, gives advice and technical assistance to developing countries on nuclear power development, nuclear safety, radioactive waste management, and related efforts. Safeguards are the technical means applied by the IAEA to verify that nuclear equipment or materials are used exclusively for peaceful purposes. Headquartered in Vienna, Austria. The IAEA was created in 1957 in response to the deep fears and expectations resulting from the discovery of nuclear energy. Its fortunes are uniquely geared to this controversial technology that can be used either as a weapon or as a practical and useful tool. The Agency's genesis was US President Eisenhower's 'Atoms for Peace' address to the General Assembly of the United Nations on 1953-December-08. These ideas helped to shape the IAEA Statute, which 81 nations unanimously approved in October 1956. The Statute outlines the three pillars of the Agency's work – nuclear verification and security, safety and technology transfer. In the years following the Agency's creation, the political and technical climate had changed so much that by 1958 it had become politically impracticable for the IAEA to begin work on some of the main tasks foreseen in its Statute. But in the aftermath of the 1962 Cuban missile crisis, the USA and the USSR began seeking common ground in nuclear arms control. In 1961 the IAEA opened its Laboratory in Seibersdorf, Austria, creating a channel for cooperative global nuclear research. That year the Agency signed a trilateral agreement with Monaco and the Oceanographic Institute headed by Jacques Cousteau for research on the effects of radioactivity in the sea, an action that eventually lead to the creation of the IAEA's Marine Environment Laboratory. As more countries mastered nuclear technology, concern deepened that they would sooner or later acquire nuclear weapons, particularly since two additional nations had 'joined the club', France in 1960 and China in 1964. The safeguards prescribed in the IAEA's Statute, designed chiefly to cover individual nuclear plants or supplies of fuel, were clearly inadequate to deter proliferation. There was growing support for international, legally binding, commitments and comprehensive safeguards to stop the further spread of nuclear weapons and to work towards their eventual elimination. This found regional expression in 1968, with the approval of the Treaty on the Non-Proliferation of Nuclear Weapons (NPT). The NPT essentially freezes the number of declared nuclear weapon States at five (USA, Russia, UK, France and China). Other States are required to forswear the nuclear weapons option and to conclude comprehensive safeguards agreements with the IAEA on their nuclear materials. The 1970s showed that the NPT would be accepted by almost all of the key industrial countries and by the vast majority of developing countries. At the same time the prospects for nuclear power improved dramatically. The technology had matured and was commercially available, and the oil crisis of 1973 enhanced the attraction of the nuclear energy option. The IAEA's functions became distinctly more important. But the pendulum was soon to swing back. The first surge of worldwide enthusiasm for nuclear power lasted barely two decades. By the early 1980s, the demand for new nuclear power plants had declined sharply in most Western countries, and it shrank nearly to zero in these countries after the 1986 Chernobyl accident. In 1988 the IAEA and UN Food and Agricultural Organization joined forces with other agencies to eradicate New World Screwworm – which spreads a deadly livestock disease. The radiation-based technology to eradicate the worm was developed at the Agency's Laboratory Seibersdorf. In 1991, the discovery of Iraq's clandestine weapon programme sowed doubts about the adequacy of IAEA safeguards, but also led to steps to strengthen them, some of which were put to the test when the Democratic People's Republic of Korea (DPRK) became the second country that was discovered violating its NPT safeguards agreement. The Three Mile Island accident and especially the Chernobyl disaster persuaded governments to strengthen the IAEA's role in enhancing nuclear safety. In the early 1990s, the end of the Cold War and the consequent improvement in international security virtually eliminated the danger of a global nuclear conflict. Broad adherence to regional treaties underscored the nuclear weapon free status of Latin America, Africa and South East Asia, as well as the South Pacific. The threat of proliferation in some successor States of the former Soviet Union was averted; in Iraq and the DPRK the threat was contained. In 1995, the NPT was made permanent and in 1996 the UN General Assembly approved and opened for signature a comprehensive test ban treaty. While military nuclear activities were beyond the IAEA's statutory scope, it was now accepted that the Agency might properly deal with some of the problems bequeathed by the nuclear arms race – verification of the peaceful use or storage of nuclear material from dismantled weapons and surplus military stocks of fissile material, determining the risks posed by the nuclear wastes of nuclear warships dumped in the Arctic, and verifying the safety of former nuclear test sites in Central Asia and the Pacific. In recent years, the Agency's work has taken on some urgent added dimensions. Among them are countermeasures against the threat of nuclear terrorism, the focus of a new multi-faceted Agency action plan. Xxxxx. The IAEA was created in 1957 in response to the deep fears and expectations generated by the discoveries and diverse uses of nuclear technology. The Agency's genesis was US President Eisenhower's 'Atoms for Peace' address to the General Assembly of the United Nations on 8 December 1953. The US Ratification of the Statute by President Eisenhower, 29 July 1957, marks the official birth of the International Atomic Energy Agency. In the press conference following the signing ceremony in the Rose Garden of the White House in Washington, DC, President Eisenhower evoked his address to the UN General Assembly in December 1953, at which he had proposed to establish the IAEA. 'In fact, we did no more than crystallize a hope that was developing in many minds in many places … the splitting of the atom may lead to the unifying of the entire divided world'. The IAEA is strongly linked to nuclear technology and its controversial applications, either as a weapon or as a practical and useful tool. The ideas President Eisenhower expressed in his speech in 1953 helped shape the IAEA's Statute, which 81 nations unanimously approved in October 1956. The Agency was set up as the world's 'Atoms for Peace' organization within the United Nations family. From the beginning, it was given the mandate to work with its Member States and multiple partners worldwide to promote safe, secure and peaceful nuclear technologies. The objectives of the IAEA's dual mission – to promote and control the Atom – are defined in Article II of the IAEA Statute. 'The Agency shall seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world. It shall ensure, so far as it is able, that assistance provided by it or at its request or under its supervision or control is not used in such a way as to further any military purpose'. In October 1957, the delegates to the First General Conference decided to establish the IAEA's headquarters in Vienna, Austria. Until the opening of the Vienna International Centre in August 1979, the old Grand Hotel next to the Vienna Opera House served as the Agency's temporary headquarters. The IAEA has also two regional offices located in Toronto, Canada (since 1979) and Tokyo, Japan (since 1984), as well as two liaison offices in New York City, United States of America (since 1957) and Geneva, Switzerland (since 1965). The Agency runs laboratories specialized in nuclear technology in Vienna and Seibersdorf, Austria, opened in1961, and, since 1961, in Monaco. List of Member States:- Total

Membership:- 168 (as of February 2016). Eighteen ratifications were required to bring the IAEA's Statute into force on 29 July 1957. In the list below, the year denotes year of membership. The names of States are not necessarily their historical designations:- 1957:- Afghanistan, Albania, Argentina, Australia, Austria, Belarus, Brazil, Bulgaria, Canada, Cuba, Denmark, Dominican Republic, Egypt, El Salvador, Ethiopia, France, Germany, Greece, Guatemala, Haiti, Holy See, Hungary, Iceland, India, Indonesia, Israel, Italy, Japan, Republic of Korea, Monaco, Morocco, Myanmar, Netherlands, New Zealand, Norway, Pakistan, Paraguay, Peru, Poland, Portugal, Romania, Russian Federation, Socialist Federal Rep. of Yugoslavia, South Africa, Spain, Sri Lanka, Sweden, Switzerland, Thailand, Tunisia, Turkey, Ukraine, United Kingdom, United States, Venezuela, Viet Nam. 1958:- Belgium, Ecuador, Finland, Iran, Luxembourg, Mexico, Philippines, Sudan. 1959:- Iraq. 1960:- Chile, Colombia, Ghana, Senegal. 1961:- Lebanon, Mali, Democratic Republic of the Congo. 1962:- Liberia, Saudi Arabia. 1963:- Algeria, Bolivia, Côte d'Ivoire, Libya, Syria, Uruguay. 1964:- Cameroon, Gabon, Kuwait, Nigeria. 1965:- Costa Rica, Cyprus, Jamaica, Kenya, Madagascar. 1966:- Jordan, Panama. 1967:- Sierra Leone, Singapore, Uganda. 1968:- Liechtenstein. 1969:- Malaysia, Niger, Zambia. 1970:- Ireland. 1972:- Bangladesh. 1973:- Mongolia. 1974:- Mauritius. 1976:- Qatar, United Arab Emirates, Tanzania. 1977:- Nicaragua. 1983:- Namibia. 1984:- China. 1986:- Zimbabwe. 1992:- Estonia, Slovenia. 1993:- Armenia, Croatia, Czech Republic, Lithuania, Slovakia. 1994:- the former Yugoslav Republic of Macedonia, Kazakhstan, Marshall Islands, Uzbekistan, Yemen. 1995:- Bosnia and Herzegovina. 1996:- Georgia. 1997:- Latvia, Malta, Moldova. 1998:- Burkina Faso. 1999:- Angola, Benin. 2000:- Tajikistan. 2001:- Azerbaijan, Central African Republic, Serbia. 2002:- Eritrea, Botswana. 2003:- Honduras, Seychelles, Kyrgyzstan. 2004:- Mauritania. 2005:- Chad. 2006:- Belize, Malawi, Montenegro, Mozambique. 2007:- Cabo Verde*. 2008:- Nepal, Palau. 2009:- Bahrain, Burundi, Cambodia, Congo, Lesotho, Oman. 2011:- Lao People's Democratic Republic, Tonga*. 2012:- Dominica, Fiji, Papua New Guinea, Rwanda, Togo, Trinidad and Tobago. 2013:- San Marino, Swaziland. 2014:- The Bahamas, Brunei Darussalam, Comoros*. 2015:- Djibouti, Guyana, Vanuatu, Antigua and Barbuda, Barbados. 2016:- Saint Lucia*, Saint Vincent and the Grenadines*, The Gambia*, Turkmenistan. Notes:- The Democratic People's Republic of Korea (DPRK), which joined the IAEA in 1974, withdrew its membership of the IAEA in 1994. * For the following States, membership has been approved by the IAEA General Conference and will take effect once the State deposits the necessary legal instruments with the IAEA:- Cabo Verde, Comoros, Saint Lucia, Saint Vincent and the Grenadines, The Gambia, Tonga. / Агентство возглавлялось Генеральным Директором Юкиа Амано (Yukiya Amano). Президент США Двайт Дэйвид Айзэнхауэ (Dwight David Eisenhower; 1890–1969) . Институт, возглавляемый Жакём Кусто (Jacques Cousteau). Трилатеральный (Trilateral), от Латинского слова Trilaterus, означающее Трёхсторонний, от Tri, в сложных словах означающее Три, и Latus, родительный падеж Lateris, означающее Сторона. Международное Агентство по Атомной Энергии (сокращённо – МАГАТЭ) было создано в 1957 для развития международного сотрудничества в области мирного использования атомной энергии. В 1985 в состав МАГАТЭ входили 113 государств. Штабквартира расположена в Вене, Австрия. Международное Агентство По Атомной Энергии (МАГАТЭ) – организация для развития международного сотрудничества в области мирного использования атомной энергии. Создана в соответствии с решением Организации Объединённых Наций (ООН) (03 Декабря 1955), с которой связана специальным соглашением; ежегодно представляет Генеральной Ассамблее ООН доклад о своей деятельности. Устав МАГАТЭ был утверждён на Международной Конференции в Нью Йорке в Октябре 1956 и вступил в силу 29 Июля 1957. МАГАТЭ созывает международные конференции и другие совещания для обсуждения вопросов развития атомной энергетики, посылает в различные страны (главным образом развивающиеся) специалистов для помощи в исследовательской работе, оказывает посреднические межгосударственные услуги по передаче ядерного оборудования и материалов, исполняет контрольные функции и, в частности, наблюдает за тем, чтобы помощь, предоставляемая непосредственно агентством или при его содействии, не была использована для 'каких-либо военных целей'; по Договору О Нераспространении Ядерного Оружия на МАГАТЭ возложена проверка выполнения обязательств его участников. В конце 1972 членами МАГАТЭ было 103 государства (в том числе все государства, располагающие ядерным оружием, за исключением Китая). Руководящие органы – созываемая ежегодно Генеральная Конференция всех стран-членов, Совет Управляющих из 25 человек и Секретариат, осуществляющий текущую работу (возглавляется Генеральным Директором).

INTERNATIONAL AUTOMOBILE FEDERATION = МЕЖДУНАРОДНАЯ АВТОМОБИЛЬНАЯ ФЕДЕРАЦИЯ – Since its birth in 1904, the Fédération Internationale de l'Automobile (FIA) has been dedicated to representing the interests of motoring organizations and motor car users throughout the world. It is also the governing body of motor sport worldwide. This combination of road and track gives the FIA a unique responsibility as an indenpendent word body concerned with a wide range of automotive, motoring and mobility issues. The FIA is a non-profit making association which brings together 222 national motoring organizations from 130 countries on five continents. Its member clubs represent over 100 million motorists and their families. This is a powerful mandate which the FIA is proud to defend. On issues such as safety, mobility, the environment and consumer law the FIA actively promotes the interests of motorists at the United Nations, within the European Union and other international bodies. International Automobile Federation (IAF) or, in French, Fédération Internationale de l'Automobile (FIA). Headquarters are in Paris, France and adiministrative offices in Geneve, Switzerland. / Международная Автомобильная Федерация (МАФ) или, как это звучит на Французском языке по месту регистрации ассоциации, Федерасьён Этэрнасьёналь дё л'Ётомобиль (Эф.И.А.; Fédération Internationale de l'Automobile (FIA)). Штабквартира расположена в Париже, Франция, а административные офисы в Женеве, Швейцария.

INTERNATIONAL BANK ACCOUNT NUMBER = МЕЖДУНАРОДНЫЙ НОМЕР БАНКОВСКОГО СЧЁТА – The IBAN facilitates the automation of cross-border payment transaction processing. Each country has its particular national IBAN format. The ISO 13616 standard specifies the structure of an ISO-compliant national IBAN format. ISO has designated SWIFT to act as the registration authority for national IBAN formats. Only a national standards body or a national central bank can request a national IBAN format registration for its country. SWIFT publishes the ISO 13616 IBAN Registry. This registry contains the technical specification of the national IBAN formats of those countries that are compliant with the ISO 13616 standard. The IBAN Registry is updated upon request from the ISO national standards bodies or the national central banks. For the rationalization of cross-border payments transfer the new International Bank Account Number (IBAN) was created by the International Organization for Standardization (ISO) and the European Committee for Banking Standards (ECBS). The International Bank Account Number (IBAN) is an international standard for identifying bank accounts across national borders. It was originally adopted by the European Committee for Banking Standards, and was later adopted as ISO 13616:1997 and now as ISO 13616:2003. The IBAN was developed to facilitate payments within the European Union. Customers, especially individuals and SMEs, are frequently confused by differing national standards for bank account numbers. The IBAN is not yet used for routing, because the IBAN has not been widely adopted outside Europe, among other reasons. The ECBS expects that adoption may take up to ten years, so it remains necessary to use the current ISO 9362 Bank Identifier Code system (BIC or SWIFT code) in conjunction with the BBAN (short for Basic Bank Account Number) or IBAN. At present, the United States does not participate in IBAN. Any US participation in IBAN would likely be tied to the standards of the US Automated Clearing House, since this is the only US banking system that provides a fixed length for bank account numbers (17 digits). The IBAN consists of a ISO 3166-1 alpha-2 country code, followed by two check digits, and up to thirty alphanumeric characters for the domestic bank account number, called the BBAN (Basic Bank Account Number). It is up to each country's national banking community to decide on the length of the BBAN for accounts in that country, but its length must be fixed for any given country. The IBAN must not contain spaces when stored

electronically. When printed on paper, however, the norm is to express it in groups of four characters, the last group being of variable length. The International Bank Account Number (IBAN) is part of an international initiative to standardize account numbers. Together with the BIC Code (separate entry) IBAN serves as the international standard for mapping bank data in cross-border payment business in Europe. The IBAN code is made up of a maximum of 27 alphanumerical characters in Europe; (the German IBAN has 22 characters). Outside of Europe it may have up to 34 digits. The IBAN format, which varies according to national specifications, combines an international identification element (country code and check digit) with a bank code and account number. The expanded version of the Basic Bank Account Number (BBAN), intended for use internationally. The IBAN uniquely identifies an individual account, at a specific financial institution, in a particular country. It is the ISO 13616 international standard for numbering bank accounts. In 2006, the International Organization for Standardization (ISO) designated SWIFT as the Registration Authority for ISO 13616. The IBAN facilitates the communication and processing of cross-border transactions. It allows exchanging account identification details in a machine-readable form. The IBAN structure is defined in ISO 13616-1 and consists of a two-letter ISO 3166-1 country code, followed by two check digits and up to thirty alphanumeric characters for a BBAN which has a fixed length per country and, included within it, a bank identifier with a fixed position and a fixed length per country. The check digits are calculated based on the scheme defined in ISO/IEC 7064 (MOD97-10). See also Basic Bank Account Number. An expanded version of the Basic Bank Account Number (BBAN) used internationally to uniquely identify the account of a customer at a financial institution. IBANs have been introduced to standardise the identification of bank accounts. The complete identifier, original bank code and account number, plus the additional characters will be known as the IBAN. IBAN implementation will facilitate improvements in the quality of information exchanged between parties involved in European cross-border payments and to help reduce errors and delays. The IBAN provides a guard against the accidental transposition of its characters/numbers. Its validation does not guarantee that the bank code or account number is correct. Nor does it guarantee that the account actually exists, or is live. Officially an IBAN can only be issued for an account by the bank that services the account. The account owner is responsible for communicating their IBAN to their trading partner(s). It is unwise to take IBANs from any other source. It is also unwise to generate them from any source other than one provided by the account servicing bank. These other sources may be misinformed and give inaccurate or incorrect IBANs, and thus may cause delays in the payment process. / МНБС в единственном роде идентифицирует индивидуальный счёт в конкретном финансовом учреждении, в конкретной стране. Сообщество по Всемирной Межбанковской Финансовой Дальней Связи (СВМФДС; The Society for Worldwide Interbank Financial Telecommunication (SWIFT)). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT = МЕЖДУНАРОДНЫЙ БАНК РЕКОНСТРУКЦИИ И РАЗВИТИЯ – The International Bank for Reconstruction and Development (IBRD) aims to reduce poverty in middle-income and creditworthy poorer countries by promoting sustainable development through loans, guarantees, risk management products, and analytical and advisory services. Established in 1944 as the original institution of the World Bank Group, IBRD is structured like a cooperative that is owned and operated for the benefit of its 187 member countries. IBRD raises most of its funds on the world's financial markets and has become one of the most established borrowers since issuing its first bond in 1947. The income that IBRD has generated over the years has allowed it to fund development activities and to ensure its financial strength, which enables it to borrow at low cost and offer clients good borrowing terms. At its Annual Meeting in September 2006, the World Bank – with the encouragement of its shareholder governments – committed to make further improvements to the services it provides its members. To meet the increasingly sophisticated demands of middle-income countries, IBRD is overhauling financial and risk management products, broadening the provision of free-standing knowledge services and making it easier for clients to deal with the Bank. The International Bank for Reconstruction and Development (IBRD) was established in 1944 with headquarters in Washington, DC, the United States, to help countries reconstruct their economies after World War II. IBRD now assists developing member countries by lending to government agencies, or by guaranteeing private loans for such projects as agricultural modernization or infrastructural development. Also known as the World Bank. Established in 1944 and more commonly known as the World Bank, the IBRD provides under three main headings:- straqtegy and coordination services, financial services including loans and development assistance to middle and low-income countries with a stated aim of reducing poverty, and knowldge services. Loans generally have a five-year grace period and must be repaid over a period of 15–20 years. In 2008 the IBRD commited a total of USD13.5 billion in loans, in contrast to USD13.6 billon in 2005, destined for a large range of projects. The Bank obtains some of its funds through the sale of bonds on international financial market while most of its income comes from interest on loans made from its own capital. This capital consists of reserves built up over the years as well as money paid in by its 184 member countries. While not a profit maximizing organisation, the IBRD has earned net income every year since 1948. International Bank Of Reconstruction And Development (IBRD) is a component of the United Nation's World Bank Group that was established in 1945 with the original mandate of providing funding towards the post-World War II rebuilding efforts. In the modern era, the IBRD's main objective is to provide loans and other financial services to less fortunate countries in hopes of reducing global poverty. The IBRD raises captial for the loans via the issuance of AAA rated bonds. Around USD10–15 billion worth of bonds are issued on an annual basis. The IBRD has had its AAA credit rating since 1959. The International Bank for Reconstruction and Development (IBRD) is a global development cooperative owned by 189 member countries (on June 2017). As the largest development bank in the world, it supports the World Bank Group's mission by providing loans, guarantees, risk management products, and advisory services to middle-income and creditworthy low-income countries, as well as by coordinating responses to regional and global challenges. Created in 1944 to help Europe rebuild after World War II, IBRD joins with IDA, our fund for the poorest countries, to form the World Bank. They work closely with all institutions of the World Bank Group and the public and private sectors in developing countries to reduce poverty and build shared prosperity. IBRD's Services:- through our partnership with middle-income countries (MICs) and creditworthy poorer countries, IBRD offers innovative financial solutions, including financial products (loans, guarantees, and risk management products) and knowledge and advisory services (including on a reimbursable basis) to governments at the national and subnational levels. IBRD finances investments across all sectors and provides technical support and expertise at each stage of a project. IBRD's resources not only supply borrowing countries with needed financing, but also serve as a vehicle for global knowledge transfer and technical assistance. Advisory services in public debt and asset management help governments, official sector institutions, and development organizations build institutional capacity to protect and expand financial resources. IBRD supports government efforts to strengthen public financial management as well as improve the investment climate, address service delivery bottlenecks, and strengthen policies and institutions. How IBRD Is Financed:- IBRD raises most of its funds in the world's financial markets. This has allowed it to provide more than USD500 billion in loans to alleviate poverty around the world since 1946, with its shareholder governments paying in about USD14 billion in capital. IBRD has maintained a triple-A rating since 1959. This high credit rating allows it to borrow at low cost and offer middle-income developing countries access to capital on favorable terms – helping ensure that development projects go forward in a more sustainable manner, while often complementing or catalyzing private financing. IBRD earns income every year from the return on its equity and from the small margin it makes on lending. This pays for World Bank operating expenses, goes into reserves to strengthen the balance sheet, and provides an annual transfer of funds to IDA, the fund for the poorest countries. / Известен также как Всемирный Банк (The World Bank). Международный Банк Реконструкции и Развития (МБРР) является специализированным учреждением Организации Объединённых Наций (ООН),

созданным в 1945 и начавшим свои операции с 1946. В 1984 членами МБРР являлись 148 государств. Капитал банка, формируемый из взносов государств участников, оценивался в 60 миллиардов Долларов США. Штабквартира расположена в Вашингтоне, Округ Колумбия, США. Международный Банк Реконструкции И Развития (МБРР) – международная финансовая организация, учреждённая в результате Бреттон-Вудской конференции в 1944; первоначально ориентировался на восстановление экономики стран Западной Европы, а сегодня, главным образом, кредитует развивающиеся государства на рыночных условиях под правительственные гарантии; не конкурирует с коммерческими банками и аккумулирует свои ресурсы путём выпуска долгосрочных облигаций; группа МБРР включает также Международную Финансовую Корпорацию, Международную Ассоциацию Развития, Многостороннее Агентство Гарантий по Инвестициям и другие международные финансовые организации. Международный Банк Реконструкции и Развития (МБРР; International Bank for Reconstruction and Development (IBRD)) – специализированное учреждение Организации Объединённых Наций (ООН), международный кредитный институт, созданный одновременно с Международным Валютным Фондом (МВФ) в соответствии с решением Валютно-Финансовой Конференции 44 стран в Бреттон Вудсе (США, 1944). Начал операции в Июне 1946. Имеет форму акционерного общества, участниками которого могут быть только государства-члены МВФ. На середину 1973 в МБРР входило 122 страны. В капитале МБРР страны-члены участвуют пропорционально их доле в капитале МВФ. Основной капитал МБРР на 01 Июля 1947 был определён в 10 миллиардов Долларов США, в середине 1973 он достигал 30.4 миллиардов Долларов США, в том числе оплаченный – 3 миллиарда Долларов США. Бывший Советский Союз в деятельности банка не участвовал. Высший орган – Совет Управляющих. Каждая страна имеет в нём 250 голосов плюс 1 голос на акцию (100 000 Долларов США). Это обеспечивает Соединённым Штатам Америки (США) 25% голосов, Великобритании – 10%, Федеративной Республике Германия (ФРГ) – 5%, Франции – 4%, Канаде, Индии и Японии по 3% общего количества голосов. Исполнительный орган – Директорат – состоит из 20 директоров, в числе которых постоянно назначаемые представители США, Великобритании, ФРГ, Франции, Японии и Индии и избираемые 14 директоров, представляющие остальных участников банка. Президент банка – Робёт Стрэйндьж МэкНэмэра (Robert Strange McNamara; 1916-Июнь-09–2009-Июль-06) (США). Правление МБРР находится в Вашингтоне, Округ Колумбия, США. Официальные цели МБРР:- содействие развитию производительных сил стран-участниц, в первую очередь менее развитых стран, вывозу (или экспорту) в них частного капитала путём гарантирования таких капиталовложений или участия в них. Фактически МБРР превратился в средство содействия вывозу (или экспорту) капиталов империалистических монополий. 65–70% кредитов МБРР предоставляются на финансирование развития инфраструктуры (транспорта, дорог, коммунального хозяйства и другого), вложения в которую создают основу для последующих вложений частных средств в доходные отрасли. Предоставление кредитов экономически слаборазвитым странам МБРР нередко обусловливается проведением ими экономической политики, приносящей выгоды иностранным монополиям. Главные ресурсы для кредитных вложений МБРР получает путём размещения своих облигаций на международных рынках капиталов. Монополиям, приобретающим эти облигации, государствами-членами МБРР гарантируется возвратность средств. Задолженность МБРР по размещённым им займам на середину 1973 составляла 8.9 миллиардов Долларов США. Общая сумма предоставленных банком кредитов – 20.3 миллиардов Долларов США, непогашенная задолженность на середину 1973 – 14.6 миллиардов Долларов США (банк имеет право перепродавать обязательства стран-дебиторов, поэтому разница между суммой предоставленных кредитов и фактической задолженностью представляет собой не только погашенные, но и перепроданные кредиты). Часть средств (в середине 1973 – 1.8 миллиардов Долларов США) МБРР держит в государственных ценных бумагах, преимущественно США. Срок кредитов МБРР от 5 до 25 лет; процентная ставка устанавливается на базе рыночных ставок, по которым МБРР привлекает средства плюс около 1% комиссионных; ставка неоднократно повышалась; с Августа 1970 составляла 7.25% годовых. Основные получатели кредитов МБРР – государственные организации; для предоставления кредитов частным компаниям требуются гарантии государственных организаций. Кредиты МБРР в 1973 распределялись следующим образом:- страны Латинской Америки – 39%, страны Азии и Океании – 25%, страны Европы, Среднего Востока и Северной Африки – 24%, страны Восточной и Западной Африки – 12%. Деятельность МБРР дополняется деятельностью её двух дочерних организаций:- Международной Ассоциации Развития (МАР) и Международной Финансовой Корпорации (МФК). Международный Банк Реконструкции И Развития (МБРР) – организация, созданная в соответствии с Бреттон-Вудским Соглашением 1944 (Bretton Woods Agreement of 1944) с целью оказания содействия финансированию восстановления Европы и Азии после Второй Мировой Войны. Выполнив эту задачу, Всемирный Банк (The World Bank) – под этим названием известен МБРР – обратился к финансированию коммерческих проектов и развитию инфраструктуры, в частности в развивающихся странах. Он не конкурирует с коммерческими банками, однако может оказать содействие в предоставлении займа коммерческим банком. Займы, предоставляемые Всемирным Банком, должны гарантироваться правительством получающей заём страны.

INTERNATIONAL BANKING FACILITY = ОПЕРАЦИОННЫЙ ОФИС ИНОСТРАННОГО БАНКА (или МЕЖДУНАРОДНЫЙ ОПЕРАЦИОННЫЙ ОФИС БАНКА) – International Banking Facility (IBF):- in the United States, specially designated activities of a bank located in the United States that are treated as those of an offshore bank by US regulatory authorities. Dollar deposits in such a facility are considered to be Eurodollars. An International Banking Facility (IBF) is one of four categories of foreign banking in the United States. An IBF is a set of asset and liability accounts that is segregated and limited to financing international trade. In the United States, International Banking Facilities (IBFs) are the facilities which, in general, can accept time deposits from foreign customers free of reserve requirements and interest rate limitations, and can lend to foreigners if the funds are for the conduct of foreign business outside of the United States Net borrowing from these facilities by domestic banking offices is subject to reserve requirements.

INTERNATIONAL BULLION MASTER AGREEMENT = МЕЖДУНАРОДНОЕ ГОЛОВНОЕ СОГЛАШЕНИЕ О СЛИТКАХ – The International Bullion Master Agreement (IBMA), issued by The London Bullion Market Association (LBMA) in 1994. IFEMA International Foreign Exchange Master Agreement. The 1994 International Bullion Master Agreement (IBMA) is an agreement which gives a common set of terms reflecting best market practice for spot and forward bullion transactions and options, providing for the closing out and netting of outstanding bullion transactions between the parties in the event of default by one of them. As such, it is a single-product netting agreement. It is in a form that may be executed between the parties or, if not executed and one party is acting through an office in the United Kingdom, will be presumed to apply if no other bilateral documentation has been signed between the parties. Copies of IBMA may be obtained in print format only from The London Bullion Market Association (LBMA) – this publication is not available electronically. There is a charge if you are not within the LBMA membership. Please send an email if you are interested in obtaining a copy.

INTERNATIONAL BUREAU = МЕЖДУНАРОДНОЕ БЮРО – In the US patent law, International Bureau (IB) is the secretariat of the the World Intellectual Property Organization (WIPO) which, among other functions, centralizes information of various kinds relating to the protection of intellectual property.

INTERNATIONAL BUSINESS CORPORATION = МЕЖДУНАРОДНАЯ ДЕЛОВАЯ КОРПОРАЦИЯ (или МЕЖДУНАРОДНАЯ БИЗНЕС КОРПОРАЦИЯ) – International Business Corporation or International Business Company (IBC):- the term International

Business Corporation or IBC refers to a corporation formed in an offshore financial secrecy jurisdiction which is afforded certain tax advantages and protection as to the disclosure of its beneficial owner. Depending on the offshore financial secrecy jurisdiction, shareholders of the IBC may remain confidential through the use of bearer shares. Just as with US corporations, the same person may act as a shareholder, director, president, agent, or as any other officer within the company. Generally, however, the beneficial owner(s) will appoint resident officers and directors for the IBC. Typically an IBC is authorized to do business anywhere in the world except in its home country where it was incorporated, i.e. an IBC formed in The Bahamas may do business anywhere in the world except The Bahamas. The IBC may purchase real estate, cars, businesses, etc. The beneficial owner may act as an agent of the IBC to purchase assets on its behalf. By this means, assets are held under a corporate name, thereby helping to protect the beneficial owner's privacy. It has been reported that there are over one million IBCs formed in offshore jurisdictions worldwide.

INTERNATIONAL CAPITAL MARKET ASSOCIATION = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ РЫНКА КАПИТАЛОВ – The International Capital Market Association (ICMA) is a unique self regulatory organization and an influential voice for the global capital market. It represents a broad range of capital market interests including global investment banks and smaller regional banks, as well as asset managers, exchanges, central banks, law firms and other professional advisers. ICMA's market conventions and standards have been the pillars of the international debt market for over 40 years. ICMA is the representative body and voice for all capital market constituencies with a European focus. It seeks to unify currently fragmented industry representation, at European level through the European Financial Markets Federation (EFMF) and collaboration through the Global Capital Markets Board (GCMB) at global level. ICMA promotes the development and efficient functioning of the global capital markets through:- (i) development and maintenance of high standards of market practice; (ii) fostering appropriate levels of regulation; (iii) educating market participants and others through training and research; and (iv) facilitating communication and establishing information forums. Development and maintenance of high standards of market practice through:- (i) self regulatory framework, i.e. rulebook; (ii) standardised documentation, master agreements and legal opinions; (iii) collaboration with other associations through the Global Capital Markets Board (GCMB) and the European Financial Markets Federation (EFMF); (iv) co-ordination and support for industry working groups and committees. Fostering appropriate levels of regulation:- (a) advocacy to regulatory and legislative bodies and governments and (b) informing members of legislative and regulatory developments. Provision of educational and research services:- (i) executive training courses; (ii) development of industry-recognised academic qualifications through a network of universities across Europe; and (iii) sponsorship and dissemination of research. Facilitating communication and establishing information forums:- (i) facilitation of communication between members; (ii) gathering and dissemination of information on key market issues to members and the market; (iii) organisation and sponsorship of conferences and seminars; and (iv) informing the wider constituency of media, government and general public about role of capital markets in global economic development. Headquartered in Zurich, Switzerland. The Association was established under the name 'Association of International Bond Dealers' (AIBD) in February 1969 in Zurich, where it is entered in the commercial register. With effect from 1992-January-01, the Association changed its name to 'International Securities Market Association' (ISMA). As a result of the Association's merger with the International Primary Market Association (IPMA), the Association changed its name to 'International Capital Market Association' (ICMA) effective 2005-July-01. 1970s:- AIBD oversees the formation of a series of rules and recommendations governing trading and settlement in the international securities market; establishes a regional structure to reflect the geographic composition of the Association's global membership; creates the AIBD Certificate and the Operations Certificate Programme (OCP). 1980s:- In the UK AIBD is approved as an International Securities Self-Regulating Organisation (ISSRO) and recognised as a Designated Investment Exchange (DIE). AIBD Ltd. opens in London to provide data services to the market, and in 1989 AIBD launches TRAX, the transaction matching and regulatory reporting system. 1990s:- General Certificate Programme (GCP) replaces AIBD certificate. Global Master Repurchase Agreement (GMRA) launched in 1992 and the ISMA Centre established at the University of Reading. AIBD changes its name to International Securities Market Association (ISMA). The Swiss Federal Banking Commission, the predecessor of the Swiss Financial Market Supervisory Authority (FINMA), recognises ISMA as an 'institution similar to an exchange' under the Swiss Federal Act on Stock Exchanges and Securities Trading (SESTA) in 1998. In this capacity and to the extent of its submission under SESTA, ISMA is subject to the Swiss Federal Banking Commission's supervision. 2000 to 2003:- ISMA maintains its ISSRO status under the Financial Services and Markets Act 2000. The International Repo Council is formed under ISMA auspices in 2000; ISMA launches Coredeal, a screen based order-driven exchange recognised by the FSA as an investment exchange in May 2000, and sold to MTS in November 2001. First international regulatory consultant employed in 2002. 2005:- ISMA and the International Primary Market Association (IPMA) create ICMA. The Regulatory Policy team is built up to provide services and expertise for members. 2006 to present:- ICMA adopts a new governance and management structure which clearly identifies the board's supervisory role and the executive committee's responsibility for the Association's management. ICMA develops close working relationships with other associations, pursuing informal co-operation on regulatory policy work, establishes partnerships with local trade associations worldwide and combines activities with the Euro Debt Market Association (AMTE). ICMA extends representation to all capital market constituencies, with the investor-led Asset Management and Investors Council and the Covered Bond Investor Council, and opens associate membership to law firms. A membership categorisation structure is introduced. ICMA creates a new sub-region covering Latin America. ICMA Centre facilities are extended, accommodating an increase of 50% in physical capacity, and ICMA Executive Education is expanded with the launch of the Financial Markets Foundation Course (FMFC). ICMA sells its market services arm, Xtrakter, to Euroclear. The International Capital Markets Association (ICMA) was formed in 2005 by the merger of the International Primary Market Association (IPMA) and the International Securities Market Association (ISMA) entstanden. The ICMA is an organization representing the interests of international investment banks with the aim of maintaining and developing an efficient and cost effective international capital market. As part of its work, it addresses regulatory issues affecting the capital market and supports product innovation or qualification initiatives. / (Xtrakter), Юроклыэ (Euroclear). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). головные соглашения .

INTERNATIONAL CAPITAL MARKETS ADVISORY COMMITTEE = МЕЖДУНАРОДНЫЙ СОВЕЩАТЕЛЬНЫЙ КОМИТЕТ ПО РЫНКАМ КАПИТАЛА (или МЕЖДУНАРОДНЫЙ КОНСУЛЬТАТИВНЫЙ КОМИТЕТ ПО РЫНКАМ КАПИТАЛА) – International Capital Advisory Committee advises on policies to strengthen the position of the US as a world capital center and the New York Stock Exchange (NYSE®) as an international market. The committee's widely respected international finance experts receive and react to the NYSE's prospective international policies and programs, and advise on operating systems and procedures to facilitate nonresidents' trading in US securities. They recommend programs to encourage the listing of foreign companies' securities in the US, and advise the staff on fulfilling the NYSE's obligations as a member of the International Federation of Stock Exchanges. / (НЙФБ® или Эн.Уай.Эс.И.® (NYSE®)).

INTERNATIONAL CARRIAGE = МЕЖДУНАРОДНАЯ ПЕРЕВОЗКА – International Carriage is a carriage whereby the place of departure and any place of landing are situated in more than one country (aircargo). / В перевозках авиационных грузов, перевозка, в которой место вылета и любое место прилёта расположены более чем в одной стране.

INTERNATIONAL CENTRAL SECURITIES DEPOSITORY = МЕЖДУНАРОДНЫЙ ЦЕНТРАЛЬНЫЙ ДЕПОЗИТАРИЙ ЦЕННЫХ БУМАГ – The International Central Securities Depository (ICSD) is a securities settlement system which clears and settles trades on international and certain local markets, usually through a network of direct or indirect links (via local banks) to local central securities depositories (CSDs). Originally the work of ICSDs was limited to eurobond clearing and settlement, for which there was no supporting market infrastructure at the time. In Europe there are 2 ICSDs:- Clearstream Banking Luxembourg (CBL) and Euroclear Bank in Brussels, Belgium. The International Central Securities Depository (ICSD) is a central securities depository that settles trades in international and domestic securities, usually through direct or indirect (through local agents) links to local central securities depositories. Customers include commercial and central banks, custodians, and broker/dealers. / Юроклыэ Банк (Euroclear Bank).

INTERNATIONAL CENTRE FOR SETTLEMENT OF INVESTMENT DISPUTES = МЕЖДУНАРОДНЫЙ ЦЕНТР ПО РАЗРЕШЕНИЮ ИНВЕСТИЦИОННЫХ СПОРОВ – The International Centre for Settlement of Investment Disputes (ICSID) is a separate organization of the World Bank which was established in 1966. The ICSID encourages greater flows of investment capital by providing facilities for the conciliation and arbitration of disputes between governments and foreign investors. The ICSID also conducts and publishes research in foreign-investment law. Headquartered in Washington, DC, the United States. ICSID is an autonomous international institution established under the Convention on the Settlement of Investment Disputes between States and Nationals of Other States (the ICSID or the Washington Convention) with over one hundred and forty member States. The Convention sets forth ICSID's mandate, organization and core functions. The primary purpose of ICSID is to provide facilities for conciliation and arbitration of international investment disputes. The ICSID Convention is a multilateral treaty formulated by the Executive Directors of the International Bank for Reconstruction and Development (the World Bank). It was opened for signature on 1965-March-18 and entered into force on 1966-October-14. The Convention sought to remove major impediments to the free international flows of private investment posed by non-commercial risks and the absence of specialized international methods for investment dispute settlement. ICSID was created by the Convention as an impartial international forum providing facilities for the resolution of legal disputes between eligible parties, through conciliation or arbitration procedures. Recourse to the ICSID facilities is always subject to the parties' consent. As evidenced by its large membership, considerable caseload, and by the numerous references to its arbitration facilities in investment treaties and laws, ICSID plays an important role in the field of international investment and economic development. Today, ICSID is considered to be the leading international arbitration institution devoted to investor-State dispute settlement.

INTERNATIONAL CHAMBER OF COMMERCE™ = МЕЖДУНАРОДНАЯ ТОРГОВАЯ ПАЛАТА™ – International Chamber of Commerce™ (ICC™) – The World Business Organization™ is the voice of world business championing the global economy as a force for economic growth, job creation and prosperity. Because national economies are now so closely interwoven, government decisions have far stronger international repercussions than in the past. ICC™ – the world's only truly global business organization responds by being more assertive in expressing business views. ICC™ activities cover a broad spectrum, from arbitration and dispute resolution to making the case for open trade and the market economy system, business self-regulation, fighting corruption or combating commercial crime. ICC™ has direct access to national governments all over the world through its national committees. The organization's Paris-based international secretariat feeds business views into intergovernmental organizations on issues that directly affect business operations. Setting rules and standards:- (i) arbitration under the rules of the ICC™ International Court of Arbitration is on the increase. Since 1999, the Court has received new cases at a rate of more than 500 a year. (ii) ICC's Uniform Customs and Practice for Documentary Credits (UCP 600) are the rules that banks apply to finance billions of Dollars worth of world trade every year. (iii) ICC™ Incoterms® are standard international trade definitions used every day in countless thousands of contracts. ICC™ model contracts make life easier for small companies that cannot afford big legal departments. (iv) ICC™ is a pioneer in business self-regulation of e-commerce. ICC™ codes on advertising and marketing are frequently reflected in national legislation and the codes of professional associations. Promoting growth and prosperity:- (i) ICC™ supports government efforts to make a success of the Doha trade round. ICC™ provides world business recommendations to the World Trade Organization. (ii) ICC™ speaks for world business when governments take up such issues as intellectual property rights, transport policy, trade law or the environment. (iii) Signed articles by ICC™ leaders in major newspapers and radio and TV interviews reinforce the ICC™ stance on trade, investment and other business topics. (iv) Every year, the ICC™ Presidency meets with the leader of the G8 host country to provide business input to the summit. (v) ICC™ is the main business partner of the United Nations and its agencies. Spreading business expertise:- (i) At UN summits on sustainable development, financing for development and the information society, ICC™ spearheads the business contribution. (ii) Together with the United Nations Conference on Trade and Development (UNCTAD), ICC™ helps some of the world's poorest countries to attract foreign direct investment. (iii) In partnership with UNCTAD, ICC™ has set up an Investment Advisory Council for the least-developed countries. (iv) ICC™ mobilizes business support for the New Partnership for Africa's Development. At ICC™ World Congresses every two years, business executives tackle the most urgent international economic issues. (v) The World Chambers Congress, also biennial, provides a global forum for chambers of commerce. (vi) Regular ICC™ regional con-ferences focus on the concerns of business in Africa, Asia, the Arab World and Latin America. Advocate for international business:- ICC™ speaks for world business whenever governments make decisions that crucially affect corporate strategies and the bottom line. ICC's advocacy has never been more relevant to the interests of thousands of member companies and business associations in every part of the world. Equally vital is ICC's role in forging internationally agreed rules and standards that companies adopt voluntarily and can be incorporated in binding contracts. ICC™ provides business input to the United Nations, the World Trade Organization (WTO), and many other intergovernmental bodies, both international and regional. International standards and practices organization. The International Chamber of Commerce™ was founded in 1919 with an overriding aim that remains unchanged: to serve world business by promoting trade and investment, open markets for goods and services, and the free flow of capital. Much of ICC's initial impetus came from its first president, Etienne Clémentel, a former French minister of commerce. Under his influence, the organization's international secretariat was established in Paris and he was instrumental in creating the ICC™ International Court of Arbitration in 1923. ICC™ has evolved beyond recognition since those early post-war days when business leaders from the allied nations met for the first time in Atlantic City. The original nucleus, representing the private sectors of Belgium, Britain, France, Italy and the United States, has expanded to become a world business organization with thousands of member companies and associations in around 120 countries. Members include many of the world's most influential companies and represent every major industrial and service sector. Traditionally, ICC™ has acted on behalf of business in making representations to governments and intergovernmental organizations. Three prominent ICC™ members served on the Dawes Commission which forged the international treaty on war reparations in 1924, seen as a breakthrough in international relations at the time. A year after the creation of the United Nations in San Francisco in 1945, ICC™ was granted the highest level consultative status with the UN and its specialized agencies. Ever since, it has ensured that the international business view receives due weight within the UN system and before intergovernmental bodies and meetings such as the G20 and G8 where decisions affecting the conduct of business are made. ICC's reach – and the complexity of its work – have kept pace with the globalization of business and technology. In the 1920s ICC™ focused on reparations and war debts. A decade later, it struggled vainly through the years of depression to hold back the tide of protectionism and economic nationalism. After war came in 1939, ICC™ assured continuity by transferring its operations to neutral Sweden. In the post-war years, ICC™ remained a diligent

defender of the open multilateral trading system. As membership grew to include more and more countries of the developing world, the organization stepped up demands for the opening of world markets to the products of developing countries. ICC™ continues to argue that trade is better than aid. In the 1980s and the early 1990s, ICC™ resisted the resurgence of protectionism in new guises such as reciprocal trading arrangements, voluntary export restraints and curbs introduced under the euphemism of 'managed trade'. After the disintegration of communism in eastern Europe and the former Soviet Union, ICC™ faced fresh challenges as the free market system won wider acceptance than ever before, and countries that had hitherto relied on state intervention switched to privatization and economic liberalization. As the world enters the XXI century, ICC™ is building a stronger presence in Asia, Africa, Latin America, the Middle East, and the emerging economies of eastern and central Europe. Today, 13 ICC™ commissions of experts from the private sector cover every specialized field of concern to international business. Subjects range from banking techniques to financial services and taxation, from competition law to intellectual property rights, telecommunications and information technology, from air and maritime transport to international investment regimes and trade policy. Self-regulation is a common thread running through the work of the commissions. The conviction that business operates most effectively with a minimum of government intervention inspired ICC's voluntary codes. Marketing codes cover sponsoring, advertising practice, sales promotion, marketing and social research, direct sales practice, and marketing on the Internet. Launched in 1991, ICC's Business Charter for Sustainable Development provides 16 principles for good environmental conduct that have been endorsed by more than 2 300 companies and business associations. The first Uniform Customs and Practice for Documentary Credits came out in 1933 and the latest version, UCP 600, came into effect in January 1994. These rules are used by banks throughout the world. A supplement to UCP 600, called the eUCP, was added in 2002 to deal with the presentation of all electronic or part electronic documents. In 1936, the first nine Incoterms® were published, providing standard definitions of universally employed terms like Ex Quay, CIF and FOB, and whenever necessary they are revised. Incoterms® 2010 came into force on 2011-January-01. In 1950 the International Bureau of Chambers of Commerce (IBCC) was created. It quickly became a focal point for cooperation between chambers of commerce in developing and industrial countries, and took on added importance as chambers of commerce of transition economies responded to the stimulus of the market economy. In 2001, on the occasion of the 2nd World Chambers Congress in Korea, IBCC was renamed the World Chambers Federation (WCF), clarifying WCF as the world business organization's department for chamber of commerce affairs. WCF also administers the ATA Carnet system for temporary duty-free imports, a service delivered by chambers of commerce, which started in 1958 and is now operating in over 68 countries. Another ICC™ service, the Institute for World Business Law was created in 1979 to study legal issues relating to international business. At the Cannes film festival every year, the Institute holds a conference on audiovisual law. In the early 1980s, ICC set up three London-based services to combat commercial crime:- the International Maritime Bureau, dealing with all types of maritime crime; the Counterfeiting Intelligence Bureau; and the Financial Investigation Bureau. A cybercrime unit was added in 1998. An umbrella organization, ICC™ Commercial Crime Services, coordinates the activities of the specialized anti-crime services. All these activities fulfil the pledge made in a key article of the ICC's constitution:- 'to assure effective and consistent action in the economic and legal fields in order to contribute to the harmonious growth and the freedom of international commerce'. Private, politically independent organization formed to improve trade and business relations between nations. Founded in 1920 in Paris, France. Founded in 1920, it is a world federation of business organizations, business firms, and business people. It frequently acts as the voice of the business community in the international field and presents the business point of view to governments and to world public opinion. The organization was granted the highest consultative status with the Economic and Social Council of the United Nations, that of category A. In addition to publishing a quarterly called World Trade, the International Chamber of Commerce™ (ICC™) operates a court of arbitration that provides conciliation and arbitration facilities for the settlement of commercial disputes for members of disparate nationalities. In the majority of cases the awards of this court are accepted and executed. Fifty-eight national councils with the goal of promoting free trade and private enterprise and the represent business interests at national and international levels. In 1919, a handful of entrepreneurs decided to create an organization that would represent business everywhere. The group of industrialists, financiers and traders were determined to bring economic prosperity to a world that was still reeling from the devastation of World War I. They founded the International Chamber of Commerce and called themselves 'the merchants of peace'. The world had few working international structures in the immediate aftermath of the first of the XX century's global conflicts. There was no world system of rules to govern trade, investment, finance or commercial relations. That the private sector should start filling the gap without waiting for governments was ground-breaking. It was an idea that took hold. Although they did not know it at the time, the pioneers were creating an organization that would become essential to the global economy. Over the years, ICC™ has taken a central role in international trade and business. It forges international rules, mechanisms and standards that are used every day throughout a vastly more complex world than that of 1919. The original nucleus of businessmen from five countries has expanded to become a world business organization with hundreds of thousands of member companies in more than 120 countries. Members include many of the world's biggest multinationals as well as small- and medium-sized companies. Much of ICC's early impetus came from its first president, Etienne Clémentel, a former French minister of commerce. Under his leadership, the new organization's international secretariat was established in Paris. Mr Clémentel was also instrumental in creating the ICC™ International Court of Arbitration in 1923. From the very beginning, ICC™ spoke out on behalf of business in making representations to governments and intergovernmental organizations. Three ICC™ members served on the Dawes Commission, which drew up the international treaty on war reparations in 1924. In the 1920s, ICC™ focused on reparations and war debts. Then the disastrous Smoot-Hawley tariff in the United States set the scene for the economic nationalism of the 1930s. ICC™ struggled through those years of depression to hold back the tide of protectionism as another world war loomed. ICC™ issued the first version of its Uniform Customs and Practice for Documentary Credits, still used by banks all over the world to finance trade, in 1933. Incoterms® the standard trade definitions that are familiar to every trader came in 1936, updated whenever necessary since then. And, the following year, ICC™ introduced its first International Code of Advertising Practice. ICC™ was awarded the highest level consultative status with the United Nations (UN) in 1946, and since then has represented the private sector by engaging in a broad range of activities with the UN and its specialized agencies. ICC™ has remained a diligent advocate of the open multilateral trading system through successive trade rounds, including the Doha Round. As ICC™ membership included more and more countries in the developing world, the organization stepped up demands for the opening of world markets to their products, especially agriculture. To meet the needs of its members, ICC™ has expanded its activities over the years. ICC™ Commercial Crime Services, based in London, was founded in the 1980s to address all aspects of commercial crime. The World Chambers Federation provides a hub for chambers of commerce throughout the world. Today, 13 ICC™ commissions comprising experts from the private sector cover specialized fields of immediate concern to international business. Subjects range from banking techniques to taxation, from competition law to intellectual property rights, telecommunications and information technology, from transport, environment and energy to international investment and trade policy. All these activities fulfil the pledge in ICC's constitution 'to further the development of an open world economy with the firm conviction that international commercial exchanges are conducive to both greater global prosperity and peace among nations'. / ковка или штамповка (forging). INTERNATIONAL CHAMBER OF SHIPPING = МЕЖДУНАРОДНАЯ ПАЛАТА ПО СУДОХОДСТВУ – The International Chamber of Shipping (ICS) is the world's principal shipping organisation, representing around 75% of the world's merchant tonnage; through membership of national shipowners' associations, concerned with all regulatory, operational and legal issues. A major ICS activity is at the United Nations agency with responsibility for the safety of life at sea and the protection of the marine environment – The International Maritime Organisation (IMO). ICS is unique in that it unlike other international shipping trade associations it represents the global interests of all the different trades in the industry:- bulk carrier operators, tanker operators, passenger ship operators and container liner trades, including shipowners and third party ship managers. ICS has consultative status with a number of intergovernmental bodies which have an impact on shipping, these include: the World Customs Organisation, the International Telecommunications Union, the United Nations Conference on Trade and Development and the World Meteorological Organization. Another key strength of ICS is its close relationships with industry organisations representing different maritime interests such as shipping, ports, pilotage, the oil industry, insurance and classification societies responsible for the surveying of ships. The International Chamber of Shipping (ICS) is a voluntary organization of US national shipowner's associations with the objective of promoting member interests, primarily in the technical and legal fields of shipping operations. Headquartered in London, the United Kingdom. The International Chamber of Shipping (ICS) is the principal international trade association for the shipping industry, representing all sectors and trades. ICS membership comprises national shipowners' associations whose member shipping companies operate two thirds of the world's merchant tonnage. Established in 1921, ICS is concerned with all technical, legal and policy issues that may have an impact on international shipping. ICS is actively engaged with the following international bodies:- International Maritime Organization (IMO), United Nations Division of Ocean Affairs and the Law of the Sea (DOALOS), United Nations Conference on International Trade Law (UNCITRAL), Organization for Economic Co-operation and Development (OECD), World Customs Organization (WCO), World Trade Organization (WTO). It also enjoys a close relationship with national maritime authorities throughout the world and with relevant departments and agencies of the European Union. The aim of ICS is to promote the interests of shipowners and operators in all matters of shipping policy and ship operations. To that end ICS will:- (i) encourage high standards of operation and the provision of high quality and efficient shipping services; (ii) strive for a regulatory environment which supports safe shipping operations, protection of the environment and adherence to internationally adopted standards and procedures; (iii) promote properly considered international regulation of shipping and oppose unilateral and regional action by governments; (iv) press for recognition of the commercial realities of shipping and the need for quality to be rewarded by a proper commercial return; (v) remain committed to the promotion of industry guidance on best operating practices; (vi) co-operate with other organisations, both intergovernmental and nongovernmental, in the pursuit of these objectives; and (vii) anticipate whenever possible and respond whenever appropriate to policies and actions which conflict with the above. / коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INTERNATIONAL CIVIL AVIATION ORGANIZATION = МЕЖДУНАРОДНАЯ ОРГАНИЗАЦИЯ ГРАЖДАНСКОЙ АВИАЦИИ – The consequence of the studies initiated by the US and subsequent consultations between the Major Allies was that the US government extended an invitation to 55 States or authorities to attend, in November 1944, an International Civil Aviation Conference in Chicago. Fifty-four States attended this Conference end of which a Convention on International Civil Aviation was signed by 52 States set up the permanent International Civil Aviation Organization (ICAO) as a means to secure international co-operation an highest possible degree of uniformity in regulations and standards, procedures and organisation regarding civil aviation matters. At the same time the International Services Transit Agreement and the International Air Transport Agreement were signed. The most important work accomplished by the Chicago Conference was in the technical field because the Conference laid the foundation for a set of rules and regulations regarding air navigation as a whole which brought safety in flying a great step forward and paved the way for the application of a common air navigation system throughout the world. Because of the inevitable delays in the ratification of the Convention, the Conference had signed an Interim Agreement, which foresaw the creation of a Provisional International Organization of a technical and advisory nature with the purpose of collaboration in the field of international civil aviation (PICAO – North Atlantic Route Service Conference; Dublin, Ireland, March 1946). This Organization was in operation from August 1945 to April 1947 when the permanent ICAO came into being. Its seat was in Montreal, Canada and in 1947 the change from PICAO to ICAO was little more than a formality. However, it also brought about the end of ICAN because, now that ICAO was firmly established, the ICAN member States agreed to dissolve ICAN by naming ICAO specifically as its successor Organization. From the very assumption of activities of PICAO/ICAO, it was realised that the work of the Secretariat, especially in the technical field, would have to cover two major activities:- (i) those which covered generally applicable rules and regulations concerning training and licensing of aeronautical personnel both in the air and on the ground, communication systems and procedures, rules for the air and air traffic control systems and practices, airworthiness requirements for aircraft engaged in international air navigation as well as their registration and identification, aeronautical meteorology and maps and charts. For obvious reasons, these aspects required uniformity on a world-wide scale if truly international air navigation was to become a possibility. Activities in these fields had therefore to be handled by a central agency, i.e. ICAO headquarters, if local deviations or separate developments were to be avoided; and (ii) those concerning the practical application of air navigation services and facilities by States and their co-ordinated implementation in specific areas where operating conditions and other relevant parameters were comparable. To meet the latter objective it was agreed to sub-divide the surface of the earth into a number of 'regions' within which distinct and specific air navigation problems of a similar nature existed. A typical example of this process is illustrated by a comparison of the so-called 'North Atlantic Region (NAT)', where the primary problems concern long-range overseas navigation, with the 'European-Mediterranean region (EUR)' where the co-ordination of trans-European operations with domestic and short-range international traffic constitutes the major problem. Once the regions created, it was necessary to provide bodies which were able to assist States in the resolution of their specific 'regional' problems and it was agreed that this could best be achieved by the creation of a number of Regional Offices which were to be located either in the Region they served or, if more than one Region was to be served by such an Office, as close as possible to the Region concerned. As a consequence of the above ICAO adopted the concept of Regions and Regional Offices on the understanding that any regional activities could only be undertaken provided they did not conflict with the world-wide activities of the Organization. However, it was also recognised that such activities could vary from Region to Region taking into account the general economic, technical or social environment of the Region concerned. The International Civil Aviation Organization (ICAO) is a United Nations specialized agency consisting of 164 member states with the goal of promoting international cooperation in civil aviation. Headquartered in Montréal, Quebec, Canada. Convention on International Civil Aviation (also known as Chicago Convention), was signed at Chicago on 7 December 1944 by 52 States. Pending ratification of the Convention by 26 States, the Provisional International Civil Aviation Organization (PICAO) was established. It functioned from 1945-June-06 until 1947-April-04. By 1947-March-05 the 26th ratification was received. ICAO came into being on 1947-April-04. In October of the same year, ICAO became a specialized agency of the United Nations linked to Economic and Social Council (ECOSOC). The Convention on International Civil Aviation set forth the purpose of ICAO:- 'Whereas the future development of international civil aviation can greatly

help to create and preserve friendship and understanding among the nations and peoples of the world, yet its abuse can become a threat to the general security; and Whereas it is desirable to avoid friction and to promote that co-operation between nations and peoples upon which the peace of the world depends; Therefore, the undersigned governments having agreed on certain principles and arrangements in order that international civil aviation may be developed in a safe and orderly manner and that international air transport services may be established on the basis of equality of opportunity and operated soundly and economically; Have accordingly concluded this Convention to that end'. / домогательство (abuse). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Международная Организация Гражданской Авиации (МОГА) является специализированным агентством Организации Объединённых Наций (ООН), состоящим из 164 стран участниц, и созданным в 1944 с целью продвижения международного сотрудничества в сфере гражданской авиации. Организация начала действовать с 1947. Штабквартира организации расположена в Монреале, Канада.

INTERNATIONAL CLASS = МЕЖДУНАРОДНЫЙ КЛАСС – In the US patent law, International Class (IC):- class(es) assigned to a mark under the International Classification of Goods and Services (Nice Agreement); used in the United States since 01 September 1973.

INTERNATIONAL COFFEE AGREEMENT = МЕЖДУНАРОДНОЕ СОГЛАШЕНИЕ О КОФЕ – The International Coffee Agreement (ICA) is a United Nations agreement establishing the International Coffee Organization. Initially created in 1963 (and extended or renegotiated several times since), this agreement was designed to help stablize Coffee prices. It was created as a response to a crash in the the Coffee market in the late 1950s which lasted into the early 1960s. Since the original agreement, there have been five subsequent agreements, ratified in 1968, 1976, 1983, 1994, and 2001. Prior to the original agreement, the global Coffee market was prone to wild swings in price, with overproduction often drastically affecting the income of major exporters of Coffee. In previous years, organizations such as the National Coffee Association had opposed such agreements on the grounds that they infringed upon free trade (and likely resulted in a higher prices for consumers). However, against the backdrop of the Cold War, such organizations came to support the idea of quotas to prop up the price of Coffee so as to prevent the worsening of poverty conditions which could have the affect of opening the door to communist influence in developing countries. There have been several International Coffee Agreements since its inception, each one requiring negotiations to address contemporary issues. he original Internation Coffee Agreement established quotas which limited world Coffee exports to major consuming countries to a total of 45.6 million bags annually, with Brazil being allowed a plurality of the quota (18 million bags). While it was drafted on 1962-September-28, this agreement was not actually ratified until 1963. The agreement dictated that exported Coffee include country of origin certification to guarantee the orgin of the Coffee. This initial version of the agreement is considered to be largely symbolic as all provisions were voluntary, and the producing countries were not limited in their exports to countries with low consumption rates. Additionally, with 90 days notice, any participating country could withdraw from the agreement. Even with the weakness of enforcement in this version of the agreement, the United States of America, one of the major consumers of Coffee in the world, initially balked at ratifying the agreement. Against concerns of high Coffee prices, the United States did not officially approve of this agreement until February of 1965, but only after export quotas were increased by another 2.3 million bags. The International Coffee Agreement is an agreement presently signed by 67 countries, representing all of the world's major exporters and importers of Coffee. The United States is a party to the agreement. / Международное Соглашение о Кофе является соглашением, в настоящее время подписанным 67 странами, представляющими всех основных мировых экспортёров и импортёров Кофе. Соединённые Штаты Америки являются одной из сторон данного соглашения. 2015-Март-04:- Совет Федерации России ратифицировал закон о присоединении России к Международному Соглашению по Кофе; оно было принято 28 Сентября 2007 в Лондоне резолюцией Международного Совета по Кофе (International Coffee Council) и окончательно вступило в силу 02 Февраля 2011. Основными целями соглашения являются содействие развитию международного сотрудничества в области производства, торговли и переработки Кофе, обеспечение возможности для межправительственных консультаций и переговоров, направленных на достижение баланса и долгосрочного равновесия между спросом и предложением на рынке Кофе. Присоединяясь к соглашению, Россия получает возможность вносить в повестку дня мирового кофейного сообщества вопросы, имеющие важное экономическое значение для предприятий страны. На сегодняшний день потребление Кофе в России выросло по сравнению с 1998 более чем на 50% и достигло 250 000 тонн в год. Объём рынка в денежном эквиваленте приблизился к 3 миллиардам Долларов США. Процент Россиян, регулярно потребляющих Кофе, остаётся стабильно высоким на протяжении последних лет (76–77% в 2009–13), говорится в пояснительной записке. Приоритетные вопросы для России – модернизация базовых принципов поставки кофейного сырья для Российской кофейной индустрии на фоне высокой лихорадочности цен на бирже, сокращение количества посредников в цепи поставок кофейного сырья из стран-производителей на Российский рынок, что влечёт за собой уменьшение стоимости продукта. Экономический эффект от решения такого рода вопросов оценивается в несколько миллионов Долларов США. Закон поступает на подпись Президенту России.

INTERNATIONAL COFFEE ORGANIZATION = МЕЖДУНАРОДНАЯ ОРГАНИЗАЦИЯ ПО КОФЕ – The International Coffee Organization (ICO):- Coffee is a tree crop which became an important commodity in international trade during the XIX century. Since then it has suffered from long periods of over supply and low prices followed by relatively brief periods of short supply and high prices. In more recent times, during the period of severe economic depression in the 1930s and during the second World War from 1939 to 1945, supply increased, demand fell and prices were low. In the immediate post-war years, however, demand increased and supplies were inadequate to satisfy this rising demand. Between 1950 and 1953 stocks reached levels below the minimum needs for normal trading purposes, a situation which was exacerbated by the outbreak of the Korean War and a serious drought in Brazil, which was followed by a frost. Prices rose to unprecedented heights in 1953. This gave rise to a substantial increase in planting throughout the world and over-production followed. Stocks increased and, in the second half of the 1950s and early 1960s, prices fell drastically. This led to an intergovernmental initiative to attempt to stabilize the market and to halt the fall in prices which had had serious economic and political consequences for a large number of Coffee producing countries in Latin America and Africa. The International Coffee Organization was established in 1963 when the first International Coffee Agreement (ICA) entered into force in 1962 for a period of five years, and it has continued to operate under successive Agreements negotiated since then. These include the ICA 1968 (and its two extensions), the ICA 1976 (with one extension), 1983 (and its four extensions), the 1994 Agreement (with one extension) and the 2001 Agreement (with three extensions). The text of the latest Agreement, the ICA 2007, was adopted by the Council on 28 September 2007. It will enter into force once signatory Governments with two-thirds of the votes of exporting and importing Members, respectively, have deposited their instruments of ratification, acceptance or approval. Headquartered in London, the United Kingdom. The International Coffee Organization (ICO) is the main intergovernmental organization for Coffee, bringing together exporting and importing Governments to tackle the challenges facing the world Coffee sector through international cooperation. Its Member Governments represent 97% of world Coffee production and over 80% of world consumption. The ICO's mission is to strengthen the global Coffee sector and promote its sustainable expansion in a market-based environment for the betterment of all participants in the Coffee sector. It makes a practical contribution to the development of a sustainable world Coffee sector and to reducing poverty in developing countries by:- enabling governments and the private sector to exchange views on Coffee matters, market conditions and

trends, and coordinate policies at high-level meetings; developing and seeking finance for projects that benefit the world Coffee economy; promoting Coffee quality through a Coffee Quality-Improvement Programme; promoting market transparency by providing a wide range of statistics on the world coffee sector; developing Coffee consumption and markets for Coffee through innovative market development activities; encouraging the development of strategies to enhance the capacity of local communities and small-scale farmers; promoting training and information programmes to assist the transfer of technology relevant to Coffee; facilitating information on financial tools and services to assist producers; and providing objective and comprehensive economic, technical and scientific information on the world Coffee sector. The ICO was set up in London in 1963 under the auspices of the United Nations because of the great economic importance of Coffee. It administers the International Coffee Agreement (ICA), an important instrument for development cooperation. The latest Agreement, the ICA 2007, entered into force on 2011-February-02. Importance of Coffee:- Coffee is one of the world's most widely traded commodities, and is produced in over 60 countries. Many of these countries are heavily dependent on coffee, which can account for over 50% of their total export earnings. It provides a livelihood for over 125 million people around the world and is particularly important for smallholder farmers who produce most of the world's Coffee. Among consumers Coffee is a universally popular drink, with over 600 billion cups consumed each year.

INTERNATIONAL COMMERCIAL EXCHANGE = МЕЖДУНАРОДНАЯ КОММЕРЧЕСКАЯ БИРЖА – International Commercial Exchange was founded in 1970, and located in New York, State of New York (NY), the United States. It was the first exchange to trade currency futures, beginning on April 23, 1970, two years before the CME. It ceased operations in 1973 and former International Commercial Exchange traders were granted certain trading privileges on NYMEX. The International Commercial Exchange became a Designated Contract Market (DCM) in April of 1971. It was founded in 1970 by members of the New York Produce Exchange, and the two exchanges eventually merged. The International Commercial Exchange was the first exchange to trade currency futures. They launched on April 23, 1970 thanks to the work of then exchange non-executive Chairman Murray Borowitz, two years before the Chicago Mercantile Exchange (CME) listed its currency products. With the Bretton Woods agreement still in effect, the exchange's attempt at listing currency futures may have been premature, however. The International Commercial Exchange ceased operations in 1973 and former International Commercial Exchange traders were granted certain trading privileges on the New York Mercantile Exchange (NYMEX). The exchange designation was never formally vacated but the exchange was not active on April 21, 1975, the effective date of the CFTC Act of 1974 when the CFTC commenced operations. / НАЙМЭКС (NYMEX). Председатель Мори Боровыц (Murray Borowitz).

INTERNATIONAL COMMITTEE OF THE RED CROSS = МЕЖДУНАРОДНЫЙ КОМИТЕТ КРАСНОГО КРЕСТА – The International Committee of the Red Cross (ICRC) is an impartial, neutral and independent organization whose exclusively humanitarian mission is to protect the lives and dignity of victims of armed conflict and other situations of violence and to provide them with assistance. The ICRC also endeavours to prevent suffering by promoting and strengthening humanitarian law and universal humanitarian principles. Established in 1863, the ICRC is at the origin of the Geneva Conventions and the International Red Cross and Red Crescent Movement. It directs and coordinates the international activities conducted by the Movement in armed conflicts and other situations of violence. The International Committee of the Red Cross (ICRC) is made up of 25 individuals (all Swiss nationals) with the aim of providing humanitarian aid in wartime. The ICRC, established in 1863, works worldwide to provide humanitarian help for people affected by conflict and armed violence and to promote the laws that protect victims of war. An independent and neutral organization, its mandate stems essentially from the Geneva Conventions of 1949. Based in Geneva, Switzerland, it employs some 12 000 people in 80 countries; it is financed mainly by voluntary donations from governments and from national Red Cross and Red Crescent societies. The work of the ICRC is based on the Geneva Conventions of 1949, their Additional Protocols, its Statutes – and those of the International Red Cross and Red Crescent Movement – and the resolutions of the International Conferences of the Red Cross and Red Crescent. The ICRC is an independent, neutral organization ensuring humanitarian protection and assistance for victims of war and armed violence. It takes action in response to emergencies and at the same time promotes respect for international humanitarian law and its implementation in national law. Since its creation in 1863, the ICRC's sole objective has been to ensure protection and assistance for victims of armed conflict and strife. It does so through its direct action around the world, as well as by encouraging the development of international humanitarian law (IHL) and promoting respect for it by governments and all weapon bearers. Its story is about the development of humanitarian action, the Geneva Conventions and the Red Cross and Red Crescent Movemen. Headquartered in Geneva, Switzerland. Up until the middle of the XIX century, there were no organized and well-established army nursing systems for casualties and no safe and protected institutions to accommodate and treat those who were wounded on the battlefield. In June 1859, the Swiss businessman Henry Dunant travelled to Italy to meet French emperor Napoléon III with the intention of discussing difficulties in conducting business in Algeria, at that time occupied by France. When he arrived in the small town of Solferino on the evening of June 24, he witnessed the Battle of Solferino, an engagement in the Austro-Sardinian War. In a single day, about 40 000 soldiers on both sides died or were left wounded on the field. Henry Dunant was shocked by the terrible aftermath of the battle, the suffering of the wounded soldiers, and the near-total lack of medical attendance and basic care. He completely abandoned the original intent of his trip and for several days he devoted himself to helping with the treatment and care for the wounded. He succeeded in organizing an overwhelming level of relief assistance by motivating the local population to aid without discrimination. Back in his home in Geneva, he decided to write a book entitled A Memory of Solferino which he published with his own money in 1862. He sent copies of the book to leading political and military figures throughout Europe. In addition to penning a vivid description of his experiences in Solferino in 1859, he explicitly advocated the formation of national voluntary relief organizations to help nurse wounded soldiers in the case of war. In addition, he called for the development of international treaties to guarantee the neutrality and protection of those wounded on the battlefield as well as medics and field hospitals. On 1863-February-09 in Geneva, Henry Dunant founded the 'Committee of the Five' (together with four other leading figures from well-known Geneva families) as an investigatory commission of the Geneva Society for Public Welfare. Their aim was to examine the feasibility of Dunant's ideas and to organize an international conference about their possible implementation. The members of this committee, aside from Dunant himself, were Gustave Moynier, lawyer and chairman of the Geneva Society for Public Welfare; physician Louis Appia, who had significant experience working as a field surgeon; Appia's friend and colleague Théodore Maunoir, from the Geneva Hygiene and Health Commission; and Guillaume-Henri Dufour, a Swiss Army general of great renown. Eight days later, the five men decided to rename the committee to the 'International Committee for Relief to the Wounded'. In October (26–29) 1863, the international conference organized by the committee was held in Geneva to develop possible measures to improve medical services on the battle field. The conference was attended by 36 individuals:- eighteen official delegates from national governments, six delegates from other non-governmental organizations, seven non-official foreign delegates, and the five members of the International Committee. The states and kingdoms represented by official delegates were Baden, Bavaria, France, Britain, Hanover, Hesse, Italy, the Netherlands, Austria, Prussia, Russia, Saxony, Sweden, and Spain. Among the proposals written in the final resolutions of the conference, adopted on October 29, 1863, were:- (i) the foundation of national relief societies for wounded soldiers; (ii) neutrality and protection for wounded soldiers; (iii) the utilization of volunteer forces for relief assistance on the battlefield; (iv) the organization of additional conferences to enact these concepts in legally binding international treaties; and (v) the introduction of a common distinctive protection symbol for medical

personnel in the field, namely a white armlet bearing a red cross. Only one year later, the Swiss government invited the governments of all European countries, as well as the United States, Brazil, and Mexico, to attend an official diplomatic conference. Sixteen countries sent a total of twenty-six delegates to Geneva. On 1864-August-22, the conference adopted the first Geneva Convention 'for the Amelioration of the Condition of the Wounded in Armies in the Field'. Representatives of 12 states and kingdoms signed the convention:- Baden, Belgium, Denmark, France, Hesse, Italy, the Netherlands, Portugal, Prussia, Switzerland, Spain, and Württemberg. The convention contained ten articles, establishing for the first time legally binding rules guaranteeing neutrality and protection for wounded soldiers, field medical personnel, and specific humanitarian institutions in an armed conflict. Furthermore, the convention defined two specific requirements for recognition of a national relief society by the International Committee:- the national society must be recognized by its own national government as a relief society according to the convention; and the national government of the respective country must be a state party to the Geneva Convention. Directly following the establishment of the Geneva Convention, the first national societies were founded in Belgium, Denmark, France, Oldenburg, Prussia, Spain, and Württemberg. Also in 1864, Louis Appia and Charles van de Velde, a captain of the Dutch Army, became the first independent and neutral delegates to work under the symbol of the Red Cross in an armed conflict. Three years later in 1867, the first International Conference of National Aid Societies for the Nursing of the War Wounded was convened. Also in 1867, Henry Dunant was forced to declare bankruptcy due to business failures in Algeria, partly because he had neglected his business interests during his tireless activities for the International Committee. Controversy surrounding Dunant's business dealings and the resulting negative public opinion, combined with an ongoing conflict with Gustave Moynier, led to Dunant's expulsion from his position as a member and secretary. He was charged with fraudulent bankruptcy and a warrant for his arrest was issued. Thus, he was forced to leave Geneva and never returned to his home city. In the following years, national societies were founded in nearly every country in Europe. In 1876, the committee adopted the name 'International Committee of the Red Cross' (ICRC), which is still its official designation today. Five years later, the American Red Cross was founded through the efforts of Clara Barton. More and more countries signed the Geneva Convention and began to respect it in practice during armed conflicts. In a rather short period of time, the Red Cross gained huge momentum as an internationally respected movement, and the national societies became increasingly popular as a venue for volunteer work. When the first Nobel Peace Prize was awarded in 1901, the Norwegian Nobel Committee opted to give it jointly to Henry Dunant and Frédéric Passy, a leading international pacifist. More significant than the honor of the prize itself, the official congratulation from the International Committee of the Red Cross marked the overdue rehabilitation of Henry Dunant and represented a tribute to his key role in the formation of the Red Cross. Dunant died nine years later in the small Swiss health resort of Heiden. Only two months earlier his long-standing adversary Gustave Moynier had also died, leaving a mark in the history of the Committee as its longest-serving president ever. In 1906, the 1864 Geneva Convention was revised for the first time. One year later, the Hague Convention X, adopted at the Second International Peace Conference in The Hague, extended the scope of the Geneva Convention to naval warfare. Shortly before the beginning of the First World War in 1914, 50 years after the foundation of the ICRC and the adoption of the first Geneva Convention, there were already 45 national relief societies throughout the world. The movement had extended itself beyond Europe and North America to Central and South America (Argentina, Brazil, Chile, Cuba, Mexico, Peru, El Salvador, Uruguay, Venezuela), Asia (the Republic of China, Japan, Korea, Siam), and Africa (Republic of South Africa). The original motto of the International Committee of the Red Cross was Inter Arma Caritas ('Amidst War, Charity'). It has preserved this motto while other Red Cross organizations have adopted others. Due to Geneva's location in the French-speaking part of Switzerland, the ICRC is also known under its initial French name Comité International de la Croix-Rouge (CICR). However, the ICRC has four official languages (Arabic, English, French and Spanish). The official symbol of the ICRC is the Red Cross on white background (the inverse of the Swiss flag) with the words 'Comite International Geneve' circling the cross. / В Июне 1859 Швейцарский предприниматель Жон Ори Дюно (Jean Henry Dunant; 1828–1910) поехал в Италию на встречу с Французским императором Наполео III (Napoléon III). Членами этого комитета, кроме самого Дюно, были Гюстав Муанье (Gustave Moynier), юрист и председатель Женевского Общества за Публичное Благосостояние (Geneva Society for Public Welfare); врач Люи Апьа (Louis Appia), который имел богатый опыт, работая полевым хирургом; друг Апьи и коллега Тэодор Монуар (Théodore Maunoir), из Женевской Комиссии по Гигиене и Здоровью (Geneva Hygiene and Health Commission); и Гийом-Ори Дюфур (Guillaume-Henri Dufour), генерал Швейцарской Армии . Шарл фан дэ Фэлдэ (Charles van de Velde), капитан Нидерландской Армии. И Фрэдэрикь Паси (Frédéric Passy), ведущий международный пацифист. Комитэ Этэрнасьёналь дё ля Круа-Руж (Сэ.И.Сэ.Эр.; Comité International de la Croix-Rouge (CICR)). Обязанный своим появлением порыву души одного человека, который не остался равнодушным к судьбе раненных солдат, на протяжении последних 140 лет МККК помогает оказывать помощь миллионам людей, пострадавшим в результате вооружённых конфликтов по всему миру. Наряду с осуществлением гуманитарных программ, МККК способствует развитию права вооружённых конфликтов для обеспечения эффективной защиты тех, кто не принимает или прекратил принимать участие в военных действиях. Деятельность МККК основывается на положениях Женевских конвенций. МККК трижды был удостоен Нобелевской Премии, последний раз в 1963. Международный Комитет Красного Креста (МККК (ICRC)) формируется из 25 лиц (все Швейцарской национальности) с целью обеспечения гуманитарной помощи в военное время. Международный Комитет Красного Креста (МККК) был основан почти полтора столетия назад. Его миссия состоит в том, чтобы предоставлять защиту и оказывать помощь пострадавшим в вооружённых конфликтах и внутренних беспорядках. Принцип, которым руководствуется МККК, заключается в том, что даже у войны есть пределы, ограничивающие методы и средства ведения военных действий и поведение воюющих. Свод основанных на этом принципе правил составляет международное гуманитарное право, в основе которого лежат Женевские конвенции. Участниками Женевских конвенций стали все государства мира.

INTERNATIONAL COMMODITY AGREEMENT = МЕЖДУНАРОДНОЕ СОГЛАШЕНИЕ О СЫРЬЕ – The International Commodity Agreement (ICA) is an international understanding, usually reflected in a legal instrument, relating to trade in a particular basic commodity, and based on terms negotiated and accepted by most of the countries that export and import commercially significant quantities of the commodity. Some commodity agreements (such as exists for Cocoa, Coffee, natural rubber, sugar, and tin) center on economic provisions intended to defend a price range for the commodity through the use of buffet stocks or export quotas or both. Other commodity agreements (such as existing agreements for Jute and Jute products, olive oil and Wheat) promote cooperation among producers and consumers through improved consultation, exchange of information, research and development, and export promotion.

INTERNATIONAL COMMODITY CLEARING HOUSE = МЕЖДУНАРОДНАЯ СЫРЬЕВАЯ КЛИРИНГОВАЯ ПАЛАТА – The International Commodity Clearing House (ICCH) is an independent organization that serves as a clearinghouse for most futures markets in Australia, Bermuda, London, New Zealand, and Singapore. Office:- Auckland, New Zealand. / Независимая организация, служащая в качестве клиринговой палаты (расчётной палаты) для большинства рынков фьючерсов в Австралии, Бермудах, Лондоне, Новой Зеландии и Сингапуре.

INTERNATIONAL COMMUNICATIONS SATELLITE ORGANIZATION = МЕЖДУНАРОДНАЯ ОРГАНИЗАЦИЯ СПУТНИКОВОЙ СВЯЗИ – The International Telecommunications Satellite Organization (ITSO) is an intergovernmental organization with the mission to

ensure that Intelsat, Ltd. provides public telecommunications services, including voice, data and video, on a global and non-discriminatory basis. The organization formed under a multilateral agreement which owns, maintains, and operates the global satellite system used by 150 participating countries. Headquartered in Washington, DC, ITSO currently has 150 member countries. COMSAT is the United States' representative to and participant in INTELSAT. Established in August 1964 by a group of 11 countries in Washington, DC. The creation of the International Telecommunications Satellite Organization (ITSO), previously known by the acronym, 'INTELSAT', resulted from the efforts of a group of nations to join the United States in 1964 to establish a global communications satellite system. The International Telecommunications Satellite Organization is an intergovernmental organization that incorporates the principle set forth in Resolution 1721 (XVI) of the General Assembly of the United Nations, which establishes that communication by means of satellites should be available to the nations of the world as soon as practicable on a global and non-discriminatory basis. It also incorporates the principle embedded in the 'Outer Space Treaty', which states that outer space shall be used for the benefit and in the interest of all countries. The Organization underwent an important restructuring in 2001 in order to secure the long-term viability of its communications system in a market that is characterized by increasing competition, fast-paced innovations and rising capital costs, and in order to attract private investments. The Assembly of Parties, the highest decision-making body of the Organization, in 2000 approved the legal instruments and framework necessary to create a commercial and pro-competitive company named 'Intelsat, Ltd', to operate the satellite system and provide space segment capacity in a manner consistent with the core principles of global coverage and connectivity, lifeline connectivity and non-discriminatory access. For this purpose, ITSO transferred its global satellite system, including the geostationary-orbital locations, 'landing rights' and the brand-name of 'Intelsat', to Intelsat, Ltd. Since this transfer in 2001, Intelsat has invested USD2.6 billion to substantially improve the global connectivity and coverage that it offers. As a result, Intelsat's global communications network, which was composed of 19 satellites in 2001, has expanded to 53 satellites through new launches and acquisitions, while Intelsat simultaneously has expanded its terrestrial facilities, including teleports, points of presence and fiber connectivity. Since its establishment, the Organization has proved to be an efficient catalyst for global cooperation in satellite communications. It has promoted cross-border flows of information that are vital to business, trade and peace, and it has been instrumental in linking the developing countries to the global economy and enhancing the competitiveness of their economies. ITSO has succeeded in providing high-quality and reliable space segment capacity for public telecommunications services, including telephony, data, video and Internet connectivity, to more than 200 countries and territories, no matter their location, size or level of development. The Organization also has inspired the emergence of dozens of participants at the national, regional and international level in the satellite industry, which today is worth more than USD100 billion. Since 18 July 2001, ITSO has been restructured as follows:- (a) At the intergovernmental level:- (i) Assembly of Parties is the governing body of the Organization, currently comprised of the 150 member countries of ITSO, and meets normally every two years in ordinary Assemblies. The Assembly of Parties elects a Panel of Legal Experts that resolves disputes in connection with the Agreement between two or more member countries, or between ITSO and one or more member country. (ii) Executive Organ is headed by the Director General, who is the Chief Executive Officer (CEO) and the legal representative of ITSO, and is responsible to the Assembly of Parties. The Director General supervises and monitors Intelsat, Ltd's provision of public telecommunications services. An Advisory Committee comprised of representatives of 23 member countries provides consultative advice to the Director General on any matters requested. (b) At the operating level:- Intelsat, Ltd is a private and competitive company based in Washington, DC and headquartered in Bermuda. The corporate structure of Intelsat, Ltd includes several subsidiaries established under the laws of various countries. Intelsat Global Service, established under US law, is located in Washington, DC, and employs the majority of the 800 staff. The United States and United Kingdom were the two countries selected by the Organization to manage licensing issues. The United States is responsible for licensing the launch and operation of satellites for 'Fixed Satellite Services' (FSS) in C- and Ku- bands, while the United Kingdom is responsible for 'Broadcasting Satellite Services' (BSS) and FSS in Ka-bands. Within their responsibility as the notifying administrations of Intelsat, Ltd, the United States and the United Kingdom work with the Director General on potential activities to expand access to lifeline countries and to maintain global connectivity and service to these countries. / Интэлсэт, Эл.ти.ди. (Intelsat, Ltd.). Создана в 1964. коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INTERNATIONAL CONFEDERATION OF FREE TRADE UNIONS = МЕЖДУНАРОДНАЯ КОНФЕДЕРАЦИЯ СВОБОДНЫХ ПРОФСОЮЗОВ – The International Confederation of Free Trade Unions (ICFTU), was set up in 1949 and has 241 affiliated organisations in 156 countries and territories on all five continents, with a membership of 155 million, 40% of who are women. It has three major regional organisations, APRO (short for the Asian and Pacific Regional Organisation of ICFTU) for Asia and the Pacific, AFRO (short for the African Regional Organisation of ICFTU) for Africa, and ORIT (short for the Organización Regional Interamericana de Trabajadores) for the Americas. It also maintains close links with the European Trade Union Confederation (ETUC) (which includes all ICFTU European affiliates) and Global Union Federations, which link together national unions from a particular trade or industry at international level. Membership:- it is a Confederation of national trade union centres, each of which links together the trade unions of that particular country. Membership is open to bona fide trade union organisations, that are independent of outside influence, and have a democratic structure. Finances:- its activities are financed by the fees paid by member organisations. International Relations:- the ICFTU cooperates closely with the International Labour Organisation and has consultative status with the United Nations' Economic and Social Council and with specialized agencies such as UNESCO (short for the United Nations Educational, Scientific and Cultural Organization), FAO (short for the Food and Agriculture Organization of the United Nations), etc. It maintains contacts with the International Monetary Fund, the World Bank and the World Trade Organisation and has offices in Geneva, New York and Washington. Activities:- the ICFTU organizes and directs campaigns on issues such as:- (i) the respect and defence of trade union and workers' rights; (ii) the eradication of forced and child labor; (iii) the promotion of equal rights for working women; (iv) the environment; (v) education programmes for trade unionists all over the world; (vi) encouraging the organisation of young workers; and (vii) sends missions to investigate the trade union situation in many countries. Priorities for Action:- the five main ICFTU priorities are:- (i) employment and international labor standards; (ii) tackling the multinationals; (iii) trade union rights; (iv) equality, women, race and migrants; and (v) trade union organisation and recruitment. Publications:- The ICFTU produces a number of publications each year on particular themes. Each June it publishes a Survey of Trade Union Rights, which gives details of more than 115 countries which violate basic trade union rights norms. The International Confederation of Free Trade Unions (ICFTU) consists of 144 national organizations with the goal of promoting the trade union movement. Headquartered in Brussels, Belgium. The International Trade Union Confederation (ITUC) is the main international trade union organization, representing the interests of working people worldwide. It has 301 affiliated member organizations in 151 countries and territories, with a total membership of 176 million workers. The ITUC was founded at its inaugural Congress in Vienna, Austria, on 2006-November-01-03. It groups together the former affiliates of the International Confederation of Free Trade Unions (ICFTU) and the World Confederation of Labour (WCL), along with trade union organizations which had no global affiliation. The ICFTU and the WCL dissolved themselves on 2006-October-31, to pave the way for the creation of the ITUC. The ITUC represents 176 million workers in 151 countries and territories and has 301 national affiliates. / заслуживающий доверия или действительный (bona fide). Международная Конфедерация Свободных Профсоюзов (МКСП) – международное объединение профсоюзов. Основана в 1949 на учредительной конференции в Лондоне в результате раскола ВФП правыми лидерами профсоюзов США и Великобритании. Объединяет реформистские профцентры капиталистических и

развивающихся стран (в 1972 – 115 организаций из 91 страны, насчитывавшие, по данным их руководства, около 50 миллионов членов). Принятые МКСП в 1949 устав, Манифест и Декларация О Социально-Экономических Требованиях содержат антикоммунистические выпады наряду с выражением готовности вести борьбу за права профсоюзов, за экономический, социальный и культурный прогресс в рамках социал-демократического реформизма. Документы, публиковавшиеся конфедерацией в 1950-х, заявляли о поддержке ею НАТО, Плана Маршалла, агрессии США в Корее, милитаризации Западных стран; в 1955 Исполком МКСП запретил её членским организациям обмениваться делегациями с профсоюзами социалистических стран. В 1960 – начале 1970-х МКСП принимала решения, отражавшие в той или иной степени проблемы и задачи, поставленные перед рабочим классом сложившимися условиями его борьбы (например, заявление 7-го Конгресса в 1962 о достижении полной занятости и социальных последствиях автоматизации, резолюция 9-го Конгресса в 1969 о последствиях для трудящихся процесса интернационализации производства, резолюции 10-го Конгресса в 1972 о международных корпорациях, об инфляции и занятости). Многие национальные организации, входящие в МКСП, вопреки сопротивлению правых лидеров установили контакты с объединениями, входящими в ВФП, в том числе с профсоюзами социалистических стран. В 1969 из МКСП вышел профцентр США Американская Федерация Труда – Конгресс Производственных Профсоюзов, по мнению руководителей которого конфедерация перестала в достаточной мере выполнять роль антикоммунистического международного профцентра. Высший орган МКСП – Конгресс, созываемый раз в 3 года (в 1949–72 проведено 10 конгрессов). Конгресс избирает Исполком и Генерального Секретаря (с 1972 по 1982 – Ото Керстэн (Otto Kersten), ФРГ). Исполком избирает Председателя (с 1972 – Д. Макдоналд, Канада) и Вице-Председателей МКСП, а также Подкомитет (в составе Председателя, Генерального Секретаря и нескольких членов Исполкома), принимающий решения между сессиями Исполкома. Текущую работу ведёт Секретариат. Региональную деятельность осуществляют Межамериканская Региональная Организация Трудящихся и Азиатская региональная организация (созданы в 1951). Европейская региональная организация (создана в 1950) к началу 1970 прекратила своё существование. В 1973 была основана формально независимая от МКСП Европейская Профсоюзная Конфедерация, объединившая Западноевропейские членские организации МКСП. Африканская региональная организация (оформилась в 1960) с конца 1960-х не действовала, 10-й Конгресс МКСП принял решение о возобновлении её деятельности. Штаб-квартира МКСП – в Брюсселе, Бельгия. Официальный орган МКСП – ежемесячный журнал Фри Лейбор Ворлд (Free Labour World). Международная Конфедерация Свободных Профсоюзов (МКСП) состоит из 144 национальных организаций, объединившихся с целью продвижения самого профсоюзного движения. МКСП была основана в Декабре 1949 в Лондоне, Соединённое Королевство, в результате раскола Всемирной Федерации Профсоюзов (ВФП) правыми лидерами профсоюзов Западных стран. Конфедерация объединяет реформистские профцентры, в 1984 – 154 национальных организаций 95 стран и территорий с общей численностью населения около 83 миллионов человек. Многие национальные организации МКСП, вопреки сопротивлению её правых лидеров, установили контакты с профцентрами, входящими в ВФП.

INTERNATIONAL CONGRESS AND CONVENTION ASSOCIATION = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ КОНГРЕССОВ И СЪЕЗДОВ – The International Congress & Convention Association (ICCA) was founded in 1963 by a group of travel agents. Headquartered in Amsterdam, The Netherlands. Their first and foremost aim was to evaluate practical ways to get the travel industry involved in the rapidly expanding market of international meetings and to exchange actual information related to their operations in this market. This initiative soon proved to have been taken at the right moment:- the meeting industry expanded even more rapidly than foreseen. As a result of which candidates from all over the world applied for ICCA membership. Not only congress travel agents but representatives from all the various sectors of the meetings industry. ICCA now is one of the most prominent organizations in the world of international meetings. It is the only association that comprises a membership representing the main specialists in handling, transporting and accommodating international events. With approximately 850 members in over 80 countries worldwide, it is certainly the most global organization within the meetings industry. ICCA has offices in the Netherlands, Malaysia, the United States of America and Uruguay. Mission:- ICCA is the global community for the meetings industry, enabling its members to generate and maintain significant competitive advantage. ICCA's network of suppliers to the international meetings industry spans the globe, with members in 80 countries. All companies and organizations which have a strategic commitment to provide top quality products and services for international meetings should consider ICCA membership as part of their long term plans. International meeting planners can rely on the ICCA network to find solutions for all their event objectives:- venue selection; technical advice; assistance with delegate transportation; full convention planning or ad hoc services. ICCA members represent the top destinations worldwide, and the most experienced specialist suppliers. / для данного случая (ad hoc).

INTERNATIONAL CONVENTION = МЕЖДУНАРОДНАЯ КОНВЕНЦИЯ – A term International Convention means an international agreement concluded among states in written form and governed by international law. / Термин Международная Конвенция означает международное соглашение, заключённое между государствами в письменной форме и руководствующееся международным правом.

INTERNATIONAL COTTON ADVISORY COMMITTEE = МЕЖДУНАРОДНЫЙ СОВЕЩАТЕЛЬНЫЙ КОМИТЕТ ПО ХЛОПКУ – The International Cotton Advisory Committee (ICAC) is the outgrowth of an International Cotton Meeting held in Washington, in September 1939. At that time, world stocks of cotton had reached nearly 25 million bales, of which over half were located in the United States. The following ten producing countries convened in Washington, DC, in September 1939:- Brazil, British cotton exporting colonies, Egypt, French cotton exporting colonies, India, Mexico, Peru, Sudan, the USSR, and the United States, to discuss problems of over-production, rising stocks and falling prices. The principal objective was to take concerted international action to avoid chaotic developments in the world cotton economy. The following resolution was passed:- that an advisory committee be set up in Washington representing the countries participating in the present conference, and including in addition representatives of other important cotton growing and exporting nations; such committee to undertake the following function:- (i) to observe and keep in close touch with developments in the world cotton situation; and (ii) to suggest, as and when advisable, to the Governments represented any measures the committee considers suitable and practicable for the achievement of ultimate collaboration. The ICAC met for the first time in Washington, DC in April 1940. At first, membership was limited to cotton producing countries. After the fourth meeting, an invitation to join the Committee was extended to all other United and Associated Nations substantially interested in the production, export or import of cotton. At the fifth Meeting in May 1946, it was decided to establish a Secretariat and a governing Executive Committee consisting of representatives from six cotton producing and six cotton consuming countries. A beginning was also made with the statistical and economic information program, which became an intrinsic part of the Committee's work. Subsequently, in 1948, it was agreed to replace the original Executive Committee with a Standing Committee in which all countries would have a voice. International Cotton Advisory Committee (ICAC), a worldwide association of governments which assembles, analyzes, and publishes data on world production, consumption, stocks, and prices. ICAC closely monitors developments in the world cotton market and promotes intergovernmental cooperation in developing and maintaining a sound world cotton economy. Headquartered in Washington, DC, the United States. The ICAC is an association of governments of cotton producing, consuming and trading countries. The Committee was formed in 1939, and the Secretariat was established in 1946. The annual budget is USD1.8 million, of which about 85% come from

government assessments and 15% from the sale of subscriptions and participant fees at meetings and seminars. There are eleven members of the Secretariat representing ten countries; all work from one office in Washington. Documents are published in English, French and Spanish, monthly summaries are available in Russian and annual summaries are available in Arabic and Russian. The mission of the ICAC is to assist governments in fostering a healthy world cotton economy. The Committee achieves its mission by providing transparency to the world cotton market, by serving as a clearinghouse for technical information on cotton production and by serving as a forum for discussion of cotton issues of international significance. The role of the ICAC is to raise awareness of emerging issues, provide information relevant to the solving of problems and to foster cooperation in the achievement of common objectives. By serving as an objective statistical observer and by bringing together producing, consuming and trading countries and all segments of the cotton industry, the ICAC serves a unique role as a catalyst for constructive change. The ICAC does not have a role in setting market prices or in intervening in market mechanisms. However, the ICAC Secretariat provides valuable information that is timely and relevant to all sectors of the cotton industry in assessing market conditions. The ICAC is the premier source of international data on the world cotton industry. The Secretariat forecasts cotton supply, use and prices, estimates the supply of extra-fine cotton, and tracks exports by destination and imports by origin. The Secretariat measures and forecasts cotton consumption and cotton's share of fiber demand in the world and by region and is the primary source in the world for statistics on fiber demand. The ICAC Research Associate Program serves as an annual training program for researchers from both producing and consuming countries. The ICAC organizes each World Cotton Research Conference at four-year intervals, and helps to sponsor regional technical conferences around the world. Issues of The Recorder, special technical publications, as well as research on the cost of cotton production and cotton production practices help to inform all segments of the cotton research community. The Secretariat keeps abreast of new developments in cotton research, including organic cotton production, transgenic cotton and developments in fiber testing. The Secretariat is actively engaged in efforts to develop an international consensus on the adoption of objective classification standards to replace the current system of grades and types, and the Secretariat is facilitating efforts in producing countries to develop methods of reducing contamination in cotton. The ICAC Task Force on Commercial Standardization of Instrument Testing of Cotton (CSITC) serves as the basis for international cooperation among cotton testing laboratories. CSITC ensures that all laboratories testing cotton are using the same calibration standards and same definitions to ensure that tests performed anywhere in the world are comparable. The ICAC Expert Panel on Social, Environmental and Economic Performance of Cotton Production (SEEP) works to provide information about the impacts of cotton production and recommend policies and practices to governments for improvement. SEEP published a review of social science literature on the social impacts of cotton production. SEEP is now finalizing a report on pesticide use in cotton production, and SEEP is gathering data on labor costs and practices in cotton production. The ICAC Secretariat works with UNICEF, government agencies and some NGOs on the issue of child labor in cotton production. The ICAC is the International Commodity Body for Cotton and Cotton Textiles before the Common Fund for Commodities (CFC). Since the Fund became operational in the early 1990s, a total of 22 cotton projects valued at USD70 million have been supported. Plenary meetings of the ICAC provide a forum for the discussion of international issues of importance to the world cotton industry, and provide opportunities for industry and government leaders from producing, consuming and trading countries to consult on matters of mutual concern. As the International Commodity Body for Cotton and Cotton Textiles, the ICAC plays a crucial role in the achievement of broad objectives in the cotton industry, and all industry participants and government officials with a concern about the health of the sector are invited to participate in ICAC activities. Member Countries (on 2019-December – 29 members):- Argentina (May 1946), Australia (May 1946), Bangladesh (February 2017), Belgium, Brazil (September 1939), Burkina Faso (October 1997), Cameroon, Chad (March 1967), Colombia, Cote d'Ivoire (August 1973), Egypt (September 1939), European Union (May 2017), Finland, France, Germany, Greece, India (September 1939), Iran, Israel, Italy, Kazakhstan (September 2006), Kenya (July 2007), Korea (Republic of Korea; March 1954), Mali (July 1996), Mozambique (September 2010), Netherlands, Nigeria (July 2019), Pakistan (July 1948), Poland, Russia (February 1962; as USSR – September 1939), South Africa (July 1991), Spain, Sudan (September 1939; January-2021), Switzerland (January 1951), Syria, Taiwan (February 1963), Tanzania (1961; and again in December 2019), Togo (September 1999), Turkey (November 1947), Uganda (November 1962), United States (September 1939), Uzbekistan (September 1992), Zambia, Zimbabwe (April 1991). The International Cotton Advisory Committee (ICAC), an association of governments from cotton producing, consuming and trading countries, is the only global intergovernmental group for cotton and cotton textiles. With a mission to assist members in fostering a healthy world cotton economy, ICAC continually strives to operate internationally in the interests of the cotton industry. Its role is to raise awareness, provide information, and serve as a catalyst for cooperative action on issues of International significance. ICAC membership delivers tangible benefits in the form of increased access to statistics and critical technical information provided by the Secretariat, and can lead to enhanced participation in collaborative interactions in cotton research and development. Perhaps most importantly, membership provides the avenue for a country's government and cotton industry to fully join with other cotton countries to discuss issues of international scope and significance. Founded at the International Cotton Meeting in Washington, DC in 1939, and the Secretariat in 1946, the ICAC advocates for cotton producing nations, publishes studies and technical information on the cotton industry, and holds an annual Plenary Meeting of member states. The nine Secretariat members originate from eight countries and work from an office in Washington, DC. Documents are published in English, French and Spanish, monthly summaries are available in Russian, and annual summaries are available in both Arabic and Russian. The annual budget is USD1.8 million (in 2018), of which about 85% comes from members assessments and 15% from the sale of subscriptions and participant fees at meetings and seminars. ICAC Projects and Initiatives:- ICAC has reinvented itself to focus more on innovation and technological solutions to the biggest challenges the global cotton industry faces, including:- (i) A Soil & Plant Health app that will allow farmers all over the world to identify their specific crop problems, including diseases and pests, while standing in their fields – even if the farmer is illiterate; (ii) A Virtual Reality training program that will educate cotton researchers and scientists by 'transporting' them to cotton fields from all over the world – without ever leaving the classroom; and (iii) The #TruthAboutCotton initiative, a social media project created to counter the misinformation that is so rampant in today's media. Established:- September 1939. Created by an International Cotton Meeting in Washington, DC. Mission:- to assist governments in fostering a healthy world cotton economy. The role of the ICAC is to raise awareness, to provide information and to serve as a catalyst for cooperative action on issues of international significance. Functions:- (i) provide statistics on world cotton production, consumption, trade and stocks and to identify emerging changes in the structure of the world cotton market; (ii) serve as a clearing house for technical information about cotton and cotton textiles; (iii) serve as an objective forum for discussion of cotton matters of international significance; and (iv) represent the international cotton industry before UN agencies and other international organizations. / Международный Совещательный Комитет по Хлопку (МСКХ) был учреждён в Вашингтоне, Округ Колумбия, Соединённые Штаты Америки делегатами Международной Встречи по Хлопку (International Cotton Meeting), состоявшейся в Сентябре 1939.

INTERNATIONAL COURT OF JUSTICE = МЕЖДУНАРОДНЫЙ СУД СПРАВЕДЛИВОСТИ – The International Court of Justice, commonly known as the World Court, is the principal judicial organ of the United Nations, though the court's origins predate the League of Nations. The idea for the creation of an international court to arbitrate international disputes arose during an international conference held at The Hague in 1899. This institution was subsumed under the League of Nations in 1919 as the Permanent Court of International Justice (PCIJ) and adopted its present name with the founding of the UN in 1945. The court's decisions are binding, and

its broad jurisdiction encompasses 'all cases which the parties refer to it and all matters specially provided for in the Charter of the United Nations or in treaties and conventions in force'. Most importantly, states may not be parties to a dispute without their consent, though they may accept the compulsory jurisdiction of the court in specified categories of disputes. The court may give advisory opinions at the request of the General Assembly or the Security Council or at the request of other organs and specialized agencies authorized by the General Assembly. Although the court has successfully arbitrated some cases (e.g., the border dispute between Honduras and El Salvador in 1992), governments have been reluctant to submit sensitive issues, thereby limiting the court's ability to resolve threats to international peace and security. At times countries also have refused to acknowledge the jurisdiction or the findings of the court. For example, when Nicaragua sued the United States in the court in 1984 for mining its harbours, the court found in favor of Nicaragua, but the United States refused to accept the court's decision. The 15 judges of the court are elected by the General Assembly and the Security Council voting independently. No two judges may be nationals of the same state, and the judges are to represent a cross section of the major legal systems of the world. Judges serve nine-year terms and are eligible for reelection. The seat of the World Court is The Hague. The International Court of Justice (ICJ) is made up of 15 judges elected by the United Nations General Assembly and Security Council to represent all principal legal systems. It is the primary judicial organ of the UN. Also known as the World Court. / Международный Суд Справедливости или, как это устоялось в Русскоязычной версии, просто Международный Суд был образован в 1945. Являясь одним из главных органов Организации Объединённых Наций (ООН) и главным судебным органом ООН, он разрешает правовые споры между государствами с их согласия и даёт консультативные заключения по правовым вопросам. Международный Суд Справедливости действует в соответствии со своим Статутом, основанным на Статуте Постоянной Палаты Международного Правосудия и образующим неотъемлемую часть Устава ООН. Международный Суд Справедливости состоит из 15 судей, избираемых Генеральной Ассамблеей и Советом Безопасности ООН для представления интересов всех основных правовых систем. Все члены ООН по факту являются участниками Статута Международного Суда. Государство, не являющееся членом ООН, может стать участником Статута Международного Суда на условиях, которые определяются, в каждом отдельном случае, Генеральной Ассамблеей по рекомендации Совета Безопасности ООН. Каждый член ООН обязуется выполнить решение Международного Суда Правосудия по тому делу, в котором он является стороной. В случае, если какая-либо сторона в деле не выполнит обязательства, возложенного на неё решением данного суда, другая сторона может обратиться в Совет Безопасности ООН, который может, если признает это необходимым, сделать рекомендации или решить о принятии мер для приведения решения в исполнение. Устав ООН ни в коей мере не препятствует членам ООН поручать разрешение своих разногласий другим судам в силу уже существующих соглашений или таких, которые могут быть заключены в будущем. Генеральная Ассамблея или Совет Безопасности ООН могут запрашивать от Международного Суда Правосудия консультативные заключения по любому юридическому вопросу. Другие органы ООН и специализированные учреждения, которым Генеральная Ассамблея может дать в любое время разрешение на это, также могут запрашивать консультативные заключения данного суда по юридическим вопросам, возникающим в пределах их круга деятельности. Известен также как Всемирный Суд (World Court). Международный Суд Справедливости (МСС) – главный судебный орган Организации Объединённых Наций (ООН). Образован в 1945. Организация, компетенция и процедура определяются Статутом МСС, образующим неотъемлемую часть Устава ООН, в силу чего все члены ООН являются участниками Статута. МСС принимает также свой Регламент, определяющий порядок выполнения им своих функций и правила судопроизводства. Международный Суд Справедливости состоит из 15 судей, избираемых на 9 лет Генеральной Ассамблеей ООН и Советом Безопасности (независимо друг от друга) абсолютным большинством голосов; каждые 3 года суд обновляется на 1/3. Суд избирает на 3 года Председателя, Вице-Председателя, а также назначает Секретаря (на 7 лет). Кандидатов в МСС выдвигают национальные группы Постоянной Палаты Третейского Суда или специально назначенные группы. Согласно Статуту состав суда должен обеспечивать представительство 'главнейших форм цивилизации и основных правовых систем мира'. При исполнении служебных обязанностей члены суда пользуются дипломатическими привилегиями и иммунитетами. Главная задача МСС состоит в разрешении на основе международного права дел (международных споров), переданных ему сторонами (только государствами), и только с согласия всех спорящих сторон. Государства-члены ООН вправе сделать заявление о признании ими юрисдикции МСС ООН, обязательной по тем или иным правовым вопросам, или оговорить изъятие из компетенции суда некоторых категорий споров. Решения суда принимаются большинством голосов присутствующих на заседании судей при кворуме не менее 9 членов. Решения обязательны лишь для участвующих в споре государств и лишь по данному делу. Решения МСС ООН окончательны и обжалованию не подлежат. Международный Суд Справедливости ООН может также давать консультативные заключения по любому юридическому вопросу по запросу любого учреждения ООН, имеющего на то право. Такие заключения в принципе имеют лишь характер рекомендаций.

INTERNATIONAL CRIMINAL POLICE ORGANIZATION = МЕЖДУНАРОДНАЯ ОРГАНИЗАЦИЯ УГОЛОВНОЙ ПОЛИЦИИ – The International Criminal Police Organization (INTERPOL) is the world's largest international police organization, with 188 member countries. Created in 1923, it facilitates cross-border police co-operation, and supports and assists all organizations, authorities and services whose mission is to prevent or combat international crime. INTERPOL aims to facilitate international police co-operation even where diplomatic relations do not exist between particular countries. Action is taken within the limits of existing laws in different countries and in the spirit of the Universal Declaration of Human Rights. INTERPOL's constitution prohibits 'any intervention or activities of a political, military, religious or racial character'. INTERPOL's activities are guided by the following four core functions:- (1) Secure global police communication services:- INTERPOL's global police communications system, known as I-24/7, enables police in all member countries to request, submit and access vital data instantly in a secure environment. (2) Operational data services and databases for police:- Member countries have direct and immediate access to a wide range of databases including information on known criminals, fingerprints, DNA profiles and stolen or lost travel documents. INTERPOL also disseminates critical crime-related data through a system of international notices. (3) Operational police support services:- INTERPOL provides law enforcement officials in the field with emergency support and operational activities, especially in its priority crime areas. A Command and Co-ordination Centre operates 24 hours a day, seven days a week and can deploy an Incident Response Team to the scene of a serious crime or disaster. (4) Police training and development:- INTERPOL provides focused police training initiatives with the aim of enhancing the capacity of member countries to effectively combat transnational crime and terrorism. This includes sharing knowledge, skills and best practices in policing and establishing global standards. The International Criminal Police Organization (INTERPOL) is made up of 188 members with the goal of promoting international cooperation between criminal police authorities. Headquartered in Lyon, France. 1914:- First International Criminal Police Congress held in Monaco. Police officers, lawyers and magistrates from 14 countries meet to discuss arrest procedures, identification techniques, centralized international criminal records and extradition proceedings. 1923:- Creation of the International Criminal Police Commission (ICPC) with headquarters in Vienna, Austria, on the initiative of Dr Johannes Schober, president of the Vienna Police. 1925:- The General Assembly, held in Berlin, Germany, proposes that each country establish a central point of contact within its police structure:- the forerunner of the National Central Bureau (NCB). 1927:- Resolution to establish NCBs adopted. 1930:- Specialized departments established to deal with currency counterfeiting, criminal records and passport forgery. 1932:- Following the death of Dr Schober, new statutes put in place creating the post of Secretary General. The first was Austrian Police

Commissioner Oskar Dressler. 1935:- INTERPOL international radio network launched. 1938:- The Nazis assume control after deposing of Secretary General Oskar Dressler. Most countries stop participating and ICPC effectively ceases to exist as an international organization. 1942:- ICPC falls completely under German control and is relocated to Berlin, Germany. 1946:- Belgium leads the rebuilding of the organization after the end of World War II. A new headquarters set up in Paris, France, and 'INTERPOL' chosen as the organization's telegraphic address. Democratic process to elect the President and Executive Committee instituted. Present INTERPOL color-coded notice system initiated and first Red Notices for persons wanted internationally issued. 1949:- The United Nations grants INTERPOL consultative status as a non-governmental organization. 1956:- Following the adoption of a modernized constitution, the ICPC becomes the International Criminal Police Organization-INTERPOL, abbreviated to ICPO-INTERPOL or just INTERPOL. The organization becomes autonomous by collecting dues from member countries and relying on investments as the main means of support. 1958:- Contributions of member countries revised and financial regulations adopted. 1963:- First regional conference held, in Monrovia, Liberia. 1965:- The General Assembly sets out operating policies for NCBs. 1971:- The United Nations recognizes INTERPOL as an intergovernmental organization. 1972:- A Headquarters Agreement with France recognizes INTERPOL as an international organization. 1982:- An independent body created to monitor the implementation of INTERPOL's internal rules in relation to data protection. This will become the Commission for the Control of INTERPOL Files in 2003. 1989:- INTERPOL moves its General Secretariat to Lyon, France. 1990:- The X.400 communication system launched, enabling NCBs to send electronic messages to each other and to the General Secretariat directly. 1992:- An automated search facility for remote searches of INTERPOL databases introduced. 1995:- As part of a programme of regionalization the General Assembly adopts guidelines for the establishment and operation of Sub-Regional Bureaus. 1996:- ASF-SMV database operational. 1997:- INTERPOL's first website launched. 1998:- INTERPOL Criminal Information System (ICIS) database created. 2002:- The I-24/7 web-based communication system launched, significantly improving NCBs' access to INTERPOL's databases and services. Canada is the first country to connect to the system. Database of stolen and lost travel documents launched. 2003:- A Command and Co-ordination Centre created at the General Secretariat, enabling the organization to operate 24 hours a day, seven days a week. 2004:- INTERPOL liaison office inaugurated at the United Nations in New York and first Special Representative appointed. 2005:- First INTERPOL-United Nations Special Notices issued for individuals subject to UN sanctions against Al Qaeda and the Taliban. MIND/FIND – Mobile or Fixed INTERPOL Network Database – two technical solutions developed to give front-line officers access to INTERPOL databases. 2008 - Special Representative appointed to the European Union in Brussels, Belgium. / Доктор Йоханэс Шоба (Dr Johannes Schober). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Первым был Австрийский Комиссар Полиции Оска Дрэсля (Austrian Police Commissioner Oskar Dressler). Международная Организация Уголовной Полиции (МОУП) или, так называемый ИНТЕРПОЛ (INTERPOL), состоящая в настоящее время из 188 участников, была создана с целью продвижения международного сотрудничества между руководствами уголовных полиций. Была создана в Вене, Австрия в 1923 как Международная Комиссия Уголовной Полиции (МКУП) для борьбы с общеуголовными преступлениями. В 1938 МКУП прекратила своё существование. В современном виде ИНТЕРПОЛ был воссоздан в 1946. Штабквартира организации расположена в Лионе, Франция.

INTERNATIONAL DEPOSITORY RECEIPT = МЕЖДУНАРОДНАЯ ДЕПОЗИТАРНАЯ РАСПИСКА – The International Depositary Receipt (IDR):- certificates that represent ownership of international securities. An international depositary receipt, or IDR, is the international equivalent of an American Depositary Receipt (ADR). IDRs were introduced by Morgan Guaranty Trust Company in 1970 to facilitate international trading in securities; they are only used outside the United States. International Depository Receipt (IDR) is the negotiable certificate issued by a bank that proves the ownership of securities by someone outside the country of origin. / были представлены в 1970 компанией Моргэн Гэрэнти Тчраст Кампэни (Morgan Guaranty Trust Company).

INTERNATIONAL DEVELOPMENT ASSOCIATION = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ РАЗВИТИЯ – The International Development Association (IDA) complements the World Bank's other lending arm – the International Bank for Reconstruction and Development (IBRD) – which serves middle-income countries with capital investment and advisory services. IBRD and IDA share the same staff and headquarters and evaluate projects with the same rigorous standards. IDA is one of the largest sources of assistance for the world's 79 poorest countries, 39 of which are in Africa. It is the single largest source of donor funds for basic social services in the poorest countries. IDA lends money (known as Credits) on concessional terms. This means that IDA credits have no interest charge and repayments are stretched over 35 to 40 years, including a 10-year grace period. IDA also provides grants to countries at risk of debt distress. Since its inception, IDA credits and grants have totaled USD222 billion, averaging USD13 billion a year in recent years and directing the largest share, about 50 percent, to Africa. Eligibility for IDA support depends first and foremost on a country's relative poverty, defined as gross national income (GNI) per capita below an established threshold and updated annually (in fiscal year 2011:- USD1 165.00). IDA also supports some countries, including several small island economies, which are above the operational cutoff but lack the creditworthiness needed to borrow from IBRD. Some countries, such as India and Pakistan, are IDA-eligible based on per capita income levels, but are also creditworthy for some IBRD borrowing. They are referred to as 'Blend' Countries. Seventy-nine countries are currently eligible to receive IDA resources. Together, these countries are home to 2.5 billion people, half of the total population of the developing world. An estimated 1.5 billion people there survive on incomes of USD2 or less a day. DA credits have maturities of 20, 35 or 40 years with a 10-year grace period before repayments of principal begins. IDA funds are allocated to the borrowing countries in relation to their income levels and record of success in managing their economies and their ongoing IDA projects. Nearly all IDA credits have no interest charge, but credits do carry a small service charge, currently 0.75 percent on funds paid out. IDA also provides grants, which are allocated to the countries that are at risk of debt distress. In fiscal year 2010 (which ended June 30, 2010), IDA commitments totaled USD14.5 billion, of which 18 percent was provided on grant terms. New commitments in FY10 comprised 190 new operations. Since 1960, IDA has provided USD222 billion to 108 countries. Annual commitments have increased steadily and averaged about USD13 billion over the last three years. IDA-financed operations address primary education, basic health services, clean water and sanitation, environmental safeguards, business climate improvements, infrastructure and institutional reforms. These projects pave the way toward economic growth, job creation, higher incomes and better living conditions. IDA emphasizes broad-based growth, including:- (i) sound economic policies, rural development, private business and sustainable environmental practices; (ii) investment in people, in education and health, especially in the struggle against HIV/AIDS, malaria and TB; (iii) expansion of borrower capacity to provide basic services and ensure accountability for public resources; (iv) recovery from civil strife, armed conflict and natural disaster; and (v) promotion of trade and regional integration. IDA carries out analytical studies to build the knowledge base that allows intelligent design of policies to reduce poverty. IDA advises governments on ways to broaden the base of economic growth and protect the poor from economic shocks. IDA also coordinates donor assistance to provide relief for poor countries that cannot manage their debt-service burden. IDA has developed a system for allocating grants based on countries' risk of debt distress, designed to help countries ensure debt sustainability. While the IBRD raises most of its funds on the world's financial markets, IDA is funded largely by contributions from the governments of its richer member countries. Additional funds come from IBRD's income and from borrowers' repayments of earlier IDA credits. IDA Replenishments:- Donors get together every three years to replenish IDA funds. 51 countries contributed to the 16th replenishment of IDA, which totaled USD49.3 billion. The IDA16 replenishment

raised funds for poor countries for the three-year period between July 2011 and June 2014. These are critical years for countries trying to achieve the UN Millennium Development Goals since it takes time for projects to be completed and yield measurable results. The International Bank for Reconstruction and Development (IBRD), better known as the World Bank, was established in 1944 to help Europe recover from the devastation of World War II. The success of that enterprise led the Bank, within a few years, to turn its attention to developing countries. By the 1950s, it became clear that the poorest developing countries needed softer terms than those that could be offered by the Bank, so they could afford to borrow the capital they needed to grow. With the United States taking the initiative, a group of the Bank's member countries decided to set up an agency that could lend to the poorest countries on the most favorable terms possible. They called the agency the 'International Development Association'. Its founders saw IDA as a way for the 'haves' of the world to help the 'have-nots'. But they also wanted IDA to be run with the discipline of a bank. For this reason, US President Dwight D. Eisenhower proposed, and other countries agreed, that IDA should be part of the World Bank. IDA's Articles of Agreement became effective in 1960. The first IDA loans, known as Credits, were approved in 1961 to Chile, Honduras, India and Sudan. IDA currently has 170 member countries. Members subscribe to IDA's initial subscriptions and subsequent replenishments by submitting the necessary documentation and making the required payments under the replenishment arrangements. Thirty-five countries have graduated from IDA throughout its history, ceasing to borrow from the Association. Some of these countries have since 'reverse graduated', or reentered IDA. One of two organizations (along with International Finance Corporation) later created to further the aims of the World Bank by providing loans to underdeveloped countries at less rigorous terms than the Bank would normally stipulate. Headquartered in Washington, DC, the United States. The International Development Association (IDA) is the part of the World Bank that helps the world's poorest countries. Established in 1960, IDA aims to reduce poverty by providing interest-free credits and grants for programs that boost economic growth, reduce inequalities and improve people's living conditions. Affiliate of the World Bank that lends money at no interest, other than a service charge of 1 percent or less, over long terms (up to 50 years) to developing countries that are unable to obtain investment capital through conventional channels at normal rates. See also World Bank. The International Development Association (IDA) is an affiliate of the World Bank Group that was created in 1959 to lend money to developing countries at no interest and for a long repayment period. By providing development assistance through soft loans, IDA meets the needs of many developing countries that cannot afford development loans at ordinary rates of interest and in the time span of conventional loans. / выплата (repayment) . Президент США Двайт Дэйвид Айзэнхауэ (Dwight David Eisenhower; 1890–1969). Международная Ассоциация Развития (МАР), специализированное учреждение ООН, была создана в 1959 в качестве филиала Международного Банка Реконструкции и Развития (МБРР). Предоставляет займы главным образом развивающимся странам на более льготных, чем МБРР, условиях. Штабквартира МАР расположена в Вашингтоне, США. Международная Ассоциация Развития (МАР; International Development Association (IDA)) – дочерняя организация Международного Банка Реконструкции и Развития (МБРР). Создана в 1960 для предоставления развивающимся странам кредитов и займов на более льготных, чем в МБРР, условиях как в свободной конвертируемой, так и в неконвертируемой валютах. На середину 1973 МАР насчитывала 112 членов. Во главе её – Совет Управляющих (высший орган управления), Директорат и Президент. Директорат МАР является постоянно действующим исполнительным органом. Директорами МАР становятся по совместительству Директора МБРР. Функции Президента МАР выполняет Президент МБРР. Все вопросы в Совете Управляющих и Директорате решаются большинством голосов. Голоса распределяются в зависимости от суммы взносов в основной капитал. Страна-член МАР имеет 500 голосов плюс один дополнительный голос за каждые 5 000 Долларов США суммы её первоначального взноса. Основной капитал МАР составлял на середину 1973 1 061 000 000 Долларов США. Наибольшие квоты имели (в миллионах Долларов США):- США – 332, Великобритания – 135, Франция – 55, ФРГ – 56, Индия – 42, Япония – 35. В соответствии с порядком распределения голосов 17 промышленно развитых стран в 1972 получили 159 269 голосов, или 62.02%, в том числе Соединённые Штаты Америки (США) 25.14%, Великобритания 10.41%, Федеративная Республика Германия (ФРГ) 4.32%, Япония 2.81% общего числа голосов. Развивающиеся страны, для кредитования которых создана МАР, получили 97 523 голоса, или 37.98%. Промышленно развитые страны производят взносы золотом или обратимой валютой, развивающиеся страны только 10 % своих взносов вносят золотом или обратимой валютой, а остальные 90% – в национальной валюте. В целях пополнения источников кредитования в 1964 и 1969 были приняты решения о дополнительных взносах 17 промышленно развитыми странами на общую сумму 1 950 190 Долларов США. Займы МАР являются беспроцентными сроком, как правило, на 50 лет. Погашение их предусматривается начинать через 10 лет, причём в последующие 10 лет из расчёта по 1% в год, а в остальные 30 лет по 3%. Займы предоставляются правительству или под его гарантию органам отдельных административных единиц, частным или общественным организациям. В 1960–71 МАР заключила соглашения о выплате 274 займов 58 странам на общую сумму 3 340 400 000 Долларов США. Из этой суммы страны Азии (включая весь Ближний Восток) получили 2 374 700 000 Долларов США (71.1%), страны Африки – 666 000 000 Долларов США (19.9%), Латинской Америки – 176 700 000 Долларов США (5.2%), Океании – 11 000 000 Долларов США (0.5%) и страны Европы – 111 800 000 Долларов США (3.3%). Займы МАР предоставляются для финансирования строительства электростанций, железных и шоссейных дорог и сельского хозяйства. МАР преследует те же цели, что и МБРР:- сохранить развивающиеся страны в положении сельскохозяйственных придатков к экономике промышленно развитых стран, создать благоприятные условия для частных иностранных капиталовложений и переложить на налогоплательщиков, то есть на трудящихся, расходы, связанные со строительством капиталоёмких и нерентабельных для частных предпринимателей объектов. Это свидетельствует о дальнейшем обострении противоречий капиталистической системы, которые правящие круги империалистических государств пытаются разрешить за счёт развивающихся стран.

INTERNATIONAL DEVELOPMENT COOPERATION AGENCY = МЕЖДУНАРОДНОЕ АГЕНТСТВО ПО РАЗВИТИЮ СОТРУДНИЧЕСТВА – The International Development Cooperation Agency (IDCA) is a coordinating body of all aspects of US economic assistance and cooperation with Less Developed Countries (LDCs). The United States International Development Cooperation Agency (IDCA) consists of three parts:- Agency for International Development (AID), the Overseas Private Investment Corporation (OPIC), and Trade and Development Program (TDP). The Administrator of AID currently serves as the Acting Director of IDCA. Headquartered in Washington, DC, the United States. An International Development Cooperation Agency, an independent agency of the US Government, was established by Executive Order in September, 1979 to coordinate foreign assistance activities as they related to bilateral programs administered by USAID, multilateral programs of international lending institutions then under the purview of the Department of the Treasury, voluntary contributions to United Nations agencies then administered by the Department of State, food programs then administered by USAID, and the activities of OPIC. The International Development Cooperation Agency (IDCA) was established by Executive Order in September, 1979. As an attempt to reorganize the foreign assistance management structure, the IDCA was envisioned by Senator Hubert Humphrey in 1978, to coordinate foreign assistance activities as they related to bilateral programs administered by the US Agency for International Development (USAID), multilateral programs of international lending institutions then under the purview of the Department of the Treasury, voluntary contributions to United Nations agencies then administered by the Department of State, food programs then administered by USAID, and the activities of OPIC. An International Development Institute would be established within IDCA to address, among other things, private and voluntary organizations and with one of the Institute's constituent parts being the Peace Corps. As established under Reorganization Plan No. 2 of 1979, the only entity

it actually coordinated was USAID and, since it was staffed with fewer than 75 people, could make only a marginal impact on overall bilateral and multilateral assistance policy. In the Reagan Administration, no staff were provided to IDCA and, functionally, it faded quickly from the scene. The Executive Order creating IDCA remained intact, however, defining some of the lines of authority in the administration of foreign assistance. Some of the other coordinating functions that had been expected to be exercised by IDCA (but not contained in the Executive Order) were initially exercised instead by USAID, but over time the functions fell into disuse. The IDCA was abolished by act of 1998-October-02 (112 Stat. 2681-790) and its functions transferred to the Department of State, US Agency for International Development (USAID), and Overseas Private Investment Corporation (OPIC). / Президент США Ранэлд Вилсэн Рэйген (Ronald Wilson Reagan; 1911–2004).

INTERNATIONAL ELECTROTECHNICAL COMMISSION = МЕЖДУНАРОДНАЯ ЭЛЕКТРОТЕХНИЧЕСКАЯ КОМИССИЯ – The International Electrotechnical Commission (IEC):- millions of devices that contain electronics, and use or produce electricity, rely on IEC International Standards and Conformity Assessment Systems to perform, fit and work safely together. Founded in 1906, the IEC (International Electrotechnical Commission) is the world's leading organization for the preparation and publication of International Standards for all electrical, electronic and related technologies. These are known collectively as 'electrotechnology'. IEC provides a platform to companies, industries and governments for meeting, discussing and developing the International Standards they require. All IEC International Standards are fully consensus-based and represent the needs of key stakeholders of every nation participating in IEC work. Every member country, no matter how large or small, has one vote and a say in what goes into an IEC International Standard. The International Electrotechnical Commission (IEC) is a not-for-profit, non-governmental organization, founded in 1906. The IEC's members are National Committees, and they appoint experts and delegates coming from industry, government bodies, associations and academia to participate in the technical and conformity assessment work of the IEC. The International Electrotechnical Commission (IEC) is the world's leading organization that prepares and publishes International Standards for all electrical, electronic and related technologies. Over 10 000 experts from industry, commerce, government, test and research labs, academia and consumer groups participate in IEC Standardization work. Globally Relevant:- the IEC is one of three global sister organizations (IEC, ISO, ITU) that develop International Standards for the world. When appropriate, IEC cooperates with ISO (International Organization for Standardization) or ITU (International Telecommunication Union) to ensure that International Standards fit together seamlessly and complement each other. Joint committees ensure that International Standards combine all relevant knowledge of experts working in related areas. The International Electrotechnical Commission is the leading global organization that publishes consensus-based International Standards and manages conformity assessment systems for electric and electronic products, systems and services, collectively known as Electrotechnology. IEC publications serve as a basis for national standardization and as references when drafting international tenders and contracts. Central Office is located in Geneva, Switzerland. IEC has offices in the following cities and countries:- Singapore, Singapore (IEC Asia-Pacific); São Paulo, Brazil (IEC Latin America); Worcester, State of Massachusetts (MA), the United States of America; and Sydney, New South Wales (NSW), Australia (IECEx/IECQ). The IEC came into being on 26–27 June 1906 in London, UK, and ever since has been giving the very best global standards to the world's electrotechnical industries. The IEC thanks industry, government, academia, end-users, and everyone else who has been involved from around the world for more than a century of commitment and partnership. / Международная Электротехническая Комиссия (МЭК) (International Electrotechnical Commission (IEC)) разрабатывает стандарты в области электротехники, радиоэлектроники, связи. Она была создана в 1906, то есть задолго до образования Международной Организации по Стандартизации (МОС). Первоначально комиссия располагалась в Лондоне, с 1948 по настоящее время штаб-квартира находится в Женеве, Швейцария. Так же имеются региональные центры в Юго-Восточной Азии (Сингапур), Латинской Америке (Сан-Пауло, Бразилия) и Северной Америке (Бостон, США). Разновременность образования и разная направленность МЭК и МОС определили факт параллельного существования двух крупных международных организаций. С учётом общности задач МОС и МЭК, а также возможности дублирования деятельности отдельных технических органов между этими организациями заключено соглашение, которое направлено, с одной стороны, на разграничение сферы деятельности, а с другой – на координацию технической деятельности. Число членов МЭК – 76 стран. Россия является членом МЭК с 1911. Высший руководящий орган МЭК – Совет, в котором представлены все национальные комитеты. Бюджет МЭК, как и бюджет МОС, складывается из взносов стран-членов этой организации и поступлений от продажи международных стандартов. Структура технических органов МЭК такая же, как и МОС:- технические комитеты, подкомитеты и рабочие группы. В МЭК функционируют 174 комитета и подкомитета, часть которых (как и в МОС) разрабатывает международные стандарты (МС) общетехнического и межотраслевого характера, а другая – МС на конкретные виды продукции (бытовая радиоэлектронная аппаратура, трансформаторы, изделия электронной техники). В настоящее время разработано свыше 5 200 стандартов, технических отчётов, рекомендаций. Следует отметить важность проводимых МЭК работ по установлению требований безопасности для бытовых электроприборов и машин. В связи с различным подходом к обеспечению безопасности в разных странах ТК 61 'Безопасность бытовых электроприборов' выпущено более 40 МС, устанавливающих требования практически ко всем электробытовым приборам и машинам. Разработка МС в этой области имеет особенно важное значение в связи с созданием в МЭК системы сертификации электробытовых приборов и машин на соответствие их МС МЭК. В перспективе, по прогнозу отдельных специалистов, деятельность МЭК и МОС будет постепенно сближаться:- на первом этапе – это разработка единых правил подготовки МС, создание совместных ТК (такой опыт имеется по вопросам информационной технологии), а на втором этапе – возможное слияние, тем более что большинство стран представлено в МОС и МЭК одними и теми же органами – национальными организациями по стандартизации. Актуальной задачей является сокращение сроков подготовки МС МОС и МЭК, так как в настоящее время разработка их занимает в среднем четыре-пять лет. Тенденция к сокращению сроков морального старения продукции, необходимость оперативного реагирования на запросы международной торговли в стандартах ставят задачу резкого сокращения сроков разработки МС. Все чаще начинает практиковаться процедура обсуждения проектов МС в рамках телеконференций. В отличие от традиционных заседаний рабочих органов по стандартизации, на которые командируются специалисты из разных стран, телеконференции могут проводиться чаще, организованнее и оперативнее. По оценкам специалистов, проведение телеконференций экономит 80% средств и 60% времени, затрачиваемых на разработку МС в рамках традиционных процедур. Глобализация мирового рынка, характеризующаяся стиранием границ на пути свободного перемещения людей, товаров, капитала и информации, требует перехода стран на единые стандарты. Пока средний показатель использования странами-членами МОС международных стандартов в общем числе национальных – 22%, в странах с более высоким уровнем развития – 40%. Как идеал выдвинут принцип единого стандарта; единых испытаний; сертификатов, признанных повсюду. Этот принцип реализовался в проекте МОС, предложенного в 2001 как 'Мечта 1/1/1' (1/1/1 'Dream'). Смысл проекта – в устранении разнообразия в стандартах, в исключении повторов в испытаниях и процедурах подтверждения. Имеются примеры воплощения 'Мечты':- на мировом рынке такие объекты стандартизации, как контейнерные перевозки, кредитные карточки, кораблестроение, отвечают стандартам и оцениваются по единым процедурам соответствия.

THE INTERNATIONAL ENERGY AGENCY = МЕЖДУНАРОДНОЕ АГЕНТСТВО ПО ЭНЕРГЕТИКЕ – The International Energy Agency (IEA), is an autonomous body which was established in November 1974 within the framework of the Organisation for Economic

Co-operation and Development (OECD), to implement an international energy programme. It carries out a comprehensive programme of energy co-operation among twenty-six of the OECD's thirty member countries. The basic aims of the IEA are:- (i) to maintain and improve systems for coping with oil supply disruptions; (ii) to promote rational energy policies in a global context through co-operative relations with nonmember countries, industry and international organizations; (iii) to operate a permanent information system on the international oil market; (iv) to improve the world's energy supply and demand structure by developing alternative energy sources and increasing the efficiency of energy use; and (v) to assist in the integration of environmental and energy policies. Headquartered in Paris, France. The IEA member countries are:- Australia (joined 1979), Austria (founding member 1974), Belgium (founding member 1974), Canada (founding member 1974), the Czech Republic (joined 2001), Denmark (founding member 1974), Finland (joined 1992), France (joined 1992), Germany (founding member 1974), Greece (joined 1977), Hungary (joined 1997), Ireland (founding member 1974), Italy (founding member 1974), Japan (founding member 1974), the Republic of Korea (joined 2002), Luxembourg (founding member 1974), the Netherlands (founding member 1974), New Zealand (joined 1977), Norway (participates in the Agency under a special Agreement since 1974), Poland (joined 2008), Portugal (joined 1981), Slovak Republic (joined 2007), Spain (founding member 1974), Sweden (founding member 1974), Switzerland (founding member 1974), Turkey (founding member 1974), the United Kingdom (founding member 1974), the United States (founding member 1974). The European Commission also takes part in the work of the IEA. These countries are also all member countries of the Organisation for Economic Co-operation and Development (OECD), as the IEA is an autonomous agency linked with the OECD. See also The Organisation For Economic Co-operation And Development. The International Energy Agency (IEA) is an autonomous agency linked with the Organisation for Economic Co-operation and Development (OECD). IEA acts as energy policy advisor for its 28 member countries in their effort to ensure reliable, affordable and clean energy for their citizens. Founded during the oil crisis of 1973–74 with Headquarters in Paris, France, its initial role was to coordinate measures in times of oil supply emergencies. But during the last decades, the energy markets have changed, and so has the IEA. It now focuses well beyond oil crisis management on broader energy issues, including climate change policies, market reform, energy technology collaboration and outreach to the rest of the world. With a staff of around 150, mainly energy experts and statisticians from its 26 members countries, the IEA conducts a broad program of energy research, data compilation, publications and public dissemination of the latest energy policy analysis and recommendations on good practices. The Member countries of the International Energy Agency (IEA) seek to create conditions in which the energy sectors of their economies can make the fullest possible contribution to sustainable economic development and to the well-being of their people and of the environment. In formulating energy policies, the establishment of free and open markets is a fundamental point of departure, though energy security and environmental protection need to be given particular emphasis by governments. IEA countries recognise the significance of increasing global interdependence in energy. They therefore seek to promote the effective operation of international energy markets and encourage dialogue with all participants. In order to secure their objectives, member countries therefore aim to create a policy framework consistent with the following goals:- (i) Diversity, efficiency and flexibility within the energy sector are basic conditions for longer-term energy security:- the fuels used within and across sectors and the sources of those fuels should be as diverse as practicable. Non-fossil fuels, particularly nuclear and hydro power, make a substantial contribution to the energy supply diversity of IEA countries as a group. (ii) Energy systems should have the ability to respond promptly and flexibly to energy emergencies. In some cases this requires collective mechanisms and action: IEA countries co-operate through the Agency in responding jointly to oil supply emergencies. (iii) The environmentally sustainable provision and use of energy are central to the achievement of these shared goals. Decision-makers should seek to minimise the adverse environmental impacts of energy activities, just as environmental decisions should take account of the energy consequences. Government interventions should respect the Polluter Pays Principle where practicable. (iv) More environmentally acceptable energy sources need to be encouraged and developed. Clean and efficient use of fossil fuels is essential. The development of economic non-fossil sources is also a priority. A number of IEA member countries wish to retain and improve the nuclear option for the future, at the highest available safety standards, because nuclear energy does not emit carbon dioxide. Renewable sources will also have an increasingly important contribution to make. (v) Improved energy efficiency can promote both environmental protection and energy security in a cost-effective manner. There are significant opportunities for greater energy efficiency at all stages of the energy cycle from production to consumption. Strong efforts by governments and all energy users are needed to realise these opportunities. (vi) Continued research, development and market deployment of new and improved energy technologies make a critical contribution to achieving the objectives outlined above. Energy technology policies should complement broader energy policies. International co-operation in the development and dissemination of energy technologies, including industry participation and co-operation with non-Member countries, should be encouraged. (vii) Undistorted energy prices enable markets to work efficiently. Energy prices should not be held artificially below the costs of supply to promote social or industrial goals. To the extent necessary and practicable, the environmental costs of energy production and use should be reflected in prices. (viii) Free and open trade and a secure framework for investment contribute to efficient energy markets and energy security. Distortions to energy trade and investment should be avoided. (ix) Co-operation among all energy market participants helps to improve information and understanding, and encourages the development of efficient, environmentally acceptable and flexible energy systems and markets worldwide. These are needed to help promote the investment, trade and confidence necessary to achieve global energy security and environmental objectives. The 'Shared Goals' were adopted by IEA Ministers at their 04 June 1993 meeting in Paris, France. The International Energy Agency (IEA) was founded in 1974 as a forum for energy cooperation among 28 member nations. The IEA helped participating countries prepare to reduce the economic risks of oil supply disruptions and to reduce dependence on oil through coordinated and cooperative research efforts. Emergency response to oil supply disruptions has remained a core mission of the International Energy Agency since its founding in 1974. This information pamphlet explains the decisionmaking process leading to an IEA collective action, the measures available – focusing on stockdraw – and finally, the historical background of major oil supply disruptions and the IEA response to them. It also demonstrates the continuing need for emergency preparedness, including the growing importance of engaging key transition and emerging economies in dialogue about energy security. Standing Groups and Committees:- (i) The Standing Group on Emergency Questions (SEQ) is responsible for all aspects of IEA oil emergency preparedness and collective response to supply disruptions. (ii) The Standing Group on the Oil Market (SOM) monitors and analyses short- and medium-term developments in the international oil market to help IEA Member countries react promptly and effectively to changes in market conditions. (iii) The Standing Group on Long-Term Co-operation (SLT) encourages co-operation among IEA member countries to ensure their collective energy security, improve the economic efficiency of their energy sector and promote the environmental protection in provision of energy services. The SLT has established an expert body:- the Working Party on Energy Efficiency. (iv) The Standing Group for Global Energy Dialogue (SGD) is responsible for work with countries and regions outside of the IEA membership, including China, Russia and India. Many SGD projects draw upon both regional and sectoral expertise and are carried out jointly with other IEA divisions. (v) The Committee on Energy Research and Technology (CERT) co-ordinates and promotes the development, demonstration and deployment of technologies to meet challenges in the energy sector. The CERT has established four expert bodies:- the Working Party on Fossil Fuels; the Working Party on Renewable Energy Technologies; the Working Party Energy End-Use Technologies and the Fusion Power Co-ordinating Committee. The IEA provides a framework for more than 40 international collaborative energy research, development and demonstration projects known as Implementing Agreements. The 28 member countries of IEA are committed to taking joint measures

to meet oil supply emergencies. They also have agreed to share energy information, to coordinate their energy policies and to cooperate in the development of rational energy programs. The International Energy Agency (IEA), an autonomous agency, was established in November 1974. Its primary mandate was – and is – two-fold:- to promote energy security amongst its member countries through collective response to physical disruptions in oil supply, and provide authoritative research and analysis on ways to ensure reliable, affordable and clean energy for its 28 member countries and beyond. The IEA carries out a comprehensive programme of energy co-operation among its member countries, each of which is obliged to hold oil stocks equivalent to 90 days of its net imports. The Agency's aims include the following objectives:- (i) Secure member countries' access to reliable and ample supplies of all forms of energy; in particular, through maintaining effective emergency response capabilities in case of oil supply disruptions; (ii) Promote sustainable energy policies that spur economic growth and environmental protection in a global context – particularly in terms of reducing greenhouse-gas emissions that contribute to climate change; (iii) Improve transparency of international markets through collection and analysis of energy data; (iv) Support global collaboration on energy technology to secure future energy supplies and mitigate their environmental impact, including through improved energy efficiency and development and deployment of low-carbon technologies; (v) Find solutions to global energy challenges through engagement and dialogue with non-member countries, industry, international organisations and other stakeholders. The International Energy Agency (IEA) is an autonomous organization which works to ensure reliable, affordable and clean energy for its 28 member countries (in 2014) and beyond. Founded in response to the 1973/74 oil crisis, the IEA's initial role was to help countries co-ordinate a collective response to major disruptions in oil supply through the release of emergency oil stocks to the markets. While this continues to be a key aspect of its work, the IEA has evolved and expanded. It is at the heart of global dialogue on energy, providing authoritative and unbiased research, statistics, analysis and recommendations. Today, the IEA's four main areas of focus are:- (i) energy security:- promoting diversity, efficiency and flexibility within all energy sectors; (ii) economic development:- ensuring the stable supply of energy to IEA member countries and promoting free markets to foster economic growth and eliminate energy poverty; (iii) environmental awareness:- enhancing international knowledge of options for tackling climate change; and (iv) engagement worldwide:- working closely with non-member countries, especially major producers and consumers, to find solutions to shared energy and environmental concerns. The International Energy Agency (IEA) is an autonomous body which was established in November 1974 within the framework of the Organisation for Economic Co-operation and Development (OECD) to implement an inter national energy programme. It carries out a comprehensive programme of energy co-operation among twenty-eight of the OECD thirty member countries. The basic aims of the IEA are:- (i) To maintain and improve systems for coping with oil supply disruptions; (ii) To promote rational energy policies in a global context through co-operative relations with non-member countries, industry and inter national organisations; (iii) To operate a permanent information system on the international oil market; (iv) To improve the world's energy supply and demand structure by developing alternative energy sources and increasing the effi ciency of energy use; (v) To promote international collaboration on energy technology; (vi) To assist in the integration of environmental and energy policies. The IEA member countries are (in August 2008):- Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Japan, Republic of Korea, Luxembourg, Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Spain, Sweden, Switzerland, Turkey, United Kingdom and United States. The European Commission also participates in the work of the IEA. See also Organisation For Economic Co-operation And Development.

INTERNATIONAL FEDERATION OF ACCOUNTANTS = МЕЖДУНАРОДНАЯ ФЕДЕРАЦИЯ БУХГАЛТЕРОВ – International Federation of Accountants (IFAC) is the global organization for the accountancy profession dedicated to serving the public interest by strengthening the profession and contributing to the development of strong international economies. IFAC is comprised of 172 members and associates in 129 countries and jurisdictions, representing approximately 2.5 million accountants in public practice, education, government service, industry, and commerce. IFAC's mission is to serve the public interest by:- (i) contributing to the development of high-quality standards and guidance; (ii) facilitating the adoption and implementation of high-quality standards and guidance; (iii) contributing to the development of strong professional accountancy organizations and accounting firms and to high-quality practices by professional accountants, and promoting the value of professional accountants worldwide; and (iv) speaking out on public interest issues where the accountancy profession's expertise is most relevant. IFAC's vision is that the global accountancy profession be recognized as a valued leader in the development of strong and sustainable organizations, financial markets and economies. IFAC's view is that a fundamental way to protect and serve the public interest is to develop, promote, and enforce high-quality, internationally recognized standards for auditing and assurance, education, ethics, and public sector accounting. These standards and related regulation are essential to ensuring the credibility of information upon which investors and other stakeholders depends and to achieving sustainable global economic development. As a result, IFAC supports the following independent standard-setting boards:- (i) International Auditing and Assurance Standards Board; (ii) International Accounting Education Standards Board; (iii) International Ethics Standards Board for Accountants; and (iv) International Public Sector Accounting Standards Board. It promotes convergence to the standards issued by the boards as well as to the International Financial Reporting Standards (IFRSs) set by the International Accounting Standards Board. IFAC also issues tools, guidance, and resources to support member bodies and their members who are professional accountants in business or employed in small and medium practices – both of these groups play a critical role in the global economy. In addition, it collaborates with member bodies and works with organizations throughout the world to support the growth and development of the accountancy profession in emerging economies. IFAC also issues tools, guidance, and resources to support member bodies and their members who are professional accountants in business or employed in small and medium practices – both of these groups play a critical role in the global economy. In addition, it collaborates with member bodies and works with organizations throughout the world to support the growth and development of the accountancy profession in emerging economies. The International Federation of Accountants was founded on October 07, 1977, in Munich, Germany, at the 11th World Congress of Accountants. IFAC was established to strengthen the worldwide accountancy profession in the public interest by:- (i) developing high-quality international standards in auditing and assurance, public sector accounting, ethics, and education for professional accountants and supporting their adoption and use; (ii) facilitating collaboration and cooperation among its member bodies; (iii) collaborating and cooperating with other international organizations; and (iv) serving as the international spokesperson for the accountancy profession. At the first meeting of the IFAC Assembly and Council in October 1977, a 12-point work program was developed to guide IFAC committees and staff through the first five years of activities. Many elements of this work program are still relevant today. Beginning with 63 founding members from 51 countries in 1977, IFAC's membership has grown to now include 173 members and associates in 129 countries and jurisdictions worldwide. Headquartered in New York, State of New York (NY), the United States.

INTERNATIONAL FEDERATION OF FREIGHT FORWARDERS ASSOCIATIONS = МЕЖДУНАРОДНАЯ ФЕДЕРАЦИЯ АССОЦИАЦИЙ ГРУЗОВЫХ ЭКСПЕДИТОРОВ (или МЕЖДУНАРОДНАЯ ФЕДЕРАЦИЯ ЭКСПЕДИТОРСКИХ АССОЦИАЦИЙ) – The International Federation of Freight Forwarders or, in French, Fédération Internationale des Associations de Transitaires et Assimiliés (FIATA) or, in German, Internationale Föderation der Spediteurorganisationen, was founded in Vienna, Austria on 1926-May-31. FIATA, a non-governmental organization, represents today an industry covering approximately 40 000 forwarding and logistics firms, also known as the 'Architects of Transport', employing around 8–10 million people in 150 countries. FIATA has consultative

status with the Economic and Social Council (ECOSOC) of the United Nations (inter alia ECE, ESCAP, ESCWA), the United Nations Conference on Trade and Development (UNCTAD), and the UN Commission on International Trade Law (UNCITRAL). It is recognised as representing the freight forwarding industry by many other governmental organizations, governmental authorities, private international organizations in the field of transport such as the International Chamber of Commerce (ICC), the International Air Transport Association (IATA), the International Union of Railways (UIC), the International Road Transport Union (IRU), the World Customs Organization (WCO), the World Trade Organization (WTO), etc. In summary FIATA is the largest non-governmental organization in the field of transportation. Its influence is worldwide. Headquartered in Glattbrugg, Switzerland. / Международная Федерация Ассоциаций Экспедиторов и Им Подобных или, как это звучит на Французском языке по месту регистрации федерации, Федэрасьё Этэрнасьёналь дэз Асосьясьё дё Транзитэр э Ассимилье (Эф.И.А.Тэ.А.; Fédération Internationale des Associations de Transitaires et Assimilés (FIATA)), или, на Немецком, Международная Федерация Экспедиторских Организаций или Интернационале Фёдерацион дэр Шпедитойрорганизационен (Internationale Föderation der Spediteurorganisationen).

THE INTERNATIONAL FEDERATION OF INSPECTION AGENCIES (LIMITED) = МЕЖДУНАРОДНАЯ ФЕДЕРАЦИЯ ИНСПЕКЦИОННЫХ АГЕНТСТВ (ЛИМИТИД) – The International Federation of Inspection Agencies Limited (IFIA) is the trade association for inspection agencies and other organizations that provide inspection, testing and certification services internationally. The promotion of integrity is one of the federation's top priorities. IFIA was founded in 1982 and Members and Associate Members include the leading international inspection companies from around the world. They cover every field of inspection and related testing making IFIA's work and views truly representative of the profession. IFIA is a nonprofit making organization. Its objectives are to review and, where possible, to improve the methods, standards, safety procedures and rules used and observed by Members for the benefit of Members and their clients. IFIA promotes cooperation between inspection agencies, laboratories and allied businesses throughout the world in order to:- (i) develop and coordinate technical and professional standards, methods of inspection and testing, and codes of practice; (ii) improve efficiency and establish standard procedures; (iii) develop methods of technical education and training; (iv) represent the profession to Government Authorities and Trade Associations; and (v) promote uniform interpretation of international conventions on safety and cooperate in their implementation. Headquartered in London, the United Kingdom.

INTERNATIONAL FINANCE CORPORATION = МЕЖДУНАРОДНАЯ ФИНАНСОВАЯ КОРПОРАЦИЯ – The International Finance Corporation (IFC) fosters sustainable economic growth in developing countries by financing private sector investment, mobilizing capital in the international financial markets, and providing advisory services to businesses and governments. IFC helps companies and financial institutions in emerging markets create jobs, generate tax revenues, improve corporate governance and environmental performance, and contribute to their local communities. The goal is to improve lives, especially for the people who most need the benefits of growth. IFC invests in enterprises majority-owned by the private sector throughout most developing countries in the world. Developing regions include:- Sub-Saharan Africa; East Asia & the Pacific; South Asia; Europe & Central Asia; Latin America & the Caribbean; and Middle East & North Africa. IFC emphasizes five strategic priorities for maximizing its sustainable development impact:- (i) strengthening its focus on frontier markets, particularly the small and medium enterprise (SME) sector; (ii) building long-term partnerships with emerging global players in developing countries; (iii) addressing climate change, and environment and social sustainability activities; (iv) addressing constraints to private sector investment in infrastructure, health, and education; and (v) developing domestic financial markets through institution building and the use of innovative financial products. For all new investments, IFC articulates the expected impact on sustainable development, and, as the projects mature, IFC assesses the quality of the development benefits realized. IFC offers an array of financial products and services to its clients and continues to develop new financial tools that enable companies to manage risk and broaden their access to foreign and domestic capital markets. IFC offers a range of advisory services in support of private sector development in developing countries. IFC has 182 member countries (2011). IFC's corporate powers are vested in a Board of Governors, to which each country appoints a governor, generally the minister of finance or an equivalent. The creation of IFC in 1956 represented the first step by the global community to foster private sector investment in developing nations. The International Finance Corporation (IFC) is a member of the World Bank Group. An organization of the World Bank. It was created to further economic development in less developed countries (LDCs) by dealing with private investors acting without government guarantors. See also International Development Association. Affiliate of the World Bank created in 1955 to authorize the Bank to lend money to private industry in developing countries. See also World Bank. The International Finance Corporation (IFC) was established in 1956 as a member of the World Bank Group. The IFC promotes capital flow into private investment in developing countries. Headquartered in Washington, DC, the United States. / Международная Финансовая Корпорация (МФК), специализированное учреждение ООН, созданная в 1956 в качестве филиала Международного Банка Реконструкции и Развития (МБРР) для капиталовложений в частный сектор развивающихся стран участниц МФК. В середине 1984 в МФК входили 125 государств. Штабквартира корпорации расположена в Вашингтоне, США. Международная Финансовая Корпорация (МФК; International Finance Corporation (IFC)) – дочерняя организация Международного Банка Реконструкции и Развития (МБРР). Создана в Июле 1956 для капиталовложений в частный сектор развивающихся стран-участниц, преимущественно в прибыльные предприятия, в форме кредитов (74% средств МФК) и участия в акционерных капиталах (26% средств МФК). В 1973 в неё входило 100 стран. МФК не требует государственных гарантий, но обязательным условием получения её кредитов является участие в размере 50% капитала в финансируемых проектах местного или иностранного частного капитала. Сроки предоставления кредитов – от 5 до 15 лет. Размеры процентных ставок – от 5 до 10% годовых. Управляют МФК руководящие органы МБРР. Уставный капитал МФК к середине 1973 достигал 110 миллионов Долларов США, из которых 107 миллионов Долларов США оплачено золотом и свободно конвертируемой валютой. Сумма подписки каждой страны пропорциональна доле её участия в капитале МБРР. Это обеспечивает подавляющее число голосов (около 1/3) США. МФК имеет резервный фонд, сформированный за счёт прибылей (на середину 1973 он составлял 76 миллионов Долларов США). МБРР предоставил МФК кредиты, сумма которых к середине 1973 равнялась 297 миллионам Долларов США, из них было использовано 104 миллиона Долларов США. МФК выпускает и размещает на рынках капиталов свои облигации, перепродаёт акции и обязательства по кредитам. Сумма вложений МФК к середине 1973 составляла 848 миллионов Долларов США (в 203 предприятия 51 страны) при общей стоимости проектов (с учётом частных вложений) в 4.3 миллиарда Долларов США; задолженность по кредитам и вложениям МФК на середину 1973 – 368 миллионов Долларов США.

INTERNATIONAL FINANCIAL REPORTING STANDARDS = МЕЖДУНАРОДНЫЕ СТАНДАРТЫ ФИНАНСОВОЙ ОТЧЁТНОСТИ – The International Financial Reporting Standards (IFRS) are standards and interpretations adopted by the International Accounting Standards Board® (IASB). Many of the standards forming part of IFRS are known by the older name of International Accounting Standards (IAS). IAS were issued between 1973 and 2001 by the board of the International Accounting Standards Committee. In April 2001, the IASB adopted all IAS and continued their development, calling the new standards IFRS. IFRS are used in many parts of the world, including the European Union (EU), Hong Kong, Australia, Pakistan, India, Russia, South Africa, Singapore and Turkey. Currently about 75 countries require the use of IFRS, or some form of modified IFRS. All listed EU companies (including banks and insurance companies) have been required to use IFRS since 2005. Prior to 2005, there were approximately 350 publicly listed companies that used IFRS. The International Financial Reporting Standards (IFRS) is a standard or its interpretation regarding financial

reporting, as adopted by the International Accounting Standards Board® (IASB), London, the United Kingdom. They comprised:- (i) the International Financial Reporting Standard (IFRS); (ii) the International Accounting Standard IAS; and (iii) Interpretations originated by the International Financial Reporting Interpretations Committee (IFRIC; the IFRIC is the interpretative body of the International Accounting Standards Board® (IASB)) or the former Standing Interpretations Committee (SIC). The International Financial Reporting Standards (IFRS) are the financial reporting standards published by the International Accounting Standards Committee (IASC) or the International Accounting Standards Board® (IASB). These regulations, formerly known as International Accounting Standards (IAS), are now referred to as International Financial Reporting Standards (IFRS) to reflect their broader remit. IAS standards retain their current designations. As with IAS, new IFRS rules are consecutively numbered ('IFRS 1', 'IFRS 2' etc). Therefore, both an IAS 1 and an IFRS 1 exist side by side. Reporting under IFRS/IAS values securities by the 'mark to market' method and therefore restricts the formation of undisclosed reserves. The main objective of reporting is to provide information, primarily for investors, to meet the basic criteria of comprehensibility, relevance to decision-making, comparability and reliability. In contrast to the emphasis on creditor protection and the principle of caution typical of traditional German accounting methods, IFRS is guided by the concept of 'fair presentation'. To be admitted to the Prime Standard listing segment of the Frankfurt Stock Exchange, companies are required to report according to IFRS or US GAAP (short for the Generally Accepted Accounting Principles). The International Financial Reporting Standards (IFRS) are a set of international accounting standards stating how particular types of transactions and other events should be reported in financial statements. IFRS are issued by the International Accounting Standards Board. IFRS are sometimes confused with International Accounting Standards (IAS), which are the older standards that IFRS replaced. IAS were issued from 1973 to 2000. The goal with IFRS is to make international comparisons as easy as possible. This is difficult because, to a large extent, each country has its own set of rules. For example, US GAAP are different from Canadian GAAP. Synchronizing accounting standards across the globe is an ongoing process in the international accounting community. The International Financial Reporting Standards (until 2001:- International Accounting Standards (IAS)) are developed and published by the International Accounting Standards Board (IASB), headquartered in London, the United Kingdom. In accordance with the IAS Regulation, the application of IFRS has been mandatory for listed companies headquartered in the European Union since 2005. / строка баланса (item). Всё больше компаний по всему миру выходят на международные рынки, а для подтверждения своего устойчивого финансового положения они публикуют в прессе результаты своей финансовой деятельности. В большинстве стран мира действовали и продолжают действовать свои стандарты ведения бухгалтерского учёта, что может создавать в других странах некоторое непонимание публикуемой на основе национальных стандартов финансовой отчётности. Для разрешения таких проблем и было принято решение о разработке и повсеместном продвижении единых универсальных международных стандартов ведения бухгалтерского учёта или, говоря языком экономистов, финансовой отчётности. Впервые Международные Стандарты Финансовой Отчётности (МСФО; International Financial Reporting Standards (IFRS)) были выпущены в 1973. Их разработывала специально созданная международная организация – Комитет по Международным Стандартам Бухгалтерского Учёта (КМСБУ; International Accounting Standards Committee (IASC)). Первоначально эти стандарты назывались Международными Стандартами Бухгалтерского Учёта (МСБУ; International Accounting Standards (IAS)); часть из них продолжает действовать и по сей день, несмотря на введение в обращение и новых МСФО. В 2000-м этот комитет был реформирован в Палату по Международным Стандартам Бухгалтерского Учёта (ПМСБУ; International Accounting Standards Board (IASB)), которая и занимается разработкой и продвижением МСФО. Штабквартира ПМСБУ расположена в Лондоне, Соединёное Королевство. Переход от национальных стандартов ведения бухгалтерского учёта на МСФО изменяет не только принципы подготовки самой финансовой отчётности, но и принципы когнтроля её качества и аудита. Международные Стандарты Финансовой Отчётности базируются на трёх основных концепциях:- (i) концепция справедливой стоимости; (ii) концепция приоритета экономического содержания над правовой формой; и (iii) концепция прозрачности. Концепция справедливой стоимости заключается в том, что пользователю информации о финансовом состоянии и результатах деятельности предприятия исходя из его реальной стоимости на момент оформления отчётности. Концепция приоритета экономического содержания над правовой формой предполагает под собой то, что не столь важно в какую правовую форму облечён тот или иной факт хозяйственной деятельности предприятия, гораздо важнее что он собой представляет с экономической точки зрения. Концепция прозрачности заключается в том, что несмотря на достаточно большой объём публикуемых сведений о деятельности предприятия, пользователь информации должен увидеть и осознать все существенные детали с тем, чтобы у него создалось представление о реальном финансовом состоянии данного предприятия. Потребность в Международных Стандартах Финансовой Отчётности (МСФО) возникла в 1950-е на фоне интеграции послевоенных экономик. В 1973 бухгалтерские ассоциации десяти стран (Австралия, Великобритания, Германия, Ирландия, Канада, Мексика, Нидерланды, США, Франция и Япония) основали Комитет по Международным Стандартам Бухгалтерского Учёта (IASC). В 2001 он уступил место Совету по Международным Стандартам Финансовой Отчётности (IASB). Организация является некоммерческой, а её штабквартира расположена в Лондоне, Соединённое Королевство. В 2002 в Европейском Союзе был принят закон, обязывающий все публичные компании вести отчётность по МСФО начиная с 2005. На сегодня МСФО в том или ином виде используется практически везде, за исключением США. С 2002 IASB и Совет по Стандартам Финансового Учёта США (FASB) совместно работают над адаптацией МСФО и Американских стандартов GAAP с целью свести их воедино. В 2008 Комиссия США по Ценным Бумагам и Биржам (SEC) опубликовала так называемую 'дорожную карту' по возможному использованию Американскими компаниями МСФО начиная с 2014. Но полноценное принятие МСФО Соединёнными Штатами Америки в обозримом будущем (на Август 2014) оказалось маловероятными (по словам специалистов агентства Фитч Рэйтиньгз Лимитид (Fitch Ratings Ltd)). IASB и FASB пока так и не смогли завершить три из четырёх проектов по сближению стандартов – финансовые инструменты, аренда и договоры страхования.

INTERNATIONAL FORUM ON ACCOUNTANCY DEVELOPMENT = МЕЖДУНАРОДНЫЙ ФОРУМ ПО РАЗВИТИЮ БУХГАЛТЕРСКОГО ДЕЛА – International Forum on Accountancy Development (IFAD) meets 2 or 3 times per year, members are i.a. the Accounting firms, the International Monetary Fund (IMF), the International Accounting Standards Board (IASB), The World Bank, the US Securities and Exchange Commission (SEC), the United Nations Conference on Trade and Development (UNCTAD).

INTERNATIONAL FREIGHT FORWARDER = МЕЖДУНАРОДНЫЙ ГРУЗОВОЙ ЭКСПЕДИТОР – International Freight Forwarder:- freight forwarders that handle booking, paperwork and consolidation of exports. / Под Международными Грузовыми Экспедиторами понимается грузовые экспедиторы, которые занимаются бронированием, оформлением документации ('бумажной работой') и консолидацией грузов для вывоза.

INTERNATIONAL FREQUENCY REGISTRATION BOARD = МЕЖДУНАРОДНАЯ ПАЛАТА ПО РЕГИСТРАЦИИ ЧАСТОТ – The International Frequency Registration Board (IFRB) is an organizational entity under the International Telecommunication Union (ITU). Headquartered in Geneva, Switzerland, IFRB is composed of five full-time elected officials with a rotating chairmanship. IFRB maintains the International Frequency Register, monitors and analyzes all ITU records of frequency use around the world, and makes determinations as to whether or not certain systems are in compliance with the Radio Regulations. The International Frequency Registration Board (IFRB) was created to act as an administrative body to regulate the use of frequencies. It was created at the

International Radio Conference (at Atlantic City, the United States, on 16 May – 02 October, 1947) and approved by the International Telecommunication Conference. The creation of the IFRB introduced an entirely new type of administrative body and new concept in the regulation of radio to the Union. The IFRB would create a master frequency list that would enable the notification and registration of frequency use to be tracked. In addition, the IFRB would notify member countries of new registrations giving them an opportunity to raise concerns and objections. The registration of a new frequency would be completed if it conformed with all provisions of the Regulations. A working group was created to draw up procedures for the IFRB including its duties: the notification and registration of frequencies, undertaking studies and recommendations on frequency usage and the cancellation of frequency recordings. The IFRB would have eleven members from four areas of regional representation:- Americas, Western Europe and Africa, Eastern Europe and North Asia and the rest of the world. Furthermore, the members of the IFRB were to be free of outside influence. They were not on the board to represent their country, but an international public trust. The IFRB would be brought into existence on 1948-January-01; however, the representatives for the IFRB were elected at the conference and held their first meeting on 1947-September-30. A committee convened and examined the frequencies that were in use, but also the frequencies that were needed. This committee also examined and determined the directives for the International Frequency List. It was decided that work on a new International Frequency List would continue after the conference. Following the International Radio Conference the IFRB would work with the Provisional Frequency Board to create a new International Frequency List that would be compiled based on engineering principles. / при Международном Союзе Дальней Связи (МСДС; International Telecommunication Union (ITU)). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INTERNATIONAL FUND FOR AGRICULTURAL DEVELOPMENT = МЕЖДУНАРОДНЫЙ ФОНД СЕЛЬСКОХОЗЯЙСТВЕННОГО РАЗВИТИЯ – The International Fund for Agricultural Development (IFAD), a specialized agency of the United Nations, was established as an international financial institution in 1977 as one of the major outcomes of the 1974 World Food Conference. The Conference was organized in response to the food crises of the early 1970s that primarily affected the Sahelian countries of Africa. The conference resolved that 'an International Fund for Agricultural Development should be established immediately to finance agricultural development projects primarily for food production in the developing countries'. One of the most important insights emerging from the conference was that the causes of food insecurity and famine were not so much failures in food production, but structural problems relating to poverty and to the fact that the majority of the developing world's poor populations were concentrated in rural areas. IFAD is dedicated to eradicating rural poverty in developing countries. Seventy-five per cent of the world's poorest people – 1.4 billion women, children and men – live in rural areas and depend on agriculture and related activities for their livelihoods. Working with rural poor people, governments, donors, non-governmental organizations and many other partners, IFAD focuses on country-specific solutions, which can involve increasing rural poor peoples' access to financial services, markets, technology, land and other natural resources. IFAD's goal is to empower poor rural women and men in developing countries to achieve higher incomes and improved food security. IFAD will ensure that poor rural people have better access to, and the skills and organization they need to take advantage of:- (i) natural resources, especially secure access to land and water, and improved natural resource management and conservation practices; (ii) improved agricultural technologies and effective production services; (iii) a broad range of financial services; (iv) transparent and competitive markets for agricultural inputs and produce; (v) opportunities for rural off-farm employment and enterprise development; and (vi) local and national policy and programming processes. All of IFAD's decisions – on regional, country and thematic strategies, poverty reduction strategies, policy dialogue and development partners – are made with these principles and objectives in mind. As reflected in the strategic framework, IFAD is committed to achieving the Millennium Development Goals, in particular the target to halve the proportion of hungry and extremely poor people by 2015. Through low-interest loans and grants, IFAD works with governments to develop and finance programmes and projects that enable rural poor people to overcome poverty themselves. Since starting operations in 1978, IFAD has invested USD12.0 billion in 860 projects and programmes that have reached some 370 million poor rural people. Governments and other financing sources in recipient countries, including project participants, contributed USD10.8 billion, and multilateral, bilateral and other donors provided approximately another USD8.8 billion in cofinancing. This represents a total investment of about USD19.6 billion. IFAD tackles poverty not only as a lender, but also as an advocate for rural poor people. Its multilateral base provides a natural global platform to discuss important policy issues that influence the lives of rural poor people, as well as to draw attention to the centrality of rural development to meeting the Millennium Development Goals. Membership in IFAD is open to any state that is a member of the United Nations or its specialized agencies or the International Atomic Energy Agency. The Governing Council is IFAD's highest decision-making authority, with 165 Member States represented by a Governor and Alternate Governor and any other designated advisers. The Council meets annually. The Executive Board, responsible for overseeing the general operations of IFAD and approving loans and grants, is composed of 18 members and 18 alternate members. The President, who serves for a four-year term (renewable once), is IFAD's chief executive officer and chair of the Executive Board. The International Fund for Agricultural Development (IFAD) is an UN specialized agency that promotes agricultural development. It is made up of 144 members divided into three categories. Headquartered in Rome, Italy. / сохранение (conservation). Международный Фонд Сельскохозяйственного Развития (МФСР), специализированное агентство ООН, был создан в 1977 для мобилизации дополнительных ресурсов и предоставления их на льготных условиях развивающимся странам и межправительственным организациям членам МФСР. Штабквартира фонда расположена в Риме, Италия.

INTERNATIONAL GAS UNION = МЕЖДУНАРОДНЫЙ СОЮЗ ПО ГАЗУ – As per today (2011), the International Gas Union (IGU) has 75 Charter members and 35 Associate members in 74 countries. The member countries are marked in yellow below. The International Gas Union was founded in 1931. It is a worldwide non-profit organization registered in Vevey, Switzerland with the present Secretariat located in Oslo, Norway. The objective of IGU is to promote the technical and economic progress of the gas industry. The members of IGU are associations and entities of the gas industries in 74 countries. It cooperates with many global energy organisations. IGU's working organisation covers all domains of the gas industry from exploration and production of natural gas on- or offshore, pipeline and piped distribution systems to customers' premises and combustion of the gas at the point of use. The programme towards the World Gas Conference, which takes place every three years, is implemented by Working Committees. It may vary from time to time but for the triennium 2006–09 the areas of interest are covered by the following Working and Programme Committees and Task Forces:- (i) Exploration & Production of Gas; (ii) Gas storage; (iii) Transmission of Gas; (iv) Distribution of Gas; (v) Utilisation of Gas; (vi) Sustainable Development; (vii) Strategy, Economics and Regulation; (viii) Developing Gas Markets; (ix) LNG; (x) Task Force on Research and Development; and (xi) Task Force on Gas Market Integration (GMI). Vision:- recognising that natural gas has an important part to play in satisfying the global need for an environment-friendly energy source, IGU will be the most influential, effective and independent non-profit organization, while serving as the spokesman for the gas industry world-wide. Supplemented by Mission:- (i) IGU will actively, directly and through its members promote the technical and economic progress of the global gas industry. (ii) IGU will work towards improving the competitiveness of gas in the world energy markets. By promoting the development and application of new technologies and best practises, IGU will help optimise the economics of the entire gas chain, while emphasising sound environmental performance, safety and reliability. (iii) IGU – serving as a global information clearing house – will promote transfer of technology and know-how. (iv) In carrying out this mission, IGU will maximise value to its members and to gas customers. Objectives:-

in striving towards the vision and fulfilling the mission, IGU will regarding:- (i) economy:- promote all activities within the entire gas chain, which can add to the technical and economic progress of gas; (ii) customers:- encourage development of good customer services and customer relations; (iii) technology:- encourage research and development towards new and better technologies for the gas community; (iv) safety:- promote the safe production, transmission, distribution and utilisation of gas; (v) environment:- encourage and promote development of clean technology, renewable energy applications and other activities, which will add to the environmental benefits of gas; (vi) international gas trade:- encourage international trade in gas by supporting non-discriminatory policies and sound contracting principles and practises; (vii) legal:- promote and contribute to the development of legislation concerning:- (a) establishing equitable, non-discriminatory and reasonable environmental and energy efficiency regulations; (b) efforts to establish appropriate and relevant international standards; as well as (c) promote and participate in the exchange of information relating to regulatory processes; (viii) co-operation:- enhance partnership with industry and manufacturers, and co-operation with Governments, policy makers and international energy related organizations; and (ix) promote the exchange of information among members in order to help them improving the efficiency and safety of gas operations. See also Eurogas.

INTERNATIONAL GRAINS COUNCIL = МЕЖДУНАРОДНЫЙ СОВЕТ ПО ЗЕРНОВЫМ – The International Grains Agreement 1995 comprises two conventions, one on grains trade and the other on food aid, with the Food Aid Convention being tied to the existence of the Grains Trade Convention. Both conventions are administered by the International Grains Council (IGC), set up under the Grains Trade Convention. The current Grains Trade Convention (GTC 1995) and Food Aid Convention (FAC 1999) are the latest in a long series of multilateral cooperation instruments, in operation since 1949 for grains trade and since 1967 for food aid matters. The Grains Trade Convention (GTC) applies to trade in Wheat, Maize, Barley, Sorghum and other grains, and their products. It seeks to further international cooperation in grains trade; to promote expansion, openness and fairness in the grains sector; to contribute to grain market stability and to enhance world food security. These objectives are sought by improving market transparency through information-sharing, analysis and consultation on grain market and policy developments. The Convention also establishes the International Grains Council as an intergovernmental forum for cooperation in grains trade matters. The IGC includes all parties to the Grains Trade Convention. It holds two regular sessions each year, usually in June and December. Its functions are to oversee the implementation of the GTC; to discuss current and prospective world grain market developments; and to monitor changes in national grain policies and their market implications. The Council may develop and sponsor grains-related projects in member countries for financing by the UN Common Fund for Commodities. The IGC Secretariat provides administrative services for both the International Grains Council and the Food Aid Committee. It provides an independent source of authoritative information and analyses of world grain market developments and monitors shipments under the Food Aid Convention. The Food Aid Committee consists of all parties to the Food Aid Convention. Donor members oversee the implementation of the Convention and exchange information on their food aid operations. The Committee holds two regular meetings a year, usually at the same time as the IGC. The Food Aid Committee monitors the performance of members' undertakings under the Convention, on the basis of records maintained by the IGC Secretariat. It shares information on policy developments affecting food aid and discusses the world food situation and prospects in developing countries. It also considers ways in which donors' aid efforts may best achieve their objectives, with emphasis on the monitoring and evaluation of the impact and effectiveness of food aid operations. The International Grains Council (IGC) is an intergovernmental organization concerned with grains trade. It administers the Grains Trade Convention, 1995. The IGC Secretariat, based in London since 1949, also services the Food Aid Committee, established under the Food Aid Convention 1999. Institutionalised multilateral grains cooperation goes back at least to 1934, when a comprehensive International Wheat Agreement was negotiated between a number of exporting and importing countries in response to persistent problems of oversupply and low prices, and spreading agricultural protectionism. Its ambitious 'economic provisions' could not be made to operate effectively, but the Wheat Advisory Committee (which became the International Wheat Council in 1942) remained in being as a focus for discussions and negotiations and a clearing house for information. After several attempts, a new International Wheat Agreement was brought into effect in 1949. Price stability and assurance of supplies to importing countries were its major objectives, reflecting the post-war background of shortages and high prices in world Wheat markets. This Agreement took the form of a multilateral contract between Wheat exporting and importing countries, involving mandatory price ranges and supply and purchase commitments. However, unlike the 1934 agreement, it placed no limits on members' exports or production. The seat of the International Wheat Council (IWC) was established in London. Similar Wheat Agreements were successively implemented in 1953, 1956, 1959 and 1962. When surpluses reappeared in the mid-1950s, major exporting countries insulated their mounting stocks from the market to keep prices within the limits specified under the Agreement. They also sought to expand sales on special terms to countries not yet able to finance large commercial imports. But in the mid-1960s, when repeated monsoon failures in the Indian sub-continent led to a sudden increase in trade and an unexpected drop in exporting countries' stocks, the threat of shortage awakened international concerns about world food security. The International Grains Agreement 1967, negotiated in the context of the GATT (short for the General Agreement on Tariffs and Trade) Kennedy Round, reflected the tightening grain markets and the wish of existing food aid donors to share their efforts with other countries. It consisted of two legally separate but linked instruments:- a Wheat Trade Convention (WTC) with 'substantive economic provisions' and the first Food Aid Convention (FAC). Shortly after the entry into force of the Grains Agreement, surpluses reappeared on Wheat markets and export prices fell below the specified minima. The mechanisms provided in the WTC to deal with such a situation could not be made to work effectively. The major exporting countries then agreed between themselves on steps, including planting reductions, to bring supplies into better balance with demand. The 'substantive economic provisions' under the WTC were suspended in 1969, and the successor Wheat Trade Convention of 1971 included none. The FAC 1967 involved a pledge by its members to provide annual food aid totalling 4.5 million tons of grain to developing countries. Commitments were expressed in tonnages, guaranteeing minimum food aid levels even if scarcity forced up world grain prices. Donors were free to decide how to distribute their aid, but the FAC encouraged them to channel some multilaterally. From the outset, FAC food aid has been an important resource for the World Food Programme in support of its various projects. The FAC was renewed with little change in 1971. Massive, unexpected purchases by the Soviet Union in the mid-1970s caused world grain stocks to fall to exceptionally low levels and prices to soar. Many developing countries became concerned about the security of their future supplies, and a UN World Food Conference was convened in 1974, in response to what became known as the 'World Food Crisis'. The Conference resolved that at least 10 m. tons of grains should be provided annually as food aid, and urged governments to discuss establishing grain reserves, located at strategic points. Wheat stocks were the focus of an unsuccessful conference in 1978–79 which attempted to negotiate a new Wheat Trade Convention (WTC). Differences over the appropriate price levels to trigger stock actions, and other technical points, could not be overcome. The WTC 1971 was extended unchanged to 1986. Under the FAC 1980, minimum obligations of donor members were raised to a total of 7.6 million tons, as part of a joint effort of the international community to meet the World Food Conference target. Rice was brought within the coverage of the Convention. Members began to make greater use of the Food Aid Committee as a forum to discuss their food aid policies and to review experience with food aid deliveries. The FAC was renewed in 1986. Global aid shipments exceeded 10 million tons in most years under these two Conventions. The basic objective of previous Conventions was maintained in the Food Aid Convention of 1995, although it incorporated a few changes, notably adding pulses (e.g., grain legumes) to the list of products which could be supplied. During the 1980s and 1990s, the international trading environment moved away from regulatory-type commodity agreements, with increasing privatisation, deregulation and decentralisation

of grain production and trade activities. The IWC's information, analysis and consultation functions were strengthened and more attention was given to maize and other coarse grains, which, in 1986, were formally incorporated under a new WTC. Inauguration of annual IGC Grains Conferences in 1992 provided enhanced opportunities for contacts between governments and world grain industry leaders. In the changing trading environment ushered in by the WTO Agreement, a new International Grains Agreement came into force on 1995-July-01, with two linked Conventions concerning grains trade and food aid matters. Under the Grains Trade Convention, 1995 (GTC), the International Wheat Council (IWC) became the International Grains Council (IGC), giving recognition to the full coverage of coarse grains and their products in its activities. The IGC's Market Conditions Committee was given a firmer institutional basis to monitor all matters affecting the world grain economy and analyse supply and demand developments and policies. In 2004, its meetings became full-day dialogue forums, including expert presentations on specific topics such as the impact on grain of meat trade and the increasing use of biofuels. The Food Aid Convention 1995 was opened for renegotiation in December 1997. This followed the Recommendations in respect of Least-Developed and Net Food-Importing Developing Countries adopted by WTO Ministers at their Singapore Conference in December 1996 and the Declaration on World Food Security and the Plan of Action adopted by the Rome World Food Summit in the same year. There had also been significant changes in the food aid policies of several donor countries. The renegotiation was completed in April 1999 and the new Convention brought into force with effect from 1999-July-01. In June 2004, FAC members undertook a renegotiation of the Convention 1999 'to strengthen its capacity to meet identified needs when food aid is the appropriate response'. However, the Committee decided this would need to await the outcome of the trade-related food aid issues being addressed in the WTO agriculture negotiations. In the meantime, members agreed that the existing Convention should be extended for two years after 2005-July-01. / Генерального Соглашения о Тарифах и Торговле (ГСТТ или ГЯТ (GATT)) .

INTERNATIONAL GRAY SCALE = МЕЖДУНАРОДНАЯ СЕРАЯ ШКАЛА (или МЕЖДУНАРОДНАЯ ШКАЛА СЕРОГО) – International Gray Scale is a scale distributed through the American Association of Textile Chemists and Colorists (AATCC) that is used as a comparison standard to rate degrees of fading from 5 (negligible or no change) to 1 (severe change). The term is sometimes applied to any scale of quality in which 5 is excellent and 1 is poor. / Шкала Серого – шкала, состоящая из ряда полей с определёнными величинами оптической плотности от белого до чёрного, используемая для контрольных измерений.

INTERNATIONAL IMPORT CERTIFICATE = МЕЖДУНАРОДНОЕ СВИДЕТЕЛЬСТВО О ПРИВОЗЕ (или СЕРТИФИКАТ О МЕЖДУНАРОДНОМ ИМПОРТЕ) – International Import Certificate is a document required by the importing country indicating that the importing country recognizes that a controlled shipment is entering their country. The importing country pledges to monitor the shipment and prevent its re-export, except in accordance with its own export control regulations.

INTERNATIONAL INSTITUTE FOR COTTON = МЕЖДУНАРОДНЫЙ ИНСТИТУТ ХЛОПЧАТНИКА – The International Institute for Cotton:- active in the 1960s through 1980s of the XX century, based on the financing by the member countries governments, what appeared to be not enough for creation of effective, unified world cotton promotion programme. After a series of re-structuring, financial problems and shifts of the legal ownership, the Institute had unfortunately lost its position and meaning, which could have allowed it to retain the Cotton Emblem and its wide-scale promotion opportunities. International Institute for Cotton (IIC):- With 10 other cotton-exporting nations, the United States participates in the IIC, established in 1966. The IIC's purpose is to increase throughout the world the consumption of raw cotton and cotton products through programs of utilization and marketing research, sales promotion, education, and public relations. The Institute is currently operating cotton market development programs in Japan and 13 countries in Western Europe. The active members of the IIC – Argentina, Brazil, Greece, India, Ivory Coast, Mexico, Nigeria, Spain, Tanzania, Uganda and the United States – account for about 40 percent of world cotton production and exports. Membership is open to all cotton-exporting countries that are members of the United Nations or the UN Food and Agriculture Organization. In the field of utilization research, the IIC's program, in cooperation with leading research institutes and universities of Western Europe, provides for basic research to improve the qualities of cotton products. The research is concentrated on chemical finishing, with special emphasis given to treatments to provide more easy-care and better wrinkle-resistant properties. Research into the unique properties of cotton for adaptation to open end spinning is also a high priority. Sales promotion activities are conducted in the 13 program countries. The broad objective is to stimulate demand for cotton products generally by emphasizing the specific advantages the fiber imparts to the product. The International Institute for Cotton (IIC), a nonprofit organization of cotton producing countries founded in 1966. Its purpose is to increase world consumption of cotton and cotton products through utilization research, market research, sales promotion, education, and public relations. Headquartered in Brussels, Belgium. In the mid-1960s, the ICAC held discussions on how cotton should react to the competitive challenge of synthetic fibers. It was decided that promotion was the responsibility of producers and that a producers-only organization, the International Institute for Cotton, be established for cotton market development. Producer-only or producer dominated organizations have not been successful in cotton. The producer caucus of the late 1970s became a splinter group which faded away. The producer funded International Institute for Cotton was in existence for nearly 30 years, but suffered during most of them from lack of funding. Organizations which require large sums of money have also not been successful in cotton. The International Institute for Cotton had difficulty maintaining a budget of USD5 million. The International Institute for Cotton received two-thirds of its financial support over the years from the USA; the contributions requested from other countries discouraged membership and led eventually to the withdrawal of several of its core members in later years. In the end, the Institute was forced to close in 1994 from lack of participation by a sufficient number of countries.

INTERNATIONAL INSTITUTE FOR THE UNIFICATION OF PRIVATE LAW = МЕЖДУНАРОДНЫЙ ИНСТИТУТ ПО УНИФИКАЦИИ ЧАСТНОГО ПРАВА – Institut International Pour L'Unification Du Droit Prive (UNIDROIT) or International Institute for the Unification of Private Law is an international governmental organization headquartered in Rome, Italy, whose tasks are to study needs and methods for modernising, harmonising and coordinating private and in particular commercial law as between States and groups of States and to formulate uniform law instruments, principles and rules to achieve those objectives. Membership of UNIDROIT is restricted to States acceding to the UNIDROIT Statute. UNIDROIT's 63 member States (in 2017) are drawn from the five continents and represent a variety of different legal, economic and political systems as well as different cultural backgrounds. See also Institut International Pour L'Unification Du Droit Prive. / Смотрите также Международный Институт По Унификации Частного Права или Институт Энтэрнасьёналь Пур Л'Юнификасьён Дю Друа Приве (Institut International Pour L'Unification Du Droit Prive).

INTERNATIONAL INVESTMENT POSITION = МЕЖДУНАРОДНАЯ ИНВЕСТИЦИОННАЯ ПОЗИЦИЯ – International Investment Position (IIP):- since 2006 the European Central Bank (ECB) has compiled the international investment position (IIP) for the Euro area as a whole at quarter ends and publishes it with the detailed quarterly balance of payments (BOP) four months after the date to which it relates. The IIP is published in fuller detail (including changes in outstanding amounts stemming from factors other than transactions, broken down by price changes, exchange rate changes and other adjustments) at year ends. These statements of the external assets and liabilities of the Euro area reveal the structure of the Euro area's external financial position and complement the BOP data for monetary policy and foreign exchange market analysis. Periodic stock data also provide a check on the plausibility of BOP flows. The quarterly IIP data were developed, in part, for incorporation into the Euro area accounts. The breakdown required quarterly is very similar to that in the financial account of the quarterly BOP, although in the financial derivatives category, asset and liability positions

are shown separately. The annual IIP data are also similar, but with more detail on direct investment, where equity in listed companies appears at both book and market value (the latter being the recommended approach in international standards for valuation in the IIP). For practical reasons, direct investment in unlisted companies is shown at book value only, although, since in principle it draws on the accounts of foreign affiliates, it should reflect reinvested earnings. The annual IIP is accompanied by a geographical breakdown of the Euro area's external assets and liabilities, but presents essentially the same breakdown of counterparts as that accompanying the quarterly BOP. As in the case of the BOP, there is no geographical breakdown in the IIP of portfolio investment liabilities, financial derivatives or reserve assets. The breakdown of portfolio investment liabilities cannot be calculated from the information available from ECB sources; some counterpart information is available from the IMF's Coordinated Portfolio Investment Survey and related IMF surveys, the results of which become available later than the ECB's annual IIP. Euro area IIP, including a geographical breakdown (released annually, about ten and a half months after the year-end to which the data relate). The quarterly BOP and the annual IIP statistics provide a geographical breakdown, by country or group of countries, of counterparties to the Euro area's external transactions and positions.

INTERNATIONALIZED DOMAIN NAMES = ИНТЕРНАЦИОНАЛИЗИРОВАННЫЕ ДОМЕННЫЕ ИМЕНА – Internationalized Domain Names (IDNs) are domain names that include characters used in the local representation of languages that are not written with the twenty-six letters of the basic Latin alphabet 'a–z'. An IDN can contain Latin letters with diacritical marks, as required by many European languages, or may consist of characters from non-Latin scripts such as Arabic or Chinese. Many languages also use other types of digits than the European '0–9'. The basic Latin alphabet together with the European-Arabic digits are, for the purpose of domain names, termed 'ASCII characters' (ASCII = American Standard Code for Information Interchange). These are also included in the broader range of 'Unicode characters' that provides the basis for IDNs. The 'hostname rule' requires that all domain names of the type under consideration here are stored in the DNS using only the ASCII characters listed above, with the one further addition of the hyphen '–'. The Unicode form of an IDN therefore requires special encoding before it is entered into the DNS. The following terminology is used when distinguishing between these forms:- A Domain Name consists of a series of 'labels' (separated by 'dots'). The ASCII form of an IDN label is termed an 'A-label'. All operations defined in the DNS protocol use A-labels exclusively. The Unicode form, which a user expects to be displayed, is termed a 'U-label'. The difference may be illustrated with the Hindi word for 'Test' – □□□□□ – appearing here as a U-label would (in the Devanagari script). A special form of 'ASCII compatible encoding' (abbreviated ACE) is applied to this to produce the corresponding A-label:- xn--11b5bs1di. A domain name that only includes ASCII letters, digits, and hyphens is termed an 'LDH label'. Although the definitions of A-labels and LDH-labels overlap, a name consisting exclusively of LDH labels, such as 'icann.org' is not an IDN. / Интернационализированные Доменные Имена (ИДИ) представляют собой доменные имена, включающие символы, используемые в местном графическом представлении языков, письменность которых не основывается на двадцати шести буквах базового Латинского алфавита (a-z). ИДИ могут содержать Латинские символы с диакритическими знаками, необходимые во многих Европейских языках, или могут состоять из символов, не входящих в Латинский алфавит, например, символов Арабского или Китайского языков. Во многих языках также используются другие типы цифр вместо Европейских (0–9). Базовый Латинский алфавит в совокупности с Европейско-Арабскими цифрами в контексте системы доменных имён называется 'символами ASCII' (где ASCII – Американский Стандартный Код Обмена Информацией). Это множество символов также входит в состав более широкого диапазона 'символов Юникода', создающих основу интернационализированных доменных имён (ИДИ). 'Правило именования узлов' требует, чтобы все доменные имена рассматриваемого здесь типа хранились в DNS только с использованием перечисленных выше символов ASCII, за исключением единственного дополнения в виде дефиса '–'. Поэтому представление ИДИ в форме Юникода требует специального кодирования перед вводом в СДИ (DNS). Для проведения различия между этими формами используется следующая терминология:- Доменное Имя состоит из серии 'меток' (разделяемых 'точками'). Форма метки ИДИ в кодировке ASCII называется 'A-меткой'. При выполнении всех определённых в СДИ операций используются исключительно A-метки. Метка в форме Юникода, которую пользователь ожидает увидеть в адресной строке, называется 'U-меткой'. Это различие можно проиллюстрировать на примере слова 'Тест' на языке Хинди – □□□□□, которое приведено здесь как U-метка (с использованием письменности Деванагари). После применения к этой метке особой формы 'ASCII-совместимого кодирования' (сокращенно ACE) создаётся соответствующая A-метка:- xn--11b5bs1di. Доменное Имя, содержащее только ASCII, цифры и дефисы, называется 'LDH-меткой'. Хотя определения A-меток и LDH-меток пересекаются, имя, состоящее исключительно из LDH-меток, такое как 'icann.org' не является ИДИ.

INTERNATIONAL LABOR ORGANIZATION = МЕЖДУНАРОДНАЯ ОРГАНИЗАЦИЯ ТРУДА – International Labor Organization or International Labour Organization (ILO) is a specialized agency of the United Nations (UN) dedicated to improving labor conditions and living standards throughout the world. Established in 1919 by the Treaty of Versailles as an affiliated agency of the League of Nations, the ILO became the first affiliated specialized agency of the United Nations in 1946. In recognition of its activities, the ILO was awarded the Nobel Prize for Peace in 1969. The functions of the ILO include the development and promotion of standards for national legislation to protect and improve working conditions and standards of living. The ILO also provides technical assistance in social policy and administration and in workforce training; fosters cooperative organizations and rural industries; compiles labor statistics and conducts research on the social problems of international competition, unemployment and underemployment, labor and industrial relations, and technological change (including automation); and helps to protect the rights of international migrants and organized labor. In its first decade the ILO was primarily concerned with legislative and research efforts, with defining and promoting proper minimum standards of labor legislation for adoption by member states, and with arranging for collaboration among workers, employers, government delegates, and ILO professional staff. During the worldwide economic depression of the 1930s the ILO sought ways to combat widespread unemployment. With the postwar breakup of the European colonial empires and the expansion of ILO membership to include poorer and less developed countries, the ILO addressed itself to new issues, including the social problems created by the liberalization of international trade, the problem of child labor, and the relationship between working conditions and the environment. Among intergovernmental organizations the ILO is unique in that its approximately 175 member states are represented not only by delegates of their governments but also by delegates of those states' employers and workers, especially trade unions. National representatives meet annually at the International Labor Conference. The ILO's executive authority is vested in a 56-member Governing Body, which is elected by the Conference. The International Labor Office in Geneva, Switzerland, composed of the permanent Secretariat and professional staff, handles day-to-day operations under the supervision of an appointed director general. The ILO has international civil servants and technical-assistance experts working in countries throughout the world. Among the ILO's many publications are the International Labor Review and the Year Book of Labor Statistics. International Labor Organization (ILO):- based in Geneva, Switzerland, it is one of the oldest components of the United Nations (UN) system of specialized agencies and has been involved over the years in appraising and seeking to improve and regulate conditions for seafarers. In its unusual tripartite way, involving official representatives of government, employer and employee interests, its joint Maritime Commission have had in hand moves on the employment of foreign seafarers to urge the application of minimum labor standards, on crew accommodation, accident prevention, medical examination and medical care, food and catering and officer's competency. Hedaquartered in Genève,

Switzerland. The International Labour Organization (ILO) is the only tripartite United Nations agency for the world of work. It sets international labor standards, promotes rights at work and encourages decent employment opportunities, the enhancement of social protection and the strengthening of dialogue on work-related issues. The ILO has a unique structure, bringing together governments, employers' and workers' representatives. The ILO has 187 member States and is one of the oldest The ILO is founded as part of the Treaty of Versailles that ended the First World War, to reflect the belief that universal and lasting peace cannot be achieved without social justice. 1919 The ILO becomes the first specialized agency of the United Nations. 1946 The Declaration of Philadelphia states that labor is not a commodity and establishes basic human and economic rights for States to uphold. 1944 The Organization is awarded the Nobel Peace Prize. 1969 UN agencies. The ILO's Secretariat has its headquarters in Geneva, Switzerland, and a global network of technical experts and fi eld offi ces in more than 40 countries. The International Labour Conference (ILC) meets once a year to adopt new international labor standards and to approve the ILO's work plan and budget. The Governing Body is the executive council of the ILO and meets three times a year in Geneva. Creating Jobs:- Promoting economies that generate opportunities for investment, entrepreneurship, skills development, job creation and sustainable livelihoods. Promoting Social Dialogue:- Strong and independent workers' and employers' organizations are central to increasing productivity, avoiding disputes at work and building cohesive societies. Extending Social Protection:- Ensuring that women and men enjoy working conditions that are safe, allow adequate free time and rest, take into account family and social values, provide for adequate compensation in case of lost or reduced income and permit access to adequate health care. Guaranteeing Rights At Work:- Obtaining recognition and respect for the rights of workers. All workers, and in particular disadvantaged or poor workers, need representation, participation and laws that protect their rights. Tripartism And Social Dialogue:- Underlying the ILO's work is the importance of cooperation between governments and employers' and workers' organizations in fostering social and economic progress. The ILO aims to ensure that it serves the needs of working women and men by bringing together governments, employers and workers to set labor standards, develop policies and devise programmes. The very structure of the ILO, where workers and employers together have an equal voice with governments in its deliberations, shows social dialogue in action. It ensures that the views of the social partners are closely reflected in ILO labor standards, policies and programmes. The ILO encourages this tripartism within its constituents – employers, workers and member States, by promoting a social dialogue between trade unions and employers in formulating, and where appropriate, implementing national policy on social, economic, and many other issues. Main Bodies:- The ILO accomplishes its work through three main bodies which comprise governments', employers' and workers' representatives:- (i) The International labour Conference sets the International labor standards and the broad policies of the ILO. It meets annually in Geneva. Often called an international parliament of labour, the Conference is also a forum for discussion of key social and labour questions. (ii) The Governing body is the executive council of the ILO. It meets three times a year in Geneva. It takes decisions on ILO policy and establishes the programme and the budget, which it then submits to the Conference for adoption. (iii) the International Labour Office is the permanent secretariat of the International Labour Organization. It is the focal point for International Labour Organization's overall activities, which it prepares under the scrutiny of the Governing Body and under the leadership of the Director-General. The work of the Governing Body and of the Office is aided by tripartite committees covering major industries. It is also supported by committees of experts on such matters as vocational training, management development, occupational safety and health, industrial relations, workers' education, and special problems of women and young workers. Regional meetings of the ILO member States are held periodically to examine matters of special interest to the regions concerned. Standards Supervisory System:- International labour standards are backed by a supervisory system that is unique at the international level and that helps to ensure that countries implement the conventions they ratify. The ILO regularly examines the application of standards in member states and points out areas where they could be better applied. If there are any problems in the application of standards, the ILO seeks to assist countries through social dialogue and technical assistance. The ILO has developed various means of supervising the application of Conventions and Recommendations in law and practice following their adoption by the International Labour Conference and their ratification by States. There are two kinds of supervisory mechanism. Partnering For Development:- Since the early 1950s, the ILO has been providing technical cooperation to countries on all continents and at all stages of economic development. Projects are implemented through close cooperation between recipient countries, donors, and the ILO, which maintains a network of country offices worldwide. Development cooperation builds bridges between the ILO's standard-setting role and women and men everywhere. It is essential to give people decent work opportunities and an important means of assisting our constituents – workers, employers and governments – in making the Decent Work Agenda a reality. Simply put, development cooperation supports the technical, organizational and institutional capacities of ILO constituents for them to put in place meaningful and coherent social policy and ensure sustainable development. With over 50 years of experience in development cooperation on all continents and at all stages of development, the ILO today has over 600 programmes and projects in more than 100 countries – with the support of 120 development partners. Programme And Budget:- The Programme and Budget of the Organization which sets out the strategic objectives and expected outcomes for the Organization's work is approved every two years by the International Labour Conference. Mission And Impact Of The ILO:- Promoting jobs, Protecting people. The International Labour Organization (ILO) is devoted to promoting social justice and internationally recognized human and labor rights, pursuing its founding mission that social justice is essential to universal and lasting peace. Only tripartite UN agency, the ILO brings together governments, employers and workers representatives of 187 member States, to set labor standards, develop policies and devise programmes promoting decent work for all women and men. Today, the ILO's Decent Work agenda helps advance the economic and working conditions that give all workers, employers and governments a stake in lasting peace, prosperity and progress. Four Strategic Objectives At The Heart Of The Decent Work Agenda:- (i) Set and promote standards and fundamental principles and rights at work; (ii) Create greater opportunities for women and men to decent employment and income; (iii) Enhance the coverage and effectiveness of social protection for all; and (iv) Strengthen tripartism and social dialogue. Unmatched Expertise And Knowledge About The World Of Work:- In support of its goals, the ILO offers unmatched expertise and knowledge about the world of work, acquired over almost 100 years of responding to the needs of people everywhere for decent work, livelihoods and dignity. It serves its tripartite constituents – and society as a whole – in a variety of ways, including:- (i) Formulation of international policies and programmes to promote basic human rights, improve working and living conditions, and enhance employment opportunities; (ii) Creation of international labour standards backed by a unique system to supervise their application; (iii) An extensive programme of international technical cooperation formulated and implemented in an active partnership with constituents, to help countries put these policies into practice in an effective manner; and (iv) Training, education and research activities to help advance all of these efforts. History of the ILO:- As the ILO celebrates its 100th anniversary in 2019, it is timely to reflect on the many life-changing events which are linked to the ten decades of ILO history. The Organization has played a role at key historical junctures – the Great Depression, decolonization, the creation of Solidarność in Poland, the victory over apartheid in South Africa – and today in the building of an ethical and productive framework for a fair globalization. It was created in 1919, as part of the reaty of Versailles that ended World War I, to reflect the belief that universal and lasting peace can be accomplished only if it is based on social justice. The Constitution of the ILO was drafted in early 1919 by the Labor Commission, chaired by Samuel Gompers, head of the American Federation of Labor (AFL) in the United States. It was composed of representatives from nine countries:- Belgium, Cuba, Czechoslovakia, France, Italy, Japan, Poland, the United Kingdom and the United States. The process resulted in a tripartite organization, the only one of its kind, bringing together representatives of governments, employers and

workers in its executive bodies. The driving forces for the ILO's creation arose from security, humanitarian, political and economic considerations. The founders of the ILO recognized the importance of social justice in securing peace, against a background of the exploitation of workers in the industrializing nations of that time. There was also increasing understanding of the world's economic interdependence and the need for cooperation to obtain similarity of working conditions in countries competing for markets. Reflecting these ideas, the Preamble of the ILO Constitution states:- (i) Whereas universal and lasting peace can be established only if it is based upon social justice; (ii) And whereas conditions of labor exist involving such injustice, hardship and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperilled; and an improvement of those conditions is urgently required; and (iii) Whereas also the failure of any nation to adopt humane conditions of labor is an obstacle in the way of other nations which desire to improve the conditions in their own countries. The areas of improvement listed in the Preamble remain relevant today, including the regulation of working time and labour supply, the prevention of unemployment and the provision of an adequate living wage, social protection of workers, children, young persons and women. The Preamble also recognizes a number of key principles, for example equal remuneration for work of equal value and freedom of association, and highlights, among others, the importance of vocational and technical education. Early Years:- The ILO moved to Geneva in the summer of 1920, with France's Albert Thomas as its first Director. Nine International Labour Conventions and 10 Recommendations were adopted in less than two years. These standards covered key issues, including:- (i) hours of work, (ii) unemployment, (iii) maternity protection, (iv) night work for women, (v) minimum age, and (vi) night work for young persons. A Committee of Experts was set up in 1926 to supervise the application of ILO standards. The Committee, which still exists today, is composed of independent jurists responsible for examining government reports and presenting each year to the Conference its own report on the implementation of ILO Conventions and Recommendations. The Great Depression, with its resulting massive unemployment, soon confronted Britain's Harold Butler, who succeeded Albert Thomas as Director in 1932. Realizing that handling labour issues also requires international cooperation, the United States became a Member of the ILO in 1934, although it continued to stay out of the League of Nations. The American, John Winant, took over as head of the ILO in 1939 – just as the Second World War was imminent. He moved the ILO's headquarters temporarily to Montreal, Canada, in May 1940 for reasons of safety. His successor, Ireland's Edward Phelan, had helped to write the 1919 Constitution and played an important role once again during the Philadelphia meeting of the International Labour Conference, in the midst of the Second World War. Government delegates, employers and workers from 41 countries adopted the Declaration of Philadelphia as an annex to the ILO Constitution. The Declaration still constitutes the Charter of the aims and objectives of the ILO. The Declaration sets out the key principles for the ILO's work after the end of World War II. These include that 'labor is not a commodity', and that 'all human beings, irrespective of race, creed or sex, have the right to pursue both their material well-being and their spiritual development in conditions of freedom and dignity, of economic security and equal opportunity'. Going Global:- In 1946, the ILO became a specialized agency of the newly formed United Nations. America's David Morse was Director-General from 1948–1970, when the number of Member States doubled and the Organization took on its universal character. Industrialized countries became a minority among developing countries, the budget grew five-fold and the number of officials quadrupled. The ILO established the Geneva-based International Institute for Labour Studies in 1960 and the International Training Centre in Turin in 1965. The Organization won the Nobel Peace Prize on its 50th anniversary in 1969. Under Britain's Wilfred Jenks, Director-General from 1970–73, the ILO advanced further in the development of standards and mechanisms for supervising their application, particularly the promotion of freedom of association and the right to organize. His successor, Francis Blanchard of France, expanded ILO's technical cooperation with developing countries. The ILO played a major role in the emancipation of Poland from dictatorship by giving its full support to the legitimacy of the Solidarnosc Union, based on respect for Convention No. 87 on freedom of association, which Poland had ratified in 1957. Belgium's Michel Hansenne succeeded him in 1989 and guided the ILO into the post-Cold War period, emphasizing the importance of placing social justice at the heart of international economic and social policies. He also set the ILO on a course of decentralization of activities and resources away from the Geneva headquarters. In March 1999, Juan Somavia of Chile took over as Director-General. He emphasized the importance of making decent work a strategic international goal and promoting a fair globalization. He also underlined work as an instrument of poverty alleviation and the ILO's role in helping to achieve the Millennium Development Goals, including cutting world poverty in half by 2015. Under Somavia, the ILO established the World Commission on the Social Dimension of Globalization, which published a major report responding to the needs of people as they cope with the unprecedented changes that globalization has brought to societies. In May 2012, Guy Ryder (UK) was elected as the tenth Director-General of the ILO. He was re-elected to his second five-year term in November 2016. Ryder has emphasised that the future of work is not predetermined:- Decent work for all is possible but societies have to make it happen. It is precisely with this imperative that the ILO established its Global Commission on the Future of Work as part of its initiative to mark its centenary in 2019. International Labor Organization or International Labour Organization (ILO):- the only tripartite UN agency, since 1919 the ILO brings together governments, employers and workers of 187 member States, to set labor standards, develop policies and devise programmes promoting decent work for all women and men. / Самьюэл Гомпёз (Samuel Gompers (или Gumpertz); 1850–1924). Француз Альбэр Тома (Albert Thomas; 1878–1932). Сэр Харолд Бэрэсфод Батлё (Sir Harold Beresford Butler; 1883–1951). Американец Дьжон Гилбёрт Винэнт (John Gilbert Winant; 1889–1947). из Ирландии Эдвод Дьжосэф Филэн (Edward Joseph Phelan; 1888–1967). из Америки Дэйвид Абнё Морс (David Abner Morse; 1907–1990). Британец Клэрэнц Вилфрид Дьженькс (Clarence Wilfred Jenks; 1909–1973). Фросис Блёшар (Francis Blanchard; 1916–2009) из Франции. Мишэль Осэна (Michel Hansenne; 1940–) из Бельгии. Хуан Сомавиа Альтамирано (Juan Somavía Altamirano; 1941–) из Чили. Гай Райдэ (Guy Ryder; 1956–) из Соединённого Королевства. Создана в 1919 при Лиге Наций как Международная Комиссия для выработки конвенций и рекомендаций по вопросам трудового законодательства и улучшения условий труда. Местопребывание:- Женева, Швейцария. Международная Организация Труда (МОТ) – международная межправительственная организация, созданная в 1919 по решению Парижской Мирной Конференции как автономная организация Лиги Наций (Устав МОТ был утверждён как часть XIII Версальского Мирного Договора 1919). В 1946 МОТ стала первым специализированным учреждением Организации Объединённых Наций (ООН). В 2006 в МОТ в качестве членов состояло 175 государств, в 2020 – 187 стран участниц, в том числе и Российская Федерация. Структуру МОТ составляют:- Международная Конференция Труда, Административный Совет, Международное Бюро Труда, Трёхсторонние Комитеты, Региональные и Специальные Конференции. Международная Организация Труда (МОТ) – специализированное учреждение Организации Объединённых Наций (ООН), одна из крупнейших современных международных организаций. Создана в 1919 согласно Версальскому Мирному Договору в рамках Лиги Наций. На 01 Января 1974 членами МОТ являлись 123 государства. Бывший Союз Советских Социалистических Республик (СССР) входил в МОТ в 1934–40; в интересах расширения сотрудничества в решении задач, стоящих перед МОТ, Советский Союз в 1954 снова стал её членом; членами МОТ состояли также Белорусская Советская Социалистическая Республика (БССР) и Украинская Советская Социалистическая Республика (УССР). Согласно Уставу целями МОТ являются достижение всеобщего и прочного мира 'на основе социальной справедливости' и улучшение существующих условий труда, что может быть достигнуто:- регламентацией рабочего времени, включая установление максимальной продолжительности рабочего дня и рабочей недели; регламентацией набора рабочей силы путём борьбы с безработицей; установлением гарантий заработной платы, обеспечивающей удовлетворительные условия жизни, и другим. Эти положения устава подтверждены декларацией

относительно целей и задач МОТ, принятой Генеральной Конференцией МОТ в Филадельфии (США) в 1944. Местонахождение органов МОТ – Женева, Швейцария. Устав МОТ исходит из двух принципов – всеобщности (универсальности) и 3-стороннего представительства. Первый означает прежде всего возможность вступления в МОТ для всех государств, берущих на себя предусмотренные уставом обязательства. Этот принцип обязывает членов МОТ способствовать улучшению условий труда и жизни трудящихся во всех странах, предоставлять им равное право пользоваться теми преимуществами, которые вытекают из членства в организации. Если принцип всеобщности характерен для большинства международных организаций, то принцип 3-стороннего представительства свойствен только МОТ. Сущность его состоит в том, что каждый член МОТ представлен в организации делегатами правительства, трудящихся и предпринимателей, причём каждая группа представителей может занимать самостоятельную позицию при решении проблем труда. Принцип 3-стороннего представительства основан на реформистской идее сотрудничества труда и капитала, которая является ведущей для буржуазных представителей в МОТ. Основные органы МОТ:- Генеральная Конференция, Административный Совет и Международное Бюро Труда (МБТ). Генеральная Конференция (или Международная Конференция Труда) – высший орган МОТ. В её ежегодных сессиях участвуют по 4 представителя от каждого члена МОТ (2 правительств, делегата, по 1 от трудящихся и предпринимателей). Согласно уставу все делегаты пользуются равными правами, в том числе правом участия в голосовании, практически же принцип равноправия не всегда соблюдается. Административный Совет – исполнительный орган МОТ. Состоит из 48 членов – 24 представителей правительств (10 назначаются правительствами наиболее крупных промышленных государств), 12 представителей предпринимателей и 12 представителей трудящихся. Все члены совета (кроме указанных 10) избираются на Генеральной Конференции (соответственно делегатами правительств, предпринимателей и трудящихся) на 3 года. В функции Административного Совета входит определение повестки дня сессий Генеральной Конференции и других органов МОТ, назначение Генерального Директора Международного Бюро Труда, создание вспомогательных органов, комиссий, координирование деятельности МОТ с деятельностью других международных организаций и так далее. Международное Бюро Труда – постоянный секретариат МОТ. МОТ образует также различные комитеты, комиссии, региональные конференции и тому подобное. Органы МОТ должны формироваться с учётом справедливого географического распределения мест и должностей, равноправия социально-экономических систем, однако практически это не всегда имеет место. В МБТ, например, подавляющее большинство ответственных постов занято представителями капиталистических государств. МОТ осуществляет деятельность в трёх основных направлениях:- разработка конвенций и рекомендаций о труде; оказание технической помощи развивающимся странам Азии, Африки и Латинской Америки; обучение и просвещение по вопросам, входящим в круг деятельности МОТ. Разработка конвенций и рекомендаций о труде – важнейшая форма деятельности МОТ. На 01 Января 1974 принято 136 конвенций и 144 рекомендации. Содержащиеся в них международные нормы о труде охватывают самые различные области трудовых отношений, направлены на запрещение принудительного труда, дискриминации трудящихся, охрану материнства и труда молодёжи, обеспечение профсоюзной свободы, равноправия в оплате труда мужчин и женщин, гарантий заработной платы и так далее. Конвенции МОТ становятся обязательными для государств-членов МОТ в случае их ратификации. Ратифицируя конвенцию, государство берёт на себя обязательство принимать необходимые меры для эффективного применения её положений. Рекомендации не подлежат ратификации и не порождают других обязательств для государств, кроме предусмотренных уставом обязанностей процедурного характера. В МОТ нет юридического обязательства ратифицировать конвенции. Однако, вступая в организацию, государство берёт на себя в этом плане определённое моральное обязательство. Советский Союз ратифицировал 40 конвенций МОТ, в том числе важнейшие из них:- № 29 О Принудительном Труде, № 87 О Свободе Ассоциаций И Защите Права На Организацию, № 111 О Дискриминации В Области Найма И Занятий и так далее. Многие буржуазные государства уклоняются от ратификации важнейших конвенций МОТ:- США, например, ратифицировали всего 7 конвенций. Международные нормы о труде собраны в Международном Кодексе Труда (издан в Женеве, в двух томах), который представляет собой систематическое собрание международных норм о труде, содержащихся в конвенциях и рекомендациях МОТ; обязательной силы не имеет. Деятельность МОТ по оказанию технической помощи развивающимся странам получила развитие в 1950–60-х. Она заключается в направлении по просьбе заинтересованных правительств экспертов по организации труда и управлению предприятиями, подготовке трудового законодательства и так далее. Деятельность МОТ по обучению и просвещению связана с созданием в Женеве в 1960 Международного Института Социальных Исследований, который, по замыслу его организаторов, представляет собой как бы высшее учебное заведение университетского типа в области социальной и трудовой политики. Участвуя в МОТ, бывший СССР и другие социалистические страны оказывали поддержку рабочему классу капиталистических стран, ведущему борьбу за улучшение положения трудящихся и стремящемуся использовать в этой борьбе, наряду с другими средствами, международные организации. Советский Союз оказывал всемерную поддержку мероприятиям МОТ, направленным на развитие международного сотрудничества, содействующего улучшению положения трудящихся и упрочению мира между народами.

INTERNATIONAL LIQUIDITY = МЕЖДУНАРОДНАЯ ЛИКВИДНОСТЬ – International Liquidity:- foreign exchange reserves available to governments to pay the balance of commercial and financial transactions among themselves. / Под Международной Ликвидностью понимаются резервы в иностранной валюте, доступные правительствам для оплаты остатков по коммерческим и финансовым операциям между собой.

INTERNATIONAL LOAD LINE CERTIFICATE = МЕЖДУНАРОДНОЕ СВИДЕТЕЛЬСТВО О ГРУЗОВОЙ МАРКЕ (или МЕЖДУНАРОДНОЕ УДОСТОВЕРЕНИЕ О НАИМЕНЬШЕЙ ВЫСОТЕ НАДВОДНОГО БОРТА) – International Load Line Certificate is a certificate which gives details of a ship's freeboards and states that the ship has been surveyed and the appropriate load lines marked on her sides. A classification society or the US Coast Guard issues this certificate. International Load Line Certificate:- issued under the provisions of the International Convention on Load Lines (ICLL), 1966, as modified by the Protocol of 1988 relating thereto under the authority of the Government of United States of America. Purpose of Load Line Assignment:- The purpose of load line assignment is to ensure the seaworthiness of the intact (undamaged) vessel. This is accomplished by:- (i) ensuring a robust hull that can withstand severe sea conditions, i.e. structural design, construction, and maintenance; (ii) ensuring weathertight & watertight integrity, i.e. coamings; exposed doors, hatches, hull valves, etc, are in good working condition; (iii) ensuring that the vessel has reserve buoyancy and is not overloaded (by limiting the maximum loaded draft); (iv) ensuring that the vessel has adequate stability for all loading and operating conditions (by approved stability documentation and instructions); (v) ensuring rapid drainage of water on deck (boarding seas) (by adequate arrangement of freeing ports in bulwarks); (vi) ensuring safety of crew while working on deck (by increased freeboard to reduce boarding seas, guardrails); (vii) ensuring that modifications to vessel do not compromise seaworthiness (modifications must be approved by LL assigning authority); (viii) periodic inspections (afloat and dry docked) to verify that the above are properly maintained (by LL assigning authority). Obtaining a Load Line:- International load line certificates are issued to vessels that meet the requirements of the IMO International Convention on Load Lines (ICLL); ICLL certificates are required on US vessels that go on voyages to foreign ports or waters. Domestic load line certificates are issued to vessels that meet the requirements of US load line regulations (which are found in 46 CFR Subchapter E). With minor exceptions, the US requirements for an unrestricted domestic

load line (suitable for high seas voyages) are the same as the requirements for an international ICLL load line. For this reason, an ICLL certificate is acceptable in lieu of a domestic certificate. Load line certificates (domestic or ICLL) are issued on behalf of the United States by the American Bureau of Shipping or one of several other USCG-approved classification societies. The choice of assigning authority is made by the vessel owner/operator. The Coast Guard itself does not issue load lines other than a 'single voyage exemption certificate'. In order to be issued a load line (whether domestic or international ICLL), the vessel must be constructed to meet the load line requirements. This entails pre-construction review and approval of the vessel's design by the assigning authority. Surveyors then periodically visit the shipyard to verify that it is being constructed according to the approved design. Upon completion of construction, the vessel is inclined so that its stability documents can be approved and issued. The freeboard assignment is calculated, and the load line marks are inscribed on the hull. Upon final verification that all of these steps have been properly accomplished, the vessel is issued a load line certificate. A load line certificate is normally issued for a 5-year term, subject to annual 'topside' surveys to verify that hatch covers, doors, vent covers, and other critical closures are in good working condition, and that there have not been any damage or unauthorized modifications that would compromise the vessel's seaworthiness. At the end of the 5-year term, the vessel must be dry docked to inspect the underwater hull, seachests and valves, etc, before a new certificate can be issued. Load Line Enforcement and Violations:- US vessel owners and operators are subject to fines and penalties if a vessel is overloaded such that the load line marks are submerged, or the vessel is operated in violation of any restrictions on its certificate. Penalties are set forth in 46 USC 5116. Foreign vessels in US waters are required to have a valid international (ICLL) load line certificate. A foreign vessel may be detained in port if the Coast Guard determines that it is overloaded, or unseaworthy due to poor condition. The vessel won't be released to depart until the deficiencies have been corrected:- excess cargo is offloaded, repairs have been made and a surveyor from the assigning authority has attended the vessel to confirm its compliance with ICLL regulations. Origin of Load Lines:- Historically, the concept of a load line evolved during the 1870s in Great Britain to guard against merchant ships being overloaded. Lloyd's Register established a minimum freeboard requirement for its classed ships, to ensure that a ship had good reserve buoyancy in heavy boarding seas. After considerable persuasive efforts by Samuel Plimsoll, Parliament extended the requirement to all British merchant ships; thus was born the 'Plimsoll mark'. Originally, only British ships were required to have a load line, but in 1906, Parliament extended the requirement to include all foreign ships in British waters. Consequently, similar load line requirements were individually adopted by other maritime nations, until they were internationally standardized in the Load Line Convention of 1930. The present International Convention on Load Lines (ICLL) was drawn up in 1966 and entered into force on July 21, 1968. It is periodically amended via the Load Line Protocol of 1988 (in force since February 03, 2000). The Convention and it's Protocol are administered by the International Maritime Organization (IMO), a specialized agency of the United Nations. Vessels of countries signatory to the Convention are required to have an ICLL certificate for international voyages. As of May 2016, 161 countries (representing 98.5% of world tonnage) are signatory the 1966 ICLL, and 103 countries (representing 95.3% of world tonnage) are signatory to the 1988 LL Protocol. The United States is a signatory to both the original 1966 ICLL and the 1988 LL Protocol, and therefore US vessels engaged on international voyages are subject to the Convention, as modified by the Protocol. Load line regulations for US vessels operating solely on domestic routes are developed by the Coast Guard, and reflect the less-severe operating environments of coastwise service. Special load line standards apply to vessels operating on certain coastwise routes and on the Great Lakes. International Load Line Certificate is the certificate issued by a classification society or the US Coast Guard. An International load line certificate provides the details of a ship's freeboards and states that the ship has been surveyed and the appropriate load lines marked on her sides. / Английский политик и социальный реформатор Сэмьюэл Плимсэл (Samuel Plimsoll; 1824–1898). Грузовая Марка, знак предельной осадки, наносимый на обоих бортах морского судна в середине его длины. Грузовую марку изображают в виде круга, пересечённого по центру горизонтальной линией, которая показывает наибольшую допустимую осадку судна в морской воде (в летнее время в зоне умеренного климата), и ряда горизонтальных линий, показывающих предельное погружение его в море или реке в зависимости от времени года и района плавания. Над грузовой маркой наносят палубную линию. Положение грузовой марки по высоте определяется величиной минимального надводного борта, регламентируемой Международной Конвенцией о Грузовых Марках (1966) либо национальными правилами, в зависимости от назначения, размеров и конструктивных особенностей судна, и удостоверяется Свидетельством о Грузовой Марке, выдаваемым классификационным обществом. Для уменьшения регистровой вместимости при перевозке грузов с большим удельным погрузочным объёмом морские грузовые суда могут иметь ниже второй палубы тоннажную марку – равносторонний треугольник, вершиной касающийся горизонтальной линии с уступом, которая показывает наибольшую осадку судна в морской и пресной воде. Грузовые Марки на бортах судов, соответствующие сезону года и зоне или району плавания, не должны быть погружены на протяжении всего времени, когда судно выходит в море, находится в плавании и приходит в порт за исключением погружения на величину поправки в пресной воде или временного погружения на величину соответственно весу топлива и всех других материалов, используемых судном во внутренних водах перед выходом в море. В тех случаях, когда плотность воды отличается от единицы, поправка должна быть пропорциональна разнице между 1.025 и действительной плотностью. Судно подлежит:- (i) первоначальному освидетельствованию перед вводом в эксплуатацию; (ii) периодическому освидетельствованию – через 5 лет, чтобы удостовериться, что судно полностью отвечает требованиям Конвенции; и (iii) промежуточному – ежегодному, плюс/минус три месяца – что не производилось изменений, влияющих на расчёт определения места нанесения Грузовых Марок и что устройства и средства для закрытия отверстий, штормовых портиков и доступа в помещения команды содержатся в надлежащем состоянии. На основании результатов освидетельствования судну выдаётся Международное Свидетельство о Грузовой Марке (International Load Line Certificate). Свидетельство теряет силу (аннулируется):- (i) при просрочке периодического освидетельствования, ежегодного подтверждения; (ii) при существенных изменениях в корпусе и надстройке судна, влияющих на надводный борт; (iii) при содержании в ненадлежащем состоянии устройств и средств для закрытия ВНЗ; (iv) снижении прочности конструкций корпуса ниже допустимых пределов; и (v) при передаче судна под Флаг другого Государства. Грузовая Марка – знак предельной осадки, наносимый на обоих бортах морского судна в середине его длины (грузовая ватерлиния). Грузовую марку изображают в виде круга, пересечённого по центру горизонтальной линией, которая показывает наибольшую допустимую осадку судна в морской воде (в летнее время в зоне умеренного климата), и ряда горизонтальных линий, показывающих предельное погружение его в море или реке в зависимости от времени года и района плавания. Английские моряки называют грузовую марку Диском Плимсэла, которая на основании правил международной конвенции наносится на борта каждого спущенного на воду торгового судна, если его тоннаж превышает сто пятьдесят регистровых тонн. Впервые такую грузовую марку предложил Сэмьюэл Плимсэл (Samuel Plimsoll), Англичанин и пивовар из города Дерби, который не имел никакого отношения к судоходству. Применяются следующие грузовые марки:- (i) летняя грузовая марка – Л (S); (ii) зимняя грузовая марка – З (W); (iii) зимняя грузовая марка для Северной Атлантики – ЗСА (WNA); (iv) тропическая грузовая марка – Т (T); (v) грузовая марка для пресной воды – П (F); и (v) тропическая марка для пресной воды – ТП (TF). Для каждого судна грузовую марку размечают по международным правилам, которые обязательны для всех морских держав мира. Поэтому форма грузовой марки везде одинакова. Единственное отличие – в буквах. Обозначение организации, назначившей грузовую марку, наносится над горизонтальной линией, проходящей через центр кольца знака (Диск Плимсэла). Обозначение Регистра Судоходства Российской Федерации – РС, L и R = Регистр Лойда, A и B

= Американское Бюро Судоходства и так далее. Различают грузовые марки для лесовозов, пассажирских и парусных судов. Грузовая марка, соответствующая сезону, не должна быть погружена в воду на протяжении всего периода от момента выхода из порта до прихода в следующий порт. Судам, на борта которых нанесены грузовые марки, выдаётся Международное Свидетельство о Грузовой Марке (International Load Line Certificate) на срок не более чем на 5 лет. На каждом судне хранится свидетельство на надводный борт, и если осадка больше, чем это допускается грузовой маркой, то его капитан не имеет права выйти в море. В случае перегрузки портовые власти, ответственные за выход судна в рейс, вправе потребовать удаления лишнего груза и даже задержать судно в порту. Марки углубления ни в коем случае нельзя путать с грузовой маркой, так как они служат только для измерения фактической носовой и кормовой осадки на данный момент. Применение:- согласно Международной Конвенции о Грузовой Марке судну запрещён выход в море на международный рейс, если ему не была нанесена грузовая марка и не выдано Международное Свидетельство о Грузовой Марке или, когда необходимо, Международное Свидетельство об Изъятии для Грузовой Марки. Настоящая конвенция применяется ко всем судам кроме:- (i) военных кораблей; (ii) новых судов длиной менее 24 метров (79 футов); (iii) существующих судов валовой вместимостью менее 150 регистровых тонн; (iv) прогулочных яхт, не занимающихся коммерческими перевозками; и (v) рыболовных судов. Ничто в настоящей Конвекции не применяется к судам, совершающим плавание исключительно:- (a) по Великим Озёрам Северной Америки и по Реке Святого Лаврентия в пределах, ограниченных на Востоке прямой линией, проведённой от Мыса Розье до Мыса Вест Пойнт на Острове Антикости, и далее прямой линией, проведённой от Острова Антикости в Северном направлении по меридиану 63° Западной долготы; (б) в Каспийском Море; (в) по рекам Ла-Плата, Парана и Уругвай в пределах, ограниченных на Востоке прямой линией, проведённой между Пунта Раза (Кабо Сан Антонио), Аргентина, и Пунта дель Эсте, Уругвай. Международная Конвенция о Грузовой Марке (International Convention on Load Lines), кратко именуемая МКГМ, подписанная 05 Апреля 1966 в Лондоне по инициативе Международной Морской Организации (ММО). В 1988 специальным Протоколом в неё были внесены изменения, позднее, в 2003 дополненные Комитетом по Безопасности на Море ММО. Изменённая Международная Конвенция о Грузовой Марке (МКГМ-66/88) вступила в силу 01 Января 2005. Конвенция запрещает выход в море судна в международный рейс, если оно не было соответствующим образом освидетельствовано, ему не была нанесена грузовая марка и не выдано Международное Свидетельство о Грузовой Марке или, когда необходимо, Международное Свидетельство об Изъятии для Грузовой Марки. В Приложениях к Конвенции устанавливаются правила определения грузовых марок, условия назначения и величины надводного борта, модификации конвенционных требований по зонам, районам и сезонным периодам, а также приводятся формы Международного Свидетельства о Грузовой Марке. В 1988 был принят Протокол к Конвенции о Грузовой Марке, вступивший в силу в 2000. Этим Протоколом требования Конвенции 1966 относительно освидетельствования и выдачи международных свидетельств были приведены в соответствие с требованиями Международной Конвенции по Предотвращению Загрязнения с Судов (МАРПОЛ 73/78) и Международной Конвенции по Охране Человеческой Жизни на Море (СОЛАС).

INTERNATIONAL LUBRICANT STANDARDIZATION AND APPROVAL COMMITTEE = КОМИТЕТ ПО МЕЖДУНАРОДНОЙ СТАНДАРТИЗАЦИИ И ОДОБРЕНИЮ СМАЗОК – The International Lubricant Standardization and Approval Committee (ILSAC) is a joint committee of the American Automobile Manufacturers Association (AAMA) and the Japan Automobile Manufacturers Association (JAMA) members that assists in the development of new minimum oil performance standards. The International Lubricant Standardization and Approval Committee (ILSAC) is the organization responsible for creating lubricant specifications for passenger cars. ILSAC/OIL is the entity within ILSAC that develops and introduces the newly required specifications. The entity is divided into two branches:- ILSAC, which includes the AAM (Alliance of Automobile Manufacturers) and the JAMA (Japanese Automobile Manufacturers Association):- (i) ILSAC, which includes the AAM (Alliance of Automobile Manufacturers) and the JAMA (Japanese Automobile Manufacturers Association); and (ii) OIL, which is composed of representatives from organizations within the petroleum industry, the API and the ACC (American Chemistry Council). Tests performed by ILSAC/OIL are certified by the API. There are five ILSAC specifications:- (i) GF-1 and GF-2 are now obsolete; (ii) GF-3, introduced in 2001 (API SL level+ improved Fuel Economy +improved volatility+deposit control and viscosity performance) with a limit for phosphorous of 0.1% max; (iii) GF-4, introduced in 2005 (API SM level + improved Fuel Economy performance) and designed for low emission vehicles; it includes limits for phosphorus and sulfur contents in order to improve the lifespan of post-treatment systems; (iv) GF-5 was introduced in 2010. It was designed with the aim of:- (a) Improving fuel economies and maintaining them over time (Fuel Economy retention), (b) Ensuring good protection of new engine technologies, better sludge control, (c) Protecting post-treatment systems, and (d) Suiting E85 fuel driven engines. TOTAL proposes complete product ranges – some of wich have been totally reformulated to meet the ILSAC GF-5 standards. And (v) ILSAC GF-6 is currently under development nad might be launched in 2018. There will be 2 subcategories:- (a) GF-6A:- backward compatible with GF-5, but with improved fuel economy and durability, and (b) GF-6B:- similar performance as GF-6A, but allowing more fluid grades such as 0W-16. Not backward compatible with GF-5.

INTERNATIONAL MARITIME BUREAU = МЕЖДУНАРОДНОЕ МОРСКОЕ БЮРО – The International Maritime Bureau (IMB) is a specialized department of the International Chamber of Commerce (ICC; headquartered in Paris, France). The IMB's responsibilities lie in fighting crimes related to maritime trade and transportation, particularly piracy and commercial fraud, and in protecting the crews of ocean-going vessels. It publishes a weekly piracy report and maintains a 24-hour piracy reporting centre in Kuala Lumpur, Malaysia. The IMB is part of ICC Commercial Crime Services whose other divisions include The Counterfeiting Intelligence Bureau, The Financial Investigation Bureau and FraudNet. FraudNet is the world's leading network of fraud and asset recovery lawyers with 63 lawyers in 56 different jurisdictions. The bureau, endorsed by the UN's International Maritime Organisation (IMO; headquartered in London, The United Kingdom), was founded in 1981. The body has observer status with Interpol and a Memorandum of Understanding (MOU) with the World Customs Organization (WCO; headquartered in Brussels, Belgium). A special division of the International Chamber of Commerce. Headquartered in London, the United Kingdom. The ICC International Maritime Bureau (IMB) is a specialized division of the International Chamber Of Commerce (ICC). The IMB is a non-profit making organisation, established in 1981 to act as a focal point in the fight against all types of maritime crime and malpractice. The International Maritime Organization (IMO) in it's resolution A 504 (XII) (5) and (9) adopted on 1981-November-20, has inter alia, urged governments, all interests and organisations to cooperate and exchange information with each other and the IMB with a view to maintaining and developing a co-ordinated action in combating maritime fraud. The IMB has a MOU with the World Customs Organization (WCO) and has observer status with Interpol (ICPO). IMB's main task is to protect the integrity of international trade by seeking out fraud and malpractice. For over 25 years, it has used industry knowledge, experience and access to a large number of well-placed contacts around the world to do this:- identifying and investigating frauds, spotting new criminal methods and trends, and highlighting other threats to trade. The information gathered from sources and during investigations is provided to members in the form of timely advice via a number of different communication routes. It lists the threats and explains how members can reduce their vulnerability to them. Over the years, this approach has thwarted many attempted frauds and saved the shipping and trading industry many millions of Dollars. The IMB provides an authentication service for trade finance documentation. It also investigates and reports on a number of other topics, notably documentary credit fraud, charter party fraud, cargo theft, ship deviation and ship finance fraud. As well as helping to prevent crime, the IMB also has a duty to educate both

the shipping community and a wider audience that comprises just about every entity engaged in trade. To this end, the IMB runs a regular series of courses and training programmes that have a wide-ranging syllabus and many proven benefits. It also offers bespoke consultancy services in areas such as ship and port security. One of the IMB's principal areas of expertise is in the suppression of piracy. Concerned at the alarming growth in the phenomenon, this led to the creation of the IMB Piracy Reporting Centre in 1992. The Centre is based in Kuala Lumpur, Malaysia. It maintains a round-the-clock watch on the world's shipping lanes, reporting pirate attacks to local law enforcement and issuing warnings about piracy hotspots to shipping. With its multi-lingual and multi-disciplined staff, experience, unique structure, industry support and well-placed contacts, the IMB can rightly claim to be the world's premier independent crime-fighting watchdog for international trade. / Специальное подразделение Международной Торговой Палаты (International Chamber of Commerce). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Международное Морское Бюро (ММБ) является специализированным подразделением Международной Торговой Палаты (МТП; штабквартира в Париже, Франция). История Создания Международного Морского Бюро:- Дата создания – 1981. Играет роль координационного центра борьбы против всевозможных видов морской преступности, злоупотребления служебным положением. Международная Морская Организация (ММО; штабквартира в Лондоне, Соединённое Королевство), своей резолюцией 504 (XII) (5) и (9) от 20 Ноября 1981 призвала правительства, все заинтересованные организации сотрудничать, обмениваться информацией друг с другом и ММБ. Цель – сохранение, развитие скоординированных действий в борьбе против мошенничества в морской отрасли. Бюро подписало Меморандум о Взаимопонимании со Всемирной Организацией Таможен (ВОТ; штабквартира в Брюсселе, Бельгия), имеет статус наблюдателя в Интерпол. Цели И Задачи Международного Морского Бюро:- Основополагающая задача Международного Морского Бюро – защита международной торговли путём разоблачения мошенничества, злоупотреблений служебным положением. На протяжении более 40-ти лет, ММБ использует свои знания, опыт, широкую сеть контактов по всему миру, для того чтобы выявлять, расследовать мошенничество, создавать новые методы выявления иных угроз международной торговле. Полученная в ходе расследования информация предоставляется всем членам ММБ в виде консультаций, где перечисляются возможные угрозы, разъяснения участникам о методах снижения уязвимости членов Международного Морского Бюро перед такими угрозами. Подход позволяет экономить судоходству, торговой индустрии миллионы Долларов США. Деятельность Международного Морского Бюро:- ММБ предоставляет услугу аутентификации финансово-торговой документации своих участников. Бюро проводит расследования в следующих сферах:- (i) мошенничество с аккредитивами; (ii) мошенничество с чартерами; (iii) кража груза; и (iv) девиация судна от условий контракта и финансовое мошенничество со стороны судна. Для воспитания принципов добросовестности среди членов-участников международной торговли, Международное Морское Бюро периодически проводит курсы, семинары. ММБ предоставляет консультационные услуги по вопросам безопасности судов, портов и других видов морских инженерных сооружений. Важнейшая область специализации ММБ – борьба с пиратством на море. Выражая общую обеспокоенность своих участников по поводу роста обозначенного явления, Международное Морское Бюро участвовало в создании Центра Докладов о Пиратстве (IMB Piracy Reporting Centre) в 1992. Центр базируется в Куала Лумпуре (Малайзия), несёт непрерывную вахту наблюдения за морскими торговыми путями по всему земному шару, сообщая о пиратских нападениях местным правоохранительным органам, издаёт предупреждения о пиратстве судам находящимся вблизи горячих точек. Издания И Публикации Международного Морского Бюро:- Специально для членов ММБ, дважды в месяц издаётся Конфиденциальный Бюллетень, представляющий собой списки мошенников, коммерческих неудач и неуплат долгов, с указанием имен виновных, адресов и псевдонимов, любой другой актуальной информации. Доставляется участникам бюро электронной почтой в формате pdf. Сопутствующие статьи объясняют деятельность мошенников, указывают на сферы их возможного действия; приводятся примеры используемой документации.

INTERNATIONAL MARITIME CONSULTATIVE ORGANIZATION = МЕЖДУНАРОДНАЯ МОРСКАЯ КОНСУЛЬТАТИВНАЯ ОРГАНИЗАЦИЯ (или МЕЖДУНАРОДНАЯ МОРСКАЯ СОВЕЩАТЕЛЬНАЯ ОРГАНИЗАЦИЯ) – The International Maritime Consultative Organization (IMCO) is a United Nations agency dealing solely with maritime affairs. The organization focuses on the improvement of maritime safety and the prevention of maritime pollution. International Maritime Consultative Organization is a forum in which most major maritime nations participate and through which recommendations for the carriage of dangerous goods, bulk commodities, and maritime regulations become internationally acceptable.

INTERNATIONAL MARITIME DANGEROUS GOODS CODE = МЕЖДУНАРОДНЫЙ МОРСКОЙ КОДЕКС ПО ОПАСНЫМ ТОВАРАМ – The International Maritime Dangerous Goods Code (IMDG Code) is accepted as an international guideline to the safe transportation or shipment of dangerous goods or hazardous materials by water on vessel. IMDG Code is intended to protect crew members and to prevent marine pollution in the safe transportation of hazardous materials by vessel. It is recommended to governments for adoption or for use as the basis for national regulations. The implementation of the Code is mandatory in conjunction with the obligations of the members of united nation government under the International Convention for the Safety of Life at Sea (SOLAS) and the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78). It is intended for use not only by the mariner but also by all those involved in industries and services connected with shipping. Contains advice on terminology, packaging, labeling, placarding, markings, stowage, segregation, handling, and emergency response. The code is updated and maintained by the DSC Sub-Committee of the International Maritime Organization every 2 years. International Maritime Dangerous Goods (IMDG) Code:- the regulations published by the IMO for transporting hazardous materials internationally. A code, representing the classification of dangerous goods as defined by the International Maritime Organization (IMO) in compliance with international legal requirements. International Maritime Dangerous Goods Code (IMDG Code:- regulations concerning the international transport of dangerous goods by sea. / Сегрегация или Выделение или Зейгерование или Разделение По Крупности (Segregation).

INTERNATIONAL MARITIME ORGANIZATION = МЕЖДУНАРОДНАЯ МОРСКАЯ ОРГАНИЗАЦИЯ – The International Maritime Organization (IMO). Aim:- to deal with international maritime affairs; a UN specialized agency. Established in:- 1948-March-06 set up as the Inter-Governmental Maritime Consultative Organization; effective – 1958-March-17. Notes:- name changed from Intergovernmental Maritime Consultative Organization (IMCO) on 1982-May-22. International Maritime Organization (IMO) is formerly known as the Inter-Governmental Maritime Consultative Organization (IMCO), was established in 1958 through the United Nations to coordinate international maritime safety and related practices. The IMO was established as a specialized agency of the United Nations in 1948. The IMO facilitates cooperation on technical matters affecting merchant shipping and traffic, including improved maritime safety and prevention of marine pollution. Headquarters are in London, The United Kingdom. A United Nations agency concerned with safety at sea. Its work includes codes and rules pertaining to tonnage measurement of vessels, load lines, pollution and the carriage of hazardous goods. Previous name:- Inter-Governmental Maritime Consultative Organisation (IMCO), since 1982 known as the International Maritime Organization (IMO). The Convention establishing the International Maritime Organization (IMO) was adopted in Geneva in 1948 and IMO first met in 1959. IMO's main task has been to develop and maintain a comprehensive regulatory framework for shipping and its remit today includes safety, environmental concerns, legal matters, technical co-operation, maritime security and the efficiency of shipping. A specialized agency of the United Nations with 167 Member States and three Associate Members, IMO is based in the United Kingdom with around 300 international staff. Headquartered in London, the United Kingdom. It has always been

recognized that the best way of improving safety at sea is by developing international regulations that are followed by all shipping nations and from the mid-XIX century onwards a number of such treaties were adopted. Several countries proposed that a permanent international body should be established to promote maritime safety more effectively, but it was not until the establishment of the United Nations itself that these hopes were realized. In 1948 an international conference in Geneva adopted a convention formally establishing IMO (the original name was the Inter-Governmental Maritime Consultative Organization, or IMCO, but the name was changed in 1982 to IMO). The IMO Convention entered into force in 1958 and the new Organization met for the first time the following year. The purposes of the Organization, as summarized by Article 1(a) of the Convention, are 'to provide machinery for cooperation among Governments in the field of governmental regulation and practices relating to technical matters of all kinds affecting shipping engaged in international trade; to encourage and facilitate the general adoption of the highest practicable standards in matters concerning maritime safety, efficiency of navigation and prevention and control of marine pollution from ships'. The Organization is also empowered to deal with administrative and legal matters related to these purposes. IMO's first task was to adopt a new version of the International Convention for the Safety of Life at Sea (SOLAS), the most important of all treaties dealing with maritime safety. This was achieved in 1960 and IMO then turned its attention to such matters as the facilitation of international maritime traffic, load lines and the carriage of dangerous goods, while the system of measuring the tonnage of ships was revised. But although safety was and remains IMO's most important responsibility, a new problem began to emerge – pollution. The growth in the amount of oil being transported by sea and in the size of oil tankers was of particular concern and the Torrey Canyon disaster of 1967, in which 120 000 tons of oil was spilled, demonstrated the scale of the problem. During the next few years IMO introduced a series of measures designed to prevent tanker accidents and to minimize their consequences. It also tackled the environmental threat caused by routine operations such as the cleaning of oil cargo tanks and the disposal of engine room wastes – in tonnage terms a bigger menace than accidental pollution. The most important of all these measures was the International Convention for the Prevention of Pollution from Ships, 1973, as modified by the Protocol of 1978 relating thereto (MARPOL 73/78). It covers not only accidental and operational oil pollution but also pollution by chemicals, goods in packaged form, sewage, garbage and air pollution. IMO was also given the task of establishing a system for providing compensation to those who had suffered financially as a result of pollution. Two treaties were adopted, in 1969 and 1971, which enabled victims of oil pollution to obtain compensation much more simply and quickly than had been possible before. Both treaties were amended in 1992, and again in 2000, to increase the limits of compensation payable to victims of pollution. A number of other legal conventions have been developed since, most of which concern liability and compensation issues. Also in the 1970s a global search and rescue system was initiated, with the establishment of the International Mobile Satellite Organization (IMSO), which has greatly improved the provision of radio and other messages to ships. The Global Maritime Distress and Safety System (GMDSS) was adopted in 1988 and began to be phased in from 1992. In February 1999, the GMDSS became fully operational, so that now a ship that is in distress anywhere in the world can be virtually guaranteed assistance, even if the ship's crew do not have time to radio for help, as the message will be transmitted automatically. Two initiatives in the 1990s are especially important insofar as they relate to the human element in shipping. On 1998-July-01 the International Safety Management Code entered into force and became applicable to passenger ships, oil and chemical tankers, bulk carriers, gas carriers and cargo high speed craft of 500 gross tonnage and above. It became applicable to other cargo ships and mobile offshore drilling units of 500 gross tonnage and above from 2002-July-01. On 1997-February-01, the 1995 amendments to the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers, 1978 entered into force. They greatly improve seafarer standards and, for the first time, give IMO itself powers to check Government actions with Parties required to submit information to IMO regarding their compliance with the Convention. New conventions relating to the marine environment were adopted in the early 2000s, including one on anti-fouling sytems (AFS 2001) and ballast water management (BWM 2004). The 2000s also saw a focus on maritime security, with the entry into force in July 2004 of a new, comprehensive security regime for international shipping, including the International Shiip and Port Facility Security (ISPS) Code, made mandatory under amendments to SOLAS adopted in 2002. In 2005, IMO adopted amendments to the Convention for the Suppression of Unlawful Acts (SUA) Against the Safety of Maritime Navigation, 1988 and its related Protocol (the 2005 SUA Protocols), which amongst other things, introduce the right of a a State Party desires to board a ship flying the flag of another State Party when the requesting Party has reasonable grounds to suspect that the ship or a person on board the ship is, has been, or is about to be involved in, the commission of an offence under the Convention. As IMO instruments have entered into force and been implemented, developments in technology and/or lessons learned from accidents have led to changes and amendments being adopted. The focus on implementation continues, with the technical co-operation programme a key strand of IMO's work. Meanwhile, the first audits under the Voluntary IMO Member State Audit Scheme were completed at the end of 2006. / Тори Кэньэн (Torrey Canyon). Международная Морская Организация (ММО), специализированное агентство ООН, основанная в 1958 в целях содействия международному сотрудничеству в области морских перевозок и морской торговли. До 1982 ММО именовалась Межправительственной Морской Консультативной Комиссией (ММКК). По данным на 1985 в состав ММО входили 127 государств. Штабквартира ММК расположена в Лондоне, Соединённое Королевство.

INTERNATIONAL MARITIME SATELLITE ORGANIZATION = МЕЖДУНАРОДНАЯ ОРГАНИЗАЦИЯ МОРСКОЙ СПУТНИКОВОЙ СВЯЗИ – The International Mobile Satellite Organization (IMSO) is the intergovernmental organization that oversees certain public satellite safety and security communication services provided via the Inmarsat satellites. These public services include:- (i) services for maritime safety within the Global Maritime Distress and Safety System (GMDSS) established by the International Maritime Organization (IMO); (ii) distress alerting; (iii) search and rescue co-ordinating communications; (iv) maritime safety information (MSI) broadcasts; (v) general communications; and (vi) aeronautical safety AMS(R)S services through compliance with the Standards and Recommended Practices (SARPs) established by the International Civil Aviation Organization (ICAO). IMSO also acts as the International LRIT Coordinator, appointed by IMO to coordinate the establishment and operation of the international system for the Long Range Identification and Tracking of Ships (LRIT) worldwide. IMSO is established under the provisions of the Convention on the International Mobile Satellite Organization which also defines the public services, such as satellite services for the GMDSS, that are subject to international oversight. The Organization has a form of public-private partnership contract with Inmarsat Ltd through a Public Services Agreement which sets out the obligations of Inmarsat Ltd in respect of the relevant public services, as well as defining the oversight mechanism that exists between Inmarsat and IMSO. A Public Services Committee which meets every three months provides formal regular contact between the company and the organization. Similar arrangements will be put in place when IMO recognises other mobile satellite service providers for participation in the GMDSS. IMSO also owns a 'special share' in Inmarsat Ltd which provides a mechanism to ensure that any commercial decisions taken are not detrimental to the public services. IMSO works closely with IMO, ICAO, ITU and other interested international organizations, as well as Inmarsat Ltd itself, in developing recommendations, standards and operational practices that support and may improve the public services. The Organization's special relationship with IMO is fostered and maintained by regular reports to the IMO Maritime Safety Committee on the provision and quality of satellite services for the GMDSS, and continuing detailed work on the establishment of the International LRIT System. The Organization operates through:- (i) the Assembly of Parties, integrated by its 94 member States, which generally meets every two years; (ii) the Directorate, headed by the Director General, Capt. Esteban Pacha-Vicente of Spain, who is the Chief Executive Officer and legal representative of IMSO; and (iii) an Advisory Committee, comprising a number of Member States, appointed by the Assembly, which meets regularly.

Headquartered in London, the United Kingdom. The establishment of the Organization was based on two international public law instruments developed under the auspices of the International Maritime Organization (IMO). These are:- (a) Convention on the International Maritime Satellite Organization (Inmarsat) between States Parties to the Convention; and (b) Operating Agreement between telecommunications entities public or private (one per Party) called 'Signatories' designated by a State. Both instruments entered into force on 16 July 1979. The purpose of Inmarsat was to make provision for the space segment necessary for improved maritime communications and, in particular, for improved safety of life at sea communications and the Global Maritime Distress and Safety System (GMDSS). This purpose was later extended through amendments to the Convention and Operating Agreement to provide the space segment for land mobile and aeronautical communications, and the name of the organization was changed to the International Mobile Satellite Organization to reflect the amended purpose. Inmarsat was structured with three principal organs:- (a) the Assembly of Parties (one State, one vote), which dealt with general policy matters and the long term objectives of the Organization; (b) the Council, composed of 22 Signatories, or groups of Signatories. It decided on all financial, operational, technical and administrative matters, and made provision for the space segment for carrying out the purposes of the Organization. Signatories' voting rights were linked to their utilization of the system via investment shares; and (c) the Directorate which was the executive body of the Organization headed by a Director General who was the Chief Executive Officer and legal representative of the Organization. After twenty years of successful operation, Member States and Signatories of the intergovernmental organization Inmarsat decided to challenge rapidly growing competition from private providers of satellite communications services and pioneered the first ever privatization of all assets and business carried on by the intergovernmental organization while adhering to the continuous provision of the public service obligations and governmental oversight as a pre-requisite of the privatization. At its Twelfth Session in April 1998, the Inmarsat Assembly adopted amendments to the Inmarsat Convention and Operating Agreement which were intended to transform the Organization's business into a privatised corporate structure, while retaining intergovernmental oversight of certain public service obligations and, in particular, the Global Maritime Distress and Safety System (GMDSS). The Assembly and Council of Inmarsat subsequently decided to implement the amendments as from 15 April 1999, pending their formal entry into force. In doing so, it was recognised that early implementation of the new structure was needed to maintain the commercial viability of the system in a rapidly changing satellite communications environment, and thereby ensure continuity of GMDSS services and other public service obligations, namely:- peaceful uses of the system, non-discrimination, service to all geographical regions and fair competition. The restructuring amendments entered into force on 31 July 2001 and became binding upon all Parties, including those which had not accepted them, and the Operating Agreement terminated on the same date. The restructuring of Inmarsat involved the incorporation of holding and operating companies, located in England and registered under British law on 15 April 1999, as planned. On the same day, the Headquarters Agreement between the UK Government and the IMSO was signed. A Public Services Agreement between IMSO and the privatized Inmarsat Ltd was also executed with immediate effect. The Operating Agreement was terminated and the Signatories received ordinary shares in the privatised Inmarsat Ltd in exchange for their investment shares. Capital requirements are met from existing shareholders, strategic investors and public investment through a listing of the shares on a stock exchange (IPO). The Inmarsat satellites and all other assets of the former intergovernmental organization have been transferred to the privatised operating Company which continues to manage the global mobile satellite communications system, including maritime distress and safety services for GMDSS at either no cost or at a special rate. Xxxxx. The International Mobile Satellite Organization (Inmarsat) is the intergovernmental organization that oversees certain public satellite safety and security communication services provided via the Inmarsat satellites. Some of these services concern:- (i) the Global Maritime Distress Safety System (GMDSS) established by the International Maritime Organization (IMO); (ii) search and rescue co-ordinating communications; (iii) maritime safety information (MSI) broadcasts; (iv) the aeronautical mobile satellite (route) service, or AMS(R)S, through compliance with the Standards and Recommended Practices (SARPs) established by the International Civil Aviation Organization (ICAO); and (v) general communications. The International Maritime Satellite Organization (INMARSAT) was established under the auspices of the International Maritime Organization by the Convention on the International Maritime Satellite Organization signed at London on 03 September 1976. The Assembly of the IMSO decided to rename the organization to the International Mobile Satellite Organization (Inmarsat) in December 1994. The IMSO was reestablished by the Convention on the International Mobile Satellite Organization signed at London on 24 April 1998 and succeeded INMARSAT on 15 April 1999. After the succession, the INMARSAT space segment and operational business were transferred to Inmarsat Ltd., a UK company, with the IMSO overseeing the public services obligations of the company pursuant to an agreement concluded between IMSO and Inmarsat Ltd. An agreement between the International Civil Aviation Organization (ICAO) and the IMSO was signed in Montreal on 20 September 2000 and addresses the relationship between ICAO and IMSO. Headquartered in London, the United Kingdom, but as a global organization, Inmarsat is represented around the world. Our network operations are run from our headquarters in London and our regional offices provide on-the-ground, local support for our partners and customers. Dubai office, covering the Middle East, Africa, Central Asia and Russia. Singapore office, covering Asia Pacific, East Asia, South-east Asia, North Asia and Australasia. Miami Office, covering the Americas, including North America (except Government development), Mexico, the Caribbean, Central America and South America. Washington Office, covering global government development. Inmarsat PLC is the world's leading provider of global mobile satellite communications. We provide voice and high-speed data services to almost anywhere on the planet – on land, at sea and in the air. Our services are delivered through the most versatile and reliable satellite network in the world. We own and operate 11 satellites in geostationary orbit 35 786 km (22 236 mi) above the Earth, controlled from our HQ in London via ground stations located around the globe. We sell our services through a worldwide network of distribution partners and service providers. As well as being some of the world's leading telecommunications service providers, they all have specialist satellite industry experience. We work together with our partners to develop innovative, customised solutions for businesses and organisations all over the world. These include major corporations from the maritime, media, oil and gas, construction and aeronautical industries, as well as governments and aid agencies. Our customers rely on us for mission-critical mobile communications. We are a trusted and integral part of their global operations. Inmarsat's goal is to remain the leading mobile satellite services operator – through a combination of extensive portfolio, global coverage and technological innovation. We aim to deliver the highest standards of reliability in the market, while offering excellent value for money. With the deployment of Inmarsat-5 Global Xpress™ network from the end of 2014, we will be able to offer customers mobile broadband speeds of 50 Mbps to terminals as small as 60 cms, and speeds of up to 10 Mbps to terminals as small as 20 cm. Ka-band First:- it will be the first time a commercial operator has utilised Ka-band radio frequencies to deliver a global satellite service. This additional capacity will also free us to enhance our existing portfolio of L-band services – including BGAN, FleetBroadband and SwiftBroadband, and our global handheld phone, IsatPhone Pro. We see a future where mobile satellite services are delivered through a combination of L-band and Ka-band satellites, harnessing the strengths of each to offer an unrivalled package of services based on speed, price and portability. Inmarsat was the operator of the first global mobile satellite communications system – its goal to enable merchant ships to stay in touch across the oceans and to call for help in an emergency. Today Inmarsat owns and operates three global constellations of 11 satellites flying in geosynchronous orbit 37 786 km (22 240 statute miles) above the Earth. Award For Innovation:- our first wholly owned satellites, the Inmarsat-2s, were launched in the early 1990s, and the Inmarsat-3s – the first generation to use spot beam technology – followed later in the decade. The Inmarsat-4 satellites – winner in 2010 of the Royal Academy of Engineering's prestigious MacRobert Award for

innovation – established the world's first global 3G network in 2009. They are expected to remain in service until 2020 and beyond. Mobile Coverage:- in the meantime, Inmarsat has entered into agreement with the European Space Agency (ESA) to become the commercial operator of a new satellite called Alphasat. Built by Astrium, Alphasat is scheduled for completion in 2012, when it will supplement the I-4 satellites by providing L-band mobile coverage of Europe, the Middle East and Africa. The Inmarsat-5s:- a new constellation of Ka-band satellites, the Inmarsat-5s, is also being built by US manufacturer Boeing, planned for launch in 2013–14. They will form the backbone of our new Inmarsat Global Xpress™ network, offering broadband speeds of 50 Mbps around the world. The International Maritime Satellite Organization (INMARSAT) is an international partnership of signatories from 62 nations. The partnership provides mobile satellite capacity to its signatories, who, in turn, use the capacity to provide worldwide mobile satellite services to their maritime, aeronautical and land-mobile customers – including shipping, cruise, fishing, research and offshore exploration industries and airlines. INMARSAT began service in 1976. COMSAT is the US signatory to INMARSAT. Inmarsat has been at the forefront of mobile satellite services for over 31 years. We are recognized leaders in our field and we continue to introduce new technologies that redefine the standard for our industry. As of August 2010, Boeing, the US aerospace manufacturer, has been contracted to build a pioneering new constellation of satellites – the Inmarsat-5s. They will form the backbone of our planned Inmarsat Global Xpress™ network, delivering mobile broadband speeds of up to 50 Megabits per second. Global Coverage:- our current fleet of 11-satellites already provides seamless mobile voice and data communications around the world, enabling users to make phone calls or connect to the internet – whenever and wherever they need – on land, at sea or in the air. Inmarsat's award-winning Broadband Global Area Network (BGAN) service, for example, makes it possible for TV broadcasters to beam live breaking news from remote locations into millions of homes. And in future, when you make a mobile phone call or send a text message from an aircraft, it's likely to be routed via the Inmarsat satellites to the ground. Safety Services:- but for the maritime community our communication and safety services are nothing new. Their lives and livelihoods have depended upon Inmarsat for more than a quarter of a century. We were founded in 1979 to ensure that ships could stay in constant touch by telephone. In 1999, we became the first intergovernmental organisation to transform into a private company and, in 2005, were floated on the London Stock Exchange. / Инмасэт Эл.ти.ди. (Inmarsat Ltd). (ii) Директорат, возглавляемый Генеральным Директором, Капитаном Эстэваном Пача-Висэнтэ (Director General, Capt. Esteban Pacha-Vicente) из Испании, который . рабочая сеть Инмасэт-файв Глоубэл Экспрэс^{T3} (Inmarsat-5 Global Xpress™ network). – включая Би.Дьжи.Эй.Эн. (BGAN), ФлитБродбэнд (FleetBroadband) и СвыфтБродбэнд (SwiftBroadband), и нашу АйсэтФон Про (IsatPhone Pro). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Международная Организация Морской Спутниковой Связи (МОМСС или ИНМАРСАТ по произношению Англоязычного сокращения INMARSAT) была учреждена Конвенцией 1976 с целью обеспечения использования искусственных спутников Земли для мореплавания. За десять лет своего существования организация добилась того, что в её составе находились 80 стран участниц.

INTERNATIONAL MARKET INSIGHTS = ОЗНАКОМЛЕНИЯ С МЕЖДУНАРОДНЫМИ РЫНКАМИ (или ВЗГЛЯДЫ ИЗНУТРИ НА МЕЖДУНАРОДНЫЙ РЫНОК) – In the United States, the International Market Insight (IMI) reports are prepared by staff at American embassies and consulates. An IMI covers developments in a single country that are of interest to traders and investors. Topics may include:- new laws, policies and procedures, new trade regulations and marketplace changes.

INTERNATIONAL MONETARY FUND = МЕЖДУНАРОДНЫЙ ВАЛЮТНЫЙ ФОНД (или МЕЖДУНАРОДНЫЙ МОНЕТАРНЫЙ ФОНД) – The International Monetary Fund (IMF) is an organization of 187 countries, working to foster global monetary cooperation, secure financial stability, facilitate international trade, promote high employment and sustainable economic growth, and reduce poverty around the world. The IMF works to foster global growth and economic stability. It provides policy advice and financing to members in economic difficulties and also works with developing nations to help them achieve macroeconomic stability and reduce poverty. The IMF promotes international monetary cooperation and exchange rate stability, facilitates the balanced growth of international trade, and provides resources to help members in balance of payments difficulties or to assist with poverty reduction. The IMF has 187 member countries. It is a specialized agency of the United Nations but has its own charter, governing structure, and finances. Its members are represented through a quota system broadly based on their relative size in the global economy. Through its economic surveillance, the IMF keeps track of the economic health of its member countries, alerting them to risks on the horizon and providing policy advice. It also lends to countries in difficulty, and provides technical assistance and training to help countries improve economic management. This work is backed by IMF research and statistics. The IMF works with other international organizations to promote growth and poverty reduction. It also interacts with think tanks, civil society, and the media on a daily basis. The IMF has played a part in shaping the global economy since the end of World War II. Cooperation and reconstruction (1944–71):- as the Second World War ends, the job of rebuilding national economies begins. The IMF is charged with overseeing the international monetary system to ensure exchange rate stability and encouraging members to eliminate exchange restrictions that hinder trade. The end of the Bretton Woods System (1972–81):- after the system of fixed exchange rates collapses in 1971, countries are free to choose their exchange arrangement. Oil shocks occur in 1973–74 and 1979, and the IMF steps in to help countries deal with the consequences. Debt and painful reforms (1982–89):- the oil shocks lead to an international debt crisis, and the IMF assists in coordinating the global response. Societal Change for Eastern Europe and Asian Upheaval (1990–2004):- the IMF plays a central role in helping the countries of the former Soviet bloc transition from central planning to market-driven economies. Globalization and the Crisis (2005 – present):- the implications of the continued rise of capital flows for economic policy and the stability of the international financial system are still not entirely clear. The current credit crisis and the food and oil price shock are clear signs that new challenges for the IMF are waiting just around the corner. The IMF's fundamental mission is to help ensure stability in the international system. It does so in three ways:- keeping track of the global economy and the economies of member countries; lending to countries with balance of payments difficulties; and giving practical help to members. Surveillance:- the IMF oversees the international monetary system and monitors the financial and economic policies of its members. It keeps track of economic developments on a national, regional, and global basis, consulting regularly with member countries and providing them with macroeconomic and financial policy advice. Technical Assistance:- to assist mainly low- and middle-income countries in effectively managing their economies, the IMF provides practical guidance and training on how to upgrade institutions, and design appropriate macroeconomic, financial, and structural policies. Lending:- the IMF provides loans to countries that have trouble meeting their international payments and cannot otherwise find sufficient financing on affordable terms. This financial assistance is designed to help countries restore macroeconomic stability by rebuilding their international reserves, stabilizing their currencies, and paying for imports – all necessary conditions for relaunching growth. The IMF also provides concessional loans to low-income countries to help them develop their economies and reduce poverty. International organization established for lending funds to member nations to promote international monetary cooperation among nations, to facilitate the expansion and balanced growth of international trade, and to finance temporary balance-of-payments deficits, usually in conjunction with macroeconomic adjustment programs. The International Monetary Fund (IMF) is an international organization with 187 members, including the United States. The main functions of the IMF are to lend funds to member nations to finance temporary balance of payments problems, to facilitate the expansion and balanced growth of international trade and to promote international monetary cooperation among nations. The IMF also creates special drawing rights (SDRs), which provide member nations with a source of additional reserves. Member nations are

required to subscribe to a Fund quota, paid mainly in their own currency. The IMF grew out of the Bretton Woods Conference of 1944. The International Monetary Fund (IMF) was established in 1946 to act as the banker of last resort for countries experiencing foreign exchange deficiencies, and to monitor currency exchange relationships among nations. A fund set up as a result of the Bretton Woods Conference in 1944 which began operations in 1947. It currently has 187 member countries including most of the major countries of the world. The fund was set up to supervise the fixed exchange rate system agreed at Bretton Woods and to make available to its members a pool of foreign exchange resources to assist them when they have balance of payments difficulties. It is funded by member countries' subscriptions according to agreed quotas. The most important international organization for monetary policy cooperation. The IMF, like the World Bank, was established in 1944 in Bretton Woods and is headquartered in Washington, DC, the United States. In the 2005–06 fiscal year the organization numbered 184 member countries. International organization affiliated with the United Nations, created at the Bretton Woods Economic Conference in 1944 to maintain monetary stability in the world community. It has 187 members. The International Monetary Fund (IMF) is responsible for ensuring that the international monetary systems runs smoothly. To fulfill this mission, it performs three main functions:- (i) it defines and maintains order in the international monetary system; (ii) it offers member nations technical assistance and a forum for negotiations on fiscal and monetary matters; and (iii) it provides credit to countries with balance of payments difficulties. The IMF has consistently worked to promote stable exchange rates and to oppose restrictive and discriminatory practices. In the 1970s, the IMF played a key role in reforming the international monetary system from a fixed to a floating exchange rate system. It created a new reserve asset known as Special Drawing Rights (SDRs), whose value is based on a basket of currencies. SDRs have been reissued several times since they were first created in 1970. Loans made by the IMF are purchases of foreign currencies and SDRs, and repayments are repurchases by IMF members of their own currencies, using SDRs or foreign exchange. In recent years, the IMF has linked its lending activities to stringent internal restraints designed to bring inflation rates and the world debt crisis under control by reducing imports and increasing exports. In restructuring debt owed by Third World nations, it has added its guarantee to private bank loans and made direct loans to encourage banks to renew maturing loans. Since the break-up of the former USSR, the IMF has been working to help the 15 republics of the Commonwealth of Independent States, and planned to provide USD25–30 million to help those countries in their transition to a market economy. The International Monetary Fund (IMF) was conceived at the Bretton Woods Conference in 1944 to promote international monetary co-operation and stability. It opened in Washington DC in 1947. Website:- http://www.imf.org. The IMF is an international organization established in 1945 to foster international trade and global economic cooperation. Further objectives include promoting exchange rate stability, providing temporary financial assistance to countries to help ease balance of payments adjustment, and participating in debt restructuring agreements. Today (2011), it has 187 member countries. International Monetary Fund (IMF) is an international monetary organization which was established in 1944 under the Bretton Woods Agreement. It is based in Washington DC, and now has 184 member countries (in 2006). Under the IMF Articles of Agreement, its main tasks are to foster global monetary cooperation, secure exchange rate stability, facilitate international trade and promote economic growth. / выплата (repayment). Международный Валютный Фонд (МВФ) является специализированным агентством Организации Объединённых Наций (ООН), созданным в 1944 для поддержания валютных курсов путём представления среднесрочных валютных займов. В 2011 членами фонда являлись 187 государств. Капитал МВФ, формируемый из взносов государств участников, составлял 90 миллиардов единиц Специальных Прав Заимствования (СПЗ). Штабквартира фонда расположена в Вашингтоне, Округ Колумбия, США. Международный Валютный Фонд – ведущая международная валютно-финансовая организация, учреждённая в 1944 в результате Бреттон-Вудских соглашений с целью поддержания стабильности международной валютной системы и снижения торговых и валютных барьеров между странами; координирует международное сотрудничество в валютно-финансовой сфере, финансирует страны-члены и консультирует их по различным экономическим вопросам, выпускает СДР; ресурсы МВФ состоят из взносов стран-членов и рыночных заимствований. Международный Валютный Фонд (МВФ; International Monetary Fund (IMF)) – международная валютная организация, имеющая статус специализированного учреждения ООН. МВФ создан в 1944 по решению валютно-финансовой конференции 44 стран в Бреттон Вудсе (Bretton Woods), США. Начал операции в Марте 1947. В 1947 в него входило 49 стран. Основной капитал составлял 7.7 миллиардов Долларов США. В середине 1973 МВФ насчитывал 125 стран-членов. Основной капитал достиг 28.8 миллиардов Долларов США. Бывший Советский Союз в деятельности фонда не участвовал. Правление МВФ – в Вашингтоне, Округ Колумбия, США. Фонд имеет отделение в Париже, Франция. МВФ (согласно его Уставу) создан с целью содействия международному валютному сотрудничеству, урегулирования валютно-расчётных отношений между странами, поддержания равновесия платёжных балансов стран, входящих в МВФ, и регулирования курсов их валют. Фактически деятельность МВФ осуществляется под контролем США, которые заняли в нём ведущее положение и используют в целях укрепления позиций Доллара США как ключевой валюты капиталистического мира. Основной капитал МВФ образуется из взносов (квот) стран, входящих в фонд. Размеры квот устанавливаются с учётом экономического значения страны в мировой торговле. На Сентябрь 1972 квоты главных капиталистических стран составили (в миллионах Долларов США):- США – 6 700, Великобритании – 2 800, ФРГ – 1 600, Франции – 1 500, Японии – 1 200, Канады – 1 100; 25% квоты вносится золотом и 75% в национальной валюте страны. Высший орган – Совет Управляющих. Каждый член МВФ имеет в совете 250 голосов плюс 1 голос на каждые 100 000 Долларов США квоты страны. Это обеспечивает решающее большинство голосов развитым капиталистическим странам. На долю 10 стран:- США, Великобритании, ФРГ, Франции, Японии, Канады, Италии, Бельгии, Нидерландов и Швеции в 1972 приходилось 56.4% голосов. Исполнительный орган банка – Исполнительный Директорат, во главе которого стоит Председатель, являющийся одновременно Директором-Распорядителем МВФ. Задачей фонда с момента его образования является установление твёрдых паритетов валют. Страны-члены МВФ согласились установить паритеты своих валют в золоте или Долларах США и не изменять их без согласия фонда больше чем на 10%, а также не отклоняться от паритета при проведении операций более чем на ±1% (с Декабря 1971 ±2.25%). В целях смягчения и предотвращения вспышек валютного кризиса МВФ предоставляет странам-членам краткосрочные (до 1 года) и среднесрочные (до 3–5 лет) кредиты из расчёта в среднем 2–3.5% годовых. Кредиты предоставляются в форме купли-продажи национальной валюты данной страны на эквивалент национальной валюты других стран-членов. Центральной проблемой, стоящей перед МВФ, была и остаётся проблема обеспечения международной ликвидности, то есть способности стран беспрепятственно производить платежи по внешнеторговым и другим международным операциям и свободно превращать образующееся активное сальдо платёжного баланса в валюты, используемые в качестве средств международных расчётов. Валютно-финансовая система, основы которой были разработаны на Бреттонвудской Конференции, в качестве международных ликвидных средств использует золото и Доллар США как ключевую валюту капиталистического мира. С Декабря 1971 за основу этой системы принято равенство:- 38 Долларов США (до Декабря 1971 35 Долларов США) за 1 Тройскую унцию золота (31.003 5 грамм (г)), с Февраля 1973 – 44.22 Доллара США за 1 унцию золота. Существовавшая система золотодевизного стандарта явно не успевала за быстро растущей мировой торговлей и была не в состоянии обеспечить нормальные условия международного товарообмена (смотрите Валютный Кризис, Золотовалютные Резервы). Добыча золота отставала от потребностей платёжного оборота. Кризис Доллара США, вызванный хроническим дефицитом платёжного баланса и значительными военными расходами правительства США, привёл к его девальвациям в Декабре 1971 (на 7.89%) и Феврале 1973 (на 10%) и глубокому

расстройству всей системы международных расчётов. В целях повышения уровня международной ликвидности на сессии МВФ в Рио де Жанейро (1967) была разработана и с 01 Января 1970 введена система 'специальных прав заимствования' (система предоставления взаимных кредитов в условных расчётных денежных единицах – СДР, приравненных по золотому содержанию к Доллару США). Кредиты в СДР предоставляются странам-членам МВФ при дефиците платёжного баланса и недостатке золотовалютных резервов. Новые кредитные средства выдаются странам пропорционально их квоте в капитале фонда. С Января 1970 по Январь 1972 страны-члены получили 9.4 миллиарда единиц. В Сентябре 1972 на 27-й Сессии Совета Управляющих МВФ был сформирован специальный Комитет по Реформе Международной Валютной Системы.

INTERNATIONAL MONETARY SYSTEM = МЕЖДУНАРОДНАЯ МОНЕТАРНАЯ СИСТЕМА (или МЕЖДУНАРОДНАЯ ВАЛЮТНАЯ СИСТЕМА) – International Monetary System:- institutions, agreements and rules of behavior governing the settlement of international exchanges. See also European Monetary System, and Gold Exchange Standard.

INTERNATIONAL MULTIMODAL TRANSPORT = МЕЖДУНАРОДНАЯ МУЛЬТИМОДАЛЬНАЯ ПЕРЕВОЗКА (или МЕЖДУНАРОДНАЯ ПЕРЕВОЗКА В СМЕШАННОМ СООБЩЕНИИ) – International Multimodal Transport means the carriage of goods by at least two different modes of transport on the basis of a multimodal transport contract from a place in one country at which the goods are taken in charge by the multimodal transport operator to a place designated for delivery situated in a different country. Also known as International Combined Transport. A term International Multimodal Transport means the carriage of goods by at least two different modes of transport on the basis of a multimodal transport contract from a place in one country at which the goods are taken in charge by the multimodal transport operator to a place designated for delivery situated in a different country. The operations of pick-up and delivery of goods carried out in the performance of a unimodal transport contract, as defined in such contract, shall not be considered as international multimodal transport.

INTERNATIONAL OIL POLLUTION COMPENSATION FUND = МЕЖДУНАРОДНЫЙ ФОНД ПО КОМПЕНСАЦИЯМ ОТ ЗАГРЯЗНЕНИЙ НЕФТЬЮ – International Oil Pollution Compensation Fund is an inter-governmental agency designed to pay compensation for oil pollution damage, exceeding the shipowner's liability. It was created by an IMO (short for the International Maritime Organization) Convention in 1971 and started its operations in October 1978. Contributions come mainly from the oil companies of member states.

INTERNATIONAL OLYMPIC COMMITTEE = МЕЖДУНАРОДНЫЙ ОЛИМПИЙСКИЙ КОМИТЕТ – At the Congress of Paris in 1894, the control and development of the modern Olympic Games was entrusted to the International Olympic Committee (IOC; Comité International Olympique), with headquarters to be established in Switzerland. It is responsible for maintaining the regular celebration of the Olympic Games, seeing that the Games are carried out in the spirit that inspired their revival, and promoting the development of amateur sport throughout the world. The original committee in 1894 consisted of 14 members and Coubertin, and membership since then has been self-perpetuating. Convinced that the downfall of the ancient Olympic Games had been caused by outside influences that undermined the spirit of the Games, Coubertin felt that the revived Games would go the same way unless they were in the hands of people whose concern was to keep the spirit of amateur sport alive and who were responsible in no way to any outside influences. Thus IOC members are regarded as ambassadors from the IOC to their national sports organizations. They are in no sense delegates to the committee and may not accept from the government of their country, or from any organization or individual, any instructions that in any way affect their independence. In light of this stance, in December 1998 the sporting world was shocked by allegations of widespread corruption within the IOC. It was charged that IOC members had accepted bribes – in the form of cash, gifts, entertainment, business favors, travel expenses, medical expenses, and even college tuition for members' children – from members of the committee that had successfully advanced the bid of Salt Lake City, Utah, the United States, as the site for the 2002 Winter Games. Accusations of impropriety were also alleged in the conduct of several previous bid committees. The IOC responded by expelling six members; several others resigned. An IOC 2000 reform commission announced in December 1999 a 50-point reform package covering the selection and conduct of the IOC members, the bid process, the transparency of financial dealings, the size and conduct of the Games, and drug regulation. An independent IOC Ethics Commission was established. The IOC is a permanent organization that elects its own members. The 1999 reforms set the maximum membership at 115, of which 70 are individuals, 15 current Olympic athletes, 15 National Olympic Committee presidents, and 15 International Sports Federation presidents. The members are elected to renewable eight-year terms, but they must retire at age 70. Term limits were also applied to future presidents. The IOC elects its president for a period of eight years, at the end of which the president is eligible for reelection for further periods of four years each. Jacques Rogge (of Belgium) was elected in 2001. Previous presidents were Dimítrios Vikélas (1894–96, Greece), Pierre, baron de Coubertin (1896–1925, France), Henri, comte de Baillet-Latour (1925–42, Belgium), J. Sigfrid Edström (1946–52, Sweden), Avery Brundage (1952–72, the United States), Michael Morris, Lord Killanin (1972–80, Ireland), and Juan António Samaranch (1980–2001, Spain). The executive board of 15 members holds periodic meetings with the international federations and National Olympic Committees. The IOC as a whole meets annually, and a meeting can be convened at any time that one-third of the members so request. The International Olympic Committee (IOC), established in 1894, consists of 167 members with the goals of conducting, promoting the Olympic ideals and administer the modern Olympic games. The International Olympic Committee is the supreme authority of the Olympic Movement. Acting as a catalyst for collaboration between all parties of the Olympic family, from the National Olympic Committees (NOCs), the International Sports Federations (IFs), the athletes, the Organising Committees for the Olympic Games (OCOGs), to the TOP partners, broadcast partners and United Nations agencies, the International Olympic Committee (IOC) shepherds success through a wide range of programmes and projects. On this basis it ensures the regular celebration of the Olympic Games, supports all affiliated member organisations of the Olympic Movement and strongly encourages, by appropriate means, the promotion of the Olympic values. In detail the role of the IOC, according to the Olympic Charter, is:- (i) to encourage and support the promotion of ethics in sport as well as education of youth through sport and to dedicate its efforts to ensuring that, in sport, the spirit of fair play prevails and violence is banned; (ii) to encourage and support the organisation, development and coordination of sport and sports competitions; (iii) to ensure the regular celebration of the Olympic Games; (iv) to cooperate with the competent public or private organisations and authorities in the endeavour to place sport at the service of humanity and thereby to promote peace; (v) to take action in order to strengthen the unity and to protect the independence of the Olympic Movement; (vi) to act against any form of discrimination affecting the Olympic Movement; (vii) to encourage and support the promotion of women in sport at all levels and in all structures with a view to implementing the principle of equality of men and women; (viii) to lead the fight against doping in sport; (ix) to encourage and support measures protecting the health of athletes; (x) to oppose any political or commercial abuse of sport and athletes; (xi) to encourage and support the efforts of sports organisations and public authorities to provide for the social and professional future of athletes; (xii) to encourage and support the development of sport for all; (xiii) to encourage and support a responsible concern for environmental issues, to promote sustainable development in sport and to require that the Olympic Games are held accordingly; (xiv) to promote a positive legacy from the Olympic Games to the host cities and host countries; (xv) to encourage and support initiatives blending sport with culture and education; and (xvi) to encourage and support the activities of the International Olympic Academy (IOA) and other institutions which dedicate themselves to Olympic education. The administration of the IOC is

placed under the responsibility of the Director General who, under the authority of the President, runs it with the assistance of the directors; the latter are at the head of small units responsible for dealing with business in their respective sectors of competence (Olympic Games, International Cooperation and Development, Finance and Administration, Sports, Relations with the National Olympic Committees, Technology, Communications, Information Management, Television and Marketing Services, Legal Affairs, Medical and Scientific, Olympic Museum and Olympic Solidarity). Headquartered in Lausanne, Switzerland. Xxxxx. When he announced in Paris, on a winter's evening in 1892, the forthcoming re-establishment of the Olympic Games, Pierre de Coubertin was applauded, but nobody at the time imagined the scale of the project entailed by reviving the ancient Olympic Games, appointing a committee in charge of organising them and creating an international movement. The IOC was created on 23 June 1894; the 1st Olympic Games of the modern era opened in Athens on 06 April 1896; and the Olympic Movement has not stopped growing ever since. The Olympic Movement encompasses organisations, athletes and other persons who agree to be guided by the principles of the Olympic Charter. Its composition and general organisation are governed by Chapter 1 of the Charter. The Movement comprises three main constituents:- (i) The IOC:- the supreme authority of the Movement; (ii) The International Federations (IFs):- these are international non-governmental organisations administering one or several sports at world level and encompassing organisations administering such sports at national level (More information about IFs); and (iii) The National Olympic Committees:- their mission is to develop, promote and protect the Olympic Movement in their respective countries. The NOCs are the only organisations that can select and designate the city which may apply to organise Olympic Games in their respective countries. In addition, they alone can send athletes to the Games. The goal of the Olympic Movement is to contribute to building a peaceful and better world by educating youth through sport practised without discrimination or any kind, in a spirit of friendship, solidarity and fair play. The Olympic Movement is defined also by the numerous activities in which it engages, such as:- (i) promoting sport and competitions through the intermediary of national and international sports institutions worldwide; (ii) cooperation with public and private organisations to place sport at the service of mankind; (iii) assistance to develop 'Sport for All'; (iv) advancement of women in sport at all levels and in all structures, with a view to achieving equality between men and women.Help in the development of sport for all; (v) opposition to all forms of commercial exploitation of sport and athletes; (vi) the fight against doping; (vii) promoting sports ethics and fair play; (viii) raising awareness of environmental problems; (ix) financial and educational support for developing countries through the IOC institution Olympic Solidarity. / Комитэ Этэрнасьёналь Олямпик (Comité International Olympique). ; несколько других подали в отставку (resigned). Жакь Рогe (Jacques Rogge; из Бельгии) был избран в 2001. Предшествующими президентами были Димитриос Викелас (Dimítrios Vikélas; 1894–96; Греция), Пьер, барон дё Куберта (Pierre, baron de Coubertin; 1896–1925; Франция), Ори комт дё Байе-Лятур (Henri, comte de Baillet-Latour; 1925–42; Бельгия), Йий. Сигфрид Эдстром (J. Sigfrid Edström; 1946–52; Швеция), Эйвёри Брандэдьж (Avery Brundage; 1952–72; Соединённые Штаты Америки), Майкел Морис, Лод Килэнын (Michael Morris, Lord Killanin; 1972–80; Ирландия), Хуан Антонио Самаранч (Juan António Samaranch; 1980–2001; Испания), Жакь Рогe (Jacques Rogge; 2001–13; Бельгия), и Томас Бах (Thomas Bach; 2013–; Германия). домогательство (abuse). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Международный Олимпийский Комитет (МОК), созданный в 1894 по инициативе Французского барона, спортивного и общественного деятеля, историка, педагога и литератора Пьера дё Куберта (Pierre de Coubertin; 1863-Январь-01–1937-Сентябрь-02), Французского общественного деятеля, и состоящий из 167 членов, в качестве основных целей имеет продвижение Олимпийских идеалов и администрирование Олимпийских игр. Комитет является высшим постоянно действующим органом современного олимпийского движения. В 1985 МОК признал 160 Национальных Олимпийских Комитетов, хотя в его составе в это время насчитывалось 92 члена (свыше 70 стран). Международный Олимпийский Комитет (МОК) – высший руководящий орган современного олимпийского движения. Создан 23 Июня 1894 по инициативе Французского общественного деятеля Пьера дё Куберта на Международном Конгрессе, созванном в Париже, Франция для обсуждения актуальных проблем физического воспитания и спорта. На МОК была возложена организация современных Олимпийских Игр. В состав МОК были избраны представители Аргентины, Бельгии, Великобритании, Венгрии, Греции, Италии, Новой Зеландии, России (Генерал Алексей Дмитриевич Бутовский (1838–1917)), Соединённых Штатов Америки (США), Франции, Чехии и Швеции; первые члены МОК были организаторами Национальных Олимпийских Комитетов (НОК) в своих странах. Уставный документ МОК – Хартия Олимпийских Игр. Задачи МОК:- регулярное проведение Олимпийских Игр, их постоянное совершенствование, руководство развитием любительского спорта, содействие укреплению дружбы между спортсменами всех стран. МОК принимает решения о признании НОК и международных спортивных федераций (на 01 Ноября 1973 МОК признаны 131 НОК и 26 международных федераций), определяет программу Олимпийских Игр. Во время игр МОК передаёт международным спортивным федерациям право технического контроля за проведением соревнований по соответствующим видам спорта. Штаб-квартира МОК – в Лозанне, Швейцария. МОК – постоянно действующая организация. Своих членов он избирает из лиц, которые проживают в странах, имеющих НОК. Для страны избирается один член МОК (для крупнейших и наиболее активно участвующих в олимпийском движении стран, а также для тех, где уже проводились Олимпийские Игры, могут быть 2 члена). Члены МОК согласно Хартии являются его представителями в своих странах, а не представляют страны в МОК. На 01 Ноября 1973 в составе МОК было 78 членов из 62 стран; в бывшем Союзе Советских Социалистических Республик (СССР) два члена МОК – Константин Александрович Андрианов (1910–1988) (с 1951; с 1962 – член Исполкома) и Виталий Георгиевич Смирнов (1935–) (с 1971); почётный член Алексей Осипович Романов (1904–1979) (в 1952–71 член МОК). 69 стран, участвующих в олимпийском движении, не имеют представителей МОК. Президентами МОК были:- Димитриос Викелас (Греция) в 1894–96, Пьер дё Куберта (Франция) в 1896–1925, Ори комт дё Байе-Лятур (Бельгия) в 1925–42, Йий. Сигфрид Эдстром (Швеция) в 1942–52, Эйвёри Брандэдьж (США) в 1952–72; в 1972–80 3-й Барон Майкел Морис Килэнын (Ирландия); в 1980–2001 Хуан Антонио Самаранч (Испания); в 2001–13 Жакь Рогe (Бельгия); с 2013 – Томас Бах (Германия). Ежегодно проводятся сессии МОК, в олимпийском году дважды – во время летних и зимних игр. По инициативе представителей социалистических стран МОК неоднократно рассматривал общие проблемы международных спортивных связей, демократизации олимпийского движения, выступал против политической и расовой дискриминации в спорте (в 1968 МОК предоставил право спортивным организациям Германской Демократической Республики (ГДР) и Корейской Народной Демократической Республики (КНДР) направлять на Олимпийские Игры самостоятельные национальные команды; закрыл доступ на Олимпийские Игры 1964 и 1968 и отказал в признании в 1970 НОК Южно-Африканской Республике (ЮАР), где тогда проводилась государственная политика апартеида). В 1967 МОК по предложению НОК СССР принял обращение к спортсменам всех стран с призывом выступать в защиту мира. В отдельных вопросах МОК остаётся на консервативных позициях, в частности не отказывается от недемократического принципа своего формирования. До 1930 МОК периодически созывал Олимпийские Конгрессы для обсуждения проблем олимпийского движения (состоялось 9 конгрессов); затем в течение 43 лет, стремясь сохранить монопольное руководство движением, МОК не проводил их. Под влиянием прогрессивных сил международного спортивного движения в 1973 в Болгарии был проведён 10-й конгресс с участием членов МОК, делегатов НОК и международных спортивных федераций. Конгресс принял обращение к спортсменам о расширении контактов в целях укрепления мира, высказался за активное участие НОК и международных федераций в разрешении проблем мирового спорта, определил основные пути совершенствования олимпийского движения.

INTERNATIONAL OPTIONS MARKET ASSOCIATION = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ РЫНКА ОПЦИОНОВ – International Options Market Association (IOMA):- 1983:- founded in Amsterdam, the Netherlands as the International Association of Options Exchanges and Clearing Houses; 1993:- present name adopted; 2002:- affiliated with the World Federation of Exchanges (WFE). IOMA was founded an association of options markets and clearinghouses around the world. It includes most of the major exchanges trading options on equities, equity indexes, debt instruments, currencies and commodities. Since its affiliating with WFE in 2002, IOMA has widen its scope to include futures and commodity trading. IOMA conducts the annual survey of options markets, and maintains a directory of IOMA members. Between annual meetings, a Board of Directors consisting of eight members governs the association.

INTERNATIONAL ORGANIZATION FOR STANDARDIZATION = МЕЖДУНАРОДНАЯ ОРГАНИЗАЦИЯ ПО СТАНДАРТИЗАЦИИ – International Organization For Standartization (ISO) sets viscosity reference scales. 2007 May:- it has a membership of 156 national standards institutes from countries large and small, industrialized and developing, in all regions of the world. ISO develops voluntary technical standards which add value to all types of business operations. They contribute to the dissemination of technology and making the development, manufacturing and supply of products and services more efficient, safer and cleaner. They make trade between countries easier and fairer. ISO standards also safeguard users and consumers, and make many aspects of their lives simpler. ISO develops only those standards that are required by the market. This work is carried out by experts coming from the industrial, technical and business sectors which have asked for the standards, and which subsequently put them to use. These experts may be joined by others with relevant knowledge, such as representatives of government agencies, consumer organizations, academia and testing laboratories. Published under the designation of International Standards, ISO standards represent an international consensus on the state of the art in the technology or good practice concerned. ISO deals in standards of all sorts, ranging from documentation to equipment packaging and labeling. ISO is the Interational Organization for Standardization. Because the name of the International Organization for Standardization would have different abbreviations in different languages (IOS in English, OIN in French), it was decided to use a word derived from the Greek ‘Isos’, meaning ‘Equal’. Therefore, the short form of the organization’s name is always ISO. International standardization began in the electrotechnical field:- the International Electrotechnical Commission (IEC) was established in 1906. Pioneering work in other fields was carried out by the International Federation of the National Standardizing Associations (ISA), which was set up in 1926. The emphasis within ISA was laid heavily on mechanical engineering. ISA’s activities came to an end in 1942. In 1946, delegates from 25 countries met in London, the United Kingdom and decided to create a new international organization, of which the object would be ‘to facilitate the international coordination and unification of industrial standards’. The new organization, ISO, officially began operating on 1947-February-23. International Organization for Standardization is made up of national standards institutes from countries large and small, industrialized and developing, in all regions of the world. ISO currently has some 130 member organizations on the basis of one member per country. ISO is a non-governmental organization and its members are not, therefore, national governments, but are the standards institutes in their respective countries. Every participating member has the right to take part in the development of any standard which it judges to be important to its country’s economy. No matter what the size or strength of that economy, each participating member in ISO has one vote. ISO’s activities are thus carried out in a democratic framework where each country is on an equal footing to influence the direction of ISO’s work at the strategic level, as well as the technical content of its individual standards. ISO develops voluntary technical standards which add value to all types of business operations. ISO does not enforce their implementation. ISO standards contribute to making the development, manufacturing and supply of products and services more efficient, safer and cleaner. They make trade between countries easier and fairer. ISO standards also serve to safeguard consumers, and users in general, of products and services, as well as to making their lives simpler. ISO develops only those standards which are required by the market. This work is carried out by experts on loan from the industrial, technical and business sectors which have asked for the standards, and which subsequently put them to use. These experts may be joined by others with relevant knowledge, such as representatives of government agencies, regulatory authorities, consumer organizations, academia, testing bodies and laboratories. A certain percentage of ISO standards, mainly those concerned with health, safety or the environment, has been adopted in some countries as part of their regulatory framework, or is referred to in legislation for which it serves as the technical basis. However, such adoptions are sovereign decisions by the regulatory authorities or governments of the countries concerned. ISO itself does not regulate or legislate. Published under the designation of International Standards, ISO standards represent an international consensus on the state of the art in the technology concerned. ISO standards are technical agreements which provide the framework for compatible technology worldwide. All technical work is coordinated from ISO Central Secretariat in Geneva, Switzerland, which also publishes the standards. Since 1947, ISO has published more than 12 000 International Standards. ISO’s work programme ranges from standards for traditional activities, such as agriculture and construction, through mechanical engineering to the newest information technology developments, such as the digital coding of audio-visual signals for multimedia applications. A world-wide federation of national standards institutes (ISO member bodies). The International Organization for Standardization (ISO), established in 1947, is a worldwide federation of national bodies, representing approximately 90 member countries. The scope of the International Organization for Standardization covers standardization in all fields except electrical and electronic engineering standards, which are the responsibility of the International Electrotechnical Commission (IEC). Together, the ISO and IEC form the specialized system for worldwide standardization – the world’s largest nongovernmental system for voluntary industrial and technical collaboration at the international level. The result of ISO technical work is published in the form of International Standards. There are, for example, ISO standards for the quality grading of steel; for testing the strength of woven textiles; for storage of citrus fruits; for magnetic codes on credit cards; for automobile safety belts; and for ensuring the quality and performance of such diverse products as surgical implants, ski bindings, wire ropes, and photographic lenses. / обозначения . являются суверенными (самостоятельными) решениями . Международная Организация по Стандартизации (МОС) является международной неправительственной организацией, осуществляющей разработку международных стандартов и сотрудничество в области стандартизации. МОС пользуется консультативным статусом в Организации Объединённых Наций (ООН). Под таким названием организация официально стала действовать с 23 Февраля 1947. Первоначально штабквартира организации располагалась в Лондоне, Соединённое Королевство. Центральный Секретариат МОС расположен в Женеве, Швейцария. Рабочими органами МОС являются 146 технических комитетов по отраслям техники, разрабатывающих рекомендации и международные стандарты. Членами МОС являются национальные организации по стандартизации. Россия является постоянным членом Совета МОС. Международная Организация по Стандартизации (МОС; International Organization for Standardization (ISO); Organisation Internationale de Normalisation), международная неправительственная организация, осуществляющая разработку международных стандартов и сотрудничество в области стандартизации. Учреждена в 1946 в Лондоне, Соединённое Королевство на совещании представителей 25 стран. По состоянию на 01 Января 1973 членами МОС являлись национальные организации по стандартизации 70 стран. От имени бывшего Союза Советских Социалистических Республик (СССР) членом МОС являлся Государственный Комитет Стандартов Совета Министров СССР. МОС содействует развитию стандартизации в мировом масштабе с целью облегчения международного товарообмена и взаимопомощи и сотрудничеству в области интеллектуальной, научно-технической и экономической деятельности. Международные стандарты, разрабатываемые МОС на основе координации и унификации национальных стандартов, имеют рекомендательный характер. Высший орган МОС – Генеральная Ассамблея, которая созывается не реже 1 раза в 3 года. В период между сессиями

Генеральной Ассамблеи работой МОС руководит Совет, состоящий из 14 членов, избираемых на 3 года. Генеральная Ассамблея избирает также Президента МОС со сроком полномочий 3 года. Ведение дел организации возлагается на Центральный Секретариат МОС, возглавляемый Генеральным Секретарём. Вся техническая работа по разработке проектов международных стандартов проводится в технических комитетах МОС, секретариаты которых возглавляют члены организации. На 01 Июля 1973 в МОС имелось 146 технических комитетов. Программа их работы определяется членами МОС. На 01 Июля 1973 в рамках МОС было издано 2 400 международных стандартов, тематика которых охватывает практически все области науки и техники. Международная Организация по Стандартизации (МОС; International Organization for Standardization (ISO)) функционирует с 1947. Сфера деятельности МОС охватывает стандартизацию во всех областях, за исключением электроники и электротехники, которые относятся к компетенции Международной Электротехнической Комиссии (МЭК; International Electrotechnical Commission (IEC)). На сегодняшний день в состав МОС входит 162 страны. Бывший СССР был одним из основателей организации. Денежные фонды МОС составляются из взносов стран-членов, от продажи стандартов и других изданий, пожертвований. Органами МОС являются Генеральная Ассамблея, Совет МОС, Комитеты Совета, Технические Комитеты и Центральный Секретариат. Высший орган МОС – Генеральная Ассамблея, представляющая собой, собрание должностных лиц и делегатов, назначенных комитетами-членами. Каждый комитет-член имеет право представить не более трёх делегатов, но их могут сопровождать наблюдатели. Члены-корреспонденты и члены-абоненты участвуют как наблюдатели. В период между сессиями Генеральной Ассамблеи работой организации руководит Совет, в который входят представители национальных организаций по стандартизации. При Совете создано исполнительное бюро, которое руководит техническими комитетами МОС. Проекты международных стандартов разрабатываются непосредственно рабочими группами, действующими в рамках технических комитетов. В рамках МОС функционирует около 200 технических комитетов. Технические Комитеты (ТК) подразделяются на общетехнические и комитеты, работающие в конкретных областях техники. Общетехнические ТК решают общетехнические и межотраслевые задачи. К ним, например, относятся ТК 12 ‘Единицы измерений’, ТК 19 ‘Предпочтительные числа’, ТК 37 ‘Терминология’. Остальные ТК действуют в конкретных областях техники (ТК 22 ‘Автомобили’, ТК 39 ‘Станки’ и другие). ТК, деятельность которых охватывает целую отрасль (химия, авиационная и космическая техника и другие), организуют подкомитеты (ПК) и рабочие группы (РГ). В зависимости от степени заинтересованности каждый член МОС определяет статус своего участия в работе каждого ТК. Членство может быть активным и в качестве наблюдателей. Проект международного стандарта (МС) считается принятым, если он одобрен большинством (75%) активных членов ТК. К началу 2006 действовало примерно 14 тысяч международных стандартов (МС) МОС. 75% МС МОС – основополагающие стандарты и стандарты на методы испытаний. В практике международной стандартизации основной упор при разработке стандартов на продукцию делается на установление единых методов испытаний продукции, требований к маркировке, терминологии, то есть на те аспекты, без которых невозможно взаимопонимание изготовителя и потребителя независимо от страны, где производится и используется продукция. В МС также устанавливаются требования к продукции в части безопасности её для жизни и здоровья людей, окружающей среды, взаимозаменяемости и технической совместимости. Что касается других требований к качеству конкретной продукции, то их нецелесообразно устанавливать в МС, – конкретные нормы качества на конкретную продукцию для разных категорий потребителей регулируются через цену непосредственно в контрактах. Значительными достижениями МОС являются разработка международной системы единиц измерения, принятие метрической системы резьбы, системы стандартных размеров и конструкции контейнеров для перевозки грузов всеми видами транспорта. В настоящее время особое внимание привлекает работа ТК 176 ‘Системы обеспечения качества’, созданного в 1979. В его задачу входят стандартизация и гармонизация основополагающих принципов создания систем обеспечения качества. В 1987 была опубликована первая версия четырёх стандартов МОС серии 9000, направленных на единообразный подход к решению вопросов качества продукции на предприятиях, в 1994 – вторая версия, в 2000 – третья версия. Другими органами Совета МОС являются Техническое Бюро и семь комитетов:- (1) ПЛАКО (PLACO – Planning Committee) подготавливает предложения по планированию работы МОС, по организации и координации технических сторон работы. В сферу работы ПЛАКО входят рассмотрение предложений по созданию и роспуску технических комитетов, определение области стандартизации, которой должны заниматься комитеты. (2) КОПОЛКО (COPOLCO – Committee on Consumer Policy) изучает вопросы обеспечения интересов потребителей и возможности содействия этому через стандартизацию; обобщает опыт участия потребителей в создании стандартов и составляет программы по обучению потребителей в области стандартизации и доведению до них необходимой информации о международных стандартах. Этому способствует периодическое издание Перечня Международных и Национальных Стандартов, а также полезных для потребителей руководств:- ‘Сравнительные испытания потребительских товаров’, ‘Информация о товарах для потребителей’, ‘Разработка стандартных методов измерения эксплуатационных характеристик потребительских товаров’ и другие. КОПОЛКО участвовал в разработке руководства МОС/МЭК по подготовке стандартов безопасности. (3) СТАКО комитет по изучению научных принципов стандартизации. (4) КАСКО (CASCO – Committee on Conformity Assessment) занимается вопросами подтверждения соответствия продукции, услуг процессов и систем качества требованиям стандартов, изучая практику этой деятельности и анализируя информацию. Комитет разрабатывает руководства по испытаниям и оценке соответствия (сертификации) продукции, услуг, систем качества, подтверждению компетентности испытательных лабораторий и органов по сертификации. Важная область работы КАСКО – содействие взаимному признанию и принятию национальных и региональных систем сертификации, а также использованию международных стандартов в области испытаний и подтверждения соответствия. КАСКО совместно с МЭК подготовлен целый ряд руководств по различным аспектам сертификации, которые широко используются в странах-членах МОС и МЭК:- принципы, изложенные в этих документах, учтены в национальных системах сертификации, а также служат основой для соглашений по оценке соответствия взаимопоставляемой продукции в торгово-экономических связях стран разных регионов. КАСКО также занимается вопросами создания общих требований к аудиторам по аккредитации испытательных лабораторий и оценке качества работы аккредитующих органов; взаимного признания сертификатов соответствия продукции и систем качества и другого. (5) ИНФКО – комитет по научно-технической информации, к компетенции ИНФКО относятся:- координация и гармонизация деятельности МОС и членов организации в области информационных услуг, баз данных, маркетинга, продажи стандартов и технических регламентов; консультирование Генеральной Ассамблеи МОС по разработке политики по гармонизации стандартов и другим указанным выше вопросам; контроль и руководство деятельностью Информационной Сети МОС (ИСОНЕТ). (6) ДЕВКО (DEVCO – Committee on Developing Country Matters) изучает запросы развивающихся стран в области стандартизации и разрабатывает рекомендации по содействию этим странам в данной области. Главные функции ДЕВКО:- организация обсуждения в широких масштабах всех аспектов стандартизации в развивающихся странах, создание условий для обмена опытом с развитыми странами; подготовка специалистов по стандартизации на базе различных обучающих центров в развитых странах; содействие ознакомительным поездкам специалистов организаций, занимающихся стандартизацией в развивающихся странах; подготовка учебных пособий по стандартизации для развивающихся стран; стимулирование развития двустороннего сотрудничества промышленно развитых и развивающихся государств в области стандартизации и метрологии. В этих направлениях ДЕВКО сотрудничает с ООН. Одним из результатов совместных усилий

стало создание и функционирование международных центров обучения. (7) РЕМКО (REMCO – Committee on Reference Materials) оказывает методическую помощь МОС путём разработки соответствующих руководств по вопросам, касающимся стандартных образцов (эталонов). Так, подготовлен справочник по стандартным образцам и несколько руководств:- 'Ссылка на стандартные образцы в международных стандартах', 'Аттестация стандартных образцов. Общие и статистические принципы' и другие. Кроме того, РЕМКО – координатор деятельности МОС по стандартным образцам с международными метрологическими организациями, в частности, с МОЗМ – Международной Организацией Законодательной Метрологии. МС МОС не являются обязательными, то есть каждая страна вправе применять их целиком, отдельными разделами или вообще не применять. Однако в условиях острой конкуренции на мировом рынке изготовители продукции, стремясь поддержать высокую конкурентоспособность своих изделий, вынуждены пользоваться международными стандартами. По оценке зарубежных специалистов, передовые промышленно развитые страны мира применяют до 80% всего фонда стандартов МОС. Особенно широко используют стандарты МОС и других международных организаций страны, экономика которых в большой степени зависит от внешней торговли. Это Нидерланды, Швеция, Бельгия, Австрия, Дания, у которых доля внешней торговли по отношению к общему объёму производства составляет 40–50 процентов. Эти страны стремятся не создавать национальные стандарты в тех областях, в которых действуют соответствующие международные стандарты.

INTERNATIONAL ORGANIZATION OF SECURITIES COMMISSIONS = МЕЖДУНАРОДНАЯ ОРГАНИЗАЦИЯ КОМИССИЙ ПО ЦЕННЫМ БУМАГАМ – The International Organization of Securities Commissions (IOSCO) was born in 1983 from the transformation of its ancestor inter-American regional association (created in 1974) into a truly international cooperative body. Eleven securities regulatory agencies from North and South America gathered in Quito, Ecuador in April 1983 to take that important decision. In 1984, securities regulators from France, Indonesia, Korea and the United Kingdom were the first agencies to join the membership from outside the Americas. The IOSCO July 1986 Paris Annual Conference was the first to take place outside of the American continents. On that occasion a decision was made to create a permanent General Secretariat for the Organization. Today IOSCO is recognized as the international standard setter for securities markets. The Organization's wide membership regulates more than 90% of the world's securities markets and IOSCO is the world's most important international cooperative forum for securities regulatory agencies. IOSCO members regulate more than one hundred jurisdictions and the Organization's membership is steadily growing. IOSCO adopted in 1998 a comprehensive set of Objectives and Principles of Securities Regulation (IOSCO Principles), which are today recognized as the international regulatory benchmarks for all securities markets. The Organization endorsed in 2003 a comprehensive methodology (IOSCO Principles Assessment Methodology) that enables an objective assessment of the level of implementation of the IOSCO Principles in the jurisdictions of its members and the development of practical action plans to correct identified deficiencies. In 2002 IOSCO adopted a IOSCO multilateral memorandum of understanding (MOU) designed to facilitate cross-border enforcement and exchange of information among the international community of securities regulators. 2005 was a landmark year for IOSCO. The Organization endorsed the IOSCO MOU as the benchmark for international cooperation among securities regulators and set-out clear strategic objectives to rapidly expand the network of IOSCO MOU signatories by 2010. It approved as an unambiguous operational priority the effective implementation, in particular within its wide membership, of the IOSCO Principles and of the IOSCO MOU, which are considered as primary instruments to facilitate cross-border cooperation, reduce global systemic risk, protect investors and ensure fair and efficient securities markets. IOSCO also adopted a comprehensive consultation policy designed to facilitate its continuous interaction with the international financial community and in particular with the industry. IOSCO provides comprehensive technical assistance to its members, in particular those which regulate emerging securities markets. Headquartered in Madrid, Spain. Encourages cooperative policies on market regulation, surveillance, and enforcement at the domestic and international levels in order to maintain just and efficient securities markets. The primary objectives of IOSCO are to promote high standards of regulation in order to maintain just, efficient, and sound markets; to establish standards and an effective surveillance of international securities transactions; and to promote the integrity of the markets by applying standards rigorously and enforcing them effectively. International Organisation of Securities Commissions (IOSCO) is the international body of securities commissioners and administrators from more than sixty countries. IOSCO's primary mandate is to facilitate and coordinate international securities regulation and to promote consistency in regulation across borders.

INTERNATIONAL PAYMENT INSTRUCTION = ИНСТРУКЦИЯ ПО МЕЖДУНАРОДНЫМ ПЛАТЕЖАМ – A paper form for credit transfer instructions to be combined with (cross-border) invoices in order to facilitate automated (cross-border) credit transfers. International Payment Instruction (IPI) is a standard, which was defined by the European Committee for Banking Standards (ECBS). This standard regulates the use of a payment order, which simplifies in particular the automated cross-border payment transfers. / Документальная форма для инструкций по кредитным переводам, которая должна сопровождаться трангранічными счетами-фактурами с тем, чтобы облегчить автоматизированные трансграничные кредитные переводы. Инструкция по Международным Платежам (ИМП; International Payment Instruction (IPI)) это стандарт, который был установлен Европейским Комитетом по Стандартам в Сфере Банковского Обслуживания (ЕКСБО; European Committee for Banking Standards (ECBS)). Этот стандарт регулирует использование платёжного поручения, которое облегчает автоматизированные переводы трансграничных платежей.

THE INTERNATIONAL PETROLEUM EXCHANGE = МЕЖДУНАРОДНАЯ БИРЖА НЕФТИ – International Petroleum Exchange of London Ltd.:- Europe's leading energy futures and options exchange. It provides a regulated marketplace where over USD2 billion in underlying value is traded daily. It is organized as a Recognised Investment Exchange (RIE) under British law. The UK Financial Services Authority (FSA) supervises the members of the IPE. Futures and options for four commodities trade on the IPE:- Brent Crude (Oil), Gas Oil, Natural Gas, and Electricity. Trade occurs at the exchange through open outcry. Orders from clients are taken over the telephone by brokers and transmitted to the appropriate traders in the pit, who shout out their orders. Hand signals may be used to supplement spoken words but can't replace them. A group of energy and futures companies founded the IPE in 1980, and it began trading its first contract, Gas Oil futures, in 1981. In June 1988, the IPE successfully launched Brent Crude futures. In 1997, the IPE began trading its first non-oil contract, Natural Gas futures, which are traded electronically. In March 2001, the IPE began trading an Electricity futures contract. Today, ICE Futures operates exclusively as an electronic marketplace. The International Petroleum Exchange (IPE) (or International Petroleum Exchange of London Limited (full name)) was founded in 1980 as a traditional open-outcry auction market by a group of leading energy and trading companies. IPE headquartered in London, the United Kingdom. The International Petroleum Exchange, as a regulated futures exchange, had both established liquidity and an established brand in global energy markets. The Brent crude futures contract, its benchmark contract, was launched in 1988. Brent crude is sourced from the North Sea. The International Petroleum Exchange had been seeking to expand its electronic trading capabilities since the late 1990s following the emergence of the industry trend toward electronic trade execution. The IntercontinentalExchange, Inc. (ICE) acquired the International Petroleum Exchange to develop a leading platform for energy commodities trading that would offer liquidity in both the futures and over-the-counter (OTC) markets. In February 2006, ICE Futures introduced a West Texas Intermediate, or WTI, futures contract, which is a benchmark crude oil contract based on delivery in Cushing, Oklahoma in the United States. The ICE Gas Oil futures contract is a leading benchmark for the pricing of a range of traded refined oil products outside the United States. Formerly an

independent London energy exchange, the IPE became a wholly owned subsidiary of Intercontinental Exchange (ICE) in June 2001. Its name has since changed to Intercontinental Exchange Futures Europe and trading has been shifted onto an electronic trading platform. This exchange has futures and options contracts for energy products including Brent blend crude oil, gasoil natural gas, electricity (baseload and peakload), coal contracts and carbon emission allowances. The International Petroleum Exchange, based in London, is one of the world's largest energy futures and options exchanges. Its flagship commodity, Brent Crude is a world benchmark for oil prices, but the exchange also handles futures contracts and options on gas oil, natural gas, electricity (baseload and peakload), coal contracts and, as of 2005-April-22, carbon emission allowances with the European Climate Exchange (ECX). The IPE was acquired by the IntercontinentalExchange, Inc. in June 2001. The IPE was an open outcry exchange until 2005-April-07, when its name was changed to ICE Futures and all trading was shifted onto an electronic trading platform. Until the 1970s, the price of oil was relatively stable with production largely controlled by the biggest oil companies. The 1970s transformed the industry forever. Two oil price shocks meant that price volatility became a fundamental feature of the market, short-term physical markets rapidly evolved, and the need to hedge emerged. A group of energy and futures companies founded the IPE in 1980 and the first contract, for Gas Oil futures, was launched the following year. In June 1988, the IPE successfully launched Brent Crude futures. Volumes rapidly took off and the Exchange has experienced incremental growth, year-on-year for almost its entire history. New trading instruments such as swaps, futures and options have grown up. The modern business, though complex, is efficient, flexible and fast moving. Since its inception Oil futures and latterly options have been traded in pits on the market floor using the open outcry system. As business volumes have grown the IPE has moved location several times to accommodate new pits and increasing number of traders. Since 1997 the ICE Futures has expanded its offerings from Brent Crude and Gas Oil to include Natural Gas (1997), Electricity (2004), and ECX carbon financial instruments (2005). These expansions have meant that the ICE Futures can now offer a full spectrum of energy products. More advanced transactions are also now possible, due to cross and multi-product transactions, which eliminate the need to use multiple markets or an adviser. The IPE is regulated in the United Kingdom by the Financial Services Authority (FSA) as a recognised investment exchange (RIE) under Part XVIII of the Financial Services and Markets Act 2000 (FSMA). Further, in April 2003, the IPE received no-action relief from the US Commodity Futures Trading Commission under Sections 5 and 5a of the Commodity Exchange Act to make all of its contracts available in the United Kingdom on the ICE Platform during the course of the entire trading day. In accordance with the FSMA (short for the Financial Services and Markets Act 2000), all IPE General Participants based in the United Kingdom will be authorized and regulated by the UK Financial Services Authority (FSA). Where General Participants are incorporated overseas, they will be regulated by the relevant regulatory authority in that jurisdiction. LCH Limited (London, UK; recognized central counterparty – clearing house) guarantees financial performance of all IPE contracts registered with it by its clearing Members. All IPE Floor Member companies are either members of LCH, or have a clearing agreement with a Floor Member who is a member of LCH. The International Petroleum Exchange in London is one of the world's premier energy futures and contracts exchange. Brent crude from North sea oil fields is one of the major commodities traded at the IPC. Apart from Brent crude, natural gas and gas oil is also actively traded here. Brent crude traded at the IPE is regarded as one of the bench marks for crude trade around the world. Until the 1970s, the price of oil was relatively stable with production largely controlled by the biggest oil companies. The 1970s transformed the industry forever. Two oil price shocks meant that price volatility became a fundamental feature of the market, short-term physical markets rapidly evolved, and the need to hedge emerged. A group of energy and futures companies founded the IPE in 1980 and the first contract, for Gas Oil futures, was launched the following year. In June 1988, the IPE successfully launched Brent Crude futures. Volumes rapidly took off and the Exchange has experienced incremental growth, year-on-year for almost its entire history. New trading instruments such as swaps, futures and options have grown up. The modern business, though complex, is efficient, flexible and fast moving. Since its inception Oil futures and latterly options have been traded in pits on the market floor using the open outcry system. As business volumes have grown the IPE has moved location several times to accommodate new pits and increasing number of traders. In 1997 the IPE began trading its first non-oil contract with the launch of the IPE Natural Gas futures. These contracts were launched on the IPE bespoke Electronic Trading Platform (IPE ETS). This platform has been further enhanced since its first launch and now also provides the medium for parallel trading of oil contracts. / Международная Биржа Нефти (МБН) – Лондонская биржа фьючерсов и опционов на энергоносители, на которой продаются опционы и фьючерсы на сырую нефть, попутный газ и фьючерсы на неэтилированный бензин. Расчёт по сделкам с фьючерсами на сырую нефть производится наличными. На бирже представлены три класса участников:- (i) фирмы – члены биржи, имеющие право голоса, место на бирже и собственную долю биржи; (ii) торговые ассоциации, принимающие непосредственное участие в добыче, переработке или торговле нефтью и нефтепродуктами; и (iii) местные члены биржи – частные лица, которые могут заключать сделки в зале биржи. Торги проводятся через членов биржи, участвовать в торгах через членов биржи может любой. Местные члены биржи участвуют в торгах для себя за свой счёт или для фирм – членов биржи и других местных членов биржи, но не для клиентов. Торги на МБН проходят с Понедельника по Пятницу с 09:15 до 20:15.

THE INTERNATIONAL PLANT PROTECTION CONVENTION = МЕЖДУНАРОДНАЯ КОНВЕНЦИЯ ПО ЗАЩИТЕ РАСТЕНИЙ – The International Plant Protection Convention (IPPC) is an international treaty to secure action to prevent the spread and introduction of pests of plants and plant products and to promote appropriate measures for their control. The Convention was adopted by the Food and Agriculture Organization of the United Nations (FAO) in 1951 and entered into force in 1952. The New Revised Text of the Convention was adopted in 1997 and entered into force in 2005. The Convention has 144 Contracting Parties (in June 2009). The purpose of the Convention is 'to secure common and effective action to prevent the spread and introduction of pests of plants and plant products, and to promote appropriate measures for their control'. Although the IPPC clearly has strong relevance to the regulation of trade, the Convention is not limited in this respect. International cooperation in many forms of plant protection may fall within the scope of the Convention. Likewise, plants are not limited to cultivated plants and protection is not limited to direct damage from pests. Therefore, the scope of the Convention extends to the protection of natural flora and includes indirect harm or damage from pests such as weeds. The role of the Convention with respect to trade has changed significantly in recent years as reflected in the substantial amendments found in the New Revised Text approved in 1997. In addition to describing the fundamental elements of national plant protection organizations, the IPPC is now also an active organization strongly involved with international standard setting. The New Revised Text of the IPPC (1997) emphasizes cooperation and the exchange of information toward the objective of global harmonization. In addition to describing national plant protection responsibilities, it also addresses important elements of international cooperation for the protection of plant health and the establishment and use of International Standards for Phytosanitary Measures (ISPMs). The IPPC is governed by the Commission on Phytosanitary Measures, which adopts International Standards for Phytosanitary Measures (24 ISPMs have been adopted so far). The Commission is comprised of the Contracting Parties to the Convention. The IPPC Secretariat coordinates the activities of the Convention; it is hosted by the FAO. The International Plant Protection Convention (IPPC) is an international agreement on plant health with 177 current signatories (in 2011). It aims to protect cultivated and wild plants by preventing the introduction and spread of pests. The Secretariat of the IPPC is provided by the Food and Agriculture Organization of the United Nations. The International Plant Protection Convention (IPPC) is an international plant health agreement, established in 1952, that aims to protect cultivated and wild plants by preventing the introduction and spread of pests. The Commission on Phytosanitary Measures (CPM) is the governing body of the IPPC. International travel and trade are greater than ever

before – and as people and commodities move around the world, organisms that present risks to plants travel with them. Pest introductions and outbreaks cost governments, farmers and consumers billions every year. Once pest species are established their eradication is often impossible, and controlling them takes up a significant percentage of the cost of producing food. The IPPC allows countries to analyze risks to their national plant resources and to use science-based measures to safeguard their cultivated and wild plants. By protecting plant resources from pests and diseases, the IPPC helps:- (i) protect farmers from economically devastating pest and disease outbreaks; (ii) protect the environment from loss of species diversity; (iii) protect ecosystems from loss of viability and function as a result of pest invasions; and (iv) protect industries and consumers from the costs of pest control or eradication. Contracting parties to the IPPC share the same goal: to protect the world's cultivated and natural plant resources from the spread and introduction of plant pests while minimizing interference with the international movement of goods and people. The IPPC provides an international framework for plant protection that includes developing International Standards for Phytosanitary Measures (ISPMs) for safeguarding plant resources. ISPMs developed as of 31 July 2009 include standards for:- (i) procedures and references; (ii) pest surveillance, survey and monitoring; (iii) import regulations and pest risk analysis; (iv) compliance procedures and phytosanitary inspection methodologies; (v) pest management; (vi) post entry quarantine; (vii) exotic pest emergency response, control and eradication; and (viii) export certification. The IPPC also provides information exchange related to import and export requirements, pest status and regulated pest lists provided by each member country. Developing countries also receive technical assistance to support their ability to implement the Convention and the ISPMs. While the IPPC's primary focus is on plants and plant products moving in international trade, the convention also covers research materials, biological control organisms, germplasm banks, containment facilities and anything else that can act as a vector for the spread of plant pests – for example, containers, packaging materials, soil, vehicles, vessels and machinery. Contracting parties to the IPPC agree to promote technical assistance to other contracting parties. In particular, the Convention encourages support to developing countries to improve the effectiveness of their National Plant Protection Organizations (NPPOs) and to participate in regional plant protection organizations, to help them realize the benefits of safe trade. The concept of international plant protection began in 1881, when five countries signed an agreement to control the spread of grape phylloxera, a North American aphid that was accidentally introduced into Europe around 1865 and that subsequently devastated much of Europe's grape-growing regions. The next major step was the International Convention for the Protection of Plants, signed in Rome in 1929, followed in 1951 by the adoption of the International Plant Protection Convention – the IPPC – by the Food and Agriculture Organization (FAO) of the United Nations. The IPPC came into force in April 1952, superseding all previous international plant protection agreements. It was recognized by the 1989 Uruguay Round of the General Agreement on Tariffs and Trade as a standard setting organization for the Agreement on the Application of Sanitary and Phytosanitary Measures (the SPS Agreement). In 1992 the IPPC Secretariat was established at FAO headquarters in Rome and began its international standard-setting program, which was adopted by FAO the following year. IPPC members requested revision of the Convention in 1995 to reflect contemporary phytosanitary concepts and the role of the IPPC in relation to the Uruguay Round Agreements of the World Trade Organization, particularly the SPS Agreement. In the same year the FAO Conference approved the first three international standards for phytosanitary measures (ISPMs) – formal, binding agreements to help protect the world's plants and plant industries by controlling the spread of plant pests. Under the SPS Agreement, the IPPC provides international standards for phytosanitary measures implemented by governments to protect their plant resources from harmful pests, while ensuring that these measures are justified and are not used as unjustified barriers to international trade. The 29th FAO Conference in 1997 unanimously adopted the New Revised Text of the IPPC, which came into force in 2005. The IPPC Secretariat's current work programme focuses on the development of ISPMs, the exchange of official information, and capacity building and technical assistance. International Plant Protection Convention, as deposited with FAO in Rome in 1951 and as subsequently amended. The International Plant Protection Convention (IPPC) is an international treaty that aims to secure coordinated, effective action to prevent and to control the introduction and spread of Pests of Plants and plant products. The Convention extends beyond the protection of cultivated Plants to the protection of natural flora and plant products. It takes into consideration both direct and indirect damage by Pests, so it includes Weeds. It also covers vehicles, aircraft and vessels, containers, storage places, soil and other objects or material that can harbour or spread pests. The Convention provides a framework and a forum for international cooperation, harmonization and technical exchange between contracting parties. Its implementation involves collaboration by National Plant Protection Organizations (NPPOs) – the official services established by governments to discharge the functions specified by the IPPC – and Regional Plant Protection Organizations (RPPOs), which can act as coordinating bodies at a regional level to achieve the objectives of the IPPC. The convention has been deposited with the Director-General of the Food and Agriculture Organization of the United Nations (FAO) since its adoption in 1951. / Международная Конценция по Защите Растений (МКЗР) . Виды (Species).

INTERNATIONAL POW WOW = МЕЖДУНАРОДНОЕ ПАУ ВАУ – The International POW WOW promotes foreign tourism to the United States. It is an annual trade fair, sponsored by the Travel Industry Association of America, which brings together over 1 200 international buyers (tour operators and wholesalers) from 55 countries. The buyers are chosen through international selection criteria and purchase packages which they sell to their respective travel retailers.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT = ОТЧЁТ О МЕЖДУНАРОДНОМ ПРЕДВАРИТЕЛЬНОМ ЭКЗАМЕНИРОВАНИИ (или ЗАКЛЮЧЕНИЕ МЕЖДУНАРОДНОЙ ПРЕДВАРИТЕЛЬНОЙ ЭКСПЕРТИЗЫ) – International Preliminary Examination Report (IPER; Form PCT/IPEA/409), produced by an International Preliminary Examining Authority, is a preliminary and non-binding opinion on whether the invention claimed in an international application appears to be novel, to involve an inventive step (to be non-obvious), and to be industrially applicable.

INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY = ОРГАН МЕЖДУНАРОДНОГО ПРЕДВАРИТЕЛЬНОГО ЭКЗАМЕНИРОВАНИЯ (или ОРГАН МЕЖДУНАРОДНОЙ ПРЕДВАРИТЕЛЬНОЙ ЭКСПЕРТИЗЫ) – International Preliminary Examining Authority (IPEA) is either a national office (the United States Patent and Trademark Office (USPTO)) or an intergovernmental organization whose tasks include the establishment of examination reports on inventions which are the subject of international applications.

INTERNATIONAL PRICE = МЕЖДУНАРОДНАЯ ЦЕНА – International Price:- in the Cotton industry of the United States, there is no statistically valid, single estimate of a World Price. Two popular measures are reported by Cotlook Ltd (or Liverpool Cotton Services, Ltd), Liverpool, the United Kingdom, publishers of Cotton Outlook. The Cotlook® A Index is a simple arithmetic average of the five lowest priced growths of the 11 quoted for Middling 1-3/32-inch Cotton delivered to Northern Europe from various exporting countries. The Cotlook® B Index is a simple average of the three lowest Northern European prices of the six quoted for shorter staple coarse Cotton varying in staple length from 1 inch to 1-3/32 inches. The Cotlook® B Index is a simple average of the three lowest Northern European prices quoted for shorter staple coarse Cotton varying in staple length from 1 inch to 1-3/32 inches. These prices are used to compare export competitiveness of American and foreign growths. See also Cotlook® Index A, and Cotlook® Index B. The Cotlook® A Index is average of cheapest 5 quotations from a current selection of the 15 styles of principal upland Cottons of Middling 1-3/32" quality traded internationally. Cash price for Cotton from 15 different countries or areas are used to form this index. The Cotlook® B

Index is a simple average of cheapest 3 of 9 styles of Strict Low Middling 1-1/16" quality so marked, taking nearer shipment when two are quoted. Cash price for Cotton from 9 different countries or areas are used to form this index. / Международная Цена:- в хлопковой отрасли Соединённых Штатов Америки не существует как таковой некоей единственной, статистически обоснованной оценки Мировой Цены (World Price). Две популярные меры оценки публиковались компанией Котлук Лимитид (Cotlook Ltd) (или Ливэпул Котчэн Совисиз, Эл.ти.ди. (Liverpool Cotton Services, Ltd)), Ливерпул, Соединённое Королевство, издателем Котчэн Аутлук (Cotton Outlook). Индекс А от Котлук® (зарегистрированный Ливерпулской компанией Котлук Лимитид) является среднеарифметическим значением по 5 самых дешёвым из 15 предлагаемых видов хлопкового волокна Среднего качества со штапельной длиной волокна 1-3/32 дюйма (Middling 1-3/32") из 15 разных стран или регионов происхождения, поставленных в Северную Европу (ранее). Индекс Б от Котлук® (зарегистрированный Ливерпулской компанией Котлук Лимитид) являлся среднеарифметическим значением для 3 самых дешёвых из 9 предлагавшихся видов хлопкового волокна качества Строго Низкого Среднего со штапельной длиной волокна 1-1/16 дюйма (Strict Low Middling 1-1/16"), то есть более короткого, утолщённого волокна, из 9 разных стран или регионов происхождения, поставленных в Северную Европу (ранее). Эти цены (значения индексов) использовались для сравнения конкурентоспособности Американского хлопкового волокна с хлопковым волокном из других стран или регионов. Смотрите также Индекс А от Котлук® (Cotlook® Index A) и Индекс Б от Котлук® (Cotlook® Index B).

THE INTERNATIONAL ROAD TRANSPORT UNION = МЕЖДУНАРОДНЫЙ АВТОТРАНСПОРТНЫЙ СОЮЗ (или МЕЖДУНАРОДНЫЙ СОЮЗ АВТОМОБИЛЬНОГО ТРАНСПОРТА) – The International Road Transport Union (IRU) or, in French, Union Internationale des Transports Routiers, through its national associations, represents the entire road transport industry world-wide. It speaks for the operators of coaches, taxis and trucks, from large transport fleets to driver-owners. In all international bodies that make decisions affecting road transport, the IRU acts as the industry's advocate. By working for the highest professional standards, the IRU improves the safety record and environmental performance of road transport and ensures the mobility of people and goods. Among its practical services to the industry, the IRU is international guarantor of the TIR carnet system under which trucks are sealed by customs upon departure and can cross several borders without further checks until they reach their destinations. The IRU:- takes the initiative in making sure that vehicles are safe, clean, efficient, and economical in fuel consumption; encourages sound fleet management, strict vehicle maintenance and good working conditions for drivers; helps to make roads safer and less congested; seeks improvements in the environmental performance of vehicles; maintains close working relationships with the competent national, inter-governmental and non-governmental organizations; works for harmonisation and simplification of procedures affecting road transport; alerts the industry to changes in national and international legislation; and strives to lift the barriers to international transport and trade. The IRU, founded in Geneva, Switzerland on 1948-March-23, has local and global reach through its 180 members in 70 countries. Headquartered in Geneva, Switzerland. / Международный Автотранспортный Союз или, как это звучит на Французском языке по месту регистрации союза, Юньён Этэрнасьёналь дэ Транспор Рутэр (Union Internationale des Transports Routiers), встречается также под сокращением IRU, произносимого по-Английски – Ай.Ар.Ю., а по-Французски – И.Эр.Ю..

INTERNATIONAL SAFETY MANAGEMENT CODE = МЕЖДУНАРОДНЫЙ КОДЕКС УПРАВЛЕНИЯ БЕЗОПАСНОСТЬЮ – The International Maritime Organization Assembly adopted the International Safety Management Code (ISM Code) in 1993. On 1998-July-01, the ISM Code became mandatory for passenger vessels, passenger high-speed craft, oil tankers, chemical tankers, bulk carriers, and cargo high-speed craft of 500 gross tons or more. On 2002-July-01, the ISM Code became applicable to other cargo ships and to self-propelled mobile offshore drilling units of 500 gross tons or more.

INTERNATIONAL SEARCH AUTHORITY = ОРГАН МЕЖДУНАРОДНОГО ИССЛЕДОВАНИЯ (или ОРГАН МЕЖДУНАРОДНОГО ПОИСКА) – International Search Authority (ISA) is either a national office (the United States Patent and Trademark Office (USPTO)) or an intergovernmental organization whose tasks include the establishment of documentary search reports on prior art with respect to inventions which are the subject of international applications.

INTERNATIONAL SEARCH REPORT = ОТЧЁТ О МЕЖДУНАРОДНОМ ИССЛЕДОВАНИИ (или ОТЧЁТ О МЕЖДУНАРОДНОМ ПОИСКЕ) – International Search Report (ISR; Form PCT/ISA/210), produced by an International Searching Authority, is a report listing citations of published documents that might affect the patentability of the invention claimed in an international application.

INTERNATIONAL SECURITIES IDENTIFICATION DIRECTORY = МЕЖДУНАРОДНЫЙ СПРАВОЧНИК ПО ИДЕНТИФИКАЦИИ ЦЕННЫХ БУМАГ – International Securities Identification Directory (ISID) is a directory which includes CUSIP (short for the Committee on Uniform Securities Identification Procedures) numbers and International Securities Identification Numbers, as well as cross-references to other international securities numbering systems. ISIDPlus is produced jointly by Standard and Poor's and Telekurs (USA). / номера Си.Ю.Эс.Ай.Пи. (CUSIP). МСИЦБ Плюс (ISIDPlus) создаётся совместно компаниями Стэндод энд Поз (Standard & Poor's) и Тэликёз (Telekurs; США).

INTERNATIONAL SECURITIES IDENTIFICATION NUMBER = МЕЖДУНАРОДНЫЙ ИДЕНТИФИКАЦИОННЫЙ НОМЕР ЦЕННЫХ БУМАГ – The International Securities Identificaion Number (ISIN) provides a uniform structure for use in the trading and administration of securities in the international securities industry. The Euroclear Operations Center has been designated as the numbering agency for international securities. / Юроклыэ (Euroclear).

INTERNATIONAL SECURITIES MARKET ASSOCIATION = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ РЫНКА ЦЕННЫХ БУМАГ – International Securities Market Association (ISMA) is a self-regulatory organization and trade association originally located in Zürich, Switzerland, that encourages systematic and compliant trading in the international securities market. It also promotes the development of the Euromarkets and is acknowledged as a designated investment exchange by the Financial Services Authority, which regulates the financial services industry in the United Kingdom. ISMA helped to establish standardized trading procedures in the international bond market. It had 430 members in 49 different countries, representing all of the major securities firms active in the secondary international debt market. In July 2005, the ISMA and International Primary Market Association merged to become the International Capital Market Association. An industry organization located in Zurich, Switzerland, International Securities Market Association (ISMA) acts as a forum for questions related to international securities markets. The Association was established under the name 'Association of International Bond Dealers' (AIBD) in February 1969 in Zurich, where it is entered in the commercial register. With effect from 1992-January-01, the Association changed its name to 'International Securities Market Association' (ISMA). As a result of the Association's merger with the International Primary Market Association (IPMA), the Association changed its name to 'International Capital Market Association' (ICMA) effective 2005-July-01.

INTERNATIONAL SECURITIES SERVICES ASSOCIATION = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ СЛУЖБ ПО ЦЕННЫМ БУМАГАМ – The International Securities Services Association (ISSA) is an umbrella organization established in 1979 on the initiative of Citibank, Deutsche Bank AG and Union Bank of Switzerland (UBS AG). Its objective is to standardize and promote the development of securities settlement techniques and procedures. Today, ISSA has nearly 100 members institutions. An international organization of participants in the global securities markets including banks, clearing organizations, central securities depositories, broker/dealers, and

asset managers. ISSA's stated goals include increasing knowledge of participants, improving communications, and promoting progress in the securities services industry. The International Securities Services Association (ISSA) provides leadership in the formulation and promotion of best practice to improve efficiency and risk management in the global asset servicing industry. Headquartered in Zürich-Altstetten, Switzerland. The idea of an association of securities administrators from all over the world was first conceived in 1975 over a luncheon between C.F. Ahrens, then Head of Securities Administration at Citibank, New York, and B. Imseng, Head of Securities Administration at Union Bank of Switzerland, Zurich. The perceived need was, on one hand, to create an organisation able to collect and disseminate information on the developments in the rapidly changing international securities markets, and on the other hand to offer securities operations professionals a forum to exchange ideas and issues of common interest. In 1979, Citibank, Deutsche Bank and Union Bank of Switzerland, by jointly organising a first meeting of senior securities administrators in Switzerland, laid the foundation of the International Society of Securities Administrators. ISSA continued to grow over the years. Chase Manhattan Bank, Dresdner Bank, Midland Bank and Nomura Securities joined the association as Sponsoring Members, followed by BNP Paribas Securities Services, Franklin Templeton, Morgan Stanley and Schroders Investment Management Ltd. in 2004. Recognising that the face of the securities custody industry has changed dramatically over the years, and that the term Securities Administrator no longer adequately describes the nature of tasks performed by its members, the association changed its name to International Securities Services Association at the end of 1996. Morgan Stanley decided to step down from the board at the end of 2008. As of January 01, 2009 Clearstream, Euroclear, Swift and The Depository Trust & Clearing Corporation strengthen the ISSA Executive Board. / Сытибэньк (Citibank), Дойчэ Банк А.Ге. (Deutsche Bank AG) и (Ю.Би.Эс. А.Ге. (UBS AG)). Си.Эф. Арэнс (C.F. Ahrens) Би. Имсэн (B. Imseng). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Чэйс Мэнхэтэн Бэньк (Chase Manhattan Bank), Дрэсна Банк (Dresdner Bank), Мидлэнд Бэньк (Midland Bank), и Номура Сэкьюритиз (Nomura Securities). Бе.Эн.Пе. Париба Сэкьюритиз Сёвисиз (BNP Paribas Securities Services), Фрэньклын Тэмпэлтэн (Franklin Templeton), Моргэн Стэнли (Morgan Stanley) и Шройдас Инвэстмэнт Мэнэдьжмент Эл.ти.ди. (Schroders Investment Management Ltd.). Клыэстрим (Clearstream), Юроклыэ (Euroclear), Свифт (Swift) и Зэ Дипазытори Тчраст Энд Клыэринь Корпорэйшэн (The Depository Trust & Clearing Corporation).

INTERNATIONAL SHARE PLACEMENT = МЕЖДУНАРОДНОЕ РАЗМЕЩЕНИЕ АКЦИЙ – International Share Placement:- underwriting of shares outside the capital market of the country where the issuing company is domiciled. Analogous to Eurobonds, these internationally placed shares are usually called Euroequities since the issuing houses operating on the Euromarket as a rule collaborate in the placement and trading activities. Primary offerings abroad frequently employ the so-called Tender Offer. Other equity paper, such as PCs (an acronym for Professional Corporation, a business legal entity), is placed abroad in a similar manner.

INTERNATIONAL SHIP AND PORT FACILITY CODE = КОДЕКС МЕЖДУНАРОДНОГО СУДНА И ПОРТОВОЙ БАЗЫ – The International Ship and Port Facility Security (ISPS) Code is an amendment to the Safety of Life at Sea (SOLAS) Convention (1974/1988) on minimum security arrangements for ships, ports and government agencies. Having come into force in 2004, it prescribes responsibilities to governments, shipping companies, shipboard personnel, and port/facility personnel to 'detect security threats and take preventative measures against security incidents affecting ships or port facilities used in international trade'. The International Ship and Port Facilities Security Code (ISPS Code) represents the culmination of just over a year's intense work by IMO's Maritime Committee and its Maritime Security Working Group since the twenty-second session of the Assembly adopted resolution A.924(22), on the review of measures and procedures to prevent acts of terrorism which threaten the security of passengers and crews and the safety of ships, in November 2001. The ISPS Code was adopted by one of the resolutions that were adopted on 12 December 2002 by the Conference of Contracting Governments to the International Convention for the Safety of Life at Sea (SOLAS), 1974 (London, the United Kingdom 2002-December-09-13). Another resolution also includes the necessary amendments to chapters V and XI of SOLAS by which compliance with the Code will become mandatory on 2004-July-01, if deemed accepted on 2004-January-01. The existing chapter XI of SOLAS was amended and re-identified as chapter XI-1 and a new chapter XI-2 was adopted on special measures to enhance maritime security. The ISPS Code and these amendments to SOLAS are set out in this publication, as are other resolutions (relating to the work that will need to be completed before the Code can be implemented in 2004 and the revision of the Code, technical co-operation, and co-operative work with the International Labour Organization and the World Customs Organization) that were adopted by the Conference. The objectives of this Code are to establish an international framework involving co-operation between Contracting Governments, Government agencies, local administrations and the shipping and port industries to detect/assess security threats and take preventive measures against security incidents affecting ships or port facilities used in international trade; to establish the respective roles and responsibilities of all these parties concerned, at the national and international level, for ensuring maritime security; to ensure the early and efficient collation and exchange of security-related information; to provide a methodology for security assessments so as to have in place plans and procedures to react to changing security levels; and to ensure confidence that adequate and proportionate maritime security measures are in place. The objectives are to be achieved by the designation of appropriate officers/personnel on each ship, in each port facility and in each shipping company to prepare and to put into effect the security plans that will be approved for each ship and port facility. Parts A and B of the Code are, respectively, the mandatory requirements regarding the provisions of chapter XI-2 of SOLAS, 1974, as amended, and guidance regarding the provisions of chapter XI-2 of SOLAS, 1974, as amended, and part A of the Code. The International Ship and Port Facility Code (ISPF Code) adopted by an International Maritime Organization (IMO) Diplomatic Conference in December 2002. Measure is designed to strengthen maritime security. The IMO states that 'The International Ship and Port Facility Security Code (ISPS Code) is a comprehensive set of measures to enhance the security of ships and port facilities, developed in response to the perceived threats to ships and port facilities in the wake of the 9/11 attacks in the United States' (IMO). Development and implementation were speeded up drastically in reaction to the 2001-September-11 attacks and the bombing of the French oil tanker Limburg. The US Coast Guard, as the lead agency in the United States delegation to the International Maritime Organization (IMO), advocated for the measure. The Code was agreed at a meeting of the 108 signatories to the SOLAS convention in London in December 2002. The measures agreed under the Code were brought into force on 2004-July-01. The Code is a two-part document describing minimum requirements for security of ships and ports. Part A provides mandatory requirements. Part B provides guidance for implementation. The ISPS Code applies to ships on international voyages (including passenger ships, cargo ships of 500 GT and upwards, and mobile offshore drilling units) and the port facilities serving such ships. The main objectives of the ISPS Code are:- (i) to detect security threats and implement security measures; (ii) to establish roles and responsibilities concerning maritime security for governments, local administrations, ship and port industries at the national and international level; (iii) to collate and promulgate security-related information; and (iv) to provide a methodology for security assessments so as to have in place plans and procedures to react to changing security levels.

THE INTERNATIONAL SHIP AND PORT FACILITY SECURITY = БЕЗОПАСНОСТЬ МЕЖДУНАРОДНОГО СУДНА И ПОРТОВОЙ БАЗЫ – The International Ship And Port Facility Security:- following the tragic events of 2001-September-11 in the United States and the recognition that any means of transport could be a target for terrorist attacks the International Maritime Organization (IMO) supplemented the SOLAS Agreement with the so-called ISPS Code in December 2002. This code of practice defines the international security measures required to prevent terrorist attacks on port facilities and on ocean-going ships. The changes to the SOLAS

Agreement apply on the one hand to international passenger ships and freight ships with a registered tonnage of 500 or more. On the other hand this agreement also covers port facilities visited by the aforementioned ships, i.e. those areas within a port operating as interfaces between ships and the port.

THE INTERNATIONAL SHIP AND PORT FACILITY SECURITY CHARGE = СБОР ЗА БЕЗОПАСНОСТЬ МЕЖДУНАРОДНОГО СУДНА И ПОРТОВОЙ БАЗЫ – Certain European terminal operators have recently (August 2004) announced their intention to start charging an International Ship and Port Facility Security (ISPS) terminal surcharge. Individual carriers have not fully accepted the Terminals' arguments for imposing the proposed ISPS terminal surcharge levels, which, in some cases are being forced upon the Lines. Failure to agree could cause severe disruption to the movement of cargo. The Lines will incur costs of EUR5.00 per container at ports in the North Continent of Europe, Scandinavia, the Baltic, and the Mediterranean. For the United Kingdom the charge will be GBP3.50, but will be GBP1.50 per container for those Terminals which do not charge for empties and transhipment (presently Felixstowe, Southampton, Thamesport and Tilbury). This is due to the different method of charging by the terminals. This Carriers' charge will be in addition to the charge levied by the Terminals on the Lines for each container moved. In the light of these extra costs the Far Eastern Freight Conference (FEFC) Member Lines would like to announce that, with effect from 2004-September-15 they will tariff an 'add on' charge, which will be in addition to the Security Charge levied by the Terminals, as follows:- (i) For Containers moved to or from Ports in the North Continent of Europe, Scandinavia, the Baltic and the Mediterranean EUR5.00; (ii) For containers moved to, or from the ports of Felixstowe, Thamesport, Tilbury and Southampton where Lines recover the Security Charge from shippers/consignees GBP1.50; (iii) For Containers moved to, or from all other ports in the United Kingdom GBP3.50. The level of the Terminal Charge to which the above charges will be added will depend on the outcome of negotiations between the Terminal and the Lines. These charges are payable by the shipper/consignee in Europe. / терминальная надбавка или доплата (terminal surcharge) .

INTERNATIONAL SHIPPING FEDERATION = МЕЖДУНАРОДНАЯ ФЕДЕРАЦИЯ ПО СУДОХОДСТВУ – The International Shipping Federation (ISF) is the principal international employers' organisation for the shipping industry, representing all sectors and trades. ISF membership comprises national shipowners' associations whose member shipping companies together operate two thirds of the world's merchant tonnage and employ a commensurate proportion of the world's 1.25 million seafarers. Established in 1909, ISF is concerned with all labor affairs, manpower and training, and seafarers' health and welfare issues that may have an impact on international shipping. ISF is actively engaged with the following international bodies:- International Labour Organization (ILO), International Maritime Organization (IMO), World Health Organization (WHO), International Committee on Seafarers' Welfare (ICSW), International Organisation of Employers (IOE). ISF also enjoys a close relationship with national maritime authorities throughout the world. The national associations that form the membership of ISF appoint representatives to its expert committees, which are responsible for developing the international labor policy of maritime employers. This includes positions to be adopted on international maritime regulatory questions, industrial relations and training issues that may have an impact on the global shipping industry. For the past 80 years, ISF has played an infl uential role in the development, implementation and subsequent revision of all ILO maritime labor instruments. It was responsible for co-ordinating the position of maritime employers throughout the development and adoption of the ILO Maritime Labour Convention, 2006. For the last 30 years, ISF has also played a similar role in the development and subsequent amendment of the IMO Standards of Training, Certifi cation and Watchkeeping Convention (STCW) and other IMO regulations that may have a direct impact on maritime employers, including discussions relevant to the role of the 'human element' in maritime safety. Through its institutional role as an ILO 'social partner', ISF is the opposite number of the International Transport Workers' Federation (ITF) with whose affi liates ISF member shipowners' associations make up the membership of the ILO Joint Maritime Commission, which is responsible for recommending the ILO minimum wage for Able Seafarers. ISF also works very closely with its sister organisation, the International Chamber of Shipping (ICS), and the other partners in the Round Table of international shipping associations – BIMCO, Intercargo and Intertanko. ISF is centrally involved in the co-ordination and representation of the global shipping industry's views on most issues affecting maritime employers, including:- employment standards; industrial relations; health, safety and accident prevention; living and working conditions; manning agency standards; manpower supply; Maritime Labour Convention implementation; port welfare; safety culture; seafarers' rights; training and certification standards; wage cost information; and work hour regulations. Headquartered in London, the United Kingdom.

INTERNATIONAL STANDARD BANKING PRACTICE = МЕЖДУНАРОДНАЯ СТАНДАРТНАЯ ПРАКТИКА БАНКОВСКОГО ОБСЛУЖИВАНИЯ – The International Standard Banking Practice (ISBP):- For the Examination of Documents UCP 600 (short for the last edition of the Uniform Customs and Practice for Documentary Credits). This publication is a checklist of best practices worldwide for checking documents under the Uniform Customs and Practice for Documentary Credits (UCP), International Chamber of Commerce (ICC's) universally used rules on letters of credit. Because the UCP rules are general in nature, it was necessary to define in greater detail the term 'international standard banking practice', first found in UCP 500 sub-article 13 (a), the previous version of the UCP. ISBP 681:- the ISBP, which was revised in 2007 as ISBP 681, is credited with dramatically reducing the number of discrepancies between banks dealing with documentary credits. The ISBP addresses a range of subjects, for example, typing errors, mathematical calculations, drafts and how they are drawn, description of the goods in invoices and signing of bills of lading, among others. In light of comments from users, the banking commission has decided to both update and expand the current ISBP to take in a range of new topics – such as transfer, amendments, etc, that are not covered in ISBP 681. The new revision will relate to ICC's latest revision of the UCP, UCP 600. ISBP Online Training:- the course is designed to enhance the knowledge and skills of documentary credit professionals. This course includes expert commentary on the ISBP, related UCP 600 articles, sample document extracts and ICC Opinions that help to provide context/reasoning on an ISBP provision. ISBP Publication – 2013 Revised Edition:- International Standard Banking Practice – ISBP 2013 is the most up to date, comprehensive guide to handling and examining trade documents under documentary credits. This new ISBP is the most up to date and comprehensive guide to handling and examining trade documents under documentary credits. Completely revised, ISBP 2013 enables to apply banking practices under UCP 600 to various trade documents, e.g., invoices, transport documents, bills of lading, and certificate of origin. ISBP also addresses documents, not treated in previous editions:- (i) packing list; (ii) weight list; (iii) beneficiary certificate; (iv) non-negotiable sea waybills; and (v) analysis, inspection, health, quantity and quality certificate. ISBP is the best reference book in banking practices for international letters of credit documents subject to UCP 600. Use of ISBP has significantly reduced international discrepancies for documentary credits and is regularly used by banking, logistics, insurance, legal and corporate professionals and academics worldwide. It is a great companion book with UCP 600. International Standard Banking Practice (ISBP):- For the Examination of Documents under Documentary Credits. This Publication, an update of the successful International Chamber of Commerce (ICC) publication 645, reflects international standard banking practice for all parties to a documentary credit under UCP 600. Figures show that more than 50% of credits are rejected for discrepancies on first presentation. The new ISBP, by encouraging a uniformity of practice worldwide, should reduce that figure dramatically and, by doing so, facilitate the flow of world trade. The 2003 publication International Standard Banking Practice (ISBP) for the examination of documents under documentary credits (ICC Publication 645) was widely acclaimed by practitioners as an essential companion to UCP 500. This revised version of the ISBP brings it into line with UCP 600. ISBP was conceived as an intelligent checklist of procedures for document checkers to follow in examining the documents presented under letters of credit. While not a substitute for the UCP, which

remains the guiding text, the ISBP demonstrates how the UCP is to be integrated into day-to-day practice. In this volume, users will find guidance on how to deal with documents covering at least two different modes of transport (UCP 600 article 19):- insurance documents and coverage (UCP600 article 28):- transferable credits (UCP600 article 38) and a broad range of other issues covered in the new documentary credit rules. International Standard Banking Practice – ISBP 2013 is the most up to date, comprehensive guide to handling and examining trade documents under documentary credits. An invaluable source of practical information for trade finance professionals and academics, this revised edition of ISBP provides readers with the latest ICC approved guidelines for all parties to documentary credits. ISBP 2013 details how to apply banking practices under UCP600 to various trade documents (invoices, transport documents, bills of lading, certificates of origin …) and features the following documents, which were not covered in previous editions:- (i) Packing List; (ii) Weight List; (iii) Beneficiary Certificate; (iv) Non-negotiable Sea Waybills; and (v) Analysis, Inspection, Health, Phytosanitary, Quantity and Quality Certificates. The professionals' reference book to best banking practices for international L/C documents subject to UCP600, ISBP has already played a significant role in reducing international discrepancies for documentary credits and is regularly consulted by a wide range of banking, logistics, insurance, legal and corporate professionals and academics worldwide.

INTERNATIONAL STANDARD FOR PHYTOSANITARY MEASURES = МЕЖДУНАРОДНЫЙ СТАНДАРТ ПО ФИТОСАНИТАРНЫМ МЕРАМ – International Standard For Phytosanitary Measures is an international standard adopted by the Conference of FAO (short for the Food and Agriculture Organization), the Interim Commission on phytosanitary measures or the Commission on phytosanitary measures, established under the International Plant Protection Convention (IPPC). ISPMs are available at the following Web site:- https://www.ippc.int/IPP/En/default.jsp.

INTERNATIONAL STANDARDS = МЕЖДУНАРОДНЫЕ СТАНДАРТЫ – International Standards are standards established in accordance with Article X paragraph 1 and 2 of the International Plant Protection Convention (IPPC). / В сфере защиты и карантина растений под Международными Стандартами понимаются стандарты, установленные в соответствии со Статьёй X параграфами 1 и 2 Международной Конвенции по Защите Растений (МКЗР).

THE INTERNATIONAL SWAPS AND DERIVATIVES ASSOCIATION, INC. = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ ПО СВОПАМ И ДЕРИВАТИВАМ, ИНК. – The International Swaps and Derivatives Association, Inc. (ISDA®), a global trade association representing leading participants in the privately negotiated derivatives industry, a business which includes interest rate, currency, commodity, credit and equity swaps, and related products such as caps, collars, floors, and swaptions. The International Swaps and Derivatives Association, Inc. (ISDA®) is an international financial trade association whose membership comprises over 670 (February 2006) of the world's largest commercial, merchant and investment banks, corporations, government entities and other institutions. ISDA's members represent a broad cross section of the institutions that act as dealers and end-users of swaps and other privately negotiated derivative transactions in jurisdictions worldwide (50 countries (February 2006)). The Over-the-counter (OTC) derivatives market began in the early 1980's with interest rate swaps. In the early to mid 1980's most OTC derivative traders had their own proprietary derivative documentation. The result was every trader had their own standards and meant negotiating every piece of documentation was a long and tortuous process. All trades done on an individual basis with extensive lawyer input. The individual nature of each trade meant there was no basis for close out netting for multiple trades. The first trader committee was formed in 1985 to agree and create some standard terms and documentation. That trader committee became the International Swap Dealers Association (ISDA®) subsequently changing to The International Swaps and Derivatives Association (ISDA®). The first set of standard documentation was produced in 1985 being the Code of Swaps. The Code of Swaps was not a contract but a set of definitions which could be used to standardise the concept of swap trades and trading. It laid the foundation of the future ISDA® Master Agreement. The Swaps Code was designed as a series of options that could be chosen in their entirety by counterparts or on a pick and choose basis. The Swaps Code was quickly followed by the first set of definitions covering the swap itself. This was issued in 1987 as the ISDA® Currency and Interest Rate Agreement. The first complete ISDA® Master Agreement was published in 1993 but known as the 1992 ISDA® Master Agreement. This 1992 Master extended the usage of the agreement to all potential asset classes rather than just rates and currency. ISDA® is an organization of 815 members in 56 different countries which:- (i) Promotes practices conducive to the efficient conduct of the business, including the development and maintenance of derivatives documentation. Issues standard documentation for facilitating a legal environment in which derivatives can be traded, i.e. Master Agreements and Collateral Agreements. (ii) Obtains legal opinions on the enforceability of ISDA® contracts in different legal jurisdictions and educating all parties on the various issues and aspects of derivatives. (iii) Represents the derivatives market with external parties and advancing public understanding of the derivatives business. (iv) Promoting the development of sound risk management practices. ISDA® is not a regulator or a self regulating body. It is more like a trade association representing the industry with external parties. ISDA® does not involve itself in dispute resolution. ISDA® provides unbiased, standard documentation to market participants. It does not force participants to use it. If trade disputes occur it is up to the parties to resolve either amicably or via the legal system. ISDA® will not take sides. ISDA® obtains legal opinions with regard to:- (i) the creation and wording of definitions or master documentation; (ii) enforceability of all terms in ISDA® Master Agreements, e.g., Netting; and (iii) ad-hoc specific legal terms on a trade by trade basis, e.g., whether convertible bonds are deliverable under standard credit default swap terms. ISDA® will not become involved in disputes between counterparts. This is a defined documentation environment that may be adapted and used for any asset type such that:- (i) They remove much of the legal wording previously included in confirmations by using shortened terms. (ii) These terms are then expanded within the definitions to represent full legal definition. (iii) Their standard definitions are generic; they can be used in confirming trades across asset classes. (iv) They provide for all trades between counterparties fitting neatly within a single ISDA® Master Agreement and CSA agreement. The basis of this nomenclature is the terms of the 2006 ISDA® Definitions and the ISDA® Master Agreement. Therefore the 2006 definitions fully define various trade attributes and represent them in confirmations by the following terms:- Trade Date; Effective Date; Termination Date; Scheduled Termination Date; Fixed Rate Payer; Floating Rate Payer; Fixed Rate Payer Calculation Amount; Floating Rate Payer Calculation Amount; and Fixed Rate. These terms have identical meanings in equity, credit, commodity derivative confirmations etc unless specifically defined for a particular transaction. This standard nomenclature provides for new asset types to be easily incorporated into the ISDA® documentation framework and hence easily confirmed. Standardisation means improved efficiency, greater accuracy and less errors. Ultimately liquidity in a new product increases as confidence in the process increases. There are 3 key pieces of documentation usually required in executing an ISDA® based derivative:- (i) a confirmation for the particular transaction; (ii) an ISDA® Master Agreement with the counterparty to the transaction; and (iii) a Collateral Agreement between the parties (CSA). All trade confirmations will usually make reference to the ISDA® Master and include that trade under the terms of the Master agreement. When included the CSA is an addendum to the ISDA® Master and therefore its terms are automatically incorporated. The 3 documents therefore form a secure record of the terms under which the trade has been traded and the economic terms of that trade. The terms of the confirmation supersede should there be discrepancies between the 3 documents. Executing and confirming a derivative transaction goes through a number of stages dependent upon:- (i) whether there is an ISDA® Master agreement in place with the counterparty; (ii) what type of underlying asset and product are being traded; (iii) whether the underlying asset and product is standardised or bespoke; and (iv) whether the counterparties do electronic confirmation through DTCC or Swaps wire. Deals may be executed in the following

ways or combinations or ways:- telephone only direct; telephone only via broker; telephone and term sheet and/or draft confirmation; vendor system, e.g., broker internet trading site; bank trading system; and Bloomberg messaging or email. Most OTC derivatives are initially transacted by telephone but always followed up with a written confirmation. Where transactions are vanilla and market practice is clearly defined the above will be the standard modus operandi. Complex or non-standard trades might be transacted using a term sheet or a draft confirmation. In very complex transactions it might be agreed that the trade is not struck until the signing of the confirmation is complete to avoid any misunderstandings or errors. In this scenario the parties may either state on the telephone that the agreed terms are as defined in the term sheet/draft confirmation or sign the term sheet/draft confirmation and send back as affirmation of the trade terms. Some banks and regulators require that all trading room conversations are recorded so that if discrepancies occur they have a record of the trade and terms being agreed. Trades can be booked in risk management systems in the following ways:- (i) trader directly inputs into the system from blotter or immediately after trading; (ii) trader writes ticket and it is input by trade assistant or middle office; (iii) direct automatic input from vendor or bank trading system; and (iv) Complex or Exotic trades with multiple legs might be input by middle office based on term sheet/ confirmation. Confirmations may take these forms:- (i) paper manual confirmation; (ii) electronic confirmation, e.g., DTCC; (iii) vendor or bank automatically generated confirmation; and (iv) broker confirmation. The confirmation process will differ depending on the product type and complexity of product and the sophistication of the parties:- (i) for an Interest rate swap between banks, the standard is that the parties exchange confirmations; (ii) for credit derivatives between banks the standard is that the seller prepares a confirmation which the other party signs and returns; (iii) for client trades the bank will always prepare irrespective of market standard; and (iv) Complex or Exotic trades will typically have a single confirmation which is sent backwards and forwards between parties. Term Sheets are used frequently on exotic or complex non standard trades to represent the economic terms and main legal terms. They are typically prepared by one party, the bank on client trades, and one of the banks on a bank trade. Term sheets vary in detail and quality. The best term sheets are clear, concise, use ISDA® language where required and specify all important terms, leaving only very standard non-contentious items for the confirmation. If a trade is executed by telephone, the failure to follow up with a confirmation will not effect the validity of the trade. A trade executed over the telephone is binding unless both traders have stated that it is subject to other matters being agreed or confirmation. Once a confirmation is executed it becomes the record of the trade such that the courts would view it in the absence of anything else as a complete statement of the agreed terms. The only exception to this would be a claim for rectification if there was an error in the confirmation. An earlier agreement verbal or otherwise cannot be used to change the later executed confirmation. Sometimes each party produces a confirmation and exchanges with neither party expecting the confirmations to be countersigned. It is acknowledged that providing the terms agreed are consistent that these confirmation terms will supersede the telephone agreement. If the confirmations are not consistent life is more complicated. Initially any broker note or agreed term sheet is used to verify terms. If one of the confirmations can be shown to reflect the terms of the verbal agreement and the other not then this will be strong evidence that the former confirmation reflects the trade. In some cases where exchange of documents is usual both documents may have discrepancies. In this case the parties will need to make changes to both documents to fully confirm the trade. There may be difficulties where both confirmations introduce new terms and are not consistent with each other. In this case, from a pure legal point of view, unless both parties are totally in agreement with these changes then the original trader telephone conversation prevails. There will be little additional economic data added at the confirmation stage. Most banks therefore consider that as long as the terms are consistent with each other then they represent the terms of the trade. It is then only with respect to inconsistencies that they will need to refer to the original telephone contract. Hence, the importance of well drafted and complete term sheets. Errors and Mistakes occasionally occur in the confirmation or trading process. If the parties are unable to agree whether the mistake or error is such that there is no market arbitration, e.g., ISDA®. It is up to the parties to agree or occasionally go to court. The court would look to the contract and the intention of the parties. In common law if both parties were mistaken the contract is void. However, if one party had warranted or indemnified the mistake the contract will be valid. Errors/Mistakes may be:- (i) mutual, i.e. both parties are mistaken, e.g., not specific enough on the Reference Entity in a credit derivative; (ii) unilateral where one party didn't execute what they meant to execute, i.e. They traded Ford Motor Co. rather than Ford Motor Credit as the Reference Entity in a CDS transaction. In the unilateral case the mistaken party will be protected:- (i) if a reasonable person would have understood the words used in executing the trade in a different sense from the meaning they might appear to mean; and (ii) if one of the parties knew the other was mistaken. The most common mistakes/errors are in the economics of the transaction:- maturity date, notional amount, rate, and reference entity. Ultimately these may end in court case if no agreement can be reached. Particularly, problems will occur if mistakes are made regarding the direction of the trade. These are the most costly for the incorrect party. One famous case was UBS AG versus Deutsche Bank AG on a credit derivative where the Reference Entity in the signed confirmation was not the standard Reference Entity and was not the intention of the parties. There are four types of confirmation:- (i) Long Form Confirmation referencing no specific Product Definitions or referencing only the general Interest Rate definitions; (ii) Short Form Confirmation Referencing a set of specific product Definitions, e.g., the 2003 Credit Derivative Definitions; (iii) Master Confirmation Referencing A Master Confirmation Agreement or Supplement; and (iv) a DTCC or Swapswire electronic confirmation which uses a Short Form or Master Confirmation template incorporated into the DTCC OR Swapswire software terms. These are a set of contract definitions for use with particular asset types, the main ones being:- (i) Credit:- 2003 ISDA® 2003 Credit Derivative Definitions; (ii) Equity:- 2002 ISDA® Equity Derivative Definitions and Users Guide; (iii) Commodities:- 2005 ISDA® Commodity Definitions and User's Guide to the 2005 ISDA® Commodity Definitions; (iv) Interest Rates:- 2006 ISDA® Definitions; (v) Foreign Exchange:- 1998 FX and Currency Option Definitions; (vi) Property:- 2007 ISDA® Property Index Derivatives Definitions and Forms of Confirmation. If Definitions didn't exist confirmation would be up to 60 pages long. Definitions standardise, where possible, all of the legal terms separately. Which can then be incorporated into a confirmation reduced to 3 pages which has only the main economic terms and any legal terms for which there are alternatives given in the Definitions. Even where Definitions exist, e.g., in credit derivatives, these may not be general or specific enough to incorporate specific asset types. So, for example, in credit the Definitions were not deemed to be sufficient for:- (a) leveraged loans and (b) mortgage backed, asset backed and CDO's. Specific Supplements were therefore issued for these product types to provide additional terms not covered and to amend others in the ISDA® 2003 Credit Derivative Definitions. For these product types the short form confirmation references the Supplement. The Supplement itself references the ISDA® 2003 Credit Derivative Definitions. Master Confirmation Agreements (MCAs) currently only exist for credit and equity derivatives. The master confirmation agreement is the next stage in standardising legal terms. Thus, a short form confirmation runs to 3 pages and includes some legal term choices. The credit derivative market then further standardised, so that even these choices could be pre-agreed. The market progressed from a short form to signing Master Confirmation Agreements where all legal terms were pre-agreed for the different types of trades and the confirmation was further reduced to one page of economic terms which could be easily transferred to electronic, e.g., for Credit – DTCC initially. If a party wants to make use of a Master Confirmation Agreement they must agree and sign an agreement with each counterpart. The master agreement will attach a matrix of standard legal terms for each type of trade, e.g., ISDA® periodically publishes new matrices for credit derivatives. It is then up to the parties to decide if new terms are incorporated automatically each time a change is made or if the Agreement needs re-negotiation. Eventually master confirmation agreements will be developed for interest rate swaps, equities and commodities. ISDA® has published a series of User Guides to the published Definitions. There is currently no User Guide for Credit Derivatives. This is probably because at the time ISDA®

drafted the Definitions in 1999 there were many disputes and uncertainties on the documentation and ISDA® did not want to be seen to get involved in disputes. The User Guide aims to provide a layman's explanation of the legal terms in Definitions. The Definitions can be difficult to understand and the legal language difficult to interpret. DTCC is an electronic confirmation matching system for derivatives and is currently used mainly for credit derivatives with some small volumes of equity and rates. Swapswire is primarily used for interest rate swaps with a small amount of equities. With the explosion in derivative volumes in the last 5 years confirming derivatives in paper form became unsustainable. Electronic systems have been available to match derivative trades for 10 years but up until the last 5 years usage was insignificant. The rapid increase in business over the last 5 years has forced market participants to electronically match:- In 2004 there was a market push to confirm as many credit derivatives as possible in electronic form thereby reducing human input and operational risk. The easiest derivatives to confirm electronically are vanilla CDSs (Credit Default Swaps) and IRSs (Interest Rate Swaps). More problematic are structured or non-standard trades. In DTCC and Swapswire the electronic input is reduced to the master confirmation terms, all other legal terms being pre-agreed in the master confirmation agreement. Thus, the electronic confirmation is reduced to the economic terms. Both DTCC and Swapswire have electronic confirmation templates for the asset classes they support. Using electronic matching systems means it is possible to link the trading/confirmation systems directly to the matching service; minimising human input and errors. Obviously to use an electronic service both parties must be on the same service. Percentage electronic confirmed trades:- Credit – 85%, Interest Rates – 37%, Equity – 20%, Commodities – 42%. These percentages reflect:- volumes; standardisation of documentation; proportion of vanilla versus structured trades; and regulatory requirements. The reason for the high percentage of credit derivatives is that in 2003 volumes increased so rapidly that banks were unable to control the existing paper confirmation process. This lead to high standardization of documentation (Master Confirmation Agreements) and the use of DTCC. In 2006, due to increasing numbers of outstanding confirmations, the Regulators started to focus on the credit derivatives business. Working with the banks, targets were set to reduce the overall number of outstandings, but also targets were agreed for usage of electronic matching systems. At the time, less focus was placed on rates and equities but targets have now been set for these products. Interest Rate swaps are a standard product, however the level of electronic confirmation is much lower due to more non-standard terms that still persist such as break clauses. The credit derivatives market has developed indices which unlike equities are not exchange traded. In London these are the ITRAXX (iTraxxx – the Europe CDS Crossover index, comprised of 45 equally weighted single company credit default swaps). In the US the CDX, ABX and CMBX. These indices are administered by Markit® (Markit Limited, London, United Kingdom; global financial information and services company). The documentation is published by Markit on their website and is heavily based on the ISDA® templates for the underlying assets. Once a derivative transaction has been executed there are 3 ways of closing out the derivative position:- (i) execute an opposite and equal trade; (ii) do a termination with the original counterpart to the trade; and (iii) novate the original contract to a third party. Each of these have advantages and disadvantages. The ISDA® Master Agreement is the glue that holds the derivatives market together and provides the legal framework for derivative transactions. Fundamentally, the ISDA® Master is a credit agreement that governs the credit relationship between the two parties to a derivative. If a derivative is traded with no ISDA® Master being in place this would be equivalent to lending money without a loan agreement. Master Agreement aims to identify, monitor and manage risks associated with OTC transactions. Master Agreement is a bilateral framework agreement inclusive of general terms and conditions which are not transaction specific. Accompanying Schedule details additionally negotiate clauses. Together the Master Agreement and Schedule complete the 'Master Agreement'. Subject to any provisions in the Agreement, parties must make payment and deliveries specified in the confirmation. Payments to be made on due date specified and into the account shown on confirmation. Importance of delivery emphasized in place of performance, i.e. it references receipt of the funds rather than efforts to make the payments. Provides administrative certainty. Performance could become impossible, e.g., systems closure. In the event of bankruptcy, courts can uphold transactions favorable to the bankrupt company, and annul those that are unfavorable. This is known as Cherry Picking. For derivatives this means the court would only recognize transactions where the bankrupt party was due money, or In the Money. By not recognising Out the Money transactions there could be a scenario where one party makes a payment to the bankrupt counterparty on a single chosen trade when overall it should be receiving money as a result of netting the whole portfolio. Payment netting:- (i) where amounts are due in same currency and due on same day in respect of same transactions; (ii) designed to reduce settlement risk and also provides administrative advantage in reducing number of payments made; (iii) should parties wish to net payments under different transactions, appropriate election must be made in Schedule (Multiple Transaction Payment Netting); (iv) however, would require parties to have such systems in place to identify when payments arise. The International Swaps and Derivatives Association, Inc. (ISDA®) is a New York-based group of major international swaps dealers, that publishes the Code of Standard Wording, Assumptions and Provisions for Swaps, or Swaps Code, for US Dollar interest rate swaps as well as standard master interest rate, credit, and currency swap agreements and definitions for use in connection with the creation and trading of swaps. The global trade association representing participants in the privately negotiated derivatives industry, a business covering swaps and options across all asset classes (commodity, credit, currency, equity, and interest rate). The International Swaps and Derivatives Association, Inc. (ISDA®) was chartered in 1985, and in 2006 numbers over 670 member institutions from 50 countries on six continents. These members include most of the world's major institutions who deal in, as well as leading end-users of, privately negotiated derivatives. The membership includes associated service providers and consultants. Since its inception, ISDA® has pioneered efforts to identify and reduce the sources of risk in derivatives and risk management business. Among its most notable accomplishments are:- developing the ISDA® Master Agreement; publishing a wide range of related documentation materials and instruments covering a variety of transaction types; producing legal opinions on the enforceability of netting and collateral arrangements (available only to ISDA® members); securing recognition of the risk-reducing effects of netting in determining capital requirements; promoting sound risk management practices, and advancing the understanding and treatment of derivatives and risk management from public policy and regulatory capital perspectives. INTERNATIONAL SYSTEM OF UNITS = МЕЖДУНАРОДНАЯ СИСТЕМА ЕДИНИЦ – International System Of Units:- just as the original conception of the metric system had grown out of the problems scientists encountered in dealing with the medieval system, so the new International System grew out of the problems a vastly enlarged scientific community faced in the proliferation of subsystems improvised to serve particular disciplines. At the same time, it had long been known that the original XVIII-century standards were not accurate to the degree demanded by XX-century scientific operations; new definitions were required. After lengthy discussion the 11th General Conference on Weights and Measures (11th CGPM), meeting in Paris, birthplace of the metric system, in October 1960

formulated a new International System of Units (abbreviated SI). The SI was amended by subsequent convocations of the CGPM. The following base units have been adopted and defined:- Ampere (unit of electric current), candela (unit of light (luminous) intensity), Kelvin (unit of thermodynamic temperature), kilogram (unit of mass), metre (unit of length), mole (unit of amount of substance), second (unit of time). The 11th General Conference on Weights and Measures (in October 1960) adopted the name 'Le Système International d'Unités' (International System of Units, international abbreviation SI), for the recommended practical system of units of measurement. The 11th General Conference on Weights and Measures (la 11e Conférence Générale des Poids et Mesures (CGPM)) laid down rules for the prefixes, the derived units, and other matters. The base units are a choice of seven well-defined units which by convention are regarded as dimensionally independent:- the metre (meter), the kilogram, the second, the Ampere, the Kelvin, the mole, and the candela. Derived units are those formed by combining base units according to the algebraic relations linking the corresponding quantities. The names and symbols of some of the units thus formed can be replaced by special names and symbols which can themselves be used to form expressions and symbols of other derived units. The SI is not static but evolves to match the world's increasingly demanding requirements for measurement. The creation of the decimal metric system at the time of the French Revolution and the subsequent deposition of two platinum standards representing the metre and the kilogram, on 1799-June-22, in the Archives de la République in Paris can be seen as the first step in the development of the present International System of Units. In 1832, Gauss strongly promoted the application of this metric system, together with the second defined in astronomy, as a coherent system of units for the physical sciences. Gauss was the first to make absolute measurements of the Earth's magnetic field in terms of a decimal system based on the three mechanical units millimetre, gram, and second for, respectively, the quantities length, mass, and time. In later years, Gauss and Weber extended these measurements to include electrical phenomena. These applications in the field of electricity and magnetism were further developed in the 1860s under the active leadership of Maxwell and Thomson through the British Association for the Advancement of Science (BAAS, now BA). They formulated the requirement for a coherent system of units with base units and derived units. In 1874 the BAAS introduced the CGS (centimeter-gram-second) system of units, a three-dimensional coherent unit system based on the three mechanical units centimetre, gram, and second, using prefixes ranging from micro to Mega to express decimal submultiples and multiples. The subsequent development of physics as an experimental science was largely based on this system. The sizes of the coherent CGS units in the fields of electricity and magnetism proved to be inconvenient so, in the 1880s, the BAAS and the International Electrical Congress, predecessor of the International Electrotechnical Commission (IEC), approved a mutually coherent set of practical units. Among them were the Ohm for electrical resistance, the Volt for electromotive force, and the Ampere for electric current. After the signing of the Metre Convention on 1875-May-20, which created the BIPM and established the CGPM and the International Committee for Weights and Measures (known in French as Comité International des Poids et Mesures (CIPM)), work began on the construction of new international prototypes of the metre and kilogram. In 1889 the 1st CGPM sanctioned the international prototypes for the metre and the kilogram. Together with the astronomical second as the unit of time, these units constituted a three-dimensional mechanical unit system similar to the CGS (centimeter-gram-second) system of units, but with the base units metre, kilogram, and second, the MKS (metre-kilogram-second) system of units. In 1901 Giorgi showed that it is possible to combine the mechanical units of this metre-kilogram-second system with the practical electric units to form a single coherent four-dimensional system by adding to the three base units a fourth unit, of an electrical nature such as the Ampere or the Ohm, and rewriting the equations occurring in electromagnetism in the so-called Rationalized Form. Giorgi's proposal opened the path to a number of new developments. After the revision of the Metre Convention by the 6th CGPM in 1921, which extended the scope and responsibilities of the International Bureau of Weights and Measures (known in French as Bureau International des Poids et Mesures (BIPM)) to other fields in physics, and the subsequent creation of the Consultative Committee for Electricity (known in French as Comité Consultatif d'Électricité (CCE); now Consultative Committee for Electricity and Magnetism (known in French as Comité Consultatif d'Électricité et Magnétisme (CCEM))) by the 7th CGPM in 1927, the Giorgi proposal was thoroughly discussed by the IEC, the International Union of Pure and Applied Physics (IUPAP), and other international organizations. This led the CCE to propose, in 1939, the adoption of a four-dimensional system based on the metre, kilogram, second, and Ampere, the MKSA (metre-kilogram-second-Ampere) system of units, a proposal approved by the CIPM in 1946. Following an international inquiry by the BIPM, which began in 1948, the 10th CGPM, in 1954, approved the introduction of the Ampere, the Kelvin and the candela as base units, respectively, for electric current, thermodynamic temperature and luminous intensity. The name International System of Units, with the abbreviation SI, was given to the system by the 11th CGPM in 1960. At the 14th CGPM in 1971, after lengthy discussions between physicists and chemists, the current version of the SI was completed by adding the mole as the base unit for amount of substance, bringing the total number of base units to seven. As of 2005-December-31, fifty-one states were members of this convention:- Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Cameroon, Canada, Chile, China, Czech Republic, Denmark, Dominican Republic, Egypt, Finland, France, Germany, Greece, Hungary, India, Indonesia, Iran (Islamic Republic of), Ireland, Israel, Italy, Japan, Korea (Democratic People's Republic of), Korea (Republic of), Malaysia, Mexico, The Netherlands, New Zealand, Norway, Pakistan, Poland, Portugal, Romania, Russian Federation, Serbia and Montenegro, Singapore, Slovakia, South Africa, Spain, Sweden, Switzerland, Thailand, Turkey, United Kingdom, United States, Uruguay, and Venezuela. Twenty States and Economies were Associates of the General Conference:- Belarus, CARICOM (Caribbean Community consists of 15 member states:- Antigua and Barbuda, The Bahamas, Barbados, Belize, Dominica, Grenada, Guyana, Haiti, Jamaica, Montserrat, Saint Lucia, St Kitts and Nevis, St Vincent and the Grenadines, Suriname, and Trinidad and Tobago; and 5 associate members:- Anguilla, Bermuda, British Virgin Islands, Cayman Islands, and Turks and Caicos Islands), Chinese Taipei, Costa Rica, Croatia, Cuba, Ecuador, Estonia, Hong Kong (China), Jamaica, Kazakhstan, Kenya, Latvia, Lithuania, Malta, Panama, Philippines, Slovenia, Ukraine, and Viet Nam. The International System of Units (abbreviated SI from the French 'le Système International d'Unités') is the modern form of the metric system and is generally a system devised around the convenience of the number ten. It is the world's most widely used system of measurement, both in everyday commerce and in science. The older metric system included several groups of units. The SI was developed in October 1960 from the old metre-kilogram-second system, rather than the centimetre-gram-second system, which, in turn, had a few variants. Because the SI is not static, units are created and definitions are modified through international agreement among many nations as the technology of measurement progresses, and as the precision of measurements improves. The system is nearly universally employed. Three principal exceptions are Burma (Myanmar), Liberia, and the United States (US). The United Kingdom has officially adopted the International System of Units but not with the intention of replacing customary measures entirely. The European Union (EU) had a directive banning non-SI markings after 2009-December-31 on any goods imported into the European Union. This would apply to all markings on products, enclosed directions and papers, packaging and advertisements; however problems experienced during metrication efforts in the UK forced the EU to abandon this deadline. On 2007-September-11, the EU announced that the United Kingdom would be exempted from this directive and Imperial measurements would still be permitted indefinitely alongside with the metric system as supplementary indications. The EU directive is also in the process of being modified to allow the continuation of both US customary and metric units for US consumer goods sold in the EU. The international system of units consists of a set of units together with a set of prefixes. The units of SI can be divided into two subsets. There are seven base units:- Each of these base units represents, at least in principle, different kinds of physical quantities. From these seven base units, several other units are derived. In addition to the SI units, there is also a set of non-SI units accepted for use with SI which includes some

commonly used units such as the litre (liter). A prefix may be added to a unit to produce a multiple of the original unit. All multiples are integer powers of ten. For example, kilo- denotes a multiple of a thousand and milli- denotes a multiple of a thousandth; hence there are one thousand millimetres to the metre and one thousand metres to the kilometre. The prefixes are never combined: a millionth of a kilogram is a milligram not a microkilogram. / Комитэ Этэрнасьёналь дэ Пуа э Мёзюр (Сэ.И.Пэ.Эм.; Comité International des Poids et Mesures (CIPM)). В 1901 Жиоржи (Giorgi). Бюро Этэрнасьёналь дэ Пуа э Мёзюр (Бэ.И.Пэ.Эм.; Bureau International des Poids et Mesures (BIPM)) Комитэ Консультатифь д'Электриситэ (Сэ.Сэ.Ё.; Comité Consultatif d'Électricité (CCE); сейчас Консультативный Комитет по Электричеству и Магнетизму (Consultative Committee for Electricity and Magnetism; известный на Французском языке как Комитэ Консультатифь д'Электриситэ э Маньэтисмэ (Сэ.Сэ.Ё.Эм.; Comité Consultatif d'Électricité et Magnétisme (CCEM)). Томсэн (Thomson). Международная Система Единиц или, как это звучит на Французском языке, Лё Систэм Этэрнасьёналь д'Юните (Le Système International d'Unités сокращённо – Эс.И. или, как её уже устоялось называть в России, СИ (SI)) была принята в Октябре 1960 11-й Генеральной Конференцией по Мерам и Весам (ГКМВ; или как это звучит опять же на Французском языке, Ля Онзьем Конференс Женераль дэ Пуа э Мёзюр (Сэ.Жэ.Пэ.Эм.; la 11^{e} Conférence Générale des Poids et Mesures (CGPM))). Последующие конференции вносили в данную редакцию некоторые уточнения. В настоящее время Международная Система Единиц состоит из семи основных единиц:- Ампер (единица силы электрического тока в СИ, а также единица магнитодвижущей силы в СИ и единица разности магнитных потенциалов в СИ; обозначение:- А), кандела (единица силы света в СИ; обозначение:- кд), Кельвин (единица термодинамической температуры в СИ; обозначение:- К), килограмм (единица массы в СИ; обозначение:- кг), метр (единица длины в СИ; обозначение:- м), моль (единица количества вещества в СИ; обозначение:- моль) и секунда (единица времени в СИ; обозначение:- с); двух дополнительных единиц:- радиан (единица плоского угла в СИ; обозначение:- рад) и стерадиан (единица телесного угла в СИ; обозначение:- ср); а также большого числа производных единиц таких как, квадратный или кубический метр, метр в секунду, Ватт (универсальная единица мощности в СИ; обозначение:- Вт), Вольт (единица электрического напряжения, электрического потенциала, разности электрических потенциалов, электродвижущей силы в СИ; обозначение:- В), Герц (единица частоты периодического процесса; обозначение:- Гц), Джоуль (единица работы, энергии (механической, электромагнитной, ионизирующего излучения, звуковой и так далее) и количества теплоты в СИ; обозначение:- Дж), Кулон (единица количества электричества, электрического заряда и потока электрического смещения в СИ; обозначение:- Кл), Паскаль (единица давления (в том числе звукового, осмотического) и механического напряжения в СИ; обозначение:- Па), градус Цельсия (внесистемная единица температуры, допускаемая к применению наравне с единицей СИ – Кельвином; обозначение:- °С) и другие. Производные единицы СИ являются когерентными (согласованными) единицами. Как правило, их образуют с помощью простейших уравнений связи между величинами (определяющих уравнений), в которых числовые коэффициенты равны 1. Для образования производных единиц величины в уравнениях связи принимаются равными единицам СИ. Например, единицу скорости образуют с помощью уравнения, определяющего скорость прямолинейно и равномерно движущейся точки, v = s/t, где v – скорость, s – длина пройденного пути, t – время движения точки. В результате подстановки единиц СИ вместо s и v получают [v] = [s]/[t] = 1 м/1 с = 1 м/с. Следовательно, единицей скорости СИ является метр в секунду, равный такой скорости прямолинейно и равномерно движущейся точки, при которой эта точка за время 1 с перемещается на расстояние 1 м. Производные единицы СИ электрических и магнитных величин образованы в соответствии с рационализированной формой уравнений электромагнитного поля. При этом фиксировано численное значение магнитной постоянной μ_0. 18 производным единицам СИ ГКМВ присвоены специальные наименования, например, люкс (lx, лк) или люмен (lm, лм), а остальным 16 производным единицам СИ присвоены наименования в виде фамилий учёных:- Беккерель (единица активности нуклида в радиоактивном источнике (активности изотопа) в СИ; обозначение:- Бк (Bq)), Ватт (универсальная единица мощности в СИ; обозначение:- Вт (W)), Вебер (единица магнитного потока в СИ; обозначение:- Вб (Wb)), Вольт (единица электрического напряжения, электрического потенциала, разности электрических потенциалов, электродвижущей силы в СИ; обозначение:- В (V)), Генри (единица индуктивности и взаимной индуктивности в СИ; обозначение:- Гн (H)), Герц (единица частоты периодического процесса; обозначение:- Гц (Hz)), Грэй (единица поглощённой дозы излучения и кермы в СИ; обозначение:- Гр (Gy)), Джоуль (единица работы, энергии (механической, электромагнитной, ионизирующего излучения, звуковой и так далее) и количества теплоты в СИ; обозначение:- Дж (J)), Зиверт (специальное наименование единицы эквивалентной дозы излучения в СИ; обозначение:- Зв (Sv)), Кулон (единица количества электричества, электрического заряда и потока электрического смещения в СИ; обозначение:- Кл (C)), Ньютон (единица силы и веса в СИ; обозначение:- Н (N)), Ом (единица электрического сопротивления в СИ; обозначение:- Ом (Ω)), Паскаль (единица давления (в том числе звукового, осмотического) и механического напряжения в СИ; обозначение:- Па (Pa)), Сименс (единица электрической проводимости в СИ; обозначение:- См (S)), Тесла (единица магнитной индукции в СИ; обозначение:- Тл (T)) и Фарад (единица электрической ёмкости в СИ; обозначение:- Ф (F)). Не допускается применять специальные наименования единиц, не утверждённые ГКМВ, например, бакт и эр для Ватта – единицы мощности бактерицидного и эритемного излучения. Наименования производных единиц СИ, как правило (кроме указанных выше 18 единиц), содержат наименования основных, дополнительных или других производных единиц, например, Ватт на стерадиан (W/sr, Вт/ср), метр в секунду (m/s, м/с) или Паскаль·секунда (Pa·s, Па·с). Определения основных единиц СИ увязаны с физическими методами воспроизведения их размеров в эталонах. Международный Комитет Мер и Весов принимает рекомендации по условиям, в которых должны реализовываться заложенные в определениях методы, что способствует росту международного единства и точности измерений. Основные преимущества СИ:- унификация единиц физических величин, охватывающая все области науки, техники и человеческой деятельности, удобные для практического использования размеры основных, дополнительных и большинства производных единиц, когерентность производных единиц и упрощение записи большинства важных для практики уравнений и формул, возможность использования широкого набора множителей и приставок для образования десятичных кратных и дольных единиц, обеспеченность современными международными и национальными эталонами, воспроизводящими размеры основных единиц с наивысшей точностью. Эти преимущества обусловливают повышение эффективности труда при использовании единиц СИ, облегчение педагогического процесса, лучшее взаимопонимание при дальнейшем развитии научно-технических и экономических связей между странами. Упорядочение и унификация единиц физических величин на основе СИ происходит во всём мире, в том числе и в 'неметрических' странах (Австралия, Великобритания, Канада, США, Япония и другие). Наравне с единицами СИ допускается в обоснованных случаях применять следующие единицы:- единицы длины (астрономическая единица (обозначение:- а.е. (ua)), световой год (обозначение:- св. год (ly)), парсек (обозначение:- пк (pc))), единицы массы (тонна (обозначение:- т (t)), атомная единица массы (обозначение:- а.е.м. (u))), единицы времени (минута (обозначение:- мин (min)), час (обозначение:- ч (h)), сутки (обозначение:- сут (d))), единицы плоского угла (градус (°), минута (’), секунда (”), град (гон; …^{g} (gon), град)), единицу площади – гектар (обозначение:- га (ha)), единицу объёма или вместимости – литр (обозначение:- л (l, L)), единицу энергии – электронВольт (обозначение:- эВ (eV)), единицу оптической силы – диоптрия (–, дптр), единицу механического напряжения – Ньютон на квадратный миллиметр (обозначение:- Н/мм^2 (N/mm^2)), единицу полной мощности в электротехнике – Вольт-Ампер (обозначение:- В·А (V·A)) и единицу реактивной мощности в электротехнике – вар (обозначение:- вар (var)); их сочетания с единицами СИ, а также получившие широкое распространение на практике кратные и дольные от этих единиц. Допускается

применение относительных и логарифмических величин и их единиц. В связи с удобством их использования для ряда приложений (линии связи, системы регулирования и тому подобное) наблюдается расширение масштабов их применения для представления значений энергетических или силовых величин в логарифмическом масштабе. При этом в качестве исходных принимаются уровни, рекомендуемые специализированными организациями. За исходные уровни приняты (к началу 1988):- для звукового давления – $2 \cdot 10^{-5}$ Па, для звуковой мощности – 10^{-12} Вт, для мощности на ВЧ или СВЧ – 10^{-3} Вт, для оптической мощности в световоде – 10^{-3} Вт, для интенсивности звука – 10^{-12} Вт/м^2. Учитывая разнообразие этих уровней, к применению относительных и логарифмических величин следует проявлять повышенное внимание. Десятичные кратные и дольные единицы образуются умножением исходных единиц на один из множителей, представляющих 10^{3n} (10 в степени 3 в степени n), где n – целое положительное или отрицательное число (от –6 до 6). Наименования десятичных кратных и дольных единиц образуются присоединением десятичных приставок СИ. Приставки гекто (10^2), дека (10^1), деци (10^{-1}) и санти (10^{-2}) рекомендуется допускать только в наименованиях кратных и дольных единиц, уже получивших широкое распространение, например, декалитр, квадратный дециметр, квадратный сантиметр. Нежелательно образование новых единиц с этими приставками, например, гектоВольт, декаНьютон, сантигрэй. Не допускается присоединение к наименованию единицы двух или более приставок. В связи с тем, что наименование основной единицы массы – килограмм содержит приставку ‘кило’, для образования кратных и дольных единиц массы используется дольная единица грамм, к наименованию которой и следует присоединять десятичные приставки. Если единица образована как произведение единиц, то приставку следует присоединять к наименованию первой единицы, входящей в произведение, например, кПа·с/м, а не Па·кс/м. Для отношения единиц и начального использования приставки с единицей, стоящей в знаменателе, перенос приставки к первой стоящей в числителе единице сопровождается изменением знака степени её множителя и её названия, например, В/мс следует обозначать как кВ/с. Выбор десятичной кратной или дольной единицы от единицы СИ диктуется прежде всего удобством её применения. Числовые значения величин при использовании выбранной приставки должны находиться в диапазоне 0.1–1 000. Например, лучше писать 0.5 микрометра (мкм), а не 0.000 5 мм или 0.000 05 см; 80 МВт вместо 80 000 кВт; 140 кН, а не 140 000 Н; 720 ГПа вместо 720 000 МПА. Однако в таблицах числовых значений одной и той же величины или при сопоставлении этих значений в одном тексте целесообразно применять одну и ту же кратную или дольную единицу, даже если числовые значения выходят за указанные пределы. Аршив дё ля Републик (Archives de la République). Ля Онзьем Конференс Женераль дэ Пуа э Мёзюр (Сэ.Жэ.Пэ.Эм.; la 11^e Conférence Générale des Poids et Mesures (CGPM)). Лё Систэм Этэрнасьёналь д’Юните (Эс.И. или, как её уже устоялось называть в России, СИ). Международная Система Единиц является универсальной системой единиц физических величин для всех отраслей науки, техники экономики и системы обучения, которая была принята и рекомендована к практическому применению в Париже, Франция в Октябре 1960 XI-й Генеральной Конференцией по Мерам и Весам. В России известна как система СИ, хотя правильнее было называть Эс.И. по произношению на Французском языке сокращения SI. Международная Система Единиц содержит 7 основных единиц:- Ампер – силы электрического тока, кандела – силы света, Кельвин – термодинамической температуры, килограмм – веса (ранее массы), метр – длины, моль – количества вещества, и секунда – времени. При расчётах, если значения всех величин выражены в единицах СИ, в формулы не требуется вводить коэффициенты, зависящие от выбора единиц. В настоящее время Международная Система Единиц применяется в большинстве стран мира. Международная Система Единиц была введена в бывшем СССР в действие с 01 Января 1963 для предпочтительного применения в соответствии с ГОСТ 9867-61 и с 01 Января 1982 для обязательного применения в соответствии с ГОСТ 8.417-81 ‘Единицы Физических Величин’. Международная Система Единиц (Systeme International d ‘Unitées) – система единиц физических величин, принятая 11-й Генеральной Конференцией По Мерам И Весам (1960). Сокращённое обозначение системы – SI (в Русской транскрипции – СИ). Международная Система Единиц разработана с целью замены сложной совокупности систем единиц и отдельных внесистемных единиц, сложившейся на основе Метрической Системы Мер, и упрощения пользования единицами. Достоинствами Международной Системы Единиц являются её универсальность (охватывает все отрасли науки и техники) и когерентность, то есть согласованность производных единиц, которые образуются по уравнениям, не содержащим коэффициент пропорциональности. Благодаря этому при расчётах, если выражать значения всех величин в единицах Международной Системы Единиц, в формулы не требуется вводить коэффициенты, зависящие от выбора единиц. Первые три основные единицы (метр, килограмм, секунда) позволяют образовывать когерентные производные единицы для всех величин, имеющих механическую природу, остальные добавлены для образования производных единиц величин, не сводимых к механическим:- Ампер – для электрических и магнитных величин, Кельвин – для тепловых, кандела – для световых и моль – для величин в области физической химии и молекулярной физики. Дополнительные единицы радиан и стерадиан служат для образования производных единиц величин, зависящих от плоского или телесного углов. Для образования наименований десятичных кратных и дольных единиц служат специальные приставки СИ:- деци (для образования единиц, равных 10^{-1} по отношению к исходной), санти (10^{-2}), милли (10^{-3}), микро (10^{-6}), нано (10^{-9}), пико (10^{-12}), фемто (10^{-15}), атто (10^{-18}), дека (10^1), гекто (10^2), кило (10^3), мега (10^6), гига (10^9), тера (10^{12}); смотрите также Дольные Единицы; и Кратные Единицы. В соответствии с Метрической Конвенцией, подписанной в Париже, Франция 20 Мая 1875, был создан Международный Комитет Мер и Весов для организации и согласования международных метрологических работ. Члены комитета избираются государствами участниками Метрической Конвенции. Международное Бюро Мер и Весов (The International Bureau of Weights and Measures или, как это выглядит на Французском языке по месту регистрации, Bureau International des Poids et Mesures (BIPM)) является научно-техническим органом Международного Комитета Мер и Весов (The International Committee for Weights and Measures или, как это выглядит на Французском языке по месту регистрации, Comité International des Poids et Mesures (CIPM)). Оно хранит эталоны Международной Системы Единиц и проводит метрологические исследования. Штабквартира бюро расположена в городе Севр (Sèvres) пригороде Парижа, Франция. Международный Эталон – средство измерений, обеспечивающее воспроизведение размера единицы физической величины, применяемое для установления международного единства измерений и признанное в качестве эталона Международной Организацией Мер и Весов. Под Системой Единиц МКГСС (MKGSS System of Units) понимается устаревшая и не подлежащая применению так называемая техническая (поскольку была распространена в технике) система единиц – система единиц физических величин lft (где l – длина, f – сила, t – время) с основными единицами метр (м) – единица длины, килограмм-сила (кгс) – единица силы, секунда (с) – единица времени. За единицу массы принята масса тела, приобретающего ускорение 1 м/с^2 под действием приложенной к нему силы 1 кгс, её называют технической единицей массы (т.е.м.) или инертой. 1 т.е.м. равна 9.81 килограмма. Система Единиц МКГСС некогерентна (не согласована) с единицами электрических, магнитных, тепловых и световых величин. С введением Международной Системы Единиц СИ Система Единиц МКГСС вышла из употребления. Под Системой Единиц МКС (MKS (metre-kilogram-second) System of Units) понимается система единиц механических (а также акустических) величин lmt (где l – длина, m – масса, t – время) с основными единицами метр (м) – единица длины, килограмм (кг) – единица массы, секунда (с) – единица времени. Система Единиц МКС входит как составная часть в Международную Систему Единиц СИ. Под Системой Единиц МКСА (MKSA (metre-kilogram-second-Ampere) System of Units), именуемой также Системой Единиц Джорджи, понимается система единиц электрических и магнитных величин lmtI (где l – длина, m – масса, t – время, I – сила электрического тока), принятая для рационализованной формы уравнений

электромагнитного поля, с основными единицами метр (м) – единица длины, килограмм (кг) – единица массы, секунда (с) – единица времени и Ампер (А) – единица силы электрического тока. К Системе Единиц МКСА принадлежат распространённые практические электрические единицы:- Вольт, кулон, Ом и другие. Система Единиц МКСА входит как составная часть в Международную Систему Единиц СИ. Под Системой Единиц МКСК (MKSK System of Units) понимается система единиц тепловых величин lmtT (где l – длина, m – масса, t – время, T – термодинамическая температура) с основными единицами метр (м) – единица длины, килограмм (кг) – единица массы, секунда (с) – единица времени и Кельвин (К) – единица термодинамической температуры (Кельвин ранее называли градусом Кельвина (°К), в связи с чем система обозначалась МКСГ). В Системе Единиц МКСК пользуются двумя температурными шкалами:- Термодинамической Температурной Шкалой (Thermodynamic Temperature Scale) и Международной Практической Температурной Шкалой (МПТШ-68; International Practical Temperature Scale of 1968 (IPTS-68)), с 01 Января 1990 заменённой Международной Температурной Шкалой (International Temperature Scale of 1990 (ITS-90)), в которой наряду с Кельвином (К) применяют градус Цельсия (1 К = 1 °С). Система Единиц МКСК входит как составная часть в Международную Систему Единиц СИ. Под Системой Единиц МТС (MTS System of Units) понималась вышедшая из употребления система единиц механических величин lmt (где l – длина, m – масса, t – время) с основными единицами метр (м) – единица длины, секунда (с) – единица времени и тонна (т) – единица массы. Важнейшими производными единицами этой системы являлись:- кВт – единица мощности, пьеза – единица давления, стен – единица силы, стен-метр или кДж – единица работы. Под Системой Единиц СГС (SGS System of Units) понимается система единиц физических величин lmt (где l – длина, m – масса, t – время), в которых приняты три основные единицы:- сантиметр (см; единица длины) – грамм (г; единица массы) – секунда (с; единица времени), заменяемые сокращением СГС. В механике и акустике важнейшие производные единицы, получившие специальные наименования, – дина (дин) – единица силы, эрг (эрг) – единица работы и энергии, пуаз (П) – единица динамической вязкости, Стокс (Ст) – единица кинематической вязкости, гал (Гал) – единица ускорения. Применяется главным образом в трудах по физике и астрономии. В электродинамике применялись 7 видов Системы Единиц СГС:- (1) магнитную СГСМ (магнитная проницаемость вакуума μ_0 принята равной безразмерной единицей), в этой системе специальные наименования имеют единица магнитного потока – Максвелл (Мкс), единица магнитной индукции – Гаусс (Гс), единица напряжённости магнитного поля – Эрстед (Э) и единица магнитодвижущей силы – Гильберт (Гб); (2) электростатическую СГСЭ (диэлектрическую проницаемость вакуума ε_0 принята равной безразмерной единице); (3) симметричную (смешанную) систему единиц СГС (или систему единиц Гаусса), получившую в XX веке наибольшее распространение, в которой магнитные единицы равны единицам системы СГСМ (Гаусс, Максвелл, Эрстед и другие), электрические – единицам системы СГСЭ (собственных наименований не имеют), магнитная постоянная $\mu_0 = 1$ и электрическая постоянная $\varepsilon_0 = 1$ (при нерационализированной форме уравнений электромагнитного поля); (4–7) получившие наибольшее распространение системы СГС ε_0 (ε_0 – четвёртая основная единица), СГС μ_0 (μ_0 – четвёртая основная единица), СГСФ (четвёртая основная единица – Франклин (Ф)), СГСБ (четвёртая основная единица – Био (Б)). Единицы Системы Единиц СГС всех видов не подлежат применению, за исключением научно-исследовательских работ и публикаций теоретического характера в области естествознания. Под Системой Единиц МСК (MSC System of Units) понимается система единиц световых величин ltJ (где l – длина, t – время, J – сила света) с основными единицами метр (м) – единица длины, секунда (с) – единица времени и кандела (кд; candela) – единица силы света (кандела ранее называлась свечой, в связи с чем система обозначалась МСС). Система Единиц МСК входит как составная часть в Международную Систему Единиц СИ.

INTERNATIONAL TELECOMMUNICATIONS SATELLITE ORGANIZATION = МЕЖДУНАРОДНАЯ ОРГАНИЗАЦИЯ СПУТНИКОВОЙ ДАЛЬНЕЙ СВЯЗИ – International Telecommunications Satellite Organization (INTELSAT):- in 1965, Intelsat established the first commercial global satellite communications system. For the first time, people, businesses and governments could communicate instantly, reliably and simultaneously from all corners of the globe. NASA put a man on the moon – and the world watched it happen via Intelsat. In 2006, our merger with PanAmSat brought in a heritage of challengers and determined commercial entrepreneurs that made satellite communications part of our daily lives and spearheaded the creation of today's USD7 billion industry. As we move forward together, we intend to continue to find innovative solutions to tomorrow's communications challenges. We have doubled our collective knowledge and gained cultural and professional diversity that promises potential beyond anything previously imagined. As we look ahead, our customers will depend on our people, our networks, our technical leadership and commercial innovation to offer their customers seamless, secure and easy access to people, information and entertainment all over the planet – bringing the world closer, by far. The International Telecommunications Satellite Organization (INTELSAT), created in 1964 under a multilateral agreement, is a nonprofit cooperative of (presently) 116 countries that jointly own and operate a global communications satellite system serving the world. The system is used primarily for international communications, and by many countries for domestic communications. In 1991, the INTELSAT system comprised a network of 16 satellites in geosynchronous orbit over the Atlantic, Indian and Pacific Ocean regions, with service to about 1 500 international and domestic earth station antennas. Intelsat was established in 1964 as the first commercial satellite services provider. At Intelsat, our business is enabling the delivery of information and entertainment worldwide. We use a combination of satellite and terrestrial connectivity technology to help enterprises, governments and service providers deliver content around the world quickly, securely and reliably – to people at home, in the office or on the move. Services:- (i) Capacity services:- flexible, diverse satellite coverage and capacity options for quality point-to-point or point-to-multipoint services; (ii) IntelsatONE^{SM} managed services:- portfolio of global, integrated satellite and terrestrial network managed services to meet broadband, trunking and media requirements worldwide; and (iii) Specialized services:- Value-added and specialized services including disaster recovery, customer premise equipment programs, co-location services and consulting and technical management including support to satellite companies, organizations and governments. Operational Strength:- (i) carries one out of every four television channels transmitted over fixed satellites; (ii) supports 32 DTH platforms worldwide; (iii) operates 27 satellites that are part of video neighborhoods around the world; (iv) is the number one provider of transponders for video programming worldwide; (v) is the largest provider of commercial satellite services to the government sector; (vi) is the leading provider of services to enterprise, Internet and mobile network operators; and (vii) provides communications services to 99 percent of the world's populated regions. Global Network:- Using optimized capacity on a fleet of approximately 50 satellites and a large, complementary terrestrial infrastructure including eight owned teleports, fiber connectivity and more than 50 points of presence in almost 40 cities, Intelsat offers an unparalleled class of service. Customers:- We serve approximately 1 800 customers around the world, including the world's largest Internet service providers, telecommunications companies, broadcasters and corporate network service providers. Milestones:- 1965 – launched the world's first commercial communications satellite; 1969 – first live global television broadcast of the Apollo XI lunar landing; 1974 – created the first international digital satellite voice communications service; 1987 – linked 50 000 people in 70 cities for world's largest teleconference; 1998 – established high-speed Internet backbone links around the world; 2000 – compressed 40 000 hours of programming into two weeks for Sydney Olympics; 2001 – Intelsat becomes a private company after 37 years as an intergovernmental organization; 2004 – Intelsat acquires from Loral five satellites and the rights to operate from six orbital locations over North America; 2005 – Intelsat announces the successful closing of the acquisition of Intelsat by Intelsat Holdings, Ltd., an entity formed at the direction of funds advised by or associated with Apax Partners Worldwide LLP, Apax Partners, Inc., Apollo Management V, L.P., MDP Global Investors Limited and Permira Advisors, LLC.; 2006 – Intelsat announces the successful closing of the acquisition of PanAmSat

Holding Corporation. Merger creates world's largest commercial fixed satellite services provider, bringing the new Intelsat closer, by far, to meeting customer needs with unrivaled satellite and terrestrial resources and expanded delivery of value-added services. Total Revenue:- USD2.4 billion in 2008. Employees:- Staff of 1 100. Offices:- Intelsat has offices in Brazil, China (Hong Kong), France, Germany, India, Singapore, South Africa, the United Arab Emirates, the United Kingdom and the United States. Intelsat Global SA headquartered in Luxembourg. / ИНТЭЛСЭТ (INTELSAT). ПэнАмСэт (PanAmSat). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Глоубэл Инвэстоз Лимитид (MDP Global Investors Limited) и Пёмира Эдвайзоз Эл.Эл.Си. (Permira Advisors, LLC.; 2006 – Интэлсэт анонсировал успешное завершение поглощения ПэнАмСэт Холдинь Корпорэйшэн (PanAmSat Holding Corporation). Международная Организация Спутниковой Дальней Связи (МОСДС, известная под Англоязычным сокращением ИНТЭЛСЭТ (INTELSAT)), созданная в 1964 по многостороннему соглашению, в настоящее время является бесприбыльным кооперативом (некоммерческой организацией), состоящим из 116 стран, которые совместно владеют и оперируют глобальной системой спутниковой дальней связи, обеспечивающей своими услугами весь мир. Данная система используется главным образом для международной дальней связи, а многими странами и для внутренней дальней связи. В 1991 система космической связи ИНТЭЛСЭТ обладала серией связанных искусственных спутников Земли (ИСЗ) в количестве 16 штук, составлявших единую сеть и находившихся на геосинхронной орбите над регионами Атлантического, Индийского и Тихого Океанов в купе почти что с 1 500 международных и внутренних наземных стационарных антенн, обеспечивающих бесперебойную взаимосвязь с пользователями предоставляемых ИНТЭЛСЭТом услуг. Спутники связи и ракетоносители для вывода их на орбиты разрабатывались Американскими фирмами с участием Западно-Европейских и Японских фирм. Ряд стран арендует каналы искусственных спутников Земли, входящих в систему ИНТЭЛСЭТ, для использования в региональных системах связи, обслуживающих территории этих стран.

INTERNATIONAL TELECOMMUNICATIONS SERVICES = МЕЖДУНАРОДНЫЕ УСЛУГИ ДАЛЬНЕЙ СВЯЗИ – International Telecommunications Services:- these are transborder services provided via cable, radio, or satellite. These service offerings have traditionally been international message telephone service (IMTS), telex and telegraph, but during the 1980s have grown to include private leased lines, overseas value-added services, and international 800 services. / коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Имеются трансграничные услуги, обеспечиваемые через кабель, по радио или с помощью спутников. К предложениям этих услуг традиционно относились услуги международного телефонного сообщения (УМТС), телекса и телеграфа, а в течение 1980-х они значительно выросли, особенно с появлением частных арендуемых линий, зарубежных услуг с добавленной стоимостью, и международных услуг формата 800 (бесплатного для звонящего).

INTERNATIONAL TELECOMMUNICATION UNION = МЕЖДУНАРОДНЫЙ СОЮЗ ДАЛЬНЕЙ СВЯЗИ – The International Telecommunication Union (ITU) is the leading United Nations agency for information and communication technology issues, and the global focal point for governments and the private sector in developing networks and services. For 145 years, ITU has coordinated the shared global use of the radio spectrum, promoted international cooperation in assigning satellite orbits, worked to improve telecommunication infrastructure in the developing world, established the worldwide standards that foster seamless interconnection of a vast range of communications systems and addressed the global challenges of our times, such as mitigating climate change and strengthening cybersecurity. ITU also organizes worldwide and regional exhibitions and forums, such as ITU TELECOM WORLD, bringing together the most influential representatives of government and the telecommunications and ICT industry to exchange ideas, knowledge and technology for the benefit of the global community, and in particular the developing world. From broadband Internet to latest-generation wireless technologies, from aeronautical and maritime navigation to radio astronomy and satellite-based meteorology, from convergence in fixed-mobile phone, Internet access, data, voice and TV broadcasting to next-generation networks, ITU is committed to connecting the world. ITU is based in Geneva, Switzerland, and its membership includes 192 Member States and more than 700 Sector Members and Associates (in 2011). The International Telecommunication Union (ITU) is a specialized agency of the United Nations with resonsibilities for developing operational procedures and technical standards for the use of the ratio frequency spectrum, the satellite orbit, and for the international public telephone and telegraph network. There are over 160 member nations of the ITU. The Radio Regulations that result from ITU conferences have treaty status and provide the principal guidelines for world telecommunications. In the case of the United States, they are the framework for development of the US national frequency allocations and regulations. The ITU has four permanent organs:- (i) the General Secretariat, (ii) the International Frequency Registration Board (IFRB), (iii) the International Radio Consultative Committee (CCIR), and (iv) the International Telegraph and Telephone and Consultative Committee (ITTCC). ITU's mission is to enable the growth and sustained development of telecommunications and information networks, and to facilitate universal access so that people everywhere can participate in, and benefit from, the emerging information society and global economy. The ability to communicate freely is a pre-requisite for a more equitable, prosperous and peaceful world. And ITU assists in mobilizing the technical, financial and human resources needed to make this vision a reality. A key priority lies in bridging the so called Digital Divide by building information and communication infrastructure, promoting adequate capacity building and developing confidence in the use of cyberspace through enhanced online security. Achieving cybersecurity and cyberpeace are amongst the most critical concerns of the information age, and ITU is taking concrete measures through its landmark Global Cybersecurity Agenda. ITU also concentrates on strengthening emergency communications for disaster prevention and mitigation. While both developing and developed countries are equally vulnerable to natural disasters, poorer nations are hardest hit because of their already fragile economies and lack of resources. Whether through developing the standards used to create infrastructure to deliver telecommunications services on a worldwide basis, through equitable management of the radio-frequency spectrum and satellite orbits to help bring wireless services to every corner of the world, or through providing support to countries as they pursue telecommunication development strategies, all the elements of ITU's work are centred around the goal of putting every human being within easy and affordable reach of information and communication and to contribute significantly towards economic and social development of all people. ITU remains dedicated to helping the world communicate. Every time someone picks up a telephone and dials a number, answers a call on a mobile, sends a fax or receives an e-mail, takes a plane or a ship, listens to the radio or watches a favorite television programme, they benefit from the universal telecommunication and ICT frameworks put in place by the International Telecommunication Union (ITU). ITU has been at the cutting edge of information and communication technologies, defining and adopting the globally agreed technical standards that have allowed industry to interconnect people and equipment seamlessly around the world. It has also successfully regulated worldwide use of the radio-frequency spectrum, ensuring all international wireless communications remain interference-free to ensure the relay of vital information and economic data around the world. Spearheading telecommunications development on a global scale, ITU also fosters the deployment of telecommunications in developing countries by advising on development policies, regulatory frameworks and strategies, and by providing specialized technical assistance in the areas of technology transfer, cybersecurity, management, financing, installation and maintenance of networks,

disaster mitigation, and capacity building. Founded in Paris in 1865 as the International Telegraph Union, ITU took its present name – the International Telecommunication Union – in 1934 and, in 1947, became a specialized agency of the United Nations. Nominated by leading international consultant Booz Allen Hamilton in 2002 as one of the world's topmost enduring institutions, ITU is also the most inclusive global telecommunications organization. A public-private partnership organization since its inception, ITU now has a membership of 192 countries and over 700 public and private sector companies as well as international and regional telecommunication entities. The Union's consensus-based approach gives a voice to all its members and its work helps deploy infrastructure, achieve connectivity, and provide efficient telecommunication services worldwide. ITU's biggest achievement is undoubtedly the pivotal role it has played in the creation of the international telecommunications network – the largest man-made artefact ever created. Today, thanks to the advent of the Internet, mobile wireless telephony, convergence strategies and more, this network keeps us in touch, brings us world news and entertainment, provides access to a huge global store of information, and underpins the global economy. It would not exist without ITU's work. Headquartered in Geneva, Switzerland. The International Telecommunication Union (ITU) was founded in 1865 making it the oldest international organization in the UN family. ITU is the leading United Nations agency for information and communication technology issues, and the global focal point for governments and the private sector in developing networks and services. From its beginnings in 1865 up until the present ITU has produced a multitude of documents that chart the organization's history and contribution to information and communication technology issues. The ITU History Portal will enable you to discover many of these documents, as well as learn how ITU has evolved. Using the navigation menu on the left-hand side of the screen, you are invited to use the ITU History Portal to access a variety of information. Digitized historical documents and pertinent information can be found by accessing our series of historical micro-sites listed in this menu. We invite you to explore and enjoy some highlights from ITU's illustrious history. / коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Международный Союз Дальней Связи (МСДС) является специализированном агентством ОрганизацииОбъединённых Наций (ООН), основанным в 1865 с целью содействия развитию международного сотрудничества для улучшения и рационального использования всех видов дальней связи (телеграфной, телефонной и радио). До 1932 он именовался Международным Телеграфным Союзом. В 1985 в составе союза насчитывалось 159 государств членов. Штабквартира союза расположена в Женеве, Швейцария. Международный Союз Электросвязи (МСЭ) – международная межправительственная организация. Учреждён 17 Мая 1865 в Париже, Франция 22 государствами (в том числе Россией). До 1932 называлась Международным Телеграфным Союзом. С 1947 специализированное учреждение Организации Объединённых Наций (ООН). На 01 Января 1974 членами МСЭ является 141 государство (бывший Союз Советских Социалистических Республик (СССР) – член МСЭ с 1925). Согласно уставу МСЭ его цели – содействие развитию международного сотрудничества для улучшения и рационального использования всех видов электросвязи, включая телеграф, телефон и радио, совершенствования этих служб и расширения их использования населением, согласования деятельности государств-членов в этой области. МСЭ осуществляет распределение между государствами радиочастотного спектра и регистрацию выделенных радиочастот; координирует меры по ликвидации помех при работе радиостанций различных государств; поощряет международное сотрудничество в целях установления наиболее низких тарифов за пользование различными видами электросвязи; способствует принятию мер для обеспечения безопасности при пользовании электросвязью; проводит исследования и разрабатывает рекомендации, включая методы и нормы космической электросвязи; собирает и публикует информацию по вопросам электросвязи в интересах всех членов союза. Высший орган МСЭ – Полномочная Конференция, состоящая из представителей всех членов МСЭ, созывается обычно 1 раз в 5 лет; пересматривает международную конвенцию электросвязи, заключает соглашения с другими межправительственными организациями, избирает другие главные органы МСЭ:- Административный Совет, Генерального Секретаря и его Заместителя. Одновременно с Полномочной Конференцией обычно созываются Административные Конференции МСЭ:- Административная Телеграфная И Телефонная Конференции и Административная Радиоконференция, которые пересматривают соответственно телеграфный, телефонный и радиорегламенты, а также избирают членов Международного Комитета Регистрации Частот (5 членов из числа специалистов в этой области на основе принципа справедливого географического представительства). Постоянными органами МСЭ являются Международный Телеграфный И Телефонный Консультативный Комитет, Международный Консультативный Комитет По Радио, Международный Комитет По Регистрации Частот и Генеральный Секретариат. Консультативные комитеты МСЭ разрабатывают технические стандарты и рекомендации, относящиеся к аппаратуре, тарифам и нормам эксплуатации электросвязи. На Административных Радиоконференциях 1963 и 1971 по вопросам космической радиосвязи были определены полосы частот для работы различных космических радиослужб и для служб радиоастрономии, установлен порядок регистрации частот для этих целей, приняты технические рекомендации по использованию космического пространства для радиовещания и телевидения. Значительное место в деятельности МСЭ занимает оказание технической помощи развивающимся странам, в том числе содействие развитию региональных сетей электросвязи в Африке, Азии и Латинской Америке.

INTERNATIONAL TEXTILE MANUFACTURERS FEDERATION = МЕЖДУНАРОДНАЯ ФЕДЕРАЦИЯ ИЗГОТОВИТЕЛЕЙ ТЕКСТИЛЯ – The International Textile Manufacturers Federation (ITMF) is an international association of the global textile industries. It has set out to keep its members over the whole world continually updated by means of questionnaires, studies and publications as well as by the organisation of annual conferences. Over and above this, the ITMF achieves this goal by its participation in the further development of the industry's value added chain and by the publication of well-considered opinions on future trends and international developments. History:- The International Textile Manufacturers Federation is one of the oldest non-governmental organisations. It was founded in Zurich in 1904 on the initiative of the British cotton spinning industry. The newly founded organisation thereby adopted the name International Federation of Master Cotton Spinners' and Manufacturers' Association. It was often referred to as the International Cotton Federation. The organisation established its headquarters in Manchester, England. For many years and throughout both world wars, it represented and promoted the interests of the global cotton spinning and cotton production industries. The appearance of synthetic fibres extended the raw material basis of the cotton industry. Simultaneously, the structure of the industry was changed by the vertical integration of textile companies and its size thereby enlarged:- meanwhile it has become a multi-fibre and multi-process industry. In 1963, the organisation's headquarters was transferred from Manchester in England to Zurich in Switzerland in order to facilitate international contacts and to improve the administration services as well as the communication. Since 1960, membership of the organisation has substantially increased and today comprises the greatest part of the worldwide textile production. It consequently also reflects the internationalisation process that has taken place in the field of textile manufacture since the end of the Second World War. So not only has the geographical location of the global textile industry's capacity drastically changed but the process of adjustment has also influenced the structure of trade associations in the industry. Their original fragmentation has gradually made way for a more strongly integrated and comprehensive form of representation. The global organization known today as the International Textile Manufacturers Federation (ITMF) came into existence in 1904, in direct response to an acute crisis in the European spinning industry which had emerged as chronic cotton shortages created an environment of price spikes, supply disruptions and market manipulation. This unprecedented instance of textile industrialists cooperating across national borders to extract the industry from a raw material squeeze was the launch-pad for a century of multilateral initiatives to promote the well-being of the world's textile

industries. From an early point in its history, the Federation began appointing Honorary Officers from all over the world to underscore its aspiration to become a genuinely international forum. In the wake of the large scale speculative attempt in February 1904 on the New York Cotton Exchange, the English Federation of Master Cotton Spinners called together the First International Cotton Congress, in Zürich, at the end of May that year to establish a common defence programme for the industry by means of securing agreement among the principal cotton spinning and manufacturing associations of Western Europe. The Congress aimed to encourage the expansion of raw cotton production; defeat large scale speculations on cotton; and establish a permanent international organization for the industry to facilitate future cooperative action. On that occasion, the value of working collaboratively was firmly implanted, and – as often happens – once industry representatives were brought together to discuss matters of mutual interest, a great backlog of potential projects began being brought to the table. To these, the International Federation has dedicated itself over one hundred years of engagement with the challenges and opportunities of textile manufacturing. The new organisation was formally named the 'International Federation of Master Cotton Spinners' and Manufacturers' Associations', and was often subsequently referred to as the 'International Cotton Federation'. For many years, and through both World Wars, the Federation represented and promoted the interests of the cotton spinning and manufacturing industries of the world. The advent of man-made fibres broadened the raw material basis of the cotton industry. At the same time, vertical integration in textile enterprises changed the structure of the industry and broadened its scope:- it has today become a multi-fibre, multi-process industry. In 1954, the Federation took steps to adjust to this structural evolution by changing its name to 'International Federation of Cotton and Allied Textile Industries' (often referred to as IFCATI). (Reorganized and new Statutes adopted, May 1954.) The membership and range of activities were expanded accordingly. In 1963, the Federation moved its headquarters from Manchester, England to Zürich, Switzerland, to facilitate international contacts and improve administrative services and communications. In response to developments in the global adjustment process taking place in the industry, the Federation in 1978 changed its name to 'International Textile Manufacturers Federation' and concluded its first century of operation well-qualified to represent the broadest possible segment of the world's textile industries. In 2001, the Federation introduced a new membership category, Corporate Membership, to enable companies to enter the Federation and thus, to embrace textile interests in countries that would otherwise have no access to its activities. Cotton Supply Concerns at the Origin of the Federation:- The world economy at the time of the International Federation's birth in 1904 presented a picture closer to today's economic conditions than was the case in many of the intervening decades. It was an environment of largely unconstrained international trade, certainly within the British Empire which was then at its geographical peak. Raw materials and minerals flowed into Britain from around the world, fuelling the unrivalled manufacturing complex built up there in the later 19th century. The textiles industries' dominant raw material, cotton, was somewhat unusual in that most of the world supply originated outside the Empire – in the United States of America. Continental Western Europe, where raw cotton consumption was even greater that in Great Britain and the United States, was similarly sourcing a significant part of its cotton from a country outside its political influence. Thus, the exposure of the British and continental textile industries to supply and price risks was substantial. In the absence of buffer stocks, the market forces of supply, demand, and speculation were beginning to engender risks in an industry running at near-full capacity. At the beginning of the 20th century, Britain accounted for 70% of the world's textile trade, while the United States produced 75% of the annual tradable cotton crop. Against the backdrop of rapid industrial and population growth in the Western world, it was widely recognized that America could not produce sufficient cotton to meet world demand, and that the Untied States was using a greater share of its own cotton every year. The only other substantial sources of cotton, India and Egypt, were not producing cotton in the quantities and grades needed to adequately supplement American supply. While these source countries were within the political orbit of Great Britain, the other European textile producing states also possessed territories in which the climate favoured cotton cultivation. These trends – the need to diversify European sources of good quality cotton, and the high volatility and even market manipulation in periods of short supply – combined to create a sense of crisis in the European spinning Industry, which was extensively discussed at the First International Cotton Congress in Zürich in May, 1904, and led to the establishment of the International Federation. The congress framed a formal resolution 'that this international congress of Master Cotton Spinners and Manufacturers being convinced of the absolute necessity of an increase in the supply of raw cotton, strongly urges various nationalities represented in the Congress to take all necessary steps for obtaining such increase'. It was accepted among delegates that even if America were able to increase production, greater diversification by country remained a vital task for the industry's future security of supply. It was also agreed that the International Committee would begin collecting information with regard to the growth of cotton, and endeavour to enlist the sympathies of governments and of other dependent industries to the cause. The prosperity of the cotton textile industries were critical to maintaining living standards for many millions in the countries affected, and the Federation's founding industrialists believed that this fact would ensure widespread support for increasing global cotton cultivation. In the decade prior to 1914, the cotton problem continued to be one of supply. Even on occasions of large American cotton crops, abnormally-high supply was immediately taken up by abnormally-strong demand, leaving the industry convinced that it remained at risk from shortages and price-spikes. Expanding Cotton Cultivation:- India:- The possibility of increasing global cotton supply by developing cotton cultivation in India had been approached with caution, due to quality issues. The Indian cotton industry joined the International Federation in 1910, being the second extra-European country to do so (the first was Japan in 1907). Following India's joining, the Secretary of the International Federation, Mr. A.S. Pearse, visited India three times to study cotton production conditions and trading issues. A significant commercial problem for purchasers of Indian cotton had been the widespread practice of ginners and dealers in India artificially watering cotton to increase its weight. Representations were made to the Indian government that this practice should be ended, and eventually the government legislated to make watering of cotton and seed cotton a criminal offence. In 1913, a joint delegation of members of the International Federation and of the UK Parliament representing Lancashire, visited India and again urged that cultivation should be expanded and various trading malpractices eliminated. Spinners noted that in subsequent years, Indian cotton improved, both in the quantity available and in the quality. Egypt and Sudan:- The first official contact between the International Federation and the main producers of high-quality extra-long staple cottons took place in 1912, when the Secretary made an extensive tour of Egypt and Sudan and issued reports on cotton growing in both countries. In the following year, the Federation lobbied the British government that cotton growing in the Anglo-Egyptian Sudan should be increased and improved. In consequence, the government underwrote a 3 million pound loan to capitalise the formation of the Sudan Plantations Syndicate. By 1930, it was noted that an increasing part of European cotton consumption originated from countries other than the traditional producers. The International Federation expressed some satisfaction that their efforts to spread the growing of cotton to suitable regions of the world had not been in vain. Dealing With The Supply Shortage:- No Support for Coordinated International Action:- A key development in global cotton supply emerged in the later part of the 1930s. The agricultural support policy in the US, which substantially restricted production of cotton, was more than counter-balanced by increases in the cotton output of other countries. Notwithstanding that in the US one quarter of land under cotton cultivation had been taken out of production, by 1939 America was in possession of large stocks of domestically grown cotton. However, while the possibility of restricting production by joint international agreement had been discussed immediately prior to the outbreak of hostilities, no further initiative was taken. Production restrictions and price maintenance schemes, at least on an international level, did not find support among the International Federation's members when activities resumed after the War. In fact, the Federation adopted a strong resolution in 1950 which was sent to the governments of all cotton growing countries, condemning the various trading and production restrictions and price maintenance

schemes placed on raw cotton around the world. The Federation's position here once again coincided with free market principles and perceptions, as the resolution pointed out that such practices merely stimulated cotton growing in parts of the world not included within the cartel, and that it also stimulated the consumption of alternative fibres. Repeated discussions about co-ordinated international short-time mill operation failed to result in agreement. At the Fifth Congress (1908) a resolution was adopted stating that 'whenever there was a lack of raw material or the supply of any manufactured article exceeded the demand in any country, the adoption of short time working was the only remedy and all affiliated Associations were requested to structure their organization in order to put this into operation, whenever necessary'. However, the exigencies of business and the durability of mill-owner individualism meant that such orchestrated action was never undertaken. ... and the Building of Reserve Stocks'. Similarly, the proposal first raised in 1906 that European spinners form a syndicate to build up a substantial reserve stock of raw cotton as a means of encouraging price stability was never implemented; mainly due to the high level of investment required. These two early instances of cooperative (today, some would say collusive) schemes failing to come to pass serve to underline the fact that from its foundation onwards, the International Federation has never been able to impose an agenda on members and has relied implicitly on unanimity emerging among them. In this way, it has all along represented the 'broad church' of textile-producing industrialists, rather than coming to be associated with sectional or regional interest groups. In the long run, such a parliamentary inclusiveness has undoubtedly served to sustain the International Federation as an independent authority on the global textile scene. An Early Concern for Quality:- Rather than conducting campaigns to influence the cotton market, the Federation began early in its life to use its industry representative status to bring about improvements in the quality of raw cotton as supplied to mills. The process of identifying quality concerns, developing a set of practical recommendations in response, and maintaining pressure on suppliers to make the desired improvements has continued to the present day. American Raw Cotton Contracts:- The first instance of the International Federation attempting to bring about a quality improvement occurred in 1906, when the Committee adopted a resolution on American raw cotton contracts. It was decided that contract conditions should specify:- (i) that canvass and bands should not together exceed more than 4.5% of gross invoice weight; (ii) that cotton should be bought be weight, and not by the number of bales; (iii) that country-damaged bales should not be accepted by purchaser spinners; and (iv) that moisture content should not exceed 8.5%. Cotton Baling:- The next year, further resolutions covered the baling of cotton and the desired materials for bale-wrapping; suggestions that cotton seed selection and ginning be improved; that gins introduce high-density square bales; and that bale labelling be introduced to assist in minimizing country damage to the raw material. Many of these resolutions were made at the 1907 Congress in Atlanta, Georgia, and were directly related to cotton of US origin. Cotton Classing:- Perhaps the most enduring quality-related consequence of the Atlanta meeting was the resolution that the US Government or representative association of American raw cotton exporters and exchanges establish a standardized cotton classing system. The classification of raw cotton was to be carried out on the basis of grade and colour, and staple was not to be determinative. This suggestion was eventually to lead to the creation of the Universal Cotton Standards system of classing in 1924, a system which has endured to the present day. Cotton Testing and Crop Estimation:- The 1920s also saw a number of initiatives undertaken by the International Federation in respect to raw materials risks. In 1922, it was recommended that each country should create cotton testing houses based on the Le Havre Testing House in France. From that year onwards, the Secretary made annual tours of the Cotton Belt in the USA to arrive at a private crop estimate, which was circulated among Federation members. Until these were replaced by government estimates, the private forecasts were advantageous to spinners in an environment of extreme sensitivity to fluctuations in the total crop size. Egyptian Cotton Quality:- In 1927, a group of important resolutions taken at the Congress held in Egypt covered the improvement of Egyptian government crop forecasts and how to address spinners' complaints regarding humidity, foreign matter, and mixing of cotton varieties in Egyptian cotton. In response to the Federation's representations, the Egyptian government prohibited the mixing of varieties in the bale, established a testing house in Alexandria with an International Federation representative involved at Board level, and, in 1930, the International Federation and the Alexandria Cotton Exporters Association resolved that excess humidity above 8.5% would be paid for by shippers. The corollary agreement was that consignments with humidity levels below this would require spinners to pay the difference. This arrangement became most satisfactory from spinners' point of view, and even countries not in membership of the Federation came to adopt it for shipments from Egypt. Joint Egyptian Cotton Committee:- The 1927 Congress also saw the Foundation of the Joint Egyptian Cotton Committee, which brought together the Egyptian government and the cotton shippers of Alexandria on one side, and on the other, the spinners of extra-long staple cottons represented by members of the Federation. This was the first important sub-committee of the International Federation, allowing for full and frank discussion of quality and trading issues arising between the cotton trade and the spinning industry. The concept of such a sub-committee later influenced the thinking behind the establishment of the Joint Cotton Committee of ITMF, although this body does not directly include government representatives. ICAC – a New Discussion Forum for Cotton:- In September 1939, the International Cotton Advisory Committee was established in Washington DC, but it commenced activity only after the War. The ICAC was intended to primarily address problems in connection with raw cotton, through the offices of the cooperating governments of cotton producing, and later cotton consuming, countries. Due to the resources at the disposal of a governmental organization, it was inevitable that certain statistics and highly technical areas of investigation formerly at the heart of International Federation activity came to be ceded to the new organisation. Developments in the field of cotton production and trade led cotton producing countries to feel that a dedicated intergovernmental agency should be charged with coordinating information on cotton world wide. In 1948 at the first ICAC Plenary Meeting in Egypt, the Committee was organized along its present lines. The International Federation immediately established a close cooperative working pattern with the new committee, as was natural considering its previous intensive involvement in raw cotton issues. Ever since, the Federation has attended ICAC Plenary Meetings, and the ICAC is regularly invited to the Federation's annual conference with observer status. As early as the International Federation's meeting in Zürich in 1949, the Federation agreed to work as closely as possible with the ICAC, and although the new Committee was governmental in composition, it was felt that government activities with regard to specific growing problems had become generally effective. Thus, the environment in which the International Federation gradually began resuming activities following the severe disruption to commercial relations between 1939 and 1945 was characterized by the emergence of new fibre and textile organizations offering opportunities to collaborate on matters of mutual interest. The Federation re-established its headquarters in Manchester and most countries renewed their membership. Following the transfer of responsibility for monitoring and advising on the global raw cotton supply to the ICAC, the International Federation retained a 'watching brief' over the raw cotton market as the representative body of the most important group of consumers. The increasing 'governmentalisation' of world trade – the rising consensus that the problems of major trading industries could be dealt with through government intervention – was to become the backdrop to Federation activity for the next four decades. In the textiles arena, the dawn of the era of 'managed trade' introduced political considerations that significantly affected the activities of the International Federation's member associations, introducing quota allocation and lobbying to the agenda. These developments, and the consequent re-focusing of the Federation on providing knowledge-based services to support the prosperity of the industry as a whole, are reviewed in the next section. Dealing With Cotton in a Multi-Fibre Era:- From the latter part of the 1950s, through to the oil-shocks of the early 1970s, natural fibres enjoyed a period of relative price stability. The Federation was able, in 1965, to ascribe the credit for reduced cotton price volatility largely to the policies of the USA. At the same time, it was noted that 'natural fibres, particularly cotton, are facing growing competition from man-made fibres. Any measures, which would tend to freeze prices or to keep them at artificially high levels, would encourage the

substitution of natural by man-made fibres'. However, it was not held to be good long-term strategy for the International Federation to enter into a partisan battle on behalf of pure cotton. Rather, the same meeting produced a concluding statement that called on the producers of natural fibres (cotton) to concentrate their efforts on production research and promotion, and welcomed advances made in the development of man-made fibres as an important complementary raw material for the industry. This approach served the Federation well twelve years later, when it became possible to open associate membership to MMF-producer organizations. In this way, the International Federation moved definitively towards a multi-fibre outlook, without relegating the importance of its cotton-related activity programme which up to the Seventies had been entrusted to and was conducted under the auspices basically of the Raw Cotton Merchants Committee and the Joint Cotton Committee. Despite the rising share of man-made fibres in world fibre consumption, the proportions of fibre input at the short-staple spinning stage remain heavily oriented to cotton to this day. Unlike the situation prevailing between man-made fibre users and the fibre producers, where solutions may be worked out in direct consultation, in the cotton world – with its large number of source countries and the multitude of decision-makers influencing the raw material – clearly a common voice is required at the international level. The articulation of vital current messages in this single voice has always been the province of the International Federation. Raw Cotton Merchants Committee:- At the congress in Egypt in 1951, the Cotton Exchanges of Europe were admitted to associate membership of the International Federation, to facilitate discussions in a neutral arena between the representatives of the buyers and sellers of cotton. Once cotton exchanges were brought into the membership, it became possible to establish a Raw Cotton Merchants Committee dealing with matters affecting the raw cotton trade. The futures trade was kept continuously under review in this Committee, in the context of a broad monitoring of the commercial aspects of the trade. Questions of quality maintenance and improvement, and problems connected with seed breeding, ginning, packing and shipping of raw cotton were the main areas of Committee activity. It is interesting to recall with regard to the cotton futures market that Dr. W.T. Kroese, then President of the International Federation, noted in his 1960 report that 'it stands to reason, as long as governments continue to interfere with the mechanism of the market – especially hampering the futures market – the workload resting upon this Committee is not likely to become lighter'. Before the Raw Cotton Merchants Committee was dissolved in 1977 following the formation of the Committee for International Cooperation between Cotton Associations (CICCA), which largely absorbed its objectives, the working programme had included almost all the imaginable aspects of physical international cotton trade; quality control, freight, insurance, clean bills of lading, flag discrimination, harmonization of cotton exchange trading rules, and cotton standards. Joint Cotton Committee:- The Joint Cotton Committee, established in 1962 as a forum for merchants and spinners, became the primary mechanism through which the International Federation cooperated with governments, international organizations and relevant trade associations interested in raw cotton production, trading and marketing. Regarding the vital issue of sanctity of contract, the Committee remains active to the present day in close cooperation with the cotton associations and exchanges which are associate members of the Federation. It thus maintained a strong interest in achieving the performance of agreed contract terms, and has even gone further, in considering an optimal set of terms to be recommended for raw cotton contracting as originally presented by the Spinners Committee. The increasingly challenging commercial environment with which industry participants were confronted by the end of the 1970s spurred their representatives to thinking about how the Federation could promote and pursue the critical interests of the modern cotton textiles industry in a more focused way. This re-assessment led to the formation of the International Committee on Cotton Testing Methods (ICCTM) in 1980, and of the Spinners Committee five years later. Both committees have flourished and after two decades in continuous operation are recognised on the international stage as the primary consultative institutions in their respective fields of endeavour. International Committee on Cotton Testing Methods:- As the quality requirements for textiles became more exacting, new methods of testing and measuring fibre properties came to the fore during a period of technological innovation dating from the 1970s. In 1980 it was agreed that the Federation should assemble a standing committee of the most pre-eminent cotton testing specialists in the world to provide members and other interested parties with rigorous commentary and advice as the technologies developed. The International Committee on Cotton Testing Methods (ICCTM) was therefore convened under the aegis of the Federations Technical Committee. Due to the highly specialised nature of the subject matter, and to the global dispersion of the participating experts, the committee has been itself divided into working groups, each with its own Chair and Vice Chair. Presently, these working groups are concerned with maturity, stickiness, dust/trash, fibre length, and high volume instrument testing (HVI). In 1997 the Committee published the first edition of 'HVI User Guide' with the purpose of putting the HVI testing of cotton on a sound international foundation. Testing Committee members closely monitor technical progress and the results of round trials etc. throughout the world, as well as cooperating with much larger dedicated national agricultural agencies such as the US Department of Agriculture, and with international bodies – primarily, the ICAC. The biennial cycle of Bremen Conferences and the subsequent issuing of a detailed report has facilitated a high level of dialogue, and progress is periodically presented to the members of the Federation. Spinners Committee:- By the early 1980s, it was felt that within the overarching multi-fibre character of the Federation, a specialist committee should be created to allow for a strong, identifiable spinners' voice to comment on all aspects of the industry. The Spinners Committee was thus set up in 1985, drawing its membership from senior figures active in yarn spinning in Federation member countries. The Committee currently has three main objectives:- to support the development of quality cotton fibre based on modern spinning requirements; to provide advice relating to the harvesting, handling and ginning of cotton; and to promote the mechanical testing of raw cotton. To achieve these objectives, it convenes meetings with other interested parties and in particular with machinery and testing instrument manufacturers; pays visits to cotton producing countries with the purpose of fostering an interchange of ideas between breeders, farmers, ginners, traders and spinners; and propagates the progressive replacement of the traditional cotton classification with mechanical classing like HVI. Beginning with its visit to Pakistan in 1989, the Committee has issued regular sets of country-specific recommendations to the cotton-growing countries it visits. Because of the high level of expertise and global experience represented on the Committee, it has been able to credibly encourage positive developments in cotton growing and ginning, and provide constructive criticism based on the spinners' commercial priorities. As well as its function in keeping abreast of growing and processing practices around the world, the Spinners Committee has synthesized its accumulated knowledge into the brochure, 'Guidelines for the Purchase of Raw Cotton' (1999) and into its continuing work on designing an electronic cotton contract. The Chairman of the Spinners Committee reports on the year's activities to the Federation's Committee of Management. Participation in International Bodies:- In addition to the working programmes of its own specialist sub-committees, the Federation also has played a major role in other international bodies which, over several decades, have been dedicated to providing the tools by which technically-oriented cotton assessment may proceed on an agreed and scientifically-robust footing. The International Calibration Cotton Standards Committee is a collaborative undertaking between the main agencies active in the US cotton pipeline – USDA, National Cotton Council and American Cotton Shippers Association – and the International Federation, which supports the programme through its international mandate. Its purpose has been to provide calibration cottons, so that cotton laboratories can standardize levels of both instruments and operators. Calibration cottons are distributed by the US Department of Agriculture. The ICCS Programme began in 1957 and by 1980 had expanded to cover around 500 active fibre laboratories in 57 countries. The Cotton Contamination Surveys:- The contamination of raw cotton by foreign matter has been a long-term bugbear of the spinning industry, imposing additional costs and raising concerns about end-product quality which become more pressing with every year that passes. For most of the last century, the degree of contamination among different cotton growths has been largely a matter of anecdote and reputation. To shed more light on spinners' perception of the occurrence of cotton

contamination, foreign matter, stickiness and seedcoat fragments, the Federation since the late Seventies has conducted every other year a survey among spinning mills affiliated with its world-wide membership. It was however only in 1989 that a solid methodological basis was devised which is allowing the report to put developments into the longer-term perspective. This initiative is known to be valued by all segments throughout the cotton pipeline from spinners to growers to traders. It is distributed free-of-charge as a ready reference on contamination and other problems affecting quality of raw cotton in the bale. The survey can help buyers to check their individual impressions of the perceived contamination level in a given cotton origin, and may capture evidence of medium-term improvement in countries where anti-contaminant practices and technologies have been introduced. Thus, it serves as a bridge between the standards being continually encouraged by the International Federation, and the grass-roots level of cotton production, ginning and trading. The report may be seen as an essential supplement to the work of the Spinners Committee and the Committee on Cotton Testing Methods.

INTERNATIONAL TEXTILES AND CLOTHING BUREAU = МЕЖДУНАРОДНОЕ БЮРО ПО ТЕКСТИЛЮ И ОДЕЖДЕ – International Textiles And Clothing Bureau:- the coming into force of the International Textiles and Clothing Bureau, an intergovernmental body of Third World exporting members of the Multifibre Arrangements (MFA) was announced Friday (on 1985-February-08) in Geneva. Felipe Jaramillo, Colombia's Ambassador to GATT (short for the General Agreement on Tariffs and Trade) and UNCTAD (short for the United Nations Conference on Trade and Development), announced that the agreement (of which the government of Colombia is the depository) has now entered into force, having been signed and ratified by seven countries who accounted for 70 percent of the Third World MFA exports. As of February 08, 1985, ten countries have signed the agreement – China, Colombia, Egypt, Hong Kong, India, South Korea, Macao, Mexico, Pakistan and Peru. Of these ten, Colombia, Egypt and Mexico are still in the process of ratification, as required by their constitutions. The Bureau has as its main objectives:- (i) the elimination of discrimination and protectionism directed against textiles and clothing exports of its members in the world market, and for full application of GATT rules and principles to this trade; (ii) assist members in ensuring their rights under the MFA; and (iii) assist members in their effective participation in all relevant international fora dealing with textiles and clothing sector. The Bureau is to be allocated in Geneva, Switzerland, and negotiations are in progress with the Swiss Federal Authorities in this matter, Jaramillo said. Third World MFA exporters have been already cooperating among themselves, and have for the last three years or more been presenting a united stand, through the 'programme of cooperation among developing countries exporters of textiles and clothing', which has 29 members. It is financed by a trust fund contributed by members and others and administered by the UNCTAD secretariat. Jaramillo hoped that most, if not all members of the programme of cooperation, would join the Textiles and Clothing Bureau, and that in any event the two would complement each other. Members of the programme would be able to attend the Bureau as observers, and at least in the beginning this would facilitate the joint presentation of a Third World view, not only in GATT and other fora, but also in educating public opinion in industrial countries. At present, only the viewpoint of the domestic textile industry was presented in the media, Jaramillo complained. The first meeting of the Council of the Bureau is expected to be held soon, when the election of a chairman and an executive director, and other matters would be considered. The programme of cooperation itself was holding a workshop of its members in Mexico in April 1985, and at the same time the Council of the Bureau would also be meeting, Jaramillo said. Jaramillo expected all Third World MFA exporters and members of the cooperation programme to join the Bureau, with the exception perhaps of a few small countries who do not have any representation in Geneva. But even they would be associated as observers. The setting up of the Bureau was a concrete example of mutual cooperation among the Third World countries, and would also deal with their negotiations with the industrial countries, Jaramillo added. Through the trust fund administered by UNCTAD, these countries had received help and cooperation from the UNCTAD secretariat and they expected the cooperation to continue in the future also. / Фэлипэ Харамильо, Посол Колумбии (Felipe Jaramillo, Colombia's Ambassador).

INTERNATIONAL TONNAGE CERTIFICATE = МЕЖДУНАРОДНОЕ СВИДЕТЕЛЬСТВО О ТОННАЖЕ (или МЕЖДУНАРОДНЫЙ СЕРТИФИКАТ ТОННАЖА) – International Tonnage Certificate is a certificate issued to a shipowner by a government department in the case of a ship whose gross and net tonnages have been determined in accordance with the International Convention of Tonnage Measurement of Ships. The certificate states the gross and net tonnages together with details of the spaces attributed to each. / Свидетельство, выдаваемое собственнику судна правительственным департаментом в отношении судна, валовый и чистый тоннаж которого был определён в соответствии с Международной Конвенцией об Измерении Тоннажа Судов. Свидетельство указывает на валовый и чистый тоннаж совместно со сведениями о пространстве, относящемуся к каждому.

INTERNATIONAL TOURING ALLIANCE = МЕЖДУНАРОДНЫЙ АЛЬЯНС ПО ТУРИЗМУ – The International Touring Alliance (ITA) or, in French, Alliance Internationale de Tourisme (AIT), established in 1898, is the oldest non-profit, non-governmental organization in the world to represent the interests of national automobile associations and touring clubs. This century of experience at the service of its member associations has grown to include many different areas of activity relating to travel and mobility. For more information on these activities please read our brochure or visit the links provided in the menus opposite. Although the AIT does not deal directly with the public, its services are far-reaching and include mutual assistance agreements between its member associations for the benefit of these associations' individual members. Membership of the AIT carries a number of advantages, though specific membership criteria have to be met in order to belong. In 2002 the AIT consisted of 140 member associations in 101 countries. Headquarters are in Geneva, Switzerland. / Международный Альянс по Туризму (МАТ) или, как это звучит на Французском языке по месту регистрации альянса, Альянс Этэрнасьёналь дё Турисм (А.И.Тэ.; Alliance Internationale de Tourisme (AIT)) был основан в 1898 и является старейшей бесприбыльной (некоммерческой), неправительственной организацией в мире. Он представляет интересы национальных автомобильных ассоциаций и клубов путешествий. . Штабквартира расположена в Женеве, Швейцария.

INTERNATIONAL TRADE COMMISSION = КОМИССИЯ ПО МЕЖДУНАРОДНОЙ ТОРГОВЛЕ – The United States International Trade Commission is an independent, quasijudicial Federal agency with broad investigative responsibilities on matters of trade. The agency investigates the effects of dumped and subsidized imports on domestic industries and conducts global safeguard investigations. The Commission also adjudicates cases involving imports that allegedly infringe intellectual property rights. Through such proceedings, the agency facilitates a rules-based international trading system. The Commission also serves as a Federal resource where trade data and other trade policy-related information are gathered and analyzed. The information and analysis are provided to the President, the Office of the United States Trade Representative (USTR), and Congress to facilitate the development of sound and informed US trade policy. The Commission makes most of its information and analysis available to the public to promote understanding of international trade issues. The mission of the Commission is to:- (i) administer US trade remedy laws within its mandate in a fair and objective manner; (ii) provide the President, USTR, and Congress with independent analysis, information, and support on matters of tariffs, international trade, and US competitiveness; and (iii) maintain the Harmonized Tariff Schedule of the United States (HTS). The Commission has five major operations that serve its external customers:- (i) Import Injury Investigations; (ii) Intellectual Property-Based Import Investigations; (iii) Industry and Economic Analysis; (iv) Tariff and Trade Information Services; and (v) Trade Policy Support. The International Trade Commission (ITC) is an independent US Government fact-finding agency with six

commissioners who review and make recommendations concerning countervailing duty and antidumping petitions submitted by US industries seeking relief from imports that benefit unfair trade practices. Known as the US Tariff Commission before its mandate was broadened by the Trade Act of 1974. Headquartered in Washington, DC, the United States. 1916:- as a part of a large body of legislation passed during the Progressive Era, Congress established a government body called the United States Tariff Commission (which became the International Trade Commission in 1974). The Tariff Commission was to apply scientific principles to the study of tariffs and to assist in recommending appropriate levels. Harvard University economist Frank Taussig was named the Commission's first Chairman. The first offices of the US Tariff Commission were located at 1322 New York Avenue, Washington, DC. An independent federal agency determining import injury to US industries in antidumping, countervailing duty, and global and China safeguard investigations; directing actions against unfair trade practices involving patent, trademark, and copyright infringement. / Штабквартира расположена в Вашингтоне, Округ Колумбия, Соединённые Штаты Америки.

INTERNATIONAL TRADEMARK ASSOCIATION = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ ПО ТОВАРНЫМ ЗНАКАМ (или МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ ПО ТОРГОВЫМ МАРКАМ) – The International Trademark Association (INTA®) is a not-for-profit membership association dedicated to the support and advancement of trademarks and related intellectual property as elements of fair and effective commerce. The association (originally as the United States Trademark Association (USTA®)) was founded in 1878 by 17 merchants and manufacturers who saw a need for an organization 'to protect and promote the rights of trademark owners, to secure useful legislation and to give aid and encouragement to all efforts for the advancement and observance of trademark rights'. Today (in 2012), 5 900 trademark owners, professionals and academics from more than 190 countries make INTA® a powerful network of powerful brands. Members of INTA® find true value in the Association's global trademark research, policy development, and education and training. Headquartered in New York City, NY, the United States, INTA® also has offices in Shanghai (China), Brussels (Belgium) and Washington (DC, the United States) and representatives in Geneva (Switzerland) and Mumbai (India). 1993:- the United States Trademark Association (USTA®) changes its name to the International Trademark Association (INTA®).

INTERNATIONAL TRANSPORT IMPLEMENTATION GUIDELINES GROUP = ГРУППА ПО ДИРЕКТИВАМ В СФЕРЕ ОСУЩЕСТВЛЕНИЯ МЕЖДУНАРОДНЫХ ПЕРЕВОЗОК – The International Transport Implementation Guidelines Group (ITIGG) is an international group of experts engaged in the development and implementation of UN/EDIFACT-standard messages for electronic trading in the transport industry. 2011:- ITIGG is a sub-group of TBG3, the UN/EDIFACT Message Development Group for Transport (ранняя версия:- ITIGG is a subgroup of D4, the UN/EDIFACT Message Development Group for Transport). The development of UN/EDIFACT messages in the Transport sector in the late 1980's initiated the formation of a global EDI standards organisation and this development has continued to progress from the inception of the UN/EDIFACT standard to the present time. Message structures essential to the use of electronic commerce in the transport sector have been agreed and approved by the relevant United Nations and local authorities, have been implemented by various communities around the world over the past ten years. These existing implementations have, in most cases, developed in isolation and this has resulted in differing interpretations of the standard messages. In turn this has resulted in a lack of international synergy with regard to the use of codes, qualifiers, data elements, composites, segments, groups of segments and even the messages themselves. The UN/EDIFACT Message Development Group for Transport (TBG3) has recognised that this lack of synergy represents a serious inhibitor to the growth of global electronic commerce. Interested members of the Transport Group formed an informal group to harmonise known message implementation guides and user manuals and to provide a basis for intending implementers to proceed with confidence. This group formally established itself in 1995 as the International Transport Implementation Guidelines Group (ITIGG). ITIGG realised its major objective of compiling and issuing a document which provides the principles and rules for the international implementation of electronic messages in the transport industry. ITIGG has thus produced harmonised guidelines for all modes of transport (maritime, air, road, rail and other means of inland transport) through consistent recommendations which apply across all modes. Through TBG3 ITIGG is actively participating in the UN/CEFACT process of comparing and harmonising segment usage between different industry sectors. ITIGG develops recommendations which provide software developers with a series of simple, straightforward tools to assist in designing applications which can be used for trading electronically throughout the world, and to clarify the intentions of the designers of key UN/EDIFACT messages. In the longer term the group aims to harmonise messages used in the transport sector, so that the same message specifications can be used anywhere in the world. Current ITIGG secretary is located in Vlaardingen, the Netherlands. The publication of detailed, comprehensive and easily understood documents to support the implementation of key UN/EDIFACT messages is one of ITIGG's key tasks. To date this has resulted in the release of a large number of documents related to the the International Forwarding and Transport Message set (IFTM** set of freight movement messages), and the container message set (CO**** set of container messages), as well as a number of other messages used in the transport sector. Those documents which have been finalised are available for free down-load from this site. Draft documents are available for download by ITIGG members from the Meeting Papers page. ITIGG documents are currently of two types:- (i) Detailed recommendations covering segment, code and data usage in every segment of a message or a related group of messages (known as 'Principles and Rules' documents). These documents are 'high level' and are not intended for implementation. And (ii) Sample implementation guidelines for individual messages derived from the recommendations in the Principles and Rules documents (known as 'International Reference Guidelines'). These documents provide more specific guidance for developers wishing to design specific purpose guidelines. In some cases users may choose to use the International Reference Guideline for their local implementation. ITIGG does not always choose to produce an International Reference Guideline for every message of interest to the transport community. Instead, this task is often assigned to an ITIGG member or associated group. Thus the Reference Guideline for the BAPLIE message is maintained by the shiplanning Message Development Group (SMDG), and the Guideline for the DESTIM message is maintained by the Concord EDI Group, in accordance with the ITIGG Principles and Rules which apply to each message. Changes to documents:- ITIGG documents are reviewed at regular intervals, usually coinciding with the six monthly meetings of the UN/CEFACT Forum. These meetings formally endorse proposals which have been developed in advance through electronic mail dialogue amongst ITIGG members. Proposals can be put forward by anyone with an interest in implementation of UN/EDIFACT transport messages, by contacting the ITIGG secretariat.

INTERNATIONAL UNDERWRITING ASSOCIATION (LTD) = МЕЖДУНАРОДНАЯ АССОЦИАЦИЯ АНДЕРРАЙТИНЬГА (ЭЛ.ТИ.ДИ.) – The International Underwriting Association of London (IUA) is the world's largest representative organization for international and wholesale insurance and reinsurance companies. Mission Statement:- the IUA exists to promote and enhance the business environment for international insurance and reinsurance companies operating in or through London. History:- the IUA was formed on 31 December 1998, through the merger of the London International Insurance and Reinsurance Market Association (LIRMA) and the Institute of London Underwriters (ILU). This union brought together the representative bodies for the marine and non-marine sectors of the London company insurance market. The ILU's history in the history in the marine, aviation and transport insurance markets dates back to 1884. Senior members of marine insurance companies had, since the 1850s, been meeting informally in the Jerusalem Coffee House and the Jamaica Wine Rooms near the Royal Exchange to discuss policy wordings and other matters of mutual interest. A proposal was made to establish a formal representative underwriting association in July 1882 and two years later the new ILU took up offices in the Royal Exchange Buildings. LIRMA was formed in 1991 from the merger of previous insurance

associations, established in the 1960s and 1970s, to support non-marine insurance business and reinsurance. Who can be a member of the IUA? The IUA is a membership organisation for companies, not individuals. Member companies are international wholesale insurance and reinsurance businesses operating in or through London. For more information on membership visit Joining the IUA. What is the London company market's premium income? The IUA publishes a London Company Market Statistics Report surveying premium income which can be downloaded from the documents section of website:- http://www.iua.co.uk. The IUA also produces for its members underwriting statistics showing premiums received and claims paid by companies using Xchanging Ins-sure processing services. However, a number of member companies do not use Xchanging Ins-sure for processing their business and these statistics, therefore, do not represent the total size of the London company market. What is the capacity of the London company market? It is impossible to measure exactly the capacity of IUA members for reasons similar to those encountered trying to measure premium income. As part of large international groups the capital of IUA companies is used to write all business and is not necessarily identified and allocated specifically to the London Market. In addition, the capability of international insurance companies to accept risk is governed not solely by location and their premium income, but also the size and structure of their global reinsurance programme. Thus, on a worldwide basis, IUA members potentially offer access to capital running into many hundreds of billions of Dollars. For a full explanation of the difficulties in compiling statistics on the London Market click here. What is the difference between the International Underwriting Association (IUA) and the Association of British Insurers (ABI)? The IUA represents the company wholesale insurance and reinsurance market in London. The ABI represents retail insurance companies and life insurers. What is the difference between the IUA and Lloyd's? The IUA is an association representing companies operating in London, but outside of the Lloyd's market. We do not have any regulatory authority over our members. Lloyd's is not an insurance company but a society of members, both corporate and individual, that accept insurance risks through their participation in competing syndicates. The Lloyd's Franchise Board is responsible for commercially managing the Lloyd's market. Can the IUA comment on premium rates and/or renewal negotiations? No. The IUA is a trade and market association. It has no involvement or authority over the commercial pricing decisions of its member companies. The London Market is a distinct, separate part of the UK insurance and reinsurance industry centred on the City of London. It comprises insurance and reinsurance companies, Lloyd's syndicates, P&I clubs, and brokers. Whilst there is no watertight definition of the market, there is general agreement that the core of its activity is the conduct of internationally traded insurance and reinsurance business. This is mostly non-life (general) insurance and reinsurance, with an increasing emphasis on high-exposure risks. There is also, however, a significant amount of life reinsurance activity in London. Despite the growth of other international centres, London retains its position as the world's leading international insurance and reinsurance market. There may be far fewer companies operating in the market than in the late 1980s, but their average size has increased, and so has the overall level of business. The London Market's international character is reflected not only in the sources of its business but also in the nationalities of its participants and their ultimate owners. A majority of the companies underwriting in the London Market are foreign or foreign-owned. It is still the only centre in which all of the world's 20 largest reinsurance groups are represented. Insurance in London began well over 400 years ago, and gained prominence in the XIX century, reflecting Britain's then dominant role in shipping and shipbuilding. As the British Empire expanded London developed into a dominant global financial centre. For most of this period, the marine insurance industry was dominated by Lloyd's, but a flourishing company sector also developed and later expanded to embrace emerging aviation and energy markets. By the 1980s, the company non-marine sector had also grown to match the Lloyd's market, boosted by an influx of overseas capital. An important competitive strength of the London Market lies in the number, diversity and expertise of the insurers competing here. Brokers can find the capacity and expertise required for the underwriting of virtually any type of risk. Brokers control most of the business placed in the market. London is largely a subscription market where risks are shared. A key feature is the presence of highly skilled 'lead underwriters' whose judgements on premium rates to be charged for different risks are followed by other insurers in London and indeed other markets across the globe. Another important attribute is geographical concentration with many insurers and intermediaries located in close vicinity within the City of London. Thus, brokers can know personally the strengths, specialities and reputations of the underwriters and the insurers with whom they deal, and readily tap the combined underwriting capacity for all sectors of the market. Similarly buyers can meet insurers, and market information is spread rapidly among all participants. The London Market also contains an unrivalled pool of service providers, for example law firms, IT support and professional bodies such as the IUA, and a liberal but effective regulatory environment. All of these attributes contribute to an enviable reputation for innovation and security. The International Underwriting Association Ltd (IUA) is the representational organization for international commercial insurers and reinsurers trading though London. IUA's aim is to ensure that the international market centred on London offers its members a first class environment in which to do business. To this end, the IUA/Lloyd's Forum was set up in July 1999, and IUA representatives have worked with Lloyd's and brokers on the London Market Principles 2001 – a set of proposals for market reform. Formed from the merger of Institute of London Underwriters (ILU) with London Insurance and Reinsurance Market Association (LIRMA) in 1998, the IUA's membership includes virtually every large and medium sized company in the industry. The association covers all classes of business, and its horizons stretch well beyond London. It represents members to policy makers and regulators in the US, the European Union World Trade Association talks, as well as the International Association of Insurance Supervisors and the UN International Maritime Organization. The IUA's subsidiary, the London Processing Centre, processes premiums and claims of IUA members electronically across Europe. IUA looks to promote e-commerce, to encourage education and training and provide information and publish research. Headquartered in London, the United Kingdom.

THE INTERNATIONAL UNION OF MARINE INSURANCE = МЕЖДУНАРОДНЫЙ СОЮЗ МОРСКОГО СТРАХОВАНИЯ – The International Union of Marine Insurance (IUMI) is a professional body run by and for its members. It provides an essential forum to discuss and exchange ideas of common interest and to protect and advance members' interests. It also provides through its worldwide communication network- a platform from which views on matters of concern to its members are disseminated to the marine and shipping industry, international organizations and international media. IUMI has a unique status in the world of marine insurance, whose members are dedicated to expand trade and to enter emerging markets. International Union of Marine Insurance (IUMI) was founded during the inaugural meeting that was held in Berlin, Germany from January 8th to 11th 1874. IUMI has for its object the representation, safeguarding and development of insurers' interests in Marine and all types of Transport insurance. The current seat of IUMI is in Zurich, Switzerland. The roots of IUMI, in its present form, can be traced to the later part of the XIX century, a time of continuous increase in the volume of international trade and consumption and of constantly improving communications. The transition from sail to steam was already under way, leading to a greater need for marine insurance, especially cargo insurance, both ocean and inland. Until the mid-XIX century, most marine insurance was placed in local markets. The developments, in international trade and shipping, however, gave rise to more international transactions. New markets were emerging and there was a demand for uniformity in insurance cover, not least by banks and clients. In the wake of such rapid changes, a great number of marine insurance companies were formed, all endeavouring to secure a share of the market. This led to fierce competition and to the chaotic use of a variety of rules and policy conditions, many of which lacked conformity and substance. The recession that followed in 1870 hit these companies in the midst of a cut-throat fight for business and drove many of them into liquidation. It was then that the need for international cooperation was fully recognised by the traditional markets, mainly in Britain and Continental Europe and it was German Underwriters who took the initiative on 1874-January-08 by forming the Internationaler Transport – Versicherungs – Verband in Berlin, Germany. This later

became the International Union of Marine Insurance (IUMI). The purpose of this initiative was to create an association 'where the members could discuss business matters of common interest with the purpose of agreeing upon principles concerning the management of marine insurance business'. At the same time further initiatives were taken to improve the classification of ships and thus influence the work done by Classification Societies; to compile regulations with regard to customs practices and insurance conditions; and to express opinions on legal matters, such as uniform rules for Bills of Lading etc. IUMI also tried to establish advisory rates for certain commodities such as cotton, grain, wood, wool, tobacco etc. However, these efforts failed as any understandings and/or agreements on rates would have been against laws that existed in some member states. By World War I, individual companies from 22 countries had enrolled as members. In 1926 British and French companies also joined. After World War II (1946), individual membership was replaced by membership of National Associations. This made it possible for Lloyd's to join through its Underwriters' Association, and it was then that IUMI started becoming a truly international organization, tying together the pre-war history of IUMI with the post-war aspirations, needs and demands of the various national markets. Today, IUMI has 53 National associations as Full Members and 1 Associations as Associate Member. Membership is limited to national or market marine insurance associations or, in the absence of such associations, to bodies acting in the same capacity and representing exclusively the interest of insurers, pursuing the aims mentioned in the Articles of Association. IUMI's primary objective is:- to represent, safeguard and develop insurers' interests in marine and transport insurance. In fulfilling its mission, IUMI, inter alia:- (i) advances the interests of the marine insurance business; fosters the cooperation of national markets on marine issues; (ii) facilitates the exchange and dissemination of information relating to marine insurance and technology and (iii) promotes cooperation with other international governmental and non-governmental-related marine organizations and associations. IUMI is not a decision-making body, nor is it involved in the formulation of rating schedules, clauses or conditions. Rather it is a forum to exchange experience, information and statistical data on marine insurance matters; to discuss legislative issues, loss prevention and safety measures; to debate, in an objective and conducive way, the challenges and opportunities facing marine insurers. / формированием в Берлине, Германия Международной Перевозки – Фэрзихэрунгс – Фэрбанд (Versicherungs – Verband). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

THE INTERNATIONAL UNION OF RAILWAYS = МЕЖДУНАРОДНЫЙ СОЮЗ ЖЕЛЕЗНЫХ ДОРОГ – The International Union of Railways or, in French, Union Internationale des Chemins de Fer (UIC) is the worldwide international organisation of the railway sector. UIC including 196 members across all 5 continents; 81 active members (including the railways from Europe, Russia, the Middle East, North Africa, South Africa, India, Pakistan, China, Japan, Korea, Kazakhstan, and companies operating worldwide such as Veolia Transport); 80 associate members (including railways from Asia, Africa, America and Australia); and 35 affiliate members (related or ancillary rail transport businesses or services). UIC members may be:- (i) integrated railway companies; (ii) infrastructure managers; and (iii) railway or combined transport operators, rolling stock and traction leasing companies service providers (restaurant services, sleeping cars, public transport, maritime transport). UIC mission:- to promote rail transport at world level and meet the challenges of mobility and sustainable development. Main UIC objectives:- (i) facilitate the sharing of best practices among members (benchmarking); (ii) support members in their efforts to develop new business and new areas of activities; (iii) propose new ways to improve technical and environmental performance; (iv) promote interoperability, create new world standards for railways (including common standards with other transport modes); (v) develop centres of competence (High Speed, Safety, Security, e-Business, …). UIC original principal task:- to harmonise and improve conditions for railway constructions and operations. The idea of creating an international organisation, bringing together the railway companies, was developed in the wake of the international conference of Portorosa, in Italy on 1921-November-23, followed by the international conference of Geneva on 1922-May-03. State representatives favored the 'creation of a permanent rail administration focusing on international traffic for the standardisation and improvement of conditions of railway construction and operations'. The international conference founding UIC was held in Paris on 1922-October-17. Initially the UIC had 51 members from 29 countries including Japan and China, which were soon joined by the railways from the USSR, the Middle East and North Africa. The idea of creating an international organization, bringing together the railway companies, was developed in the wake of the international conference of Portorosa, in Italy on 1921-November-23, followed by the international conference of Genoa on 1922-May-03. State representatives favored the 'creation of a permanent rail administration focusing on international traffic for the standardization and improvement of conditions of railway construction and operations'. The international conference founding UIC was held in Paris on 1922-October-17. Initially the UIC had 51 members from 29 countries including Japan and China, which were soon joined by the railways from the USSR, the Middle East and North Africa. The International Union of Railways or, in French, Union Internationale des Chemins de Fer (UIC) is the world-wide organization for international cooperation among railways and promotion of the rail transport mode. It was founded in 1922. Its initial purpose was standardization and improvement of conditions for railway construction and operations, especially in view of international traffic. In 2005 a 'New UIC' has been designed in order to cope with a series of new challenges, in particular railway liberalization, increasing competition from other modes, the growing economic constraints on railways together with the challenge of globalization of the transport market which creates new opportunities for railways. The UIC mission in 2006 consists in promoting Rail transport at World level in order to meet challenges of Mobility and Sustainable Development. UIC groups 171 members (railways, rail operators, infrastructure managers, railway service providers, public transport companies, etc) on all 5 continents. The Headquarters are located in Paris, France. / Международный Союз Железных Дорог или, как это звучит на Французском языке по месту регистрации союза, Юньён Этэрнасьёналь дэ Шмэн дё Фэр (Ю.И.Сэ.; Union Internationale des Chemins de Fer (UIC)).

INTERNATIONAL VALUE–ADDED NETWORK SERVICES = МЕЖДУНАРОДНЫЕ УСЛУГИ СЕТИ С ДОПОЛНИТЕЛЬНЫМИ ВОЗМОЖНОСТЯМИ – The International Value-Added Network Services (IVANS) include advanced telecommunications services, such as voice mail and electronic banking. IVANS agreements play a growing role in maintaining the competitiveness of American firms and provide benefits for consumers worldwide. / службы дальней связи, . коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

INTERNATIONAL WATERWAYS = МЕЖДУНАРОДНЫЕ ВОДНЫЕ ПУТИ – International Waterways:- consist of international straits, inland and interocean canals and rivers where they separate the territories of two or more nations. Provided no treaty is enforced both merchant ships and warships have the right of free and unrestricted navigation through these waterways. / Под Водными Путями понимаются водные пространства, используемые для судоходства и сплава леса. Наиболее экономичный для перевозки грузов и пассажиров вид путей сообщения.

INTERNATIONAL WOOL TEXTILE ORGANISATION = МЕЖДУНАРОДНАЯ ОРГАНИЗАЦИЯ ПО ШЕРСТЯНОМУ ТЕКСТИЛЮ – The International Wool Textile Organisation (IWTO) has been the recognized global authority for standards in the wool textile industry since 1930. With a membership drawn from 22 countries encompassing the wool pipeline 'from sheep to shop', IWTO represents the interests of the world's wool textile trade at the international level. By facilitating industry strategy and ensuring standards in manufacturing and sustainability, IWTO fosters connection between members and all stakeholders through mutual support of opportunities for wool. Wool industry players wishing to participate in securing wool's future should consider the benefits of an IWTO

membership. IWTO is based in Brussels, Belgium. IWTO's vision is a sustainable, profitable, international wool industry, working together for the future of our fiber. Our mission is to connect all parts of the wool supply chain in order to strengthen wool's credentials as the world's leading sustainable fiber and represent the wool industry at international level. We accomplish our mission through the following activities:- (i) Communicating the benefits and values of wool to both internal and external stakeholders; (ii) Documenting and disseminating the science that supports wool's unique natural properties; (iii) Linking members and international agencies and organizations; (iv) Governing the trading standards and regulations for wool across the world; (v) Supporting a platform for information and knowledge-sharing. Xxxxx. Wool is increasingly seen by caring consumers as a sustainable lifestyle choice for fashion and interiors. In 2010 HRH The Prince of Wales launched the Campaign for Wool with the purpose of renewing interest in and creating a greater awareness of wool's environmental credentials. Of equal importance to the Campaign is the preservation of sustainable practices on farms for the benefit of the rural community. Fashion and Retail now, as a matter of course, are asking textile manufacturers ever more searching questions about provenance, origin and sustainability. Animal welfare and caring for the land are increasingly important elements in areas relating to Corporate Social Responsibility. The IWTO is the recognized global authority for manufacturing standards in the wool textile industry and we are fully aware we are working in an area where sustainable practices need to be transparent at all stages in the pipeline. Animal welfare is very much a part of this process. I was delighted that so many grower countries contributed to the preparation of this valuable document which will be of significant assistance to spinners and weavers working closely with downstream manufacturers in the global market. The route from farm to fashion crosses many borders where standards of manufacturing excellence and Corporate Social Responsibility need to respond to the expectations of the increasingly vigilant consumers. Our intent is that these guidelines provide a ready resource for anyone interested in the applicable standards for wool sheep production globally, and for those interested in development or refinement of individual country codes. It will be reviewed and updated on a regular basis.

INTERNET = ИНТЕРНЕТ – Internet is a system architecture that has revolutionized communications and methods of commerce by allowing various computer networks around the world to interconnect. Sometimes referred to as a 'Network Of Networks', the Internet emerged in the United States in the 1970s but did not become visible to the general public until the early 1990s. By the beginning of the XXI century approximately 360 million people, or roughly 6 percent of the world's population, were estimated to have access to the Internet. It is widely assumed that at least half of the world's population will have some form of Internet access by 2010 and that wireless access will play a growing role. The Internet provides a capability so powerful and general that it can be used for almost any purpose that depends on information, and it is accessible by every individual who connects to one of its constituent networks. It supports human communication via electronic mail (e-mail), 'chat rooms', newsgroups, and audio and video transmission and allows people to work collaboratively at many different locations. It supports access to digital information by many applications, including the World Wide Web (WWW). The Internet has proved to be a spawning ground for a large and growing number of 'e-businesses' (including subsidiaries of traditional 'brick-and-mortar' companies) that carry out most of their sales and services over the Internet. Many experts believe that the Internet will dramatically transform business as well as society. A worldwide system of interconnected networks and computers. Worldwide public computer network. The Internet had its origin in a program developed in the late sixties and used by US defense, research and administration organizations. Its breakthrough as a medium for private and, increasingly, commercial use came in the nineties with the rise in popularity of personal computers. Also used by banks as a medium for telebanking. See also WWW. / коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Днём рождения Интернета считается 02 Сентября 1969, именно в этот день сотрудники одной Американской корпорации связали через 5-метровую сеть несколько компьютеров. Также используется банками в качестве связующего звена при банковском обслуживании на отдалении или тэлибэнькин (telebanking). Смотрите также Дабл.Ю.Дабл.Ю.Дабл.Ю. (WWW).

INTERNET ASSIGNED NUMBERS AUTHORITY = ВЕДОМСТВО ПО РАСПРЕДЕЛЕНИЮ НОМЕРОВ ИНТЕРНЕТА – The Internet Assigned Numbers Authority (IANA) is the authority originally responsible for the oversight of IP address allocation, the coordination of the assignment of protocol parameters provided for in Internet technical standards, and the management of the DNS, including the delegation of top-level domains and oversight of the root name server system. Under the Internet Corporation for Assigned Names and Numbers (ICANN), the IANA continues to distribute addresses to the Regional Internet Registries, coordinate with the IETF and others to assign protocol parameters, and oversee the operation of the DNS. / Агентство по Распределению Номеров Интернета (АРНИ) – агентство, которое изначально отвечало за контроль распределения IP-адресов, координацию назначения параметров протокола, предусмотренных в технических стандартах Интернета, а также за управление СДИ, включая назначение доменов верхнего уровня и контроль за системой корневых серверов имён. Под управлением Корпорации Интернета по Распределению Имён и Номеров (КИРИН) агентство АРНИ продолжает распределять адреса среди региональных реестров Интернета, согласовывать с группой ИПГИ и другими официальными органами назначаемые параметры протокола, а также осуществлять надзор за функционированием СДИ.

INTERNET BANKING = БАНКОВСКОЕ ОБСЛУЖИВАНИЕ С ИСПОЛЬЗОВАНИЕМ ИНТЕРНЕТА – Internet Banking is a banking service which enables customers to use the decentralized, global electronic network known as the Internet to obtain cash / custody account information and conduct other payment and securities transactions. Safe data transmission channels protect the confidentiality of the information conveyed. Internet banking is a form of home banking. Usually conducted through a personal computer (PC) that connects to a banking web site via the Internet. Internet banking can also be conducted via wireless technology through both personal digital assistants (PDAs) and cellular phones. / Обычно осуществляется с помощью персонального компьютера (ПК), который подключается к вэб сайту банка через Интернет. Банковское обслуживание с использованием Интернета может также осуществляться с помощью беспроводной технологии через персональных цифровых помощников (ПЦП) и сотовые телефоны.

INTERNET CORPORATION FOR ASSIGNED NAMES AND NUMBERS = КОРПОРАЦИЯ ИНТЕРНЕТА ПО РАСПРЕДЕЛЕНИЮ ИМЁН И НОМЕРОВ – The Internet Corporation for Assigned Names and Numbers (ICANN):- to reach another person on the Internet you have to type an address into your computer – a name or a number. That address must be unique so computers know where to find each other. ICANN coordinates these unique identifiers across the world. Without that coordination, we wouldn't have one global Internet. In more technical terms, ICANN coordinates the Internet Assigned Numbers Authority (IANA) functions, which are key technical services critical to the continued operations of the Internet's underlying address book, the Domain Name System (DNS). The IANA functions include:- (1) the coordination of the assignment of technical protocol parameters including the management of the address and routing parameter area (ARPA) top-level domain; (2) the administration of certain responsibilities associated with Internet DNS root zone management such as generic (gTLD) and country code (ccTLD) Top-Level Domains; (3) the allocation of Internet numbering resources; and (4) other services. ICANN performs the IANA functions under a US Government contract. How Does ICANN Work? Besides providing technical operations of vital DNS resources, ICANN also defines policies for how the 'names and numbers' of the Internet should run. The work moves forward in a style we describe as the 'bottom-up, consensus-driven, multi-

stakeholder model':- (i) Bottom up:- at ICANN, rather than the Board of Directors solely declaring what topics ICANN will address, members of sub-groups in ICANN can raise issues at the grassroots level. Then, if the issue is worth addressing and falls within ICANN's remit, it can rise through various Advisory Committees and Supporting Organizations until eventually policy recommendations are passed to the Board for a vote. (ii) Consensus-driven:- through its By-laws, processes, and international meetings, ICANN provides the arena where all advocates can discuss Internet policy issues. Almost anyone can join most of ICANN's volunteer Working Groups, assuring broad representation of the world's perspectives. Hearing all points of view, searching for mutual interests, and working toward consensus take time, but the process resists capture by any single interest – an important consideration when managing a resource as vital as the global Internet. (iii) Multi-stakeholder model:- ICANN's inclusive approach treats the public sector, the private sector, and technical experts as peers. In the ICANN community, you'll find registries, registrars, Internet Service Providers (ISPs), intellectual property advocates, commercial and business interests, non-commercial and non-profit interests, representation from more than 100 governments, and a global array of individual Internet users. All points of view receive consideration on their own merits. ICANN's fundamental belief is that all users of the Internet deserve a say in how it is run. What Has ICANN Accomplished? Here are just a few highlights of what our bottom-up, consensus-driven, multi-stakeholder model has produced:- (i) ICANN established market competition for generic domain name (gTLD) registrations resulting in a lowering of domain name costs by 80% and saving consumers and businesses over USD1 billion annually in domain registration fees. (ii) ICANN implemented an efficient and cost-effective Uniform Domain Name Dispute Resolution Policy (UDRP), which has been used to resolve thousands of disputes over the rights to domain names. (iii) Working in coordination with the appropriate technical communities and stakeholders, ICANN adopted guidelines for the deployment of Internationalized Domain Names (IDN), opening the way for registration of domains in hundreds of the world's languages. (iv) Verisign, ICANN and NTIA jointly completed deployment of Domain Name System Security Extensions (DNSSEC) for the root zone in July 2010. These extensions make certain kinds of cyberfraud much more difficult to perpetrate. As of 30 June 2011, 70 TLDs had adopted DNSSEC, including two of the largest TLDs – .com and .de. (v) ICANN created the New gTLD Program, so that any established entity in the world can apply to operate its own top-level domain. Many of these new gTLDs will go online in 2013. (vi) The world broadly accepts ICANN as the place to work out Internet governance policies. As 2011 ended, the Governmental Advisory Committee represented 109 nations (plus the European Union and the Vatican). The Country Code Names Supporting Organization (ccNSO) represented more than 120 country code domains. The At-Large Advisory Committee represented 134 At-Large Structures (ALSes) from all geographic regions. ICANN is a not-for-profit public-benefit corporation with participants from all over the world dedicated to keeping the Internet secure, stable and interoperable. It promotes competition and develops policy on the Internet's unique identifiers. Through its coordination role of the Internet's naming system, it does have an important impact on the expansion and evolution of the Internet. How it works? At the heart of ICANN's policy-making is what is called a 'Multistakeholder Model'. This is a community-based consensus-driven approach to policy-making. The idea is that Internet governance should mimic the structure of the Internet itself-borderless and open to all. Effect on the Internet:- ICANN plays a unique role in the infrastructure of the internet. Through its contracts with registries (such as dot-com or dot-info) and registrars (companies that sell domain names to individuals and organisations), we help define how the domain name system functions and expands. Get involved:- explore online forums and the Supporting Organizations and Advisory Committees or active mailing lists for participants. ICANN holds public meetings throughout the year. Many of the groups working on policy issues are seeking public input. Share your perspective, on the Public Comment forum. The Internet Corporation for Assigned Names and Numbers (ICANN) is an internationally organized, non-profit corporation that has responsibility for Internet Protocol (IP) address space allocation, protocol identifier assignment, generic (gTLD) and country code (ccTLD) Top-Level Domain name system management, and root server system management functions. Originally, the Internet Assigned Numbers Authority (IANA) and other entities performed these services under US Government contract. ICANN now performs the IANA function. As a private-public partnership, ICANN is dedicated to preserving the operational stability of the Internet; to promoting competition; to achieving broad representation of global Internet communities; and to developing policy appropriate to its mission through bottom-up, consensus-based processes. The DNS translates the domain name you type into the corresponding IP address, and connects you to your desired website. The DNS also enables email to function properly, so the email you send will reach the intended recipient. / Корпорация Интернета по Распределению Имён и Номеров (КИРИН) – международная некоммерческая организация, отвечающая за глобальную координацию системы уникальных элементов интернета, ее стабильную работу и безопасную организацию. Корпорация Интернета по Распределению Имён и Номеров (КИРИН) – международная некоммерческая корпорация, несущая ответственность за распределение адресного пространства Интернет Протокола (IP-адресов), назначение идентификаторов протокола, управление системой доменных имен родовых доменов верхнего уровня (рДВУ) и национальных доменов верхнего уровня (нДВУ), а также за функции управления системой корневых серверов. Первоначально ответственность за оказание данных услуг несли Агентство по Распределению Номеров Интернета (IANA) и другие организации согласно контракту с правительством США. Сейчас функции IANA выполняет КИРИН. Как участник частно-государственного партнерства КИРИН отвечает за сохранение безопасности и стабильности функционирования Интернета, стимулирование конкуренции, за достижение широкого представительства международных Интернет сообществ и за разработку политики, соответствующей ее миссии, в рамках демократических процессов на основе достижения консенсуса. Система DNS преобразует введенное доменное имя в соответствующий IP-адрес и соединяет пользователя с нужным веб-сайтом. Система DNS также отвечает за нормальное функционирование электронной почты; благодаря ей посланное электронное письмо достигает требуемого адресата. КИРИН (ICANN) была создана 18 Сентября 1998 при участии Правительства США для регулирования вопросов, связанных с доменными именами, IP-адресами и прочими аспектами функционирования Интернета. Деятельность КИРИН существенно изменила облик Интернета. До 1998 регистрацией имён в доменах общего пользования занималась только одна компания. Подобный монополизм обусловливал высокую стоимость регистрации – каждый домен в зонах .com, .net и .org ежегодно обходился его владельцу в USD50. Это, в свою очередь, было одной из причин, препятствовавших росту количества зарегистрированных доменных имен:- в 1998 в мире их насчитывалось всего три миллиона. Корпорация КИРИН начала использовать распределённую систему регистрации доменов, которая основана на принципе свободного доступа аккредитованных регистраторов к реестрам доменных имён. Этот шаг положил начало формированию конкурентного доменного рынка. Сегодня в доменных зонах общего пользования работает более 900 аккредитованных регистраторов, благодаря чему количество зарегистрированных доменов значительно возросло и уже превышает 270 миллионов. В рамках развития системы адресации корпорация КИРИН последовательно расширяла список доменов общего пользования – сейчас их уже 18, тогда как в 1998 было всего три (.com, .net, .org). С 2001 корпорация внедрила доменные зоны .info, .biz, .name, .coop, .museum, .aero, .pro, .travel, .jobs, .cat, .asia, .eu, .mobi, .tel. При этом в КИРИН намерены и в дальнейшем следовать политике расширения адресного пространства за счёт создания новых доменов верхнего уровня, в том числе с использованием символов национальных алфавитов. Заслугой КИРИН можно назвать и то, что все принимаемые корпорацией решения предварительно обсуждаются с представителями Интернет сообщества, бизнеса и государственных органов власти различных стран. Это необходимо для обеспечения сбалансированного управления адресным пространством с учётом мнения всех заинтересованных в этом процессе сторон. Обсуждение документов КИРИН сегодня проходит в самых различных форматах. В частности, перед утверждением все они доступны для

комментариев на сайте организации. Кроме того, корпорация регулярно проводит международные конференции. Сегодня в КИРИН проводится комплекс мер по выводу корпорации из-под контроля Правительства США. Однако даже при нынешнем положении дел вряд ли можно поспорить с международным статусом организации. Офисы КИРИН расположены в Лос Анджелесе, Брюсселе, Сиднее и Вашингтоне, а в руководящих органах корпорации есть представители самых разных уголков нашей планеты. На прошедшей в Каире 02–07 Ноября 2008 33-й конференции КИРИН было принято Решение о выделении России кириллического домена верхнего уровня '.рф'. 04 Февраля 2011 IPv4 адреса стали подходить к концу. КИРИН уже начала внедрять новую серию IPv6 адресов. В Июле-Сентябре 2011 компания провела масштабное исследование, целью которого было выявление абсолютного количества всей существующей информации в мире, в том числе и абсолютно идентичных файлов, скопированных на разные источники. По результатам исследования, в мире насчитывается порядка 2.56 зеттабайта информации. То же исследование высказало прогноз, что к концу XXI века количество информации будет равно 4.22 йоттабайта. Штабквартира корпорации расположена в Лос Анджелесе, Штат Калифорния, США.

INTERNET ENGINEERING TASK FORCE = ИНЖЕНЕРНАЯ ПРОЕКТНАЯ ГРУППА ИНТЕРНЕТА – Internet Engineering Task Force (IETF) is a large open international community of network designers, operators, vendors, and researchers concerned with the evolution of the Internet architecture and the smooth operation of the Internet. It is open to any interested individual. / Инженерная Проектная Группа Интернета (ИПГИ) – большое открытое международное сообщество проектировщиков, операторов, производителей и исследователей сетей, работающих над развитием архитектуры Интернета и обеспечением его бесперебойной работы. Сообщество открыто для всех заинтересованных лиц.

INTERNET PROTOCOL = ИНТЕРНЕТ ПРОТОКОЛ – Internet Protocol (IP) is a standard developed to identify computers and networks linked to the Internet. Internet Protocol (IP) is the communications protocol underlying the Internet, IP allows large, geographically diverse networks of computers to communicate with each other quickly and economically over a variety of physical links. An Internet Protocol Address is the numerical address by which a location in the Internet is identified. Computers on the Internet use IP addresses to route traffic and establish connections among themselves; people generally use the human-friendly names made possible by the Domain Name System. / Стандарт, разработанный для идентификации компьютеров и связаных сетей в Интернете. Интернет Протокол (ИП) или Протокол Интернета (ПИ) – коммуникационный протокол, лежащий в основе Интернета. Протокол ИП позволяет большим, территориально распределённым компьютерным сетям быстро и экономично соединяться друг с другом по различным физическим каналам. Адрес Интернет Протокола – это цифровой адрес, посредством которого определяется местоположение узла в Интернете. Компьютеры в Интернете используют ИП-адреса для маршрутизации трафика и установления соединений между собой; люди, как правило, используют более лёгкие для запоминания имена, которые стали доступны благодаря системе доменных имён.

INTERNET SERVICE PROVIDER = ПОСТАВЩИК УСЛУГ ИНТЕРНЕТА – The Internet Service Provider (ISP) is a company, which provides access to the Internet to organizations and/or individuals. Access services provided by ISPs may include web hosting, email, VoIP (voice over IP), and support for many other applications. / Поставщик Услуг Интернета (ПУИ) – это компания, которая предоставляет организациям и частным лицам доступ к Интернету. Службы доступа, предоставляемые ПУИ, могут включать веб-хостинг, электронную почту, VoIP (IP-телефонию) и поддержку многих других приложений.

INTERNET SOCIETY = ИНТЕРНЕТ СООБЩЕСТВО – The Internet Society (ISOC) is the international organization for global cooperation and coordination for the Internet and its internetworking technologies and applications. ISOC membership is open to any interested person. / Интернет Сообщество (ИСОО) или Общество Интернета – международная организация, созданная в целях глобального сотрудничества и координации развития Интернета, его технологий и приложений. Общество открыто для всех заинтересованных лиц.

INTERNODE = МЕЖДОУЗЛИЕ – Internode:- the portion of the main stem between nodes. In cotton it is often used as an indicator of growth, i.e. a greater internode length indicates faster growth and the possible need of a growth regulator capable of slowing growth, such as Pix. Internode is a part of a stem between two nodes. Internode is the portion of the stem between two nodes. Smooth and solid (when young) or hollow; (when mature) part of the culm. The portion of a stem between two nodes. Also known as Internodium. See also Node. Internode is the smooth, solid (when young) or hollow (when mature) part of the culm, short basally and long apically, between two successives nodes. Internode is the stem section between two nodes, that is, the space between two successive true leaves on the main stem or a branch. / Участок стебля между двумя узлами. В Английском языке может также использоваться термин Междоузлие как Internodium. Смотрите также Узел (Node).

INTER PARTES REEXAMINATION = МЕЖСТОРОННЯЯ ПЕРЕЭКЗАМЕНАЦИЯ (или МЕЖСТОРОННЯЯ ПОВТОРНАЯ ЭКСПЕРТИЗА, или ПЕРЕЭКЗАМЕНАЦИЯ ИНТЭР ПАРТЭС) – Inter Partes Reexamination practice primarily differs from ex parte practice in that the third party requestor may file written comments addressing issues raised by the patent owner in a response to office (the United States Patent and Trademark Office (USPTO)) action. See also Reexamination Proceeding. Inter Partes is a Latin phrase that literally translated means 'Between The Parties'. It is often used by attorneys and judges to refer to situations in which both sides involved in a particular dispute are present. It can also be used to define the drafting of contracts that are between two entities. In many jurisdictions, lawsuits or other court proceedings cannot happen unless all parties to it have been properly notified of the time, place, and circumstances. This is so that all individuals involved have an opportunity to have their sides heard. Notification is normally given by serving each one with a summons, or warning, that he should appear in court to defend allegations being made against him. Any judgment made during an inter partes hearing normally binds all parties that have been served, subject to any appeals that might be available. This allows judges to render decisions that can be applied to certain situations without having to hear multiple lawsuits. This helps the court system work fairly and effectively, since everyone has a chance to have their voice heard.

INTERPOL = INTERNATIONAL CRIMINAL POLICE ORGANIZATION

INTERPOLATION = ИНТЕРПОЛЯЦИЯ – Interpolation is a process of establishing an approximate value for a point between two points of known origin. / Процесс отыскания ориентировочного значения промежуточного пункта между двумя другими пунктами с известными местоположениями. В математике и статистике под Интерполяцией, от Латинского слова Interpolatio, означающее Изменение или Обновление или Переделка, понимается отыскание промежуточных значений величины по некоторым известным её значениям. Например, отыскание значений функции f(x) в точках x, лежащих между точками $x_0 < x_1 < \ldots < x_n$, по известным значениям $y_i = f(x_i)$, где i = 0, 1, …, n. Если x лежит вне интервала (x_0, x_n), аналогичная процедура нахывается экстраполяцией.

INTERROGATION DEVICE = УСТРОЙСТВО ДЛЯ ОПРОСА (или ОПРАШИВАЮЩЕЕ УСТРОЙСТВО) – Interrogation Device is a computer terminal that provides market information – last sale price, quotes, volume, etc – on a screen or paper tape. / Компьютерный терминал, который обеспечивает информацией о рынке – ценой последней продажи, котировками, объёмом и так далее – с выводом на экран или бумажную ленту.

INTER–ROW CULTIVATION = МЕЖДУРЯДНАЯ КУЛЬТИВАЦИЯ (или МЕЖДУРЯДНАЯ ОБРАБОТКА) – Inter-Row Cultivation:- the act of cultivation between the plant lines. / Междурядная Культивация – процесс культивации между рядами растений.

INTERRUPTED NAIL = XX (или ГВОЗДЬ С ПЕРЕМЫЧКАМИ) – Interrupted Thread Nail is a threaded nail on which the threaded portion has a non-threaded zone between two threaded areas, to allow for collating by wire or plastics strip. See also Pallet. / Гвоздь С Перемычками (Interrupted Thread Nail):- нарезной гвоздь, имеющий между двумя резьбовыми участками участки без резьбы, позволяющие прикреплять проволоку или полимерную ленту. Смотрите также Поддон (Pallet).

INTERRUPTIBLE DEMAND = ПОТРЕБЛЕНИЕ (ПО НЕОБХОДИМОСТИ) С ПЕРЕРЫВАМИ (или ПОТРЕБЛЕНИЕ С ПЕРЕБОЯМИ, или ПРЕРЫВАЕМОЕ ПОТРЕБЛЕНИЕ, или ПЕРЕБОЙНЫЙ СПРОС) – Interruptible Demand:- the amount of customer demand that, in accordance with contractual arrangements, can be interrupted by direct control of the system operator, remote tripping, or by action of the customer at the direct request of the system operator. / Объёмы потребления электроэнергии, поставка которых в соответствии с условиями контракта может быть прервана прямым вмешательством оператора системы, дистанционным отключением или самим потребителем по прямому требованию оператора системы.

INTERRUPTIBLE GAS = ПЕРЕБОЙНЫЙ ГАЗ – Interruptible Gas is a gas sold to customers with a provision that permits curtailment or cessation of service at the discretion of the distributing company under certain circumstances, as specified in the service contract.

INTERRUPTIBLE LOAD = ПРЕРЫВАЕМАЯ НАГРУЗКА (или ПЕРЕБОЙНАЯ НАГРУЗКА) – Term Interruptible Load refers to program activities that, in accordance with contractual arrangements, can interrupt consumer load at times of seasonal peak load by direct control of the utility system operator or by action of the consumer at the direct request of the system operator. It usually involves commercial and industrial consumers. In some instances the load reduction may be affected by direct action of the system operator (remote tripping) after notice to the consumer in accordance with contractual provisions. For example, loads that can be interrupted to fulfill planning or operation reserve requirements should be reported as Interruptible Load. Interruptible Load as defined here excludes Direct Load Control and Other Load Management. (Interruptible Load, as reported here, is synonymous with Interruptible Demand reported to the North American Electric Reliability Council on the voluntary Office of Energy Emergency Operations Form OE-411, 'Coordinated Regional Bulk Power Supply Program Report', with the exception that annual peak load effects are reported on the Form EIA-861 and seasonal (i.e. summer and winter) peak load effects are reported on the OE-411).

INTERRUPTIBLE SERVICE = ЭНЕРГОСНАБЖЕНИЕ С КРАТКОВРЕМЕННЫМИ ПЕРЕРЫВАМИ (или НЕ ГАРАНТИРОВАННАЯ ПОСТАВКА, или ПОДАЧА С ПЕРЕБОЯМИ, или ОБСЛУЖИВАНИЕ С ПЕРЕБОЯМИ, или ПЕРЕБОЙНОЕ ОБСЛУЖИВАНИЕ) – Interruptible Service is the utility service which expects and permits interruption on short notice, generally in peak-load periods, in order to meet the demand by firm service customers. Interruptible service customers usually pay a lower rate than firm service customers. The opposite of Firm Service. / Подача, осуществляемая энергопредприятием, которая предполагает и разрешает её прерывание после уведомления за короткий срок, обычно в периоды пиковых нагрузок, с тем, чтобы удовлетворить потребности клиентов, прерывать поставку электроэнергии которым нельзя. Клиенты, подача энергии которым может быть прервана, обычно платят по более низкому тарифу, нежели клиенты, прерывать поставку электроэнергии которым нельзя. В противоположность Гарантированная Поставка или Бесперебойному Обслуживанию (Firm Service).

INTERSPECIFIC CROSS = МЕЖВИДОВОЕ СКРЕЩИВАНИЕ – Interspecific Cross is a cross between two different species of a genus. / Под Помесью или Метисом понимается животное, полученное от скрещивания особей разных пород. Благодаря неоднородной генетической структуре наследственности обычно отличается повышенной продуктивностью, жизнеспособностью. Служит хорошим материалом для отбора при выведении новых пород.

INTERSTATE AIR COMMERCE = ВНУТРИШТАТОВСКАЯ ВОЗДУШНАЯ КОММЕРЦИЯ – Interstate Air Commerce means the transportation of passengers or property by aircraft for compensation, the transportation of mail by aircraft, or the operation of aircraft in furthering a business or vocation:- (i) between a place in:- (a) a State, territory, or possession of the United States and a place in the District of Columbia or another State, territory, or possession of the United States; (b) a State and another place in the same State through the airspace over a place outside the State; (c) the District of Columbia and another place in the District of Columbia; or (d) a territory or possession of the United States and another place in the same territory or possession; and (ii) when any part of the transportation or operation is by aircraft. / .

INTERTANKO = ИНТЁТЭНЬКО (или ИНТЕРТАНКО) – INTERTANKO is an association of independent tanker owners whose aims are to represent the views of its members internationally. INTERTANKO is committed to working for safe transport, cleaner seas and free competition. Mission:- provide leadership to the Tanker Industry in serving the world with the safe, environmentally sound and efficient seaborne transportation of oil, gas and chemical products. Vision For The Tanker Industry:- a responsible, sustainable and respected Tanker Industry, committed to continuous improvement and constructively influencing its future. INTERTANKO And Its Members' Goals:- (1) Be the representative forum of choice for all quality tanker owners and managers; (2) Enhance public and political awareness of the importance and positive performance of the tanker industry; (3) Promote balanced terms of trade and a competitive, transparent and sustainable tanker industry; (4) Lead the development, acceptance and implementation of uniform, worldwide international tanker standards; (5) Lead in establishing and maintaining partnerships, cooperation and open and constructive dialogue with the relevant maritime authorities, organizations, associations and special interest groups. INTERTANKO Members Will:- (6) Lead the continuous improvement of the Tanker Industry's performance in striving to achieve the goals of:- (a) Zero fatalities, (b) Zero pollution, and (c) Zero detentions. (7) Deliver the highest quality services to meet the expectations of their stakeholders; and (8) Promote the availability and utilization of personnel with the highest quality marine skills and competencies. INTERTANKO's Four Strategic Objectives:- (1) To develop and promote best practices in all sectors of the tanker industry, with owners and operators setting the example; (2) To be a positive and proactive influence with key stakeholders, developing policies and positions, harmonising a united industry voice, and engaging with policy and decision makers; (3) To profile and promote the tanker industry, communicating its role, strategic importance and social value; and (4) To provide key services to Members, with customised advice, assistance and access to information, and enabling contact and communication between Members and with other stakeholders. Membership is open to independent tanker owners and operators of oil, chemical and gas tankers, i.e. non-oil companies and non-state controlled tanker owners, who fulfil the Association's membership criteria. As of January 2017, the organisation had 205 members, whose combined fleet comprises some 3 805 tankers totalling over 332 million dwt. INTERTANKO's Associate Membership stands at some 260 companies and organisations related to the tanker industry. INTERTANKO is a forum where the industry meets, policies are discussed and best practice developed. It is a valuable source of first-hand information, opinions and guidance. INTERTANKO stands for safe transport, cleaner seas and free competition. INTERTANKO Industry Spokesperson:- the strong support that INTERTANKO enjoys allows it to speak authoritatively and proactively on behalf of tanker operators at international, regional, national and local level. It is also able to maintain a 20-strong Secretariat and a network of 14 committees and five regional panels that coordinate an extensive work programme that comprises more than 50 agenda items. Governments and shipping regulators have taken a closer interest in tanker shipping. INTERTANKO has responded by establishing, strengthening and maintaining relationships with legislators on all

levels, working with them to ensure a fair and equitable distribution of the responsibilities and liabilities involved in carrying oil and chemicals by sea. Underlining its commitment to representing its members where key decisions are made, INTERTANKO opened offices in Singapore and Washington DC in 1999, in addition to its principal offices in Oslo and London. Within the shipping industry itself, INTERTANKO participates in discussions within the International Maritime Organisation (IMO) where we have NGO status, and the International Oil Spill Compensation Fund. In addition, it has consultative status at the United Nations Conference on Trade and Development. Oil, its derivatives and gas will remain the world's most critical commodity in the foreseeable future and tankers will be needed to distribute it to where it is needed. As long as tankers are vital to this distribution INTERTANKO will provide leadership in the development and implementation of industry standards and practices, and international regulations for maritime safety and environmental protection. INTERTANKO Information Services:- INTERTANKO is actively involved in a wide range of topics, which include commercial, technical, legal and operational matters. INTERTANKO's direct contact with the members and original sources enables it to select and promulgate the information which is essential to the tanker industry. INTERTANKO's information and advisory services include our Weekly NEWS, courses, seminars and free access to a range of web-based services. INTERTANKO produces publications, specialising in technical, operational, environmental, documentary and market issues. Members and associate members are also entitled to direct expert opinions from resourceful and experienced lawyers, mariners, naval architects, marine engineers, economists and other specialists within INTERTANKO. Their wide network of contacts routinely benefit directly members and associate members. INTERTANKO membership fleet:- (i) 205 Members; (ii) 3 805 tankers; (iii) 332 m dwt; and (iv) 40 countries. INTERTANKO is the International Association of Independent Tanker Owners. INTERTANKO has been the voice of independent tanker owners since 1970, ensuring that the liquid energy that keeps the world turning is shipped safely, responsibly and competitively. History of INTERTANKO since its inaugural meeting in Oslo on 21 October 1970. The text and images have been collated from our 25th anniversary book, which was published in 1996, and the pages will be further developed to include the history of INTERTANKO's development up until today.

INTERTEXTUS = ПЕРЕПЛЕТЁННОЕ (или ИНТЭРТЭКСТУС) – Intertextus:- interwoven.

INTERTROPICAL CONVERGENCE ZONE = ИНТЕРТРОПИЧЕСКАЯ ЗОНА КОНВЕРГЕНЦИИ – Intertropical Convergence Zone, ITCZ or ITD, intertropical discontinuity; a broad trough of low pressure at the confluence of the trade winds which moves north and south roughly parallel to the equator with the seasonal change in the winds.

INTERVAL MARKET = ИНТЕРВАЛЬНЫЙ РЫНОК (или XX) – Interval Market (in electricity in the United States):- the Capacity Market rules provide for three Interval Markets, covering the months from January through May, June through September and October through December.

INTERVENING CAUSE = ВМЕШАВШЕЕСЯ ОБСТОЯТЕЛЬСТВО – Intervening Cause:- an event that prevents a loss being attributable to another event by breaking the chain of causation.

INTERVENTION = ИНТЕРВЕНЦИЯ – Intervention:- deliberate, direct or indirect action on the part of central banks to manipulate currency rates in foreign exchange markets, or to maintain an orderly market. Central banks intervene by buying or selling currencies or engaging in currency swaps with other central banks. In economics, government intervention is an attempt to influence the economy and guide it in a direction consistent with a nation's economic policy. / Под Интервенцией, от позднелатинского слова Interventio, означающее Вмешательство, в международном праве понимается насильственное вмешательство одного или нескольких государств во внутренние дела другого государства. Интервенция может быть военной (одна из форм агрессии), экономической, дипломатической и идеологической. Все виды интервенции запрещены международным правом и несовместимы с Уставом ООН.

INTERVENTION POINTS = ИНТЕРВЕНЦИОННЫЕ ПУНКТЫ (или КОРИДОР ДЛЯ ИНТЕРВЕНЦИЙ) – In a system of fixed exchange rates, Intervention Points are the specified rate limits between which the exchange rate of a currency may fluctuate freely. If there is a danger that the rate will transcend this band, the relevant authority has to intervene and regulate. Systems of flexible or floating exchange rates do not provide for intervention points. / может свободно колебаться .

INTERVENTION PURCHASE PRICE = ЦЕНА ИНТЕРВЕНЦИОННЫХ ПРИОБРЕТЕНИЙ – Intervention Purchase Price is the price at which the European Commission will purchase produce to support internal market prices. It usually is below 100% of the intervention price, which is an annually decided policy price.

INTERVENTION PURCHASES = ИНТЕРВЕНЦИОННЫЕ ПРИОБРЕТЕНИЯ – Intervention Purchases are the purchases by the EC Commission of certain commodities to support internal market prices.

INTERVENTION STOCKS = ЗАПАСЫ ДЛЯ ИНТЕРВЕНЦИЙ (или ИНТЕРВЕНЦИОННЫЕ ЗАПАСЫ) – Intervention Stocks are the stocks held by national intervention agencies in the European Union as a result of intervention buying of commodities subject to market price support. Intervention stocks may be released onto the internal markets if internal prices exceed intervention prices; otherwise, they may be sold on the world market with the aid of export restitutions. Intervention Stocks are the stocks held by national intervention agencies in the European Union as a result of intervention buying of commodities subject to market price support. Intervention stocks may be released onto the internal markets if internal prices exceed intervention prices.

IN THE MONEY OPTION = ПРИБЫЛЬНЫЙ ОПЦИОН – A term 'In-The-Money Option' describes an option whose strike price is advantageous compared to the current forward market price of the underlying. The more an option is in-the-money, the higher its intrinsic value and the more expensive it becomes. As an option becomes more in-the-money, its delta increases and it behaves more like the underlying in profit and loss terms; hence deep in-the-money options will have a delta of close to one. If an option is 'in the money' that means it has a positive 'intrinsic value'. A call option is in the money if the price of the underlying asset is above the strike price. A put option is in the money if the price is below the strike price. In-The-Money Option is an option with intrinsic value – option is said to be in the money. For calls, the strike price must be below the current market price of the underlying futures contract or asset. For puts, the strike price must exceed it. An option that can be exercised and immediately closed out against the underlying market for a cash credit. In-The-Money Option is a term used to describe an option contract that has a positive value if exercised. A call with a strike price of USD390 on gold trading at USD400 is in-the-money 10 US Dollars. See also Intrinsic Value. In-The-Money is a term used to describe an option contract that is showing a profit. In The Money:- refers to options with intrinsic value. For example, calls where the strike price is less than the underlying asset price or puts where the strike price is greater than the underlying asset price. In-The-Money Option is an option with a positive intrinsic value is in-the-money. In-The-Money Option (ITM Option) is a call option whose strike price is lower than the stock or future's price, or a put option whose strike price is higher than the underlying stock or future's price. In-The-Money Option is an option (call or put) which has intrinsic value. In-The-Money, for a put option, is when the strike price is above the current price of the underlying futures contract (the option has intrinsic value). A call option is in-the-money when the strike price is below the current price of the underlying futures contract (the option has intrinsic value). In-The-Money Option is an option with intrinsic (exercise) value. A put option with a strike price above the current price of the underlying futures contract. A call option with a

strike price below the current price of the underlying futures contract. See also At-The-Money, and Out-Of-The-Money. / Опцион с внутренней ценностью является опционом, о котором говорят, что он прибыльный. Иными словами под прибыльным опционом понимается опционный контракт, который имеет положительную стоимость (ценность) в случае его исполнения. Для опционов на покупку, сходная цена должна быть ниже текущей рыночной цены соответствующего фьючерсного контракта или актива. Например, в торговле фьючерсами на золото опцион на покупку со сходной ценой в 390 Долларов США при текущей стоимости золота в 400 Долларов является прибыльным на 10 Долларов США (400 – 390 = 10). Правда в этом случае не принимается в расчёт размер премии, потраченной на приобретение данного опциона. Для опциона на продажу, сходная цена должна превышать текущую цену соответствующего фьючерсного контракта или актива. Прибыльный опцион может быть исполнен и немедленно выведен из соответствующего рынка для получения по нему денежных средств. Смотрите также Внутренняя Ценность (Intrinsic Value).

IN THE MONEY STRIKE = ПРИБЫЛЬНАЯ СХОДНАЯ ЦЕНА – In The Money Strike is an exercise price that has intrinsic value now. For calls, that would include all strikes with a strike less than the price of the underlying asset. For puts, it would encompass all strikes with a strike higher than the price of the underlying asset. / Прибыльная Сходная Цена – цена исполнения опциона, имеющая в данный момент внутреннюю ценность. Для опционов на покупку она могла бы включать все сходные цены, которые находятся ниже значения цены соответствующего актива. Для опционов на продажу она могла бы включать все сходные цены, которые находятся выше значения цены соответствующего актива.

INTIMATE BLEND = БЛИЗКАЯ СМЕСКА – Intimate Blend is a technique of mixing two or more dissimiliar fibers in a very uniform mixture. Usually the stock is mixed before or at the picker. / техника смешивания двух или более .

INTL = INTERNATIONAL

INTO = ДО – Into:- in reference to US electricity, demarcates seller and buyer responsibility. In the United States, sellers are responsible for the transmission service required to deliver energy from the generating source to any ComEd (short for the Commonwealth Edison) or TVA (short for the Tennessee Valey Authority) interface, but not for transmission service within the ComEd or TVA transmission system. Buyers are obliged to receive firm electric energy and are responsible for transmission service within the ComEd or TVA transmission system. / Эдэсэн (Edison). По отношению к электричеству, разграничивает ответственность между продавцом и покупателем. В Соединённых Штатах Америки, продавцы несут ответственность за подачу элетроэнергии, требуемой к поставке от источника генерации к любой границе раздела СоЭд (ComEd) или ВТД (TVA), но не для подачи электроэнергии в пределах системы передачи СоЭд или ВТД. Покупатели обязаны принимать бесперебойную элетроэнергию и несут ответственность за её подачу внутри системы передачи СоЭд или ВТД.

INTRACOASTAL = ПРИМОРСКОЕ – Intracoastal:- domestic shipping routes along a single coast.

INTRA–COMMODITY SPREAD = ВНУТРИСЫРЬЕВАЯ КУРСОВАЯ РАЗНИЦА (или ВНУТРИСЫРЬЕВОЙ СПРЭД) – Intra-Commodity Spread is a spread in which a trader buys and sells futures contracts of a single commodity on a single exchange, but of different months. See also Interdelivery Spread, and Spread. Intra-Commodity Spread is an options strategy in which a futures contract of a given delivery month is purchased and, simultaneously, a futures contract of a different delivery month of the same commodity (on the same exchange) is sold. Also called Interdelivery Spread. See also Inter-Commodity Spread. A buying one commodity and selling a related commodity is known as an Inter-Commodity Spread. These spreads can often be more volatile than the underlying individual commodities themselves and can give clues as to the future performance of one or more commodities. I pointed out the relationship between soybeans and corn and that historically soybeans were cheap relative to the corn price. While an inter-commodity spread contains a long and short position of two commodities that are related as parents and children or cousins; an intra-commodity spread can best be described as a spread between siblings. An intra-commodity spread is a spread within the same commodity. And, an intra-commodity spread can give important clues as to the future price of a commodity. In fact, I believe that an intra-commodity spread in natural gas may be giving a call to action in that commodity at this very moment! Let's understand intra-commodity spreads before we get to the current situation in the natural gas market. There are several different types of intra-commodity spreads:- (i) Location Spread:- the same commodity that is traded in different delivery locations; (ii) Quality Spread:- the same commodity might have different standards and grades measuring value and quality; and (iii) Time Spread:- different prices for different months. As with inter-commodity spreads an intra-commodity spread can also be very volatile.

INTRA–CROP SPREADS = ВНУТРИУРОЖАЙНЫЕ КУРСОВЫЕ РАЗНИЦЫ (или ВНУТРИУРОЖАЙНЫЕ СПРЭДЫ) – Intra-Crop Spreads are the differences in price between futures contracts with delivery in the same marketing year, e.g., September 01–August 31 for Corn and Soybeans. See also Spread.

INTRADAY CHARTS = ВНУТРИСУТОЧНЫЕ ГРАФИКИ – The term Intraday is used to describe those charts that are constructed of less than daily bars or candles. These would include tick, 1-, 5-, 10-, 15-, 30-, 45-, 60-minute bars or candles. Each intraday bar or candle contains the Open, High, Low, and Close that occurred during each trading day. / Термин внутрисуточный используется для описания графиков, строящихся на штрихах или свечах, формируемых на менее, чем посуточной основе. Это могут быть пошаговые, 1-, 5-, 10-, 15-, 30-, 45-, 60-минутные штрихи или свечи. Каждый внутрисуточный штрих или свеча содержит значения цен Открытия, Максимума, Минимума и Закрытия, имевших место в течение каждого дня торговли.

INTRADAY CREDIT = ВНУТРИДНЕВНОЙ КРЕДИТ – Intraday Credit is a credit extended and reimbursed within a period of less than one business day. The European System of Central Banks (ESCB) will extend intraday credit (based on eligible assets) to eligible counterparties for payment systems purposes. Intraday Credit:- a negative balance in an institution's master account at any time during the Fedwire operating day. Also called Daylight Overdraft. / хозяйский счёт.

INTRADAY LIQUIDITY = ВНУТРИДНЕВНАЯ ЛИКВИДНОСТЬ – Intraday Liquidity:- available funds consisting in intraday credit plus cash balances.

INTRAMARKET SPREAD = ВНУТРИРЫНОЧНАЯ КУРСОВАЯ РАЗНИЦА (или ВНУТРИРЫНОЧНЫЙ СПРЭД) – Intramarket Spread, also called a Time Spread, comprises a long position in one contract month against a short position in another contract month in the same futures contract on the same exchange. An example would be long March Sugar #11 futures contract, the world benchmark contract for raw sugar trading vs. short July sugar futures on ICE Futures US or short September soybean futures vs long January soybean futures on the Chicago Board of Trade (CME Group). The spread, or difference, between the prices of various futures delivery months reflects supply, demand and carrying costs. Because carrying costs generally increase over time, in many futures markets the price of each succeeding delivery month is higher than that of the preceding delivery month. See also Interdelivery Spread. Intramarket Spread:- a situation in which futures contracts for the same commodity are bought for one month and sold for another month. For example, August heating oil contracts are purchased, and September heating oil contracts are sold. Intramarket spreads are very common. Spread trades on most exchanges qualify for lower commission rates and lower margin requirements. Traders use

intramarket spreads to make a profit in the future direction of prices. They also use this to roll over their position from one month to another. Also called Interdelivery Spread. / Внутрирыночная Курсовая Разница или Внутрирыночный Спрэд, называемая также Календарная Курсовая Разница или Календарный Спрэд (Calendar Spread), Срочная Курсовая Разница или Срочный Спрэд (Time Spread), Межпоставочная Курсовая Разница или Межпоставочный Спрэд (Interdelivery Spread) формируется путём открытия позиции покупки (a long position) в одном контрактном месяце, то есть покупки фьючерса с одним месяцем поставки, и открытия позиции продажи (a short position) в другом контрактном месяце, то есть продажи фьючерса с другим месяцем поставки. Биржа как и сам фьючерсный контракт на какой-то актив, биржевой инструмент или сырьё в обоих случаях одни и те же; кроме того количество покупаемых контрактов должно совпадать с количеством продаваемых контрактов. Внутрирыночная курсовая разница торгуется в настоящее время на большинстве известных международных бирж фьючерсов. Сделки с ней отличаются более низкими ставками комиссии и более низкими требованиями в отношении ставок маржи. В качестве примеров внутрирыночной курсовой разницы можно привести следующие:- (i) покупка на бирже Ай.Си.И. Фьючез Ю.Эс., Инк. (ICE Futures US, Inc.) Фьючерсного Контракта № 2^{3O} на Хлопок (являющегося всемирным ориентиром на рынке хлопка) с поставкой в Июле против продажи Фьючерсного Контракта № 2^{3O} на Хлопок с поставкой в Декабре; или (ii) покупка на бирже Ай.Си.И. Фьючез Ю.Эс., Инк. (ICE Futures US, Inc.) фьючерсного контракта № 11 на сахар (являющегося всемирным ориентиром на рынке сахара-сырца) с поставкой в Марте против продажи фьючерсного контракта № 11 на сахар с поставкой в Июле; или (iii) покупка на Нью Йоркской Товарной Бирже, Инк. (New York Mercantile Exchange, Inc.; известной по своей аббревиатуре НАЙМЭКС® (NYMEX®)) фьючерсного контракта № 2 на печное бытовое топливо с поставкой в Октябре против продажи фьючерсного контракта № 2 на печное бытовое топливо с поставкой в Ноябре; или (iv) продажа на бирже Чикагская Палата Торговли (Chicago Board of Trade; известной по своей аббревиатуре СИБАТ® (CBOT®)) фьючерсного контракта № 2 на жёлтые соевые бобы с поставкой в Сентябре против покупки фьючерсного контракта № 2 на жёлтые соевые бобы с поставкой в Январе. В настоящее время сделки с внутрирыночной курсовой разницей или внутрирыночным спрэдом являются весьма распространёнными среди международных биржевых дельцов. Фактически внутрирыночный спрэд представляет собой разницу в ценах между различными месяцами поставки одного и того же фьючерсного контракта, а сама такая разница обуславливается спросом и предложением для разного времени поставки, а также возможными накладными расходами на хранение, страхование соответствующего данному фьючерсному контракту сырья. В связи с тем, что накладные расходы со временем лишь нарастают, на многих рынках фьючерсов на сырьё каждый последующий месяц поставки превышает в цене каждый предшествующий месяц поставки. Именно поэтому биржевые дельцы используют внутрирыночную курсовую разницу с целью извлечения прибыли в направлении возможных будущих цен. Кроме того, они используют такую тактику для переноса своей позиции из одного месяца поставки, который подходит к завершению торговли, к другому месяцу, который становится активным ближайшим месяцем поставки по конкретному фьючерсному контракту. Смотрите также Курсовая Разница По Различным Срокам Поставки или Спрэд По Различным Срокам Поставки (Interdelivery Spread).

INTRASTATE AIR CARRIER = ВНУТРИШТАТОВСКИЙ ВОЗДУШНЫЙ ПЕРЕВОЗЧИК – Intrastate Air Carrier means a citizen of the United States undertaking by any means to provide only intrastate air transportation.

INTRASTATE AIR TRANSPORTATION = ВНУТРИШТАТОВСКАЯ ВОЗДУШНАЯ ТРАНСПОРТИРОВКА – Intrastate Air Transportation means the transportation by a common carrier of passengers or property for compensation, entirely in the same State, by turbojet-powered aircraft capable of carrying at least 30 passengers. Interstate Air Transportation means the transportation of passengers or property by aircraft as a common carrier for compensation, or the transportation of mail by aircraft:- (i) between a place in:- (a) a State, territory, or possession of the United States and a place in the District of Columbia or another State, territory, or possession of the United States; (b) Hawaii and another place in Hawaii through the airspace over a place outside Hawaii; (c) the District of Columbia and another place in the District of Columbia; or (d) a territory or possession of the United States and another place in the same territory or possession; and (ii) when any part of the transportation is by aircraft.

INTRA VIRES = ИНТРА ВИРЭС – Intra Vires:- Latin for 'Within The Powers'. Within the legal power or authority or a person or official or body etc. It is used as a legal term in a number of common law contexts. / В переводе с Латинского, В Пределах Полномочий. Например, действия в пределах полномочий.

INTRINSIC VALUE = ВНУТРЕННЯЯ ЦЕННОСТЬ – The Intrinsic Value of an option is equivalent to the proceeds an option buyer would gain from the immediate exercise of his option right. An option has intrinsic value if the strike price of a call (put) option is below (above) the current price of the underlying asset. An immediate exercise of the option would generate a profit equivalent to the positive difference between strike price (including ancillary costs) and the current asset price.If the underlying asset is quoted below (above) the strike price of a call (put), or equals it, the intrinsic value is zero. Formula:- Intrinsic Value = (Asset Price – Strike Price) x Exercise Ratio. Intrinsic Value is a measure of the value of an option or a warrant if immediately exercised, that is the extent to which it is in-the-money. The amount by which the current price for the underlying commodity or futures contract is above the strike price of a call option or below the strike price of a put option for the commodity or futures contract. Intrinsic Value is a value, if any, that an option or a warrant would have if exercised at the present time. Difference between the current price of the underlying asset and an option's strike (exercise) price. The amount by which a put or call option is in-the-money. For a call option, the excess of the current market price of the asset or futures contract underlying the option over the strike price of the option. For a put option, the excess of the strike price over the current market price of the asset or futures contract underlying the option. Out-of-the-money options have no intrinsic value. Intrinsic value and time value are the two components of an option premium, or price. Intrinsic value is never less than zero. See also Extrinsic Value or Time Value. A term Intrinsic Value refers to options. The difference between the current spot price and the option strike (or exercise) price, i.e. the in-the-money element. Intrinsic Value:- for a call option, the greater of zero and the amount by which the market price of the underlying asset exceeds the exercise price. For a put option, the greater of zero and the amount by which the exercise price exceeds the market price of the underlying asset. Intrinsic Value is the amount which would be realized if the option were exercised. Also know as Exercise Value. Intrinsic Value:- for a call option, the difference between the asset price and the exercise price (if positive, otherwise no intrinsic value) . For a put option the difference between the exercise price and the asset price (if positive, otherwise no intrinsic value). / Внутренняя Ценность:- сумма, которую мог бы иметь опцион или варрант в случае исполнения в настоящий момент времени. Разница между текущей ценой соответствующего актива и сходной ценой (ценой исполнения) опциона. Сумма, на которую опцион на продажу или покупку считается прибыльным. Для опциона на покупку – превышение текущей рыночной цены актива или фьючерсного контракта, соответствующего опциону, над сходной ценой опциона. Для опциона на продажу – превышение сходной цены над текущей рыночной ценой актива или фьючерсного контракта, соответствующего опциону. Убыточные опционы не имеют внутренней ценности. Внутренняя ценность и временная ценность являются двумя составляющими премии за опцион или стоимости опциона. Внутренняя ценность не может быть ниже нуля. Смотрите также Внешнюю Ценность (Extrinsic Value) или Временную Ценность (Time Value).

INTRINSIC VISCOSITY = ВНУТРЕННЯЯ ВЯЗКОСТЬ (или СОБСТВЕННАЯ ВЯЗКОСТЬ, или ИСТИННАЯ ВЯЗКОСТЬ, или ХАРАКТЕРИСТИЧЕСКАЯ ВЯЗКОСТЬ) – Intrinsic Viscosity is a ratio of the specific viscosity (R.V.-1) of a solution of known

concentration to the concentration of solute extrapolated to zero concentration. Also called the Limiting Viscosity Number. It is directly proportional to the polymer-average molecular weight. / Предельное Число Вязкости или Характеристическая Приведённая Вязкость (Limiting Viscosity Number).

INTRODUCING BROKER = ПРЕДСТАВЛЯЮЩИЙ БРОКЕР – Introducing Broker is a person (other than a person registered as an Associated Person of a Futures Commission Merchant) who is engaged in soliciting or in accepting orders for the purchase or sale of any commodity for future delivery on an exchange who does not accept any money, securities, or property to margin, guarantee, or secure any trades or contracts that result therefrom. Introducing Brokers (IBs) and Futures Commission Merchants (FCMs) help investors access CTAs. They are the firms that execute, clear and carry the actual positions directed by CTAs. Independent IBs can help CTAs access a number of clearing firms and negotiate competitive rates – benefits that can be passed on to the managed futures investor. Introducing Broker is any person or organization, other than someone registered as an associated person of a Futures Commission Merchant, who solicits or accepts orders to buy or sell commodity, security, currency or index or services customer brokerage accounts but does not accept money or other assets from customers to support such orders. This person introduces (passes on) customer's orders to Futures Commission Merchants for execution, clearing and record keeping. See also Guaranteed Introducing Broker and Independent Introducing Broker. / Любое лицо или организация, отличные от тех, которые зарегистрированы в качестве ассоциированных лиц Торговца Фьючерсами За Комиссию, которые запрашивают или акцептуют распоряжения на покупку или продажу сырья, ценных бумаг, валюты или индекса или обслуживают брокерский счёт заказчика, но не акцептуют денежные или иные средства заказчика для поддержки таких распоряжений. Это лицо представляет (передаёт) распоряжения заказчика Торговцам Фьючерсами За Комиссию для исполнения, клиринга и сохранения записи. Смотрите также Гарантированный Представляющий Брокер (Guaranteed Introducing Broker) и Независимый Представляющий Брокер (Independent Introducing Broker).

INTRODUCTION = ИНТРОДУКЦИЯ (или ВВЕДЕНИЕ, или ВНЕДРЕНИЕ) – (1) Introduction is the entry of a pest resulting in its establishment. / Интродукция это проникновение вредителя, приводящее к его обоснованию (акклиматизации). Под Интродукцией, от Латинского слова Introductio, означающее Введение, понимается переселение особей какого-либо Вида Животных и Растений за пределы естественного ареала, в места, где они раньше не жили. Целенаправленная интродукция осуществляется главным образом для введения в культуру новых Видов и форм, например, Картофель, Кукуруза интродуцированы в Европу из Америки. Под Интродукцией Насекомых понимается ввоз Полезных Насекомых в какую-либо страну или область вне их современного ареала. При недостаточности карантинных мероприятий происходит распространение карантинных Вредителей и Сорняков, которые оказываются опаснее и вредоноснее местных Видов, так как обычно остаются без своих врагов, регулирующих их размножение на родине. Резко снизить потери в этом случае может интродукция насекомых – врагов этих карантинных вредителей и сорняков. Для этого на родине вредителя или сорняка оценивают, испытывают и отбирают эффективные виды хищников и паразитов вредителя, а также вредителей сорняков. После ряда карантинных мероприятий, гарантирующих от завоза вторичных паразитов или новых рас хозяина, интродуцированных насекомых размножают в инсектарии и выпускают в очаги вредителей и сорняков. Интродукция – перемещение иноземного вида в результате косвенных или прямых человеческих действий вовне его естественного ареала распространения (прошлого или настоящего). Это перемещение может быть или в пределах страны или между странами, или между зонами, находящимися за границами национальной юрисдикции. Интродукция касается иноземного вида, и, таким образом, вида, который уже проник в зону. Тем не менее, на основании других документов можно предположить, что это не так, и что не местный вид, проникающий впервые, является интродуцированным. Вид может быть интродуцирован много раз, тогда как в соответствии с другими формулировками однажды акклиматизировавшийся вид уже не может быть интродуцирован. Интродукция – проникновение вида в зону, в которой он является не местным, путём перемещения в результате человеческих действий, либо непосредственно из зоны, где вид является местным, либо косвенно (последовательным передмещением из зоны, где вид является местным через одну или несколько зон, где он не является местным). В случае косвенного перемещения, в определении особо не указано, должны ли все перемещения из одной зоны в другую считаться интродукцией (в результате человеческих действий, намеренных или ненамеренных), или некоторые из них могут происходить путём естественного распространения. Этот вопрос возникает, например, в случае, когда вид был интродуцирован в одну зону, а затем распространяется естественным путём в смежную зону. По-видимому, это можно рассматривать как косвенную интродукцию, а рассматриваемый вид в этом случае является иноземным видом в смежной зоне, несмотря на то, что он проник в неё естественным путём. Промежуточная страна, из которой происходит естественное распространение, не обязана предпринимать какие-либо действия по его ограничению, хотя она может быть обязана предотвращать намеренную или ненамеренную интродукцию, если рассматриваемая привозящая (или импортирующая) страна устанавливает соответствующие фитосанитарные меры.

(2) Introduction:- cultivar of Rice taken from one place to another. / Под Интродукцией Растений понимается переселение отдельных Видов за пределы естественного ареала в места, где они раньше не произрастали. Основы интродукции Растений разрабатывал ещё Швейцарский ботаник Огюста Пирамю дё Кондоль (Augustin Pyramus de Candolle; 1778–1841; 1855) и его сын Альфонс Люи Пьер Пирамю дё Кондоль (Alphonse Louis Pierre Pyramus de Candolle; 1806–1893). Русский учёный Николай Иванович Вавилов (1887–1943) вместо чисто имперических приёмов 'проб и ошибок' предложил прогнозировать реальный успех интродукции Растений путём сопоставления всей суммы природных условий родины интродуцента с таковыми же района интродукции. В разработке научных основ интродукции растений большую роль сыграла теория Вавилова о центрах происхождения культурных Растений. Большинство современных культурных Растений являются интродуцентами. В XVI–XVII веках в Европу завезены их Америки Картофель, Кукуруза, Перец Стручковый, Подсолнечник, Табак, Томат и другие. В Центральную и Южную Америку Сахарный Тростник попал из Южной Азии через Канарские Острова. В Северной Америке уже в XVII веке культивировались привезённые из Европы Груша, Конский Каштан, Слива, Яблоня и другие. В Австралии появились Виноград, Кукуруза, Маслина, Тыква, Цитрусовые и другие. Обычные для сельского хозяйства Африки Арахис, Багат, Маниок завезены из Америки. Большое хозяйственное значение имела интродукция Эвкалипта из Австралии в страны Африки и Азии. При интродукции Растений из природного ареала в новые районы нередко происходит улучшение жизненности видов (сортов) и тех хозяйственно ценных признаков, ради которых осуществляется интродукция:- повышение урожайности плодов (семян), фитомассы, устойчивости к различным факторам среды, болезням, вредителям и другому. Так, наиболее ценные Сорта Пшеницы характерны для далёких окраин её ареала (Австралия, Америка, Европа). В природных экосистемах интродукция Растений часто способствует восстановлению состава и функции нарушенных фитоценозов, уменьшает риск вымирания Видов. Вместе с тем работы с интродуцентами могут привести и к нежелательным последствиям, например, переносу вместе с семенами, черенками, саженцами возбудителей болезней (Бактерии, Грибы), Насекомых-Вредителей, а также Сорняков, которые могут вызвать негативные изменения в биоценозах или даже формирование новых экологических комплексов с резко обеднённой местной флорой. Интродукция Растений должна осуществляться с соблюдением карантинных правил. Научную работу по интродукции Растений ведут ботанические сады, в которых в

экспериментальной культуре сосредоточено большое разнообразие тех или иных Растений. Из коллекционных фондов отбирают наиболее перспективные для практики и введения в промышленную культуру. В бывшем Союзе Советских Социалистических Республик (СССР) Совет Ботанических Садов к 1962 подготовил районирование интродукционной работы, для чего было выделено 11 регионов, в каждом из которых ботанические сады проводили подбор полезных растений местного ассортимента, изучали биологию растений, перспективных прежде всего в данном регионе, и так далее. Ботанические сады много сделали для введения в широкую культуру различных пищевых растений (прежде всего плодовых, ягодных, орехоплодовых):- Айвы Японской, Лимонника, Облепихи, Ореха Маньчжурского и Серого, Фундука и других. Работу по интродукции растений осуществляют также сельскохозяйственные научно-исследовательские и учебные институты, опытные станции и интродукционные питомники.

(3) Introduction (of a biological control agent) is the release of a biological control agent into an ecosystem where it did not exist previously. See also Establishment.

INTRODUCTION = ИНТРОДУКЦИЯ (или ВВЕДЕНИЕ, или ВНЕДРЕНИЕ) – Introduction is a method of obtaining a listing for an unquoted company which already has a large number of investors owning its shares. No new capital is raised by this means. It can also happen when a share is listed on a different stock exchange, or when a merger of two existing companies occurs and a new holding company is formed.

INTROGRESSION = ИНТРОГРЕССИЯ – Introgression is an incorporation of genes of one species into the gene pool of another species by hybridization and backcrossing. / Интрогрессия – приобретение гена другого вида при межвидовой гибридизации. Под Интрогрессией, от Латинского слова Intro, означающее Внутрь, и , понимается .

INTRON = ИНТРОН – Intron is the intervening sequence in genes. Transcribed but not translated.

INTRORSE = ИНТРОРЗНОЕ – Introrse:- facing inwards. / Интрорзное – обращённое внутрь или обращённое к оси.

INTROSE = ОБРАЩЁННОЕ ВНУТРЬ – Introse:- facing inwards.

INTSORMIL = INTERNATIONAL SORGHUM AND MILLET PROGRAM

INTSOY = INTERNATIONAL SOYBEAN PROGRAM

INTUMESCENCE = ВСПУЧИВАНИЕ (или ВЗДУТИЕ) – Intumescence:- the swelling of a fire- retardant coating when heated, resulting in the formation of low-density film which provides a degree of surface flame-spread resistance. / .

INULIN = ИНУЛИН – Inulin syrups are extracted from Chicory through a process commercially developed in the 1980s. They usually contain 83% fructose. Inulin syrup production in the European Union is covered by the sugar regime and subject to a production quota. / Инулин, $(C_6H_{10}O_5)_n$, органическое вещество из группы полисахаридов, полимер D-фруктозы. Инулин – белый порошок, легко растворимый в горячей воде и трудно в холодной. Молекулярная масса 5 000–6 000. Имеет сладкий вкус. При гидролизе под действием кислот и фермента инулазы образует D-фруктозу и небольшое количество глюкозы. Инулин, как и промежуточные продукты его ферментативного расщепления – инулиды, не обладает восстанавливающими свойствами. Молекула инулина – цепочка из 30–36 остатков фруктозы в фуранозной форме. Подобно крахмалу, инулин служит запасным углеводом, встречается во многих Растениях, главным образом Семейства Сложноцветных, а также Колокольчиковых, Лилейных, Лобелиевых и Фиалковых. В клубнях и корнях Георгины, Нарцисса, Гиацинта, Туберозы, Цикория и Земляной Груши (Топинамбура) содержание инулина достигает 10–12%. В Растениях вместе с инулином почти всегда встречаются родственные углеводы – псевдоинулин, инуленин, левулин, гелиантенин, синистрин, иризин и другие, дающие, как и инулин, при гидролизе D-фруктозу. Добывают инулин из Цикория или из Топинамбура. Легко усваивается организмом человека, в связи с чем применяется в медицине как заменитель крахмала и сахара при сахарном диабете. Служит исходным материалом для промышленного получения фруктозы.

INUNDATE = ЗАТОПЛЯТЬ (или НАВОДНЯТЬ) – Inundate:- to be completely submerged, e.g., by floodwater.

INUNDATION = ЗАТОПЛЕНИЕ (или НАВОДНЕНИЕ, или ПАВОДОК, или РАЗЛИВ) – Inundation is the time of onset or arrival of the floods. / Под Наводнением понимается значительное затопление водой местности в результате подъёма уровня воды в реке, озере или море, вызываемого обильным притоком воды в период снеготаяния или ливней, ветровых нагонов воды, при заторах, зажорах и тому подобном. Под Паводком понимается сравнительно кратковременное и непериодическое поднятие уровня воды, возникающее в результате быстрого таяния ледников, снега, обильных дождей. Следующие один за другим могут образовать половодье. Значительный паводок может вызвать наводнение.

INUNDATIVE RELEASE = НАВОДНЯЮЩИЙ ВЫПУСК – Inundative Release is the release of large numbers of mass-produced biological control agents or beneficial organisms with the expectation of achieving a rapid effect. Inundative Release is the release of overwhelming numbers of a mass-produced, invertebrate biological control agent in the expectation of achieving a rapid reduction of a pest population without necessarily achieving continuing impact.

INVALID UNIQUE IDENTIFIER = НЕДЕЙСТВИТЕЛЬНЫЙ УНИКАЛЬНЫЙ ИДЕНТИФИКАТОР – Invalid Unique Identifier shall mean an identifier which does not meet the standardized requirements, if any.

INVASION = ИНВАЗИЯ (или ВТОРЖЕНИЕ, или НАПАДЕНИЕ) – Invasion:- when an infectious agent attacks the host plant causing a disease. Invasion, in the context of the Container Handbook:- insect attack of goods. / Инвазия – проникновение в организм хозяина. Под Инвазией, от Латинского слова Invasio, означающее Вторжение или Нападение, понимается заражение человека, животного или растения паразитами животного происхождения с последующим развитием взаимодействия между организмом-хозяином и паразитом. Инвазия проявляется инвазивной болезнью либо протекает бессимптомно (субклинически). Инвазия у Животных может быть представлена одним или несколькими (смешанная инвазия) Видами Паразитов. Для возникновения инвазии необходимы следующие условия:- восприимчивость хозяина и благоприятная среда для развития паразита. На развитие и течение инвазии влияют возраст животного (более тяжело болеет молодняк), путь проникновения паразита, сезонность года, климатические условия местности. Продолжительность инвазии зависит от длительности жизни паразита, вида и возраста хозяина. Освобождение организма-хозяина от инвазии происходит по различным причинам:- в связи с завершением стадий развития паразита, в результате его гибели, например, при дегельминтизации, высокой сопротивляемости организма-хозяина и по другим причинам. Часто наблюдают повторные инвазии (суперинвазии и реинвазии).

INVENTION = ИЗОБРЕТЕНИЕ – In the US patent law, Invention is any art or process (way of doing or making things), machine, manufacture, design, or composition of matter, or any new and useful improvement thereof, or any variety of plant, which is or may be patentable under the patent laws of the United States. / Авторское Свидетельство является документом, удостоверяющим право

на изобретение. Под Изобретением понимается новое и обладающее существенными отличиями, дающее положительный эффект техническое решение задачи, необходимое для создания и неоднократного воспроизведения устройства, способа, вещества или применения ранее известных устройств, способов, веществ по новому назначению в любой области народного хозяйства, социально-культурного строительства и обороны страны. Изобретение защищается Авторским Свидетельством или Патентом. Заявка на изобретение представляет собой совокупность документов (заявление) о выдаче авторского свидетельства или патента, описание изобретения с формулой изобретения, чертежи, схемы и другое, подаваемых в национальную или международную организацию по делам изобретений и открытий, которые подвергаются государственной научно-технической экспертизе с целью вынесения решения о признании или непризнании предложения изобретением. Право на изобретение удостоверяется авторским свидетельством или патентом. Изобретение, техническое усовершенствование, приоритет, патент на изобретение, изобретатель, автор, издательский договор.

INVENTOR = ИЗОБРЕТАТЕЛЬ – In the US patent law, Inventor is one who contributes to the conception of an invention. The patent law of the United States of America requires that the applicant in a patent application must be the inventor. See also Applicant, and Joint Inventor.

INVENTORIES = ИНВЕНТАРЬ (или МАТЕРИАЛЬНО–ПРОИЗВОДСТВЕННЫЕ ЗАПАСЫ, или ТОВАРНО–МАТЕРИАЛЬНЫЕ ЦЕННОСТИ) – Inventories are initially recognized at cost. Cost of inventories includes import duties, non-refundable taxes, transport and handling costs and any other directly attributable costs less trade discounts, rebates and similar items. Inventories are valued at the lower of cost and net realizable value (NRV). NRV is the estimated selling price in the ordinary course of business, less the estimated costs of completion and estimated selling expenses. Also known as Stocks in the United Kingdom. Inventories:- these are produced assets but not being used for further production such as materials and supplies, work-in-progress, finished goods, and goods for resale. Inventories are assets:- (i) held for sale in the ordinary course of business; (ii) in the process of production for such sale; and (iii) in the form of materials or supplies to be consumed in the production process or in the rendering of services. Net realisable value is the estimated selling price in the ordinary course of business less the estimated costs of completion and the estimated costs necessary to make the sale. IAS 2 (short for International Accounting Standard No. 2) – Inventories – prescribes the measurement of inventories, including the amount to be initially recognised as an asset in the balance sheet and, subsequently recognised as an expense in the income statement, including any write-down to net realisable value. IAS 2 requires inventories to be measured at the lower of cost and net realisable value on an item by item basis. The cost of inventories is the aggregation of the costs of purchase (e.g., purchase price, import duties, transportation and handling costs) net of trade discounts and rebates, the costs of conversion into finished products (e.g., labor and production overhead costs) and other costs in bringing the inventories to their present location and condition excluding the cost of abnormal wastage, storage, administration and selling. The cost of inventories may be approximated using the standard cost method (cost of inventories estimated based on normal operating activity) or the retail inventory method (cost of inventories estimated based on reducing the sales value by the appropriate gross margin). The cost of inventories of items that are not ordinarily interchangeable and goods or services produced and segregated for specific projects shall be assigned by using specific identification of their individual costs. The assignment of the cost of inventories to inventory items is to be done by using either the first-in first-out (inventory items on hand at the end of the period are assigned the cost of those items most recently purchased or produced) or weighted average cost formula (inventory items on hand at the end of the period are assigned the weighted average of the cost of those items on hand at the beginning of the period and those produced or purchased during the period). Net realisable value is the net amount an entity expects to realise from the sale of inventory in the ordinary course of business. Once measured, the lower of cost and net realisable value is the carrying amount an entity recognises as an asset in the balance sheet. Upon the sale of inventories, the carrying amount of those inventories is to be recognised as an expense in the income statement in the period in which the related revenue is recognised. If net realisable value falls below the cost of inventories the write-down is expensed in the income statement in the period in which the write-down occurs. An increase in net realisable value that reverses a previous write-down is to be recognised as a reduction in the amount of inventories recognised as an expense in the period the reversal occurs. IAS 2 applies to all inventories, except:- (i) work in progress arising under construction contracts; (ii) financial instruments; and (iii) biological assets related to agricultural activity and agricultural produce at the point of harvest. IAS 2 measurement principles do not apply to the inventories held by:- (i) producers of agricultural and forest products, agricultural produce after harvest, and minerals and mineral products, to the extent that they are measured at net realisable value in accordance with well-established practices in those industries; and (ii) commodity broker-traders who measure their inventories at fair value less costs to sell. In the United Kingdom, Inventories (known as Stocks in the former system) consist of finished goods (held by the producer prior to sale, further processing or other use) and products (materials and fuel) acquired from other producers to be used for intermediate consumption or resold without further processing. In accounting, this account group includes tangible personal property acquired for normal operations, supplies to be used in the production of property for resale, or supplies to be used in the production of goods and services. Inventories may be maintained under a periodic system where costs are accumulated during the period and an adjustment is made to a physical count at the end of the period. A perpetual inventory system records additions and deductions from the inventory on a continuous basis, thus providing a perpetual record of inventory on hand. Adjustments are made to a physical count at least once during the fiscal accounting period. / МСБУ 2 (сокращение для Международного Стандарта Бухгалтерского Учёта № 2) – . строка баланса (item). ненормальных отходов, хранения, администрирования и . Под Производственными Запасами понимаются средства производства, поступившие предприятию потребителю, но ещё не переданные на рабочие места. Они подразделяются на подготовительные, страховые и текущие запасы.

INVENTORIES/COST OF GOODS SOLD = ИНВЕНТАРЬ (или МАТЕРИАЛЬНО–ПРОИЗВОДСТВЕННЫЕ ЗАПАСЫ, или ТОВАРНО–МАТЕРИАЛЬНЫЕ ЦЕННОСТИ)/СТОМОСТЬ ПРОДАННЫХ ТОВАРОВ – Inventories/Cost Of Goods Sold is the total value of inventories (expressed in days) as a proportion of the Cost of Goods Sold. Thus it is a measure of the average inventory level. Note:- it is also known as Inventory Days. This measure of the level of inventories may also be expressed as the Cost of Goods Sold divided by the value of inventories (this form of the measure is known as Inventory Turnover). The level of inventory varies depending on the industry and the efficiency of the business. A typical value (for manufacturing industries) is 73 days (an Inventory Turnover of 5).

INVENTORIES OF WORK–IN–PROGRESS = МАТЕРИАЛЬНО–ПРОИЗВОДСТВЕННЫЕ ЗАПАСЫ НЕЗАВЕРШЁННОГО ПРОИЗВОДСТВА – Inventories Of Work-In-Progress consist of goods and services that are partially completed but that are not usually turned over to other units without further processing or that are not mature and whose production process will be continued in a subsequent period by the same producer. Inventories of Work-In-Process:- that part of a manufacturer's inventory that is in the production process and has not yet been completed and transferred to the finished goods inventory. This account contains the cost of the direct material, direct labor, and factory overhead placed into the products on the factory floor. A manufacturer must disclose in its financial statements the cost of its work-in-process as well as the cost of finished goods and materials on hand.

INVENTORIES OF WORK–IN–PROGRESS ON CULTIVATED ASSETS = МАТЕРИАЛЬНО–ПРОИЗВОДСТВЕННЫЕ ЗАПАСЫ НЕЗАВЕРШЁННОГО ПРОИЗВОДСТВА ПО ВЗРАЩЕННЫМ АКТИВАМ – Inventories Of Work-In-Progress On Cultivated Assets:-

inventories of work-in-progress on cultivated assets consist of livestock raised for products yielded only on slaughter, such as fowl and fish raised commercially, trees and other vegetation yielding once-only products on destruction and immature cultivated assets yielding repeat products.

INVENTORS ASSISTANCE CENTER = ЦЕНТР ПОМОЩИ ИЗОБРЕТАТЕЛЯМ – In the US patent law, Inventors Assistance Center (IAC) is formerly Patent Assistance Center.

INVENTORY = ИНВЕНТАРЬ (или МАТЕРИАЛЬНО–ПРОИЗВОДСТВЕННЫЕ ЗАПАСЫ, или ТОВАРНО–МАТЕРИАЛЬНЫЕ ЦЕННОСТИ) – Inventory:- the raw materials, work-in-process goods and completely finished goods that are considered to be the portion of a business's assets that are ready or will be ready for sale. Inventory represents one of the most important assets that most businesses possess, because the turnover of inventory represents one of the primary sources of revenue generation and subsequent earnings for the company's shareholders/owners. Possessing a high amount of inventory for long periods of time is not usually good for a business because of inventory storage, obsolescence and spoilage costs. However, possessing too little inventory isn't good either, because the business runs the risk of losing out on potential sales and potential market share as well. Inventory management forecasts and strategies, such as a just-in-time inventory system, can help minimize inventory costs because goods are created or received as inventory only when needed. Inventory is a tangible property held for sale, or materials used in a production process to make a product. Tangible property held:- (i) for resale in the ordinary course of business; or (ii) in the process of production for such sale; or (iii) to be consumed in the production of goods or services for sale. Also known as Stock-In-Trade, or Stock-On-Hand. Raw materials, intermediate goods or other products owned and held by a business entity for use in its operations. All the raw materials and finished products a company has in its possession. Inventory refers to goods held by the firm in one of three forms:- (i) raw materials and supplies that are used in the firm's business; (ii) unfinished goods-in-progress that the firm is still in the process of manufacturing; and (iii) finished products. Some firms list inventory under these three separate categories on their balance, but others consolidate all three types of inventory into one figure. Inventory is a major asset for some business, such as manufacturers, retailers, and wholesalers, but is of little significance to service businesses. The number of units and/or value of the stock of goods a company holds. Inventory is the total value of undelivered product which is on hand, including sold, unsold, damaged and missing product. This figure will vary between the actual Physical Inventory, the computer-known Physical (Perpetual) Inventory and the Book Inventory due to timing, accounting methods and possible computer or human error. In the United States, Inventory is the quantity owned by the Commodity Credit Corporation (CCC) at any specified time. For example, about 123 000 bales of Upland Cotton were in CCC inventory (owned by CCC) on July 31, 1985. / Под Материальными Ресурсами понимается исходное сырьё, материалы, комплектующие изделия, топливо, энергия (предметы труда), а также машины, оборудование и приборы (средства труда), необходимые для производства какой-либо продукции. Материальные ресурсы измеряются в натуральных (штуках, килограммах, Джоулях и тому подобном) или стоимостных (например, в Рублях или Долларах) показателях. Материальные ресурсы представляют собой прошлый овеществлённый труд; экономия их при создании новой продукции является важнейшим резервом снижения материалоёмкости (показатель расхода материальных ресурсов при производстве какой-либо продукции) и повышения эффективности производства.

INVENTORY CARRYING COSTS = НАКЛАДНЫЕ ЗАТРАТЫ ПО ИНВЕНТАРЮ (или НАКЛАДНЫЕ РАСХОДЫ НА ТОВАРНО–МАТЕРИАЛЬНЫЕ ЦЕННОСТИ) – Inventory Carrying Costs:- generally, carrying costs or holding costs are financial measurements that calculate all the costs associated with holding goods in storage. It includes inventory-in-storage, warehousing, obsolescence, deterioration, spoilage and labor costs, as well as insurance and taxes.

INVENTORY COST = ИНВЕНТАРНАЯ ЗАТРАТА (или ЗАТРАТА НА ТОВАРНО–МАТЕРИАЛЬНЫЕ ЦЕННОСТИ) – Inventory Cost is the cost of holding goods, usually expressed as a percentage of the inventory value; includes the cost of capital, warehousing, taxes, insurance, depreciation, and obsolescence.

INVENTORY DAYS = ИНВЕНТАРНЫЕ ДНИ – Inventory Days:- The average number of days goods remain in inventory before being sold. As a measure of short-term sales potential, a number above the industry norm indicates problems with sales forecasts. And a number below the norm indicates loss of sales due to the company's inability to fulfill demand. Also known as Days Cover, Stock Cover, Days Of Inventory, or Days Sales To Inventory. Formula:- Average Inventory x 365 / Sales Revenue. See also Inventories/Cost of Goods Sold.

INVENTORY IN TRANSIT = УЧЁТ В ТРАНЗИТЕ (или ИНВЕНТАРЬ В ТРАНЗИТЕ, или ТОВАРНО–МАТЕРИАЛЬНЫЕ ЦЕННОСТИ В ТРАНЗИТЕ) – Inventory In Transit is an inventory in a carrier's possession, being transported to the buyer.

INVENTORY LOAN = ИНВЕНТАРНЫЙ ЗАЁМ – The Inventory Loan is the basic financial tool of the precious metals fabricating and refining industries. For example, jewellery manufacturers can finance the raw material in their production process by leasing gold or silver, generally at interest rates much lower than those prevailing in their local currency. As repayment of the bullion loan can be made by purchasing bullion for spot at the same time that finished jewellery products are sold, price exposure between the local currency, as well as the US Dollar gold price, is automatically hedged. The jeweller buys his gold or silver when he sells his finished jewellery, thereby avoiding any price risk. The same kind of strategy would, for example, be adopted in platinum and/or palladium by catalyst manufacturers or users.

INVENTORY RESERVE = ИНВЕНТАРНЫЙ РЕЗЕРВ (или РЕЗЕРВ ТОВАРНО–МАТЕРИАЛЬНЫХ ЦЕННОСТЕЙ) – Inventory Reserve is a minimum amount of inventory needed for a business entity to conduct normal business operations. Also known as Working Inventory.

INVENTORY TURNOVER = ОБОРОТ ИНВЕНТАРЯ (или ОБОРАЧИВАЕМОСТЬ ИНВЕНТАРЯ) – Inventory Turnover:- the cost of goods sold, divided by the average level of inventory on hand. The ratio measures how many times a company's inventory has been sold during the year. See also Inventories/Cost Of Goods Sold.

INVENTORY TURN RATE = СТАВКА ОБОРАЧИВАЕМОСТИ ИНВЕНТАРЯ (или КОЭФФИЦИЕНТ ОБОРАЧИВАЕМОСТИ ИНВЕНТАРЯ) – Inventory Turn Rate is the amount of times Inventory will be replenished in entirety during any specified period (generally one year). This is a relative measurement based on a snapshot as most products will not be completely depleted and replenished but, rather, perpetually restocked.

INVENTORY TURNS = ВОЗВРАТЫ МАТЕРИАЛЬНЫХ ЦЕННОСТЕЙ (или ВОЗВРАТЫ СКЛАДСКИХ ЗАПАСОВ) – Inventory Turns:- the number of times inventory turns is calculated using the following method:- (a) a sum the Inventory In and the Inventory Out, and then divide by 2 to arrive at the Throughput; and (b) the number of Inventory Turns is equal to the Throughput divided by the Average Inventory.

INVENTORY VELOCITY = СКОРОСТЬ ИНВЕНТАРИЗИЦИИ – Inventory Velocity is the speed with which products move from receiving dock to shipping dock.

INVERNESS = ПЛАЩ–НАКИДКА – Inverness:- a loose belted coat having a cape with a close-fitting round collar. / Плащ-Накидка с капюшоном.

INVERSION = ИНВЕРСИЯ – Inversion is a rearrangement of a chromosome segment so that its genes are in reversed linear order. Reverse order, e.g., warm air near the ground, cool air above. / В биологии под Инверсией, от Латинского слова Inversio, означающее Перестановка, понимается тип хромосомной перестройки (мутации), заключающийся в разрыве и повороте на 180° одного из внутренних участков хромосомы.

INVERTED HAMMER = ПЕРЕВЁРНУТЫЙ МОЛОТ – Inverted Hammer:- in technical analysis, a one day bullish reversal pattern. In a downtrend, the open is lower, then it trades higher, but closes near its open, therefore looking like an inverted lollipop. / В техническом анализе биржевых рынков, Перевёрнутый Молот является однодневной бычьей моделью разворота. При тенденции на понижение цен на рынке, цена открытия ниже максимальной цены торговли в этот день, но цена закрытия находится рядом с ценой открытия, и исходя из этого модель выглядит как перевёрнутый леденец на палочке.

INVERTED MARKET = ОБРАТНЫЙ РЫНОК – Inverted Market is a futures market in which the nearer months are selling at prices higher than the more distant months; a market displaying 'inverse carrying charges', characteristic of markets in which supplies are currently in shortage or the yield on the underlying asset exceeds the cost of carrying that asset. Also known as Backwardation. Inverted Market is a futures market in which the price for the nearby trading month contracts are higher than those for later months. Inverted Market:- some years there is little to no carry in the futures markets. This typically occurs when there's strong demand for the nearby delivery months. It likely reflects worries about securing adequate supplies in the near term. / Рынок с соотношением цен в состоянии бэквордэйшэн, когда сырьё или товар с поставкой в ближайшем будущем стоит дороже, чем с поставкой в более отдалённые сроки, и поэтому затраты на хранение не покрываются благоприятным соотношением цен. В условиях этого рынка размер премии за наличное сырьё или товар теоретически может ограничиваться произвольно. Обратный рынок на товарно-сырьевых биржах характеризуется, как правило, усилением спекулятивной составляющей, изменением практики и эффективности хэдьжирования.

INVERTED YIELD CURVE = ПЕРЕВЁРНУТАЯ КРИВАЯ ДОХОДНОСТИ (или ОБРАТНАЯ КРИВАЯ ДОХОДНОСТИ) – Inverted Yield Curve:- unusual situation where short-term interest rates are higher than long-term rates. Such distortions in the interest rate structure are generally short-lived. See also Yield Curve.

INVERTER = ИНВЕРТОР – Inverter is an electrical device which is designed to convert direct current into alternating current. This was originally done with rotating machines which produced true sine wave ac output. More recently this conversion has been performed more economically and efficiently using solid state electronics. However, except for the most expensive models, these devices usually do not produce perfect sine wave output. This sometimes can result in electromagnetic interference with other sensitive electronic devices. / Под Инвертором, от Латинского слова Inverto, означающее Изменяю или Переворачиваю, понимается:- (1) В радиотехнике – электрическая цепь или электронное устройство, на выходе которого изменение амплитуды, полярность или фаза электрических сигналов противоположны входным. В радиотехнической аппаратуре инвертор, точнее, фазоинвертор, применяют для получения двух равных по амплитуде, но противоположных по фазе сигналов. (2) В электротехнике – устройство, выполненное на газоразрядных или полупроводниковых (ПП) приборах, обладающих свойствами электрического вентиля; служит для преобразования постоянного тока в переменный. (3) В вычислительной технике – функциональный блок АВМ, в котором выходная величина y(t) с входной величиной x(t), являющиеся функциями времени, связаны зависимостью y(t) = –x(t); логический элемент ЭВМ, выполняющий логическую операцию 'отрицание' (инверсию). Представляет собой электронное устройство, выполненное на ПП приборах или в виде интегральной схемы с одним входом и одним выходом. Различают потенциальные и импульсные инверторы:- (i) в потенциальных инверторах высокий уровень входного напряжения преобразуется в низкий на выходе и наоборот; и (ii) в импульсном инверторе в момент подачи сигнала на вход появляется на выходе сигнал противоположной полярности либо сигнал на выходе появляется только при отсутствии сигнала на входе. Под Инвертором понимается:- (1) простейшее устройство электронной вычислительной машины (ЭВМ), выполненное на транзисторах или интегральной микросхеме, преобразующее сигнал низкого уровня на входе в сигнал высокого уровня на выходе и наоборот, что эквивалентно логической операции отрицания. (2) Устройство, выполненное на газоразрядных или полупроводниковых приборах, преобразующее постоянный ток в переменный.

INVERTORY RATE = ОБМЕННЫЙ КУРС – Inventory Rate is the rate or price at which foreign exchange, bank notes, gold coins, securities, etc are maintained on the books of the banks for internal and balance sheet purposes. / Курс или цена, по которым иностранная валюта, банкноты, золотые монеты, ценные бумаги и так далее учитываются в банковских книгах для служебных целей и для ведения бухгалтерского баланса.

INVEST = ИНВЕСТИРОВАТЬ (или ВКЛАДЫВАТЬ) – A term Invest usually referred to be a buy and hold strategy over a very long term. / Обычно относится к стратегии покупки и удержания активов в течение длительного периода времени.

INVESTED CAPITAL = ИНВЕСТИРОВАННЫЙ КАПИТАЛ (или ВЛОЖЕННЫЙ КАПИТАЛ, или КАПИТАЛОВЛОЖЕНИЯ) – (1) In accounting, Invested Capital is a total amount of money invested in a business entity by the owners and shareholders for use in conducting business.

(2) Invested Capital:- equity of all those who hold securities in a business entity, i.e. shareholders and holders of long-term liabilities, including bondholders. / Собственные средства всех тех, кто удерживает ценные бумаги конкретного юридического лица, то есть акционеры и держатели долгосрочных обязательств, включая держателей облигаций (облигационеров).

INVESTING = ВЛОЖЕНИЕ КАПИТАЛА (или ИНВЕСТИРОВАНИЕ) – Investing is the act of using money to make more money. / Инвестирование – это акт использования денежных средств для получения ещё больших денежных средств.

INVESTING ACTIVITIES = ДЕЯТЕЛЬНОСТИ ПО ВЛОЖЕНИЮ КАПИТАЛА ПО ВИДАМ (или ВИДЫ ИНВЕСТИЦИОННОЙ ДЕЯТЕЛЬНОСТИ) – Investing Activities are the acquisition and disposal of long-term assets and other investments not included in cash equivalents. The separate disclosure of cash flows arising from investing activities is important because the cash flows represent the extent to which expenditures have been made for resources intended to generate future income and cash flows. The aggregate cash flows arising from acquisitions and from disposals of subsidiaries or other business units shall be presented separately and classified as investing activities.

INVESTMENT = ВЛОЖЕНИЕ КАПИТАЛА (или ИНВЕСТИЦИЯ) – In economics, Investment is a purchase of capital goods used in production. By extension:- acquisition of capital that is expected to produce some form of income or profit, such as securities. In the strict sense, investment is the use of income to create an increase in capital stock. Investment is an important determinant of national income. It is the opposite of consumption, which satisfies needs by using up goods and services. The use of money for the purpose of making more money, to gain income or increase capital, or both. Investment is an asset acquired for the purpose of producing income

and/or capital gains for its owner. Investment is an expenditure used to purchase goods or services that could produce a return to the investor. Investment is all income expended by firms or government agencies on capital goods for use in their productive activities. Thus aggregate investment in a national economy is the total amount of spending in order to maintain or increase the stock of physical goods not intended for immediate consumption by the purchasing entity but rather for use in producing other kinds of goods or services to be delivered to others. (Note that the economist's sense of the term is somewhat narrower than the general population's use of the term, in that the economist would exclude the purchase of purely financial paper assets like bonds or shares of stock from coverage by the term 'Investment'.) All forms of investment thus require prior saving from income, but not all savings are for the purpose of investment. / Термин Инвестиция, от Немецкого слова Investition, от Латинского слова Investio, означающее Одеваю, относится к долгосрочным вложениям капитала в различные отрасли экономики как внутри страны, так и за границей. Различают финансовые инвестиции (покупка ценных бумаг) и реальные инвестиции (вложение капитала в промышленность, сельское хозяйство, строительство и другое). Инвестиция, долгосрочное вложение капитала в промышленность, сельское хозяйство, транспорт и другие отрасли хозяйства как внутри страны, так и за границей с целью получения прибыли. В буржуазной экономической науке различаются инвестиции финансовые и реальные. Инвестиция финансовая – вложение капитала в покупку акций, облигаций и других ценных бумаг, выпущенных корпорациями или государством. Инвестиция реальная – вложение капитала в производственный основной капитал (здания, сооружения, оборудование), жилищное строительство, товарно-материальные запасы как внутри страны, так и за границей. Инвестиции осуществляются частными корпорациями и государством. Частные инвестиции направляются в те отрасли народного хозяйства, где извлекаются наибольшие прибыли (прежде всего в промышленность), государственные – в малодоходные отрасли, например, в инфраструктуру. Частные инвестиции финансируются как за счёт собственных (внутренних) источников (амортизационные отчисления и нераспределённая прибыль), так и за счёт привлечённых источников:- долгосрочные кредиты и выпуск ценных бумаг. Источниками финансирования государственных инвестиций являются налоги, внутренние и внешние займы, доходы от государственных предприятий, выпуск новых денег. Операции по финансированию инвестиций осуществляются через банки (коммерческие и инвестиционные) и небанковские финансовые учреждения – сберегательные кассы, страховые компании, инвестиционные тресты, пенсионные фонды и так далее, которые способствуют аккумуляции огромных средств населения и использованию их для накопления капитала в интересах финансовой олигархии. Буржуазные экономисты видят границы инвестиций не в капиталистических производственных отношениях, а в технических условиях производства и психологических факторах. Действительно, инвестиции создают доходы и расширяют рынок, но это ограничено антагонистическими классовыми отношениями капиталистического общества. Действие всеобщего закона капиталистического накопления ведёт к тому, что благодаря инвестициям, сопровождающимся повышением органического строения капитала, возрастает богатство капиталистов, а положение рабочего класса ухудшается.

(2) In national accounting, Investment is the expenditures for products and services not consumed during a given accounting period. Investment includes gross fixed capital formation and government spending on capital assets. / В национальном бюджетном процессе, .

(3) In banking, Investment is the act or process of placing money in a property, security or other item of value or in a venture, generally on a longer-term basis.

(4) In corporate finance, Investment is the longer-term commitment of funds for the purchase of buildings, equipment, machines, etc. / В корпоративных финансах, долгосрочное вложение денежных средств на приобретение зданий, оборудования, машин, и тому подобного.

INVESTMENT ADVISORY SERVICES = СОВЕТНИЧЕСКИЕ УСЛУГИ ПО ВЛОЖЕНИЮ КАПИТАЛА (или СОВЕТНИЧЕСКИЕ УСЛУГИ ПО ИНВЕСТИРОВАНИЮ) – Investment Advisory Services:- counselling facilities of a bank or other specialized units in the area of asset management. Advisory services are geared to clients' requirements:- capital growth or income-oriented. Unlike with a managed account, the client ultimately makes his own investment decisions. Investment advisory services may also include succession planning, drafting agreements and establishing foundations.

INVESTMENT ASSETS = АКТИВЫ ВЛОЖЕНИЙ КАПИТАЛА (или ИНВЕСТИЦИОННЫЕ АКТИВЫ) – Investment Assets:- capital invested in an investment company against the issue of shares and assets thus acquired are investment assets. Investment assets must be held separately from the investment company's own assets. Investment companies may form several pools of investment assets bearing different names which must be managed separately. The investment assets do not serve as collateral for the liabilities of the investment company.

INVESTMENT BANKER = БАНКИР ПО ВЛОЖЕНИЯМ КАПИТАЛА (или ИНВЕСТИЦИОННЫЙ БАНКИР) – Investment Banker:- act as underwriters for a stock offering. The underwriter buys all the public shares of a company presenting an IPO at a set price and resells them to the public (on an exchange or over-the-counter (OTC)), hopefully at a profit. The 'middleman' between a corporation issuing new securities and the public. The usual practice is for one or more investment bankers to buy outright from a corporation a new issue of stocks or bonds. The group forms a syndicate to sell the securities to individuals and institutions. Investment bankers also distribute very large blocks of stock or bonds – perhaps help by an estate. Also known as Underwriter. Investment Bank (IB) is a financial intermediary that performs a variety of services. This includes underwriting, acting as an intermediary between an issuer of securities and the investing public, facilitating mergers and other corporate reorganizations, and also acting as a broker for institutional clients. The role of the investment bank begins with pre-underwriting counseling and continues after the distribution of securities in the form of advice. / Инвестиционный Банкир (Investment Banker) – компания, действующая в качестве андеррайтера или агента, которая выступает в качестве посредника между эмитентом ценных бумаг и общественностью, вкладывающей средства в инвестиции. В соответствии с твёрдым обязательством (firm commitment) по размещению ценных бумаг инвестиционный банк, являющийся либо управляющим, либо членом синдиката инвестиционных банков, полностью приобретает выпуск новых ценных бумаг у организации, выпустившей ценные бумаги, и размещает их среди дилеров и инвесторов, получая прибыль на разнице между ценой покупки и ценой продажи (ценой предложения в открытой продаже). Согласно условиям так называемой купленной сделки (best effort), инвестиционный банк организует выпуск ценных бумаг с гарантией их покупки по фиксированной цене в случае невозможности размещения, при этом банк действует в качестве агента, а не принципала и получает комиссионные за то количество ценных бумаг, которое ему удастся реализовать. Согласно резервному обязательству (standby commitment) один или более инвестиционный банк оказывает услуги организациям, выпустившим новые ценные бумаги, соглашаясь приобрести и перепродать все ценные бумаги, не приобретённые владельцами прав (rights) в течение 2–4 недель. В том случае, когда существует договорённость с клиентом, инвестиционный банк начинает выполнять свои функции с предоставления консультаций, предшествующих принятию обязательств по размещению ценных бумаг, и продолжает выполнять их после его завершения в форме постоянных экспертных консультаций и руководства, что часто включает и предоставление банку места в совете директоров. В США прямые обязательства по размещению ценных

бумаг включают подготовку отчёта для регистрации в Комиссии по Ценным Бумагам и Биржам (КЦББ; Securities and Exchange Commission (SEC)); консультации в отношении курсов ценных бумаг; формирование синдиката и управление им; организацию группы продавцов, если это необходимо; искусственное поддержание (pegging) цен на бумаги данного выпуска в течение периода их предложения и размещения. Помимо предложения новых ценных бумаг инвестиционные банки осуществляют размещение блоков ранее выпущенных ценных бумаг либо путём вторичного предложения, либо с помощью заключения соответствующих договорённостей, поддерживают торговлю уже размещёнными ценными бумагами, а также действуют в качестве посредников при размещении ценных бумаг частными лицами. Параллельно с исполнением функций инвестиционных банков большинство инвестиционных банкиров также осуществляют брокерско-дилерские операции, обслуживая как оптовых, так и розничных клиентов, предоставляя им брокерские или консультационные услуги и предлагая им всё большее число сопутствующих финансовых услуг.

INVESTMENT BANKING = БАНКОВСКОЕ ОБСЛУЖИВАНИЕ ПО ВЛОЖЕНИЮ КАПИТАЛА (или ИНВЕСТИЦИОННОЕ БАНКОВСКОЕ ОБСЛУЖИВАНИЕ) – Investment Banking is an area of banking covering issues, trading, repos and corporate and takeover financing.

INVESTMENT BANKS = БАНКИ ВЛОЖЕНИЙ КАПИТАЛА (или ИНВЕСТИЦИОННЫЕ БАНКИ) – Investment Banks are the financial intermediaries who perform a variety of services, including advising, aiding in the sale of securities, facilitating mergers and other corporate reorganizations, acting as brokers to both individual and institutional clients, and trading for their own accounts. Also known as Prime Brokerages. See also Underwriters. Under the traditional US separate banking system, investment banks are specialized in securities issuing and underwriting as well as mergers and acquisitions business (M&A). / Инвестиционные Банки, вид капиталистических банков, специализирующихся на финансировании и долгосрочном кредитовании различных отраслей народного хозяйства, главным образом промышленности, транспорта, торговли. Особенно широкое развитие получили в эпоху империализма. Средства инвестиционных банков формируются в основном путём размещения на денежном рынке собственных акций и облигаций. С развитием государственного монополистического капитализма в ряде капиталистических стран (Федеративной Республики Германии (ФРГ), Японии, Италии, Турции и других) создаются государственные инвестиционные банки, фонды или капиталы которых в основном формируются за счёт бюджетных средств (смотрите также Банки).

INVESTMENT CERTIFICATE = СВИДЕТЕЛЬСТВО О ВЛОЖЕНИИ КАПИТАЛА (или ИНВЕСТИЦИОННЫЙ СЕРТИФИКАТ) – Investment Certificates are shares (or units) in a securities or real estate fund. As a rule, they can be sold back to the investment company at any time at the bid price. However, there is no organized market to date for shares in closed-ended investment trusts (real estate funds). / Инвестиционный Сертификат – сертификат, являющийся свидетельством на вклад капитала в ссудо-сберегательную ассоциацию, в котором указывается инвестированная сумма. Инвестиционные сертификаты не дают права голоса и не накладывают каких-либо обязательств. Называется также как Взаимный Сертификат на Капитал (Mutual Capital Certificate).

INVESTMENT CLIMATE STATEMENTS = БЮЛЛЕТЕНИ ОБ ИНВЕСТИЦИОННОМ КЛИМАТЕ – Investment Climate Statements (ICSs) are prepared occasionally by the commercial sections of the US embassies for the US and Foreign Commercial Service, covering 67 individual countries. The ICSs provide statistics and analysis of policies and issues effecting the climate for direct investment in the individual country.

INVESTMENT COMPANY = КОМПАНИЯ ВЛОЖЕНИЙ КАПИТАЛА (или ИНВЕСТИЦИОННАЯ КОМПАНИЯ) – Investment Company is a firm that, for a management fee, invests the pooled funds of small investors in securities appropriate for its stated investment objectives. It offers participants more diversification, liquidity, and professional management service than would normally be available to them as individuals. There are two basic types of investment companies:- (i) Open-End, better known as a Mutual Fund, which has a floating number of outstanding shares (hence the name open-end) and stands prepared to sell or redeem shares at their current net asset value; and (ii) Closed-End, also known as an Investment Trust, which, like a corporation, has a fixed number of outstanding shares that are traded like a stock, often on the New York and American stock exchanges. Open-end management companies are basically divided into two categories, based on the way they distribute their funds to customers. The first category is Load Funds, which are sold in the over-the-counter market by broker-dealers, who do not receive a sales commission; instead a 'loading charge' is added to the net asset value at time of purchase. For many years the charge was 8½%, but more recently it has been reduced to 4.5–5%. Many load funds do not charge an upfront load, but instead impose a back-end load which customers must pay if they sell fund shares within a certain number of years, usually five. Funds are available as classes of shares, each having a different fee structure. The second category is No-Load Funds, which are bought directly from sponsoring fund companies. Such companies do not charge a loading fee, although some funds levy a redemption fee is shares are sold within a specified number of years. Some funds, both load and no-load, are called 12b-I Mutual Funds because they levy an annual 12b-I charge of up to 0.75% of asstes to pay for promotional and marketing expenses. Dealers in closed-end investment companies obtain their revenue from regular brokerage commissions, just as they do in selling any individual stock. Both open-end and closed-end investment companies charge annual management fees, typically ranging from 0.25% to 2% of the value of assets in the fund. Under the Investment Company Act of 1940, the registration statement and prospectus of every investment company must state its specific investment objectives. Investment companies fall into many categories, including:- diversified common stock funds (with growth of capital as the principal objective); balanced funds (mixing common and preferred stocks, bonds, and cash); bond and preferred stock funds (emphasizing current income); specialized funds (by industry, groups of industries, geography, or size of company); income funds buying high-yield stocks and bonds; dual-purpose funds (a form of closed-end investment company offering a choice of income shares or capital gains shares); and money market funds which invest in money market instruments. Company formed for the purpose of pooling member resources to invest in securities or real estate. See also Investment Fund, Mutual Fund, and Open-End Investment Company. Investment Company is a company or trust that uses its capital to invest in other companies or/and real estate. There are two principal types:- the closed-end and the open-end, also known as a Mutual Fund. Shares of closed-end investment companies, most of which are listed on the New York Stock Exchange, are readily transferable in the open market and are bought and sold like shares of stock. Capitalization of these companies remains the same unless action is taken to change, which is rare. Open-end funds sell their own new shares to investors, stand ready to buy back their old shares, and are not listed. Open-end funds are so called because their capitalization is not fixed; they issue more shares as people want them. Investment Company is an institution for the management of investment funds consisting of securities (equity or fixed-income funds) or real estate (property funds). The shares in the funds are referred to as Investment Certificates (Investment Fund Certificates) which are sold on the market. Investment funds offer clients – even those with smaller investment budgets – the advantage of a diversified portfolio made up of a wide range of securities or other assets. / Инвестиционная Компания – фирма, которая, взимая определённую комиссию за управление, инвестирует объединённые средства мелких инвесторов в ценные бумаги, приемлемые для их инвестиционных целей. Она предлагает участникам большую диверсификацию, ликвидность и услуги по профессиональному управлению средствами, чем они могли бы получить как

частные лица. Существует два основных типа инвестиционных компаний:- (i) открытая (open-end) инвестиционная компания, более известная как взаимный фонд (mutual fund), имеющая неопределённое число находящихся во владении акционеров акций и готовая в любой момент продать или выкупить акции по их текущей стоимости, рассчитанной на базе чистых активов (net asset value); и (ii) закрытая (closed-end) инвестиционная компания, также известная как инвестиционный траст (investment trust), который подобно корпорации имеет фиксированное число находящихся во владении акционеров акций; торговые операции с ними проводятся на Нью Йоркской и Американской фондовых биржах (New York and American stock exchanges). Открытые управленческие инвестиционные компании часто подразделяются на две категории, в соответствии со способом размещения акций среди инвесторов:- (a) фонды 'с нагрузкой' (load funds) продают акции на внеучётном рынке через брокеров-дилеров, не получающих комиссионных; вместо этого специальная надбавка прибавляется в момент покупки к чистой стоимости активов. Эта надбавка обычно составляет 8.5%, но при покупке пакета акций может быть снижена на 4.5–5%. Многие инвестиционные фонды, продающие свои акции с надбавкой, не назначают надбавку предварительно, а вместо неё взимают с клиентов разовый сбор, который выплачивается клиентами, если они продадут акции фонда в течение назначенного количества лет (обычно пяти) после даты их приобретения; и (b) фонды 'без нагрузки' (no-load funds), акции которых приобретаются напрямую у спонсирующих компаний. Подобные компании не взимают плату за покупку акций, хотя небольшой сбор при погашении акций является обычным. Дилеры, ведущие операции с закрытыми инвестиционными компаниями, получают свою прибыль от продаж в форме брокерских комиссионных. Некоторые фонды, как повышающие, так и не повышающие цену продажи своих акций, называются взаимными инвестиционными фондами 12b-I (12b-I mutual funds (12b-I is a rule of Investment Company Act of 1940)), поскольку они взимают ежегодный сбор по формуле 12b-I, достигающий 0.75% стоимости своих активов, чтобы покрыть маркетинговые расходы. Дилеры в инвестиционных компаниях закрытого типа получают доход от регулярных брокерских комиссионных, точно так же, как они получали бы его при продаже любых других акций. Как закрытые, так и открытые инвестиционные компании взимают ежегодную плату за управление средствами, как правило, составляющую от 0.25 до 2% объёма инвестиций. В соответствии с Актом об Инвестиционных Компаниях от 1940 (Investment Company Act of 1940) регистрационное заявление и проспект каждой инвестиционной компании должны содержать её конкретные инвестиционные цели. В основном инвестиционные компании подразделяются на следующие категории:- диверсифицированные фонды обыкновенных акций; сбалансированные фонды (вкладывающие средства в облигации, привилегированные и обыкновенные акции); фонды облигаций и привилегированных акций (предоставляющие фиксированный доход); специализированные фонды (по отрасли промышленности, группе отраслей промышленности, месту расположения, размерам компании); доходные фонды (высокодоходные акции и облигации); фонды с двойными целями (форма закрытой инвестиционной компании, предлагающая на выбор акции, приносящие дивиденды, и акции с приростом капитала); фонды денежного рынка (инструменты денежного рынка).

INVESTMENT CONTRACT = ДОГОВОР О ВЛОЖЕНИИ КАПИТАЛА (или ИНВЕСТИЦИОННЫЙ КОНТРАКТ) – Investment Contract is a financial instrument that may or may not include a service component but is not an insurance contract or a stand-alone derivative where the reporting entity is the issuer. The unbundled deposit component of an insurance contract under the International Financial Reporting Standard (IFRS) 4 would be included. It is an informal term used for convenience.

INVESTMENT COUNSEL = СОВЕТНИК ПО ВЛОЖЕНИЯМ КАПИТАЛА (или СОВЕТНИК ПО ИНВЕСТИЦИЯМ) – Investment Counsel is one whose principal business consists of acting as investment adviser and rendering investment supervisory services. / Советник по Инвестициям – лицо, деятельность которого состоит в предоставлении клиентам консультаций в области инвестиций и реализации инвестиционных решений.

INVESTMENT FOUNDATION = ФОНД ВЛОЖЕНИЙ КАПИТАЛА (или ИНВЕСТИЦИОННЫЙ ФОНД) – Investment Foundation:- in Switzerland this term is understood as being a tax-exempt foundation under federal supervision for the investment of the capital accumulated by company pension funds.

INVESTMENT FUND = ФОНД ВЛОЖЕНИЙ КАПИТАЛА (или ИНВЕСТИЦИОННЫЙ ФОНД) – Investment Fund is a company whose sole object is to invest its capital in the shares of a wide range of companies. Under Swiss law the investment fund is an entity in which investors pool their capital for joint investment. The assets are managed by the fund's management for the account of the investors according to the risk distribution principle. Depending on the type of investment fund, the assets may be invested in securities, money market instruments or in real estate; investments can also be made in special fund products and asset allocation funds. Swiss investment funds must be invested in variable capital and are obliged to redeem units whenever requested. Company or trust formed for the purpose of pooling member resources to invest in other companies. Investment funds offer more diversified forms of investment in different companies and industries, thereby reducing risk. Closed-end investment funds or trusts issue a limited number of shares of stock. The sale value of the shares, whether listed or unlisted, is not defined by the value of the net assets but by supply and demand. Open-end investment trusts issue shares as demand arises. Also known as Investment Trust. See also Money Market Fund, Mutual Fund, Real Estate Fund, Regional Fund, Sector Fund, and Securities Fund.

INVESTMENT FUND UNIT = ПАЙ ФОНДА ВЛОЖЕНИЙ КАПИТАЛА (или ПАЙ ИНВЕСТИЦИОННОГО ФОНДА) – Investment Fund Unit:- one of a number of equal portions (security) evidencing participation in an investment fund. Issued without par value.

INVESTMENT–GRADE BOND = ОБИГАЦИЯ СОРТА ВЛОЖЕНИЯ КАПИТАЛА (или ОБЛИГАЦИЯ ИНВЕСТИЦИОННОГО ХАРАКТЕРА) – Investment-Grade Bond is fixed-income securities which have been awarded a high rating by major credit rating agencies. A distinction is made between top-quality bonds (investment grade) and speculative-grade bonds (high yield oder junk bonds). A downgrading of a borrower to less than 'investment grade' will usually result in steep price markdowns on the bonds. Standard & Poor's considers investment-grade bonds to range from AAA to BBB– (BB+ to CCC– = non-investment grade) and Moody's from Aaa to Baa3 (Ba1 to Caa3 = non-investment grade). / Стэндод Энд Поз (Standard & Poor's). Мудиз Инвэстоз Сёвис Эл.ти.ди. (Moody's Investors Service Ltd).

INVESTMENT GROUP = ГРУППА ВЛОЖЕНИЙ КАПИТАЛА (или ИНВЕСТИЦИОННАЯ ГРУППА) – Investment Group is a group formed by individual savers who pool their resources, which are usually invested in marketable securities. / Инвестиционная Группа или Группа Вложений – группа, формируемая индивидуальными сберегателями (вкладчиками), объединяющими свои ресурсы. Эти ресурсы обычно вкладываются в торгуемые на рынке ценные бумаги.

INVESTMENT INCOME TAX = НАЛОГ НА ДОХОД ОТ ВЛОЖЕНИЙ КАПИТАЛА (или НАЛОГ НА ИНВЕСТИЦИОННЫЕ ДОХОДЫ) – Investment Income Tax is a special income tax levied on specific types of domestic investment income. Invest income tax must be withheld by the debtor or his bank for the account of the creditor and paid to the tax office. Withholding of investment income tax can be avoided by submitting a non-assessment certificate or a tax exemption application (for investment income). The sum withheld counts against the income tax to be paid.

INVESTMENT LIST = ПЕРЕЧЕНЬ ВЛОЖЕНИЙ КАПИТАЛА (или ИНВЕСТИЦИОННЫЙ СПИСОК) – Investment List is a list prepared periodically by a bank and which contains a selection of the securities recommended for investment. / Периодически подготавливаемый банком список, содержащий подбор ценных бумаг, рекомендуемых для инвестирования.

INVESTMENT MANAGEMENT REGULATORY ORGANISATION = ОРГАНИЗАЦИЯ ПО РЕГУЛИРОВАНИЮ УПРАВЛЕНИЯ ВЛОЖЕНИЯМИ КАПИТАЛА (или ОРГАНИЗАЦИЯ ПО РЕГУЛИРОВАНИЮ УПРАВЛЕНИЯ ИНВЕСТИЦИЯМИ) – The Investment Management Regulatory Organisation (IMRO) is a group in the United Kingdom that regulates and mangers the investment funds like retirement funds as a part of the Financial Services Authority. The Investment Management Regulatory Organisation was a self regulating group under the Financial Services Act of 1986. They did the following:- (i) investment management; (ii) management of unit trusts and various pension funds; and (iii) investment advice to corporate and institutional clients. However in December of 2001 when the financial services and Markets act of 2000 came into play the Financial Services Authority took over the business of the Investment Management Regulatory Organisation. The Financial Services Authority or FSA is a non government body that was given statutory powers by the Financial Services and Markets Act of 2000. The board sets the overall day to day policies and decisions of the staff. The FSA was set up by the government; they regulate financial services markets, firms and exchanges. They set standards that must be met and take action against the firms that do not meet those standards. Under the Financial Services and Markets Act of 2000 it states that the Financial Services Authority is to have functions on it by or under that act. They must comply with the requirements to the constitution. The Banking Act of 2009 provides the references to the functions of the Authority. In conclusion the Investment Management Regulatory Organisation was taken over by the Financial Services Authority in 2001 under the Financial Services and Markets Act of 2000. The Investment Management Regulatory Organisation (IMRO) is an self-regulatory organization (SRO) superseded by the Financial Services Authority in 2001.

INVESTMENT PAPER = БУМАГА ВЛОЖЕНИЯ КАПИТАЛА (или ИНВЕСТИЦИОННАЯ БУМАГА) – Investment Paper:- securities which are particularly suitable for longer-term investments. / Ценные бумаги, которые особенно приемлемы для долгосрочных инвестиций.

INVESTMENT PLAN = ПЛАН ВЛОЖЕНИЯ КАПИТАЛА (или ИНВЕСТИЦИОННЫЙ ПЛАН) – Investment Plan is a plan for the optimum investment of specific funds. / План по оптимальному инвестированию определённых средств.

INVESTMENT POLICY = ПОЛИТИКА ВЛОЖЕНИЯ КАПИТАЛА (или ИНВЕСТИЦИОННАЯ ПОЛИТИКА) – Investment Policy:- all operations to be performed in connection with the investment of funds in order to optimally attain a specific investment objective. Depending on the financial circumstances of the investor, special importance is attached to security, yield, the price and growth potential of the holdings or their liquidity. Of equal significance is the timing of the acquisition and sale of the investments.

INVESTMENT PORTFOLIO = ПОРТФЕЛЬ ВЛОЖЕНИЙ КАПИТАЛА (или ИНВЕСТИЦИОННЫЙ ПОРТФЕЛЬ) – Investment Portfolio is a variety of securities owned by an individual or an institution. See also Portfolio. / Совокупность ценных бумаг, удерживаемых физическим или юридическим лицом. Смотрите также Портфель (Portfolio).

INVESTMENT PROPERTY = ИМУЩЕСТВО ВЛОЖЕНИЯ КАПИТАЛА (или ИНВЕСТИЦИОННОЕ ИМУЩЕСТВО) – IAS 40 (short for International Accounting Standard No. 40) Investment Property – The objective of this Standard is to prescribe the accounting treatment for investment property and related disclosure requirements. Investment property is property (land or a building – or part of a building – or both) held (by the owner or by the lessee under a finance lease) to earn rentals or for capital appreciation or both, rather than for:- (a) use in the production or supply of goods or services or for administrative purposes; or (b) sale in the ordinary course of business. A property interest that is held by a lessee under an operating lease may be classified and accounted for as investment property provided that:- (a) the rest of the definition of investment property is met; (b) the operating lease is accounted for as if it were a finance lease in accordance with IAS 17 Leases; and (c) the lessee uses the fair value model set out in this Standard for the asset recognised. Investment property shall be recognised as an asset when, and only when:- (a) it is probable that the future economic benefits that are associated with the investment property will flow to the entity; and (b) the cost of the investment property can be measured reliably. An investment property shall be measured initially at its cost. Transaction costs shall be included in the initial measurement. The initial cost of a property interest held under a lease and classified as an investment property shall be as prescribed for a finance lease by paragraph 20 of IAS 17, ie the asset shall be recognised at the lower of the fair value of the property and the present value of the minimum lease payments. An equivalent amount shall be recognised as a liability in accordance with that same paragraph. The Standard permits entities to choose either:- (a) a fair value model, under which an investment property is measured, after initial measurement, at fair value with changes in fair value recognised in profit or loss; or (b) a cost model. The cost model is specified in IAS 16 and requires an investment property to be measured after initial measurement at depreciated cost (less any accumulated impairment losses). An entity that chooses the cost model discloses the fair value of its investment property. The fair value of investment property is the price at which the property could be exchanged between knowledgeable, willing parties in an arm's length transaction. An investment property shall be derecognised (eliminated from the balance sheet) on disposal or when the investment property is permanently withdrawn from use and no future economic benefits are expected from its disposal. Gains or losses arising from the retirement or disposal of investment property shall be determined as the difference between the net disposal proceeds and the carrying amount of the asset and shall be recognised in profit or loss (unless IAS 17 requires otherwise on a sale and leaseback) in the period of the retirement or disposal. / МСБУ 40 (сокращение для Международного Стандарта Бухгалтерского Учёта № 40) – .

INVESTMENT RISK GUARANTEE = ГАРАНТИЯ ПО РИСКАМ ВЛОЖЕНИЙ КАПИТАЛА (или ГАРАНТИЯ ПО ИНВЕСТИЦИОННЫМ РИСКАМ) – Investment Risk Guarantee (IRG):- scheme, usually government-operated, which covers a portion of the risks connected with investments abroad. In Switzerland, the investment risk guarantee program is regulated by a federal law dated 1970-March-20. The Federal Investment Risk Guarantee (IRG) is primarily designed to facilitate investment in developing countries and covers both participations and loans. It insures against risks arising from political events or government measures in the country of investment and against insolvency or refusal to pay by states and public enterprises.

INVESTMENTS = ВЛОЖЕНИЯ КАПИТАЛА (или ИНВЕСТИЦИИ, или ИНВЕСТИРОВАНИЯ) – Investments show the value (at cost) of Stocks owned in other companies.

INVESTMENT SAVING = СБЕРЕЖЕНИЕ ВЛОЖЕНИЙ КАПИТАЛА (или ИНВЕСТИЦИОННОЕ СБЕРЕЖЕНИЕ) – Investment Saving:- investment of savings in investment certificates (investment saving), fixed-income securities and shares.

INVESTMENT SAVINGS ACCOUNT = СЧЁТ СБЕРЕЖЕНИЙ ВЛОЖЕНИЙ КАПИТАЛА (или ИНВЕСТИЦИОННЫЙ СБЕРЕГАТЕЛЬНЫЙ СЧЁТ) – Investment Savings Account:- such accounts enjoy basically the same security, interest and withdrawal conditions as investment savings books, but take the form of an account.

INVESTMENT SECURITY = ЦЕННАЯ БУМАГА ВЛОЖЕНИЯ КАПИТАЛА (или ИНВЕСТИЦИОННАЯ ЦЕННАЯ БУМАГА) – Investment Security is a marketable security held by an investor as part of an income-producing portfolio. / Рыночная ценная бумага, удерживаемая инвестором как часть приносящего доход инвестиционного портфеля.

INVESTMENT TRUST = ТРЕСТ ВЛОЖЕНИЙ КАПИТАЛА (или ИНВЕСТИЦИОННЫЙ ТРЕСТ) – In the United Kingdom, Investment Trust is an institution that invests its capital in a wide range of other companies' shares. Investment trusts issue shares which are listed on the London Stock Exchange and use this capital to invest in the shares of other companies. See also Unit Trusts. Investment Trusts are public companies whose function is to manage shares and investments. They have a capital structure in the same way as other public companies and can raise both loan and equity capital. Most have quoted shares allowing small investors to gain exposure to the portfolio held by the investment trust. / Инвестиционный Трест:- учреждение в Соединённом Королевстве, которое инвестирует свой капитал в широкий диапазон акций других компаний. Инвестиционные тресты выпускают акции, которые котируются на Лондонской Фондовой Бирже (the London Stock Exchange), и используют этот капитал для инвестирования в акции других компаний.

INVESTOR = ВКЛАДЧИК КАПИТАЛА (или ИНВЕСТОР) – Investor is an organization, corporation, individual or other entity that acquires an ownership position in an investment, assuming risk of loss in exchange for anticipated returns. / На рынке закладных под Инвестором понимается юридическое или физическое лицо, приобретающее ценные бумаги, обеспеченные ипотечными кредитами, имитируемые кредиторами или операторами вторичного рынка. К ним относятся инвестиционные фонды, страховые компании, паевые инвестиционные фонды. Инвестор – частное лицо или институциональная организация, вкладывающая деньги с риском.

INVESTORS' ACCOUNT = СЧЁТ ВКЛАДЧИКОВ КАПИТАЛА (или ИНВЕСТОРСКИЙ СЧЁТ, или СЧЁТ ИНВЕСТОРОВ) – Investors' Account:- transaction account for private or institutional investment clients, normally used for the settlement of investment transactions; the account may be drawn on at any time.

INVESTORS' SAVINGS ACCOUNT = СБЕРЕГАТЕЛЬНЫЙ СЧЁТ ВКЛАДЧИКОВ КАПИТАЛА (или ИНВЕСТОРСКИЙ СБЕРЕГАТЕЛЬНЫЙ СЧЁТ, или СБЕРЕГАТЕЛЬНЫЙ СЧЁТ ИНВЕСТОРОВ) – Investors' Savings Account is an account yielding a preferential interest rate for private investment clients' medium-term savings deposits in combination with a securities safekeeping account and a corresponding transaction account. / Счёт Ответственного Хранения (Safekeeping Account).

INVISIBLE LOSSES = НЕВИДИМЫЕ ПОТЕРИ (или НЕРАЗЛИЧИМЫЕ ПОТЕРИ) – Invisible Losses are normal losses of weight of grain during normal handling. Shrinkage allowances are provided to prevent gross weight losses from affecting the net weight of an elevator's grain stocks. Invisible weight losses are primarily from:- (i) dust losses during handling; (ii) moisture losses during storage; and (iii) unexplained weight losses in oilseeds during storage.

INVISIBLES = НЕВИДИМЫЕ СТАТЬИ – Invisibles:- this refers to areas of non-merchandise 'invisible trade' that include expenses such as freight and insurance and most types of services and investment.

INVISIBLE SUPPLY = НЕВИДИМОЕ ПРЕДЛОЖЕНИЕ – Invisible Supply:- uncounted stocks of a commodity in the hands of wholesalers, manufacturers, and producers that cannot be identified accurately; stocks outside commercial channels but theoretically available to the market. See also Visible Supply.

IN VITRO = ИН ВИТРО (или В ПРОБИРКЕ, или В ЛАБОРАТОРНЫХ УСЛОВИЯХ) – In Vitro:- Latin:- meaning, outside the living cell. In a test tube or other artificial medium. Denotes the growth of explants in glass or other artificial environment. / Под Пробирками, от Немецкого слова Probieren, означающее Испытывать или Пробовать, от Латинского слова Probo, означающее Испытываю, понимаются трубки (в основном стеклянные), запаянные с одного конца. Вид химической лабораторной посуды. Пробирки предназначены для работы с небольшими количествами вещества.

IN VITRO SELECTION = СЕЛЕКЦИЯ ИН ВИТРО (или ОТБОР ИН ВИТРО) – In Vitro Selection is a selection for phenotypes (traits) expressed at the cellular or callus level which usually possess genetic changes that control the trait. / Под Селекцией, от Латинского слова Selectio, означающее Выбор или Отбор, понимается:- (1) раздел агрономии и зоотехнии, изучающий методы создания сортов и гибридов сельскохозяйственных растений и пород животных с нужными человеку признаками. (2) Отрасль сельскохозяйственного производства, занимающаяся выведением сортов и гибридов сельскохозяйственных культур, пород животных. Основные направления селекции:- (i) растений на урожайность или животных на продуктивность; (ii) на качество продукции; (iii) растений – на зимостойкость, засухоустойчивость, устойчивость к болезням и вредителям, приспособленность к высоким дозам удобрений и другого; (iv) животных – на плодовитость и другое. Методы селекции:- отбор, гибридизация, мутагенез.

IN VIVO = ИН ВИВО (или В ЖИВОМ ОРГАНИЗМЕ) – In Vivo:- Latin:- meaning, in real life; in the living cell.

INVOICE = СЧЁТ–ФАКТУРА – Invoice is a statement from a supplier, for goods and/or services supplied by him. An itemized list of goods shipped to a buyer, stating quantities, prices, shipping charges, etc. Invoice:- dated statement provided by a seller to a buyer showing the name of the seller and of the buyer, and itemizing the goods sold, prices and quantities. An invoice includes or implies a request for payment and indicates that the sales contract has been concluded. A Pro Forma Invoice (invoice 'as a matter of form') is an estimate, prepared by the seller in the form of an invoice, showing the exact prices and quantities on an order, before the sales contract is concluded. A pro forma invoice may be required to secure import or export licenses (see Documentary Credit). A Customs Invoice is a normal commercial invoice presented in the form required by the customs service of the importing country and showing delivery conditions, such as Free On Board (FOB), Cost, Insurance and Freight (CIF), etc. A Consular Invoice has been stamped by the consular or diplomatic authorities in the country of origin of an export. This is required by some countries. Such invoices must be prepared on official forms, often by a bank, and stamped by the consulate in the exporting country. See also Commercial Invoice, Consular Invoice, Customs Invoice, Final Invoice, Preliminary Invoice, Pro-Forma Invoice, and Provisional Invoice. Document which shows the terms of sale; contains full description of goods, sale price, charges, discounts, etc. Invoice is a document setting out in detail the goods consigned, marks and numbers, cost, any charges, and name of consignee. / Документ, показывающий все термины продажи и содержащий полное описание товаров, стоимость продажи, накладные расходы, скидки и тому подобное. Смотрите также Коммерческий Счёт-Фактура (Commercial Invoice), Консульский Счёт-Фактура (Consular Invoice), Таможенный Счёт-Фактура (Customs Invoice), Окончательный Счёт-Фактура (Final Invoice), Счёт-Фактура (Invoice), Предварительный Счёт-Фактура (Preliminary Invoice), Замещаемый Счёт-Фактура (Pro-Forma Invoice), и Условный Счёт-Фактура (Provisional Invoice). Счёт-Фактура – счёт, подготовленный продавцом товаров или услуг и представляемый покупателю. В этом счёте перечисляются все приобретённые товары и услуги, а также суммы покупок. Счёт-Фактура:- (1) документ выписывающийся продавцом на имя покупателя, удостоверяющий фактическую поставку товара или оказание услуг и их стоимость, после приёмки. Содержит подробное описание и цену поставленной продукции, номер отгрузочного документа, сумму счёта и иные

реквизиты. В установленных случаях может служить в качестве накладной, направляемой с товаром и сертификата о происхождении товара. (2) Документ, необходимый для осуществления процедуры внутреннего таможенного транзита; содержащий сведения, необходимые для таможенного контроля:- дату составления, наименование и почтовый адрес экспортёра и импортёра, номер и дату контракта, условия поставки, наименование и код товара, вид и качество грузовых мест и данные об их маркировке, вес брутто, стоимость товара в валюте, штамп экспортёра.

INVOICED SALES = ПРОДАЖИ, ПО КОТОРЫМ ВЫСТАВЛЕНЫ СЧЕТА–ФАКТУРЫ (или XX) – Invoiced Sales are sales that have been delivered and have been posted to the general ledger, creating a Debit Balance if unpaid at time of invoicing.

INVOICED VALUE ADDED TAX = ФАКТУРНЫЙ НАЛОГ НА ДОБАВЛЕННУЮ СТОИМОСТЬ (или XX) – Invoiced Value Added Tax (VAT) is the VAT payable on the sales of a producer; it is shown separately on the invoice which the producer presents to the purchaser.

INVOICE MASS = МАССА В СЧЁТЕ–ФАКТУРЕ – Invoice Mass is the mass indicated on the invoice and used as a commercial basis for charging. In BISFA (short for the Bureau International pour la Standardisation des Fibres Artificielles or The International Bureau for the Standardization of Man-made Fibres; headquartered in Brussels, Belgium) the invoice mass should not normally differ from the commercial mass by more than the tolerance of the invoice mass. See also Mass. / Международное Бюро по Стандартизации Искусственных Волокон (МБСИВ) или, как это звучит на Французском языке по месту регистрации, Бюро Этэрнасьёналь пур ля Стандардизасьён дэ Фибр Артифисибль (БИСФА; Bureau International pour la Standardisation des Fibres Artificielles (BISFA)).

INVOICE PRICE = ЦЕНА В СЧЁТЕ–ФАКТУРЕ (или ФАКТУРНАЯ ЦЕНА) – Invoice Price is the price fixed by the clearing house at which deliveries on futures are invoiced – generally the price at which the futures contract is settled when deliveries are made. Also known as Delivery Price.

INVOLUCRE = ПОКРЫВАЛЬЦЕ (или ОБВЁРТКА) – Involucre is a whorl of small leaves close underneath a flower or flower cluster. Involucre is a ring of bracts subtending a flower head. / Обвёртка соцветия. или рацемозное (ботрическое соцветие) или гроздь (cluster).

INVOLUNTARY DISSOLUTION = ПРЕКРАЩЕНИЕ ДЕЯТЕЛЬНОСТИ В ПРИНУДИТЕЛЬНОМ ПОРЯДКЕ – In the United States, Involuntary Dissolution is the termination of a corporation's legal existence pursuant to an administrative or judicial proceeding; dissolution forced upon a corporation rather than decided upon by the corporation. See also Administrative Dissolution, Dissolution, Judicial Dissolution, and Voluntary Dissolution. / Смотрите также Прекращение Деятельности (Dissolution), Прекращение Деятельности В Административном Порядке (Administrative Dissolution), Прекращение Деятельности В Добровольном Порядке (Voluntary Dissolution), и Прекращение Деятельности В Судебном Порядке (Judicial Dissolution).

INWARD CHARGES = СБОРЫ ПО ПРИБЫТИИ (или СБОРЫ ЗА ЗАХОД) – Inward Charges:- pilotage and other expenses incurred on entering port.

INWARD COLLECTION = ВХОДЯЩЕЕ ИНКАССО – Inward Collection:- entrusted by a foreign correspondent bank or an affiliated bank, and according to their instructions, the bank collects import payments and delivers relevant commercial documents to the importer. Classification:- inward collection has two forms including documents against payment (D/P) and documents against acceptance (D/A). Features:- (i) Low Cost:- low banking fees, help reduce financial expenses and control the costs; (ii) Easy To Use:- simple procedures and easy to use as compared L/Cs; (iii) Reduce Funds Occupation:- no advance payment required when the exporter prepares and ships the goods, the goods documents can be obtained immediately and the goods become disposable upon payment or acceptance; and (iv) Improve Cash Flow:- with D/A, the importer can immediately obtain the goods document and dispose the goods after acceptance, and can make payments later as the inflow of cash are generated by the sale of goods. With almost no occupation of funds, the company's financial position and solvency can be greatly improved. Target Customers:- (i) importers who wish to pay to exporters with lower cost and simpler procedures than L/Cs; (ii) importer with sufficient liquidity may use D/P; and (iii) importers with insufficient liquidity who need exporters to grant financing facility of forward payment may choose D/A provided that they have a good business relationship with exporters. Application Qualifications:- (i) the applicant shall be approved and registered in accordance with the law, and hold a business license that has passed the annual inspection or other valid certificates which fully prove its legal operation and scope of business; and (ii) the applicant shall have the qualification to engage in import and export trade. Required Documents:- applicants shall submit the following documents to the bank under D/P:- payment voucher and verification certificate of import trade payment in foreign exchange. Process:- (i) the foreign exporter initiates collection by submitting relevant documents to its bank after the preparation and shipment of goods; (ii) exporter's bank mails the collection documents to the bank of importer and the bank will notify the importer to pay (D/P) or accept (D/A) as instructed; (iii) after the importer has made payment or acceptance to the exporter via the bank, the bank shall release the documents to the importer; and (iv) when the acceptance under D/A is due, the importer shall pay to the exporter via the bank of importer. Kind Reminder:- (i) under D/A, importer must make acceptance of the forward draft and make payments as the draft is due, as required; and (ii) importer may also apply for trade finance such as import advance under documentary credit or overseas import bill advance from the bank of importer.

INWARD FOREIGN MANIFEST = МАНИФЕСТ ПО ПРИХОДУ О СОДЕРЖИМОМ ИНОСТРАННОГО ПРОИСХОЖДЕНИЯ – Inward Foreign Manifest:- a complete listing of all cargo entering the country of discharge. Required at all world ports and is the primary source of cargo control, against which duty is assessed by the receiving country. / груза, пребывающего в страну разгрузки.

INWARD PROCESSING RELIEF = ОСВОБОЖДЕНИЕ ОТ ОПЛАТЫ ПОШЛИН ПРИ ПЕРЕРАБОТКЕ ВНУТРИ СТРАНЫ – Inward Processing Relief (IPR) is a customs procedure providing import duty relief for goods imported into the country for process and export outside the country. See also Outward Processing Relief.

INWARD REINSURANCE = ВХОДЯЩЕЕ ПЕРЕСТРАХОВАНИЕ – Inward Reinsurance:- reinsurance that is assumed by a Lloyd's syndicate or other carrier as distinct from outward reinsurance. / синдикатом Лойда или иным перевозчиком .

INWARD REMITTANCE = ВХОДЯЩЕЕ ПЕРЕЧИСЛЕНИЕ – Inward Remittance:- the service of paying the amounts to the designated payee as instructed by the foreign remitting bank. Category:- the product is used for international settlement of fund transfer/remittance. Methods of remittance include telegraphic transfer, mail transfer and draft transfer, the latter two methods are normally used now. Features:- (i) Low Cost:- compared with L/C and collection, remittance is easy to use with low cost; (ii) Fast Process:- telegraphic transfer is fast and helpful for exporters to collect payments timely and accelerate capital turnover; and (iii) Simple Operation:- it is simple to process and widely applicable. Scope of Application:- (i) customers who want faster fund circulation or lower financial cost may choose inward remittance; and (ii) remittance should be used for settlement under non-trading and capital items. Application Qualifications:- legally approved and registered with annually checked business license and other documents effectively proving its legal status and business scope. Process (solid line for Telegraphic transfer and Mail transfer, dotted lines for Draft transfer):- (i) the bank of exporter receives remittance instruction telegraph (under T/T) or instruction letter (under M/T) from the

foreign remitting bank, or the draft transfer presented by the payee to the bank of exporter (under D/T); and (ii) the bank of exporter will pay the remittance to the payee after verifying the above instruction telegraph, letter or draft and receiving position. Kind Reminder:- (i) if you have opened an account with the remittance paying bank, the bank will credit the remitted amounts into the account; if you haven't such account, then the bank will process transfer for you in a reasonable way; and (ii) please timely contact the bank if you do not receive the remittance.

IN–WELL TRANSFER = ПЕРЕДАЧА ВНУТРИ ХРАНИЛИЩА (или ПЕРЕДАЧА НА СКВАЖИНЕ) – In-Well Transfer is an inventory transfer of propane held in underground caverns or storage.

IO = BRITISH INDIAN OCEAN TERRITORY

IO = INTEGRATED OPERATIONS

IO = INTEREST–ONLY STRIP

IOC = INTERNATIONAL OLYMPIC COMMITTEE

IOC ORDER = IMMEDIATE OR CANCEL ORDER

IODINE VALUE = ЙОДНОЕ ЧИСЛО (или ИОДНОЕ ЧИСЛО) – Iodine Value is a measure of the total amount of unsaturated fatty acids in an oil. In flaxseed, iodine values of 189 or greater are required for the manufacture of paints and inks. Lower values, around 182, are needed for the manufacture of linoleum. Iodine Value is a measure of the degree of unsaturated hydrocarbons in oils and fats. Iodine Value is a measure of the number of unsaturated carbon-carbon double bonds in a vegetable oil molecule. By titrating the oil with iodine, which reacts at the double bond sites, the number of such sites can be measured. Double bonds in vegetable oils make the molecules less flexible, and mean that they solidify at a lower temperature. In liquid biuofuel applications this gives a lower cold filter plugging point (CFPP) or cloud point. While this makes it good for use in cooler temperatures, double bonds can allow polymerization, leading to the formation of lacquers and possibly blockage and damage to engine or fuel train components. / Йодное Число – показатель содержания непредельных жирных кислот в жире или масле, выражаемый количеством йода в граммах, присоединяющегося к 100 граммам исследуемого органического вещества. Иодное Число, масса йода (или иода) (в граммах (г)), присоединяющегося к 100 г органического вещества. Иодное число, которое характеризует содержание двойных связей в ненасыщенном соединении, определяют при исследовании жиров (смотрите Животные Жиры), а также при анализе жирных кислот (смотрите Карбоновые Кислоты) и установлении содержания реагирующих с иодом примесей в ароматических углеводородах. В некоторых случаях при определении иодного числа устанавливают массу более легко присоединяющегося брома и вычисляют эквивалентную ей массу иода.

IOM = INDEX AND OPTION MARKET

IOM = INTERNATIONAL ORGANIZATION OF MIGRATION

IOMA = INTERNATIONAL OPTIONS MARKET ASSOCIATION

ION = ИОН – Ion is an electrically charged particle resulting from adding or removing electrons to an atom or a group of bonded atoms. Many chemicals ionize in solutions in water. For example sodium chloride in solution ionizes to positively charged sodium ions (Na^+) and negatively charged chlorine ions (Cl^-) – one electron that was shared between the sodium and the chlorine in the molecular form of salt leaves the chlorine and goes with the sodium (sodium chloride is actually an ionic solid). Some chemicals used in dyeing, such as acetic acid and sodium carbonate, partially ionize in solution, with some remaining in intact molecular form. With chemicals of this nature, if some of the ions in solution are used up in reactions, more of the molecules will ionize. Ion is a positively or negatively charged atom or molecule. British physicist and chemist Michael Faraday (22 September 1791 – 25 August 1867; best known for his discoveries of electromagnetic induction and of the laws of electrolysis). / Под Ионами, от Греческого слова Iōn, означающее Идущий, понимаются электрически заряженные атомы или группы атомов, образующиеся при потере или присоединении одного или нескольких электронов (или других заряженных частиц) к атомам или группам атомов или химически связанным атомным группам. Заряд иона кратен заряду электрона. Делятся на 2 типа:- катионы (положительно заряженные), например, Fe^{2+}, Fe^{3+}, NH_4^+, и анионы (отрицательно заряженные), например, Cl^-, CO_3^{2-}. В виде самостоятельных частиц ионы встречаются во всех агрегатных состояниях вещества – в газах (в частности, в атмосфере), в жидкостях (в расплавах и растворах), в кристаллах (ионные кристаллы, например, Na^+Cl^-). Термин был предложен Английским физиком Майкэлом Фарэдэем (1791–1867; Michael Faraday) в 1834.

ION EXCHANGE = ИОННЫЙ ОБМЕН – Ion Exchange is a transfer of ions between two electrolytes or between an electrolyte solution and a complex. The term normally denotes the processes of purification, separation and decontamination of aqueous and other ion-containing solutions with an insoluble (usually resinous) solid. / Ионный Обмен – обмен ионов в растворах электролитов (гомогенный ионный обмен). При смешении разбавленных растворов электролитов, например, NaCl и KNO_3 в смеси присутствуют ионы Na^+, K^+, NO_3^- и Cl^-. Равновесное состояние выразится в этом случае уравнением:- $NaCl + KNO_3 \leftrightarrow NaNO_3 +$ KCl (реакция двойного обмена). Если одно из веществ, могущих получиться при взаимодействии, диссоциировано меньше других, равновесие сдвигается в сторону образования малодиссоциированного вещества. Равновесие сдвигается также в сторону образования летучего или малорастворимого продукта (если он выделяется из данной фазы) по реакциям:- $H_2SO_4 + 2KCN \leftrightarrow K_2SO_4 + 2HCN\uparrow$, $NaCl + AgNO_3 \leftrightarrow NaNO_3 + AgCl\downarrow$. При выпаривании равновесного раствора прежде всего начинается кристаллизация соли (комбинации ионов), обладающей меньшей растворимостью. Избирательность кристаллизации может быть вызвана также добавлением органических растворителей (спирт, ацетон, диоксан и тому подобное). При гетерогенном ионном обмене (ионообменная сорбция) обмен происходит между ионами, находящимися в растворе, и ионами, присутствующими на поверхности твёрдой фазы – ионита. При соприкосновении ионита, насыщенного одним ионом, например H^+, с раствором, содержащим другие ионы, например, Na^+ и Ca^{2+}, происходит обмен ионов между раствором и ионитом:- в растворе уменьшаются концентрации Na^+ и Ca^{2+} и появляется эквивалентное количество ионов H^+. Гетерогенный ионный обмен имеет место при сорбции из растворов электролитов на некоторых минералах (алюмосиликатах, гидратах окисей металлов, цеолитах), в клетках и мембранах живых организмов и в синтетических ионообменных сорбентах. Гетерогенный ионный обмен широко применяется для обессоливания воды, идущей для питания котлов паром высоких параметров, в гидрометаллургии, в химической и фармацевтической промышленности (смотрите Иониты).

IONIC BOND = ИОННАЯ СВЯЗЬ (или ЭЛЕКТРОВАЛЕНТНАЯ СВЯЗЬ, или ГЕТЕРОПОЛЯРНАЯ СВЯЗЬ) – Ionic Bond is a chemical bond as a result of electrical attraction between positive and negative ions; also called Salt Linkage. In ionic bonding, typically an electron is transferred from one atom to another, leaving one with a positive charge and one with a negative charge. These electrical charges produce strong attraction between the differently charged ions. Ionic bonds are quite strong, but not generally as

strong as covalent bonds (where pairs of electrons are shared equally) between nuclei. Such bonds are important with acid dyes and basic (cationic) dyes. / Ионная Связь (электровалентная, гетерополярная).

IONIZING RADIATION = ИОНИЗИРУЮЩАЯ РАДИАЦИЯ – Ionizing Radiation:- charged particles and electromagnetic waves that as a result of physical interaction create ions by either primary or secondary processes. / заряженные частицы . Под Ионизирующим Излучением понимаются потоки частиц и квантов электромагнитного излучения, прохождение которых через вещество приводит к ионизации и возбуждению его атомов или молекул. Это электроны, позитроны, протоны, нейтроны и другие элементарные частицы, а также атомные ядра и электромагнитное излучение гамма-, рентгеновского и оптического диапазонов. В случае нейтральных частиц (γ-кванты, нейтроны) ионизацию осуществляют вторичные заряженные частицы, образующиеся при взаимодействии нейтральных частиц с веществом (электроны и позитроны – в случае γ-квантов, протоны или ядра отдачи – в случае нейтронов).

IONOMER = ИОНОМЕР – Ionomer is a polymer having covalent bonds between the constituents of the long-chain molecules and ionic bonds between the chains. / и ионные связи между .

I–O PAYMENT ARM = INTEREST–ONLY PAYMENT ADJUSTABLE–RATE MORTGAGE

IOR = IMPROVED OIL RECOVERY

IOR = INCREASED OIL RECOVERY

IORD = INTERNATIONAL ORGANIZATION FOR RURAL DEVELOPMENT

IOSCO = INTERNATIONAL ORGANIZATION OF SECURITIES COMMISSIONS

IOU = I OWE YOU

I OWE YOU = Я ДОЛЖЕН ВАМ (или ДОЛГОВАЯ РАСПИСКА) – 'I Owe You' (IOU) is a non-negotiable written note recording a debt. A promise to pay a debt, especially a signed paper stating the specific amount owed and often bearing the letters IOU. An IOU in the business community is actually a legally binding agreement between a borrower and a lender. The terms of the loan are set out in a contract, and, once it's signed, the two parties must abide by the terms of the contract or face legal repercussions. For example, when a corporation issues bonds, it is in essence issuing an IOU to bondholders. The IOU or bond contract sets out the terms, including the principal that will be owed, the interest that will be paid, and the time at which these payments will occur. / Документ в письменной форме, признающий наличие долга, что обычно записывается в форме 'Я Должен Вам …'. Это не переуступаемый инструмент (negotiable instrument) и не долговое обязательство (promissory note), и потому он не требует печати, за исключением случаев, когда в нём содержится обещание об уплате долга. Тем не менее, такой документ может использоваться в качестве юридического подтверждения наличия долга.

IP = IMPORT PERMIT

IP = INTELLECTUAL PROPERTY

IP = INTERNET PROTOCOL

IPA = INTERNET PURCHASING APPLICATION

IP ADDRESS = ИП АДРЕС (или АЙ.ПИ. АДРЕС) – IP Address or ips refers to the unique network address of a visitor to a website. A unique identifier of computers and/or networks linked to the Internet. / Уникальный идентификатор компьютеров и/или сетей, подключённых к Интернету.

IPB = INSTITUTE OF PLANT BREEDING

IPC = INTERLINKING PROCESSING COMPONENT

IPCA = BRAZILIAN CONSUMER PRICE INDEX

IPCC = INTERGOVERNMENTAL PANEL ON CLIMATE CHANGE

IPCO = INITIAL PUBLIC COIN OFFERING

IPE = THE INTERNATIONAL PETROLEUM EXCHANGE

IPEA = INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY

IPER = INTERNATIONAL PRELIMINARY EXAMINING REPORT

IPGRI = INTERNATIONAL PLANT GENETIC RESOURCES INSTITUTE

IPI = INLAND POINT INTERMODAL

IPI = INTERNATIONAL PAYMENT INSTRUCTION

IPL = INVESTMENT PRODUCT LINE

IPM = INTEGRATED PEST MANAGEMENT

IPMN = INTEGRATED PEST MANAGEMENT NETWORK

IPMRN = INTEGRATED PEST MANAGEMENT RESEARCH NETWORK

IPO = INITIAL PUBLIC OFFERING

IPO = INTELLECTUAL PROPERTY OWNERS ASSOCIATION

IPP = INDEPENDENT POWER PRODUCER

IPPC = THE INTERNATIONAL PLANT PROTECTION CENTER

IPPC = THE INTERNATIONAL PLANT PROTECTION CONVENTION

IPR = INTELLECTUAL PROPERTY RIGHTS

IPR = INWARD PROCESSING RELIEF

IQ = IRAQ

IQD = IRAQI DINAR

IQF RICE = INDIVIDUALLY QUICK FROZEN RICE

IR = INFRARED SPECTROPHOTOMETRY

IR = INVESTOR RELATIONS

IR = IRRIGATED RICE

IR = ISLAMIC REPUBLIC OF IRAN

IRA = INDIVIDUAL RETIREMENT ACCOUNT

IRA = INSTITUTE OF AGRONOMIC RESEARCH

IRAEN = INTERNATIONAL RICE AGRO–ECONOMIC NETWORK

IRAF = INSTITUT DE RECHERCHES AGRONOMIQUES ET FORESTIÈRES

IRALON = INTERNATIONAL RICE ACID LOWLAND SOILS OBSERVATIONAL NURSERY

IRALSN = INTERNATIONAL RICE ACID LOWLAND SOIL NURSERY

IRAM = INSTITUT DE RECHERCHES ET D'APPLICATIONS DE MÉTHODES DE DÉVELOPPEMENT = INSTITUTE OF RESEARCH AND APPLICATION OF DEVELOPMENT METHODS

IRAT = INSTITUT DE RECHERCHES AGRONOMIQUES TROPICALES ET DES CULTURES VIVRIÈRES = INSTITUTE FOR RESEARCH IN TROPICAL AGRICULTURE

IRAUSN = INTERNATIONAL RICE ACID UPLAND SOIL NURSERY

IRB = INDUSTRIAL REVENUE BOND

IRB = INVESTMENT REVIEW BOARD

IRBBN = INTERNATIONAL RICE BACTERIAL BLIGHT NURSERY

IRBN = INTERNATIONAL RICE BLAST NURSERY

IRBN–L = INTERNATIONAL RICE BLAST NURSERY – LOWLAND

IRBN–U = INTERNATIONAL RICE BLAST NURSERY – UPLAND

IRBON = INTERNATIONAL RICE BORO OBSERVATIONAL NURSERY

IRBPHN = INTERNATIONAL RICE BROWN PLANTHOPPER NURSERY

IRC = INTERNAL REVENUE CODE

IRC = INTERNATIONAL RICE COMMISSION

IRC = INTERROW CULTIVATION

IRCTN = INTERNATIONAL RICE COLD TOLERANCE NURSERY

IRD = INSTITUT DE RECHERCHE POUR LE DÉVELOPPEMENT = INSTITUTE OF RESEARCH FOR DEVELOPMENT

IRDP = INTEGRATED RURAL DEVELOPMENT PROGRAMME

IRDSN = INTERNATIONAL RICE DROUGHT SCREENING NURSERY

IRDTN = INTERNATIONAL RICE DROUGHT TOLERANCE NURSERY

IRDWON = INTERNATIONAL RICE DEEP WATER OBSERVATIONAL NURSERY

IRDWYN = INTERNATIONAL RICE DEEP WATER YIELD NURSERY

IRFAON = INTERNATIONAL RICE FINEGRAIN AROMATIC OBSERVATIONAL NURSERY

IRG = INVESTMENT RISK GUARANTEE

IRGA = INSTITUTO RIO GRANDENSE DO ARROZ

IRGC = INTERNATIONAL RICE GERMPLASM CENTER

IRGD = IRRIGATED VILLAGE DUMMY

IRGMN = INTERNATIONAL RICE GALL MIDGE NURSERY

IRHON = INTERNATIONAL RICE HYBRID OBSERVATIONAL NURSERY

IRIDESCENT = ПЕРЕЛИВАЮЩАЯСЯ (или ИРИЗИРУЮЩАЯ, или ПЕРЕЛИВЧАТАЯ, или РАДУЖНАЯ) – Iridescent:- fabric woven with yarns of one color in the warp and another color in the filling so that the fabric seems to change color as the light strikes it. Other names for this type of fabric are changeable and shot. / уточина.

IRIDIUM = ИРИДИЙ – Iridium:- chemical symbol Ir. Its specific gravity is 22.50 and its melting point is 1 539 °C. / Под Иридием, от Греческого слова Iris, означающее Радуга (из-за разнообразия окраски его солей), Латинское название Iridium, символ Ir, понимается химический элемент VIII группы Периодической Системы Менделеева. Атомный номер 77, атомная масса 192.22, относится к платиновым металлам. Иридий – серебристо-белый металл; плотность 22 420–22 650 кг/м^3, $t_{пл}$ 2 447–2 450 °C. В природе встречается редко, главным образом в виде осмистого Иридия, который входит в состав самородной Платины. Получают Иридий избирательным осаждением его соединений из раствора платиновых металлов. Применяют для нанесения защитных покрытий на электроконтакты, изготовления тиглей для плавки лазерных материалов и искусственных ювелирных камней, изготовления электродов и термопар. Является компонентом сплавов с Вольфрамом, Осмием, Палладием, Платиной, Рутением и другими (химическая аппаратура, эталоны метра и килограмма (из сплава Платины (90%) и Иридия (10%)), детали измерительных приборов, напайка 'вечных перьев'), обладающих высокими твёрдостью и износостойкостью.

IRIS = INARIHAN RIVER IRRIGATION SYSTEM

IRISH LACE = ИРЛАНДСКОЕ КРУЖЕВО – The term Irish Lace can be used to refer to any lace made in Ireland, but crocheted laces are those most often given the name. Embroidered nets are another type of Irish lace. See also Crocheted Lace. / Смотрите также Вязаное Кружево (Crocheted Lace).

IRISH LINEN = ИРЛАНДСКОЕ ЛЬНЯНОЕ – Irish Linen refers to linen items from Northern Ireland and Eire.

IRISH PENNANT = ИРЛАНДСКИЙ ВЫМПЕЛ (или ИРЛАНДСКИЙ ШКЕНТЕЛЬ) – Irish Pennant (maritime term):- an untidy loose end of a rope (or rags). / Незакреплённый (болтающийся) конец троса.

IRISH REALTIME INTERBANK SETTLEMENT SYSTEM = ИРЛАНДСКАЯ СИСТЕМА МЕЖБАНКОВСКИХ РАСЧЁТОВ В РЕЖИМЕ РЕАЛЬНОГО ВРЕМЕНИ – In 1980 the Central Bank of Ireland established the Daily Interbank Settlement system (DIS) and through this medium provided settlement account services to credit institutions. The DIS was replaced by the RTGS system, known as IRIS, which was introduced in March 1997. The RTGS system is fully automated and consists of two major components, the Central Accounting System (or CAS, for which the software is provided by Logica) and the messaging system (SWIFT). All participants hold settlement accounts at the Central Bank of Ireland and must also be members of IRISCo. The RTGS system is essentially the settlement account system of the Central Bank of Ireland. The IRIS RTGS system is interlinked to the TARGET system. In Ireland, large-value payments and interbank settlements are effected using a fully automated RTGS system known as IRIS, an acronym derived from the name of the company which owns the system, the Irish Real-time Interbank Settlement Company Limited (IRISCo). The RTGS system, which commenced operations in March 1997, is managed and operated by the Central Bank of Ireland and is interlinked with the TARGET system. Prior to the introduction of RTGS, large-value payments and interbank settlements were carried out via the Daily Interbank Settlement system (DIS), an endof-day gross settlement system. There is no largevalue netting system in Ireland. There are three main clearing systems in Ireland – IRIS, IRECC and IPCC. IRIS is Ireland's TARGET-linked RTGS system. There are two multilateral net settlement systems for retail payments – IRECC processes electronic payments and IPCC processes paper payments. The Irish Realtime Interbank Settlement Company Limited (IRIS) was incorporated on 1995-May-30 to allow IRIS members to purchase and establish a real-time gross settlement system (RTGS) to facilitate real-time gross settlement in Irish pounds in Ireland. This RTGS system became fully operational in March 1997 and is now the RTGS system for the settlement of Euro. The RTGS system is managed and operated by the Central Bank of Ireland and is interlinked with the TARGET System – the Trans-European Automated Real-time Gross Settlement Express Transfer system. TARGET is the European real-time gross settlement system for the Euro which commenced operations on 1999-January-04. TARGET consists of 15 national real-time gross settlement (RTGS) systems and the payment mechanism of the European Central Bank. All these systems are interlinked so as to provide an EU-wide uniform platform for the processing of cross-border Euro payments. / взаиморасчёт или сведение (netting) . системы валовых расчётов в режиме реального времени (ВРРРВ) ТАСВРРУП (Трансевропейская Автоматизированная Система Валовых Расчётов в Режиме Реального Времени по Ускоренным Переводам) или ТАСВРРЭП (Трансевропейская Автоматизированная Система Валовых Расчётов в Режиме Реального Времени по Экспресс Переводам). Сообщество по Всемирной Межбанковской Финансовой Дальней Связи (СВМФДС; The Society for Worldwide Interbank Financial Telecommunication (SWIFT)). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо).

IRISH TWEED = ИРЛАНДСКИЙ ТВИД – Irish Tweed is a tweed made in Ireland, Northern Ireland, or Eire. These tweeds generally can be distinguished by a white warp and colored filling threads. / белыми основными и цветными уточными нитями.

IRIS SYSTEM = IRISH REALTIME INTERBANK SETTLEMENT SYSTEM

IRLON = INTERNATIONAL RAINFED LOWLAND RICE OBSERVATIONAL NURSERY

IRLYN = INTERNATIONAL RAINFED LOWLAND RICE YIELD NURSERY

IRLYN–E = INTERNATIONAL RAINFED LOWLAND RICE YIELD NURSERY – EARLY

IRLYN–M = INTERNATIONAL RAINFED LOWLAND RICE YIELD NURSERY – MEDIUM

IRM = INSTALLED RESERVE MARGIN

IRON = INTERNATIONAL RICE OBSERVATIONAL NURSERY

IRON–E = INTERNATIONAL RICE OBSERVATIONAL NURSERY – EARLY

IRON–M = INTERNATIONAL RICE OBSERVATIONAL NURSERY – MEDIUM

IRON–VE = INTERNATIONAL RICE OBSERVATIONAL NURSERY – VERY EARLY

IRON GRAY = СЕРО–СТАЛЬНОЕ (или ЖЕЛЕЗНОЕ СЕРОЕ) – Iron Gray:- a slightly greenish dark gray.

IRON SULFATE = СУЛЬФАТ ЖЕЛЕЗА – Iron Sulfate (iron (II) sulfate, read iron two sulfate), ferrous sulfate, $FeSO_4$ (archaic terms include copperas, green vitriol and iron vitriol). Iron (II) sulfate is a common mordant for natural dyes. Solutions are not very stable, since reaction with air will cause precipitation of insoluble iron oxide. Fabric can be colored by dipping into a solution of iron sulfate, then hanging in a moist environment to allow conversion to iron oxide (rust). Post-treatments such as tannic acid can be used to alter the color. / Дубильная Кислота или Дигалловая Кислота (Tannic Acid). зелёный витриол или зелёный купорос (green vitriol) и витриол железа или железный купорос (iron vitriol).

IRON TOXICITY = ТОКСИЧНОСТЬ ЖЕЛЕЗА – Iron Toxicity is a disorder that occurs when the iron concentration in the soil solution is high. The symptoms of iron toxicity are many tiny brown spots on the green leaves which start from the tips and develop into a general browning of the leaf blades followed by the death of lower leaves. / расстройство, которое возникает . Под Токсичностью, от Греческого слова Toxikón, означающее Яд, понимается способность некоторых химических соединений и веществ биологической природы оказывать вредное действие на организм животных, растений и человека.

IRON TRIANGLES = ЖЕЛЕЗНЫЕ ТРЕУГОЛЬНИКИ – Iron Triangles are the closed, mutually supportive relationships that often prevail in the United States between the government agencies, the special interest lobbying organizations, and the legislative committees or subcommittees with jurisdiction over a particular functional area of government policy. As long as they hang together, the members of these small groups of movers and shakers tend to dominate all policy-making in their respective specialized areas of concern, and they tend to present a united front against 'outsiders' who attempt to invade their turf and alter established policies that have been worked out by years of private negotiations among the 'insiders'. The middle-level bureaucrats who run the agencies may use their special friends in Congress to block the efforts of a new President or a new Congressional majority leadership bent on reforming or reducing the size of their agencies. The Congressmen and Senators on the oversight committees can count upon their

friends in the agencies to continue 'pet' programs and pork-barrel projects important to their local constituencies or even to do special favors for their political supporters and financial backers. Lobbying organizations provide useful information to the committees and the agencies, provide campaign support for the relevant Congressmen, and often help to mobilize public opinion in favor of larger appropriations and expanded programs for 'their' part of the government bureaucracy. In return, they tend to be consulted and carefully placated when new laws or administrative regulations or important appointments affecting their special interests are being made. These triangles are said to be 'strong as iron' in that these mutually supportive relationships are often so politically powerful that representatives of the more general interests of society are usually effectively prevented from 'interfering' with policy-making altogether whenever their concept of the general interest runs counter to the special interests of the entrenched interest groups, bureaucrats and politicians.

IRR = INTEREST RATE RISK

IRR = INTERNAL RATE OF RETURN

IRR = IRANIAN RIAL

IRRADIANCE = СИЯНИЕ (или СВЕЧЕНИЕ, или БЛЕСК, или ОБЛУЧЕНИЕ, или ИЗЛУЧЕНИЕ) – Irradiance is a radiant flux density on a given surface usually expressed in watts per square centimeter or square meter. Irradiance is the amount of light energy illuminating the Earth per unit area. / , от Латинского слова Irradio, означающее Испускаю Лучи или Озаряю или Свечусь или Сияю, . Под Блеском понимается качественная характеристика свойства поверхности, отражающей свет. Строгого научного определения понятия Блеск не существует. Под Блеском или Освещённостью небесного светила понимается создаваемая светилом в месте наблюдения на перпендикулярной к лучам плоскости (влияние атмосферы не учитывается); измеряется в звёздных величинах. Под Облучением понимается воздействие излучений (инфракрасного (ИК), ультрафиолетового (УФ), ионизирующего) на вещество или биологические объекты с лечебной целью (например, УФ или лучевая терапия), случайное (например, авария) и у лиц, работающих с источниками излучений.

IRRADIATION = ИРРАДИАЦИЯ (или ОБЛУЧЕНИЕ) – Irradiation (genetics and plant breeding) is an exposure of plants or plant parts to radiation to increase mutation rates. Irradiation is a treatment with any type of ionizing radiation. / В оптике под Иррадиацией, от Латинского слова Irradio, означающее Испускаю Лучи или Сияю, понимается кажущееся увеличение размеров светлых фигур на чёрном фоне по сравнению с тёмными фигурами равной величины на белом фоне (положительная иррадиация) или при малых яркостях фона – обратная картина (отрицательная иррадиация). Под Облучением понимается воздействие излучений (инфракрасного (ИК), ультрафиолетового (УФ), ионизирующего) на вещество или биологические объекты с лечебной целью (например, УФ или лучевая терапия), случайное (например, авария) и у лиц, работающих с источниками излучений.

IRREGULAR FLOWER = НЕПРАВИЛЬНЫЙ ЦВЕТОК (или ИРРЕГУЛЯРНЫЙ ЦВЕТОК) – Irregular Flower is a flower in which similar parts are unequal in size, form or extent of fusion as in, e.g., Leguminosae (Pea Family). Often bilaterally symmetrical. See also Zygomorphic. / Смотрите также Зигоморфный (Zygomorphic). Под Иррегулярным, от позднелатинского слова Irregularis, означающее Неправильный, или Неправильным Цветком понимается цветок .

IRREGULAR GAUGE OF STITCHING = НЕРЕГУЛЯРНАЯ ПЕТЛЯ СТРОЧКИ – Irregular Gauge Of Stitching:- not using correct sewing machine or using single needle machine where a multiple needle machine is required. Sewing Room Defects. / втачивание (stitching). Порок или дефект швейного производства.

IRREGULAR PICK DENSITY = НЕПРАВИЛЬНАЯ ПЛОТНОСТЬ ПО ПОПЕРЕЧНОЙ НИТИ (или ИРРЕГУЛЯРНАЯ ПЛОТНОСТЬ ПО ПОПЕРЕЧНОЙ НИТИ) – Irregular Pick Density:- if the pick density that is pick per inch varies due to mechanical fault then thick or thin place may be formed in the fabric.

IRREGULAR REPPINESS = XX – Irregular Reppiness is characterized by the prominance of alternate picks over small areas on one face of the fabric. The following precautions can help to minimize the occurrence of repiness:- (i) worn out tappets and tradle bowls should be replaced; (ii) the back rest should be raised by about 4 cm with respect to the fell line; (iii) the emery rolles should be in good condition; and (iv) an increase in warp tension within workable limits helps to reduce this defects. / Порок или дефект.

IRREGULARITY U = НЕРЕГУЛЯРНОСТЬ Ю. (или НЕПРАВИЛЬНОСТЬ Ю., или НЕСИММЕТРИЧНОСТЬ Ю.) – Irregularity U of the mass with a cut length of approximately 1 cm (measuring field length). In other words, this is the U value you would have got from cutting the yarn into approximately 1 cm sections and weighing those short sections.

IRRESPECTIVE OF PERCENTAGE = НЕЗАВИСИМО ОТ ПРОЦЕНТНОГО СОДЕРЖАНИЯ – Irrespective Of Percentage:- this term was often seen in cargo insurance contracts when the SG (ships and goods) policy was in use. Its effect was to make claims payable without reference to the FPA (free of particular average) warranty or the franchise expressed in the memorandum in the policy form. With the abrogation of the SG policy for cargo insurances, the term has fallen into disuse in the London market. Letter of Credit wordings requiring no deductible/excess. / С аброгацией (отменой устаревшего) полиса . ручательство (warranty).

IRREVOCABLE LETTER OF CREDIT = БЕЗОТЗЫВНЫЙ АККРЕДИТИВ – An Irrevocable Letter of Credit is one which obligates the issuing bank to pay the exporter when all terms and conditions of the letter of credit have been met. None of the terms and conditions may be changed without the consent of all parties to the letter of credit. Letter of credit in which the specified payment is guaranteed by the bank if all terms and conditions are met by the drawee and which cannot be revoked without joint agreement of both the buyer and the seller. / банк, открывший аккредитив. бенефициар . если все порядки и условия . Безотзывный Аккредитив – аккредитив, который не может быть изменён или аннулирован банком эмитентом без предварительного уведомления бенефициара и получения его согласия на изменение или анну ляцию аккредитива. Безотзывный Аккредитив:- твёрдое обязательство банка-эмитента произвести платежи, акцептовать или купить переводные векселя, выставленные бенефициаром (получателем денег), при предоставлении банку коммерческих документов, предусмотренных аккредитивом, и соблюдении бенефициаром всех его условий. В нём указывается срок, до истечения которого аккредитив не может быть отозван.

IRREVOCABLE TRANSFER = БЕЗОТЗЫВНЫЙ ПЕРЕВОД – Irrevocable Transfer is a transfer that the transferor cannot revoke. / Перевод, который не может быть отозван плательщиком обратно.

IRRI = INTERNATIONAL RICE RESEARCH INSTITUTE

IRRI–BN = INTERNATIONAL RICE RESEARCH INSTITUTE – BLAST NURSERY

IRRIGATED RICE = ПОЛИВНОЙ РИС (или ОРОШАЕМЫЙ РИС, или РИС С ОРОШАЕМЫХ ЗЕМЕЛЬ, или ИРРИГАЦИОННЫЙ РИС) – Irrigated Rice is a Rice which is supplementary or fully supported with water supplied by artificial means. / Под Ирригацией, от Латинского слова Irrigatio, понимается то же, что Орошение – подвод воды на поля, испытывающие недостаток влаги, и

увеличение её запасов в почве; вид мелиорации. Различают орошение регулярное и периодическое – 1 раз в год (лиманное). В 1980 мировая площадь орошаемых земель составляла свыше 230 миллионов га (наибольшие – в Китае, Индии, Соединённых Штатах Америки (США), Италии, Болгарии, Франции); в бывшем Союзе Советских Социалистических Республик (СССР) (в 1984) 19.5 миллионов га (Средняя Азия, Юг Украины, Молдавия, Северный Кавказ).

IRRIGATED RICELAND = ОРОШАЕМАЯ РИСОВАЯ ЗЕМЛЯ (или ПОЛИВНАЯ РИСОВАЯ ЗЕМЛЯ, или ИРРИГАЦИОННАЯ РИСОВАЯ ЗЕМЛЯ) – Irrigated Riceland:- Rice areas that have assured irrigation for one or more crops per year. Some areas are served only by supplemental irrigation in the wet season.

IRRIGATION = ИРРИГАЦИЯ (или ОРОШЕНИЕ) – Irrigation is the artificial supply of water to areas by ditches, pipes, etc by pumping or gravitation to the soil for the purpose of growing crops. / Под Ирригацией, от Латинского слова Irrigatio, понимается то же, что Орошение – подвод воды на поля, испытывающие недостаток влаги, и увеличение её запасов в почве; вид мелиорации. Различают орошение регулярное и периодическое – 1 раз в год (лиманное). В 1980 мировая площадь орошаемых земель составляла свыше 230 миллионов гектаров (га) (наибольшие – в Китае, Индии, Соединённых Штатах Америки (США), Италии, Болгарии, Франции); в бывшем Союзе Советских Социалистических Республик (СССР) (в 1984) 19.5 миллионов га (Средняя Азия, Юг Украины, Молдавия, Северный Кавказ). Ирригация в сельском хозяйстве, подвод воды на земли, испытывающие недостаток влаги, и увеличение её запасов в корнеобитаемом слое почвы; один из видов мелиорации. Более распространён термин Орошение.

IRRIGATION COTTON = ПОЛИВНОЙ ХЛОПЧАТНИК (или ХЛОПЧАТНИК С ОРОШАЕМЫХ ЗЕМЕЛЬ) – Irrigation Cotton is a Cotton grown using mainly water provided by the artificial irrigation. / Поливной Хлопчатник – Хлопчатник, выращенный, главным образом, с использованием искусственного орошения (ирригации).

IRRIGATION EFFICIENCY = ЭФФЕКТИВНОСТЬ ИРРИГАЦИИ (или ЭФФЕКТИВНОСТЬ ОРОШЕНИЯ) – Irrigation Efficiency is the ratio of the water actually consumed by crops on an irrigated area to the amount of water diverted from the source onto the area.

IRRIGATION METHODS = МЕТОДЫ ИРРИГАЦИИ (или СПОСОБЫ ОРОШЕНИЯ) – Irrigation Methods:- the manner in which water is controlled and applied to an area.

I SAVINGS BONDS = СБЕРЕГАТЕЛЬНЫЕ ОБЛИГАЦИИ (СЕРИИ) АЙ. – In the United States, I Savings Bonds or I Bonds are a low-risk, liquid savings product. While you own them they earn interest and protect you from inflation. You may purchase I Bonds via TreasuryDirect, at most local financial institutions or through payroll deduction. As a TreasuryDirect account holder, you can purchase, manage, and redeem I Bonds directly from your Web browser. I Savings Bonds are a low-risk savings product that earn interest while protecting you from inflation. Sold at face value. A Series I Bond is an appreciation-type (or accrual-type) savings security issued after August 1998 that is a contract between the owner and co-owners and the United States. USD200 and USD10 000 I Bonds are issued no earlier than May 1999. Under the contract, the owner or co-owners lend money to the United States, and the US must repay that money with interest when the bond is redeemed. You can cash Series I bonds anytime after 12 months. Interest stops accruing 30 years after issue. Interest accumulates monthly (with semiannual compounding) and is paid when the bond is redeemed. Interest earnings are inflation-indexed. The I Bond earnings rate is a combination of two separate rates:- a fixed rate of return (set by the Treasury Department) and a variable semiannual inflation rate (based on changes in the nonseasonally adjusted Consumer Price Index for all Urban consumers). Regulations for these securities are in Title 31 Code of Federal Regulations Parts 359 and 360, also published as Department of the Treasury Circulars, Public Debt Series Nos. 1-98 and 2-98.

ISLAND = ОСТРОВ – In visual analysis, Island is a chart pattern after an extended price move where a single, or small group of price bars have been isolated by a chart gap on both the upside and downside thereby creating a trend reversal. This is an exhaustion pattern during a market climax. In technical analysis, an island top is formed when a market gaps up and then gaps down during an uptrend to leave an isolated trading session. An island bottom is found at the base of a downtrend. Islands are regarded as a reversal pattern. / В техническом анализе биржевых рынков, Остров представляет собой графическую модель после .

ISLAND REVERSAL = ОСТРОВНОЙ РАЗВОРОТ – Island Reversals are a specific pattern in which a market gaps up to a new high or low bar (or to two or three higher or lower bars), then gaps back in the opposite direction. Island Reversal is a reversal chart pattern that occurs when the price of a security gaps up (or down), trades above (or below) the gap for a while, and then gaps down (or up) past the first gap. The price action forms a group of prices that are separated from the rest of the price pattern by two gaps. The second gap, which is in the opposite direction of the first, offers a strong indication of trend reversal. The reversal is intact until the second gap is closed. Keep in mind the other aspects of technical analysis should be employed as well. / В техническом анализе биржевых рынков, Островной Разворот представляет собой специфическую графическую модель разворота, которая возникает в те моменты, когда цена ценной бумаги уходит с отрывом вверх (или вниз) и начинает торговаться соответственно выше (или ниже) состоявшегося отрыва .

ISLANDS–IN–THE–SEA = ОСТРОВА В МОРЕ – Islands-In-The-Sea is a type of component fiber described as multipleinterface or filament-in-matrix. The ‘island’ are fibrils of one or more polymers imbedded in the ‘sea’ (or matrix) consisting of another polymer. The matrix is often dissolved away to leave filaments of very low denier per filament. These fibers have been used in ion-exchange products and in imitation fur products as well as to produce textile products with a different hand.

ISMA = INTERNATIONAL SECURITIES MARKET ASSOCIATION

ISMARC = IRRIGATION SYSTEM MANAGEMENT RESEARCH COMMITTEE

ISM CODE = INTERNATIONAL SAFETY MANAGEMENT CODE

ISNAR = INTERNATIONAL SERVICE FOR NATIONAL AGRICULTURAL RESEARCH

ISO = INDEPENDENT SYSTEM OPERATOR

ISO = INTERNATIONAL ORGANIZATION FOR STANDARDIZATION

ISO 9001 = МОС 9001 – ISO 9001 is an international quality management system standard published by the International Organisation For Standardisation (ISO). / Международный стандарт для системы управления качеством, публикуемый Международной Организацией по Стандартизации (МОС).

ISO 14001 = МОС 14001 – ISO 14001 is an international standard developed by the International Organization for Standardization (ISO) that determines the general requirements for an environmental management system for voluntary certification. ISO 14001 is an international environmental management system standard published by the International Organisation For Standardisation (ISO). / Международный стандарт для системы управления в сфере защиты окружающей среды, публикуемый Международной Организацией по Стандартизации (МОС).

ISO 19011 = МОС 19011 – ISO 19011 is an international standard developed by the International Organization for Standardization (ISO) that determines requirements for audits of quality management and environmental management systems.

ISOC = INTERNET SOCIETY

ISO CURRENCY CODE = КОД ВАЛЮТЫ ПО МОС – ISO Currency Code:- system of internationally recognized 3-letter currency codes created by the International Organization for Standardization (ISO). Designed to overcome the problem of ambiguous currency references and facilitate computer processing. Code structure:- the first two letters identify the country, e.g., US for the United States of America, and the third the unit of currency, e.g., D for Dollar, giving USD for the US Dollar. / (например, US для Соединённых Штатов Америки), а третья – саму единицу валюты (например, D для Доллара), в результате получается USD для Доллара США. Российский Рубль по классификации Международной Организации по Стандартизации (МОС) непонятно по какой причине имеет трёхбуквенный код RUB. Вполне возможно, что не совсем осведомлённые Российские чиновники решили внести свои корректировки, опираясь на употребляемое внутри страны сокращение РУБ, хотя и в других странах мира имеются свои сокращения у национальной валюты, однако же они не касаются международной классификации их валюты. До этого нововведения у Российского Рубля был вполне нормальный код RUR, у которого первые две буквы относились к двухбуквенному коду страны RU, а третья буква была начальной буквой названия валюты R.

ISOGENIC = ИЗОГЕННОЕ – Isogenic:- having the same genic constitution. / Под Изогенным, от Греческих слов Isos, означающее Одинаковый или Равный, и Genēs, означающее Рождающий или Рождённый, понимается .

ISOGENIC LINES = ИЗОГЕННЫЕ ЛИНИИ – Isogenic Lines are the lines (families) which differ by one gene only. / В генетике под Линией, от Латинского слова Linea, понимаются размножающиеся половым путём родственные организмы, которые происходят, как правило, от одного предка или одной пары общих предков и воспроизводят в ряду поколений одни и те же наследственно устойчивые признаки. Линия – основа для получения высокопродуктивных гибридов в растениеводстве и животноводстве.

ISOGLUCOSE = ИЗОГЛЮКОЗА – Isoglucose is a starch-based fructose sweetener, produced by the action of glucose isomerase enzyme on dextrose. This isomerisation process can be used to produce glucose/fructose blends containing up to 42% fructose. Application of a further process can raise the fructose content to 55%. Where the fructose content is 42%, isoglucose is equivalent in sweetness to sugar. Isoglucose production in the European Union is covered by the sugar regime and subject to a production quota.

ISOLATE = ИЗОЛЯТ – Isolate:- (1) a single spore or culture and the subculture derived from it. Also used to indicate collections of a pathogen made at different times and/or space.(2) To remove or separate an individual sample from a given sample population. / спора или культура и . Под Изолятором, от Французского слова Isoler, означающее Разобщать, понимается .

ISOLATION = ИЗОЛЯЦИЯ – Isolation (barrier):- (1) the growing into pure culture in artificial/synthetic medium of pathogenic microorganisms. / В биологии под Изоляцией, от Французского слова Isolation, означающее Отделение или Разобщение, понимается возникновение барьеров (территориально-механических, экологических, поведенческих, физиолого-морфологических, генетических), препятствующих свободному скрещиванию организмов; одна из причин разобщения и углубления различий между близкими формами и образования новых видов. Изоляция (биологическая), ограничение или нарушение свободного скрещивания индивидов и перемешивания (панмиксия) разных форм организмов; один из элементарных факторов эволюции. Чалз Робэт Давин (или Дарвин; Charles Robert Darwin; 1809–1882) на примере островных фаун и флор показал роль изоляции в возникновении, расширении и углублении различий между близкими формами живых организмов. Если какая-либо, чаще периферическая, часть исходной популяции изолируется какими-либо географическими преградами, то со временем эта часть популяции может превратиться в самостоятельный вид. Такой географический (аллопатрический; смотрите Аллопатрия) способ видообразования, по мнению многих биологов, – единственный или, во всяком случае, главный путь видообразования. В макроэволюционном плане (смотрите Макроэволюция) изоляция обусловливается нескрещиваемостью разных Видов, то есть преимущественно носит характер репродуктивной изоляции. В микроэволюционном плане (смотрите Микроэволюция), то есть на внутривидовом уровне, различают 2 основные группы изоляции:- территориально-механическую, к которой относятся все случаи возникновения преград между разными частями населения или разными популяциями (например, водные барьеры для сухопутных и суша для водных организмов, горы для долинных и долины для горных видов и другие), и биологическую, которая подразделяется на 3 подгруппы:- (а) экологическая изоляция – индивиды двух или большего числа биотипов редко или совсем не встречаются в течение репродукционного периода; (б) морфо-физиологическая изоляция – копуляция затруднена или невозможна по морфологическим или этологическим (поведенческим) причинам; (в) собственно генетическая изоляция, обусловленная неполноценностью (снижение жизнеспособности, плодовитости или полная стерильность) гибридов, полученных в результате соответствующих скрещиваний. Все виды изоляции могут оказывать на популяции различное давление, так как любая форма изоляции может быть количественно выражена в разной степени. Территориально-механическая изоляция (на больших территориях – географическая) приводит к аллопатрическому формообразованию и при достаточно длительном действии обычно вызывает появление какой-либо формы биологической изоляции. Случаи первичного возникновения биологической изоляции могут повести к симпатрическому формообразованию (смотрите Симпатрия).

(2) Isolation:- the separation of one group of plants from another so that fertilization between or among groups is prevented. Separation between two hybrid seed production plots can be provided by topographic surface features or artificial/natural barriers, to the height of at least 2.5 m, in the case of Rice.

(3) Isolation (time) is the separation can also be provided by growing two groups at different times of the crop season so that one group is already mature (stopped providing pollen) when the other group comes to flowering. Generally a 21-day difference in flowering is sufficient in the case of Rice.

ISOMERISATION = ИЗОМЕРИЗАЦИЯ – Isomerisation or Isomerization is a refining process that alters the fundamental arrangement of atoms in the molecule without adding or removing any atoms from the original material. Isomerisation is used to convert normal butane into isobutene (iC_4), an alkylation process feedstock, and normal pentane and hexane into isopentane (iC_5) and isohexane (iC_6) (high-octane gasoline components). Isomerization is a process for obtaining high-octane isoparaffin fractions by refining low-octane paraffin hydrocarbons from light gasoline fractions using catalysts. Isomerization:- (Greek:- Isos – same; Méros – part) intra-molecular restructuring. The atoms in the molecule are reorganized in such a way that the actual composition does not change. This usually has an effect on the chemical and physical properties. / Процесс переработки обычного бутана в изобутан, алкилирование (alkylation), и обычный пентан и гексан в изопентан (iC_5) и изогексан (iC_6) (компоненты высокооктанового бензина). Изомеризация это процесс получения высокооктановых изопарафиновых фракций путём переработки низкооктановых парафиновых углеводородов из лёгких бензиновых фракций в присутствии катализаторов. Под Изомеризацией, от Греческих слов Isos, означающее Одинаковый или Равный, и Méros, означающее Доля или Часть, понимается превращение химического соединения в соединение другого строения или с иным расположением атомов (атомных групп) в пространстве, не сопровождающееся изменением состава и молекулярной массы. Происходит обычно под действием катализаторов. Важное практическое значение имеет изомеризация углеводородов при крекинге и пиролизе нефтяных фракций. Изомеризация, превращение какого-либо химического соединения в его изомер. При изомеризации могут изменяться углеродный скелет молекулы, характер функциональных групп и их положение, может происходить сужение или расширение цикла и так далее. Так, насыщенные углеводороды нормального строения при действии хлористого алюминия ($AlCl_3$) превращаются в углеводороды изостроения (например, бутан – в изобутан):- $CH_3CH_2CH_2CH_3 \rightarrow (CH_3)_2CH - CH_3$. Эти превращения происходят при переработке нефти (процессы – крекинг, пиролиз, риформинг) и приводят, в частности, к получению бензинов с высоким октановым числом. Циклогексаноноксим под действием кислот изомеризуется в капролактам – исходный продукт для получения синтетического волокна капрон (смотрите Полиамидные Волокна). Эта изомеризация – частный случай бекмановской перегруппировки. Среди других практически важных процессов изомеризации – превращение окиси этилена в ацетальдегид, изомеризация о- и м-ксилолов в n-ксилол, окислением которого получают терефталевую кислоту, превращение гидразобензола в бензидин и другое. Понятие изомеризации включает также взаимные превращения геометрических изомеров, например, малеиновой и фумаровой кислот и многочисленные случаи рацемизации оптически деятельных веществ (смотрите Стереохимия).

ISOPLASMIC = ИЗОПЛАЗМЕННОЕ (или ИЗОПЛАЗМИЧЕСКОЕ) – Isoplasmic:- CMS or restorer lines differing in nuclear genetic constitution but having a common cytoplasm. / , от Греческих слов Isos, означающее Одинаковый или Подобный или Равный, и Plásma, означающее Вылепленное или Оформленное, .

ISO SOLID CONTAMINANT CODE (ISO 4406) = КОД ЗАГРЯЗНИТЕЛЯ ПО МОС (МОС 4406) (или КОД ЗАГРЯЗНЯЮЩЕГО ВЕЩЕСТВА ПО МОС (МОС 4406)) – ISO Solid Contaminant Code (ISO 4406) is a code assigned on the basis of the number of particles per unit volume greater than 5 and 15 micrometers in size. Range numbers identify each increment in the particle population throughout the spectrum of levels.

ISO STANDARD = СТАНДАРТ МОС – The ISO Standard is a standard compliant with the International Organization for Standardization.

ISO STANDARD 4021 = СТАНДАРТ МОС 4021 – ISO Standard 4021:- the accepted procedure for extracting samples from dynamic fluid lines.

ISOTACTIC POLYMER = ИЗОТАКТИЧЕСКИЙ ПОЛИМЕР – Isotactic Polymer is a polymer structure in which there is a regular spatial or stereo relationship from one repeat unit to the next. See also Atactic Polymer, Syndiotactic Polymer, and Tactic Polymer. / Смотрите также Атактический Полимер или Стереонерегулярный Полимер (Atactic Polymer), Синдиотактический Полимер (Syndiotactic Polymer), и Изотактический Полимер (Isotactic Polymer). Изотактический Полимер – один из видов стереорегулярных полимеров.

ISOTHERM = ИЗОТЕРМА – Isotherm is a constant temperature line used on graphs of climatic conditions or thermodynamic relations, such as pressure-volume relations at constant temperature. / Под Изотермой, от от Греческих слов Isos, означающее Одинаковый или Подобный или Равный, и Thérme, означающее Теплота, понимается линия на диаграмме состояния, изображающая процесс, происходящий при постоянной температуре (изотермический процесс). Уравнение изотермы идеального газа $pV = const$, где p – давление, V – объём газа. Для реального газа уравнение изотермы имеет более сложный характер и переходит в уравнение изотермы идеального газа только при малых давлениях или высоких температурах. Семейство изотерм реального газа в координатах p, V приведено в статье Уравнение Ван-дер-Ваальса. На диаграмме p–V в точке пересечения изотермы и адиабаты последняя идёт круче изотермы. Сходный характер имеют изотермы ферромагнетиков в координатах M, H, где M – намагниченность, H – напряжённость магнитного поля. Под Изотермами понимаются изолинии температуры воздуха, воды или почвы. Чаще всего составляются карты изотерм для средней многолетней месячной температуры воздуха, средней температуры любого периода времени или температуры на определённый момент времени. Для исключения влияния высоты при проведении изотерм иногда значения температур приводят предварительно к уровню моря, принимая, что с увеличением высоты температура воздуха понижается в среднем на 0.6 °C на каждые 100 метров (м).

ISOTROPIC = ИЗОТРОПНОЕ – Isotropic:- having the same physical properties in every direction in the plane of a fabric. It is related to the random distribution of fibers in nonwoven manufacture. Isotropic:- having the same property in all directions. / Изотропное:- имеющее одно и то же свойство во всех направлениях. Под Изотропным, от Греческих слов Isos, означающее Одинаковый или Равный, и Tróрos, означающее Направление или Поворот, понимается .

ISO VISCOSITY GRADE = СОРТ ПО ВЯЗКОСТИ ПО МОС – ISO Viscosity Grade is a number indicating the nominal viscosity of an industrial fluid lubricant at 40 degrees C (104 degrees F) as defined by ASTM Standard Viscosity System for Industrial Fluid Lubricants D 2422. Essentially identical to ISO Standard 3448. American Society for Testing and Materials (ASTM). See also Viscosity Grade. / Сорт По Вязкости По МОС (сокращение для Международной Организации по Стандартизации) или, как некоторые называют его, Класс Вязкости По МОС:- Американское Общество по Испытаниям и Материалам (АОИМ).

ISO Viscosity Grade Сорт По Вязкости По МОС	Средняя Вязкость, сСт при 40 °C	Диапазон Кинематической Вязости, сСт при 40 °C
2	2.2	1.98 – 2.42

3	3.2	2.88 – 3.52
5	4.6	4.14 – 5.06
7	6.8	6.12 – 7.48
10	10	9 – 11
15	15	13.5 – 16.5
22	22	19.8 – 24.2
32	32	28.8 – 35.2
46	46	41.2 – 50.6
68	68	61.2 – 74.8
100	100	90 – 110
150	150	135 – 165
220	220	198 – 242
320	360	288 – 352
460	460	414 – 506
680	680	612 – 748
1 000	1 000	900 – 1 100
1 500	1 500	1 350 – 1 650

ISOZYME = ИЗОЗИМ (или ИЗОЭНЗИМ, или ИЗОФЕРМЕНТ) – Isozyme is an enzyme which exists in multiple electrophoretic forms either because of allelic variation within one polypeptide or multimeric associations of variant forms. Similar or identical catalytic activities occur within the same organism. Also known as Allozyme. / Под Изозимами или Изоэнзимами, от Греческих слов Isos, означающее Одинаковый или Равный, и Zýmē, означающее Закваска, понимаются ферменты, различающиеся по строению, но катализирующие одну и ту же реакцию; то же, что Изоферменты. Под Изоферментами понимаются ферменты, катализирующие одну и ту же реакцию, но различающиеся по структуре, физико-химическим и иммунологическим свойствам. Определение набора изоферментов (изоферментного спектра) у различных организмов используют в биологической систематике, а также в медицине для диагностики некоторых заболеваний. Изоферменты или Изоэнзимы или Изозимы, разные структурные формы ферментов, обладающие каталитической активностью одного типа; встречаются у организмов одного вида (или в одной ткани). Изоферменты катализируют одну и ту же реакцию, но различаются аминокислотным составом, некоторыми физическими, иммунологическими и каталитическими свойствами. Изоферменты состоят из нескольких полипептидных цепей (субъединиц), которые, комбинируясь различными способами, образуют четвертичную структуру фермента (смотрите Белки). Так, из организма цыплёнка выделены две формы фермента лактатдегидрогеназы, одна из которых характерна для скелетных мышц, другая – для сердечной мышцы. Всего у цыплят, а также в других организмах обнаружено 5 изоформ этого фермента; каждая такая форма (тетрамер) построена из 4 белковых субъединиц двух типов. Изоферменты могут быть разделены с помощью электрофореза. У организмов одного вида (или в одной ткани) изоферменты составляют характерный набор – ‘спектр’, который может меняться при патологических изменениях тканей (чем пользуются в диагностике) и в процессе онтогенеза.

ISP = INTERNET SERVICE PROVIDER

ISPF CODE = INTERNATIONAL SHIP AND PORT FACILITY CODE

ISPM = INTERNATIONAL STANDARD FOR PHYTOSANITARY MEASURES

ISPS (CHARGE) = THE INTERNATIONAL SHIP AND PORT FACILITY SECURITY (CHARGE)

ISR = INTERNATIONAL SEARCH REPORT

ISRA = INSTITUT SÉNÉGALAIS DE RECHERCHES AGRICOLES

ISRIC = INTERNATIONAL SOIL REFERENCE AND INFORMATION CENTRE

ISRO = INTERNATIONAL SECURITIES REGULATORY ORGANIZATION

ISSN = INTERNATIONAL STANDARD SERIAL NUMBER

ISSS = INTERNATIONAL SOIL SCIENCE SOCIETY

ISSUANCE OF FURTHER CAPITAL = ВЫПУСК ДОПОЛНИТЕЛЬНОГО КАПИТАЛА – Issuance Of Further Capital:- where a company wants to issue further capital (called Raising The Capital), shares are first offered to current shareholders. The issuance of further capital to Present Shareholders is called Right Issue. This issue is in proportion to current shares held by the shareholders. The shareholders can accept or reject the offer. If shareholders refuse to accept these shares then these are offered to other people.

ISSUANCE OF LETTER OF CREDIT = ВЫПУСК АККРЕДИТИВА (или ВЫСТАВЛЕНИЕ АККРЕДИТИВА) – Issuance of Letter of Credit (L/C):- the L/C is a payment undertaking by the bank to the foreign importer. The bank will fulfill its payment obligation when the terms stipulated in the L/C are complied with. Features:- (i) Improvement of Your Bargaining Position in a Negotiation:- opening L/C provides the exporter with a conditional payment commitment on top of the commercial credit, giving you better credit by which you may win favorable price terms for your goods; (ii) Warranty of Your Cargo:- commercial credit is enhanced by bank credit through the product. The trade itself will be warranted by the bank, and the ownership of the cargo, shipping date and quality of cargos are well controlled under the documents and terms; and (iii) Reduction of Fund Occupation:- for the importer who uses the L/C with credit limits, the fund occupation will be minimized during the period between the L/C issuance and payment. Target Customers:- (i) importer and exporter wish to promote the level of trade credit by making appointment on each other’s business activities; (ii) the imported commodity is within a seller’s market and the exporter insists on settlement with L/Cs; and (iii) both importer and exporter want to select trade finance out of the lack of liquidity. Application Qualifications:- (i) the applicant shall be approved and registered in accordance with the law, and hold a business license that has passed the annual inspection or other valid certificates which fully prove its legal operation and scope of business; and (ii) the applicant shall have the qualification to engage in import and export trade. Process:- (i) the importer submits the application for issuance of L/C, and the bank will issue the L/C based on margin or credit line taken up after examination and approval; (ii) the exporters prepares and ships the goods in accordance with the relevant L/C clauses after having been advised of the L/C; (iii) the exporter presents the documents required by the L/C and the presenting bank mails the documents to Bank of China to request payment or acceptance; (iv) upon receipt of the documents, the bank will make payment or acceptance to the exporters after examination and approval; and (v) the bank makes the payment when the acceptance is due.

ISSUE = ЭМИССИЯ (или ВЫПУСК) – An Issue is the placement of securities on the market. These may be stocks, bonds, mutual fund shares or other securities. An issue is typically effected via a bank (underwriting house) or a consortium of banks (underwriting syndicate). The purpose is to procure equity or debt capital. If the issue price is above the security's par value, it is known as an Issue Above Par, if it is below that value, as an issue under par. The difference between the issue price and the par value is the premium or discount, respectively. See also Issuing. In securities trading, issue of new securities. Issue:- creation of money or securities, and placing them in circulation. In economics, the term is almost exclusively reserved to the creation and circulation of money or its equivalents, or instruments of payment, whether by an individual – through the issue of checks or commercial paper – or by a business or financial entity – through the issue of securities by a corporation, of money by the US Federal Reserve System or by the banks, etc. Any of a company's securities, or the act of distributing such securities. / Любые ценные бумаги компании, либо процесс размещения таких ценных бумаг. Под Эмиссией, от Латинского слова Emissio, означающее Выпуск, понимается выпуск в обращение банковских и казначейских билетов, бумажных денег и ценных бумаг. Эмиссия ценных бумаг может быть частной (выпуск акций и облигаций акционерными компаниями) и государственной (эмиссия облигаций государственных займов). В бывшем Союзе Советских Социалистических Республик (СССР) эмиссия денег и ценных бумаг осуществлялась Государственным Банком СССР. Под Эмиссией, от Латинского слова Emissio, означающее Выпуск, от Emitto, означающее Выпускаю, понимается выпуск в обращение денег и ценных бумаг. В капиталистических странах эмиссия денег производится центральными (эмиссионными) банками и казначействами. Первые выпускают кредитные деньги – банкноты (смотрите Банковские Билеты), вторые – Казначейские Билеты и разменные монеты. Депозитно-чековая эмиссия, служащая основой безналичных расчётов и значительно превосходящая по своему объёму банкнотную, производится коммерческими банками. В главных капиталистических странах благодаря концентрации банковского капитала основная часть депозитов сосредоточена у наиболее мощных монополистических банков (смотрите Вклады). В разных странах сложились различные эмиссионные системы, определяющие правила выпуска банкнот, размеры эмиссии, нормы и формы её обеспечения. В Великобритании Акт Робэта Пила (1844) устанавливал твёрдый лимит фидуциарной (не покрытой золотом эмиссии в 14 миллионов Фунтов Стерлингов, все банкноты сверх этого лимита подлежали 100%-ному обеспечению золотом. При этом общий максимум банкнотной эмиссии не фиксировался. Во Франции эмиссионная система, введённая в 1870, определила общий максимум банкнотной эмиссии, обеспеченной и не обеспеченной металлом, в 1.8 миллиарда Франков; Банку Франции предоставлялось право определять размер металлического покрытия эмиссии (в дальнейшем максимальный лимит эмиссии увеличивался и накануне 1-й Мировой Войны 1914–18 составлял 6.8 миллиардов Франков). В Германии по закону 1875 максимальный контингент не обеспеченной золотом эмиссии определялся в 250 миллионов Марок для Рейхсбанка и 135 миллионов Марок для 32 других эмиссионных учреждений страны; кроме того, вводился принцип 'третного покрытия' банкнот:- они обеспечивались металлом не менее чем на 1/3. В России в 1897 была введена эмиссионная система, по которой Госбанку разрешалось выпускать не покрытые золотом кредитные билеты на сумму до 300 миллионов Рублей; в пределах до 600 миллионов Рублей золотое обеспечение составляло не менее 60%, вся эмиссия, превышавшая этот лимит, подлежала 100%-ному обеспечению золотом. В некоторых странах разрешалось превышать размер допустимой по закону необеспеченной эмиссии при уплате так называемого эмиссионного налога. В Германии в 1875 был введён налог в размере 5% от суммы превышения по сравнению с разрешённой законом эмиссии. В США по закону 1913 при снижении нормы покрытия с 40% до 32.5% уплачивался налог в 1%, при последующем снижении на 2.5% – 1.5% и так далее. В начале XX века металлическое обеспечение банкнотной эмиссии утратило прежнее значение. На первый план выдвинулась проблема обеспечения эластичности денежного обращения в связи с острыми денежно-кредитными кризисами, которыми сопровождались циклические колебания конъюнктуры. Повысилось значение кредитно-вексельного обеспечения эмиссии. Так, закон об учреждении в 1913 Федеральной Резервной Системы (ФРС) Соединённых Штатов Америки (США) предусматривал, что не менее 40% эмитируемых банкнот должны обеспечиваться золотом а остальные 60% – переучтёнными векселями и акцептов, траттами (переводными векселями). 1-я Мировая Война 1914–18 вызвала огромное увеличение выпуска не обеспеченных металлом бумажных денег. Восстановленный в 1920-х в урезанных формах золотой стандарт потерпел крушение почти во всех странах в годы мирового экономического кризиса 1929–33. Золотой запас был передан центральными банками в стабилизационные валютные фонды казначейств и в большинстве стран перестал использоваться для покрытия внутренней эмиссии. Норма 40%-ного золотого покрытия сохранилась в Швейцарии, 33%-ного – в Бельгии, 25%-ного – в Португалии. В США норма металлического покрытия эмиссии, сниженная в 1945 с 40% до 25%, просуществовала до 1968, но имела практически формальное значение. Главным видом обеспечения банкнотной эмиссии стали государственные ценные бумаги. В США, по данным на 01 Января 1977, банкноты в обращении на сумму 83.7 миллиарда Долларов были обеспечены портфелем государственных облигаций на 97 миллиардов Долларов, принадлежащих ФРС. В Великобритании в Ноябре 1976 кредитные билеты в обращении на сумму 6 646 миллионов Фунтов Стерлингов обеспечивались портфелем государственных облигаций, числящихся на балансе Банка Англии в сумме 8 046 миллионов Фунтов Стерлингов. Широкая эмиссия банкнот под государственные ценные бумаги – важный фактор инфляционного роста цен и прогрессирующего обесценения денег (смотрите Инфляция). Для контроля депозитно-чековой эмиссии (более сложного, чем регулирование наличной денежной эмиссии) банки капиталистических стран пытаются регулировать эмиссию депозитов, ограничивая размеры кассовых резервов коммерческих банков, однако они не могут поддерживать директивно установленный темп увеличения денежной эмиссии в условиях стихийного инфляционного денежного обращения. В Великобритании, например, в 1971–76 среднегодовой прирост денежной массы (включая депозиты до востребования) составлял, как правило, 14–19%, что в несколько раз превышало темпы роста валового национального продукта и товарооборота. Такое же положение в сфере денежного обращения Японии, Италии, Канады, США. Эмиссия ценных бумаг (акций и облигаций) осуществляют акционерные компании в сфере промышленности, торговли, коммунальных и бытовых услуг, кредита и финансов, а также буржуазное государство (его центральные и местные органы). Кроме того, на валютном рынке данной страны могут размещать свои выпуски ценных бумаг иностранные эмитенты (акционерные компании, банки). Эмиссия ценных бумаг акционерных компаний служит одним из средств мобилизации долгосрочного капитала (так называемый Эмитированный Капитал). Современные монополистические концерны практикуют эмиссию мелких акций и имеют сотни тысяч, а в некоторых случаях миллионы акционеров. Фактический контроль над акционерными компаниями принадлежит финансовой олигархии (смотрите Акционерное Общество). В 1960–70-х всё большая часть эмиссии облигаций распределяется не в результате продажи их на рынке различным инвесторам, а путём покупки всего займа узкой группой финансовых учреждений (например, страховых компаний). В 1975 в США эмиссия ценных бумаг частных компаний составила 53.3 миллиарда Долларов (в том числе выпуски для замены ценных бумаг, по которым истёк срок, – 10.9 миллиардов Долларов). Из этой суммы 40.5 миллиардов Долларов приходилось на облигации и 12.8 миллиардов Долларов – на акции. Кроме того, местные органы власти эмитировали облигации на сумму в 30.6 миллиардов Долларов. В Великобритании эмиссия ценных бумаг частных предприятий в 1975 составила 1 835.3 миллионов Фунтов Стерлингов, в том числе 296.4 миллионов Фунтов Стерлингов – ценные бумаги иностранных эмитентов; выпуски местных органов власти и государственных предприятий – 1 009.5 миллионов Фунтов Стерлингов. Неуклонный рост эмиссии облигаций центральных правительств капиталистических стран отражает хроническую

несбалансированность бюджетов, обременённых крупными государственными расходами на милитаризацию, государственно-монополистическое регулирование экономики и так далее. В США, например, задолженность Федерального Правительства по займам увеличилась с 45.9 миллиардов Долларов в 1939 до 620.4 миллиардов Долларов в 1976. Основной прирост эмиссии государственных облигаций имел место в годы 2-й Мировой Войны 1939–45 и войны во Вьетнаме (1964–73). Особой категорией эмиссии ценных бумаг являются международные эмиссии, составившие в 1976 сумму в 30 миллиардов Долларов, в том числе выпуск иностранных облигаций в США – 1.0 миллиард Долларов, на денежных рынках других стран – 5.8 миллиардов Долларов и Еврооблигаций – 14.1 миллиардов Долларов (последние представляют собой часть Европейского рынка капиталов – 230 миллиардов Долларов на конец Сентября 1976). В социалистических странах эмиссия денег (банкнот и казначейских билетов) осуществляется в соответствии с потребностями народного хозяйства и регулируется в плановом порядке. В бывшем Союзе Советских Социалистических Республик (СССР) выпуск или изъятие денег из обращения производил Государственный Банк СССР в соответствии с кредитным и кассовым планами. С 1922 кредитные билеты Госбанка СССР на 25% обеспечивались золотом и другими драгоценными металлами, а в остальной части – прочими активами Госбанка. Для оперативного маневрирования эмиссионными ресурсами в отдельных учреждениях Госбанка создавались резервные фонды кредитных билетов и монеты. Их размер регулировался лимитом, утверждаемым в целом по народному хозяйству Советом Министров СССР, а для отдельных учреждений – правлением Госбанка или республиканскими конторами. Деньги выпускались в обращение на основе специальных эмиссионных разрешений. Эмиссия ценных бумаг в социалистических странах ограничена выпуском облигаций государственных займов. Средства от размещения этих займов используются для развития социалистического хозяйства и финансирования социально-культурных мероприятий. Эмиссия или Выпуск:- (1) Акции или облигации, проданные некоторой корпорацией или государственным органом в некоторый момент времени. (2) Продажа новых ценных бумаг, выпущенных корпорацией или государственным органом либо через распространителя, либо путём частного размещения. (3) Потомки, такие, как дети или внуки. Например, можно сказать:- Имущество этого человека будет передано после его смерти его потомкам (his issue).

ISSUE AT PAR = ЭМИССИЯ ПО НАРИЦАТЕЛЬНОЙ СТОИМОСТИ (или ВЫПУСК ПО НАРИЦАТЕЛЬНОЙ СТОИМОСТИ) – Issue At Par:- securities issued at the nominal or face value, i.e. without agio or disagio (premium or discount). In the case of an above par issue the price is higher than the nominal value and in the case of a below par issue it is lower. / Ценные бумаги, эмитированные по номиналу или лицевой стоимости, то есть без ажио или дизажио (премии или скидки). В случае с эмиссией выше нарицательной стоимости, цена выше номинальной стоимости, а в случае с эмиссией ниже нарицательной стоимости, цена ниже номинальной стоимости.

ISSUE DATE = ДАТА ВЫДАЧИ – Issue Date is the date that a patent application becomes a US patent. The issue date is the date that patent rights can be exercised. US patents are always issued on Tuesdays.

ISSUE DATE = ДАТА ЭМИССИИ (или ДАТА ВЫПУСКА) – Issue Date is the first day of the month in which payment of the issue price is received by an authorized issuing agent. This means that the issue date is the first day of the month in which the bond is purchased. The issue date is inscribed in the upper right-hand corner of the bond. The issue date is the date used for determining when the bond is eligible for payment, the amount at which an accrual type bond is redeemed, the interest payment dates on current income savings bonds (such as H and HH in the US), and the date the bond reaches final maturity and ceases earning interest.

ISSUED CAPITAL = ЭМИТИРОВАННЫЙ КАПИТАЛ (или ВЫПУЩЕННЫЙ КАПИТАЛ) – In the United Kingdom, an Issued Capital is the nominal, rather than actual, value of the part of the authorised share capital that has been issued to shareholders. Issued Capital is the value of securities allotted in a company to its shareholders and debtholders. Where debt has been issued the issued share capital is shown separately. Also known as Subscribed Capital. Contrast Authorised Capital, Issued Shares, and Paid-Up Capital. See also Issuing. / Под Эмитированным Капиталом, от Латинского слова Emitto, означающее Выпускаю, понимается капитал акционерного общества в акциях, фактически выпущенных на рынок. Эмитированный Капитал, ценные бумаги (акции и облигации), выпускаемые акционерными компаниями и буржуазным государством. Смотрите также статью Эмиссия (Issuing).

ISSUED SHARES = ЭМИТИРОВАННЫЕ АКЦИИ (или ВЫПУЩЕННЫЕ АКЦИИ) – In the United States, Issued Shares that have been reacquired by the company. Treasury shares may be resold or cancelled. Dividends are not paid on treasury shares nor are voting fights associated with them. Shows the total value of shares issued by the company to shareholders. The shares are at their nominal value. Issued Shares is a term of law and finance for the quantity of shares of a corporation, which have been sold or awarded and are subsequently held by the shareholders. The number of issued shares usually a subset of the total authorized shares, which the board of directors and/or shareholders have agreed to distribute under certain circumstances. Issued Shares:- the number of securities of a company outstanding. This may be equal to or less than the number of shares a company is authorized to issue. Issued Shares are the number of shares held by parties other than the corporation. Issued shares are equal to or less than the authorized share amount. The shares of a company that have been allotted to shareholders. Compare Authorised Capital. Contrast Issued Capital. Also known as Alloted Shares in the United Kingdom. / Выпуск эмиссионных ценных бумаг – совокупность всех ценных бумаг.

ISSUED STOCKS = ЭМИТИРОВАННЫЕ АКЦИИ (или ВЫПУЩЕННЫЕ АКЦИИ) – Issued Stocks shows the total value of stocks issued by the company to stockholders. The stocks are at their nominal value.

ISSUE LIMIT = ЛИМИТ ЭМИССИИ (или ЛИМИТ ВЫПУСКА) – Issue Limit:- in Germany, Pfandbriefe (the Pfandbrief (plural:- Pfandbriefe), is a type of bond issued by German mortgage banks that is collateralized by long-term assets used, and a mostly triple-A rated German bank debenture, has become the blueprint of many covered bond models in Europe and beyond) and public-sector bonds may only be issued by mortgage banks up to a certain limit. The total amount of bonds outstanding is governed by law. The amount is determined by the share capital (equity capital) and the bank's reserves. The issue limit guarantees the issued securities.

ISSUE PRICE = ЭМИССИОННАЯ ЦЕНА – Issue Price is the price at which mutual fund management companies in Germany sell their fund units. The issue price is the repurchase price (unit price) plus, as a rule, a front load. Issue Price:- when the security/stock first becomes available (i.e. is issued), e.g., by the British Government, it may not cost exactly £100 to buy £100 nominal of stock/security. If it, say, costs £95 to buy £100 nominal of stock, the stock is said to be issued below par, at 95% and if it costs say £105 to buy £100 nominal of stock, the stock is said to be issued above par, at 105%. Price at which an investment fund sells newly issued units to the public. The issue price is equal to the net asset value of the shares plus an issuing commission. In the United States, Issue Price is the actual amount paid to purchase a savings bond. Series E bonds were purchased for 75% of face value, for example, USD18.75 for a USD25.00 E Bond; Series EE bonds are purchased for 50% of face value; and I Bonds are bought at face amount, for example, you pay USD50.00 for a USD50.00 I Bond. / Эмиссионная Цена – цена, по которой ценные бумаги продаются сразу же после их выпуска, цена первичного рынка ценных бумаг. Обычно эта цена равна нарицательной стоимости или превышает её на величину эмиссионной премии.

ISSUE PROSPECTUS = ПРОСПЕКТ ЭМИССИИ – Issue Prospectus:- for the admission of securities to trading on the official or regulated market, the Stock Exchange Act and the Securities Prospectus Act, among other things, impose a general duty to write a prospectus and to file it with the stock exchange listing office. The prospectus contains all important information about the security, the issuer, the company's structure, its financial situation, business activities and all bodies and companies involved in the issue. It should allow the formation of an accurate judgement of the issuer's assets and liabilities, financial situation, profits and losses and future prospects. The Federal Financial Supervisory Authority checks the prospectus for formal, but not material, correctness. The issuer and issuing syndicate are responsible and liable for the correctness of the content. Prospectus. / Проспект. Эмиссионный Проспект – публикация информации обо всех деталях предстоящей эмиссии новых акций, включая данные о фирме, её балансы, отчёты и другое.

ISSUER = ЭМИТЕНТ – (1) Issuer is a company or institution that issues securities launched for the first time. Issuers can be companies, banks, entities under public law, the state or other institutions. The issuer benefits from an issue by having immediate access to liquidity, and the subscriber stands to achieve a return on his capital input through interest income, dividends and/or, ideally, proceeeds from the sale of securities. The company, government, depositary or other legal entity which issues securities such as common stock, preferred stock, ordinary shares, bonds and ADRs/GDRs (issued by a foreign company). An Issuer is any organization (company, government, utility, etc) than can 'issue' securities (stocks, bonds, debentures, etc) to the general public in order to raise capital. An entity that puts a financial asset in the marketplace. / Любой орган или организация, выпускающие в обращение деньги и ценные бумаги, производящие эмиссию. Под Эмитентом, от Латинского слова Emittiere, означающее Выпускать, понимается юридическое лицо, имеющее право выпускать и распространять ценные бумаги. Ценные бумаги выпускают корпорации, муниципалитеты, иностранные и отечественные правительственные органы и их агентства, инвестиционные трасты. Юридические лица, выпускающие облигации, принимают на себя обязательства в срок выплачивать проценты и делать выплаты по основной сумме владельцам облигаций. Эмитент – любой орган или организация (государственный банк, финансово-кредитное учреждение, предприятие, компания), выпускающие в обращение деньги и ценные бумаги, производящие эмиссию.

(2) Issuer is a private sector corporation or public authority raising capital for its own use by issuing securities on the public market. Also known as Borrower.

(3) Issuer is a party of:- (i) an insurance contract obliging that party to compensate a policyholder if an insured event occurs; (ii) a financial instrument that is an investment contract obliging that party to provide specified benefits; or (iii) a service contract, obliging that party to perform an agreed task.

(4) Issuer is the financial institution which issues payment cards. / Финансовое учреждение, которое выпускает платёжные карты.

(5) Issuer is an entity which has issued a service certificate for a key pair in the personal trusted device (PTD). Typically this might be a bank or a credit card company. The entity and its supporting infrastructure are used synonymously.

(6) Issuer is the clearing member that issued the notice of delivery of the underlying commodity and has the responsibility of effecting the delivery of the underlying commodity. Also called Deliverer. / Клиринговый член, который выпускает уведомление о поставке соответствующего сырья и несёт ответственность за осуществление данной поставки соответствующего сырья. Известен также как Поставщик (Deliverer).

ISSUING = ЭМИССИЯ (или ВЫПУСК) – In banking, the Issuing is the process by which beneficiaries prepare and send out International Payment Instructions (IPIs) to ordering customers for payment. See also Issue. / В банковском обслуживании под Эмиссией, от Латинского слова Emissio, означающее Выпуск, понимается процесс, посредством которого бенефициары подготавливают и отправляют Инструкции по Международным Платежам (ИМП; International Payment Instructions (IPIs)) Клиентам Распорядителям или Инструктирующим Заказчикам (ordering customers) для оплаты. Под Эмиссией, от Латинского слова Emissio, означающее Выпуск, от Emitto, означающее Выпускаю, понимается выпуск в обращение денег и ценных бумаг. В капиталистических странах эмиссия денег производится центральными (эмиссионными) банками и казначействами. Первые выпускают кредитные деньги – банкноты (смотрите Банковские Билеты), вторые – казначейские билеты и разменные монеты. Депозитно-чековая эмиссия, служащая основой безналичных расчётов и значительно превосходящая по своему объёму банкнотную, производится коммерческими банками. В главных капиталистических странах благодаря концентрации банковского капитала основная часть депозитов сосредоточена у наиболее мощных монополистических банков (смотрите Вклады). В разных странах сложились различные эмиссионные системы, определяющие правила выпуска банкнот, размеры эмиссии, нормы и формы её обеспечения. В Великобритании Акт Робэта Пила (1844) устанавливал твёрдый лимит фидуциарной (не покрытой золотом) эмиссии в 14 миллионов Фунтов Стерлингов, все банкноты сверх этого лимита подлежали 100%-ному обеспечению золотом. При этом общий максимум банкнотной эмиссии не фиксировался. Во Франции эмиссионная система, введённая в 1870, определила общий максимум банкнотной эмиссии, обеспеченной и не обеспеченной металлом, в 1.8 миллиарда Франков; Банку Франции предоставлялось право определять размер металлического покрытия эмиссии (в дальнейшем максимальный лимит эмиссии увеличивался и накануне 1-й Мировой Войны 1914–18 составлял 6.8 миллиардов Франков). В Германии по закону 1875 максимальный контингент не обеспеченной золотом эмиссит определялся в 250 миллионов Марок для Рейхсбанка и 135 миллионов Марок для 32 других эмиссионных учреждений страны; кроме того, вводился принцип 'третного покрытия' банкнот:- они обеспечивались металлом не менее чем на 1/3. В России в 1897 была введена эмиссионная система, по которой Госбанку разрешалось выпускать не покрытые золотом кредитные билеты на сумму до 300 миллионов Рублей; в пределах до 600 миллионов Рублей золотое обеспечение составляло не менее 60%, вся эмиссия, превышавшая этот лимит, подлежала 100%-ному обеспечению золотом. В некоторых странах разрешалось превышать размер допустимой по закону необеспеченной эмиссии при уплате так называемого эмиссионного налога. В Германии в 1875 был введён налог в размере 5% от суммы превышения по сравнению с разрешённой законом эмиссией. В США по закону 1913 при снижении нормы покрытия с 40% до 32.5% уплачивался налог в 1%, при последующем снижении на 2.5–1.5% и так далее. В начале XX века металлическое обеспечение банкнотной эмиссии утратило прежнее значение. На первый план выдвинулась проблема обеспечения эластичности денежного обращения в связи с острыми денежно-кредитными кризисами, которыми сопровождались циклические колебания конъюнктуры. Повысилось значение кредитно-вексельного обеспечения эмиссии. Так, закон об учреждении в 1913 Федеральной Резервной Системы (ФРС) США предусматривал, что не менее 40% эмитируемых банкнот должны обеспечиваться золотом, а остальные 60% – переучтёнными векселями и акцептов, траттами (переводными векселями). 1-я Мировая Война 1914–18 вызвала огромное увеличение выпуска не обеспеченных металлом бумажных денег. Восстановленный в 1920-х в урезанных формах золотой стандарт потерпел крушение почти во всех странах в годы мирового экономического кризиса 1929–33. Золотой запас был передан центральными банками в стабилизационные валютные фонды казначейств и в большинстве стран перестал использоваться для покрытия внутренней эмиссии. Норма 40%-ного золотого покрытия сохранилась в Швейцарии, 33%-ного –

в Бельгии, 25%-ного – в Португалии. В США норма металлического покрытия эмиссии, сниженная в 1945 с 40% до 25%, просуществовала до 1968, но имела практически формальное значение. Главным видом обеспечения банкнотной эмиссии стали государственные ценные бумаги. В США, по данным на 01 Января 1977, банкноты в обращении на сумму 83.7 миллиарда Долларов были обеспечены портфелем государственных облигаций на 97 миллиардов Долларов, принадлежащих ФРС. В Великобритании в Ноябре 1976 кредитные билеты в обращении на сумму 6 646 миллионов Фунтов Стерлингов обеспечивались портфелем государственных облигаций, числящихся на балансе Банка Англии в сумме 8 046 миллионов Фунтов Стерлингов. Широкая эмиссия банкнот под государственные ценные бумаги – важный фактор инфляционного роста цен и прогрессирующего обесценения денег (смотрите Инфляция). Для контроля депозитно-чековой эмиссии (более сложного, чем регулирование наличной денежной эмиссии) банки капиталистических стран пытаются регулировать эмиссию депозитов, ограничивая размеры кассовых резервов коммерческих банков, однако они не могут поддерживать директивно установленный темп увеличения денежной эмиссии в условиях стихийного инфляционного денежного обращения. В Великобритании, например, в 1971–76 среднегодовой прирост денежной массы (включая депозиты до востребования) составлял, как правило, 14–19%, что в несколько раз превышало темпы роста валового национального продукта и товарооборота. Такое же положение в сфере денежного обращения Японии, Италии, Канады, США. В социалистических странах эмиссия денег (банкнот и казначейских билетов) осуществляется в соответствии с потребностями народного хозяйства и регулируется в плановом порядке. В бывшем Союзе Советских Социалистических Республик (СССР) выпуск или изъятие денег из обращения производил Государственный Банк СССР в соответствии с кредитным и кассовым планами. С 1922 кредитные билеты Госбанка СССР на 25% обеспечивались золотом и другими драгоценными металлами, а в остальной части – прочими активами Госбанка. Для оперативного маневрирования эмиссионными ресурсами в отдельных учреждениях Госбанка создавались резервные фонды кредитных билетов и монеты. Их размер регулировался лимитом, утверждаемым в целом по народному хозяйству Советом Министров СССР, а для отдельных учреждений – правлением Госбанка или республиканскими конторами. Деньги выпускались в обращение на основе специальных эмиссионных разрешений. Эмиссию ценных бумаг (акций и облигаций) осуществляют акционерные компании в сфере промышленности, торговли, коммунальных и бытовых услуг, кредита и финансов, а также буржуазное государство (его центральные и местные органы). Кроме того, на валютном рынке данной страны могут размещать свои выпуски ценных бумаг иностранные эмитенты (акционерные компании, банки). Эмиссия ценных бумаг акционерных компаний служит одним из средств мобилизации долгосрочного капитала (так называемый эмитированный капитал). Современные монополистические концерны практикуют эмиссию мелких акций и имеют сотни тысяч, а в некоторых случаях миллионы акционеров. Фактический контроль над акционерными компаниями принадлежит финансовой олигархии (смотрите Акционерное Общество). В 1960–70-х всё большая часть эмиссии облигаций распределяется не в результате продажи их на рынке различным инвесторам, а путём покупки всего займа узкой группой финансовых учреждений (например, страховых компаний). В 1975 в США эмиссия ценных бумаг частных компаний составила 53.3 миллиарда Долларов (в том числе выпуски для замены ценных бумаг, по которым истёк срок, – 10.9 миллиардов Долларов). Из этой суммы 40.5 миллиардов Долларов приходилось на облигации и 12.8 миллиардов Долларов – на акции. Кроме того, местные органы власти эмитировали облигации на сумму в 30.6 миллиардов Долларов. В Великобритании эмиссия ценных бумаг частных предприятий в 1975 составила 1 835.3 миллионов Фунтов Стерлингов, в том числе 296.4 миллионов Фунтов Стерлингов – ценные бумаги иностранных эмитентов; выпуски местных органов власти и государственных предприятий – 1 009.5 миллионов Фунтов Стерлингов. Неуклонный рост эмиссии облигаций центральных правительств капиталистических стран отражает хроническую несбалансированность бюджетов, обременённых крупными государственными расходами на милитаризацию, государственно-монополистическое регулирование экономики и так далее. В США, например, задолженность федерального правительства по займам увеличилась с 45.9 миллиардов Долларов в 1939 до 620.4 миллиардов Долларов в 1976. Основной прирост эмиссий государственных облигаций имел место в годы 2-й Мировой Войны 1939–45 и войны во Вьетнаме (1964–73). Особой категорией эмиссии ценных бумаг являются международные эмиссии, составившие в 1976 сумму в 30 миллиардов Долларов, в том числе выпуск иностранных облигаций в США – 1.0 миллиард Долларов, на денежных рынках других стран – 5.8 миллиардов Долларов и Еврооблигаций – 14.1 миллиардов Долларов (последние представляют собой часть Европейского рынка капиталов – 230 миллиардов Долларов на конец Сентября 1976). Эмиссия ценных бумаг в социалистических странах ограничена выпуском облигаций государственных займов. Средства от размещения этих займов используются для развития социалистического хозяйства и финансирования социально-культурных мероприятий. Эмиссия – выпуск в обращение ценных бумаг, денежных знаков во всех формах. Эмиссия денег означает не только печатание денежных знаков, но и увеличение всей массы наличных и безналичных денег в обращении. Эмиссия ценных бумаг – выпуск в обращение акций, сертификатов, облигаций и других ценных бумаг любыми эмитентами, включая государство, кредитные учреждения и акционерные компании.

ISSUING BANK = ЭМИССИОННЫЙ БАНК (или БАНК ЭМИТЕНТ) – (1) Issuing Bank is a financial institution that issues a means of payment to its customers. A means of payment could be a real card, a virtual card, cash, virtual cash, etc. The Issuing Bank's liability to pay and to be reimbursed from its customer becomes absolute upon the completion of the terms and conditions of the letter of credit. Under the provisions of the Uniform Customs and Practice for Documentary Credits, the bank is given a reasonable amount of time after receipt of the documents to honor the draft. The issuing banks' role is to provide a guarantee to the seller that if compliant documents are presented, the bank will pay the seller the amount due and to examine the documents, and only pay if these documents comply with the terms and conditions set out in the letter of credit. Typically the documents requested will include a commercial invoice, a transport document such as a bill of lading or airway bill and an insurance document; but there are many others. Letters of credit deal in documents, not goods. / Под Эмиссионным Банком понимается банк, наделённый монопольным правом выпуска банковских билетов (банкнот). В большинстве стран мира эмиссионные банки национализированы или находятся под контролем государства. Смотрите также Центральные (Эмиссионные) Банки. Центральные (Эмиссионные) Банки капиталистических стран, центры государственно-монополистического регулирования экономики, наделённые правом монопольного выпуска банкнот, организации и контроля за денежным обращением и банковским кредитом в стране. На ранних этапах развития капитализма одни и те же банки занимались коммерческим (приёмом вкладов и предоставлением ссуд) и эмиссионной (выпуском банкнот) деятельностью. С середины XIX – начала XX веков в большинстве развитых капиталистических стран функции центрального (эмиссионного) банка или эмиссионного банка были закреплены за определёнными банками. Так, во Франции единым эмиссионным центром с 1848 стал Банк Франции, в США с 1913 – 12 федеральных резервных банков США, являющихся центральным эмиссионным банком, в России с 1860 – Государственный Банк. В Великобритании право эмиссии наряду с Английским Банком первоначально имели также другие эмиссионные банки, но размеры совокупной эмиссии банкнот этих банков были незначительны (в 1844 банкнотное обращение Английского Банка составляло 19 миллионов Фунтов Стерлингов, других эмиссионных банков – около 8 миллионов Фунтов Стерлингов, в начале XX века соответственно – 30 миллионов Фунтов Стерлингов и 1 миллионов Фунтов Стерлингов), с 1921 Английский Банк – основной эмиссионный центр страны. Смотрите также Банк Италии, Банк Канады, Банк Японии и другие. В эпоху государственно-монополистического капитализма роль центральных (эмиссионных) банков как орудия государственной экономической политики резко возросла.

После 2-й Мировой Войны 1939–45 в развивающихся странах создавались национальные центральные (эмиссионные) банки с целью выпуска новых национальных валют взамен валют, обращавшихся при колониальных режимах, а также содействия при помощи банковского кредита развитию национальной экономики. Основными функциями центральных (эмиссионных) банков являются следующие:- (1) Эмиссия денежных знаков и наблюдение за общим объёмом денежного обращения, включая сферу безналичных платежей. Центральное место в обеспечении денежного обращения в современных капиталистических странах занимают государственные обязательства, в связи с чем эмиссия имеет фидуциарный (не покрытый золотом) характер. В середине 1970-х только в нескольких странах центральные (эмиссионные) банки сохранили норму обеспечения выпуска банкнот золотом (Швейцария – 40%, Бельгия – 33%, Португалия – 25%) и золотом и иностранной валютой (Нидерланды – 50%, Дания – 25%). (2) Хранение резервных средств коммерческих банков и предоставление им необходимой кредитной поддержки (‘Банк Банков’). Хотя центральным (эмиссионным) банкам некоторых стран (Финляндия, Франция, Швейцария, Япония) разрешается проводить операции с другой клиентурой, кроме банков, объём этих операций незначителен. (3) Хранение свободных средств государственного бюджета и операции с ними от имени правительства (‘Банк Правительства’). В условиях хронической дефицитности бюджетов капиталистических стран кредитование центральными (эмиссионными) банками государства в форме вложений в государственные обязательства значительно превышает по стоимости остатки на бюджетных счетах в центральных (эмиссионных) банках. (4) Воздействие на объём кредита и уровень деловой активности коммерческих банков методами денежно-кредитной политики (смотрите Кредитная Политика):- изменения ставки центрального (эмиссионного) банка по переучёту векселей для коммерческих банков с целью удорожания или удешевления банковского кредита, изменения лимитов переучёта векселей в центральном (эмиссионном) банке и проведения ‘операций на открытом рынке’ по покупке и продаже государственных обязательств. (5) Прямой контроль за деятельностью коммерческих банков путём наблюдения за выполнением выработанных центральным (эмиссионным) банком норм (минимальный размер капитала, коэффициент ликвидности, правила в отношении слияний банков и другие). После волны банкротств банков в 1974 этот контроль в ряде стран был усилен вплоть до требований регулярного представления коммерческими банками в центральные (эмиссионные) банки отчётов по установленной форме. (6) Организация безналичных расчётов в стране в самих центральных (эмиссионных) банках или при помощи специальных расчётных палат. (7) Хранение государственных резервов международных платёжных средств, поддержка курса национальной валюты и валютный контроль. (8) Центральные (эмиссионные) банки также собирают и публикуют финансовую и экономическую статистику и консультируют государственные организации и банки по валютно-финансовым вопросам. О центральных (эмиссионных) банках социалистических стран смотрите в статье Государственный Банк. Эмиссионный Банк – эмиссионный орган, ответственный за эмиссию денег, как правило, центральный национальный банк страны.

(2) Issuing Bank is a bank that opens a straight or negotiable letter of credit and assumes the obligation to pay the bank or beneficiary if the documents presented are in accordance with the terms of the letter of credit. / Банк Эмитент – банк, открывающий (выставляющий) аккредитив. Банк Эмитент – банк, выпускающий финансовое обязательство. В международной торговле финансовые обязательства банков представлены аккредитивами, банковскими гарантиями, поручительствами или некоторыми другими обязательства.

ISSUING CARRIER = ВЫПУСКАЮЩИЙ ПЕРЕВОЗЧИК – Issuing Carrier is the carrier issuing transportation documents or publishing a tariff.

ISTA = INTERNATIONAL SEED TESTING ASSOCIATION

ISTANBUL CONVENTION = СТАМБУЛЬСКАЯ КОНВЕНЦИЯ – Istanbul Convention:- its full name is ‘Convention on Temporary Admission’ (done at Istanbul, 1990-June-26). It is a new convention which has combined within one international instrument all existing Conventions on temporary admission, including the A.T.A. Convention. It provides simplified and harmonized procedures and standardized model Customs documents for temporary importation of goods (including means of transport) specified in the Annexes to this Convention. It entered into force on 1993-November-27. One annex deals directly with humanitarian assistance, namely:- Annex B.9. concerning goods imported for humanitarian purposes:- This annex contains provisions for temporary admission of goods imported for humanitarian purposes, namely medical, surgical and laboratory equipment and relief consignments (‘all goods, such as vehicles and other means of transport, blankets, tents, prefabricated houses or other goods of prime necessity, forwarded as aid to those affected by natural disaster and similar catastrophes’). By definition, the provisions of this Annex apply only to those goods involved in the delivery of humanitarian assistance which are imported temporarily and are subject to re-export from the country of importation. As some of the goods imported for humanitarian purposes (e.g., all disaster relief items and, occasionally, some equipment of disaster relief teams) might eventually have to stay in the recipient country, their ‘temporary admission may be terminated by clearance for home use, when circumstances justify and national legislation so permits’ (Article 13 of the body of the Istanbul Convention). Several other annexes are also relevant to the delivery of humanitarian assistance:- (i) Annex A concerning temporary admission papers (ATA carnets and CPD carnets):- This Annex replaces the A.T.A. Convention, Brussels, 1961-December-06 (see above) and contains the provisions of this convention in full. In addition, it contains provisions related to the temporary importation of means of transport. Appendices I and II provide model forms for international Customs documents for temporary admission of goods (ATA carnet) and of means of transport (CPD carnet - Carnet de Passage en Douane). These documents may also be issued and used for transit. The first pages of the ATA and CPD carnets are reproduced for information in Annex 3 and Annex 4 to this paper. The remarks concerning the ATA Convention are valid for this Annex. (ii) Annex B.2. concerning professional equipment:- it contains provisions for temporary admission of, inter alia, transmission and communication equipment, instruments and apparatus necessary for doctors, surgeons, veterinary surgeons, midwives and members of similar professions, measuring, checking or testing equipment, etc. This Annex replaces the Customs Convention on the temporary importation of professional equipment, Brussels, 1961-June-08. Its provisions might be applied for movement of disaster relief teams’ equipment which, though not directly involved in relief operations, is forwarded to fight and eliminate consequences of natural and similar disasters, e.g., for elimination of pollution of all types, decontamination of buildings and territories, inspection of industrial structures, etc. (iii) Annex B.6. concerning travellers’ personal effects and goods imported for sport purposes:- It contains provisions for temporary admission of, inter alia, personal effects, including portable personal computers, portable sound recorders and reproducers, video cameras etc, being brought by any person who temporarily enters a Customs territory for professional meetings, business etc. This Annex replaces the application of Articles 2 and 5 of the Convention concerning Customs facilities for touring, New York, 1954-June-04; its provisions cover movement of personal effects of disaster relief team members, which must be imported on a team member or in his/her baggage (whether or not accompanied) and which include all articles, new or used, which the team member may reasonably require, taking into account all circumstances of his/her journey, but excluding any goods imported for commercial purposes. (iv) Annex C concerning means of transport:- It contain provisions for temporary admission of means of transport and of spare parts and equipment for their repair. The provisions of this Annex would be applied when the means of transport arrive as disaster relief items or as search and rescue team equipment. (v) Annex D concerning animals:- it contain provisions for temporary admission of animals, in particular, for rescue

operations. The provisions of this Annex would be applied when a search and rescue team is accompanied by specially trained dogs. The expression commonly used to refer to the Convention on Temporary Admission, adopted by the Customs Co-operation Council in Istanbul, Turkey in 1990. / привоз (importation). коммуникация (communication, от Латинского слова Communicare, означающее Совещаться С Кем-Либо). Выражение, используемое обычно в отношении Конвенции по Временному Допуску (Convention on Temporary Admission), принятой Советом по Таможенному Сотрудничеству (Customs Co-operation Council) в Стамбуле, Турция в 1990.

ISTANBUL GOLD EXCHANGE = СТАМБУЛЬСКАЯ БИРЖА ЗОЛОТА – Istanbul Gold Exchange (IGE):- it took a long time to bring gold which has important social and economic roles in Turkey into its current financial situation. With the amendments in Decree number 32 concerning the Protection of the Value of Turkish Currency in 1993, determination of the gold price, gold export and import are liberalized. The decisions aimed at liberalization of gold helped import and export processes. The rapid growth seen in gold sector due to these developments, accelerated new decisions concerning gold which has a great economic potential. These new decisions aimed at restructuring gold sector. Establishment & Legal Structure of the Istanbul Gold Exchange:- the most important development during restructuring process is the trading of gold under an organized market by the establishment of Istanbul Gold Exchange (IGE). Istanbul Gold Exchange became an important step in canalizing the gold to financial system, developing gold based investment vehicles and international integration of gold sector in Turkey. After the IGE, local gold prices became in conformity with international prices, imported gold bars was enforced to meet generally accepted standards and fineness and the system gained a transparent structure. The establishment of Istanbul Gold Exchange started a continuous development process on the market, set a base for the development of gold based financial instruments. The first legal decision concerning the establishment of Istanbul Gold Exchange was made in 1993, 'General Regulation Concerning the Foundation and Operation Principles of Precious Metals Exchanges' was issued by Capital Markets Board on the basis of the provisions of Article 40/A of Code of Capital Markets, number 2499 as amended by law number 3794. The Istanbul Altin Borsasi or Istanbul Gold Exchange (in English) was founded on 1995-July-26. Headquartered in Istanbul, Turkey. Website:- http://www.iab.gov.tr. It took a long time to bring gold which has important social and economic roles in Turkey into its current financial situation. With the amendments in Decree number 32 concerning the Protection of the Value of Turkish Currency in 1993, determination of the gold price, gold export and import are liberalized. The decisions aimed at liberalization of gold helped import and export processes. The rapid growth seen in gold sector due to these developments accelerated new decisions concerning gold which has a great economic potential. These new decisions aimed at restructuring gold sector. In 1995 the Istanbul Gold Exchange (IGE) was opened (26.07.1995) and authority to import gold was given to the members of the IGE in addition to the Central Bank. The most important development during restructuring process is the trading of gold under an organized market by the establishment of Istanbul Gold Exchange (IGE). Istanbul Gold Exchange became an important step in canalizing the gold to financial system, developing gold based investment vehicles and international integration of gold sector in Turkey. After the IGE, local gold prices became in conformity with international prices, imported gold bars were enforced to meet generally accepted standards and fineness and the system gained a transparent structure. The establishment of Istanbul Gold Exchange started a continuous development process on the market, set a base for the development of gold based financial instruments. The first legal decision concerning the establishment of Istanbul Gold Exchange was made in 1993, 'General Regulation Concerning the Foundation and Operation Principles of Precious Metals Exchanges' was issued by Capital Markets Board on the basis of the provisions of Article 40/A of Code of Capital Markets, number 2499 as amended by law number 3794. Bodies of the Exchange are the General Assembly, Management Board; Supervisory Board and Exchange President. The General Assembly that is the top decision making body consists of Exchange members. Administrative organization of the Exchange is comprised of Presidency, Vice Presidency and Service Units. Becoming an exchange that deepens the money market instruments, provides trading of all precious metals, precious stones, commodity and rights in international standards, with its dynamic and strong financial structure, being an impulsive force for local precious metals and stone markets and a reference exchange for international markets. Mission:- providing a safe and regulated perfect competition market conditions for precious metals and stones subject to trading in the Exchange including registration process for commodities that are traded in the Exchange in terms of buying, selling and production, making a contribution to develop new instruments, systems and fund management techniques based on commodities that are traded in the Exchange, facilitating funding problems of precious metals sector and companies, supporting education and collaboration activities to improve corporate structure of the Exchange members and their awareness, making contribution to the activities of Istanbul International Financial Center project. Targets:- (i) achieving an organizational structure similar to the exchanges of developed countries; (ii) being an active member of the precious metals trading of Middle East and Turkic Republics in the world trade; (iii) contributing to activities for securitizing precious metals, developing precious metal instruments based on derivatives, active using of fund management methods; (iv) providing active usage of precious metals lending transactions and its certificates to ensure Turkish precious metals sector overcome financial difficulties; (v) creating a link between Turkish precious metals market and financial sector; and (vi) contributing Istanbul to be an international financial center. Activity Area:- (i) registration of import and trade of unprocessed precious metals like gold, silver, platinum and palladium that are defined in Decree No. 32 concerning the Protection of the Value of Turkish Currency which is issued in the Official Gazette dated 11/8/1989; (ii) registration and trade of precious metals that are domestically produced; (iii) trade of precious metals with fineness lower than certain amount defined by 'Communique of Standards and Refineries of metals to be Transacted on The Precious Metals Exchange'; (iv) physical exchange of the transactions between members of the Exchange; (v) storage of precious metals owned by members, mutual funds, exchange-traded funds assets; (vi) studies for the development of instruments and legislation based on precious metals; and (vii) import and export procedures for rough diamonds that are taken into consideration under the Kimberley Process Certification Scheme. Duties and Powers:- (i) creating markets in the Exchange for precious metals with standards defined by the Treasury; (ii) providing legal regulations and organization for possible markets to be formed; (iii) providing execution of trade in a secure and stable manner under free competition in the Exchange; (iv) enforcing legal sanctions for members who violet Exchange rules; (v) taking necessary measures under the power of Exchange regulation in case of unfavorable incidents; (vi) creating precious metals and lending markets based on transactions of capital market instruments; and (vii) performing tasks given by Turkish Treasury and Capital Markets Board. Legislation encompasses entire laws, by-laws and communiqués of precious metals and stones subject to purchase and sale in a safe and stable manner under conditions of free competition on the basis of the provisions of Article 40/A of Code of Capital Markets, dated 28.07.1981, No. 2499 as amended by law No. 3794 dated 29.04.1992. Istanbul Gold Exchange commenced its operations on July 26, 1995. The exchange has three types of markets:- (i) Precious Metals Market includes the spot trade of standard and non-standard gold, silver, platinum and palladium metals; (ii) Precious Metal Lending Market provide lending and certificate transactions of defined precious metals; and (iii) Diamond and Precious Stones Market provides transactions of diamond and precious stones. Domestic or foreign banks, precious metals brokerage companies, authorized corporations (formerly called Currency Office) precious metals producing and marketing companies, international precious metal companies with its full-authorized branch in Turkey that obtained the membership certificate from the Under-Secretariat of Turkish Treasury and complied with the requirements set forth by the IGE Board of Directors, are authorized for trading on the exchange. Only IGE members are eligible to import precious metals and obliged to submit the import to the IGE vault within three business days after the arrival of precious metal to Turkey. Conduct of Trading:- the members are represented by a broker on the floor who submits orders

and executes transactions and the authorized person in the member's head office. The brokers submit their order through a computer system either in session floor or from their office by using remote connection trading system. The system automatically matches orders submitted by the buyers and sellers. The orders are listed on the screen based on price and time priority. When a match occurs, the trade is automatically executed and registered. The pending orders are broadcasted worldwide beyond the trading floor through information broadcast services. Trading Hours:- in the Precious Metals Market two sessions are held every working day. The daily session is held between 09:45 am – 17:30 pm. The internet session is held between 17:45 pm – 09:40 am (included weekend and holiday). Collaterals:- in order to have the right to trade on the exchange the members have to submit two types of collaterals to the IGE. Risk Collateral:- covers the possible losses come out by the member transactions in which a member may cause to other members or the exchange. Trading Collateral:- sets the upper limit on the transaction volume of a member. Hence a member can trade up to 25 times the sum of trading collateral and the amount of precious metals that is kept in the IGE vault member's account for only maturities T+0. However Members can trade From T+1 to T+5, 20 times and 12 times for maturities from T+6 to T+9 with their own collaterals. The collaterals can be submitted to a bank defined by the Exchange's Executive Board as in following forms:- (i) cash (TL or foreign currency); (ii) bank letter of credit; (iii) precious metals existing in IGE vault; and (iv) Treasury bonds and bills. Clearing:- the Exchange's Clearing Department acts as the buyer to the seller and the seller to the buyer. The Clearing department takes collaterals against the risk of member default. In case a member does not fulfill its obligations, the Exchange asks the member to cover the losses due to this incompleteness. If this loss is not remedied, the Clearing Department uses member's collaterals to cover losses. The clearing mechanism functions as follows: The precious metal is transferred from the seller's account in the IGE vault to the buyer's account by Exchange's Clearing House. The payment covering the value of the metal subject to transaction must be made to the Clearing Department account through a liaison bank. Clearing Department transfers the related cash amount to seller's account in settlement bank. Subsequent to these operations, clearing becomes completed.

JABOT = ЖАБО – Jabot:- fall of lace or cloth attached to the front of a man's neckband (XVIII century); pleated frill of cloth or lace attached down the center front of a woman's dress or blouse. / Жабо, отделка из кружев или лёгкой ткани на блузке или платье. В Европейском костюме XVIII века нашивка (из кружев, кисеи, муслина) со сборками, прикреплявшаяся к вороту мужских сорочек и спускавшаяся на грудь. Жабо назывался также распространённый в XIX веке полотняный стоячий воротник, закрывавший нижние части щёк. Под Жабо, от Французского слова Jabot, означающее Птичий Зоб, понимается отделка блузки, платья или рубашки в виде оборки из ткани или кружев, которые спускаются от горловины вниз по груди. Некоторые толковые словари определяют жабо как воротник или галстук. История:- первое появление жабо в Европейском костюме относят к XVII веку. Жабо в то время являлось неотъемлемой частью мужской белоснежной рубашки, которая в свою очередь являлась признаком истинного щегольства и богатства. Именно в этот период и сформировалась основная форма жабо:- оно ниспадало до уровня талии пышной волной, выступами или сплошной оборкой в мелкую складку (иногда двойной или тройной). В России жабо появилось в XVIII веке вместе с платьем Западно-Европейского покроя. Во времена правления Императрицы Екатерины II (1762–96) женщины носили мундирные платья с камзолами, неотъемлемым дополнением которых были рубашки с жабо. Тем не менее, до 1840-х жабо оставалось деталью преимущественно мужского костюма. С приходом фраков в мужскую моду, жабо стало меньше в объёме и лаконичнее. Теперь оно стало атрибутом штатской одежды. В XVIII – первой половине XIX веков жабо для мужского костюма шили из ткани рубашки и отделывали различным кружевом. С середины XIX века жабо вновь появилось в женском гардеробе, но не для того, чтобы скрыть застёжку на блузке (застёжка спереди появилась только около 1880 года, блузы и платья до этого застегивались сзади), а исключительно для украшения. Во второй половине XIX века жабо практически исчезло из мужской одежды, а попытки возродить его в середине 1960-х успеха не имели. В женской и детской моде жабо сохраняется до сих пор. Жабо Сегодня:- жабо в современную моду вернул Немецкий дизайнер Кал Ото Лагафэльд (Karl Otto Lagerfeld; 1933–2019). Он первый начал использовать эти рюши в своих коллекциях. Сегодня жабо – это преимущественно атрибут романтического и ретро-стиля в женской одежде. Жабо периодически появляются в коллекциях таких Модных Домов, как Шанэль (Chanel), Робэрто Кавалли (Roberto Cavalli), Кристиа Лякруа (Christian Lacroix), Ралф Лорэн (Ralph Lauren) и других. Жабо по-прежнему украшают в основном блузки и рубашки, также жабо можно увидеть на элегантных топах и коктейльных платьях. Жабо сегодня довольно современно, однако дизайнеры нередко прибегают и к ретро-образам, предлагая одежду с жабо, подобную той, которую носили в XIX веке. Также жабо сегодня часто украшает праздничную одежду, придавая женскому образу романтичность и торжественность одновременно..

JACK = ГЮЙС (или ДЬЖАК) – Jack (maritime term):- the flag similar to the union of the national flag.

JACK = ЖУРАВЛИК (или РЫЧАГ, или КОСАРЬ, или ЖУРАВЛЬ, или КРЮЧОЧНЫЙ СТЕРЖЕНЬ, или НАПРАВИТЕЛЬ, или ПОПОЛЗУШКА, или СЕЛЕКТОР, или НИТЕИСКАТЕЛЬ, или СБРАСЫВАЮЩИЙ ГРЕБЕНЬ, или ПОДНОЖКА (в ткацком станке), или ДОМКРАТ) – Jack is:- (1) a blade having high and/or low butts used to actuate the movement of latch knitting needles. (2) Part of a dobby head designed to serve as a lever in the operation of the harness of a loom. / (2) Журавлик каретки .

JACKBOOT = БОТФОРТ (или РЫБАЦКИЙ САПОГ, или САПОГ ВЫШЕ КОЛЕНА) – Jackboot is a heavy military boot made of glossy black leather extending above the knee and worn especially during the XVII and XVIII centuries; a laceless military boot reaching to the calf.

JACKET = ЖАКЕТ – Jacket is a garment for the upper body usually having a front opening, collar, lapels, sleeves, and pockets. Jacket is a short coat. / Жакет – это короткая верхняя одежда. Под Жакетом, от Французского слова Xxxxx, означающее Xxxxx, понимается короткая женская верхняя одежда, укороченный вариант пиджака, обычно длиной до талии. Иногда длина жакета может достигать середины бедра. Классический жакет имеет полуприлегающий силуэт. Длина такого жакета может достигать линии бёдер. История:- упоминания о жакете встречаются в XIII–XV веках в период Бургундской моды. В те времена жакет представлял собой короткую распашную мужскую одежду, полы которой расходились в виде юбки от стянутой поясом талии. Жакет имел стоячий воротник, рукава различного вида, чаще всего жиго. В 1930-е был модным очень короткий жакет. Его фигурные манжеты и пояс были сделаны из контрастной ткани. В 1930–40-е годы появляются жакеты из плотных тканей (габардина, шевиота, бостона), которые носили в комплекте с платьями из тонких тканей (шифона, маркизета, батиста, ситца). С течением времени жакет претерпел множество изменений, пока не превратился в такой, каким мы его знаем сегодня. Жакет Сегодня:- жакет – очень удобная верхняя одежда, которую можно носить в любом возрасте. Сегодня жакет делается с

расширенной и спрямлённой линией плеч, чаще всего приталенным. Рукав может быть втачным, цельнокроеным и реглан. Воротник может быть самой разной формы, он также может и отсутствовать. Современные жакеты разнообразны по тканям и формам. Сегодня невероятно популярны летние жакеты из лёгких тканей с коротким рукавом. Такие жакеты визуально делают руку тоньше. Также не выходят из моды укороченные жакеты (болеро), трикотажные жакеты (кардиганы), меховые жакеты (полушубки). С Чем Носить? Жакет обычно носят в сочетании с юбками, брюками, леггинсами, шортами или платьями. Жакеты расклешённой формы будут прекрасно смотреться с узкими брюками, к ним также подойдёт и юбка-карандаш. Жакеты с короткими рукавами можно носить с перчатками, чтобы придать образу элегантности. Короткие жакеты (болеро) и жакеты длиной до талии можно носить с прямыми юбками, юбками-карандаш или с короткими пышными юбками. Здесь также будут уместны широкие брюки, брюки-дудочки, брюки-клёш и леггинсы. Жакеты с декором и/или принтами будут особенно стильно смотреться с однотонным платьем или костюмом, не контрастирующим с ним по цвету. Жакеты в стиле милитари будут удачным дополнением делового костюма или наряда для вечеринки. Также такие жакеты отлично подойдут для повседневных прогулок. Меховые жакеты практически никогда не выходили из моды и приемлемы обычно для любых условий. С равным успехом их носят и подростки, и студенты, и светские львицы, и деловые леди. Такие жакеты сочетаются с любой одеждой:- с джинсами и классическими брюками, с юбками мини и макси, с шортами и бриджами и так далее. Выбор Звёзд:- всевозможные пиджаки, жакеты и кардиганы очень любимы знаменитостями. Эти предметы одежды звёзды надевают в самых разных ситуациях:- как на светские мероприятия, так и на обычную прогулку с друзьями или поход по магазинам.

JACKET = ЧЕХОЛ (или МАНШОН, или КОЖУХ, или ОБШИВКА) – (1) Jacket is a wood or fiber cover placed around such containers as cans and bottles. / Деревянный или волоконный чехол вокруг таких контейнеров как банки и бутылки.

(2) Jacket is a woven or felted tubular sleeve for covering and shrinking on a machine roll. / муфта (sleeve).

(3) In polymer manufacture, Jacket is an external shell around a reaction vessel. For example, jacketed vessels are used when heat-transfer medium is circulated around the vessel.

JACKET CUSTODY = ХХ ДОВЕРИТЕЛЬНОЕ УПРАВЛЕНИЕ – Jacket Custody:- securities held in separate custody are kept separate from holdings of the bank or third parties. Securities are held in separate custody if they are not admitted to collective custody by a securities clearing and deposit bank, or at the depositor's request. The name of the owner is noted on the strip of paper wrapped around the securities. The advantage of separate custody for the customer is that he can receive the original of the securities deposited with the bank. See also Separate Custody. Opposite:- Collective Custody.

JACK TAR = МОРСКОЙ ВОЛК (или СТАРЫЙ МОРЯК) – Jack Tar (maritime term):- sailors were once called by their first names only, and Jack was their generic name. Tar came from seamen's custom of waterproofing clothing using tar.

JACK–UP RIG = САМОПОДЪЁМНАЯ БУРОВАЯ УСТАНОВКА (или БУРОВАЯ УСТАНОВКА НА ВЫДВИЖНЫХ СВАЯХ) – In oil industry, Jack-Up Rig is a seadrill rig system that can extract oil at different water depths. Jack-up rig's legs can either sit on the ocean floor or be ratcheted up to allow the rig to float while being relocated by a tug. Water dept up to 120 meters. See also Drillship, Semisubmersible Rig, Semitender Rig, and Tender Rig. / Ноги самоподъёмной буровой установки (СПБУ). Смотрите также Буровое Судно (Drillship), Полупогружная Буровая Установка (Semisubmersible Rig), Полупогружная Платформа С Буровой Установкой На Сваях (Semitender Rig или Tender Rig). Плавучая Буровая Установка (ПБУ) – буровая установка для бурения нефтяных и газовых скважин в открытом море. Бурение производится с ПБУ, опирающейся на морское дно при помощи мощных колонн (при глубинах до 70 метров); с заякоренной ПБУ (от 60 до 300 м); с ПБУ с динамической стабилизацией (более 250–300 м).

JACOB'S LADDER = ЛЕСТВИЦА ИАКОВА (или ШТОРМ–ТРАП) – Jacob's Ladder is a rope ladder with wooden rungs which can be rolled up and hangs down the side of vessel, for example, for a pilot to board the ship from a pilot boat. A rope ladder suspended from the side of a vessel and used for boarding. Jacob's Ladder is a ladder made of rope with wooden rungs, e.g., pilot ladder which is used over the ship's side for embarkation and disembarkation of pilots. Jacob's Ladder is a ladder to heaven, described in the Book of Genesis, which the biblical patriarch Jacob envisions during his flight from his brother Esau. Jacob's ladder is a ladder of rope with rungs, used over the side. / Под Шторм-Трапом понимается верёвочная лестница, используемая для сообщения между судами на стоянке и на неспокойном море. Под Трапом, от Голландского слова Trap, понимается верёвочная, деревянная или металлическая судовая лестница. Различают:- внутренний и забортный трап, постоянный и съёмный трап, наклонный и вертикальный трап. Забортные трапы (парадные трапы, шторм-трапы) служат для сообщения с береговыми причалами или с плавучими средствами. Верёвочный трап, используемый для сообщения между судами на стоянке и на неспокойном море, называется шторм-трапом. Трапом называются также лестницы различной конструкции, используемые при посадке/высадке в вертолёты, самолёты и тому подобное. Лествица Иакова – библейская аллегория. Брат Иосий (Esau). Лествица Иакова (Jacob's Ladder) – переводное апокрифическое сказание. В Книге Бытия (Book of Genesis; XXVIII, 10–22) содержится рассказ о том, как Иаков, сын Исаака, видит во сне лестницу, основание которой покоится на земле, а вершина достигает неба; по ней всходят и нисходят ангелы. Бог предвещает Иакову величие его рода в будущем. В основанном на этом библейском сюжете апокрифе, условно называемом Лествица Иакова, содержится более подробное описание лестницы (на ней 12 ступеней, на каждой из них справа и слева лица, а на самом верху – 'лице, акы человече, из огня изсечено'). Существенно расширено толкование видения:- ангел разъясняет символику ступеней, лиц на них, движения по лестнице ангелов, которое предвещает сошествие Христа на землю; подробнее говорится о судьбе потомков Иакова. В той части апокрифа, где рассказывается о чудесах при сошествии Христа, имеется сюжетная перекличка со Сказанием Афродитиана. И увидел во сне:- вот, лестница стоит на земле, а верх её касается неба; и вот, Ангелы Божии восходят и нисходят по ней. И вот, Господь стоит на ней и говорит:- Я Господь, Бог Авраама, отца твоего, и Бог Исаака. Землю, на которой ты лежишь, Я дам тебе и потомству твоему; и будет потомство твоё, как песок земной; и распространишься к морю и к востоку, и к северу и к полудню; и благословятся в тебе и в семени твоём все племена земные; и вот Я с тобою, и сохраню тебя везде, куда ты ни пойдёшь; и возвращу тебя в сию землю, ибо Я не оставлю тебя, доколе не исполню того, что Я сказал тебе. Иаков пробудился от сна своего и сказал:- истинно Господь присутствует на месте сем; а я не знал! Jacob's ladder – (1) Библейская лестница Иакова; (2) Разговорное:- длинная крутая лестница; (3) Морское:- скок-ванты; вант-трап (4) Ботаническое:- синюха голубая.

JACODEC = JAPAN AGRICULTURAL CHEMICALS OVERSEAS DEVELOPMENT COMMISSION

JACONET = ДЬЖЕКЭНЭТ (или ЖАКОНЕТ, или МЕДИЦИНСКАЯ КЛЕЁНКА, или ЛИНЕН–БАТИСТ) – Jaconet is a lightweight cotton cloth used for clothing and bandages. / .

JACQUARD = ЖАККАРДОВАЯ – (1) Jacquard is a system of weaving that utilizes a highly versatile pattern mechanism to permit the production of large, intricate designs. The weave pattern is achieved by a series of punched cards. Each card perforation controls the action of one warp thread for the passage of one pick. The machine may carry a large number of cards, depending upon the design, because there is a separate card for each pick in the pattern. Jacquard weaving is used for tapestry, brocade, damask, brocatelle,

figured necktie and dress fabrics, and some floor coverings. A similar device is used for the production of figured patterns on some knit goods. Jacquard is a mechanical loom invented by Joseph Marie Jacquard (1752–1834; French weaver and merchant) that simplifies the process of manufacturing textiles with complex patterns such as brocade, damask and matelasse. It is usually applied to silk, rayon and polyester. The product is an intricately woven, shiny fabric with an interwoven, textured and dimensional design. Jacquard is a system of weaving that utilizes a highly versatile pattern mechanism to permit the production of large, intricate designs and (at Bally Ribbon Mills) shapes. The weave controls the action of one warp yarn for the passage of one pick. Each card perforation machine may carry a large number of cards, depending upon the design, because there is a separate card for each pick in the pattern. / Жозеф Мари Жакяр (Joseph Marie Jacquard; 1752–1834; Французский ткач и коммерсант). брокатель (brocatelle).

(2) Jacquard:- woven fabrics manufactured by using the Jacquard attachment on the loom. This attachment provides versatility in designs and permits individual control of each of the warp yarns. Thus, fabrics of almost any type or complexity can be made. Brocade and damask are types of Jacquard woven fabrics. Jacquard:- Joseph Jacquard invented this decorative weaving technique in 1804. A special loom is used to weave a pattern directly into the fabric; a costly process that produces an elegant cloth. A fabric of intricate variegated weave or pattern. Jacquard is a term used to describe fabrics with a woven or knitted pattern, whether or not they are made with a Jacquard attachment on the loom. The Jacquard attachment for weaving and knitting machines makes possible the manufacture of complicated, repeated geometrical designs in knits and wovens. See also Dobby. / Жозеф Мари Жакяр (Joseph Marie Jacquard; 1752–1834; Французский ткач и коммерсант). Жаккардовая Ткань:- . Смотрите Крупноузорчатые Переплетения.

JACQUARD KNIT = ЖАККАРДОВЫЙ ТРИКОТАЖ – Jacquard Knit is a knit with a design knit into the fabric in a regular allover pattern. Most Jacquard patterns are closely knitted, but it is possible to make some pattern knits with a Jacquard machine. Jacquard Knit is a weft double knit fabric in which a Jacquard type of mechanism is used. This device individually controls needles or small groups of needles, and allows very complex and highly patterned knits to be created. / Жозеф Мари Жакяр (Joseph Marie Jacquard; 1752–1834; Французский ткач и коммерсант).

JACQUARD LACE = ЖАККАРДОВОЕ КРУЖЕВО – Jacquard Lace:- the name ‘Jacquard’ comes from the name given to the family of looms invented in Germany following the Second World War. The simple, quite unrefined lace produced on the first loom in this series was gradually improved on subsequent looms, from Jacquard, to Jacquardtronic, to Textronic to conclude with the most recent creation, the Super Textronic. The common characteristic of all these looms is the tricot stitch from which the lace is created, a stitch that is easier and quicker than the weft and warp of the Leavers looms, but which gives a thicker lace, with a less defined pattern, a rather uniform background and a ‘flat’ appearance with little depth. / Жозеф Мари Жакяр (Joseph Marie Jacquard; 1752–1834; Французский ткач и коммерсант).

JACQUARD MECHANISM = ЖАККАРДОВ МЕХАНИЗМ (или МАШИНА ЖАККАРДА, или МЕХАНИЗМ ЖАКЯРА) – Jacquard is a special fabrication in which a pattern is woven directly into the material. A device for weaving such elaborate designs by a machine was invented between 1801 and 1810 by Joseph Marie Jacquard (1752–1834). The Jacquard mechanism is attached to a loom and operated by a punched card system which selects individual warp threads. A variety of mechanically operated Jacquard machines exist providing control over 100, 200, 400 or 600 ends. There are also Jacquard systems for knitting machines. Jacquard systems can now be electronically controlled. Jacquard Mechanism is a mechanism, named after Joseph Marie Jacquard (1752–1834), which gives individual control of several hundred warp threads or knitting needles, enabling large figures designs to be produced. / Жозэф Мари Жакяр (или Жаккар; Joseph Marie Jacquard; 1752–1834), Французский ткач и изобретатель. Около 1800 усовершенствовал ручной ткацкий станок, создав приспособление для выработки крупноузорчатых тканей. На промышленной выставке в Париже в 1801 на его модель обратили внимание и он получил приглашение в Париж на работу в Музей (консерваторию) искусств и ремёсел. В 1808 Жакяр сконструировал новую модель машины для узорчатого ткачества, которая получила широкое распространение в ткацком производстве (смотрите Машина Жаккарда). Машина Жаккарда была изобретена Фрунцузским изобретателем, ткачом и механиком Жозэфом Мари Жакяром (Joseph Marie Jacquard; 1752–1834) в период 1804–05, а в 1806 объявлена общественным достоянием. Она представляла собой зевообразовательный механизм ткацкого станка для выработки крупноузорчатых тканей (декоративных тканей, ковров, скатертей и тому подобного). Эта машина даёт возможность раздельно управлять каждой нитью основы или небольшой их группой. Машина Жаккарда, приспособление к ткацкому станку для выработки тканей с крупным узором. Названа по имени Французского ткача и изобретателя Жозэфа Мари Жакяра (или Жаккарда). Машина Жаккарда возможность при образовании зева на ткацком станке раздельно управлять перемещением каждой нити или небольшой группы нитей основы и вырабатывать ткани, раппорт которых состоит из большого числа нитей. При помощи машины Жаккарда можно изготовлять узорчатые платьевые и декоративные ткани, ковры, скатерти и другое. Машина Жаккарда имеет ножи, крючки, иглы, рамную доску, рамные шнуры и перфорированную призму. Нити основы, пробранные в глазки лиц (галев), связаны с машиной при помощи аркатных шнуров, продетых в делительную доску для равномерного распределения по ширине станка. Ножи, закреплённые в ножевой раме, совершают возвратно-поступательное движение в вертикальной плоскости. Крючки, находящиеся в зоне действия ножей, захватываются ими и поднимаются вверх, а через рамные и аркатные шнуры поднимаются вверх и нити основы, образуя верхнюю часть зева (основные перекрытия в ткани). Крючки, выведенные из зоны действия ножей, опускаются вниз вместе с рамной доской. Опускание крючков и нитей основы происходит под действием силы тяжести грузиков. Опущенные нити основы образуют нижнюю часть зева (уточные переплетения в ткани). Крючки из зоны действия ножей выводятся иглами, на которые действует призма, имеющая качательные и вращательные движения. На призму надет картон, состоящий из отдельных бумажных карт, которые имеют просечённые и непросечённые места против концов игл. Встречая просечённое место, игла входит в призму, и крючок остаётся в зоне действия ножа, а непросечённое место карты перемещает иглу и выключает крючок из взаимодействия с ножом. Сочетание просечённых и непросечённых мест на картах позволяет осуществить вполне определённое чередование подъёмов и опускания нитей основы и образование на ткани узора.

JACQUARD PATTERNS = ЖАККАРДОВЫЕ УЗОРЫ (или ЖАККАРДОВЫ УЗОРЫ, или ЖАККАРДОВЫ РИСУНКИ) – Jacquard Patterns are the fancy patterns knitted in articles made by a special attachment on the knitting machine. Jacquard weave A construction characterized by very intricate woven-in designs. A special Jacquard loom makes these designs by controlling each warp yarn. / Жозеф Мари Жакяр (Joseph Marie Jacquard; 1752–1834; Французский ткач и коммерсант).

JACQUARD WEAVE = ЖАККАРДОВОЕ ПЕРЕПЛЕТЕНИЕ (или КРУПНОУЗОРЧАТОЕ ПЕРЕПЛЕТЕНИЕ) – Jacquard Weave is used to produce patterned fabrics. The intricate patterns or figures are created all over the fabrics. It is woven on a Jacquard loom. This type of loom differs with standard looms. It has a Jacquard attachment or a punch card. In Jacquard loom, the warp yarns is individually controlled and not in groups. This allows creating more complex designs. Jacquard weave was invented by a French named Joseph Marie Jacquired. Fabrics of Jacquard weave are costly because it involves more time and skill in making the Jacquard cards to produce new pattern. Moreover the weaving operation is also very slow. Characteristics of Jacquard Weave:- (i) the fabrics have the tendency to have floats; (ii) it has luster contrasts; (iii) it has snagging potential; and (iv) it is more stable and resilient than the basic

weaves. See also Weave. / Жозэф Мари Жакяр (Joseph Marie Jacquard; 1752–1834; Французский ткач и коммерсант). Смотрите также Переплетение (Weave). Для выработки крупноузорчатых тканей с большим раппортом переплетения по основе и утку применяют машины Жаккарда. Жаккардовые Переплетения, то же, что Крупноузорчатые Переплетения. Крупноузорчатые Переплетения тканей, вид переплетений нитей, служащий для воспроизведения узоров на ткани. Раппорт узоров включает большое число нитей как по основе, так и по утку. Крупноузорчатые переплетения получаются на ткацких станках с жаккардовыми машинами (поэтому иногда называются жаккардовыми). Контуры узора срисовываются ткацким рисовальщиком на канвовую бумагу с модели, выполненной художником, и заполняются графическими элементами различных переплетений (так называемое Патронирование). Готовый патрон определяет порядок насечки (перфорации) карт, управляющих машиной Жаккарда. Раппорты некоторых крупноузорчатых переплетений по основе могут достигать нескольких сотен нитей; бывают рисунки, раппорт переплетения которых занимает всю ширину ткани. Раппорт по утку неограничен и в отдельных случаях достигает нескольких тысяч нитей. Простые крупноузорчатые переплетения образуются из одной основы и одного утка. Такими переплетениями вырабатывают некоторые хлопчатобумажные, шёлковые и шерстяные ткани для платьев, подкладочные ткани, камчатные полотна, салфетки, скатерти и другое. Сложные крупноузорчатые переплетения образуют узор на ткани из нескольких систем основных и уточных нитей. Различают двухлицевые, двухслойные и ворсовые крупноузорчатые переплетения. Такими переплетениями вырабатывают ткани для платьев, костюмов, пальто, мебельные и другие декоративные ткани. Крупноузорчатые переплетения позволяют получить на поверхности ткани разнообразные световые эффекты, а в сочетании с разными цветами и материалом нитей – красивые, мягкие переходы тонов и резко очерченные контуры узоров, иногда весьма сложных (орнаменты, пейзажи, портреты и тому подобное).

JADE GREEN = ЗЕЛЁНО–НЕФРИТОВОЕ (или НЕФРИТОВОЕ ЗЕЛЁНОЕ) – Jade Green:- a light bluish green.

JADE™ MASTER TERMINAL = ХОЗЯЙСКИЙ ТЕРМИНАЛ ДЬЖЕЙДА™3 (или КАПИТАНСКИЙ ТЕРМИНАЛ ДЬЖЕЙДА™3) – The organization within Jade Corporation which supplies and supports CentrePort's core cargo management system for Chartts™. Jade™ Master Terminal is also the name of the cargo tracking system that this organization has developed. Good software design requires absolute understanding of an operator's requirements, objectives and strategies. Software needs to be better than just 'good'. Through innovative design and thought leadership Jade 'Master Terminal' has become a world-class Terminal Operating System (TOS) managing terminals around the world. The Master Terminal TOS is designed to handle a wide variety of terminal operations, from dedicated modern and sophisticated major container terminals to multi cargo type operations with mixed TOS requirements. All aspects of the terminal operation are integrated and handled with ease by Master Terminal, providing a most valuable tool to optimise operations and reduce operating costs. One of Jade Logistics client terminals was recently awarded the 'best terminal in northern Europe' by Maersk Line. Master Terminal also has a capacity to manage multi-modal and multi-site terminal operations. It is a cost-effective and comprehensive tool to help you improve operational productivity and the return on your investment. The core Terminal Operating System delivers commercial, technical, operational and optimisation capability through different modules recognising that even now cargo still comes in different shapes and sizes:- Break bulk, Bulk, Containers, General cargo, Inter-modal, and Roll on / Roll off. Master Terminal allows you the complete flexibility of use of individual functionalities. Each module may be operated individually or combined to suit your business requirements and to minimise your costs. We aim to help you to grow your business alongside our own, and our innovative fee structures have been established to minimise your business risks, to allow you to accurately forecast your IT costs, and to maintain the market competitiveness of your current and future operations. Our industry experts have managed, designed and developed container terminals, inter-modal terminals, Roll on / Roll off and rail operations around the world. Jade Software Corporation Ltd, Sydney, NSW, Australia. Master Terminal allows you the complete flexibility of use of individual functionalities. Each module may be operated individually or combined to suit your business requirements and to minimise your costs. It is a part of Jade Master Series which include also:- (i) Master Care24 (with Master Care24 you enjoy the benefits of having one supplier responsible for a significant portion of both the technology and service management layers involved in the delivery of your logistics solution); (ii) Master Rail (supports the new business processes, new efficiencies and cost reductions today's industry needs to remain at the top of their game); and (iii) Master Services (the team of consultants at Jade Logistics has many years of hands-on experience in the logistics and consulting industries around the world, specialising in the design and development of state of the art terminals and cargo handling facilities). / Дьжейд Софтвэа Корпорэйшэн Лимитид (Jade Software Corporation Ltd). Мэстчё КэаТчвэнтиФо (Master Care24). Мэрск Лайн (Maersk Line).

JAKARTA FUTURES EXCHANGE = ДЖАКАРТСКАЯ БИРЖА ФЬЮЧЕРСОВ – The PT. Bursa Berjangka Jakarta (BBJ; Jakarta Futures Exchange or JFX®) was established in August 1999. Headquartered in Jakarta, Indonesia. Website:- http://www.jfx.co.id. The benefit of establishing a local exchange through which Indonesian business entities can hedge their risks has been confirmed by various studies commissioned by the Indonesian government. Recognizing that the benefits far outweigh the possible cost, the Indonesian government submitted a bill for approval by Parliament in 1996. It was signed into law on 1997-December-05 as Act No. 32/1997 (Commodity Futures Trading Act). PT. Bursa Berjangka Jakarta is the first exchange established under this law. PT. Bursa Berjangka Jakarta was established on 1999-August-19 by 4 palm plantations, 7 refineries, 8 coffee exporter, 8 securities companies and 2 general traders. Of the 40 billion capital authorized, capital paid-up was Rp 11.6 billion. Bursa Berjangka Jakarta fulfills all the requirements as stated by the Act. It is expected that Bursa Berjangka Jakarta was licensed to operate in the second semester of 2000. Although there is a growing trend of merging of exchanges, like we saw in many countries some even happenend across borders, we welcomed the challenge of having competition in Indonesia when the government issued another permit. The Exchange is designed as a multi-commodity Futures Exchange. The first two contracts:- Olein Futures Contract and Robusta Futures Contract will be followed in due time by Cocoa Futures, Pepper Futures, Rubber Futures, and Plywood Futures. Options on Futures and Financial Futures will be considered later. JFX was concieved to use an electronic trading system from the very start of its operation. Exchange management saw this as a necessity as this is the trend all exchanges are experiencing. An electronic trading system called JAFeTS was then devised to meet management's criteria, i.e.:- (i) it should use latest technologies which to facilitate the adaptation of newer technologies; (ii) it should give room to system expansion if market so dictates; (iii) it should be affordable, so are its future modifications; and (iv) it should be custom built, as are the modifications so that modifications can be made in the appropriate time, without the normal delays encountered with off-the-shelf systems. Purpose and Benefits:- main purpose of the implementation of the JAFeTS and therefore its benefits are:- (i) to provide level playing field where all market participants have equal access; (ii) to provide trading facility with integrated control which minimises trade risks; (iii) to provide efficient, fast, economical and reliable trading facility; (iv) to provide a system that uses latest technologies on par with foreign leading bourses; (v) to provide a solid foundation for remote trading system, whereby market participants can access the system from their premises; and (vi) to provide a system that can be easily tailored to suit market demand as it arises, such as:- adding new products, extending trading hours. JAFeTS Components:- basically, there are five components that constitute JAFeTS:- (i) Trader Interface:- this is the screen that Screen Traders input, change, and delete orders. They can also view overall market situation through this interface. (ii) Trade Information:- publication of trade data to quote vendors and the outside world is done through this component. (iii) Administrator Interface:- this is used by exchange officers to define and set up parameters that govern the operation of JAFeTS. Among others, parameters that can be set include:- contract types,

price limit, screen traders' user ids and passwords, trading sessions. (iv) Surveillance Application:- a facility through which exchange surveillance officers monitor market activities. (v) Clearing House Interface:- trade data are sent to the clearing house electronically via this interface. (vi) Data Vendor Interface:- trade data are sent to the data vendors electronically via this interface. (vii) Interface for Bappebti:- trade data are sent to Bappebti (Coftra) electronically via this interface. JAFeTS Development:- eversince JAFeTS 1.0 was used as the electronic trading platform, it has been continuously improved and upgraded. Version 1.0 – put in usage on 15 December 2000 – used web based technology. When the a major upgrade was done to the system – hence dubbed version 2.0 – JAFeTS uses push client-server technology with Java Messaging System and Application Server at its core. This version of JAFeTS can be accessed remotely by our members and liquidity providers. It also features basis trading among other enhancements programmed into the system. Execution speed of 50 messages per second is deemed sufficient for current trading activities. Plan is underway to radically upgrade the electronic trading system for even greater capacity and capabilities. And now in order to revitalize its commodity based futures contracts, Jakarta Futures Exchange has acquired a new trading system engine named JAFeTS 3.0. This new trading engine system have more capable to process more transaction and can ensure the data integrity better than it's predecessor. It's also have better availability and robustness compare to the previous system, which make it more reliable. The user interface of JAFeTS 3.0 is much simpler than the previous one and it also easy to operate which make the trading engine system is more user frienldy. With the introduction of the JAFeTS 3.0 which deployed and implemented recently, Jakarta Futures Exchange hopes its commodity based contracts may propel the exchange to the same league as another successful commodity futures exchange. The Next JAFeTS:- expect to see future JAFeTS Next Generation capable of:- (i) handling more transaction per second than its predecessor; (ii) upgrading the risk management functions; and (iii) improving the reliability and availability of the current Online trading. / Бапэбти (Bappebti) (Кофтра (Coftra)).

JAM = ЗАКЛИНИВАТЬ (или ЗАЖИМАТЬ, или ЗАЕДАТЬ) – Jam (maritime term):- to wedge tight.

JAMBEAU = ДЬЖЕМБО (или НАШЕЙНИК) – Jambeau is a piece of medieval armor for the leg below the knee. / .

JAPANESE CANDLESTICK THEORY = ЯПОНСКАЯ ТЕОРИЯ ПОДСВЕЧНИКОВ – Japanese Candlestick Theory:- the principles were developed in Japan during the XVII century by Munehisa Homma, a Rice broker. Similarly to a bar chart, a candle chart uses the open, high, low and closing prices – however, in a candle chart a body is created between the opening and closing prices. The bodies are presented in different colors to highlight the session's direction – usually a white body for an up day (open above the close) and a black body for a down session (close below the open). Regarded as good short-term signals. / Мунехиса Хома (Munehisa Homma).

JAPAN EXTERNAL TRADE ORGANIZATION = ВНЕШНЕТОРГОВАЯ ОРГАНИЗАЦИЯ ЯПОНИИ – Although legally under the aegis of the Ministry of International Trade and Industry (MITI), the Japan External Trade Organization (JETRO) administers the export programs of the Japanese Government independently. MITI subsidizes about 60 percent of JETRO's total annual expenditures and, technically, has final decision-making authority over JETRO management and programs. Originally established to help Japanese firms export, JETRO also assists international companies seeking to export to Japan and promotes Japanese direct investment in foreign countries and international direct investment in Japan. Headquartered in Tokyo, Japan. JETRO, or the Japan External Trade Organization, is a government-related organization that works to promote mutual trade and investment between Japan and the rest of the world. Originally established in 1958 to promote Japanese exports abroad, JETRO's core focus in the XXI century has shifted toward promoting foreign direct investment into Japan and helping small to medium size Japanese firms maximize their global export potential. Outlines JETRO's overall sphere of activities, both in Japan and overseas:- (i) promoting foreign direct investment (FDI) into Japan; (ii) facilitating economic growth in developing countries through trade promotion; (iii) cooperating in Economic Partnership Agreement (EPA); (iv) assisting Japan's small and medium-sized enterprises (SMEs); (v) supplying Japan with foreign economic information; (vi) promoting cross-border business tie-ups in high-tech and other key industry sectors; (vii) helping Japanese firms expand overseas and aiding efforts to protect intellectual property; and (viii) researching developing economies (IDE). JETRO Membership:- providing support and information on overseas business.

JAPONICA RICE = РИС ЯПОНИКА – Japonica Rice is one of the two major ecogeographical Races of Oryza Sativa (see also Indica). A Group of Rice Varieties from Northern and Eastern China grown extensively in some areas of the world. It has narrow, dark green leaves, medium-height tillers and short to intermediate plant stature. It is found in the cooler zones of the subtropics and in the temperate zones. Grains are short, roundish, spikelets awnless to long-awned, panicles low-shattering, and have 0–20% amylose content. Rice breeding in Japan began to be carried out on a large scale in the Meiji era (1868–1912). Many historical records indicate that various landraces began to be recognized at that time. These landraces became valuable resources for modern Rice breeding in Japan. However, newly established Varieties were promoted and used instead of landraces, and thus genetic diversity among cultivated Rice populations rapidly disappeared. The materials used in this study were Rice stocks for emergency food stored about 100 years go in the Meiji era by a farmer in Inabu-cho, Toyota city, Aichi prefecture. This component and eating quality of this preserved Rice have been reported previously, and it was confirmed that germination ability had been lost. However, the genetic background of these Rice has not investigated. Assessment of genetic diversity using preserved Rice allows direct insight into the breeding and dispersal of Rice Varieties in the past. Clarification of Varieties that have adapted to the environment at a particular time may be informative for breeding and the conservation of genetic diversity in the present and future. For phenotypic analysis, seed size variation has been used as a key indicator of phenotypic diversity. Archaeological remains have also been a useful source for clarifying seed diversity or transitional shapes. The grain shape index (ratio of the length/width (L/W) of a Rice grain) was established by Matsuo (1952) and defines three major categories:- a-type (short type), b-type (large type), and c-type (long-type). These three types are considered to be typical grain shapes for Temperate Japonica, Tropical Japonica, and Indica, respectively, with a few exceptions, and grain shape is used as a key factor for distinguishing landraces. Generally, Japanese landraces were Temperate Japonica types, with some exceptions. For molecular based genetic analysis, a number of molecular markers have been developed as indicators of genetic diversity. By investigating 40 isozyme loci of 1948 Rice strains from Asia and Africa, Second (1982) found that Indica and Japonica had been domesticated independently from their respective ancestors. Glaszmann (1987) found a discriminant marker for Indica-Japonica by polymorphic analysis of 15 isozyme loci and various phenotypic criteria among 1688 Asian Rice strains. Ishikawa et al. (1991) also found Indica-Japonica discriminant markers among 60 Asian Rice strains through polymorphic analysis of isozymes and physiologic and phenotypic criteria based on Morishima and Oka (1981). Chen et al. (1993) developed a specific cytoplasmic marker inherited maternally for distinguishing Indica or Japonica. Simple sequence repeat (SSR) markers were also developed and applied to confirm varietal differentiation. These reports suggested that Indica and Japonica had maintained a close relationship during the process of domestication. DNA extraction from the endosperm is possible even when germination ability has been lost. This extraction method is applicable for not only varietal identification of milled Rice grains but also long-preserved seeds like those reported here and carbonized seeds excavated from archaeological sites. Rice straw and chaff are also possible DNA sources. DNA analysis of ancient botanical specimens found among archaeological remains has been reported well; however, reports of samples from the middle ages to early modern era are very limited in number. The objective of this study was to understand the genetic background of a preserved seed population. To estimate genetic variation of these preserved seeds, seed size variation, Indica-Japonica classification by

polymorphisms among three insertion/deletion (INDEL) markers and three single nucleotide polymorphism (SNP) markers of isozymes, and population structure analyses by using the 21 SSR markers in the preserved seed population and three populations of current landraces and varieties.

JARI = JUTE AGRICULTURAL RESEARCH INSTITUTE

JAROSITE = ЯРОЗИТ – Jarosite is an ocher-yellow or brown mineral consisting of basic sulfate of potassium and iron and occurring in minute rhombohedral crystals or in masses. Found in acid sulfate soils. / Ярозит (от названия местности Jaroso (Харосо) в Испании, где впервые был найден ярозит), минерал класса сульфатов; химический состав $KFe_3(SO_4)_2(OH)_6$. Обычно содержит примесь натрия. Кристаллизуется в тригональной системе. Встречается в виде землистых и мелкозернистых масс охристо-жёлтого или жёлто-бурого цвета; реже в виде мелких кристаллов ромбоэдрического и псевдокубического габитуса с сильно стеклянным или алмазным блеском. Обладает пироэлектрическими свойствами и очень высоким двупреломлением. Твёрдость по минералогической шкале 2.5–3.5; плотность 3 150–3 260 килограммов на кубический метр (кг/м^3). Образуется в зоне окисления рудных месторождений за счёт сульфидов железа (пирит, пирротин и другие) главным образом в условиях сухого климата; при значительной влажности разлагается с образованием гидроокислов железа. Отлагается также из кислых сульфатных вод в районах действующих вулканов. Ассоциирует с гипсом, самородной серой, гетитом, самородным золотом. В бывшем Союзе Советских Социалистических Республик (СССР) ярозит известен в месторождениях Южного Урала, Казахстана, Алтая, за рубежом – в Испании, Чехословакии, Франции. Из чистых разновидностей ярозита путём обжига получают полировальные порошки состава Fe_2O_3 (так называемый Крокус). Ярозит:- (1) минерал из группы основных сульфатов, $KFe_5(SO_4)_2(OH)_6$. Ярозит кристаллизуется в тритон, сингонии. Кристаллы встречаются редко и небольшой величины. Чаще ярозит находится в землистых агрегатах жёлтой окраски. Обладает пироэлектрическими свойствами. При значительной влажности разлагается с образованием оксидов железа. Спутниками ярозита, кроме оксидов железа, являются в некоторых месторождениях самородная S, галогениды Ag, гипс и другие. (2) В гидрометаллургии Zn образов, ярозит состава $R+Fe_3(OH)_6(SO_4)_2$ или $(R,H_3O)Fe_3(OH)_6(SO_4)_2$ или $R,SO_4 \cdot Fe_2(SO_4), \cdot 4Fe(OH)$, где R = Na+, NH4+, K+, и используется для выделения железа из Zn-содержащих растворов. Ярозит образуется в кислых сульфатных растворах при pH = 1.7–2.5 (в зависимости от концентрации Fe, температуры и природы иона R). При более высоком значении pH из раствора выделяется аморфный основный сульфат железа. Осаждается ярозит ускоренной затравкой, то есть кристаллами, которые служат центрами кристаллизации. Осаждается ярозит ускоренным повышением температуры pH и добавлением затравки. Из раствора ярозит выпадает не сразу, а по истечении некоторого времени (инкубационного периода).

JASDAQ = JAPANESE ASSOCIATION OF SECURITIES DEALERS AUTOMATED QUOTATION SYSTEM

JASMINE = ЖАСМИНОВОЕ (или ЖАСМИН) – Jasmine:- a light yellow.

JASON CLAUSE = ОГОВОРКА ДЬЖЕЙСЭНА – Jason Clause is a clause included by shipowners in bills of lading or charter parties to protect themselves against the consequences of damage through unseaworthiness, latent defects, negligence, etc for which the shipowners are not responsible, the consignees, cargo owners or shippers agreeing to contribute in the event of general average arising from any of these causes. It is so termed because the validity of this clause was admitted in court after eight years of litigation concerning cargo carried by the steamer 'Jason'. Jason Clause is a clause in a contract of carriage relating to liability of the shipowner under the US Harter Act in disputes concerning general average. New Jason Clause:- in the event of accident, danger, damage or disaster before or after the commencement of the voyage, resulting from any cause whatsoever, whether due to negligence or not, for which, or for the consequence of which, the carrier is not responsible, by statute, contract or otherwise, the goods, shippers, consignees or owners of the goods shall contribute with the carrier in general average to the payment of any sacrifices, losses or expenses of a general average nature that may be made or incurred and shall pay salvage and special charges incurred in respect of the goods. If a salving ship is owned or operated by the carrier, salvage shall be paid for as fully as if the said salving ship or ships belonged to strangers. Such deposit as the carrier or his agents may deem sufficient to cover the estimated contribution of the goods and any salvage and special charges thereon shall, if required, be made by the goods, shippers, consignees or owners of the goods to the carrier before delivery. / Оговорка Дьжейсэна – это оговорка в контракте на перевозку, касающаяся ответственности судовладельца согласно Американскому Акту Хартёра (the US Harter Act) в отношении споров, касающихся общей аварии (general average).

JASPÉ = ЖАСПЕ – Jaspé is:- (1) a fabric used for suiting, draperies, or upholstery characterized by a series of faint stripes formed by dark, medium, and light yarns of the same color. (2) A term describing carpets having a faint striped effect. / Под Жаспе, от Французского слова Jaspé, означающее Воронёное или Крапчатое, понимается . (1) Однониточная двухцветная пряжа, изготовленная из двух ровниц разного цвета, имитирующая двухцветную кручёную пряжу. (2) Занавесочная ткань из хлопка полотняного переплетения набивная или с вышивным узором для занавесей, покрывал и другого.

JASPER = ЯШМОВОЕ (или ЯШМА) – Jasper:- a blackish green.

JAU = JIANGXI AGRICULTURAL UNIVERSITY

JAVANICA RICE = РИС ЯВАНИКА – Javanica Rice:- designation for the Bulu and Gundil Varieties of Indonesia and many upland Rices. They belong to the Japonica Race of Oryza Sativa. Rice Varieties with broad, stiff, light green leaves. It is low-tillering and has a tall plant stature. Grains are long, broad, and thick, awned or awnless. Javanica grains are low-shattering and have 0–25% amylose content.

JAW FACES = ЧЕЛЮСТНЫЕ ЛИЦЕВЫЕ СТОРОНЫ – Jaw Faces are the elements of a clamp which grip the test specimen without damaging it and which prevent slippage during the test.

JAY = СОЙКА (или РОНЖА) – Jay:- a moderate blue.

J–BOX = КОМПЕНСАТОР В ФОРМЕ БУКВЫ ДЬЖЕЙ. (J) – J-Box is a J-shaped holding device used in continuous operations to provide varying amounts of intermediate material storage such as in wet processing of fabrics and in tow production. The material is fed to the top and pleated to fill the long arm before being withdrawn from the short arm. / Компенсатор – шахта в отбельном производстве.

JCAD = JOINT COMMITTEE ON AGRICULTURAL RESEARCH AND DEVELOPMENT

JCB CO., LTD = ДЬЖЕЙ.СИ.БИ. КО., ЭЛ.ТИ.ДИ. – JCB Co., Ltd. (an initialism of the company's former name, Japan Credit Bureau) is a credit card company based in Tokyo, Japan. It is accepted at JCB merchants, it also in a strategic alliance with Discover Network merchants in the United States, UnionPay merchants in China, American Express merchants in Canada, and RuPay merchants in India. History Point:- founded in January 1961 as Japan Credit Bureau, JCB established dominance over the Japanese credit card market when it purchased Osaka Credit Bureau in 1968, and its cards are now issued in 20 different countries. 69.26 million JCB

cardmembers worldwide use their cards to purchase over USD62.7 billion of goods and services annually in 190 countries worldwide. JCB also operates a network of membership lounges targeting East Asian travelers in Europe, Asia and North America. Since 1981, JCB has been aggressively expanding its business overseas. JCB cards are issued in 20 countries numbering almost 9 million, in most countries JCB is affiliated with financial institutions to license them to issue JCB-branded cards. All international operations are conducted through its 100%-owned subsidiary, JCB International Credit Card Co., Ltd.. In the United States, JCB is not a primary credit card network such as Visa, MasterCard, Discover, or American Express. While the brand was primarily accepted by tourism-related businesses such as airlines, car rental companies, hotels, Japanese speciality retailers and select department stores it gained wider acceptance when on August 23, 2006 JCB announced an alliance with the Discover Network. The two companies signed a long-term agreement that led to acceptance of Discover Network brand cards at JCB point-of-sale terminals in Japan and of JCB cards on the Discover network in the US. This partnership became operational in 2011. Local JCB accounts in the United States are issued by JCBUSA, but are only available to residents of California, Connecticut, Illinois, New York, New Jersey, Oregon, Washington and Hawaii. Xxxxx. History:- 1961 – Japan Credit Bureau (JCB) established; Osaka Credit Bureau (OCB) established. JCB was established in January 1961 and two months later issued Japan's first credit card, compatible with the ISO standard. In May 1961 JCB also became the first private company in Japan to offer customers convenient automatic bank draft payment for credit card bills. 1968 – JCB and OCB merged. 1972 – JCB cardmembers reach 1 million. 1974 – Annual sales volume exceeds 100 billion JPY (Japanese Yen). 1978 – Name changed to JCB Co., Ltd.; credit card point program launched. First Credit Card Point Program In Japan:- JCB's groundbreaking Joy Joy point reward program drew the attention of the entire industry. The program started with 1 point per card transaction plus 1 point for every 10 000 Yen spent. Customers received point stamps with their credit card bill to collect and exchange for rewards such as the Sony Walkman. 1980 – JCB Travel Co., Ltd. established; JCB gift certificate services commenced. 1981 – started international operation; JCB International Co., Ltd., established in Tokyo; JCB International (Asia) Ltd. established in Hong Kong. JCB As A Global Payment Brand:- as more and more Japanese tourists traveled abroad, Japan's credit card companies started issuing cards with US based international brands to secure acceptance abroad. JCB was the only one to decide to establish its own global acceptance and service network. The only global payment brand based in Japan was born form this decision to prioritize JCB brand independence. 1982 – JCB Gold Card issuance commenced; start issuing cards with magnetic stripe; franchisee card business commenced. 1983 – JCB cardmembers reach 5 million; Annual sales volume exceeds 500 billion JPY. 1984 – first JCB card issued outside Japan in Hong Kong. 1986 – annual sales volume exceeds 1 trillion JPY. 1987 – JCB cardmembers reach 10 million; JCB International Credit Card Co., Ltd. established in USA. 1988 – launched no-signature acceptance, the first in the industry in Japan; JCB International (Europe) Ltd. established in UK. 1989 – JCB Shopping and Dining Passport (current JCB Special Offers Guide) published; JCB cards issued in USA. 1990 – JCB Plaza services commenced (Paris); JCB International (Italy) S.p.A. established; JCB International (Oceania) Pty Ltd. established in Australia; JCB International (Micronesia) Ltd. established in Guam; JCB cards issued in UK and Thailand. 1991 – JCB International Asia Pacific Pte. Ltd. established (Singapore). 1993 – JCB International (Taiwan) Co., Ltd. established; JCB cards issued in Korea. 1994 – JCB cards issued in Taiwan. 1995 – Japan Card Network Co., Ltd. established; JCB cards issued in Germany, Singapore and Australia. 1996 – JCB cards issued in Indonesia and Philippines. 1997 – JCB cards issued in Netherlands, Switzerland and Spain. 1999 – JCB cardmembers outside Japan reach 1 million; launched of J/Smart™ EMV compliant payment application; JCB cards issued in New Zealand. 2000 – announced aquiring partnership with American Express; JCB became a Corporate Marketing Partner of UNIVERSAL STUDIOS JAPAN®; JCB cards issued in Malaysia. 2001 – J/Smart™ card issuance commenced; JCB International (Thailand) Co., Ltd. established; Japan Point Anex Inc. established. 2002 – JCB card acceptance locations outside Japan reach 5 million. 2004 – acquisition of ownership in EMVCo; Rollout of J/Secure™ payer authentication program. 2005 – launch of QUICPay contactless payment; JCB cards issued in Bahrain and Bulgaria; JCB cards issued in China; Certified with BS7799. 2006 – launched Diners Club Card acquiring operation in Japan with Citi Cards Japan, Inc.; J&J Business Development Corp., JCB Travel Co., Ltd., J&J Gift Co., Ltd. established with JTB; alliance with Discover Financial Services; foundation of PCI Security Standards Council, LLC with 4 other payment brands; launched UnionPay card acceptance on JCB's ATM network in Japan. 2007 – New JCB Brand Emblem and Brand Slogan 'Good times start here' are announced; JCB conveys trust and delivers expection; the JCB emblem consists of stylized S characters in 3 colors representing Support (blue), Strength (red) and Sharing (green); first commercial rollout of J/Speedy, the JCB contactless payment program. JCB launched J/Speedy, global contactless payment service using NFC technology, global standards for proximity communication, and the EMV chip technology. 2008 – JCB cards issued in the UAE. 2009 – JCB Original Series Card issuance commenced; JCB card International (Korea) Co., Ltd. established; JCB cardmembers outside Japan reach 5 million. 2010 – JCB International Business Consulting (Shanghai) Co., Ltd. established; JCB Plazas expanded to 61 locations worldwide; JCB overseas purchase protection service commenced; launched merchant acquiring operation in Japan with China UnionPay. 2011 – JCB's 50th anniversary; PT. JCB International Indonesia established; JCB cards issued in Vietnam; cardmembers outside Japan exceed 10 million. 2012 – JCB International do Brasil Representação Comercial Ltda. (current JCB International do Brasil Administradora de Cartões de Pagamento Ltda.) established; JCB card acceptance locations outside Japan reach 15 million. 2013 – cardmembers outside Japan exceed 15 million. 2014 – JCB International (Eurasia) LLC established; JCB Tottori Solution Center (JCB EQSe Co., Ltd.) established; JCB card issued in Laos; JCB card issued in Bangladesh. 2015 – JCB card issued in Austria; JCB card issued in Russia; cardmembers outside Japan exceed 20 million; JCB Plaza Kyoto was opened at Kyoto station as the second JCB Plaza in Japan to provide unique JCB hospitality and travel support to the increasing number of visitors coming to Japan; new brand message 'Uniquely Yours' is announced. 2016 – JCB card issued in Pakistan; JCB card issued in Germany. / Дьжей.Си.Би. JCCT = JOINT COMMISSION ON COMMERCE AND TRADE

JCP = JUNIOR CAPITAL POOL

J CURVE AND REAL EXCHANGE RATES = КРИВАЯ ДЬЖЕЙ. И РЕАЛЬНЫЕ ВАЛЮТНЫЕ КУРСЫ – J Curve And Real Exchange Rates:- the current account may initially worsen before improving in response to real depreciation in exchange rates, because it takes time for the growth of import volumes to decline in response to higher import prices. This phenomenon is known as the J-Curve Effect, because the downward movement followed by an upward movement in the current account resembles the letter J.

J–CUT = СРЕЗ В ВИДЕ БУКВЫ ДЬЖЕЙ. (J) (или ХХ РАЗРЕЗ) – J-Cut:- in tufting cut-pile carpet constructions, uneven cutting of the loops caused by poor adjustment of knives and hooks or excessive tension.

JEAN = ДЬЖИН (или ДЖИНСА, или ДЖИНСОВКА, или ДЖИНСОВАЯ ТКАНЬ) – Jean is a durable twilled cotton cloth used especially for sportswear and work clothes. Close-fitting pants made especially of jean or denim. Usually used in plural. Jean is a cotton twill fabric, similar to denim, but lighter and finer, in a 2/1 weave for sportswear and linings. In theory, a sturdy, solid-colored or striped twill-weave cotton fabric, softer and finer than denim and drill. In practice, the term Denim is almost always used for the fabric, whereas the term Jeans is used for pants made of denim. Jean is used for sport blouses, work shirts, women's and girl's pants and shorts, and children's overalls and playclothes. / В самом начале 1500-х на Юге Франции в городе Ним (Nîmes) освоили и впервые стали изготавливать ткань саржу (по-Французски – Сэрж (Serge)). Дешёвый голубой (blue) краситель из Индии – Индиго (Indigo) доставлялся в Ним в основном из Итальянского порта Генуя (по-Французски – Жени (Gênes)), и именовался во Франции Блю дё Жени (Bleu de Gênes). Из готовой голубой ткани очень скоро стали шить для Генуэзских моряков штаны, а о поставляемой ткани говорили как о Сарже из Нима (по-Французски – Сэрж дё Ним (Serge de Nîmes)). От сюда со временем и пошли сокращённые термины Дёним или Дэним (Denim) и Голубая Джин или Джинса (Blue Jean). Смотрите также Дёним или Джинса или Джинсовка или Джинсовая Ткань (Denim). Плотная хлопчатобумажная ткань основонастилочная саржевого переплетения 2/1; основная саржа с трёхнитным раппортом.

JENSEN'S ALPHA = АЛЬФА ДЬЖЕНСЭНА – Jensen's Alpha follows directly from the single-factor market model, which links the expected return of an investment to the amount of beta risk incurred. Jensen's Alpha is a direct measure of the absolute amount by which an asset is estimated to outperform, if positive, the return on efficiently priced assets of equal systematic risk in a single-factor market model. It is tempting to describe the return in the context of the capital asset pricing model (CAPM), but strictly speaking, no asset offers a nonzero Alpha in a CAPM world, because all assets are priced efficiently. In practice, expected returns on the asset and the market, as well as the true Beta of the asset, are unobservable. So Jensen's Alpha is typically estimated using historical data as the intercept (a) of the following regression equation:- Rt – Rf = a + b(Rm,t – Rf) + εt, where Rt is the return of the portfolio or asset in period t, Rm,t is the return of the market portfolio in time t, a is the estimated intercept of the regression, b is the estimated slope coefficient of the regression and εt is the residual of the regression in time t. The error term εt estimates the idiosyncratic return of the portfolio in time t, b is an estimate of the portfolio's Beta and a is an estimate of the portfolio's average abnormal or idiosyncratic return. Because the intercept, a, is estimated, it should be interpreted subject to levels of confidence. Positive levels of Alpha show outperformance, meaning that the manager has earned a greater amount of return than justified by the amount of risk undertaken. Conversely, negative Alpha measures underperformance, where the return on the investment was lower than expected for the amount of risk incurred. Other popular performance measures exist, and some firms use those unique to the firm. In practice, a variety of performance measures should be explored, each of which is selected to view performance from a relevant perspective. Jensen's Alpha is a direct measure of the absolute amount by which an asset is estimated to outperform, if positive, the return on efficiently priced assets of equal systematic risk in a single-factor market model. Formula:- $p = E(R_p) - R_f - p[E(R_m) - R_f]$, where:- $E(R_p)$ is the expected return of the portfolio; R_f is the riskless rate; $p[E(R_m) - R_f]$ is the required risk premium; and p is the Alpha of the returns of portfolio p. Example:- if a portfolio is expected to earn 7% annualized return when the riskless rate is 4% and the expected return of the market is 8%, then if the Beta of the portfolio is 0.5, the Alpha of the portfolio is 1%:- $p = 7\% - 4\% - [0.5\ (8\% - 4\%)] = 1\%$. Jensen's Alpha was first used as a measure in the evaluation of mutual fund managers by Michael Cole 'Mike' Jensen (1939–; American economist) in 1968. The CAPM return is supposed to be 'risk adjusted', which means it takes account of the relative riskiness of the asset. This is based on the concept that riskier assets should have higher expected returns than less risky assets. If an asset's return is even higher than the risk adjusted return, that asset is said to have 'positive Alpha' or 'abnormal returns'. Investors are constantly seeking investments that have higher Alpha. Since Eugene Francis 'Gene' Fama (1939–; American economist), many academics believe financial markets are too efficient to allow for repeatedly earning positive Alpha, unless by chance. Nevertheless, Alpha is still widely used to evaluate mutual fund and portfolio manager performance, often in conjunction with the Sharpe Ratio (William Forsyth Sharpe; 1934–; American economist) and the Treynor Ratio (Jack Lawrence Treynor; 1930–2016; American economist). / Майкэл Кол 'Майк' Дьженсэн (Michael Cole 'Mike' Jensen; 1939–; Американский экономист). Юдьжин Фрэнсис 'Дьжин' Фама (Eugene Francis 'Gene' Fama; 1939–; Американский экономист). с Соотношением Шапа (Sharpe Ratio; Вилъйэм Фосайс Шарп (William Forsyth Sharpe); 1934–; Американский экономист) и Соотношением Трэйнёра (Treynor Ratio; Дьжак Лорэнс Трэйнё (Jack Lawrence Treynor); 1930–2016; Американский экономист).

JERK–BACK FILLING = ОТДЁРНУТАЯ (или НАТЯНУТАЯ, или ВЫДЕРНУТАЯ) УТОЧИНА (или НАТЯЖКА) – Jerk-Back Filling:- xxxxx. See also Pulled-In Filling.

JERKED–IN FILLING = НАТЯНУТАЯ (или ПРОДЁРНУТАЯ) УТОЧИНА (или НАТЯЖКА) – Jerked-In Filling:- xxxxx. See also Pulled-In Filling. The invention being to provide automatically controlled means for lifting the fillings of the idle shuttles of a loom, out of the path of travel of the active shuttle, during the weaving operation, thereby eliminating what is commonly known as Jerked In Filling, which results in a defective weave and an inferior grade of material produced. / Натяжки – порок ткани в виде поперечной полосатости от сильного натяжения поперечной нити (утка).

JERKIN = КУРТКА–БЕЗРУКАВКА – Jerkin:- a close-fitting hip-length usually sleeveless jacket.

JERK–IN = НАТЯЖКА – Jerk-In:- caused by an extra piece of filling being jerked part way into the fabric by the shuttle. The defect will appear at the selvedge. Severity:- major or minor depending how close the patterns are cut to the selvedge. Woven fabric defect. Jerk-In:- in woven fabric, an extra filling thread dragged into the shed with the regular pick and extending only part of the way across the

cloth. Synonym:- Lash-In, and Pull-In. Compare Double Pick. Jerk-In:- an extra piece of filling yarn jerked by the shuttle into the fabric along with a regular pick of filling. (1) Defect Name:- Jerk-In. Defect Type:- weft lines, horizontal lines. Fabric Type:- Bottomweights – Twill Derivatives. Description:- Jerk-In:- This is the result of an extra piece of filling yarn having been jerked by the shuttle part way into the body of the fabric. Severity:- Major. (2) Defect Name:- Jerk-In. Defect Type:- weft lines, horizontal lines. Fabric Type:- Shirting and Dress Goods – Plain Weave. Description:- Jerk-In:- This is the result of an extra piece of filling having been jerked by the shuttle from the selvage part way into the body of the fabric. Severity:- Major. / Уточина. Порок тканой ткани. Синоним:- Прибивать (Lash-In), и Втягивать или Стягивать или Сдерживать или Осаживать (Pull-In). Натяжки – порок ткани в виде поперечной полосатости от сильного натяжения утка. Порок или дефект ткачества.

JERQUE NOTE = БИЛЕТ ПРОВЕРКИ (или НОТА СВЕРКИ) – Jerque Note is a document given to the master by the UK Customs officer after the inward cargo is discharged and the vessel has been rummaged. / Документ, предоставляемый хозяину (или капитану) сотрудником Таможни Соединённого Королевства после того, как завозимый груз разгружен и судно подверглось досмотру.

JERSEY FABRIC = ТКАНЬ ДЬЖЁЗИ (или ТКАНЬ ДЬЖЁЗИНКА, или ТКАНЬ ДЖЕРСИ, или ДЬЖЁЗИНСКАЯ ТКАНЬ) – Jersey is:- (1) a circular-knit or flat-knit fabric made with a plain stitch in which the loops intermesh in only one direction. As a result, the appearance of the face and the back of a Jersey fabric is wholly different. (2) A tricot fabric made with a simple stitch, characterized by excellent drape and wrinkle recovery properties. Jersey Fabric:- the consistent interlooping of yarns in the Jersey stitch to produces a fabric with a smooth, flat face, and a more textured, but uniform back. Jersey fabrics may be produced on either circular or flat weft knitting machines. Jersey is a single knit fabric with plain stitches on the right side and purl stitches on the back. A weft-knitted rayon, acetate, or two-bar tricot-knitted rayon or acetate used for slips, gowns, and blouses. Jersey is also made of wool, cotton, silk, nylon, or blends of the newer synthetics. As an elastic knitted wool fabric, usually in stockinette stitch, Jersey was first made on the Island of Jersey off the English coast and used for fisherman's clothing. It is also used for blouses, dresses, and basque shirts. The word Jersey is also occasionally used as a synonym for any knit. See also Knitting, Single Knit, and Purl Knit. Jersey Fabric is a somewhat elastic, machine-knit dress fabric. Most commonly made of wool or cotton, but can also be made from rayon or synthetic fibers. Jersey:- made of wool, worsted, silk, cotton, rayon, and synthetics. Knitted on circular, flat-bed or warp knitted methods (later popular as a tricot-knit). Right side has lengthwise ribs (wales) and wrong side has crosswise ribs (courses). Very elastic with good draping qualities. Has special crease-resistant qualities due to its construction. Is knitted plain or has many elaborate tweed designs and fancy motifs as well as printed designs. Can look very much like woven fabric. Wears very well and if washable; it washes very well. First made on the Island on Jersey off the English coast and had been used for fisherman's clothing. / Найлан[ТЗ] (Nylon[TM]). Под Джерси, от названия Английского острова Дьжёзи (или Джерси; Jersey), понимается основовязаный (из многих нитей) средний и тонкий кулирный трикотаж из шерстяных, хлопчатобумажных, шёлковых или синтетических нитей. Джерси – шёлковое трикотажное полотно.

JERSEY STITCH = СРЕДНИЕ И ТОНКИЕ КУЛИРНЫЕ ГЛАДКИЕ ТОВАРЫ (или ДЬЖЁЗИНСКОЕ ПЕРЕПЛЕТЕНИЕ, или ДЬЖЁЗИНСКАЯ СТЁЖКА) – Jersey Stitch is a basic stitch used in weft knitting, in which each loop formed in the knit is identical. The Jersey stitch is also called the Plain, Felt, or Stockinet Stitch.

JET = ГАГАТОВОЕ (или ГАГАТ, или ЧЁРНОЕ КАК СМОЛЬ) – Jet:- an intense black.

JET = ФОРСУНКА (или ПАТРУБОК, или НАСАДОК) – Jet is:- (1) a device used to bulk yarns by introducing curls, coils, and loops that are formed by the action of a high velocity stream, usually of air or steam. See also Texturing, Air Jet Method. (2) See also Spinneret.

JET DYEING = КРАШЕНИЕ СТРУЁЙ (или РАЗБРЫЗГИВАНИЕМ) (или СТРУЙНОЕ КРАШЕНИЕ) – Jet Dyeing is a high temperature piece dyeing in which the dye liquor is circulated via a Venturi jet thus providing the driving force to move the loop of fabric. Jet Dyeing:- fabric is placed in a heated tube where jets of dye solution are forced through it at high pressures. The fabric too moves along the tube. The solution moves faster than the cloth while coloring it thoroughly.

JET DYEING MACHINE = СТРУЙНАЯ (или РАЗБРЫЗГИВАЮЩАЯ) КРАСИЛЬНАЯ МАШИНА – Jet Dyeing Machine is a high-temperature piecedyeing machine that circulates the dye liquor through a Venturi jet, thus imparting a driving force to move the fabric. The fabric, in rope form, is sewn together to form a loop.

JET FUEL = РЕАКТИВНОЕ ТОПЛИВО – In the United States, Jet Fuel includes kerosene-type (commercial or military) and naphtha-type:- (i) kerosene-type jet fuel:- a quality kerosene product with a maximum distillation temperature of 400 °F at the 10% recovery point and a final maximum boiling point of 572 °F. The fuel is designated in ASTM Specification D1655 and Military Specification MIL-T-5624L (Grades JP-5 and JP-8). A relatively low-freezing point distillate of the kerosene type used primarily for turbojet and turboprop aircraft engines. Commercial:- kerosene-type jet fuel intended for commercial use. Military:- kerosene-type jet fuel intended for military use. (ii) Naphtha-type jet fuel:- a fuel in the heavy naphtha boiling range. ASTM Specification D1655 specifies for this fuel maximum distillation temperatures of 140 °C at the 20% recovery point and 240 °C at the 90% recovery point, meeting Military Specification MIL-T-5624L (Grade JP-4). JP-4 is used for turbojet and turboprop aircraft engines, primarily by the military. Excludes ram-jet and petroleum rocket fuels. Kerosene-type; high-quality kerosene product used primarily as fuel for commercial turbojet and turboprop aircraft engines. Jet Fuel is a fuel of naphtha and kerosene type suitable for commercial or military purpose on aircraft turbine engines. Includes kerosene-type (commercial or military) and naphtha-type. See also Kerosene-Type Jet Fuel, and Naphtha-Type Jet Fuel. American Society for Testing and Materials (ASTM). / Американское Общество по Испытаниям и Материалам (АООИМ). Под Реактивным Топливом понимается основное топливо для авиационных воздушно-реактивных двигателей. Наиболее распространённое реактивное топливо – керосиновые фракции нефти, получаемые прямой перегонкой нефти с последующей гидроочисткой. Реактивное Топливо, топливо для авиационных реактивных двигателей. В качестве реактивного топлива наибольшее применение нашли керосиновые фракции, получаемые прямой перегонкой из малосернистых (например, отечественное топливо марки Т-1) и сернистых (ТС-1) нефтей. Для производства топлив, обладающих повышенной термической стабильностью (например, отечественное топливо РТ, зарубежные А, А-1, В), фракции прямой перегонки подвергают гидроочистке. В производстве реактивного топлива используются также компоненты гидрокрекинга и демеркаптанизации. Важнейшими показателями реактивного топлива являются плотность и теплота сгорания, определяющие дальность полёта, а также температура начала кристаллизации, общее содержание серы и содержание меркаптановой серы. Реактивное топливо должно иметь высокую термическую стабильность, особенно если оно применяется на сверхзвуковых самолётах, в баках которых топливо может нагреваться до 150–200 °C и выше. Высокая термическая стабильность достигается очисткой топлива от неуглеводородных примесей (сернистых, азотистых, кислородных соединений), например, путём обработки водородом (смотрите Очистка Нефтепродуктов). При этом одновременно обеспечивается и низкая коррозионная агрессивность реактивного топлива. К очищенным сортам топлива для повышения их стабильности при хранении добавляются антиокислители (до 24 миллиграммов на литр (мг/л)) и деактиваторы металлов (6 миллилитров на литр (мл/л)). В реактивном топливе содержится растворённая вода (до 0.008–0.01% при обычных температурах), которая при

изменении условий может выделяться из топлива и вызывать электрохимическую коррозию топливной аппаратуры, а также образовывать кристаллы льда. Поэтому в реактивное топливо вводятся ингибиторы коррозии (смотрите Ингибиторы Химические) (10–45 мг/л) и антиобледенительные присадки (0.1–0.3 объёмного %); добавляются также присадки, предотвращающие накопление статического электричества и повышающие противоизносные свойства топлив.

JET FUEL PRICE = ЦЕНА НА РЕАКТИВНОЕ ТОПЛИВО – Jet Fuel Price is a price for a one-time open market transaction covering immediate delivery purchased at current market rates.

JET KEROSENE = АВИАЦИОННЫЙ КЕРОСИН (или РЕАКТИВНЫЙ КЕРОСИН) – Jet Kerosene is an aviation fuel. The aviation fuels include three types:- aviation gasoline (see also Gasoline), gasoline (or naphtha) type jet fuel and kerosene type jet fuel. In terms of demand for the different products, jet kerosene has a share of 99% of all aviation fuels and it is the only one basic type of jet fuel in civil use world-wide. The widecut gasoline type of jet fuel has not been used by civil aircraft for many years (less than 0.05% of world aviation fuel demand) and, once the fuel for many military organizations, its military use has rapidly decreased over the last few years. Aviation gasoline (included in gasoline) accounts for slightly less than 1% of world aviation fuel demand. Jet kerosene is a middle-distillate fuel, generally produced to exact the stringent specifications of international civil specifications, for use as civil aviation fuel. In recent years however, many military organizations, including for example the North Atlantic Treaty Organisation (NATO) and the South East Asia Treaty Organisation (SEATO), now use fuels which are virtually identical to some of the internationally accepted jet kerosene, mainly differing in the additives included. Lower quality specification kerosene (other kerosene) or a dual purpose grade is used in some regions as domestic heating oil, especially in Asia, notably in Japan and Korea. Please note that some organizations collect information for jet fuel. Jet fuel includes both kerosene type and naphtha or gasoline type jet fuel. This is not a substantial problem as the latter category barely represents 0.05% of world-wide aviation fuel demand.

JET LOOM = СТРУЙНЫЙ ТКАЦКИЙ СТАНОК (или БЕСЧЕЛНОЧНЫЙ ТКАЦКИЙ СТАНОК) – Jet Loom is a shuttleless loom that employs a jet of water or air to carry the filling yarn through the shed. See also Loom, and Weft Insertion. / уточную пряжу через .

JETRO = JAPAN EXTERNAL TRADE ORGANIZATION

JETSAM = ПРЕДМЕТЫ, СБРАСЫВАЕМЫЕ ЗА БОРТ (С АВАРИЙНОГО СУДНА) – Cargo or goods which sink when jettisoned. The term applies also to such goods when washed ashore. Jetsam is the part of a ship, its equipment, or its cargo that is cast overboard to lighten the load in time of distress and that sinks or is washed ashore. / для восстановления плавучести и устойчивости судна.

JETTISON = СБРОС ЗА БОРТ – Jettison is a voluntary dumping overboard of cargo to relieve a vessel in distress. The act of throwing overboard part of a vessel's cargo or hull in hopes of saving the ship from sinking. Jettison is an act of throwing cargo or equipment (jetsam) overboard when a ship is in danger. Jettison:- to throw goods overboard. Voluntary dumping either of cargo or of ship's material or stores overboard, to protect other property from a common danger. / Сознательный сброс за борт либо грузов, либо принадлежностей или запасов судна для защиты другого имущества при общей опасности.

JETTY = ВОЛНОЛОМ (или МОЛ) – Jetty is a landing wharf or pier; a dike at a river's mouth. A mole or breakwater, built into the sea to protect the harbour or coast. Jetty is a mole or breakwater, running out into the sea to protect harbour or coast. It is sometimes used as a landing-pier. / Под Волноломом понимается гидротехническое сооружение для защиты от волнения (ветровых волн) акватории порта и рейдовых причалов, подходов к каналам и шлюзам порта, береговых участков моря. Различают:- (i) берегозащитные волноломы, расположенные непосредственно у берега; и (ii) оградительные волноломы, окружённые водным пространством. Под Молом, от Итальянского слова Molo от Латинского слова Moles, означающее Масса или Насыпь, понимается гидротехническое оградительное сооружение в виде узкой вертикальной или наклонной стенки, примыкающее одним концом к берегу и защищающее акваторию порта от волнения. Мол уширенного профиля часто служит также для размещения причалов.

JEWELLER'S BLOCK POLICY = ПАКЕТНОЕ СТРАХОВАНИЕ ЮВЕЛИРА – Jewellers Block was originally developed at Lloyd's of London in the late 1880's by a diamond merchant's clerk named Thomas March. Mr March, who was concerned at the inability of his employer to obtain insurance against theft, was friendly with one of the leading Lloyd's Underwriters of the day and between them they devised the first Jewellers Block policy. Soon after an insurance brokerage bearing Mr March's name was established and flourishes to this day as one of the leading Jewellers Block specialist brokers in Great Britain. What does 'Block' Mean? No one remembers how the name came about, but probably it is from the term 'En Bloc'. What Coverage is Provided? The Jewellers Block Policy is an 'all risk' coverage, which means that the insurer must specify what is not covered. If a risk is not in the list of exclusions, it is covered. Typical risks that are covered are Burglary, Robbery, Shoplifting, Grab and Run, Trick Loss, Substitution and Accidental Damage, in addition to the usual risks such as Fire. What Risks are Not Covered? The most important exclusions are Employee Dishonesty, Damage to Goods Being Worked Upon and Mysterious Loss or Unexplained Loss. Most other exclusions can be bought back if required or they are 'common sense' exclusions. What Extensions are Available? Coverage is based on stock at your premises but may be extended to follow your stock almost wherever it goes, including:- (i) Jobbers And Outworkers; (ii) Memo Of Consignment To Other Jewelers; (iii) Bank Or Safety Deposit Boxes; (iv) Commission Sales Representatives; (v) Travel By Principals Or Employees; (vi) Shipments; (vii) Trade Shows And Exhibitions; (viii) Personal Residences; and (ix) While Being Worn. What are the Requirements? (1) Must be working from business premises. (2) A burglary resistant safe according to the value of stock. (3) Burglar alarm connected by a direct line to the alarm company's monitoring station and certified by Underwriters Laboratories as Extent 3 Premises Protection with Level 3 Line Security or better. The system must include at least one hold up button and a door contact on the safe. These are the minimum requirements and insurers may have further requirements. If you are located in an area where ULC (short for the Underwriters Laboratories of Canada) certification is not available, a specification schedule from your alarm company may be acceptable. (4) Closed Circuit Television with a monitor is mandatory by most insurers except where values are low. Digital recorders have become the norm for most jewellers but are not mandatory in every case. (5) Security outside business hours is important and usually not more than 10% of jewellery and watches may be left out of safe outside business hours. (6) Physical inventory must be taken at least once a year and records maintained of all sales and purchases. A perpetual inventory is the best system to operate, this can be based on a computer or books or a card system. Conclusion:- the above gives you a general view of what the Jewellers Block Policy has to offer and how it operates. When considering which quotation to accept, you should check your policy carefully and compare how different insurers handle the conditions and warranties. The experience of your insurance broker in the field is also critical. Brokers must be prepared to explain conditions to you and knowledgeable enough to deal with disputed claim situations. A good test is to ask your broker what 'memo' means; if they do not know – go elsewhere. Jeweller's Block Policy is a form of property insurance that is provided to jewellers. / первоначально разработанное у Лойда из Лондона (Lloyd's of London) в конце 1880-х клерком коммерсанта по бриллиантам по имени Томэс Мач (Thomas March). Боглэри (Burglary), Робэри (Robbery). Форма имущественного страхования, предназначенная для ювелиров.

JEWS HARP = ЕВРЕЙСКАЯ АРФА (или ХХ) – Jews Harp (maritime term):- the ring bolted to the upper end of the shank of an anchor and to which the bending shackle secures.

JFK® = JAKARTA FUTURES EXCHANGE

JIC = JOINT INDUSTRY CONFERENCE

JICA = JAPAN INTERNATIONAL COOPERATION AGENCY

JICT = JAPAN INFORMATION CENTER OF SCIENCE AND TECHNOLOGY

JIG = ДЬЖИГЕР (или РОЛИКОВАЯ (КРАСИЛЬНАЯ) МАШИНА, или (КРАСИЛЬНО–)РОЛИКОВАЯ МАШИНА) – Jig is a machine used to dye piece goods. Full-width material is passed from a roller through the dye bath is an open vat, and then proceeds to another roller. This treatment is repeated until the desired shade is assured. Also known as Jigger. Jig (Jigger) is a dyeing machine used for processing goods in the open width and consisting essentially of a vessel holding the dye liquor and one roll mounted at either end and above the bath on which the cloth is unwound and wound, passing through the liquor during repeated operation. Each complete transfer from one roll to the other is known to the dyer as an 'end'. Jig is a machine in which fabric in open width-form is transferred repeatedly from one roller to another, passing each time through a bath of relatively small volume. Jigs are used for scouring, dyeing, bleaching, and finishing.

JIG DYEING = КРАШЕНИЕ НА РОЛИКОВОЙ КРАСИЛЬНОЙ МАШИНЕ – Jig Dyeing is similar to the process of beck dyeing with a slight variation. The fabric in jig dyeing is held on rollers at full width rather than in rope form as it is passed through the dyebath.

JIG–DYEING MACHINE = РОЛИКОВАЯ КРАСИЛЬНАЯ МАШИНА – Jig-Dyeing Machine is a machine in which cloth is dyed. The machine is composed of a large vat fitted with rollers to guide the cloth through a dye solution and subject it thoroughly to the action of the dye.

JIRCAS = JAPAN INTERNATIONAL RESEARCH CENTER FOR AGRICULTURAL SCIENCES

JIT = JUST IN TIME

JM = JAMAICA

JMD = JAMAICAN DOLLAR

JNAU = JAWAHARLAL NEHRU AGRICULTURAL UNIVERSITY

JO = JORDAN

JOBBER = МАКЛЕР – (1) In the United Kingdom, Jobber is a dealer engaged in the wholesaling of securities. Unlike a stockbroker, the jobber deals only with brokers and other jobbers, but not with the general public. Also known as Dealer or Specialist in the United States, and as Stockjobber in the United Kingdom, where they are usually organized into firms. Jobber is a term for market maker used on the London Stock Exchange.

(2) Jobber is a middleman. A gasoline jobber, for example, might buy from refiners and would resell to small distributors or consumers. / Посредник. Например, маклер, специализирующийся на бензине, который может купить его у нефтеперегонного предприятия и затем перепродать мелким дистрибуторам или заказчикам.

JOBLESS CLAIMS = ОБРАЩЕНИЯ ЗА ПОСОБИЯМИ ПО БЕЗРАБОТИЦЕ – Jobless Claims is a weekly compilation of the number of individuals who filed for unemployment insurance for the first time. It predicts trends in the labor market.

JOB LOT = РАБОЧИЙ ЛОТ – (1) Job Lot:- collection of stocks or goods sold together, perhaps to somebody who wants only some of them.

(2) Job Lot:- a form of contract having a smaller unit of trading than is featured in a regular contract. / Форма контракта, предполагающая продажу меньшей партии, предположим, товара, нежели предусмотрено в обычном контракте.

JOC = JOURNAL OF COMMERCE

JOCK = ДЬЖОК (или ЙОК, или ХХ) – Jock:- athletic supporter. / .

JOCKSTRAP = СУСПЕНЗОРИЙ (или ДЬЖОКСТРЭП) – Jockstrap is an athletic supporter. / .

JOD = JORDANIAN DINAR

JODHPUR = ДЬЖОДПУР (или КАВАЛЕРИЙСКИЙ ПОЛУСАПОГ, или ГАЛИФЕ) – Jodhpur:- (plural) riding breeches cut full through the hips and close-fitting from knee to ankle; an ankle-high boot fastened with a strap that is buckled at the side. Also called Jodhpur Boot. / Галифе, от Французского слова Galliffet, – это брюки, облегающие голени и сильно расширяющиеся на бёдрах. Названы по имени Французского генерала Гястона Александрэ Огюста дё Галифе (Gaston Alexandre Auguste de Gallifet 1830–1909), который ввёл их для кавалеристов. История:- Французский кавалерийский генерал Гястон Александрэ Огюст дё Галифе во время Франко-Прусской войны (1870–71) получил ранение, в результате которого его бедро было изуродовано и искривлено. Поскольку в те времена военные носили облегающие брюки-лосины, генерал, из-за полученной травмы, не мог носить их, из-за чего редко появлялся в обществе. Однажды старый друг генерала Галифе, полковник Ковенкюр, принес ему приглашение на бал, который устраивало Французское правительство. Галифе отказывался ехать, однако дочь полковника, Анна-Мари, всё-таки его уговорила. Генерал Галифе появился на балу в новых брюках оригинального для того времени покроя:- очень свободных на бёдрах и сильно зауженных от колена. Несмотря на такой необычный покрой, брюки не выглядели смешно, а Анна-Мари, наоборот, отметила, что генералу невероятно идёт подобный фасон. Спустя несколько месяцев после бала генерал Галифе женился на Анне-Мари, а фасон новых брюк ввёл для своей армии. Позже галифе были заимствованы и другими армиями. А в 1980-х галифе вошли в женскую моду. Галифе Сегодня:- современные брюки галифе занимают прочные позиции как в мужском, так и в женском гардеробе. Галифе не выходят из моды вот уже несколько лет. Дизайнеры придумывают новые фасоны и интересный крой, экспериментируют с тканями и отделками. Галифе из атласа или шёлка, к примеру, уже никого не удивят. Сегодня также популярны не только галифе-брюки, но и капри, и шорты подобного фасона. Галифе можно наблюдать в коллекциях Гуччи (Gucci), Жан Поль Готье (Jean Paul Gaultier), Баленсиага (Balenciaga), Дольчэ э Габбана (Dolce & Gabbana), Нина Риччи (Nina Ricci), Рэлф Лорэн (Ralph Lauren), Пол Энд Дьжоу (Paul & Joe), Кристиан Диор (Christian Dior), и других. Как И С Чем Носить:- главный принцип подбора одежды к брюкам галифе – не выбирать слишком объёмный верх, поскольку объём уже присутствует ниже пояса. Галифе могут сделать ноги визуально меньше и шире, поэтому такие брюки в идеале подходят длинноногим и худощавым женщинам. Обладательницам низкого

роста желательно носить галифе с обувью на высоких каблуках. Полным женщинам стоит отдавать предпочтение брюкам тёмных цветов (чёрный, тёмно-серый, коричневый, болотный, хаки). Укороченные брюки галифе отлично сочетаются с туфлями на высоких каблуках. Для более простого и повседневного варианта укороченные галифе можно носить в сочетании с лоферами, надев наверх топ и/или жакет. Галифе хорошо сочетаются с водолазками, строгими рубашками и романтичными блузками. Также галифе будет хорошо смотреться с жакетами в стиле милитари, с меховыми жакетами. Что касается выбора топов, то здесь ограничений нет:- с галифе прекрасно сочетаются и майки, и корсеты и элегантные топы.

JO–DOG = ЛЕНИВЕЦ – Jo-Dog is a mechanical device attached to a fifth wheel to increase a tractor to a three-axle unit increasing the legal weight carrying capability of the tractor. / механическое устройство, прикреплённое в пятому колесу, для .

JOHNNY = ДЬЖОНИ – Johnny:- a short-sleeved collarless gown that is open in the back and is worn by persons, as hospital patients, undergoing medical examination or treatment.

JOINING = ВЯЗКА – Joining is a mating, to produce offspring.

JOINT = СОЧЛЕНЕНИЕ (или ЧЛЕНИК, или СОЕДИНЕНИЕ, или СУСТАВ) – Joint is a point where a side-shoot or leaf grows out of a stem. A single section or segment of a stem composed of a series of units. / Узел стебля растения.

JOINT = ШАШКА (или XX) – Joint is an intersection and connection of components, often identified by location within the pallet as the end joint, center joint and corner joint. See also Pallet.

JOINT ACCOUNT = СОВМЕСТНЫЙ СЧЁТ (или ОБЩИЙ СЧЁТ) – Joint Account is an account opened jointly in the names of two or more persons. Depending on the exact terms of the account agreement, withdrawals from such an account may be made by either of the joint depositors alone or they may require the signatures of both or all of them together. It may also be specified that withdrawals can be effected by any two of three or more depositors. Joint Account is an account owned by two or more persons or an association of individuals. A joint account may either give each accountholder the right to operate the account on his or her own ('or' account) or require all accountholders to act jointly ('and' account). / Совместный Счёт или Общий Счёт – банковский или брокерский счёт, находящийся в совместном владении двух или более лиц. Совместные счета могут быть организованы двумя способами:- (i) либо все стороны, владеющие счётом, должны подписывать чеки и одобрять любое снятие средств со счёта или все брокерские сделки; (ii) либо любая сторона может предпринимать подобные действия от своего имени.

JOINT AND SEVERAL GUARANTEE = СОЛИДАРНАЯ И РАЗДЕЛЬНАЯ ГАРАНТИЯ (или СОЛИДАРНАЯ И ДОЛЕВАЯ ГАРАНТИЯ) – In accordance with Art. 496 para. 1 of the Swiss Code of Obligations, the joint and several guarantor can be ordered to pay on behalf of the principal obligor and before realization of the real estate mortgages under the following conditions:- (i) if the principal obligor is in arrears with his or her payment despite reminders; and (ii) the principal obligor is clearly insolvent. Joint And Several Guarantee is a guarantee, under which the guarantor or guarantors commit themselves jointly and severally with the principal debtor. The guarantor can, on principle, be sued even before the principal debtor if the latter is in arrears with his payments and there has already been an unsuccessful attempt at collection. / солидарно или порознь .

JOINT APPLICATION = СОВМЕСТНАЯ ЗАЯВКА (или СОЛИДАРНАЯ ЗАЯВКА) – Joint Application is an application in which the invention is presented as that of two or more persons. See also Joint Inventor.

JOINT CARGO COMMITTEE = СОВМЕСТНЫЙ КОМИТЕТ ПО ГРУЗАМ – Joint Cargo Committee represents the interests of those writing marine cargo and related risks within the London market. This committee comprises underwriting representatives from both the Lloyd's and the International Underwriting Association (IUA) company markets and includes representation from the UK cargo market. The committee also includes two specie representatives elected from within the specie sector. Joint Cargo Committee is a group of London company underwriters and Lloyd's underwriters who meet to discuss matters relating to cargo insurance and to make recommendations to the cargo insurance market. / Лойд.

JOINT CHARGE = СОЛИДАРНЫЙ СБОР (или СБОР ЗА СТЫКОВКУ) – Joint Charge is a charge which applies to the carriage over the lines of two or more carriers and which is published as a single amount (aircargo). / В перевозках авиационных грузов, сбор, который взимается при перевозке груза по одному маршруту с задействованием двух или более перевозчиков, и которай публикуется как одна сумма.

JOINT CONTROL = СОВМЕСТНЫЙ КОНТРОЛЬ – Joint Control is the contractually agreed sharing of control over an economic activity.

JOINTED = СОСТАВНОЕ (или СОЧЛЕНЁННОЕ, или УЗЛОВАТОЕ) – Jointed:- constricted at intervals.

JOINT FLOAT = СОВМЕСТНОЕ ОБРАЩЕНИЕ – Joint Float is an arrangement by which a group of currencies maintain a fixed relationship relative to each other, but move jointly relative to another currency in response to supply and demand conditions in the exchange market.

JOINT HULL COMMITTEE = СОВМЕСТНЫЙ КОМИТЕТ ПО КОРПУСАМ – Joint Hull Committee is a group of London company underwriters and Lloyd's underwriters who meet to discuss matters relating to hull insurance conditions and rating structures. The Joint Hull Committee was founded in 1910 and is the oldest Joint Committee. It comprises underwriting representatives from both the Lloyd's and IUA company markets, representing the interests of those who write marine hull business in the London market. It has a number of sub-committees, principally Navigating Limits and Risk Assessment. Headquartered in London, the United Kingdom. / Лойда.

JOINT INVENTOR = СОИЗОБРЕТАТЕЛЬ (или СОАВТОР) – In the US patent law, Joint Inventor is an inventor who is named with at least one other inventor in a patent application, wherein each inventor contributes to the conception of the invention set forth in at least one claim in a patent application. See also Coinventor.

JOINT LIABILITY = СОЛИДАРНОЕ ОБЯЗАТЕЛЬСТВО – Joint Liability:- contractual obligation of several debtors under which each is individually answerable to the creditor for the discharge of the entire debt. / Контрактное обязательство нескольких должников, по которому каждый из них несёт индивидуальную ответственность перед кредитором за возврат всего долга. Под Солидарным Обязательством понимается обязательство с несколькими должниками или кредиторами, при котором любой из должников обязан исполнить обязательство. Солидарное Обязательство – обязательство двух или более сторон перед требованиями к активам компании или частного лица.

JOINT PHOTOGRAPHIC EXPERTS GROUP = СОВМЕСТНАЯ ГРУППА ЭКСПЕРТОВ ПО ФОТОГРАФИРОВАНИЮ – 'Joint Photographic Experts Group' or .jpg file type extension or JPEG is one of several digital image formats that are viewable in web browsers. JPEG image files are encoded using a standard for file compression (making the files smaller) that preserves essential color and display information in a fairly photorealistic way, with smooth edges, shapes and color blends. JPEG files are generally preferred

for displaying still image photographs in digital form. The JPEG format is 'lossy', meaning some information is lost when an image is compressed. This accounts for the 'fuzziness' and patchy color areas what you may see when lower resolution JPEG images are enlarged to fill a space on the screen.

JOINT PROPERTY = ОБЩАЯ СОБСТВЕННОСТЬ (или СОВМЕСТНАЯ СОБСТВЕННОСТЬ) – Joint Property:- undivided ownership of a property by a community of persons. They can only dispose of the property by unanimous decision because each has a right to the undivided property and not to quotas or shares. / Под Общей Собственностью понимается имущество, принадлежащее двум или более лицам, например, жилой дом, принадлежащий нескольким гражданам, или имущество супругов. Известна также как Совместная Собственность.

JOINT RATE = ОБЩАЯ СТАВКА (или СОЛИДАРНАЯ СТАВКА) – Joint Rate is a rate applicable from a point located on one transportation line to a point on another transportation line, made by agreement and published in a single tariff by all transportation lines over which the rate applies. Joint Rate is a rate from a point located on one transportation line to a point on another transportation line which is published in a single tariff.

JOINT SAFEKEEPING ACCOUNT = СОВМЕСТНЫЙ СЧЁТ ОТВЕТСТВЕННОГО ХРАНЕНИЯ – In Switzerland, Joint Safekeeping Account is a term for the custody account held jointly at a bank by two or more people, each of whom is entitled to dispose over the assets in the joint safekeeping account without the involvement of the other(s). / В Швейцарии этот термин применяется при обозначении банковского счёта по доверительному управлению, принадлежащего одному или более лицам, каждый из которых вправе распоряжаться активами, находящимися в управлении на этом счёте по своему собственному усмотрению, без согласования с другим или другими владельцами этого же счёта.

JOINT STOCK COMPANY = КОМПАНИЯ С СОВМЕСТНЫМ КАПИТАЛОМ (или КОМПАНИЯ С ОБЩИМ КАПИТАЛОМ) – In the United Kingdom, a group or association of people recognized in law as an individual entity with a fixed capital stock (share capital) divided into parts (shares). Also known as Corporation in the United States, and as Limited Company in the United Kingdom. Joint Stock Corporation (Aktiengesellschaft (AG)) is one of the legal forms that companies can take. In a joint stock corporation, the owners hold their stakes in the company in the form of shares. Shareholders are only liable up to the amount of their shareholding, but not with their other assets. The management bodies of the joint stock corporation are the management board (Vorstand), the supervisory board (Aufsichtsrat) and the annual general meeting (Hauptversammlung). A joint stock corporation is managed by the management board, which is appointed by the supervisory board, while the suervisory board is elected by the annual general meeting, i.e. the shareholders in general meeting. Furthermore, the shareholders also resolve at annual general meetings on important questions of key relevance to the company, such as the appropriation of profits, the ratification of the acts of management of the supervisory board and management board as well as on capital increases and mergers. / Акциэнгезэльшафт (А.Ге.; Aktiengesellschaft (AG)). Компания с Совместным Капиталом или Компания с Общим Капиталом – форма коммерческой организации, сочетающая признаки корпорации и товарищества. В соответствии с законодательством США компании с совместным капиталом считаются корпорациями с неограниченной ответственностью для акционеров. Как и в обычной корпорации, инвесторы, вкладывающие средства в компании с совместным капиталом, получают акции, которые они могут свободно продавать по своему желанию, не прекращая существования корпорации; они также избирают директоров, в отличие от корпораций с ограниченной ответственностью. Однако каждый акционер акционерной компании с неограниченной ответственностью по закону несёт ответственность по задолженностям компании. У этой формы организации существуют определённые преимущества по сравнению с компаниями с ограниченной ответственностью:- меньшие налоги, простота организации в соответствии с гражданским законодательством, большая безопасность для кредиторов, мобильность, отсутствие ограничений. Но недостатки, состоящие, например, в том, что компания с совместным капиталом с неограниченной ответственностью обычно не может владеть недвижимостью, в самом статусе компании с неограниченной ответственностью обычно перевешивают преимущества, в результате чего эта форма организации относительно малопопулярна.

JOINT VENTURE = СОВМЕСТНЫЙ ВЕНЧУР (или СОВМЕСТНАЯ ДЕЯТЕЛЬНОСТЬ, или СОВМЕСТНОЕ ПРЕДПРИЯТИЕ) – The term 'Joint Venture' was first used in the United Kingdom pronouncements in SSAP 1 (Statement of Standard Accounting Practice 1) in 1971, but was not defined. It was introduced into company law by the UK Companies Act of 1985, which whilst not providing an explicit definition, implies the criterion of joint management of the (holding) undertaking with a non-consolidated one (the venture). A business undertaking in which more than one firm share ownership and control of production and/or marketing. In the United Kingdom, a Joint Venture (JV) is a contractual arrangement whereby two or more parties (the venturers) undertake an economic activity that is subject to joint control. Joint control is defined as the contractually agreed sharing of control of an economic activity. Joint ventures fall into three categories:- jointly controlled entities, jointly controlled operations and jointly controlled assets. The accounting treatment depends on the type of joint venture. A joint undertaking by a number of persons or companies to achieve a specified entrepreneurial objective, e.g., to construct a plant or power station, or carry out a research study. A joint venture can take the form of a contract or the founding of a jointly owned subsidiary, affiliate or holding company. Some international financing institutions (such as the World Bank) also practice this form of collaboration in the field of development financing. Partnership formed for the purpose of carrying out a single project rather than as an ongoing business. Joint Venture is an enterprise participated in by associates acting together, with a community of interests, each associate having the right to participate in its management. For income tax purposes, a joint venture is treated as a partnership, not taxable in its own capacity, but regarded as a taxpayer for the purpose of computing its taxable income, which is distributable among the associates in the proportions agreed upon. Such distributive shares are reported by the associates on their individual income tax returns. Also known as Equity Investment in the United States. A joint activity of two or more companies, usually performed under a common name. An association of persons to jointly explore, finance or direct a particular development with a view to mutual profit. May be in various forms, that is, 50/50, 75/25 with the right to increase to 60/40 etc. Joint Venture:- when two or more persons or organizations gather capital to provide a product or service. Often carried out as a partnership. Joint Venture:- joint untertaking by several people or companies to achieve specific entrepreneurial objectives, for example, to build a factory or power plant, or to carry out research projects. Depending on the circumstances, the cooperation can be managed through contractual arrangements or by establishing a joint subsidiary or holding company. Joint Venture is a business enterprise, usually a corporation, that is formed between two other companies. Joint Venture is a contractual agreement between two or more parties for the purpose of executing a business undertaking. All parties agree to share in the profits and losses of the enterprise. / , например, . Совместное Предприятие – соглашение, в соответствии с которым две или более стороны совместно работают над проектом. Часто, когда компании, имеющие взаимодополняющие технологии, желают произвести изделия или услуги, совместное предприятие создаётся с использованием сильных сторон участников. Совместное предприятие, которое обычно ограничивается одним проектом, отличается от партнерства, составляющего основу сотрудничества по многим проектам.

JOIST = ПОДБАЛКА (или ВТОРОСТЕПЕННАЯ БАЛКА, или СЛЕГА, или БАЛКА, НЕСУЩАЯ НАСТИЛ или ПОЛ) – (1) Joist is one of a series of parallel beams used to support floor and ceiling loads, supported in turn by larger beams, girders, or bearing walls. /

Под Балкой, от Голландского слова Balk, понимается конструктивный элемент, обычно в виде бруса, работающего главным образом на изгиб. Балки широко применяют в строительстве и машиностроении:- в конструкциях зданий, мостов, эстакад, транспортных средств, машин, станков и так далее. Изготовляют балки в основном из железобетона, металла и дерева. В зависимости от числа опор и характера опорных закреплений различают балки однопролётные, многопролётные, консольные, с заделанными концами, разрезные, неразрезные; в зависимости от формы поперечного сечения – прямоугольные, тавровые, двутавровые, коробчатые и другие. Расчёт балки обычно производят на прочность, жёсткость и устойчивость по законам сопротивления материалов. Под Слегой понимается толстая жердь, брус.

(2) Joist is a piece of dimension lumber 114 mm (6” nominal) or more in larger dimension, intended to be loaded on its narrow face. / .

JOLLY ROGER = ВЕСЁЛЫЙ РОДЬЖЁ (или ВЕСЁЛЫЙ РОДЖЕР) – Jolly Roger (maritime term):- a pirate’s flag carrying the skull and cross-bones. / Исторический флаг пиратов.

JONES ACT = АКТ ДЬЖОНЗА – Jones Act is the Merchant Marine Act of 1920:- The President of the United States has just been briefed by the national security advisor on a critical situation developing overseas. A close ally of the United States has come under attack from a hostile nation, and the president has decided to immediately deploy US military forces to assist the defense of our ally. To whom will the president turn to in order to get the majority of US military personnel, equipment, and weapons overseas? The answer is not the Army, Navy, Air Force, or Marines. Rather, the job of transporting our military forces and equipment in such a scenario is the job of the US Merchant Marine. The US Merchant Marine is the fleet of civilian owned and crewed ships carrying imports and exports during peacetime, which becomes a naval auxiliary during wartime to deliver troops and war material. The Merchant Marine, as a cohesive and distinct arm of US commerce and defense, began during the Revolutionary War and was then known as the Colonial Merchant Marine. The best known captain in the Colonial Merchant Marine was John Paul Jones, who committed his private merchant fleet to the development of the United States Navy. The Merchant Marine Act of 1920 is commonly referred to as the ‘Jones Act’, named after the legislation’s sponsor, Senator Wesly L. Jones of Washington, though it is a common misconception the act is named after Captain John Paul Jones. At the turn of the XIX century the United States had completed a period of continental development and overcome the turmoil of the Civil War. By the dawn of the next century, the need for a strong and viable modern merchant fleet had become a political priority, driven by several factors. One consideration was the ascension of Britain as a world power, based in great part on its merchant fleet, control of the world’s shipping lanes, and its steadfast adherence to a national maritime philosophy embodied in the quote by Sir Walter Raleigh, as ‘Whosoever commands the sea commands trade; whosoever commands the trade of the world commands the riches of the world, and consequently the world itself’. Another important factor was America’s need for a large sea lift capability in time of defense, realized during World War I. Lastly, the most important maritime development in this period was the converson of ships from coal to oilburning, made possible through the development of a process to refine petroleum. Before World War I approximately only one percent of the world’s merchant and naval vessels burned oil for fuel. By the end of 1918 the number of oil burning ships had risen to nearly 15 percent and continued to climb until coal-burning ships had become totally obsolete by the commencement of World War II. At this same time, however, the volume of cargo and international trade for the US merchant fleet had drastically decreased due to the economic decline and global turmoil caused by World War I. Further complicating the ability of the US merchant fleet to compete in international commerce were higher construction and operation costs. For example, in 1926 the comparative monthly crew costs for ships of equal size were:- USD3 270 for the United States; USD1 308 for Great Britain; and USD777 for Japan. Historically, the United States curbed the impact of such issues through ‘cabotage laws’, which are government measures used to protect or foster a domestic shipping industry by reserving all or a portion of international sea commerce to ships which fly the national flag. Cabotage laws were first introduced with the Shipping Act of 1916. The Shipping Act provided, among other things, that only citizens of the United States, or companies in which a controlling interest was held by a citizen of the United States, could own a US vessel. Additionally, the secretary of transportation had strict control over the transfer and chartering of US vessels to foreign companies, and the Shipping Act provided for the regulation of rate agreements to avoid rate wars. Subsequently, Congress passed the Merchant Marine Act of 1920, which was arguably the nation’s most important cabotage law. At the time the Merchant Marine Act was passed into law, the act represented both the commitment of the United States to maintaining a strong and viable merchant fleet for commerce and defense, and its awareness that its merchant fleet could not profitably operate in unregulated competition. The opening paragraph of the act, entitled ‘Purpose and Policy of the United States’, summarized this commitment:- It is necessary for the national defense and for the proper growth of its foreign and domestic commerce that the United States shall have a merchant marine of the best equipped and most suitable types of vessels sufficient to carry the greater portion of its commerce and serve as a naval auxiliary in time of war or national emergency, ultimately to be owned and operated privately by citizens of the United States; and it is the declared policy of the United States to do whatever may be necessary to develop and encourage the maintenance of such a merchant marine. The Merchant Marine Act provided many measures to protect and foster the US Merchant Marine. Most important, the act restricted the transport of goods from points within the United States to vessels constructed and registered in the United States and owned by US citizens or companies. In this regard, the act further provided that any vessel lawfully engaging in the coastwise ‘Jones Act’ trade must never have been foreign-owned at any time and never registered under a foreign flag or rebuilt abroad. Any cargo shipped in violation of the Jones Act is subject to seizure and forfeiture to the US government. The US merchant fleet, however, continued to be plagued by its inability to compete in unregulated international commerce despite the passage of the Merchant Marine Act of 1920. The US merchant fleet has declined steadily since the end of World War II and, from 1947 to 1999, the US merchant fleet fell from approximately 4 400 vessels to less than 500 vessels. Numerous reasons are thought to have contributed to the decline, including lower standards of health, welfare, and safety for foreign merchant mariners leading to lower operating costs; discrimination by foreign countries against US merchant vessels engaged in international trade; tax advantages of operating foreign-registered vessels; aggressive labor unions in the United States; and the decline of the nation’s steel production industry. It is also important to note that many of the merchant fleets of other countries are highly subsidized by their governments, making it more difficult for the US merchant fleet to compete in international commerce. In response to the continual decline of the US merchant fleet, Congress passed new legislation to assist the maritime industry, including the Maritime Security Act of 1996. Pursuant to this act, the government acquired and has been maintaining a fleet of merchant ships, known as the ‘Ready Reserve Fleet’ (RRF) to ensure that there are sufficient US merchant vessels to support military operations worldwide. Further, the United States continues to fund and operate the US Merchant Marine Academy in Kings Point, New York, a four-year military academy vital to providing properly trained officers and executives for the transportation industry. Section 27 of the Merchant Marine Act of 1920, requiring that all shipments by water between ports in the United States (including Puerto Rico) be carried by US-flag, be US-built, and US-crewed vessels. The Jones Act:- Jones Act law and maritime law are very complex. The statutes, by themselves, are only a small part of Jones Act law and maritime law. Actual court cases which are appealed make up a large part of Jones Act law and maritime law. Generally, Jones Act laws were written to protect people who work on ships, oilrigs, or other sea-going vessels. However, Jones Act law is very different from workers compensation law. Under the Jones Act an injured worker must prove that the ship or drilling rig owner operator were negligent or at fault for your injury. This is not difficult for an experienced Jones Act lawyer. The Jones Act attorneys at the Ogletree Abbott Law Firm are experienced in handling Jones Act claims and maritime claims. We know what we’re doing and want to help you

to avoid costly mistakes and collect a 100% Jones Act settlement, not a penny less. Jones Act is the Merchant Marine Act of 1920, Section 27, requires that all US domestic waterborne trade be carried by US-flag, US-built, and US-manned vessels. The Merchant Marine Act of 1920 (PL 66-261) is a United States federal statute that regulates maritime commerce in US waters and between US ports. Section 27, better known as the Jones Act, deals with cabotage (i.e. coastal shipping) and requires that all goods transported by water between US ports be carried in US-flag ships, constructed in the United States, owned by US citizens, and crewed by US citizens and US permanent residents. The purpose of the law is to support the US maritime industry. In addition, amendments to the Jones Act, known as the Cargo Preference Act (PL 83-644), provide permanent legislation for the transportation of waterborne cargoes in US-flag vessels. The Merchant Marine Act of 1920 has been revised a number of times, the most recent and thorough revision was the re-codified version of 2006. / Сенатор из Вашингтона Вэсли Эл. Дьжонз (Wesly L. Jones), в честь Капитана Дьжона Пола Дьжонза (Captain John Paul Jones). Сэром Волтёром Роли (или Рали; Sir Walter Raleigh). Юридическая Фирма Аглтчри Абэт (Ogletree Abbott).

JOSEPH = ДЬЖОСЭФ (или ЙОСЭФ, или ЖУЗЭФ) – Joseph:- (Latin) a long cloak worn especially by women in the XVIII century.

JOULE = ДЬЖУЭЛ (или ДЖОУЛЬ) – Joule is a unit of work, energy, or heat. 1 J (Joule) = 1 Nm (Newton meter). The International System of Units (Système International d'Unités (SI)) unit of work or energy, defined to be the work done by a force of one Newton acting to move an object through a distance of one meter in the direction in which the force is applied. Equivalently, since kinetic energy is one half the mass times the square of the velocity, one Joule is the kinetic energy of a mass of two kilograms moving at a velocity of 1 m/s. This is the same as 10^7 or 10 000 000 ergs in the CGS system, or approximately 0.737 562 foot-pound in the traditional English system. In other energy units, one Joule equals about 9.478 170·10^{-4} Btu, 0.238 846 (small) calories, or 2.777 778·10^{-4} Watt hour. The Joule is named for the British physicist James Prescott Joule (1818–1889), who demonstrated the equivalence of mechanical and thermal energy in a famous experiment in 1843. Although Joule pronounced his name Jowl, the unit is usually pronounced Jool or Jew'l. A metric unit of energy. Abbreviation:- J. Joule is a unit of work or energy equal to one Watt for one second. One kiloWatt hour equals 3 600 000 Joules. Named after James Prescott Joule (born in Salford, Lancashire, Greater Manchester on 1818-December-24; died in Sale on 1889-October-11), an English physicist and brewer 1889. / Дьжул (Jool) или Дьжу'эл (Jew'l). Лё Систэм Этэрнасьёналь д'Юните (Эс.И. или, как её уже устоялось называть в России, СИ). Джоуль – единица в системе СИ для измерения количества теплоты, работы или энергии. Названа в честь открывателя – Дьжеймза Прэската Дьжуэла (или Джоуля) (James Prescott Joule; 1818–1889), Британского физика. 1 Джоуль равен 10^7 или 10 000 000 Эрг или 0.238 846 калории. Обозначение:- Дж (J). Джоуль – единица работы, энергии (звуковой, ионизирующего излучения, механической, электромагнитной и так далее) и количества теплоты в системе СИ. 1 Джоуль (Дж) равен работе, совершаемой при перемещении точки приложения силы 1 Ньютон (Н) на расстояние 1 метр (м) в направлении действия силы. Джоуль, единица энергии и работы в Международной Системе Единиц и МКСА (MKSA) Системе Единиц, равная работе силы 1 Ньютон (Н) при перемещении ею тела на расстояние 1 метр (м) в направлении действия силы. Названа в честь Английского физика Дьжеймза Прэската Дьжуэла (или Джоуля) (James Prescott Joule; 1818–1889). Обозначения:- Русское Дж, международное J. Джоуль был введён на Втором Международном Конгрессе Электриков (1889) в абсолютные практические электрические единицы в качестве единицы работы и энергии электрического тока. Джоуль был определён как работа, совершаемая при мощности в 1 Ватт (Вт) в течение 1 секунды (сек). Международная Конференция По Электрическим Единицам И Эталонам (Лондон, 1908) установила 'международные' электрические единицы, в том числе так называемый международный Джоуль. После возвращения с 01 Января 1948 к абсолютным электрическим единицам было принято соотношение:- 1 международный Джоуль = 1.000 20 абсолютный Джоуль. Джоуль применяется также как единица количества теплоты. Соотношения Джоуля с другими единицами:- 1 Дж = 107 эрг = 0.238 8 кал.

JOULE'S LAW = ЗАКОН ДЬЖУЭЛА (или ЗАКОН ДЖОУЛЯ) – Joule's laws are a pair of laws concerning the heat produced by a current and the energy dependence of an ideal gas to that of pressure, volume, and temperature, respectively. They are named after an English physicist and brewer James Prescott Joule. Joule's first law, also known as the Joule Effect, is a physical law expressing the relationship between the heat generated by the current flowing through a conductor. Joule's Law defines the relationship between current in a wire and the thermal energy produced. Joule studied this phenomenon in the 1840s. In 1841 Joule experimentally showed that $Q = I^2 \cdot R \cdot t$, where where Q is the heat generated by a constant current I flowing through a conductor of electrical resistance R, for a time t, I is the current in the wire in Amperes, R is the resistance of the wire in Ohms, t is the length of time that the current flows in seconds, and Q or W is the energy produced in Joules. When current, resistance and time are expressed in Amperes, Ohms, and seconds respectively, the unit of is the Joule. Joule's first law is sometimes called the Joule-Lenz Law since it was later independently discovered by Heinrich Lenz (1804–1865). The heating effect of conductors carrying currents is known as Joule Heating. Joule's second law states that the internal energy of an ideal gas is independent of its volume and pressure, depending only on its temperature. / Русский физик Немецкого происхождения Эмилий Христианович Ленц (или Хайнрихь Фридрих Эмиль Ленц; Heinrich Friedrich Emil Lenz; 1804–1865). Закон Джоуля:- внутренняя энергия идеального газа зависит только от температуры и не зависит от его плотности (объёма); установлен Английским физиком Дьжеймзом Прэскатом Дьжуэлом (James Prescott Joule; 1818–1889) в 1843.

JOURNAL = ЖУРНАЛ – In accounting, Journal is a book in which entries concerning transactions are recorded in chronological order and later transferred to the appropriate accounts in a ledger. / В бухгалтерском учёте, ведомость в которой проводки о совершённых операциях записываются в хронологическом порядке, а затем переносятся на соответствующие счета в главной книге.

JOURNAL = ШЕЙКА – Journal:- that part of a shaft or axle that rotates or angularly oscillates in or against a bearing or about which a bearing rotates or angularly oscillates. / та часть вала или оси, которая вращается или . Шейка – участок вала или оси, опирающийся на радиальный подшипник скольжения.

JOURNAL BEARING = РАДИАЛЬНЫЙ ПОДШИПНИК – Journal Bearing is a sliding type of bearing having either rotating or oscillatory motion and in conjunction with which a journal operates. In a full or sleeve type journal bearing, the bearing surface is 360° in extent. In a partial bearing, the bearing surface is less than 360° in extent, i.e. 150°, 120°, etc. See also Bearing. / Радиальный Подшипник – подшипник скольжения, воспринимающий нагрузку, направленную перпендикулярно к оси вращения вала.

JOURNAL FOR STATUTORY STOCK MARKET NOTICES = ЖУРНАЛ ДЛЯ СТАТУТНЫХ УВЕДОМЛЕНИЙ ФОНДОВОГО РЫНКА – Journal For Statutory Stock Market Notices:- these are certain newspapers specified by the licensing authorities of the exchanges in which all of the notifications they are required to make must be published, for example, sales prospectus upon acceptance for trading (exchange prospectus), the dates for the general meetings, the annual financial statements (balance sheet with income statement), pre-emptive rights, drawings, etc.

JOURNAL OF COMMERCE = ЖУРНАЛ О КОММЕРЦИИ – Journal of Commerce (JOC) is a trade publication. Trade transportation journal.

JP = JAPAN

JPEG = JPG = JOINT PHOTOGRAPHIC EXPERTS GROUP

JPO = JAPAN PATENT OFFICE

JPTOS = JOURNAL OF THE PATENT AND TRADEMARK OFFICE SOCIETY

JPY = JAPANESE YEN

JSE = JOHANNESBURG STOCK EXCHANGE

JUDICIAL DISSOLUTION = ПРЕКРАЩЕНИЕ ДЕЯТЕЛЬНОСТИ В СУДЕБНОМ ПОРЯДКЕ – In the United States, Judicial Dissolution is involuntary dissolution of a corporation by a court at the request of the state attorney general, a shareholder or a creditor. See also Administrative Dissolution, Dissolution, Involuntary Dissolution, and Voluntary Dissolution. / Смотрите также Прекращение Деятельности (Dissolution), Прекращение Деятельности В Административном Порядке (Administrative Dissolution), Прекращение Деятельности В Добровольном Порядке (Voluntary Dissolution), и Прекращение Деятельности В Принудительном Порядке (Involuntary Dissolution).

JULIET = ДЬЖУЛИЭТ – Juliet (pronunciation:- JEW-lee-ett) or J is international nautical signal flag meaning:- I am on fire and have dangerous cargo; keep clear. Meaning:- I am going to send a message by semaphore. Inport, your radio callsign followed by Juliett indicates that ship has a semaphore message for you. Addition of Desig indicates priority message. International Meaning:- 'I am on fire and have dangerous cargo; keep clear', or 'I am leaking dangerous cargo'.

JULIETTE SLEEVE = РУКАВ КАК У ДЬЖУЛИЭТЫ – Juliette Sleeve:- a youthful look that places emphasis on the arms. Also known as a Tiny Pouf, it has an even more extreme appearance then the cap sleeve. / .

JUMBO BONDS = ОБЛИГАЦИИ СЛОНЫ (или КРУПНЫЕ ОБЛИГАЦИИ) – Jumbo Bonds:- these bonds have received this name because of their high nominal volume, starting from around EUR1 billion. In principle, they are no different from other bonds with regard to their terms and conditions. Jumbo Bonds is a colloquial term for a very high value bond issue. The size will vary from market to market; in some emerging markets it will be in the hundreds of million of Dollars, in developed markets it will be in the billions.

JUMBO–ISED = УВЕЛИЧЕННОГО РАЗМЕРА – Jumbo-Ised:- the enlargement of a vessel, for instance, through the insertion of one or more sections. / Увеличение размеров судна, например, за счёт установки одной или более секций.

JUMEL'S TREE COTTON = ЖУМЭЛЕВСКИЙ ДРЕВЕСНЫЙ ХЛОПЧАТНИК – Jumel's Tree Cotton:- the first commercial cultivation of this plant around 1820 marked the beginning of Egypt's importance as a Cotton growing country. It was being grown solely as a flower garden plant until at the suggestion of a French engineer – Jumel – it was propagated and grown for its lint. The success of the venture led to the importation and trial of many other Cottons. Cotton as a major export staple came late to Egypt, during the reign of Muhammad Ali Pasha in the 1820s. As part of Ali's effort to create a vibrant domestic Cotton industry, in the late 1810s he brought Louis Alexis Jumel, a French textile engineer long since removed to New York City. Jumel chanced across a Cotton bush in a Cairo garden with unusually long and strong fiber. With the support of Ali, he developed the strain further, and by 1821 was already harvesting substantial amounts of what came to be called Jumel Cotton, finding ready markets in Europe. In the early 1820s, Muhammad Ali, realizing the importance of the textile industry for providing clothing to his army, received Monsieur Louis Alexis Jumel, an enterprising Frencs-Swiss textile engineer. Jumel suggested the cultivation of a cotton strain called Tree Cotton he had seen in the garden of an Egyptian notable named Mahou Bey who had been planting it as an outdoor ornament. This strain was soft and easy to spin. Jumel believed that its cultivation suited the Egyptian climate and could improve its yield, smoothness, and staple quality. Jumel was perennial tree Cotton, producing brown lint, which was imported to Egypt from Sudan. There is confusion concerning the origins of Jumel's Tree Cotton. Watt (1907) refers to Jumel as being Gossypium Brasiliense. Formerly given species status, Brasiliense is a form of Gossypium Barbadense found in Eastern South America. Balls (1919) identifies Jumel as being a Peruvian-type Cotton originating from West of the Andes. Dunn (1949) stated that Jumel was 'a variety of the Herbaceum ... an Asiatic type', which is undoubtedly wrong. Regardless of its origins, the production of Jumel was successful enough to stimulate the importation and experimentation with Sea Island Cotton's Cultivars and Cultivars from Brasil. It appears that these introduced Cottons interbred among themselves and with Jumel in an uncontrolled manner to produce a population from which the first Egyptian Cultivar Ashmouni was derived in 1860 (Kearney 1943). Ashmouni was described as being a very heterogeneous Cultivar that produced brown lint. Ashmouni in turn gave rise to the cultivar Mit Affifi. Mit Affifi was derived from a single plant selection made in a field of Ashmouni in 1882. The parent plant may have been an 'off-type' resulting from a natural cross of Ashmouni with Sea Island (Dunn 1949). / Люи Алекси Жумэль (Louis Alexis Jumel). Мау Бэй (Mahou Bey). Вот (Watt; 1907). Болз (Balls; 1919). Дан (Dunn; 1949). Ашмуни (Ashmouni). Кани (Kearney; 1943). Мит Афифи (Mit Affifi).

JUMP BOOT = ЗАХВАТНИЧЕСКИЙ САПОГ (или САПОГ ИЗ КУСКОВ СТАРОЙ КОЖИ) – Jump Boot is a boot worn especially by paratroopers.

JUMPER = XX (или ДЖЕМПЕР, или САРАФАН) – Jumper is a loose blouse or jacket worn by workmen; a sleeveless one-piece dress worn usually with a blouse; a child's overall. Usually used in plural; (chiefly British) sweater. / Джемпер, от Английского слова Jumper, означающее Прыгун, – это предмет вязаной или трикотажной одежды для верхней части тела без воротника с характерным круглым воротом, надеваемый через голову. Такое определение дают практически все толковые словари Русского языка. Модные дизайнеры и стилисты определяют джемпер как трикотажное или вязаное изделие с круглым, V-образным вырезом или с небольшой (около 10 см) застёжкой от горловины в виде молнии или пуговиц. Фактически джемпер – это тот же свитер, только без воротника-стойки. История:- джемпер появился в конце XIX века как спортивная одежда для лёгкой атлетики (отсюда и название). Начиная с 1950-х, джемпер стал входить в повседневный и деловой гардероб мужчин и женщин, правда, вторые чаще отдавали предпочтение модным в то время свитерам. Джемпер был и остаётся постоянным предметом одежды в коллекциях многих дизайнеров. Гуччи (Gucci), Марк Дьжокобз (Marc Jacobs), Нина Риччи (Nina Ricci), Макс Мара (Max Mara), Майкэл Коз (Michael Kors), Люи Вито (Louis Vuitton), Джанфранко Фэррэ (Gianfranco Ferre), Альбэрта Фэрэтти (Alberta Ferretti) – одни из тех, кто демонстрирует разнообразные джемперы в своих коллекциях. Джемпер Сегодня:- современные джемперы поражают разнообразием фасонов и стилей. Появились джемперы-туники, джемперы-платья, подчеркнуто большие джемперы и тому подобные – длина и объёмы изделия потеряли все границы. Современный женский джемпер может быть как в романтическом, так и деловом стиле. Очень популярны джемперы в мужском стиле. В холодное время года джемпер без труда можно найти в любом магазине одежды. Многие вяжут себе джемперы 'под заказ', самостоятельно выбирая пряжу, фасон и стиль изделия. Владея некоторыми навыками вязания, джемпер несложно связать и самим. С Чем Носить:- джемпер – очень универсальный предмет одежды. Его можно носить практически с чем угодно и в разных сочетаниях. Джемпер, надетый поверх рубашки – классический вариант для офиса или учёбы. Джемпер в сочетании с

юбкой-карандаш или с классическими брюками – также прекрасный вариант для деловой встречи. Ультра-популярным сегодня является сочетание объёмного и/или удлинённого джемпера с плотными колготками или леггинсами. Ещё одно модное сочетание (а также весьма сексуальное) – объёмный джемпер, надетый поверх платья-комбинации так, чтобы та чуть-чуть из-под него выглядывала. Для создания романтического образа следует сочетать джемпер с пышной юбкой. Свободный джемпер, надетый на голое тело, в сочетании с мини-юбкой или шортами – сексуальный вариант для любительниц поэкспериментировать. Что касается аксессуаров, то джемпер можно дополнить по-разному. Например, повязать ремень или пояс поверх него. На однотонный джемпер можно приколоть брошь, тем самым освежив его и придав ему определённый стиль. Джемпер с короткими рукавами можно дополнить перчатками (вязаными, кожаными, замшевыми) и/или браслетами.

JUMP SHIP = БРОСАТЬ СУДНО (или ПОКИНУТЬ СУДНО) – Jump Ship (maritime term):- to leave a ship without authority (deserting).

JUMPSUIT = КОСТЮМ ДЛЯ ПРЫЖКОВ (или КОМБИНЕЗОН) – Jumpsuit is a coverall worn by parachutists for jumping; a one-piece garment consisting of a blouse or shirt with attached trousers or shorts.

JUNIOR BOND = МЛАДШАЯ ОБЛИГАЦИЯ (или ОБЛИГАЦИЯ НИЗШЕГО РАНГА) – Junior Bond is a bond which in terms of its claims on the property or assets by which it is secured is junior or inferior to some other bond or mortgage. Junior Bond Issue is a corporate bond issue where the collateral has been pledged as security for other, more senior bond issues. It, therefore, ranks behind those prior claims. Also called Subordinated.

JUNIOR CAPITAL POOL COMPANY = ЮНАЯ КОМПАНИЯ ОБЪЕДИНЁННОГО КАПИТАЛА – Junior Capital Pool (JCP) Company is a small public capital pool company set up under the rules of the former Alberta Stock Exchange. Now called a Capital Pool Corp under the rules of the Canadian Venture Exchange (CDNX).

JUNIOR MORTGAGE = МЛАДШАЯ ЗАКЛАДНАЯ (или ЗАКЛАДНАЯ НИЗШЕГО РАНГА) – Junior Mortgage is a mortgage which has a lending limit less than that for list mortgages and therefore carries a higher interest rate. If it is stipulated in the Land Register that a junior mortgage may be ascribed a higher priority, it moves up in ranking if a lien with a higher ranking claim is cancelled. Junior Mortgage is a mortgage that carries with it a lien that is subordinate to the lien associated with a mortgage higher in priority because of prior occurrence or similar reason. / Младшая Закладная – закладная, являющаяся второстепенной по сравнению с другими закладными, например второй или третьей. Если должник не может выплатить займ полностью, то первая закладная должна быть погашена раньше, чем младшая закладная.

JUNIOR STOCK EXCHANGE = ЮНАЯ ФОНДОВАЯ БИРЖА – Junior Stock Exchange is a stock exchange which lists mainly small, emerging companies with low market capitalizations (e.g., under CAD100 million or even under CAD10 million). The TSX-V, or TSX Venture Exchange (TSX-V (short for the Toronto Stock Exchange – Venture Exchange)) is an example of this. Investors know (or should know!) that companies listed on such an exchange are inherently riskier and more speculative than those listed on a senior exchange.

JUNK BOND = НЕПОЛНОЦЕННАЯ ОБЛИГАЦИЯ (или НЕХОДОВАЯ ОБЛИГАЦИЯ, или УТИЛЬНАЯ ОБЛИГАЦИЯ) – Junk Bond is a colloquial term for a high-yield or non-investment grade bond. Junk bonds are fixed-income instruments that carry a rating of 'BB' or lower by Standard & Poor's, or 'Ba' or below by Moody's. Junk bonds are so called because of their higher default risk in relation to investment-grade bonds. Junk bonds are risky investments, but have speculative appeal because they offer much higher yields than safer bonds. Companies that issue junk bonds typically have less-than-stellar credit ratings, and investors demand these higher yields as compensation for the risk of investing in them. A junk bond issued from a company that manages to turn its performance around for the better and has its credit rating upgraded will generally have a substantial price appreciation. Junk Bonds are debt securities issued by companies with higher than normal credit risk. Considered 'non-investment grade' bonds, these securities ordinarily yield a higher rate of interest to compensate for the additional risk. Junk Bond:- these securities are issued by companies that are in financial difficulties (low rating). To compensate for the risk, the investor is promised a significantly higher return than with high quality, investment grade securities, e.g., government bonds. In the United States, high-risk bonds issued by companies with credit ratings below investment grade. It is often used to raise funds for leveraged buyouts, secured against the assets of the target company. Also known as High-Yield Bond. Junk Bonds:- Are you a risk-taker? Do you like the thrill of the unknown? If so, junk bonds, also known as High-Yield Bonds, may be the investment for you. Junk bonds, at one time euphemistically called 'Junque' Bonds because of their cache, offer higher interest rates because of their lower risk ratings. Some investors feel that the higher interest makes the risk worth taking. As a savvy investor, you should be aware of the risks and rewards of high-yield bonds and how they work as individual bonds and in bond mutual funds. What Are Junk Bonds? When you buy a bond, you are lending your money to someone (the government or a private company) who promises to pay you back the money when the bond matures, plus interest. The ability of the bond issuer to meet its obligation is expressed in the bond's credit rating. Whether a company defaults on its bonds or not depends on its ability to pay back its debt. Bonds that have a high credit rating are known as Investment-Grade Bonds. Bonds that are likely to default are called speculative or non-investment grade. Low-grade bonds may be issued by companies without long track records, or with questionable ability to meet their debt obligations. Because most brokers do not invest in these low-grade bonds, they are known as Junk Bonds. However, because of the very high interest rates these bond issues typically offer, they are also referred to as High-Yield Bonds. Because junk bonds have a high default risk, they are speculative. Default risk is the chance that a company or government will be unable to pay its obligations when the bonds mature. Defaults on bonds most often occur within the first several years of a bond's issue. Even when a junk bond defaults, it might still keep some of its value. The impact of a default on a bond's price is known as its default loss rate. Sometimes a bond's actual price loss is not the same as its rate of default loss. A default due to bankruptcy will probably reduce a bond's price more than a default due to a company changing its strategic direction. Default risk is determined by a credit rating system. A bond's credit rating is based on the risk of a bond issuer not making its payments on time, or at all. A bond's credit rating is measured by a grading system that starts with a rating of AAA for bonds least likely to default, all the way down to 'D' for bonds that default. Junk bonds have a rating of BB or lower. Junk Bond Creditworthiness:- researching the credit of a company issuing junk bonds is the key to determining whether the bonds are a wise investment. This process is called Credit Analysis. A company with strong management and sound financial strategy can overcome a weak credit rating. Looking at a company's profitability and asset value are good places to begin your research. It is also helpful to see how the rest of the company's industry is doing. Compare the credit statistics of the issuing company with those of other companies in its industry. Various ratios are also used in credit analysis. One example is the current ratio, the ratio of a company's short-term assets to its short-term debts. The higher the current ratio, the lower the credit risk. A second example is the debt-to-equity ratio, a comparison of a company's total debt to its overall stock value. Before buying a junk bond, you should also consider its maturity date, the time at which the bond must be repaid by the bond issuer. The reason junk bonds offer higher yields is their greater likelihood of default. To avoid losing your money, it is important to have a clear understanding of the creditworthiness of the issuing firm and the factors that will impact its performance. Market Behavior of Junk Bonds:- high-yield bonds, also known as Junk Bonds, may be actively traded on the bond market. However, their market performance

can be quite different from that of higher-grade bond issues. In general, secondary market bond prices move in the opposite direction of interest rates. Whether interest rates go up or down depends on many factors, including the policy of the Federal Reserve Board. However, junk bonds are less affected by interest rates than are other bonds. This is because they have higher yields and shorter maturities. Interest rates are apt to change less over a shorter period. The market behavior of junk bonds is more in tune with overall changes in the economy, such as a recession. Junk bonds tend to act more like stocks in their market behavior than other bonds. This is because the strength of junk bonds is connected to the strength of the company that issues them. In a recession, when interest rates fall, junk bonds might also fall in value because the companies issuing them earn less and are unable to pay off their debts. A rise in company revenues is more important to the health of a junk bond than interest rates are. A strong economy means fewer defaults and more junk bonds that are successful. Likewise, junk bond prices depend more on the overall health of the US economy than do higher-grade bonds. When the stock market is doing well, companies can replace debt with equity, lessening their chance of bond default and possibly increasing bond prices. In short, while most bond investors focus on how changes in interest rates will affect the market price of their bonds, high-yield bond investors must also understand the default risk of the issuing firm. They must understand how the company's performance and changing economic conditions impact the risk of default. Junk Bonds Are Known for Their High Yields:- junk bonds, also known as High-Yield Bonds, offer investors higher yields than more highly rated bonds in exchange for taking on greater default and liquidity risks. Because they have shorter maturities and higher yields, the prices of junk bonds on the secondary market are less affected by interest rates than the prices of most bonds. Before you take the plunge, you should carefully analyze both the credit and the industry of companies that are making high-yield bond issues. Junk Bond is a bond which does not meet the usual requirements of income cover and capital cover for institutional investors. Junk Bond is a high risk bond, usually issued by a company with a low credit rating (usually BB or lower). It is also known (more favorably) as a High-Yield Bond. / Стэндод Энд Поз (Standard & Poor's). Мудиз Инвэстоз Сёвис Лимитид (Moody's Investors Service Ltd). Утильная Облигация:- высокодоходные облигации с кредитным рэйтиньгом BB или ниже. Хотя этот термин используется часто, он имеет негативный оттенок, поэтому и эмитенты и владельцы предпочитают, чтобы такие облигации назывались высокодоходными (high-yield bond). Высокодоходные и высокорискованные облигации выпускаются компаниями, не имеющими длительной истории и хорошей деловой репутации, или компаниями с сомнительной кредитоспособностью. Они являются популярным способом финансирования поглощений (takeovers). Поскольку такие облигации относительно неустойчивы и приносят более высокий доход, чем облигации инвестиционного сорта (investment grade), многие ориентированные на высокий риск инвесторы специализируются на операциях с ними. Организации-попечители (fiduciary) при выборе облигаций действуют в соответствии с 'правилом разумного человека' (prudent-man rule).

JURISDICTION CLAUSE = ОГОВОРКА О ЮРИСДИКЦИИ (или ОГОВОРКА О СУДОПРОИЗВОДСТВЕ, или ОГОВОРКА О ПОДЧИНЕНИИ ЗАКОНОДАТЕЛЬСТВУ) – Jurisdiction Clause is a clause in a policy that specifies the country in which any court action relating to the policy must be pursued. A clause in an insurance or reinsurance contract which states to which territory's courts any contractual dispute shall be referred for resolution. / Под Юрисдикцией, от Латинского слова Jurisdictio, означающее Суд или Судопроизводство, понимается круг полномочий судебного или административного органа по правовой оценке конкретных фактов, в том числе по разрешению споров и применению предусмотренных законом санкций. Под Юрисдикцией понимается:- (1) компетенция судебных органов по рассмотрению гражданских, уголовных и других дел; круг дел, которые данный суд имеет право рассматривать и решать. (2) Круг вопросов, относящихся к ведению государственного учреждения или государства. Юрисдикция – предусмотренные законом или другим правовым актом следующие правомочия, полномочия государственного органа:- дать оценку правомерности или неправомерности действий юридических или физических лиц, разрешать юридические споры, применять санкции к лицам, нарушающим законы и нормы права. Специальными органами юрисдикции являются суды, арбитражные суды, уполномоченные административные органы. Юрисдикция:- (1) подсудность; право производить суд, решать правовые вопросы; (2) правовая сфера, на которую распространяются полномочия данного государственного органа.

JUROR = ПРИСЯЖНЫЙ (или ЧЛЕН ЖЮРИ) – In the United States, a Juror is any person who actually serves on a jury. Potential jurors from the area where a case is heard are chosen from various sources such as registered voters, automobile registration or telephone directories. The names are randomly and they are sent a court summons to appear for possible service. Before a trial begins the names of jurors are assigned to a trial court, and a further selection process is made. State law and judges vary regarding acceptable reasons to be excused from jury duty. If chosen, a juror receives a small amount of pay per day of service and payment for automobile mileage from home to court. Questions are asked by the judge and attorneys (called 'Voir Dire') during jury selection to weed out those whom they may challenge for cause, on stated grounds, such as a relation to the defendant, knowledge of facts related to the case, or other reasons indicating potential bias. A lawyer may also make a limited number of peremptory challenges, in which the attorney may remove a juror they suspect is biased without stating the basis for the challenge. In a high-profile criminal case in which the jury might be influenced by public comment or media coverage during trial, the court may order the jury be sequestered (kept in a hotel away from family, friends, radio, television and newspapers.) Once selected, the jury (usually with several alternates) takes an oath to act fairly and without preconceptions. At the close of the evidence and after the summations of counsel the judge instructs the jury concerning the verdict. Juror is any person who actually serves on a jury. Lists of potential jurors are chosen from various sources such as registered voters, automobile registration or telephone directories. The names are drawn by lot (more often by computer random selection) and requested to appear for possible service. Before a trial begins the names of jurors are assigned to a trial court, and a further selection process is made. Acceptable excuses from service are determined by state law or by the judge before or during the final selection process. If chosen, a juror receives a small amount of pay per day of service and payment for automobile mileage from home to court. A member of a grand jury is called a Grand Juror. Juror:- anyone who's a member of a jury in a court of law is called a Juror. When you serve as a Juror, you're part of a group that hears evidence in a trial and gives a verdict. When someone gets called for jury duty, it's an opportunity to be a juror for a trial. A juror is typically one of twelve people who swear to make an impartial, unbiased decision based on legal evidence. The jurors must come to a unanimous agreement about their verdict after all evidence is presented, generally either 'guilty' or 'not guilty'. The Latin root is Iuratorem, or 'Swearer', from Iurare, 'To Swear'. Juror is a meronym of Jury. As nouns the difference between Juror and Jury is that juror is a member of a jury while jury is (legal) a group of individuals chosen from the general population to hear and decide a case in a court of law. As a verb jury is to judge by means of a jury. As a adjective jury is (nautical) for temporary use; applied to a temporary contrivance.

JURY = ЖЮРИ (или ПРИСЯЖНЫЕ) – A Jury is a group of people summoned and sworn to decide on the facts in issue at a trial. The jury is composed of people who represent a cross-section of the community. The jury listens to the evidence during a trial, decides what facts the evidence has established, and draws inferences from those facts to form the basis for their decision. The jury decides whether a defendant is 'guilty' or 'not guilty' in criminal cases, and 'liable' or 'not liable' in civil cases. When cases are tried before a jury, the judge still has a major role in determining which evidence may be considered by the jury. The jury is the fact-finder, but it is left to 'find' facts only from the evidence which is legally admissible. The judge instructs the jury on the legal principles or rules that must be followed in weighing the facts. If the jury finds the accused guilty or liable, it is up to the judge to sentence the defendant. A Jury is a

sworn body of people (the Jurors) convened to render an impartial verdict (a finding of fact on a question) officially submitted to them by a court, or to set a penalty or judgment. Juries developed in England during the Middle Ages, and are a hallmark of the Anglo common law legal system. They are still commonly used today in Great Britain, the United States, Canada, Australia, and other countries whose legal systems are descended from England's legal traditions. Most trial juries are 'petit juries', and usually consist of twelve people. A larger jury known as a Grand Jury was used to investigate potential crimes and render indictments against suspects, but all common law countries except the United States and Liberia have phased these out. The modern criminal court jury arrangement has evolved out of the medieval juries in England. Members were supposed to inform themselves of crimes and then of the details of the crimes. Their function was therefore closer to that of a grand jury than that of a jury in a trial. Etymology:- The word Jury derives from Anglo-Norman Juré ('Sworn'). Juries are most common in common law adversarial-system jurisdictions. In the modern system, juries act as triers of fact, while judges act as triers of law (but see Nullification). A trial without a jury (in which both questions of fact and questions of law are decided by a judge) is known as a Bench Tria. Jury is a group of people who have been chosen to listen to all the facts in a trial in a law court and to decide if a person is guilty or not guilty, or if a claim has been proved; e.g., members of the jury. The jury has/have been unable to return a verdict (= reach a decision). Police officers aren't usually allowed to be/sit/serve on a jury. There are two types of juries serving different functions in the federal trial courts:- Trial Juries, also known as Petit Juries, and Grand Juries. Trial Jury:- A trial jury, also known as a Petit Jury, decides whether the defendant committed the crime as charged in a criminal case, or whether the defendant injured the plaintiff in a civil case. (i) Consists of 6–12 people. (ii) Trials are generally public, but jury deliberations are private. (iii) Defendants have the right to appear, testify, and call witnesses on their behalf. (iv) Final outcome is a verdict, in favor of plaintiff or defendant in a civil case, or guilty/not guilty in a criminal case. Grand Jury:- A grand jury is presented with evidence from the US attorney, the prosecutor in federal criminal cases. The grand jury determines whether there is 'probable cause' to believe the individual has committed a crime and should be put on trial. If the grand jury determines there is enough evidence, an indictment will be issued against the defendant. (i) Consists of 16–23 people. (ii) Grand jury proceedings are not open to the public. (iii) Defendants and their attorneys do not have the right to appear before the grand jury. Jury is a group of individuals chosen from the general population to hear and decide a case in a court of law. 'And so the Jury' and he approached, as if this were a time of peace instead of one of the greatest world disturbances ever known in history, the question whether the prosecution had proved to the 'jury's' satisfaction that George Joseph Smith was guilty of murder. The 'jury' were the shield which stood between him and death, unless, to the 'jury's' satisfaction, he was proved to be guilty. Yet while they were the shield of the man accused, they were also the Sword of the State; and if the man were proved guilty, they were the servants of the State to punish him. Their respective functions were these: he the judge, had to settle the law, and the 'jury' must take the law from him. The 'jury were judges of fact' (1952:- James Avery Joyce:- Justice At Work).

JURY MAST = ВРЕМЕННАЯ МАЧТА (или ФАЛЬШ МАЧТА) – Jury Mast is a temporary mast. / Временная мачта. Под Мачтой, от Голландского слова Mast, понимается вертикальная деревянная или металлическая конструкция на палубе судна. К мачте крепятся грузовые стрелы, навигационные огни, антенны и тому подобное.

JURY RIG = АВАРИЙНОЕ УСТРОЙСТВО (или ВРЕМЕННОЕ ПАРУСНОЕ ВООРУЖЕНИЕ) – Jury Rig (maritime term):- makeshift rig (emergency rig).

JUST IN TIME = СВОЕВРЕМЕННЫЙ – Just In Time (JIT) is an approach to merchandise replenishment which attempts to bring new product in at the same rate as it is being sold, thus having it available 'just in time' for the customer's need. When perfected there is no need for storage of product in a warehouse. See also Cross-docking. An inventory control system that attempts to reduce inventory levels by coordinating demand and supply to the point where the desired item arrives just in time for use. In this method of inventory control, warehousing is minimal or non-existent; the container is the movable warehouse and must arrive 'just in time', i.e. not too early and not too late. Just-In-Time (JIT) is an inventory system that aims to coordinate the arrival of materials or supplies at a facility at the moment that they are needed in an effort to reduce storage and holding costs.

JUST IN TIME LOGISTICS = СВОЕВРЕМЕННАЯ ЛОГИСТИКА – Just In Time Logistics is the process of minimizing the times required to source, handle, produce, transport, and deliver products in order to meet customer requirements. / Процесс минимизации временных отрезков, требуемых на начальном периоде, при обращении или перевалке, производстве, транспортировке и поставке продуктов с тем, чтобы удовлетворить требования заказчиков.

JUST–PERCEPTIBLE DIFFERENCE = ПРОСТО ОЩУТИМОЕ (или ЗАМЕТНОЕ, или ВОСПРИНИМАЕМОЕ, или РАЗЛИЧИМОЕ, или ПРИМЕТНОЕ, или ВИДИМОЕ) РАЗЛИЧИЕ (или РАЗНИЦА) – Just-Perceptible Difference is a color difference that is just large enough to be perceived by an observer in almost every trial. / цветовое различие (или разница в цвете) .

JUTE = ДЖУТ – Jute is a fiber obtained from the bast layer of the plants Corchorus capsularis and Corchorus olitorius. Very long, lustrous and strong bast yielded by the Corchorus in India. It is used for bagging, coarse ropes, cheaper carpets, etc. The Jute fiber is not durable and rots quickly in water. Jute:- this bast fiber comes from the Species known as Corchorus Capsularis. Bengal and other parts of India, southern Asia, and tropical Africa are the centers where the fiber is raised. Bengal is the world market center. The plant grows from two to twelve feet in height, and the fiber layer is quite thick. The stalk produces two to five times as much fiber as the Flax plant. The plants are rippled and retted like Flax. Raw Jute fibers are from four to seven feet in length and are yellowish brown in color. The greatest disadvantage of its fiber is that water and moisture cause it to disintegrate. When dry, Jute is durable. It is not very strong, and much difficulty is encountered in bleaching it. Root ends, known as Jute Cutting, find use in making paper. A coarse, brown fiber from the stalk of a bast plant. Jute is a bast fiber, chiefly from India, used primarily for gunny sacks, bags, cordage, and binding threads in carpets and rugs. Jute is a vegetable bast fiber often used for basketry and course weavings. Jute is one of the natural fibers still used extensively for fabrics. It is a bast fiber that comes from Jute plants grown primarily in India, Pakistan, and Bangladesh. Jute is used for many purposes, including the manufacture of burlap, gunny sacks, bags, cordage (twine and rope), trimmings, binding threads, and backings for rugs and carpets. Jute is a bast fiber used for sacking, burlap, and twine as a backing material for tufted carpets. Jute:- The Plant:- Jute is extracted from the bark of the white Jute plant, Corchorus Capsularis and to a lesser extent from Tossa Jute (Corchorus Olitorius). It flourishes in tropical lowland areas with humidity of 60% to 90%. A hectare of Jute plants consumes about 15 tons of carbon dioxide and releases 11 tons of oxygen. Yields are about 2 tons of dry Jute fiber per hectare. The Fiber:- Dubbed the 'golden fiber', Jute is long, soft and shiny, with a length of 1 to 4 meters and a diameter of from 17 to 20 microns. It is one of nature's strongest vegetable fibers and ranks second only to Cotton in terms of production quantity. Jute has high insulating and anti-static properties, moderate moisture regain and low thermal conductivity. Jute:- The strong threads made from Jute fiber are used worldwide in sackcloth – and help sustain the livelihoods of millions of small farmers. Uses Of Jute:- During the Industrial Revolution, Jute yarn largely replaced Flax and Hemp fibers in sackcloth. Today, sacking still makes up the bulk of manufactured Jute products. Jute yarn and twines are also woven into curtains, chair coverings, carpets, rugs and backing for linoleum. Blended with other fibers, it is used in cushion covers, toys, wall hangings, lamp shades and shoes. Very fine threads can be separated out and made into imitation silk. Jute is being used increasingly in rigid packaging and reinforced plastic and is replacing wood in pulp and paper. Geotextiles made

from Jute are biodegradable, flexible, absorb moisture and drain well. They are used to prevent soil erosion and landslides. Producers:- Bangladesh and West Bengal in India the world's main Jute producers, with Myanmar and Nepal producing much smaller quantities. In India and Bangladesh some 4 million farmers earn their living – and support 20 million dependents – from Jute cultivation, while hundreds of thousands work in the Jute manufacturing sector. Production And Trade:- Jute production fluctuates, influenced by weather conditions and prices. Annual output ranges from 2.3 to 2.8 million tons, on a par with wool. India produces 60% of the world's Jute, with Bangladesh accounting for most of the rest. Bangladesh exports around half as raw fiber, and half as manufactured items. India exports only 200 000 tons of Jute products, the remainder being consumed domestically. / Это лубяное волокно (bast fiber) . Виды (Species). Грубое коричневое волокно из стеблей лубяного растения. Джут относится к роду однолетних трав Семейства Липовых. Всего насчитывается приблизительно 100 видов. Джут произрастает в тропиках Австралии, Азии, Америки и Африки. Подразделяется на короткоплодный и длинноплодный Джут. В сухих стеблях Джута имеется 20–25% волокна для технических, упаковочных, мебельных тканей и ковров. Наибольшие посевные площади находились в Бангладеш и Индии. В бывшем Союзе Советских Социалистических Республик (СССР) предпринимались опытные посевы Джута. Джут (Corchorus) – Род однолетних травянистых тропических растений, кустарников и полукустарников Семейства Липовых; прядильная культура. Около 100 видов, произрастающих в тропиках и субтропиках Азии, Африки, Америки и Австралии. В культуре 2 однолетних вида (в диком состоянии неизвестны):- Джут Короткоплодный (Corchorus Capsularus) и Джут Длинноплодный (Corchorus Olitorius), выращиваемые в основном в Азиатских странах (древняя культура Индии, в России первые попытки акклиматизации в 1860–70-х). Джут теплолюбивое, влаголюбивое и светолюбивое растение. Вегетационный период 140–150 суток. Самоопылитель. Почвы – серозёмы, луговые и лугово-болотные, засолённые почвы непригодны. В сухих стеблях Джута содержится 20–25% высокогигроскопичного прочного волокна, используемого для получения лубяного волокна, из которого вырабатывают пряжу для изготовления технических, грубых упаковочных и обивочных тканей, брезентов, ковровых изделий, а также кручёных изделий (верёвок, канатов, шпагатов и тому подобного). В Индии листья Джута употребляют в пищу. В бывшем СССР Джут выращивали в Средней Азии не небольших площадях (опытные посевы). Урожайность сухих стеблей 90–100 ц/га. Сорта:- Первенец Узбекистана, Узбекский 53. Предшественники – Люцерна, Зернобобовые пропашные. Норма удобрений:- навоз 10–20 т/га, минеральные удобрения по 90–120 кг/га N и P_2O_5, 60–90 кг/га K_2O. Сеют Джут в хорошо прогретую почву (до 15 °C), 2-строчным ленточным способом (междурядья 60 см и 12–13 см), норма посева семян 12–14 кг/га, глубина 3–4 см. В течение вегетации растение 5–8 раз поливают, оросительная норма 5 000–7 000 $м^3$/га. Убирают Джут раздельным способом. Вредители – Озимая Совка. Болезни – корневая гниль всходов и молодых растений. Канатник или Китайский Джут (Abutilon) – род одно- и многолетних травянистых растений, кустарников, реже небольших деревьев семейства Просвирниковых, прядильная культура. Свыше 150 (по другим данным, 400 и более) видов, преимущественно в тропиках и субтропиках обоих полушарий; в бывшем СССР 1 вид – Канатник Теофраста (Abutilon Theophrasti, или Abutilon Avicennae), произрастающий на Юге Европейской части, на Кавказе и в Средней Азии; наиболее распространён в культуре. В сухих стеблях содержится до 25% прочного, но ломкого волокна, используемого для изготовления мешковины, верёвок, шпагата. Из отходов изготовляют бумагу, изоляционные плиты. В семенах 16–20% полувысыхающего технического масла. Родина и древний центр культуры – Китай, где его выращивают на больших площадях. Возделывают Канатник также в Монголии, Японии, Египте, США и других странах; в бывшем СССР – на коллекционных и опытных участках. Некоторые виды Канатника – декоративные растения.

JUTE AND BURLAP = ДЖУТ И ДЕРЮГА (или ДЖУТ И ДЖУТОВАЯ МЕШОЧНАЯ ТКАНЬ) – Jute And Burlap:- Jute is used in textiles for interiors, especially for wall hangings and a group of bright, homespun-effect draperies and wall coverings. Natural jute has a yellow to brown or gray color, with a silky luster. It consists of bundles of fiber held together by gummy substances that are pertinacious in character. It is difficult to bleach completely, so many fabrics are bright, dark, or natural brown in color. Jute reacts to chemicals in the same way as do cotton and flax. It has a good resistance to microorganisms and insects. Moisture increases the speed of deterioration but dry jute will last for a very long time. Jute works well for bagging, because it does not extend and is somewhat rough and coarse. This tends to keep stacks of bags in position and resist slippage. It is widely used in the manufacture of linoleum and carpets for backing or base fabric.

JUTE BUTT = ДЖУТОВАЯ КОМЛЯ – Jute Butt is the flaggy lower end of Jute fiber that is cut off in preparing jute for market. The fibers are 0.4 to 1 inch in length. Jute butts are used in twines and coarse bagging.

JUTE COUNT = НУМЕРАЦИЯ ДЖУТА (или ДЖУТОВАЯ НУМЕРАЦИЯ, или ДЖУТОВОЕ ЧИСЛО, или ДЖУТОВЫЙ НОМЕР) – Jute Count is the weight in pounds of a spindle of 14 400 yards of yarn.

JUVENILE = ЮВЕНИЛЬНОЕ (или НЕДОРАЗВИТОЕ) – Juvenile is young or immature, not having flowered.

JUVENILE LEAVES = ЮВЕНИЛЬНЫЕ ЛИСТЬЯ (или НЕДОРАЗВИТЫЕ ЛИСТЬЯ) – Juvenile Leaves is the first set of leaves, especially when differing from the mature leaves.

JUVENILE STAGE = ЮВЕНИЛЬНАЯ СТАДИЯ (РАСТЕНИЯ) (или МОЛОДАЯ СТАДИЯ (ЖИВОТНОГО), или СТАДИЯ ЮНОСТИ (ПОЧВЫ)) – Juvenile Stage is the immature or young growth period.

- K -

K = КЕЙ. – (1) K is fifth letter of a NASDAQ® stock symbol specifying the issue has no voting right. / НЭЗДЭК® (NASDAQ®) .

(2) In grains industry, the letter K in grade tables refers to the number of kernels or kernel-sized pieces of a particular grading factor in a 500-gram sample. / В зерновой отрасли, буква К в сортовой таблице относится к количеству зерновки (ядер) или частиц размером с зёрнышко (ядро) в 500-граммовой пробе, характеризующему конкретный показатель сорта. В Русскоязычной терминологии было бы правильнее использовать букву З или Я соответственно как первой буквы слов Зерновка или Ядро (на Английском языке – Kernel).

K = DECLARED OR PAID THIS YEAR ON A CUMULATIVE ISSUE WITH DIVIDENDS IN ARREARS

k = KILO = 10^3

K = Т (или ТЫС.) – K:- often used after Dollar amounts to denotes 1 000's, e.g., CAD150K = CAD150 000. CAD = Canadian Dollar.

KA = KILOAMPERE

KAFFIYEH = КАФИЯ (или КУФИЯ) – Kaffiyeh is an Arab headdress consisting of a square of cloth folded to form a triangle and held on by a cord. Arabic Kūfīya, Kaffīya, from al-Kufa or Al-Kufa, town in Iraq. / .

KAFTAN = КАФТАН – Kaftan or Caftan (from Qaftân) is a front-buttoned coat or overdress, usually reaching to the ankles, with long sleeves. It can be made of wool, cashmere, silk, or cotton, and may be worn with a sash. The caftan is of ancient Mesopotamian origin caftan (clothing). It is a variant of the robe or tunic, versions of which have been worn by countless cultures around the world, for thousands of years. The kaftan is associated with Islamic or Islamicate cultures. Kaftans were often worn as court robes; the splendor and specific decorations of the kaftan indicated the rank of the wearer. Sovereigns often gave ornate kaftans as a mark of favor. In Morocco kaftans are in general worn by women, the word Kaftan in Morocco is commonly used for one piece dress and there is typical version of Moroccan Caftan called Takshita. Components are two or more pieces dress plus belt. They can be dressy casual to extremely formal, depending on the materials used.Moroccan Kaftan for man exists, actually this dress was in the beginning masculine, the Almohad used to dress kaftans for male, and many Moroccan designers in now a days have Caftans for man among their collections. That dress is dedicated for special celebrations like wedding ceremonies, or religious festivals. The Moroccan Kaftan result from the development of medieval dresses from Morocco and Al-Andalous like the masculine dress:- Merlota or Melota, so Kaftan is an old industry in Moroccan Medina reach of handcraft and textile. Persian robes of honor were commonly known as Khalat or Kelat. The kaftans worn by the Ottoman sultans are preserved in one of the most splendid collections of Topkapı Palace in Istanbul. Lavishly decorated kaftans were given as rewards to important dignitaries and victorious generals. The decorations – colors, patterns, ribbons, and buttons – indicated the rank of the person to whom they were presented. From the XIV century through XVII centuries, textiles with large patterns were used. The decorative patterns on the fabrics became both smaller and brighter in the late XVI and in the XVII centuries. By the second half of the XVII century, the most precious fabrics were those with 'yollu':- vertical stripes with various embroideries and small patterns, the so-called 'Selimiye' Fabrics. Most fabrics manufactured in Turkey were made in Istanbul and Bursa, but some textiles came from as far away as Venice, Genoa, Persia (Iran), India and even China. Kaftans were made from velvet, aba, bürümcük (a type of crepe with a silk warp and cotton weft), canfes, çatma (a heavy silk brocade), gezi, diba, hatayi, kutnu, kemha, seraser (brocade fabric with silk warp and gold or silver metallic thread weft), serenk, zerbaft, tafta. Favoured colors were indigo blue, kermes red, violet, pişmis ayva or 'cooked quince', and weld yellow. In West Africa, a kaftan is a pullover robe. Kaftans are worn by both men and women. In West Africa, the female robe is called a Kaftan, and the male robe is called the Boubou or Senegalese Kaftan. In Russia the word Kaftan is used for another type of clothing:- a kind of a man's long suit with tight sleeves. By the XIX century, Russian kaftans were the most widely spread type of outer clothing among peasants and merchants. Currently they are used as a ritual religious clothing by the most conservative sect of Old Believers. Chassidic Jews adopted a silky robe (Bekishe) or a frock coat (Kapoteh) from the garb of Slavic nobility. The term Kapoteh may originate from the Spanish Capote or possibly from Kaftan, via Ladino. Sephardic Jews in Ottoman or Muslim lands wore a kaftan like their neighbors. The term Kapote is also used in Morocco. In South East Asia, kaftans are often worn as cool, casual hot weather attire. Batik fabric is often used. American hippie fashions of the late 1960s and the 1970s often drew from ethnic styles, including kaftans. African-styled, kaftan-like Dashikis were popular, especially among African-Americans. Street styles were appropriated by fashion designers, who marketed lavish, Moroccan-style kaftans as hostess gowns for casual at-home entertaining. / Кафтан (слово Тюркского или Персидского происхождения), верхняя мужская и женская двубортная одежда с глубоким запахом. В допетровской Руси кафтан был распространённой одеждой различных слоёв населения. Шился с удлинёнными рукавами:- у богатых – из бархата, парчи, лучшего сукна, на дорогих мехах, с драгоценными пуговицами и украшениями; у малоимущих – из простых тканей и дешёвого меха с медными и оловянными пуговицами. В народном быту употреблялся в различных местностях России до начала XX века и шился из простого сукна или домотканины (последние назывались:- сермяга, зипун, тяжелко). Короткий кафтан называется Полукафтаном.

KAIROMONE = КАЙРОМОН – Kairomone is the kind of allelochemicals that gives an adaptive advantage to the insect.

KAM = КАМ – Kam:- Chinese for gold.

KAMEEZ = КАМИЗ (или XX) – Kameez is a long tunic about knee-length or beyond. The tunic is worn over pants or skirt and can be designed in a number of styles. Traditional garment from India.

KANGAROO BONDS = ОБЛИГАЦИИ КЕНГУРУ – Kangaroo Bond is a type of foreign bond that is issued in the Australian market by non-Australian firms and is denominated in Australian currency – Australian Dollar (AUD). The bond is subject to Australian laws and regulations. Also known as Matilda Bond. Foreign bonds, such as Kangaroo bonds, are mainly used to provide issuers with access to another capital market outside of their own to raise capital. Also, major corporations and/or investment firms looking to diversify their holdings and improve their overall currency exposures can use Kangaroo bonds to raise funds in Australian Dollars. Major issuers of Kangaroo bonds have typically been from the United States Germany. Other foreign bonds include Samurai Bonds and Bulldog Bonds. Kangaroo Bonds is a term used in investing to represent unsecured bond notes issued in Australia. These bonds are issued in Australian Dollars and are marketed highly in that country and throughout Asia. They take their name from the Kangaroo, an animal common throughout the outback of Australia. Definition:- Kangaroo Bonds are issued by in the Australian market by non-Australian firms in the Australian currency. Considerations:- also known as the Matilda Bond, these bonds are subject only to Australian investing laws and regulations. Function:- Kangaroo bonds, and other bonds issued for similar purposes, are used to provide issuers with access to another capital market outside of their own. Features:- Kangaroo bonds are also used by firms and corporations to diversify their investment holdings, giving them more international capital and opportunities. Significance:- investors looking to improve their overall currency exposures are able to use these Kangaroo bonds to raise funds in Australian Dollars, instead of other currencies. Identification:- around the world, the major issuers of Kangaroo bonds have been large economies, like the United States and Germany. Fun Fact:- bonds with similar uses and purposes include Samurai Bonds and Bulldog Bonds, and are likewise prominent throughout Asia and other international markets.

KANSAS CITY BOARD OF TRADE = ПАЛАТА ТОРГОВЛИ ГОРОДА КАНЗАС (или ТАБЛО ТОРГОВЛИ ГОРОДА КАНЗАС) – The Board of Trade of Kansas City, Missouri, Inc, more known as the Kansas City Board of Trade (KCBT) was organized on 1856-November-10. When the original members of the Kansas City Board of Trade met on the banks of the Missouri River to develop a more organized method of buying and selling grain they could not have foreseen the far-reaching impact of their vision. More than a century later, more than 10 billion bushels of Wheat would change hands on the exchange in one year, and grain producers and users around the globe would look to Kansas City for the fair price of hard red winter Wheat, the primary ingredient in the world's bread. Over time, the exchange's leadership would extend into other markets. Indeed, it was at the Kansas City Board of Trade that stock index futures, hailed as the most innovative financial instrument of the 1980s, were born. The Kansas City Board of Trade was founded in 1856 by a group of Kansas City merchants. It served a function similar to a Chamber of Commerce. The Kansas City Board of Trade was formally chartered in 1876. Located on the northern border between Kansas and Missouri and the junction of two rivers, Kansas City is situated in one of the most productive wheat-growing regions of the world. Early trading at the exchange was primarily in cash grains. Today, grain elevators, exporters, millers and producers use the exchange to protect their cash positions by buying or selling futures and options. Stock market investors also utilize KCBT products. Nonetheless, cash grain trading is still the core business of many of KCBT's members. Throughout its development, the Kansas City Board of Trade has prided itself on its Midwestern heritage. Integrity and service are the cornerstones upon which the Board of Trade was founded, and they remain as important today as then. Formed in

1856 as a chamber of commerce, it reorganized after the Civil War as an exchange. The KCBT is the principal market for hard, red winter Wheat futures and options. It was the first exchange to trade stock index futures contracts when it launched Value Line Stock Index futures; options on the index also are traded. Trading hours for index products are 07:15 pm to 03:15 pm. By electronic trading and Wheat from 09:30 am to 01:15 pm for open outcry and 07:32 pm to 06:00 am for electronic trading, all Monday through Friday. The Kansas City Board of Trade (KCBT), located at 4800 Main Street in Kansas City, State of Missouri (MO), is a commodity futures and options exchange regulated by the Commodity Futures Trading Commission (CFTC) that specializes in the hard red winter Wheat – the principal ingredient of bread. The primary product traded at the exchange are futures contracts on hard red winter Wheat, and the underlying option contracts. Due to its nutritional value, the hard red winter Wheat usually trades at a premium to the Chicago Board of Trade's soft red winter Wheat. The exchange facilitates the transfer of ownership of the futures and options contracts through the open outcry system. The Board originally was organized on 1856-November-10 shortly after the Kansas City itself was founded and served as the city's Chamber of Commerce. It was formally chartered in 1876. The Board celebrated its 150th anniversary in December of 2006. It was originally located at 8th and Wyandotte. In 1925 it moved to 10th and Wyandotte and in 1966 it moved to 48th and Main in the Country Club Plaza. In 1982 the Kansas City Board of Trade introduced Value Line futures, making it the first exchange offering a stock index futures contract. Options on Value Line futures were introduced in 1992. As of 2004-December-12, the Value Line futures are now traded solely through an electronnic platform. 1856 – The Kansas City Board of Trade is established by local Kansas City merchants as a means of trading grain. Futures trading in grains began in 1876. 1856:- A group of Kansas City merchants organize a Board of Trade for the purpose of buying and selling. 1869:- The Chamber of Commerce reorganizes as the Kansas City Board of Trade. After about a year, the organization changes its name to the Commercial Exchange, representing a variety of business interests. The organization continues to be referred to as the Board of Trade by members who trade grain. 1982-February-24:- The KCBT becomes the first exchange in the world to trade stock index futures as Value Line® is launched. 2004-December-12:- Electronic trading begins for the KCBT Wheat futures and options contracts only after regular trading hours, while the Value Line starts trading exclusively on the electronic trading platform. 2008-January-13:- Electronically traded products now hosted on CME Globex® platform beginning business date January 14.

KANTAR = КАНТАР – A Kantar is the official Egyptian weight unit for measuring cotton. It corresponds to the US hundredweight, and is roughly equal to 99.05 pounds, or 45.02 kilograms. It is equal to either 157 kilograms of seed cotton or 50 kilograms of lint cotton. In Sudan 1 kantar is equal to 99.05 pounds (lb), or 44.93 kilogrammes (kg); cotton is usually quoted by the kantar and when applied to ginned cotton this is normal kantar of 100 rotls; for unginned cotton, however, it may be equivalent to 100, 105, or 315 rotls; when the unit appears in the publication, the number of rotls (or pounds) in particular kantar is specified in brackets, e.g., 'Kantars (315)'. It is also used as a unit of weight in other Eastern Mediterranean countries, bur varying from place to place in a value. From Latin Cantharus, from Ancient Greek Kántharos. Sudan:- 1 seed kantar = approximately 312 lbs. seed cotton = 110 lbs. lint. 1 lint kantar = approximately 100 lbs. cotton lint. / Кантар – устаревшая мера веса, использовавшаяся в различных странах Ближнего Востока и Средиземноморья.

KAPOK = КАПОК (или КАПОКОВОЕ) – Kapok is a fiber taken from the seed-pod of the tropical Kapok Tree, also called the Silk-Cotton Tree. Kapok Tree blooms uncommonly, typically every 5–10 years. It is productive tree, normally with 4 000 fruits growing at any one-time when it does blooms. Harvesting Kapok is labor concentrated. Usually, people knock the ripe unopened pods off the tree. However, they can also cut the pods from the tree or harvest it when it falls to the ground. Soon after harvest the fruits are hulled and seed and fiber are removed from the pods by hand, then they are stirred in a basket till the seeds fall and the fiber rises. When the pods reaches maturity and is not harvested, it will break and expose the Cotton-like fibers and seed to the wind. The word Kapok means both to the tree and to the fiber it produces. It is also known as Silk Cotton or Java Cotton. Kapok Fiber's Characteristics:- (i) Bounciness:- Kapok resists clumping (i.e. it does not become lumpy) it also bounces back to the original shape after washing; (ii) Environmental friendly:- Kapok is a natural biodegradable; (iii) Yellowish brown, shinning; each fiber is about 2.5 cm long, has a wide lumen (central cavity) and thin walls covered with waterproof wax; (iv) Light weight:- 8 times lighter than cotton by volume; (v) Buoyant:- the waxy coating helps reject water, and air bubbles are usually trapped in lumen, making Kapok 5 times more buoyant than cork; (vi) Hypoallergenic; (vii) Packs down firmly:- easy to press Kapok fiber in a container down; (viii) Slippery:- the waxy coating makes Kapok becomes slippery, so easily adjusts to shape, for example of the head on a pillow; (ix) Irritable:- as the fiber is designed to disperse seeds on the wind, people advised to wear a dust mask when processing items with Kapok; and (x) Inflammable:- the trapped air makes kapok highly inflammable, and if it catches fire it is difficult to put the fire out. Kapok Pillows Versus Cotton Pillows:- (i) Kapok fiber weighs one-eighth as much as Cotton is; (ii) Kapok pillows are softer and silky; and (iii) Kapok pillows flatten quicker than Cotton pillow. Kapok normally needs extra filling after using several months. Kapok is a vegetable seed fiber from the Kapok Tree. Kapok:- short, lightweight cotton-like fibers from the seed pod of trees of the Family Bombacabeae. A very brittle fiber, it is generally not spun. It is used for stuffing cushions, mattresses, etc, and for life jackets because of its buoyancy and moisture resistance. Kapok is a fluffy fiber that comes from the seed pods of the Kapok Tree found in the tropics. Kapok at one tirne was extremely popular for stuffing pillows and was also used in life preservers as it is naturally buoyant. Today, rnan-made fibers have replaced kapok in many cases. The sources of vegetable or plant fibers are seeds like Cotton and Kapok. Cotton is known for being the most important and dominant natural fiber in the world. Kapok (Ceiba Pentandra) is a Tree and the fibers produced by this perennial Tree are also called Kapok. Just as Cotton fiber grows on the Cotton seeds, Kapok fibers grow on Kapok seeds. Kapok is a rainforest tree that grows up to a height of sixty meters. A full-grown tree can yield up to 15 kg of fiber a year. The trunk of the Kapok Tree is used as a source of timber, which is currently its main application. The fibers grow inside a pod that is naturally shed by the plant. When the pods are mature, they burst open and expose the whitish fibers in which the round, brown-colored seed is imbedded. Wind can carry the fibers around together with the seed. Most of the Kapok fiber output is used in stuffing or insulation, but it has been replaced in these uses by polyester and foam plastics. Kapok is a short, lightweight, cotton-like, vegetable fiber found in the seed pods of the Bombocaceae Tree. Because of its brittle quality, it is generally not spun. However, its buoyancy and moisture resistance makes it ideal for use in cushions, mattresses, and life jackets. / Капок – волокно семян Растения Eriodendron Anfractuosum или с внутренних стенок плода Растения Bombax Pentandrum. Хлопчатое Дерево или Хлопковое Дерево или Капоковое Дерево или Сэиба Пэнтандра (Ceiba Pentandra), Дерево Семейства Бомбаксовых (Family Bombacabeae), произрастающее в тропической Америке. Из его плодов получают Капок. Культивируют в тропических странах обоих полушарий. Капок (от Малайского слова Kapok), волоски из плодов Сейбы (или Хлопчатого Дерева – Ceiba Pentandra) Семейства Бомбаксовых из тропической Америки, культивируемой в тропиках, особенно в Азии. Волоски длиной 10–35 миллиметров (мм) и диаметром 0.02–0.04 мм, мягкие, белые или буроватые, образуются на внутренней стороне створок плодов – коробочек (не на семенах). Они не смачиваются водой и не сваливаются. В воде капок в несколько раз более стоек, чем пробка. Волоски, очищенные от семян и частей плода, сушатся, сортируются и под давлением упаковываются в кипы. Капок применяют для набивки спасательных кругов и жилетов, мягкой мебели, матрацев и подушек, а также как звуко- и теплоизоляционный материал.

KAPPA = КАППА – (1) Kappa is the native cloth of Hawaii; traditionally created only by women by beating strips of bark together was a dying art that was revived after much research. Bark from different types of trees were used, but the mulberry tree was the most common. Dyes were created from many different types of plants, many of which are still available.

(2) Kappa is the ratio of the Dollar price change in the price of an option to a 1% change in the expected volatility. / В торговле опционами Каппа (прописная – K, строчная – к), название буквы Греческого алфавита, было использовано для указания соотношение изменения Долларовой Цены в цене опциона с 1% изменением предполагаемой лихорадочности (изменчивости) цен.

KARAT = КАРАТ – Karat is a unit of fineness, scaled from one to 24. 24 karat gold (or pure gold) has at least 999 parts pure gold per thousand; 18-karat has 750 parts pure gold and 250 parts alloy, etc. A measure of the purity of gold. Pure gold is 24-karat. Karat is a traditional measure of proportion equal to 1/24, used by US jewelers to express the purity of gold alloys. Thus '14-karat gold' is legally required to be at least 14/24, or 58.3%, gold. In Britain this unit is spelled Carat, like the weight unit for diamonds and other precious stones. American jewelers apparently spell the unit of gold purity with the K and the weight unit with the C in order to distinguish more clearly between them. In Germany, both units are spelled with the K. A traditional unit of mass for precious stones, now spelled carat in both Britain and the United States. Abbreviation:- K or Kt. See also Carat. / Под Каратом, от Итальянского слова Carato, через Арабское слово Кират, от Греческого слова Kerátion, означающее Стручок Рожкового Дерева, семена которого служили мерой массы, понимаются:- (i) внесистемная дольная единица массы драгоценных камней и жемчуга, применяющаяся в ювелирном деле. Обозначение:- кар. Метрический карат равен 0.2 г или 200 мг или $2 \cdot 10^{-4}$ кг; и (ii) мера содержания золота в сплавах, равная 1/24 массы сплава (Британский карат золота). Чистое золото соответствует 24 каратам.

KARI = KENYA AGRICULTURAL RESEARCH INSTITUTE

KARL FISCHER REAGENT METHOD = РЕАГЕНТНЫЙ МЕТОД КАЛА ФИША (или РЕАГЕНТНЫЙ МЕТОД КАРЛА ФИШЕРА) – Karl Fischer Reagent Method:- the standard laboratory test to measure the water content of mineral base fluids. In this method, water reacts quantitatively with the Karl Fischer reagent. This reagent is a mixture of iodine, sulfur dioxide, pyridine, and methanol. When excess iodine exists, electric current can pass between two platinum electrodes or plates. The water in the sample reacts with the iodine. When the water is no longer free to react with iodine, an excess of iodine depolarizes the electrodes, signaling the end of the test. / с реагентом Кала Фиша (или Карла Фишера (Karl Fischer)). Этот реагент представляет собой смесь .

KAROSS = МАНТИЯ – Kaross is a simple garment of skins used especially by native tribesmen of Southern Africa. / Мантия из звериных шкур, которую носят туземцы в Южной Африке.

KARYOKINESIS = КАРИОКИНЕЗ – Karyokinesis is the process of division of a cell nucleus, distinct from cytokinesis division of the whole cell. / от цитокинезного деления всей клетки. Кариокинез – непрямое деление ядра клетки. Под Кариокинезом, от Греческих слов Káryon, означающее Орех или Ядро Ореха, и , означающее , понимается .

KARYOTYPE = КАРИОТИП – Karyotype:- the gross morphology of the chromosomes. Karyotype is the image of the entire chromosome set of an organism. / Кариотип или хромосомный комплекс. Под Кариотипом, от Греческих слов Káryon, означающее Орех или Ядро Ореха, и Týpos, означающее Отпечаток или Форма, понимается типичная для вида совокупность морфологических признаков хромосом (размер, форма, детали строения, число и так далее). Важная генетическая характеристика вида, лежащая в основе кариосистематики. Для определения кариотипа используют микрофотографию или зарисовку хромосом при микроскопии делящихся клеток.

KASHMIR = КАШМИР (или КАШМИРСКАЯ, или КЭШЕМИЭР) – Kashmir is another spelling for Cashmere. Kashmir is also an alternate spelling for the name of the Goat from which cashmere wool comes. See also Cashmere.

KAU = KERALA AGRICULTURAL UNIVERSITY

KAU = KIND–OF–ACTIVITY UNIT

kb = KBAR = KILOBAR

kb = KBIT = KILOBIT

KB = KELLY BUSHING

kb = KILOBASE

kb = KILOBYTE

kcal = KILOCALORIE

KCBT = KANSAS CITY BOARD OF TRADE

KD = KILN DRY

KD = KNOCKED DOWN

KD YELLOW = КЕЙ.ДИ. ЖЁЛТОЕ – KD Yellow:- fabric becomes yellow after KD TMT (KD – возможно Kier Decatizer steam conditioning; TMT Machinery, Inc.; the Japanese company is jointly incorporated by the three leading manufacturers of synthetic fiber machinery in Japan – Toray Engineering, Murata Machinery and Teijin Seiki) m/c (from normal shade). Finishing defect. / Ти.Эм.Ти. Мэшинэри, Инк. (TMT Machinery, Inc.). Торэ Эндьжинирин (Toray Engineering), Мюрата Мэшинэри (Murata Machinery) и Тэйджин Сэйки (Teijin Seiki). Порок или дефект заключительной отделки.

KE = KENYA

KEEL = КИЛЬ – Keel is the lowest longitudinal timber of a vessel, on which framework of the whole is built up; combination of iron plates serving same purpose in iron vessel. Centerline of a ship fore-and-aft. Such longitudinal girder at the lowest point of a vessel providing the base for the framework. Keel:- The timber or bar forming the backbone of the vessel and running from the stem to the stempost at the bottom of the ship. / Балка, проходящая посередине судна от носовой до кормовой оконечности. Такая продольная балка днища судна служит основой каркаса. Под Килем судна, от Голландского слова Kiel, может пониматься:- (i) балка, проходящая посередине днища судна от носовой до кормовой оконечности; или (ii) неподвижная вертикальная часть хвостового оперения самолёта, дирижабля. Под Килем понимается балка, служащая основным продольным креплением и связью днища судна, располагаемая в диаметральной плоскости. Различают брусковый, вертикальный, горизонтальный, коробчатый, туннельный кили. У летательных аппаратов киль является частью вертикального оперения. Неподвижный киль

служит для придания устойчивости, а цельноповоротный киль – также для балансировки и управления летательного аппарата в его боковом движении.

KEEL = КИЛЬ (или ЛОДОЧКА) – Keel is the middle nerve of the lemma. The two lower united petals of a legume flower.

KEEL BLOCK = КИЛЬБЛОК – Keel Block is a wooden block on which a ship rests when on the launchway or the dock to prevent metal rubbing on metal. Generally made from exotic hardwoods. / протирание или притирка (rubbing). Под Кильблоком понимается элемент опорного устройства, предназначенный для судна, стоящего на стапеле или в доке. Кильблок устанавливают поперёк судна по килевой линии строго вертикально. Кильблоки состоят из металлического или железобетонного основания (часто механизированного гидравлическим домкратом) и деревянной подушки; их высота определяется из условий спуска судна на воду и удобства проведения работ под днищем. Под Кильблоком понимается:- (i) днищевая опора для судна, стоящего на стапеле или в доке; устанавленные на расстоянии 1–2 м поперёк киля кильблоки образуют, так называемую килевую дорожку; или (ii) фигурная подставка для установки шлюпки, катера на палубе судна или на берегу.

KEELED = КИЛЕВАТОЕ (или ЛАДЬЕВИДНОЕ, или ИМЕЮЩЕЕ КИЛЬ) – Keeled:- with a ridge along the middle; with a ridge like the bottom of a boat.

KEEL–HAUL = КИЛЕВАТЬ (или ПРОТАСКИВАТЬ ПОД КИЛЕМ) – Keel-Haul (maritime term):- to tie a rope about a man and, after passing the rope under the ship and bringing it up on deck on the opposite side, haul away, dragging the man down and around the keel of the vessel. As the bottom of the ship was always covered with sharp barnacles, this was a severe punishment used aboard sailing ships long ago. Today, a reprimand.

KEEP A SHARP LOOK–OUT = ПОДДЕРЖИВАТЬ ЗОРКОЕ НАБЛЮДЕНИЕ – Keep A Sharp Look-Out (maritime term):- a look-out is stationed in a position to watch for danger ahead. To be on guard against sudden opposition or danger.

KEIDANREN = КЕЙДАНРЭН – Keidanren, the Japanese Federation of Economic Organizations, was established in 1946 as a private, non-profit economic organization representing virtually all branches of economic activity in Japan. / Кейданрэн, Японская Федерация Хозяйственных Организаций, была создана в 1946 в качестве частной, некоммерческой хозяйственной организации, представляющей фактически все отрасли хозяйственной деятельности в Японии.

KEIRETSU = КЕЙРЭЦУ – Keiretsu refers to the horizontally and vertically linked industrial structure of post-war Japan. The horizontally linked groups include a broad range of industries linked via banks and general trading firms. There are eight major industrial groups, sometimes referred to as Kigyo Shudan:- DKB, Fuyo, IBJ, Mitsubishi, Mitsui, Sanwa, Sumitomo and Tokai. The vertically linked groups (such as Matshushita, Sony and Toyota) are centered around parent companies, with subsidiaries frequently serving as suppliers, distributors, and retail outlets. Common characteristics among the groups include crossholding of company shares, intra-group financing, joint investment, mutual appointment of officers, and other joint business activities. The keiretsu system emphasizes mutual cooperation and protects affiliates from mergers and acquisitions. Ties within groups became looser after the oil shocks of the 1970s as a result of decreasing dependence on banks for capital. / Кийо Щудан (Kigyo Shudan):- Ди.Кей.Би. (DKB), Фуё (Fuyo), Ай.Би.Дьжей. (IBJ), Мицубищи (Mitsubishi), Мицуи (Mitsui), Санва (Sanwa), Сумитомо (Sumitomo) и Токай (Tokai). Вертикально связанные группы (такие как Мацущита (Matshushita), Сони (Sony) и Тойота (Toyota)).

KELLY GREEN = КАПУСТНО–ЗЕЛЁНОЕ – Kelly Green:- a variable color averaging a strong yellowish green.

KELVIN = КЕЛЬВИН – Kelvin:- thermal temperature measuring unit (zero point approximately –273.16 degrees Celsius). Often abbreviated as K in technical literature. Kelvin (K) is the SI base unit of temperature, previously called the Degree Kelvin (°K). One Kelvin represents the same temperature difference as one degree Celsius. In 1967 the General Conference on Weights and Measures defined the temperature of the triple point of water (the temperature at which water exists simultaneously in the gaseous, liquid, and solid states) to be exactly 273.16 Kelvins. Since this temperature is also equal to 0.01 °C, the temperature in Kelvins is always equal to 273.15 plus the temperature in degrees Celsius. The Kelvin equals exactly 1.8 degrees Fahrenheit. The unit is named for the British mathematician and physicist William Thomson (1824–1907), later known as Lord Kelvin after he was named Baron Kelvin of Largs. He is best remembered for his pioneering work on the physics of heat, but he was also a strong advocate of the metric system; his support helped establish the now-familiar electrical units such as the Ohm, Volt, and Farad. / Томсэн (Thomson). Кельвин – единица термодинамической температуры, равная 1/273.16 части термодинамической температуры тройной точки воды; обозначается К. Названа по имени Британского математика и физика Вильэма Томсэна (William Thomson), известного позже как Вильэм Лод Келвин (или Кельвин) (William Lord Kelvin; 1824–1907). До 1968 именовалась градус Кельвина (°К). Применяется как единица Международной Практической Температурной Шкалы; является одной из основных единиц Международной Системы Единиц (СИ). По размеру Кельвин равен градусу Цельсия (°С).

KEMP = ГРУБОЕ – Kemp is a white, straight, opaque, coarse, non-felting, in-elastic fiber having a thick central medulla with hollow inter spaces. It will not take a dye; hence, its presence in wool is most objectionable. Often found around the head and legs. Kemp is a coarse fiber especially of wool that is usually short, wavy, and white, has little affinity for dye, and is used in mixed wools. / (1) Короткая и грубая ковровая шерсть. (2) Мёртвый волос, не поддающийся крашению.

KENAF = КЕНАФ – Kenaf is a bast fiber. The possibility of extracting fibers from kenaf was investigated using established retting methods. The kenaf stalk, when decorticated, offers the opportunity to extract fibers that may be used in various textile end products. The fiber extraction process affects fiber properties which are important for the making of textiles, both woven and nonwoven structures. Fibers can be extracted by either bacterial or chemical retting process. / Под Кенафом понимается Однолетнее Травянистое Растение Рода Гибискус Семейства Мальвовых. В сухих стеблях до 21% волокна, используемого для изготовления технических тканей, в семенах до 20% технического масла. Возделывают в Бразилии, Индии, КНР, Соединённых Штатах Америки (США). В бывшем Союзе Советских Социалистических Республик (СССР) производились опытные посевы. Кенаф или Канап или Гибискус Коноплёвый (Hibiscus Cannabinus) или Пенька Гамбо, Вид Однолетних Лубоволокнистых Растений Семейства Мальвовых. В диком состоянии, по-видимому, встречается в Южной Африке и Центральной Индии. Корень Кенафа стержневой, ветвистый, проникает в почву на 30 – 50 сантиметров (см) (иногда на 2 метра (м)). Стебель прямой, ребристый или округлый, с шипиками, высотой 1–5 м. Листья крупные, средние – пальчатораздельные, нижние – сердцевидные, верхние – ланцетные. Цветки пазушные, 5-членные, крупные, кремовые с ярко-вишнёвым пятном внутри венчика. Плод – 5-гнёздная коробочка, густо покрытая жёсткими волосками, вызывающими раздражение кожи у человека. Семена серые, почковидные или треугольные; 1 000 семян весит 20–28 граммов (г). Растение теплолюбиво и влаголюбиво. Семена начинают прорастать при 12–14 °С. Вегетационный период 125–145 суток. Содержание волокна в сухих стеблях отечественных Сортов Кенафа 16–20%. Волокно отличается высокой гигроскопичностью и прочностью, из него изготовляют мешковину, брезент, шпагат, верёвки и другое. Из костры делают бумагу и строительные плиты. Семена содержат до 20% технического масла. Жмых используют на удобрение и скармливают скоту. Наибольшие площади посева Кенафа – в Индии (в

1970 более 300 тысяч гектаров (га)), где это Растение впервые введено в культуру. Кенаф выращивают также в Китае, Иране, Бразилии, США и других странах. В Россию завезён в XIX веке. Его возделывают на небольших площадях в Узбекистане. Средний урожай сухих стеблей 40–60 центнеров с одного гектара (ц/га). Лучшие Сорта 3876, Узбекский 1574. Под культуру вносят минеральные удобрения (в килограммах на гектар (кг/га)):- по 90–120 N и P_2O_5 и 45–60 K_2O. Норма высева семян при широкорядном посеве 20–30 кг/га. В течение вегетации посевы 4–6 раз поливают (поливная норма 800–900 кубических метров на один гектар ($м^3$/га) воды). На волокно Кенаф убирают, когда первые коробочки станут светло-зелёными и на верхушке стебля появятся ланцетные листочки. Из свежих стеблей прямо в поле извлекают луб и после просушки отправляют его на лубяной завод. Болезни Кенафа – серая гниль стеблей, альтернариоз; Вредители – Совки, Травяной и Свекловичный Клопы, Тля, Трипсы. Кенаф – Однолетнее Растение, возделываемое для получения лубяного волокна, из которого вырабатывают пряжу для изготовления упаковочных тканей, кручёных нитей и кручёных изделий (шпагатов, верёвок, канатов и тому подобного).

KENDAL GREEN = КЕНДЭЛСКОЕ ЗЕЛЁНОЕ – Kendal Green is a green woolen cloth resembling homespun or tweed. / Из города Кендэл.

KEOGH PLAN = ПЛАН КИО – In the United States, a Keogh Plan is a retirement plan used by people who are self-employed, as well as by the partners to a partnership. The Keogh plan, much like a 401(k) plan for a standard employee, allows self-employed individuals to save for retirement while getting a present tax benefit by lowering their tax burden. A Keogh plan helps lower your tax burden because you are entitled to a tax deduction for a portion of your contributions to the plan. If you have net earnings from a sole proprietorship, you can establish a Keogh plan for yourself. If you are a partner in a partnership, the plan must be set up by the partnership itself in order to qualify. In either case, the Keogh plan must be set up by the last day of the tax year in order for you to be entitled to deduct contributions to the plan for that tax year. The distinction here is that you could make payments following the close of the tax year but before the filing deadline, which would be deductible for that tax year, for example, you can open a plan in December of 2005, and payments made prior to 2006-April-17 can be deducted from your 2005 taxes, even though the contributions were not actually made in the 2005 tax year. You should seek the advice of a tax consultant for help in calculating exactly how much of your Keogh plan contributions are deductible, as the calculation is rather complicated. After Eugene James Keogh (1907–1989), former US representative from New York. A Keogh Plan is generally a type of defined contribution plan set up by self employed individuals, partnerships, corporations, and not for profit organizations. Profit Sharing Keogh Plans and Money Purchase Keogh Plans have different rules regarding contribution requirements and maximum contribution percentages. Contributions are taken as a tax deduction by the business or taken as a deduction on the tax return of self employed individuals. The Keogh Plan is a type of tax-deductible retirement plan, similar to Individual Retirement Accounts, for self-employed individuals. It is also known as a Self-Employed Pension Plan. The individual may contribute up to USD30 000.00 or 15% of total earned income per year, whichever is less. Tax advantaged personal retirement program that can be established by a self-employed individual. See also Individual Retirement Account. / Юдьжин Дьжеймз Кио (Eugene James Keogh). План Кио:- не облагающиеся налогом пенсионные счета, предназначенные для работников неакционированных предприятий или для лиц, занимающихся индивидуальной трудовой деятельностью (получающих полную или частичную ставку). Начиная с 1984 лица, имеющие на это право, могут вносить на эти счета до 25% своего дохода, но до 30 000 Долларов. Подобно индивидуальным пенсионным счетам (individual retirement account (IRA)), план Кио позволяет людям накапливать проценты по сбережениям без налогообложения до тех пор, пока капитал не будет снят со счёта, начиная с 59.5 лет и до 70.5 лет. Для планов Кио могут быть использованы практически любые инвестиции, за исключением драгоценных металлов и предметов коллекционирования. Как правило, активы планов Кио хранятся в виде акций, облигаций, фондов денежного рынка, депозитных сертификатов, акций взаимных фондов или участия в товариществах с ограниченной ответственностью. План Кио был принят Конгрессом США в 1962 и расширен в 1976, а затем дополнен в 1981 в Акте о Налогах для Стимулирования Экономического Возрождения (Economic Recovery Tax Act).

KEPI = КЕПИ – Kepi is a military cap with a round flat top sloping toward the front and a visor.

KERATIN = КЕРАТИН – Keratin is the basic protein constituent of wool and other hair fibers. Keratin is a protein substance which is the chief component of wool fiber. / Под Кератином понимаются фибриллярные белки, составляющие основу рогового слоя кожи, волос, перьев, ногтей и тому подобного. Нерастворимы в воде и органических растворителях, устойчивы к действию протеолитических ферментов.

KERB = ОБОЧИНА (или ВНЕ БИРЖИ) – Kerb:- a trading session when open-outcry transactions occur freely outside of scheduled ring times and when all or some of the London Metal Exchange (LME) metals are traded simultaneously. Kerb or Curb is a a line of stone or concrete forming an edge between a pavement and a roadway. Kerb Market is an after-hours street market or a street market dealing in unquoted securities.

KERB DEALING = ЗАКЛЮЧЕНИЕ СДЕЛОК НА ОБОЧИНЕ – A term Kerb Dealing or Kerb Deal means the purchase and sale of securities before or after the official hours of business of the stock exchanges. Trading before or after the official hours is called as Kerb Trading. It is an unfair practice of dealing. Also known as Curb Trading. / Известны также как Сделки На Стороне (Curb Trading).

KERB TRADING = ТОРГОВЛЯ НА ОБОЧИНЕ – Kerb Trading:- closing a deal on a financial futures market after hours. It is so called because originally traders would emerge from the exchange after official trading closed for the day and remain outside (on the kerb) to close any unfinished business. Also known as Curb Trading. The London Metal Exchange (LME):- after the official trades of sessions one and two, there are 85 and 45 minutes of 'kerb' trading respectively. Trades are in futures, options and TAPOs (traded average-price options, a form of Asian options). / Известна также как Сделки На Стороне (Curb Trading).

KERCHIEF = ГОЛОВНОЙ ПЛАТОК (или КОСЫНКА, или ШАРФ) – Kerchief is a square of cloth used as a head covering or worn as a scarf arond the neck.

KERNEL = ЗЕРНОВКА (или ЯДРО) – All grains start life as whole grains. In their natural state growing in the fields, whole grains are the entire seed of a plant. This seed (which industry calls a 'Kernel') is made up of three key parts:- (i) bran, (ii) germ, and (iii) endosperm. Whole grains contain all three parts of the kernel. Refining normally removes the bran and the germ, leaving only the endosperm. Without the bran and germ, about 25% of a grain's protein is lost, along with at least seventeen key nutrients. Processors add back some vitamins and minerals to enrich refined grains, so refined products still contribute valuable nutrients. But whole grains are healthier, providing more protein, more fiber and many important vitamins and minerals. Whole grains may be eaten whole, cracked, split or ground. They can be milled into flour or used to make breads, cereals and other processed foods. If a food label states that the package contains whole grain, the 'whole grain' part of the food inside the package is required to have virtually the same proportions of bran, germ, and endosperm as the harvested kernel does before it is processed. See also Bran, Germ, and Endosperm. Kernel is a single whole grain of a cereal, e.g., a kernel of Wheat or Corn. Wheat, a member of the grass Family (Gramineae),

produces a dry one-seeded fruit, 'Caryopsis', commonly called a Kernel, Grain or Berry. The body of a seed within its husk or integuments. A Kernel of Rice consists of a hull and a brand coat, both of which are removed on polishing 'white' Rice. In general, each Rice kernel is composed of the following layer:- (i) Rice shell, Hull or Husk:- encloses the brown Rice consists mainly of embryo and endosperm. (ii) Bran Coat (layer):- a very thin layer of differentiated tissues. Thai layer contains fiber, vitamin B, protein and fat. The most nutritious part of Rice resides in this layer. (iii) Embryo:- The innermost part of Rice consisting mainly of starch called Amylose and Amylo Pectin. The mixture of these two starches determines the cooking texture of rice. Kernel is the grain or seed of cereal or grass enclosed in a hard husk. / (i) Рисовая Оболочка, Чешуя или Шелуха (Rice shell, Hull or Husk) и эндосперм. (ii) Плёнчатый Околоплодник (Bran Coat) (iii) состоящая главным образом из крахмала, называемая амилозой (amylose) и амилопектин (amylo pectin). Семянка, односемянный нераскрывающийся плод растений с околоплодником, большей частью кожистым, не срастающимся с семенем. Например, у подсолнечника, сафлора. Под Зерновкой понимается сухой односемянный нераскрывающийся плод злаков с плёнчатым околоплодником, срастающимся с семенем. Зерновка развивается из пестика с верхней завязью. Зерновка характерна для злаков. У большинства из них плотно охвачена сухими цветковыми чешуями, часто обеспечивающими их распространение (ковыль, дикие ячмени). Зерновку пшеницы, ржи и других хлебных злаков обычно называют зерном.

KERNEL MOISTURE = ВЛАЖНОСТЬ (или СЫРОСТЬ) ЗЕРНОВКИ – Kernel Moisture is the moisture of the dehusked grain.

KERNEL SMUT = ТВЁРДАЯ ГОЛОВНЯ (или МОКРАЯ ГОЛОВНЯ, или ПЫЛЬНАЯ ГОЛОВНЯ (ПРОСА)) – Kernel Smut is a fungal disease that affects the kernels of Rice and caused by Tilletia barclayana. / Под Головнёй понимается болезнь растений, вызываемая головнёвыми грибами. Несколько видов:- пузырчатая, пыльная, стеблевая, твёрдая. Наиболее вредоносна для злаков (Кукуруза, Пшеница, Рожь и другие). Колосья, метёлки, початки, стебли и листья превращаются в тёмную споровую массу.

KEROSENE = КЕРОСИН – Kerosene is a liquid fuel made up of the oil fraction that is distilled between 150 and 300 degrees Celsius. It is used as a fuel for cooking food, lighting, in motors, in refrigeration equipment, and as a solvent for domestic waxes and insecticides. See also Turbo Fuel. Kerosene comprises refined petroleum distillate and is used in aircraft transport and other sectors. It distils between 150 °C and 300 °C. Kerosene is a medium oil distilling between 150 °C and 300 °C; at least 65% of volume distils at 250 °C. Its specific gravity is roughly 0.80 and its flash point is above 38 °C. It is used as an illuminant and as a fuel in certain types of spark-ignition engines, such as those used for agricultural tractors and stationary engines. Other names for this product are burning oil; vaporizing oil, power kerosene and illuminating oil. Kerosene comprises of kerosene type jet fuel and other kerosene for all organizations. / Керосин представляет собой очищенную смесь углеводородов, выкипающую в интервале температур 150–300 °C (в России – 110–320 °C) посредством дистилляции нефти или крекинга тяжёлых нефтепродуктов. Он используется в авиации и других секторах экономики. Под Керосином понимается смесь жидких углеводородов, выкипающих в интервале температур 110–320 °C. Он обладает плотностью 0.78–0.85 г/см^3, удельной теплотой сгорания около 43 МДж/кг. Получают дистилляцией нефти или крекингом тяжёлых нефтепродуктов. Керосин применяют как реактивное топливо, горючее для бытовых нагревательных и осветительных приборов и в аппаратах для резки металлов, как растворитель, сырьё для нефтеперерабатывающей промышленности. Керосин получают перегонкой нефти или каталитической переработкой газойлей. Плотность 790–860 кг/м^3. Керосин применяется как топливо для авиационных реактивных двигателей (авиационный керосин), как горючее для бытовых осветительных приборов (осветительный керосин), как сырьё для пиролиза и растворитель (керосин для технических целей).

KEROSENE–TYPE JET FUEL = РЕАКТИВНОЕ ТОПЛИВО КЕРОСИНОВЫХ ФРАКЦИЙ – Kerosene-Type Jet Fuel is a medium oil for use in aviation gas-turbine engines with the same distillation characteristics and flash point as kerosene, with a maximum aromatic content of 20% in volume. It is treated to give a kinematic viscosity of less than 15 cSt at –34 °C and a freezing point below –50 °C. Kerosene Type Jet Fuel is a distillate used for aviation turbine power units. It has the same distillation characteristics (between 150 °C and 300 °C, and generally not above 250 °C) and flash point as kerosene. In addition, it has particular specifications (such as freezing point) which are established by the International Air Transport Association (IATA). Kerosene-Type Jet Fuel is a quality kerosene product with a maximum distillation temperature of 400 °F at the 10% recovery point and a final maximum boiling point of 572 °F. The fuel is designated in the US American Society for Testing and Materias (ASTM) Specification D1655 and Military Specification MIL-T-5624L (Grades JP-5 and JP-8). A relatively low-freezing point distillate of the kerosene type used primarily for turbojet and turboprop aircraft engines. Commercial Kerosene-Type Jet Fuel intended for commercial use, and Military Kerosene-Type Jet Fuel intended for military use. / Американское Общество по Испытаниям и Материалам (АОИМ).

KERSEY = КЁСИ (или КИРЗА) – Kersey is a thick, heavy, pure wool and cotton twill-weave fabric similar tonrelton. It is well fulled, with a fine nap and a closesheared surface. Kersey is used for uniforms and overcoats. Kersey is a coarse ribbed woolen cloth for hose and work clothes; a heavy wool or wool and cotton fabric used especially for uniforms and coats. A garment made of kersey fabric, namely a heavy wool or wool and cotton fabric. Wool – poor quality, can also be made of re-used or remanufactured wool. Originated in Kersey, England in XI century. Very similar to beaver but it is fulled more, has a shorter nap and a much higher luster. Kersey is a heavily fulled or milled woolen fabric having a high lustrous nap and a 'grainy' face, kersey is frequently used in overcoats. Kersey is a kind of coarse woollen cloth that was an important component of the textile trade in Medieval England. It derives its name from kersey yarn and ultimately from the village of Kersey, Suffolk, having presumably originated in that region. However the cloth was made in many places. It was being woven as early as 1262 in Andover, Hampshire, where regulations prohibited the inclusion of Spanish wool in kerseys. By 1475, the West Riding of Yorkshire including Calderdale was also a major producer. Kersey was a lighter weight cloth than broadcloth. English kerseys were widely exported to central Europe and other places:- a surviving business letter from the end of the XVI century recommends to trade kerseys for good wine on the Canary Islands. Kersey yarns were spun in large gauges (thicknesses) from inferior carded wool, and made thick and sturdy cloth. Kersey was a warp-backed, twill-weave cloth woven on a four-treadle loom. As a rule, half the relatively small, numerous and closely set warp ends (threads) were struck with a big kersey weft in a two-and-two, unbalanced and highly prominent twill. The rest of the ends were simultaneously struck in a one-and-three twill, so they appeared mainly on the back of the cloth, while the back-warp stitches on the face of the cloth were concealed among the face-warp threads. One of the secrets of weaving a good kersey lay in combining the adequate stitching of the weft by the back warp with the concealment of the back-warp stitches. The back of the cloth was napped and shorn after fulling, producing a dense, warm fabric with a smooth back. / Грубое домотканое сукно; тяжёлое сукно с густым коротким ворсом для шинелей и мужских пальто. Кирза:- (1) плотная прочная многослойная хлопчатобумажная ткань, вырабатываемая из тонкой кручёной пряжи. Кирза, обработанная плёнкообразующими веществами, используется как заменитель кожи; применяется также для изготовления прорезиненных приводных ремней. (2) В полиграфии, техническое сукно, употребляемое для обтяжки печатных барабанов литографских машин.

KERSEYMERE = КЁСИМИЭ (или КАШЕМИР) – Kerseymere is a fine woolen fabric with a close nap made in fancy twill weaves.

KES = KENYAN SHILLING

KEVLAR® FIBER = КЕВЛАРОВОЕ ВОЛОКНО (или ВОЛОКНО КЭВЛА®, или ВОЛОКНО КЕВЛАР®) – Kevlar® was introduced by DuPont in the 1970s. It was the first organic fiber with sufficient tensile strength and modulus to be used in advanced composites. Originally developed as a replacement for steel in radial tires, Kevlar® is now used in a wide range of applications. Kevlar® is an aramid, a term invented as an abbreviation for aromatic polyamide. The chemical composition of Kevlar® is poly para-phenyleneterephthalamide, and it is more properly known as a Para-Aramid. Aramids belong to the family of nylons. Common nylons, such as nylon 6,6, do not have very good structural properties, so the para-aramid distinction is important. The aramid ring gives Kevlar® thermal stability, while the para structure gives it high strength and modulus. The University of Southern Mississippi Department of Polymer Science has a good description of aramid chemistry, including drawings of the chemical structure. Like nylons, Kevlar® filaments are made by extruding the precursor through a spinneret. The rod form of the para-aramid molecules and the extrusion process make Kevlar® fibers anisotropic – they are stronger and stiffer in the axial direction than in the transverse direction. In comparison, graphite fibers are also anisotropic, but glass fibers are isotropic. The Kevlar® precursor is very stable both chemically and thermally. This presented a big processing challenge, which DuPont™ scientist Stephanie Kwolec ultimately solved as poetically described on the UMiss site mentioned above. Today, there are three grades of Kevlar® available:- Kevlar® 29, Kevlar® 49, and Kevlar® 149. The table below shows the differences in material properties among the different grades. If you purchase Kevlar® cloth, it is most likely Kevlar® 49. Grade 29, Density 1.44 g/cm^3, Tensile Modulus 83 GPa, Tensile Strength 3.6 GPa, and Tensile Elongation 4.0%. Grade 49, Density 1.44 g/cm^3, Tensile Modulus 131 GPa, Tensile Strength 3.6–4.1 GPa, and Tensile Elongation 2.8%. Grade 149, Density 1.47 g/cm^3, Tensile Modulus 186 GPa, Tensile Strength 3.4 GPa, and Tensile Elongation 2.0%. The tensile modulus and strength of Kevlar® 29 is roughly comparable to that of glass (S or E), yet its density is almost half that of glass. Thus, to a first approximation, Kevlar® can be substituted for glass where lighter weight is desired. Kevlar® 49 or 149 can cut the weight even further if the higher strength is accounted for. What gives Kevlar® its high strength? Berkeley Lab's MicroWorlds provides some clues. Of course, Kevlar's weight savings does come at a price:- Kevlar® is significantly more expensive than glass. Kevlar® has other advantages besides weight and strength. Like graphite, it has a slightly negative axial coefficient of thermal expansion, which means Kevlar® laminates can be made thermally stable. Unlike graphite, Kevlar is very resistant to impact and abrasion damage. It can be used as a protective layer on graphite laminates. Kevlar® can also be mixed with graphite in hybrid fabrics to provide damage resistance, increased ultimate strains, and to prevent catastrophic failure modes. Like all good things, Kevlar® also has a few disadvantages. The fibers themselves absorb moisture, so Kevlar® composites are more sensitive to the environment than glass or graphite composites. Although tensile strength and modulus are high, compressive properties are relatively poor. Finally, Kevlar® is also very difficult to cut. You will need special scissors for cutting dry fabric or prepreg, and special drill bits for drilling cured laminates. Cutting of cured laminates without fraying is very difficult. Kevlar® is used both as a raw fiber and in composites. Kevlar® Fiber, (also known as Aramid Fiber) is most widely known for its superior resistance from impact, fatigue, wear, and tear. All of our (Freeman Manufacturing & Supply Company, Avon, State of Ohio, the United States) Kevlar® woven fabrics are made with Kevlar® 49, which is the structural grade of Kevlar® material for composite reinforcement (as opposed to Kevlar® 29, which is the ballistic grade material). Kevlar® is used extensively in the manufacture of sporting goods equipment, marine vessels of all sizes, and throughout the automotive and aerospace industries. It is lighter than both fiberglass and carbon fiber. It often used in conjunction with either fabric to improve the toughness, flexibility, abrasion resistance, and most importantly, impact resistance of a composite par. DuPont™ Kevlar® Fibers – Light in Weight, and High in Performance. Versatile and strong, Kevlar® fiber is more than just a series of threads. DuPont™ Kevlar® fibers are used in a variety of clothing, accessories, and equipment to help make them safer and more durable. With five times the strength of steel based on an equal weight basis, it's the go-to fiber for protective apparel and accessories. Kevlar® fiber and filament come in a variety of types, each with its own unique set of properties and performance characteristics for different protection needs. Kevlar® AP is a next-generation fiber that offers advanced performance, value, and increased design flexibility in many applications. Kevlar® 29 (K29) is the original family of product types of Kevlar®, having similar tensile properties with many deniers and finishes. These yarns are used in ballistic applications, ropes and cables, protective apparel such as cut-resistant gloves, in life protection uses such as helmets, vehicular armoring, and plates, and as rubber reinforcement in tires and automotive hoses. Kevlar® 49 (K49) is a high-modulus type used primarily in fiber optic cable, textile processing, plastic reinforcement, ropes, cables, and composites for marine sporting goods and aerospace applications. Kevlar® 100:- producer-colored Kevlar® yarns, used in ropes and cables, tapes and strappings, gloves and other protective apparel, and sporting goods. Kevlar® 119:- higher-elongation, flexible-fatigue–resistant yarn types found in mechanical rubber goods, such as tires, automotive belts, and hoses. Kevlar® 129:- lightweight, high-performance, and high-tenacity type of yarns used in motorcycle racing gear, life protection accessories, ropes and cables, and high-pressure hoses used in the oil and gas industry. Kevlar® KM2:- woven into fabric meeting performance requirements for helmets and vests for military and high-performing UDs for spall liners. Kevlar® KM2 Plus:- high tenacity, high toughness, and finer denier fiber used in vests and helmet for both military and law enforcement officers. Kevlar® AP for Advanced Performance helps dramatically improve cost-effectiveness and design flexibility to manufacturers helping them build leaner, more robust consumer and industrial products. Kevlar® is the trade name for an organic polymer composed of aromatic polyamides having a paratype orientation (parallel chain extending bonds from each aromatic nucleus). Developed at DuPont. Kevlar is known for its high specific strength and toughness. Kevlar® aramid fiber was developped by DuPont scientists researching liquid crystalline polymer solutions. It is lightweight and flexible with a unique combination of high strength, high modulus, toughness and thermal stability. Fibers of Kevlar® consist of long melecular chains produced from poly-paraphenylene terephthalamide. The chains are highly oriented with strong interchain bonding. Its resistance to chemicals and temperature extremes make it an ideal component for ropes under sever loads in harsh environments, from the bottom of the ocean to the surface of Mars. Ropes made with Kevlar® fiber come in a variety of constructions and have been strength rated up to 1 500 tons. Properties of Kevlar® Fiber:- (i) high modulus; (ii) high LASE (Load At Specified Elongation); (iii) high tensile strength at low weight; (iv) low elongation to break high modulus (structural rigidity); (v) low electrical conductivity; (vi) high chemical resistance; (vii) low thermal shrinkage; (viii) high toughness (work-to-break); (ix) excellent dimensional stability; (x) High cut resistance; (xi) flame resistant, self extinguishing; (xii) no embrittlement or degradation at temperatures as low as –320 °F; and (xiii) sensitive to UV light – unprotected yarn will discolor with prolonged exposure. Applications of Kevlar® Fiber:- (i) Ropes and Cables; (ii) Aerospace Applications; (iii) Industrial Applications; (iv) Salvage Ropes; (v) Tow Ropes; (vi) Orbital Straps; (vii) Ropes under severe loads in harsh environments; and (viii) Mountaineering ropes. Kevlar® fabrics can be used with, or as a great alternative to carbon fiber or fiberglass. Composites grade Kevlar® is lightweight, impact resistant, abrasion resistant, heat resistant, and has great strength properties for the most demanding applications. Fiber Glast only carries Kevlar® 49 fabrics. These fabrics are developed specifically for composite reinforcement. They can be used with Epoxy, Vinyl Ester, or Polyester Resins to create a rigid laminate. Common applications for Kevlar® 49 fabrics include:- kayaks, canoes, high-speed boats, aircraft fuselage panels, pressure vessels, sporting equipment, wind turbines and much more. KEVLAR® Fabric is made with genuine DuPont™ KEVLAR® fiber. DuPont™ and KEVLAR® are registered trademarks of E.I. du Pont de Nemours and Company (headquartered in Wilmington, State of Delaware (DE), the United States). / Кэвла® или Кевлар® (Kevlar®). Найлан™ (Nylon™). раскрой (cutting). Экструзия или Выдавливание (Extrusion). учёный ДюПо™ Стэфэни Кволэк (DuPont™ scientist Stephanie

Kwolec). Фримэн Мэньюфакшэрин Энд Саплай Кампэни (Freeman Manufacturing & Supply Company). И.Ай. дю По дё Нэмур энд Кампэни (E.I. du Pont de Nemours and Company).

KEWENSIS = КВЭНСИССКИЙ (или КВЭНСИС) – Kewensis:- from the Royal Botanic Gardens, Kew, the United Kingdom. / Квэнсисский:- из Королевских Ботанических Садов, Кью, Соединённое Королевство.

KEY = КЛЮЧ – Key is a sequence of symbols that controls the operations of encipherment and decipherment. / Последовательность символов, которая контролирует операциями шифровки и расшифровки.

KEY BUSINESS MEASURES = КЛЮЧЕВЫЕ МЕРЫ ДЕЛА – Key Business Measures are calculated from the final accounts (Income Statement and Balance Sheet) to help evaluate the performance of the business. This data can be used to produce several key measures of business performance as follows:- Sales; Operating Profit; Earnings; Total Assets; Operating Profit/Total Assets; Earnings/Stockholders' Equity; Financial Leverage; Current Ratio; and Quick Ratio. These measures summarize how well the company has performed in terms of profitability and liquidity. And, by comparing one period with the next, how the company has grown.

KEY CRYPTOPERIOD = КРИПТОПЕРИОД КЛЮЧА – Key Cryptoperiod is the time period over which a key is valid for use by legitimate parties.

KEY ECB INTEREST RATES = КЛЮЧЕВЫЕ ПРОЦЕНТНЫЕ СТАВКИ ЕЦБ – Key ECB Interest Rates are the interest rates set by the Governing Council, which reflect the monetary policy stance of the European Central Bank (ECB). They are the minimum bid rate on the main refinancing operations, the interest rate on the marginal lending facility and the interest rate on the deposit facility.

KEY EMPLOYEE = КЛЮЧЕВОЙ РАБОТНИК – Key Employee is any employee that is considered to be critical to the business of the enterprise.

KEY ESTABLISHMENT = УСТАНОВЛЕНИЕ КЛЮЧА – Key Establishment:- a process whereby a shared secret key becomes available to two or more parties, for subsequent cryptographic use.

KEYLOGGER = КЛЮЧНИК (или ХХ) – Keylogger is a program used to record keystrokes typed on a computer. Keyloggers can be used for both beneficial purposes, such as monitoring employees in a regulated industry, or malignant ones, such as to steal account credentials. Sophisticated keyloggers may also record mouse movements and button clicks, keystrokes typed on on-screen virtual keyboards, and capture screenshots or videos of what is being displayed on screen. Hardware keyloggers also exist that may be plugged between a computer and a keyboard to record keystrokes.

KEY MANAGEMENT PERSONNEL = КЛЮЧЕВОЙ ПЕРСОНАЛ ПРАВЛЕНИЯ (или КЛЮЧЕВОЙ ПЕРСОНАЛ МЭНЭДЬЖМЕНТА) – Key Management Personnel are those persons having authority and responsibility for planning, directing and controlling the activities of the entity, directly or indirectly, including any director (whether executive or otherwise) of that entity.

KEYMAN INSURANCE = СТРАХОВАНИЕ КЛЮЧЕВОГО ЧЕЛОВЕКА – Keyman Insurance:- companies often take out insurance policies on essential (i.e. key) managers or employees to protect them against the loss (accidents, death) of such talent. This is referred to as Key Man Insurance.

KEYNESIAN ECONOMICS = КЕЙНСИАНСКАЯ ЭКОНОМИКА (или КЕЙНСИАНСТВО) – Keynesian Economics is an economic theory originated by the British economist John Maynard Keynes (1883–1946) and his followers. Keynes maintained that governments should use the power of the budget to maintain economic growth and stability and overcome the recessionary cycles common in most western economies. Keynesian Economics:- the economic theory that active government intervention in the marketplace and monetary policy is the best method of ensuring economic growth and stability. / Кейнсианская Экономика или Кейнсианство является экономической теорией, сформулированной Британским экономистом Дьжоном Мэйнадом Кейнзом (John Maynard Keynes, 1883–1946) и его последователями. Кейнз придерживался идеи о том, что правительства должны использовать свои полномочия в бюджете для поддержания экономического роста и стабильности и преодоления циклов спада, присущих большинству западных экономик. Под Кейнсианством понимается теория государственно-монополистического регулирования экономики. Её основные принципы были сформулированы Дьжоном Мэйнадом Кейнзом под воздействием экономического кризиса 1929–33 и направлены на регулирование экономики для обеспечения бесперебойного процесса общественного производства. Кейнсианство акцентирует внимание на анализе макроэкономических величин (национальный доход, капитальные вложения, занятость, потребление, сбережения и другие). Предметом исследования кейнсианства являются количественные закономерности в соотношении этих величин. Основными её целями являются поддержание 'эффективного' спроса и 'полной' занятости. Экономическая программа кейнсианства включает:- всемерное увеличение расходов государства, в том числе милитаризацию экономики, расширение общественных работ, инфляционную и цикличную налоговую политику, цикличное балансирование бюджета, ограничение зарплаты рабочих, регулирование занятости и другое. Некоторые положения кейнсианства были пересмотрены и развиты в работах представителей неокейнсианства, одни из которых (левые кейнсианцы) связывают достижение 'эффективного' спроса с проведением отдельных прогрессивных социальных мероприятий, другие ограничиваются анализом технико-экономических факторов экономического роста. Экономическая политика государств, проводившаяся на основе принципов кейнсианства, послужила одной из причин современной инфляции в мире. Кейнсианство оказалось несостоятельным в предотвращении экономических кризисов. Кейнсианство – экономическое учение британского экономиста и государственного советника Дьжона Мэйнада Кейнза (1883–1946), важнейшая работа которого 'Общая Теория Занятости, Процента и Денег' (The General Theory of Employment Interest and Money) была опубликована в 1936. Работая над своей книгой в период Великой депрессии, Кейнз оспорил утверждения экономистов-классиков, таких, как Эдэм Смис (Adam Smith; 1723–1790), которые полагали, что экономика работает лучше всего, когда на неё не оказывается влияния. Кейнз же, напротив, полагал, что активное государственное вмешательство (intervention) в рыночные процессы является единственным методом обеспечения экономического роста и стабильности. Он утверждал, главным образом, что недостаточный спрос вызывает безработицу, а избыточный спрос порождает инфляцию; следовательно, государство должно манипулировать уровнем совокупного спроса путём корректировки уровня государственных расходов и уровня налогообложения. Например, для того, чтобы избежать депрессии, Кейнз предлагал увеличить объём государственных расходов и свободных средств (easy money), что привело бы к росту инвестиций, занятости и потребительских расходов. Экономическое учение Кейнза оказало огромное влияние на экономическую политику промышленно развитых стран, включая США. Однако в 1980-х годах, после серии спадов, замедленного экономического роста и высокого уровня инфляции в США, сторонники взглядов, противоречащих учению Кейнза, – монетаристы и приверженцы 'экономики предложения' – возложили вину за экономические трудности на избыточное государственное вмешательство. Кейнсианство, буржуазная теория государственно-монополистического регулирования капиталистической экономики. Используется буржуазными экономистами в качестве теоретической основы экономической политики капиталистических государств и как средство идеологической борьбы против революционной теории Марксизма-Ленинизма. Кейнсианство

сформировалось под влиянием резкого обострения противоречий капиталистического воспроизводства в эпоху общего кризиса капитализма с возникновением государственно-монополистического капитализма. Основные принципы Кейнсианства сформулированы Английским экономистом Дьжоном Мэйнадом Кейнзом (John Maynard Keynes, 1883–1946). Сущность Кейнсианства – в обосновании необходимости государственного регулирования капиталистической экономики в целях бесперебойного хода капиталистического воспроизводства в интересах монополий. При рассмотрении экономических явлений в их народно-хозяйственном (макроэкономическом) аспекте для Кейнсианства характерно затушевывание социальной сущности экономических явлений, игнорирование исторического характера объективных экономических законов капитализма, преувеличение роли субъективного фактора – психологии людей в экономической жизни общества. Под воздействием кризисной обстановки 1930-х, породившей массовую безработицу, Кейнз сформулировал принципы государственно-монополистического регулирования капиталистической экономики в виде 'теории занятости', на основе которой им была разработана программа антикризисной экономической политики буржуазного государства. Главная цель теории Кейнсианства – спасти от краха капиталистическую систему производства. Это наглядно выражено в так называемом принципе 'эффективного спроса' – центральном пункте Кейнсианства. Под 'эффективным' понимается спрос, способный обеспечить капиталистам получение максимума прибылей. Отрицая закон рынка Сея, по которому предложение товаров автоматически порождает спрос, и признавая возможность несовпадения совокупного предложения товаров и совокупного спроса на них, Кейнз подчеркивает необходимость увеличения общего объёма совокупного спроса. Однако он обходит при этом такие пути его расширения, как снижение цен и увеличение заработной платы, то есть предполагает сохранение системы господства монопольных цен как условие максимизации капиталистических прибылей. Объём 'эффективного спроса' зависит, по Кейнзу, от двух групп факторов. Одна из них связана с рынком потребительских товаров, другая – с рынком средств производства. Объём потребительского спроса, по утверждению Кейнза, определяется психологическими моментами:- 'склонностью к потреблению' и 'основным психологическим законом'. Под 'склонностью к потреблению' понимаются многочисленные факторы, которые определяют долю национального дохода, идущую на личное потребление независимо от величины самого национального дохода. Влияние этого последнего момента выражается в 'основном психологическом законе'. По Кейнзу, психология общества такова, что с ростом национального дохода растёт и личное потребление, но в меньшей мере, чем растёт доход. В результате увеличивается накопляемая часть национального дохода, которая изымается из обращения, и на эту величину относительно сокращается спрос на потребительские товары. Таким образом, Кейнз вынужден признать присущую капитализму тенденцию к ограниченности рынка на предметы потребления; однако пытаясь представить её как выражение определённых психологических черт человеческой природы, он полностью игнорирует объективные экономические законы капитализма, обусловливающие узость потребительского рынка. В повышении заработной платы в этой связи усматривается причина относительного сокращения потребительского рынка, между тем как в действительности рост заработной платы – важнейший фактор расширения рынка. По Кейнзу, ёмкость рынка средств производства определяется соотношением 'предельной эффективности капитала' и нормы процента. Под 'предельной эффективностью капитала' понимается отношение ожидаемой прибыли, приходящейся на единицу вновь вводимого в действие 'капитального имущества' (фактически основного капитала), к восстановительной стоимости этой единицы, то есть прогнозируемая удельная рентабельность прироста основного капитала. Процент же трактуется Кейнсианством как вознаграждение за отказ от хранения богатства в денежной форме. Он находится, по Кейнзу, в обратной зависимости от количества денег в обращении. Таким образом, искажаются сущность процента, являющегося особой формой прибавочной стоимости, связанной с функционированием ссудного капитала, и количественные законы, определяющие его движение. В действительности величина процента определяется соотношением спроса и предложения ссудного капитала и не зависит непосредственно от количества денег в обращении. По Кейнзу, с накоплением капитала его 'предельная эффективность' имеет тенденцию к снижению, а норма процента – к устойчивости. Разница между ними – то есть фактически предпринимательский доход имеет тенденцию уменьшаться. Падение же прибыльности капитальных вложений ведёт к уменьшению спроса на средства производства. Кейнз придаёт большое значение роли инвестиций (вложений капитала) в экономике. По Кейнзу, объём национального дохода, а следовательно, и совокупного спроса находится в определённой количественной зависимости от общего объёма инвестиций. Эту количественную связь Кейнз выражает в теории мультипликатора дохода. Действительно, рост инвестиций является важным условием увеличения национального дохода, но на его объём он влияет не прямо, а косвенно, через увеличение объёма функционирующих средств производства и рабочей силы. Кроме того, инвестиции не являются источником национального дохода. Кейнзом была разработана программа экономической политики буржуазного государства, направленная на расширение 'эффективного спроса' и активизацию на этой основе капиталистической экономики. (1) Всемерное Увеличение Расходов Государства:- Но существенно увеличить общую сумму платёжеспособного спроса таким путём невозможно, поскольку главные источник средств государственного бюджета капиталистических стран – налоги с населения. Платёжеспособный спрос может увеличиваться только на сумму государственных займов, мобилизующих неиспользуемые (праздные) капиталы. Однако удельный вес этого источника средств бюджета невелик. Кроме того, займы ведут к возрастанию государственного долга и платежей по ним. Увеличение государственных расходов, не решая проблемы реализации, обеспечивает высокие прибыли монополиям, прежде всего связанным с милитаризацией экономики. (2) Инфляционная Политика:- Рассматривая устойчивость нормы процента в качестве препятствия к активизации экономической жизни, Кейнз видит выход в определённой системе государственно-монополистических мероприятий, направленных на абсолютное (с помощью так называемой регулируемой инфляции) или относительное (путём понижения номинальной заработной платы рабочих) увеличение количества денег в 'деловом обращении' и понижение нормы процента. (3) Политика Понижения И Ограничения Заработной Платы Рабочих:- Снижение доходов рабочих, по мнению Кейнза, особенно если оно компенсируется ростом расходов других слоёв населения, ведёт к росту 'предельной эффективности' капитала, способствует снижению процента и росту прибыли, стимулируя тем самым деловую активность. Особое предпочтение Кейнсианство отдаёт методам инфляционного понижения заработной платы, нашедшим своё воплощение в политике 'замораживания заработной платы' (законодательная фиксация номинальной заработной платы в условиях инфляционного роста цен), широко используемой в капиталистических странах. На самом же деле, понижение заработной платы рабочих является важнейшим фактором сужения рынка и роста прибылей буржуазии. (4) Один Из Краеугольных Камней Кейнсианства – Регулирование Занятости:- Его цель двояка:- найти средства снижения чрезмерно опасного для существования капитализма уровня безработицы (их Кейнсианство отождествляет с мерами активизации предпринимательской деятельности), а также разработать рекомендации по использованию 'нормального' уровня безработицы (от 3 до 6% безработных), именуемого 'полной занятостью', в качестве средства максимизации капиталистической прибыли. Рост безработицы нередко программируется современными буржуазными правительствами, когда они стремятся понизить заработную плату рабочих и сломить их сопротивление. (5) Милитаризация Капиталистической Экономики, апология которой получила наибольшее распространение в работах так называемого консервативного направления Кейнсианства. История показывает, что милитаризация хозяйства, способствуя безудержному обогащению монополий, в конечном счёте подрывает условия стабильного роста экономики, так как ведёт к непроизводительной затрате народно-хозяйственных ресурсов. (6)

Общественные работы, циклическое балансирование бюджета, циклическая налоговая политика и другие меры на современном этапе отстаивали преимущественно представители так называемого левого Кейсианства (Британская экономистка Дьжоун Вайэлэтч Робинсэн (Joan Violet Robinson; 1903–1983), выходец из Японии Американский Профессор Экономической Теории Кенис Кенкичи Курихара (Kenneth Kenkichi Kurihara; 1910–1972) из Штатовского Университета Нью Йорка (State University of New York), а также Американский экономист Лорэнц Робэт Клайн (Lawrence Robert Klein; 1920–2013)), стремящиеся преодолеть таким путём недостаточность 'эффективного спроса', в которой они видят причину всех пороков современного капитализма. Экономическая Программа Кейнсианства оказала большое влияние на практику государственно-монополистического регулирования капиталистического производства, однако её осуществление не в состоянии разрешить противоречия капитализма. Концепции Кейнсианства по существу составляют основу многочисленных апологетических теорий 'трансформированного капитализма'. Идеи Кейнсианства получили дальнейшее развитие в работах представителей Неокейнсианства.

KEY PERSON INSURANCE = СТРАХОВАНИЕ КЛЮЧЕВОГО ЛИЦА – Key Person Insurance:- a policy that protects a firm from loss caused by the death or disability of a 'key person' within the company. / Страхование Ключевого Лица:- полис, защищающий фирму от убытков, которые могут возникнуть вследствие смерти или нетрудоспособности 'ключевого лица' в данной компании.

KEY REVERSAL = КЛЮЧЕВОЙ РАЗВОРОТ – In technical analysis, a crucial change in price direction, signaling an end to either a bull or bear market.

KEY REVERSAL DAY = ДЕНЬ КЛЮЧЕВОГО РАЗВОРОТА – In visual analysis, a one day chart pattern where prices sharply reverse during a trend. In an uptrend, prices open in new highs and then close below the previous day's closing price. In a downtrend, prices open lower and then close higher. The wider the price range on the key reversal day and the heavier the volume, the greater the odds that a reversal is taking place.

KEYSTONE = КРАЕУГОЛЬНЫЙ КАМЕНЬ – Keystone is a traditional retail term indicating the resulting retail price of a product after doubling the cost. This is equal to a 50% Gross Margin or 100% Markup. Also known as Number.

KFF = KEEP FROM FREEZING

kg = KILOGRAM

KG = KOMMANDITGESELLSCHAFT

KG = KYRGYZSTAN

KGS = KILOGRAMS

KGS = KYRGYZ SOM

KH = COMBODIA

KHA = THOUSAND HECTARES

KHADDAR = КАДДА – Khaddar is a homespun cotton cloth of India. / Домотканая хлопковая материя.

KHAKI = ХАКИ – Khaki is:- (1) a light yellowish brown. (2) A khaki-colored cloth of cotton, wool, or combinations of these fibers with manufactured fibers used primarily in military uniforms and workclothes. Khaki is a sturdy, twilled fabric that is usually made from cotton, worsted or linen yarns, wool or synthetic fiber blends. Khaki is a term used for both an earth color or olive green color (yellow-brown color with a greenish tint) and for fabrics made in these colors, whether of wool, cotton, linen, or man-made fibers. Khaki is a classic uniform color and material. It is also used for sportswear and leisure clothes. Khaki:- a khaki-colored cloth made usually of cotton or wool and used especially for military uniforms. Light yellowish brown. A garment made of khaki-colored (namely a light yellowish brown) cloth especially a military uniform. Usually used in plural.

KHR = COMBODIAN RIEL

kHz = KILOHERTZ

KI = KIRIBATI

KID GLOVE = ЛАЙКОВАЯ ПЕРЧАТКА – Kid Glove is a dress glove made of kid leather.

KIER = БУЧИЛЬНЫЙ КОТЁЛ (или ВАРОЧНЫЙ КОТЁЛ) – Kier is a large metal tank, capable of being heated uniformly, used for wet processing.

KIER BOILING = БУЧЕНИЕ – Kier Boiling is a process of boiling cellulosic materials in alkaline liquors in a kier at or above atmospheric pressure. / Бучение – устаревшее название одного из видов термической обработки тканей – отварки.

KILIM = КИЛИМ – Kilim is the Near Eastern oriental fabric woven with a shuttle or needle, with no pile. Kilims are used by the Orientals as portieres, couch covers, and table covers. / Килим – безворсовый двухсторонний коврик.

KILN DRY = ПЕЧНАЯ СУШКА – Kiln Dry or Kiln-Drying is a process in which wood is dried in a closed chamber using heat and/or humidity control to achieve a required moisture content. KD are initials representing kiln drying. KD is marked on lumber to indicate the treatment has been conducted. Process of drying or seasoning lumber naturally by placing the lumber in a kiln and exposing the lumber to heat for a prescribed period of time. / Сушка – удаление влаги из древесины. Камерная Сушка – процесс, при котором древесина высушивается в закрытом помещении с помощью тепла и/или контроля влажности до достижения требуемого содержания воды.

KILO = КИЛО – (1) Kilo:- thousand. Kilo- (k-) is a metric prefix meaning 1 000. The prefix is a modification of Chilioi, the Greek word for a thousand. / Под Кило..., от Французского слова Kilo..., от Греческого слова Chílioi, означающее Тысяча) понимается приставка для образования наименований кратных единиц, по размеру равных 1 000 исходных единиц. Сокращённые обозначения:- Русское к, международное k. Приставка пишется слитно с наименованием исходной единицы. Пример:- 1 км (километр) = 1 000 метров (м). Была принята при установлении метрической системы мер.

(2) Kilo- (k-):- in measuring the memory of a computer, the prefix kilo- often means 2^{10} = 1 024 instead of 1 000. By a 1998 resolution of the International Electrotechnical Commission, the new prefix kibi- (Ki-) should replace kilo- for 2^{10}. However, this doesn't seem to be happening.

(3) Kilo is a common informal name for a kilogram (kg).

(4) Kilo (pronunciation:- KEY-loh) or K is international nautical signal flag meaning:- I wish to communicate with you. With numeral 1, via semaphore; numeral 2, via megaphone; numeral 3, via flashing light; numeral 4, via sound signals. Meaning:- you should stop your vessel instantly.

KILOAMPERE = КИЛОАМПЕР – KiloAmpere (kA) is a unit of electric current equal to 1 000 Amperes.

KILOBAR = КИЛОБАР – Kilobar (kbar or kb) is a metric unit of pressure, used particularly in industrial applications and in geology for measuring high pressures. The kilobar equals 1 000 bars, 100 MegaPascals, or about 14 503 pounds per square inch. Note:- in the investment world a kilobar is a bar of gold, silver, or platinum weighing 1 kilogram.

KILOBAR = КИЛОБАР (или КИЛОГРАММОВЫЙ МЕРНЫЙ СЛИТОК) – Kilobar is a popular small gold bar. A one kg bar .995 fine = 31.990 Troy ounces, and a 1 kg bar 999.9 fine = 32.148 Troy ounces. Kilobar is a bar weighing one kilogram – approximately 32.150 7 Troy ounces. / Слиток, весящий один килограмм – приблизительно 32.150 7 Тройских унций.

KILOBASE or KILO BASE PAIRS = ПАРЫ КИЛООСНОВАНИЙ (или ПАРЫ КИЛОБАЗ, или КИЛОБАЗНЫЕ ПАРЫ) – Kilobase or Kilo Base Pairs:- a unit of size of DNA which is equal to either 1 000 bases in a single-stranded nucleic acid (kb) or 1 000 base pairs in a double-stranded nucleic acid (kbp).

KILOBIT = КИЛОБИТ – Kilobit (kbit or kb) is a unit of information equal to 1 000 bits, or, in some cases, equal to 1 024 bits or 128 bytes. The larger unit is now supposed to be called a Kibibit. / Под Битом, от Английских слов Binary, означающее Двоичный, и Digit, означающее Знак или Цифра, понимается единица количества информации, которое содержится в сообщении типа ‘да’ – ‘нет’ (в двоичном коде ‘0’ или ‘1’); один двоичный разряд машинного слова. Последовательность из 8 бит образует более крупную единицу количества информации – 1 байт.

KILOBYTE = КИЛОБАЙТ – Kilobyte (kB) is a unit of information equal to 1 000 bytes. As a unit of computer storage, however, the kilobyte is usually equal to 1 024 bytes, although this should now be called a Kibibyte. / Под Байтом, понимается единица количества информации, обычно состоящая из 8 бит и используемая как одно целое при передаче, хранении и переработке информации в электронной вычислительной машине (ЭВМ). Байт служит для представления букв или специальных символов (занимающих обычно весь байт) либо десятичных цифр (по 2 цифры в одном байте). Информация в ЭВМ обрабатывается отдельными байтами либо группами байтов (полями, словами). Использование байтов позволяет строить машинные слова любой длины (кратные целому числу байтов), принятой в данной вычислительной системе. Представление информации в байтах значительно упрощает согласование процессов её обработки в ЭВМ.

KILOCALORIE = КИЛОКАЛОРИЯ – Kilocalorie (kcal) is an ambiguous metric unit of energy. The ambiguity arises because there are two ‘calories’ in common use, identified in this dictionary as the calorie (the small or gram calorie equal to 4.186 8 kiloJoules) and the Calorie (the large or kilogram calorie equal to 4.186 8 MegaJoules). The term kilocalorie properly means 1 000 calories, which is the same as 1 Calorie. In other words, ‘kilocalorie’ is the correct name for the unit known in nutrition simply as the ‘calorie’.

KILOGRAM = КИЛОГРАММ – Kilogram is the base unit of mass in the International System of Units (Le Système International d’Unités (SI)) and MKS versions of the metric system. The kilogram is defined as the mass of the standard kilogram, a platinum-iridium bar in the custody of the International Bureau of Weights and Measures (BIPM) near Paris, France. Copies of this bar are kept by the standards agencies of all the major industrial nations, including the US National Institute of Standards and Technology (NIST). One kilogram equals exactly 1 000 grams, or about 2.204 622 6 pounds. By design, this is approximately the mass of a liter of water. Kilogram (equivalent to 1 000 grams or 2.204 622 6 pounds (lb). The international prototype of the kilogram, an artefact made of platinum-iridium, is kept at the BIPM under the conditions specified by the 1st Conférence Générale des Poids et Mesures (CGPM) in 1889 when it sanctioned the prototype and declared:- This prototype shall henceforth be considered to be the unit of mass. The 3rd CGPM (1901), in a declaration intended to end the ambiguity in popular usage concerning the use of the word ‘weight’, confirmed that:- The kilogram is the unit of mass; it is equal to the mass of the international prototype of the kilogram. Kilogram (KG) is a metric measurement of weight equal to 1 000 grams or the mass of one liter of water at 4 °C. Kilogram is the unit of mass (weight) in the metric system; approximately equal to 2.2 pounds avoirdupois. One liter of water weighs one kilogram, which makes calculations such as percentage of a chemical owb, or liquor ratio, etc easy. / Конференс Женераль дэ Пуа э Мёзюр (Сэ.Жэ.Пэ.Эм.; Conférence Générale des Poids et Mesures (CGPM)). Лё Систэм Этэрнасьёналь д’Юните (Эс.И. или, как её уже устоялось называть в России, СИ). Килограмм является основной единицей массы в системе СИ. Обозначение:- кг. Один килограмм равен массе международного прототипа килограмма, хранимого в Международном Бюро Мер и Весов (Севр, близ Парижа, Франция). Прототип килограмма сделан из платиноиридиевого сплава (90% Pt, 10% Ir) в виде цилиндрической гири диаметром и высотой 39 мм. Относительная погрешность сличений эталонов-копий с прототипом не превышает $2 \cdot 10^{-9}$.

KILOHERTZ = КИЛОГЕРЦ – KiloHertz (kHz) is a common unit of frequency equal to 1 000 per second or 1 per millisecond. AM radio stations have signal frequencies measured in kiloHertz.

KILOJOULE = КИЛОДЖОУЛЬ – KiloJoule (kJ) is a common metric unit of work or energy, comparable to the British thermal unit (Btu). In fact, one kiloJoule equals approximately 0.947 817 Btu. In other energy units, the kiloJoule is also equivalent to 0.238 846 kilocalories, 0.277 778 Watt hour, or 737.562 foot-pounds in the traditional English system.

KILOMETER = КИЛОМЕТР – Kilometer (km) is a common metric unit of length or distance. One kilometer equals exactly 1 000 meters, about 0.621 371 19 mile, 1 093.613 3 yards, or 3 280.839 9 feet. Oddly, higher multiples of the meter are rarely used; even the distances to the farthest galaxies are usually measured in kilometers. The unit is sometimes pronounced with the accent on the first syllable (similar to the pronunciation of other metric units using kilo-) and sometimes on the second (helping to distinguish it from other metric units using kilo-). Both pronunciations are acceptable; there are no official pronunciations for SI units. 1 kilometer (km) equals 0.621 371 19 miles (statute). 1 km equals 1 000 meters (m).

KILOVAR = КИЛОВАР – KiloVAr is the unit of ac reactive power equal to 1 000 vars. Abbreviated kVAr or KVAR. KVAr is an abbreviation for kiloVAr. A unit of ac reactive power equal to 1 000 VArs. VAr is a unit of the reactive electric power delivered by an alternating current (AC) circuit. In an AC circuit, the electric potential or voltage (measured in Volts) and the current (in Amperes) alternate direction, varying smoothly according to sine curves. In a purely resistive circuit, current is in phase with voltage. In a purely inductive circuit, the variations of the current would lag the variations in the voltage by 1/4 cycle, or 90°. In real circuits, the current can be separated into two parts:- a part in phase with the voltage, and the ‘reactive’ part, which lags the voltage by 90°. The reactive part does no net work; it simply heats the conductor. Reactive current does perform important magnetizing and voltage-regulation functions in real circuits. The reactive power is the product of the voltage and the reactive part of the current. The name of the unit is an acronym for Volt-Ampere-reactive. / Под ВАром, сокращением от Вольт-Ампер Реактивный, обозначение допускаемой к применению единицы реактивной мощности переменного электрического тока. Отличается от Ватта множителем sin φ, где φ – сдвиг фаз

между напряжением и током в цепи. 1 ВАр равен реактивной мощности при напряжении 1 В, силе тока 1 А и sin φ = 1. Обозначение:- ВАр.

KILOVOLT = КИЛОВОЛЬТ – KiloVolt is the unit of electrical potential equal to 1 000 Volts. Abbreviated kV or KV. KV is an abbreviation for kiloVolt and equal to 1 000 Volts. KiloVolt (kV) is a common unit of electric potential equal to 1 000 Volts. Electric distribution lines operate at potentials of anywhere from several to several hundred kiloVolts.

KILOVOLT AMPERE = КИЛОВОЛЬТ–АМПЕР – KiloVolt Amperes is the unit of apparent power equal to 1 000 Volt Amperes. Here, apparent power is in contrast to real power. On ac systems the voltage and current will not be in phase if reactive power is being transmitted. Usually abbreviated kVA or KVA. KVA is an abbreviation for kiloVolt Amperes. KiloVolt Ampere (kV·A) is a common unit of load in power engineering, equal to 1 000 Volt Amperes. / Под Вольт-Ампер понимается допускаемая к применению наравне с единицами СИ единица полной мощности электрической цепи переменного тока, то есть полной мощности электрической цепи при действующих значениях силы тока 1 А и напряжения 1 В. Рассматривают также активную мощность, выражаемую в Ваттах, и реактивную мощность, выражаемую в варах. Обозначение:- В·А.

KILOWATT = КИЛОВАТТ – Kilowatt (kW) is one thousand watts. A unit of electrical power equal to 1 000 (one thousand) Watts. KiloWatt is the unit of power equal to 1 000 Watts. Abbreviated kW or KW. KW is an abbreviation for kiloWatt. A unit of power equal to 1 000 Watts. KiloWatt (kW) is a common metric unit of power, equivalent to 1 000 Watts, about 1.341 022 horsepower, or 737.562 foot-pounds per second. / Единица электрической энергии, равная 1 000 (одной тысяче) Ватт. КилоВатт является кратной единицей от Ватта – единицы мощности в системе СИ. Обозначение:- кВт. 1 кВт = 1 000 Вт = 10^{10} эрг/с = 101.97 кгс·м/с = 1.36 лс = 859.84 ккал/ч. Ватт, единица мощности в Международной Системе Единиц СИ. Названа в честь Шотландского изобретателя Дьжеймза Вота (James Watt; 1736–1819). Обозначение:- Вт. 1 Вт = 10^{7} эрг/с = 0.102 кгс·м/с = $1.36 \cdot 10^{3}$ лс. В технике широко применяют кратные единицы, такие как килоВатт (1 кВт = 10^{3} Вт) и МегаВатт (1 МВт = 10^{6} Вт).

KILOWATT HOUR = КИЛОВАТТ–ЧАС – KiloWatt-Hour is a measure of electricity defined as a unit of work or energy, measured as 1 kiloWatt (1 000 Watts) of power expended for 1 hour. One kiloWatthour is equivalent to 3 412 Btu. Amount of electricity needed to light ten 100-Watt light bulbs for a one-hour period. One thousand Watts used for one hour. KiloWatt-Hour is the unit of energy or work equal to one kiloWatt for one hour. Abbreviated as kWh or KWH. This is the normal quantity used for metering and billing electricity customers. The price for a kwh varies from approximately 4 cents to 15 cents. At a 100% conversion efficiency, one kWh is equivalent to about 4 fluid ounces of gasoline, 3/16 pound LP, 3 cubic feet natural gas, or 1/4 pound coal. KiloWatt-hour (kWh) is one thousand Watt-hours. KiloWatt hour (kW·h or KWH or kW hr) is a commercial unit of electric energy. One kiloWatt hour represents the amount of energy delivered at a rate of 1 000 Watts over a period of one hour. Since the Watt is 1 Joule/sec and there are 3 600 seconds in an hour, the kiloWatt hour is equivalent to exactly 3.6 MegaJoules of energy, or about 3 412.141 Btu, 859.846 (kilogram) Calories, or about 2.655 million foot pounds. / Количество электроэнергии, необходимое для работы десяти 100 Ваттных лампочек в течение одного часа. Одна тысяча Ватт, используемая в течение одного часа. КилоВатт-час является допускаемой к применению наравне в единицами СИ внесистемной единицей энергии или работы, применяемой преимущественно в электротехнике. Обозначение:- кВт·ч. 1 кВт·ч = $3.6 \cdot 10^{6}$ Дж = 3.6 МДж. Ватт-Час является внесистемной единицей работы и энергии. Обозначение:- Вт·ч. 1 Вт·ч = 3 600 Дж.

KILT = КИЛТ (или ЮБКА) – Kilt is a knee-length pleated skirt usually of tartan, namely a twilled woolen fabric with a plaid textile design consisting of stripes of varying width and color usually patterned to designate a distinctive clan and worn by men in Scotland and by Scottish regiments in the British armies; a garment that resembles a Scottish kilt. / Шотландская мужская юбка.

KILTIE = КИЛТИ – Kiltie:- a shoe with a long slashed tongue that folds over the instep. / Килти – Шотландский солдат.

KIMONO = КИМОНО – Kimono is a long robe with wide sleeves traditionally worn with a broad sash as an outer garment by the Japanese; a loose dressing gown or jacket.

KIMONO SLEEVE = РУКАВ КИМОНО – Kimono Sleeve:- it is constructed as a wide rectangle from a dropped shoulder.

KIND CODES = КОДЫ ПО ВИДАМ – Kind Codes:- the World Intellectual Property Organization (WIPO) Standard ST. 16 codes (kind codes) include a letter, and in many cases a number, used to distinguish the kind of patent document (e.g., publication of an application for a utility patent (patent application publication), patent, plant patent application publication, plant patent, or design patent) and the level of publication (e.g., first publication, second publication, or corrected publication).

KIND–OF–ACTIVITY UNIT = ПОДРАЗДЕЛЕНИЕ ПО ВИДУ ДЕЯТЕЛЬНОСТИ – Kind-Of-Activity Unit:- an enterprise, or part of an enterprise, which engages in only one kind of nonancillary productive activity, or in which the principal productive activity accounts for most of the value added. Each enterprise consists of one or more kind-of-activity units. / Предприятие или часть предприятия, которая вовлечена только в один вид неподсобной производственной деятельности, или в которой основная производственная деятельность извлекает основную часть добавочной стоимости. Каждое предприятие состоит из одной или более подразделений по виду деятельности.

KIND OF PACKING = ТИП (или ВИД, или РОД) УПАКОВКИ – Kind Of Packing:- description of the packaging material used for goods to be transported. / Описание упаковочного материала, использованного для товаров, подлежащих перевозке.

KINEBAR = КИНЕБАР – Kinebar is the Union Bank Of Switzerland AG (UBS AG) gold bar bearing a forgery-proof ‘kinegramm’. / Ю.Би.Эс. А.Ге. (UBS AG).

KINEMATIC VISCOSITY = КИНЕМАТИЧЕСКАЯ ВЯЗКОСТЬ – Kinematic Viscosity:- the time required for a fixed amount of an oil to flow through a capillary tube under the force of gravity. The unit of kinematic viscosity is the Stoke or centiStoke (1/100 of a Stoke). Kinematic viscosity may be defined as the quotient of the absolute viscosity in centiPoises divided by the specific gravity of a fluid, both at the same temperature. See also Viscosity (2). Kinematic Viscosity:- the fluid’s resistance to flow when affected by gravity. Usually measured on 40 °C or 100 °C. / Кинематическая Вязкость или Кинематический Коэффициент Вязкости – отношение обычного коэффициента вязкости η (называемого также Динамическим Коэффициентом) к плотности вещества ρ; обозначается ν (смотрите Вязкость). Единицей кинематической вязкости в Международной Системе Единиц служит квадратный метр в секунду ($м^2$/сек). Дольная единица кинематической вязкости $см^2$/сек называется Стокс. 1 $м^2$/сек = 10^{-4} Ст. Стокс – устаревшая и более не подлежащая применению единица кинематической вязкости (Kinematic Viscosity) ν (ν = η/ρ, где ρ – плотность жидкости или газа) в так называемых Системах Единиц СГС, но до сих пор используется в Англоязычных странах. Была названа в честь Английского физика Сэра Дьжодьжа Гейбриэла Стокса (Sir George Gabriel Stokes; 1819–1903). Обозначение:- Ст (St или S). 1 Ст = 1 $см^2$/с = 10^{-4} $м^2$/с. Чаще использовалась дольная, в 100 раз меньшая единица – сантиСтокс (сСт). 1 сСт = 1 $мм^2$/с = 10^{-6} $м^2$/с. Чем гуще жидкость, тем выше её вязкость. Международные производители смазочных масел до сих пор используют в основном единицу измерения Стокс (Ст), несмотря на то, что в настоящее время все страны мира официально

перешли на использование единиц измерений Международной Системы Единиц, так называемой системы СИ (или SI по первым буквам первых двух слов полного Франкоязычного наименования Système International d'Unités; введена в действие в бывшем Союзе Советских Социалистических Республик (СССР) с 01 Января 1963 для предпочтительного применения).

KINGDOM = ЦАРСТВО – Kingdom is the highest grouping of similar organisms within the system of classification. Terrestrial life is divided into five Kingdoms:- Animalia (animals), Plantae (plants), Fungi, Protista (protozoans and eucaryotic algae), and Monera (blue-green algae). See also Class, Division, Family, Genus, Order, Phylum, Specie, Tribe, and Type. / Смотрите также Вид (Specie), Класс (Class), Отдел (Division), Отряд (Phylum), Порядок (Order), Род (Genus), Семейство (Family), Тип (Type), и Триба или Колено (Tribe). Под Царством (Kingdom или Regnum) понимается высшая таксономическая категория (ранг). Со времён Аристотеля весь органический мир подразделяли на два Царства:- Растения и Животные. В современной системе органического мира чаще принимают 4–5 Царств:- (i) Бактерии, в том числе Цианобактерии, или Синезелёные Водоросли; (ii) Грибы; (iii) Животные и (iv) Растения. Иногда выделяют ещё Царство Архебактерий. В биогеографии Царство – высшая категория флористического и фаунистического районирования. Царство (биологическое):- (1) одна из высших таксономических категорий (рангов) в Системе Органического Мира. Со времён Аристотеля было принято деление всех живых организмов на два Царства:- Растения и Животные. С середины XX века всё больше сторонников среди биологов находит новая система органического мира. Согласно этой системе, все организмы разделяют по отсутствию или наличию в их клетках истинного ядра на Прокариот и Эукариот, которых считают Царствами или Надцарствами. В последнем случае все организмы делят на 4 Царства. Прокариоты включают одно Царство – Дробянки (два Полцарства – Бактерии и Цианеи, или Сине-Зелёные Водоросли); Эукариоты – три Царства:- Растения (2 Подцарства – Низшие Растения и Высшие Растения), Грибы (2 Подцарства – Низшие Грибы и Высшие Грибы) и Животные (2 Подцарства – Простейшие и Многоклеточные Животные). Это деление обосновано с эволюционной точки зрения. (2) Самая крупная единица зоогеографического районирования земного шара. Сушу земного шара подразделяют на три Царства (Геи):- Арктогея, Неогея и Нотогея. Некоторые зоогеографы называют Царством зоогеографические области (например, Голарктическое Царство). Мировой океан делят также на три Царства:- Царство Холодных и Умеренных Морей Северного Полушария, Тропическое Царство и Царство Холодных и Умеренных Морей Южного Полушария. (3) Высшая категория, принятая при флористическом районировании; смотрите Флористические Царства (Области).

KING PIN = ПОВОРОТНЫЙ ШВОРЕНЬ (или ПОВОРОТНЫЙ ШКВОРЕНЬ, или ПАЛЕЦ) – King Pin is a coupling pin centered on the front underside of a chassis; couples to the tractor. Locking pin device is located on the bottom side of the chassis which engages into the fifth wheel of tractor.

KING POST = ГРУЗОВАЯ КОЛОННА – King Post is a vertical mast that supports a derrick. / Вертикальная мачта, которая поддерживает грузовую стрелу (деррик).

KING–SPOKE = ВЕРХНЯЯ РУЧКА ШТУРВАЛА – King-Spoke (maritime term):- the upper spoke of a steering wheel when the rudder is amidships, usually marked in some fashion (top spoke of neutral steering wheel). / Верхняя Ручка Штурвала – указатель положения руля 'Прямо'.

KINK = КАЛЫШКА (или КЕНЬГА, или ПЕРЕГИБ, или ИЗЛОМ) – Kink (maritime term):- a twist in a rope. / Перегиб каната.

KINK = ПЕТЛЯ (или СУКРУТИНА (порок пряжи), или ПЕРЕКРУЧИВАНИЕ) – Kink:- in fabric, a short length of yarn that has spontaneously doubled back on itself to form a loop. Synonym:- Curl, Kinky Thread, Looped Yarn, and Snarl. Fabrics defect. Kink is:- (1) in fabrics, a place where a short length of yarn has spontaneously doubled back on itself. (2) In yarn, see also Snarl.

KINKING = ОБРАЗОВАНИЕ ПЕТЛИ (или ОБРАЗОВАНИЕ СУКРУТИНЫ, или ПЕТЛЯНИЕ) – Kinking is the doubling back of yarn on itself to relieve torque imparted by twisting or texturing.

KINKY FILLING = ПЕТЛИСТАЯ УТОЧИНА (или КРУТАЯ УТОЧИНА) – Defect Name:- Kinky Filling. Defect Type:- weft lines, horizontal lines. Fabric Type:- Denim Bottomweights – Indigo Dyed. Description:- Kinky Filling:- This defect is the result of the filling yarn twisting on itself. Causes are shuttle not boxing properly, a malfunctioning filling fork, too much power on the picker stick, excessive twist in the yarn, inadequate setting of filling twist, etc. Kinky filling is most common approximately eight to ten inches in the selvage and is erratic in its placement. When caused by a center filling fork, the kinks will appear in a line down the center of the fabric. Severity:- Major. See also Kinky Weft.

KINKY THREAD = ПЕТЛИСТАЯ НИТЬ (или КРУТАЯ НИТЬ) – Kinky Thread is like dead. It needs reviving. Feeling kinky ... See also Kink. / Крутая Нить или Петлистая Нить – порок ткани в виде петли или сукрутины.

KINKY WEFT = ПЕТЛИСТЫЙ УТОК (или КРУТОЙ УТОК) – Kinky Weft or Looped Yarn or Weft Kinks:- exposed loops of weft yarn. Note:- this defect is often caused by poor tension control of weft yarns during winding, unwinding or insertion. See also Kinky Filling. / Крутой Уток или Петлистый Уток дающий на ткани порок – петли, сукрутины. Петлистый Уток; Петельная Пряжа или Пряжа С Петлями; Уточные Петли (kinky weft; looped yarn; weft kinks):- порок утка; вытянутые петли уточной пряжи. Примечание:- этот порок происходит из-за плохого контроля натяжения уточной пряжи во время прокладки её в зев или из-за повышенной крутки уточной пряжи.

KINKY YARN = ПЕТЛИСТАЯ ПРЯЖА (или КРУТАЯ ПРЯЖА) – Kinky Yarn is the yarn which loops back on itself, forming small kinks.

KIRTLE = ВЕРХНЯЯ ЮБКА (или САРАФАН) – Kirtle is a tunic or coat worn by men especially in the Middle Ages; a long gown or dress worn by women. A Kirtle (sometimes called Cotte, Cotehardie) is a garment worn by men and women in the Middle Ages or, later, a one-piece garment worn by women from the later Middle Ages into the Baroque period. The kirtle was typically worn over a chemise or smock which acted as a slip and under the formal outer garment or gown/surcoat. Kirtles were part of fashionable attire into the middle XVI century, and remained part of country or middle-class clothing into the XVII century. Kirtles began as loose garments without a waist seam, changing to tightly fitted supportive garments in the XIV century. Later kirtles could be constructed by combining a fitted bodice with a skirt gathered or pleated into the waist seam. Kirtles could lace up the front, back or side-back, with some rare cases of side lacing, all depending on the fashion of the day/place and what kind of gown was to be worn over it. Kirtles could be embellished with a variety of decorations including gold, silk, tassels, and knobs. / Кётэл (Kirtle) (называемая иногда Кат (Cotte), Котхарди (Cotehardie).

KITTING = КОМПЛЕКТОВАНИЕ – Kitting is an assembly of product or parts within the warehouse.

KIWI BONDS = ОБЛИГАЦИИ КИВИ – New Zealand Government Kiwi Bonds (Kiwi Bonds) are retail stock offered directly to the public. They are available only to New Zealand residents. Kiwi Bonds are denominated in New Zealand Dollars (NZD) with a fixed interest rate paid quarterly in arrears. The bonds are redeemable on maturity or at the option of the bondholder. Kiwi Bonds are issued

in six month, and one and two-year maturities. The minimum amount that can be invested is NZD1 000 with a maximum of NZD500 000 in any one issue. Interest rates are set periodically by the New Zealand Debt Management Office (NZDMO) from the moving averages of domestic wholesale rates. From 19 May 2011, the New Zealand Government is offering a four-year Earthquake Kiwi Bond. This is like the other Kiwi Bonds however the money invested in this maturity will go towards meeting the costs to the Government of the recovery in Christchurch following the earthquakes of 04 September 2010 and 22 February 2011. Application forms and Investment Statements are available from the NZDMO Registry, and from some registered banks, NZX (short for the New Zealand Exchange Limited) firms. NZX brokers, chartered accountants, solicitors, investment advisers and investment brokers. Kiwi Bonds are the New Zealand Dollar denominated bond issues placed by foreign borrowers. Kiwi Bonds are similar to a term deposit in that they offer a fixed rate of interest over a given timeframe, either six months, one year, two years or four years. The minimum investment amount is NZD1 000. The maximum investment is NZD500 000. The interest rates offered are usually lower than those offered by banks because of the greater level of security associated with a government investment (AAA credit rating by Moody's). The interest rates are set periodically by the Treasurer of the New Zealand Debt Management Office, based on the moving averages of domestic wholesale interest rates (i.e. interest rates for government bonds and Treasury bills). Current interest rates for Kiwi Bonds (last updated 06 September 2011), Term – Interest Rate:- (i) Six Months – 2.00% pa; (ii) One Year – 2.00% pa; (iii) Two Years – 2.25% pa; and (iv) Four Years – 2.75% pa. Kiwi Bonds are available only to New Zealand residents. Anyone resident outside New Zealand, even if they hold New Zealand citizenship, is ineligible to invest in Kiwi Bonds. This is due to the requirements of securities regulations in offshore jurisdictions. What Fees will I pay when investing in Kiwi Bonds? There are no fees payable to invest in NZ Government Kiwi Bonds. / Выпуски облигаций, деноминированных в Долларах Новой Зеландии, размещаемые иностранными заёмщиками. Мудиз Инвэстоз Сёвис Лимитид (Moody's Investors Service Ltd).

KK = KABUSHIKI–KAISHA

KKU = KHON KAEN UNIVERSITY

KLCE = KUALA LUMPUR COMMODITIES EXCHANGE

KLOFFE = KUALA LUMPUR OPTIONS AND FINANCIAL FUTURES EXCHANGE

KLSE = KUALA LUMPUR STOCK EXCHANGE

km = KILOMETER

KM = COMORO ISLANDS = COMOROS

KMA = KEY MANAGER AUTHORITY

KMF = COMOROS FRANC

KN = SAINT KITTS AND NEVIS

KNEE BREAK–OUT TEST = ТЕСТ НА ИЗЛОМ (или ПЕРЕЛОМ) КОЛЕНА – Knee Break-Out Test is a method to evaluate the performance of fabrics, especially boys' wear, when subjected to abrasion, stretch, and impact forces under conditions which simulate ordinary wear at the knee.

KNEE BREECHES = ШТАНЫ ДО КОЛЕН (или КОЖАНЫЕ БРИДЖИ) – Knee Breeches:- breeches.

KNEEING = КОЛЕНИСТОСТЬ (или КОРНЕВОЙ ВЫРОСТ) – (1) Kneeing is the abnormal behavior of a spinning threadline (especially in melt spinning) in which one or more filaments form an angle (knee).

(2) Kneeing is the ability of the upper stem of deepwater or floating rice plants to bend upward after water has receded. / Knee – Корневой Вырост.

KNEESOCK = НОСОК ДО КОЛЕНА (или ГОЛЬФ) – Kneesock:- a knee-high sock.

KNICKERBOCKERS = НИКЭБАКЁЗ (или БРИДЖИ) – Knickerbockers:- knickers.

KNICKERS = СПОРТИВНЫЕ ШТАНЫ (или ПАНТАЛОНЫ, или НИКЁЗ) – Knickers are the loose-fitting short pants gathered at the knee.

KNIFE OR SCISSORS CUT = ПОРЕЗ НОЖОМ ИЛИ НОЖНИЦАМИ – Knife Or Scissors Cut:- piece damaged by over run in cutting previous piece. Cutting Room Defects, and namely – Cutting Defects. / Порок или дефект раскроя.

KNIT–DE–KNIT = СВЯЗАТЬ–РАСПУСТИТЬ – Knit-de-Knit:- a type of yarn texturizing in which a crimped yarn is made by knitting the yarn into a fabric, and then heat-setting the fabric. The yarn is then unraveled from the fabric and used in this permanently crinkled form. Knit De-Knit (KDK):- a texturing process in which yarns are knitted on a single-end circular knitting machine, the knitted tubular yarns are scoured or dyed and the knitted yarns subsequently unravelled by 'deknitting' and winding on a winding machine. Knit-deknit is high stretch and dyed in your choice of color or natural. Knit-de-Knit Method:- in this method of texturing, the yarn is knit into a 2-inch diameter hose-leg, heat-set in an autoclave, and then unraveled and wound onto a final package. This texturing method produces a crinkle yarn. See also Crinkle Yarn, Textured Yarn, and Texturing. Knit-Deknit texturing may be used on drawn fiber in order to produce crimp of a knitted-loop shape. In this process a yarn is knitted into a tubular fabric, set in place by means of heat, and then unraveled to produce textured yarn. / на кругловязальной машине, .

KNIT–DEKNIT YARN = ВЯЗАНАЯ–РАСПУЩЕНАЯ ПРЯЖА – Knit-Deknit Yarn is a textured filament yarn obtained by a process in which the filament yarn is knitted, heat set and subsequently unravelled. / филаментная (комплексная) пряжа (filament yarn). Сначала из пряжи вяжется трикотажное полотно, которое потом распускается, создавая пряжу зигзагообразной формы.

KNIT FABRICS = ТРИКОТАЖНЫЕ ТКАНИ (или ВЯЗАНЫЕ ТКАНИ, или ТРИКОТАЖ) – Knit Fabrics are fabrics made from only one set of yarns, all running in the same direction. Some knits have their yarns running along the length of the fabric, while others have their yarns running across the width of the fabric. Knit fabrics are held together by looping the yarns around each other. Knitting creates ridges in the resulting fabric. Wales are the ridges that run lengthwise in the fabric; courses run crosswise. Knit Fabric is a structure produced by interlooping one or more ends of yarn or comparable material. See also Knitting. Knit Fabrics or Knits:- knitted fabrics have been popular for many years. They were especially popular during the 1960s and the early 1970s. Use of knit fabrics for clothing descreased in the late 1970s, but there is evidence that they are regaining popularity. Fiber manufacturers contributed to the growth of the knit industry through research and development of new fibers and new yarns. Technologists successfully created computerized equipment and new knit structures. Other reasons for the increased popularity of knitted fabrics include their ability to resist wrinkling,their greater use by fashion designers, and the fact that knit fabrics can be made rapidly and therefore cost less to produce.
